

## 12 A Call for PoC

by Rt. Revd. Dr. Pastor Manul Laphroaig

Howdy, neighbor! Is that a fresh new PoC you are hugging so close? Don't stifle it, neighbor, it's time for it to see the world, and what better place to do it than from the pages of the famed International Journal of PoC or GTFO? It will be in a merry company of other PoCs big and small, bit-level and byte-level, raw binary or otherwise, C, Python, Assembly, hexdump or any other language. But wait, there's more—our editors will groom it for you, and dress it in the best Sunday clothes of proper church English. And when it looks proudly back at you from these pages, in the company of its new friends, won't that make you proud? So set that little PoC free, neighbor, and let it come to me, pastor@phrack.org!

### 12.1 PoC Contributions

Do this: Write an email telling our editors how to do reproduce \*ONE\* clever, technical trick from your research.

Like an email, keep it short. Like an email, you should assume that we already know more than a bit about hacking, and that we'll be insulted or—WORSE!—that we'll be bored if you include a long tutorial where a quick reminder would do. Don't try to make it thorough or broad.

Do pick one quick, clever low-level trick and explain it in a few pages. Teach me how to patch 81-column support into CMD.EXE; teach me how to make a Turing-machine out of twigs and mud; or, teach me how to make a randomized bingo card as a PDF that never renders the same way twice. Show me how to hide steganographic messages with METAFONT so that a trained reader can pick out from the paper copy, or how to decode downlink data from the Voyager spacecraft. Don't tell me that it's possible; rather, teach me how to do it myself with the absolute minimum of formality and bullshit.

Like an email, we expect informal (or faux-biblical) language and hand-sketched diagrams. Write it in a single sitting, and leave any editing for your poor preacherman to do over a bottle of scotch. Send this to pastor@phrack.org and hope that the neighborly Phrack folks—praise be to them!—aren't man-in-the-middling our submission process.

You can expect PoC||GTFO 0x04, our fifth release, to appear in print soon at a conference of good neighbors. We've not yet decided whether to include crayons, but you can be damned sure that it'll be a good read.

# X-VIEW 86™

**Profiles DOS application software and solves problems Debug can't touch.**

**Application Program**  
↓  
**Unmodified DOS Application**  
↑↓  
**X-VIEW 86**

**Dynamic Execution Information**

**Profiles DOS application software and solves problems Debug can't touch.**

**X-VIEW 86 is a DOS software X-ray machine.** X-VIEW 86 monitors internal software operations during execution to help you debug, test, port, or convert programs. X-VIEW 86 adds new features to Debug to profile either your own applications software or top-sellers like 1-2-3®. You get fast, reliable results.

**Real solutions to technical challenges.** Save hours of time-consuming, tedious work using data from X-VIEW 86's built-in reports that identify:

- Execution hotspots
- I/O port references
- Segment usage
- Interrupt calls
- Memory map references
- Instruction set usage

Report information is displayed on screen. And new breakpoint commands added to Debug stop a program on:

- I/O port references
- Memory data references
- Interrupt calls
- references

**Hardware and software requirements.** X-VIEW 86 runs on the EM PC and compatibles with DOS Debug 2.0 or 2.1. Even if you use a different debugger, X-VIEW 86 turns Debug into your program profiler. And it's not copy protected.
