We've got something rather special this month (or months) and you can find it inside. This article has, to our knowledge, never been published with details for use. It is so good, that it is not worth our getting hassled for printing it if you readers don't support our action by reprinting it and giving it out. Here's how to do this and make it effective; Mail it to people and places far away from you as well as in your own community. Have a stock of Xeroxed copies so when you pick up yippies hitching you can lay them onto it, and they will then spread the news. Papers should print it, and radio station people should tell listeners to rite to them for a copy. In the next letter you write to anyone you know, include a copy of this article. We are really pushing this for several reasons, but mostly because it can seriously affect Ma Bells profits and therefore policy if it goes into widespread use, & it should. It is wrong to assume that they can easily change the system and render the device ineffective, because it would take much time wherever they tried it, & it would have to be done by people who need the work anyway. Build them and sell them, but not for more than five bucks. The parts are cheap, maybe two dollars.

GET GOING!

For those of you interested in an article on bugging and debugging devices, see Radio-Electronics, February 1972. We are forced to offer you to it because of lack of space here.

Our back issue department has a headache, so we're changing things a bit. We're combing thru the issues and putting together feature sheets on the major articles that appear. So far, they are as follows:

- Credit card calls and helpful hints
- Pay phone hints, Installing phones
- This will speed our now sluggish back issue service, while insuring that you receive revisions and full information on past articles. Price is 25¢ each but send enough to make up for people who can't afford them (like us). When you get the shit, be sure to duplicate it immediately before it becomes all wrinkled, then start passing it out. You'll meet all kinds of far out people that way and it's been proven that passing out YIPLs reduces the chance of heart attack, (for you but not for Rockefeller).

Friends, freaks, and pigs:
Of late, I have been receiving fewer computer cards to return with my bills but my friendly Public Service Co.s and good 'ol Ma Bell persist in them. It seems to me that I once read of a local freak who not only cracked the code, but also went so far as to use it to his advantage. I feel it would be a great contribution to the cause of all of us if you were to encourage your readers to send in what they know so that you might publish it.-A key punch person

For those of you who want to know how to tell if your phone is tapped, give up. Best way to tell is by flipping a coin. Clicks mean nothing but poor service usually, and silence is often more dangerous. Don't talk on the phone!
Dear YIPL: you should know that
the check I’m sending costs nothing
to write. No charges for printing
checks, deposits, writing checks,
monthly statements. Just watch the
overdrafts and pastdue checks—
they cost $3 each. Write for account
information to UNB, 461 Forbes,
Pittsburgh, Pa. 15225 (that’s the
Union National Bank of Pittsburgh).
-Your friend in New York.

Dear YIPL:

If any phreaks would like to
visit Atlanta this way there is a
pay phone on the strip near Roy
Rogers drive In(876-9453area code
404). Its busy a lot, but if you
call a dope dealing freak will
probably answer. A good phone is
at the U of Ga. at Atlanta. 404-
344-9224. Call a student and turn
him on to the credit card code:
Skinny Bobby Harper, a very cool
D.J. at WIIN would like to hear
from phone phreaks. Call him and
talk on the air 6 am -9 am Mon.
 thru Fri., 6 a.m. - 10 a.m. Sat. 404-
892-3777. Relate the credit card
code to his listeners.

I just had quite a good night of
phreaking. After some of the best
Mexican I ever had I called into
Houston. The operator was real
good. She answered my questions
with "surely" and I told her that the
operators in N.Y. said that too §
Surely and I told her she sounded like a very

Boycott the War!

ITT is a corporation which produces war materials.

ITT runs the Sheraton Hotels.

ITT also owns the Continental Baking Company.

ITT makes Wonder Bread.

Morton’s Frozen Foods,
Profile Bread,
Twinkies,
Hostess Cupcakes,
and dead people.

Don’t Buy Wonder Bread!

SUPER-DUPER PROJECT!

This article will describe to you how to receive long distance calls at
no charge to the caller. The device is simple to build and use, and it
is less dangerous than all other long distance methods with the exception,
perhaps, of credit cards.

The phone company tells you are on the phone when you are drawing
direct current. This device uses a resistor to reduce the dc, and a
capacitor to ensure that the voice sounds will not be also reduced. The
capacitor value is critical. Simply break one of the two wires (green
or red) going to the phone and install the unit. Extensions cannot be
used also when using this device on a call, because when an extension
is picked up the dc starts to flow again, and the billing starts.

To use: Know when a friend is calling long distance. Normally the
wait should be left on "normal", but when the call comes in, you must pick
up the phone and then flip the switch to "free" within half a second. This
short period of time that the phone is answered normally stops the ringing,
and should be performed during a ring cycle. It sounds a lot harder than
it is, because if you wait too long between pick-up and switching to "free"
the call will be disconnected, but you have to wait at least a second
or two before doing that. If you don’t wait long enough, or accidentally flip switch
before picking up, the ring will be heard in the earpiece along with your
friend's voice, and you will have to pick up the phone again. It'll keep ringing until you do it the
right way.

On local calls, if you answer with the above procedure, you will be cut
off within a short time. As always, have friends call at varying times,§
never stay on more than 15 minutes. The device is only for incoming calls
to a home phone, and the caller must call direct, without an operator.

This device is so good, and so cheap, that you will probably want to
Xerox this article to pass out at demonstrations, riots, colleges, post
on bulletin boards, send to all the underground newspapers you know of.

Do it today!
For those of us who live in New York City, a real treat may be had by visiting the new telephone building being built on Church Street below Canal. This building is described by some as the most incredibly arrogant piece of architecture they have ever seen. It's described by others as a monolith. It's huge, and is of solid something, but it looks like concrete. There are no windows, as in the blockhouses at Cape Kennedy. There are just these 4 huge openings about halfway up for some unknown purpose. If Hitler had had enough money and time, he would have wanted one of these battle stations for his very own. It appears capable of withstanding atomic attack, if that means anything, because if anyone were to use an atomic device, it would be our government or the phone company itself, and probably on us. Oh well, go on down and have a look at things to come.

The telephone company offers its operators two kinds of headsets to wear on their heads for 8 hours a day. One kind is made of a very hard plastic and chafes and presses into the ear and side of the head. This is the standard. The other kind has a comfortable ear mount which is cushioned and much more desirable. Would you believe that you have to pay them for this type of headset if you are an operator? The phone company, after all, has to do something to make back all that money squandered on operator's outrageous salaries. Like even start charging for information calls, as they will soon be doing in many places. When that happens, we will urge people to strike phone service, phone employees to strike, and people to stop paying their extortion notices, and it looks like we should be getting ready. See y'all in San Diego.
