FCC ID: Q3E-XBR-R1G2

To Whom It May Concern:

The model xBRV4 device, with the FCC product code -XBR-R1G2, has multiple receiving radios to receive signals from wristband transmitters. The device also transmits using a single radio to control the wrist bands. The frequencies are all within the 2.4GHz ISM band. The device is classified as indoor industrial infrastructure equipment and will only be installed by qualified installation personnel.

The User Guide and Operational Description documents make reference to the xBRv4. This is an internal model number that corresponds directly to the FCC product code identifier -XBR-R1G2.

The type of equipment approval is original certification covered by CFR47 part 15.247 rules.

Sincerely,
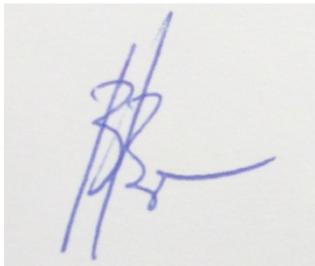

Bert Buxton
