- Teletypewriter (TTY) channel monitoring (connection for TTY send and receive to the office)
- Audible alarm inhibit/release (control of audible alarm signals).

Note: The work station control console associated with the maintenance center (MC) and the remote alarms are not used with No. 101 ESS.

3. CU ID1 24-Hour Analysis Report	12

1. GENERAL

1.01 This section provides operation and trouble analysis procedures unique to a No. 2 Switching Control Center System (No. 2 SCCS) operating in conjunction with a No. 101 Electronic Switching System (No. 101 ESS). Refer to Section 190-110-310 for No. 2 SCCS common operating procedures applicable to the No. 101 ESS.

These procedures are:

- Work station access [via cathode ray tube (CRT) monitor, see note]
- Browsing (method of searching logging file)
- Filtering and sorting (extracting selected data from file)
- Pattern defining (definition of data to be filtered or sorted)

This section is based on Generic II of the No. 2 SCCS computer program.

- 1.02** Whenever this section is reissued, the reason for reissue will be listed in this paragraph.
- 1.03** The unique operations at the No. 2 SCCS applicable to a No. 101 ESS are:
- Respond to a No. 101 ESS alarm indication displayed on the alarm monitor and accompanied by an audible signal.
 - Analyze a No. 2 SCCS 24-hour analysis program exception report, and respond to failures identified.

1.04 Alarm indications are dependent upon the content of a No. 101 ESS TTY message or the absence of a valid TTY message. When TTY contact is lost or unintelligible messages are received from the No. 101 ESS, emergency action is required to determine if the data link is inoperative or the No. 101 ESS is out of service.

1.05 The No. 2 SCCS 24-hour analysis program is provided to analyze the No. 101 ESS 24-hour maintenance printout. The 24-hour analysis program generates an exception report that lists test results in a concise form. The exception

NOTICE

Not for use or disclosure outside the
Bell System except under written agreement

report is available from a software file and can be printed out on hard copy for use by a craftperson. The 24-hour analysis program can be scheduled to run daily or be called up by command.

1.06 The operations necessary, with alarm response taking priority, are shown in flowchart format (Fig. 1). Part 2 describes the steps taken when an alarm is indicated. Part 3 describes the procedure for response to the 24-hour exception report.

1.07 See PA-5P060, Section 10, for more detailed information on the No. 101 ESS TTY alarm messages and the No. 2 SCCS indications.

1.08 See PA-5P060, Section 18, for details of the 24-hour analysis program and associated exception report.

2. NO. 101 ESS ALARM RESPONSE

2.01 Fig. 1, Step 1, when a No. 101 ESS alarm sounds, the office name and the message associated with the alarm are displayed on the video alarm monitor. The audible alarm should be retired by the craftperson. (Minor alarm is self-retiring.)

2.02 Fig. 1, Step 2, the alarm message will indicate either a No. 101 ESS TTY alarm message or an internally generated alarm.

2.03 Fig. 1, Step 12, the internally generated alarm indicates a problem receiving TTY messages and is displayed as:

- REPORT LOG TBL 118 MESG TIME OUT
(Indicates more than 15 minutes have elapsed since the last TTY message was received)
- REPORT LOG TBL 119 LINE TIME OUT
(Indicates excessive time has elapsed from the beginning of a TTY message and receipt of the end-of-line character)
- REPORT LOG TBL 117 EXCESSIVE LINE
(Indicates more than 80 TTY characters were received without receipt of the end-of-line character).

Any one of the foregoing alarm indications requires emergency action because all No. 101 ESS coverage by the No. 2 SCCS is cut off with the loss of

TTY communications. Section 190-119-311, No. 2 SCCS 101 ESS Application Emergency Action Procedure, is estimated to be available the first quarter of 1977.

2.04 Fig. 1, Step 3, the No. 101 ESS TTY alarm message (displayed on alarm monitor) is used to find the TTY message in the logging file. The TTY message is expanded by using the EXPAND command on the work station CRT. Fig. 1, Step 9, many of the 101 ESS TTY message expansions refer to the applicable Trouble-Locating Procedures section.

2.05 Fig. 1, Steps 4, 5, and 9, when an expanded message does not exist or refer to a section, check the TTY message in the 101 ESS Trouble-Locating Manual TLM-1H030. Fig. 1, Steps 6 and 7, the TLM-1H030 will reference a trouble number within the manual or a 101 ESS 240-XXX-XXX section.

2.06 Fig. 1, Step 8, there are a few messages in the TLM-1H030 that provides information about the state of the 101 ESS without a trouble procedure reference, such as MSa Sxbc Me-- which indicates a power failure coincident with SUM test failure. The message expansion will detail the message meaning (see Output Message Manual OM-1H000) when expansion is not provided for the message in question.

2.07 Fig. 1, Step 11, local instructions for dispatching craftpeople or trouble referral are necessary because of varying conditions in the operating companies.

2.08 An example of using the filtering and sorting feature of the No. 2 SCCS for No. 101 ESS application is when a number of retry TTY messages are received and logged (Section 240-200-502). The retry messages can be filtered from the logging file per switch unit (SU) number in word 2 and placed in user file No. 1. The user file No. 1 can be sorted by the type of retry message in word 3 and placed in user file No. 2. The user file No. 2 can be expanded and placed in user file No. 3. User file No. 3 can be browsed or printed out to search for common equipment units involved in all messages. Conversions, such as decimal scan points to octal group vertical horizontal (GVH) locations, can be done with the No. 2 SCCS conversions feature.

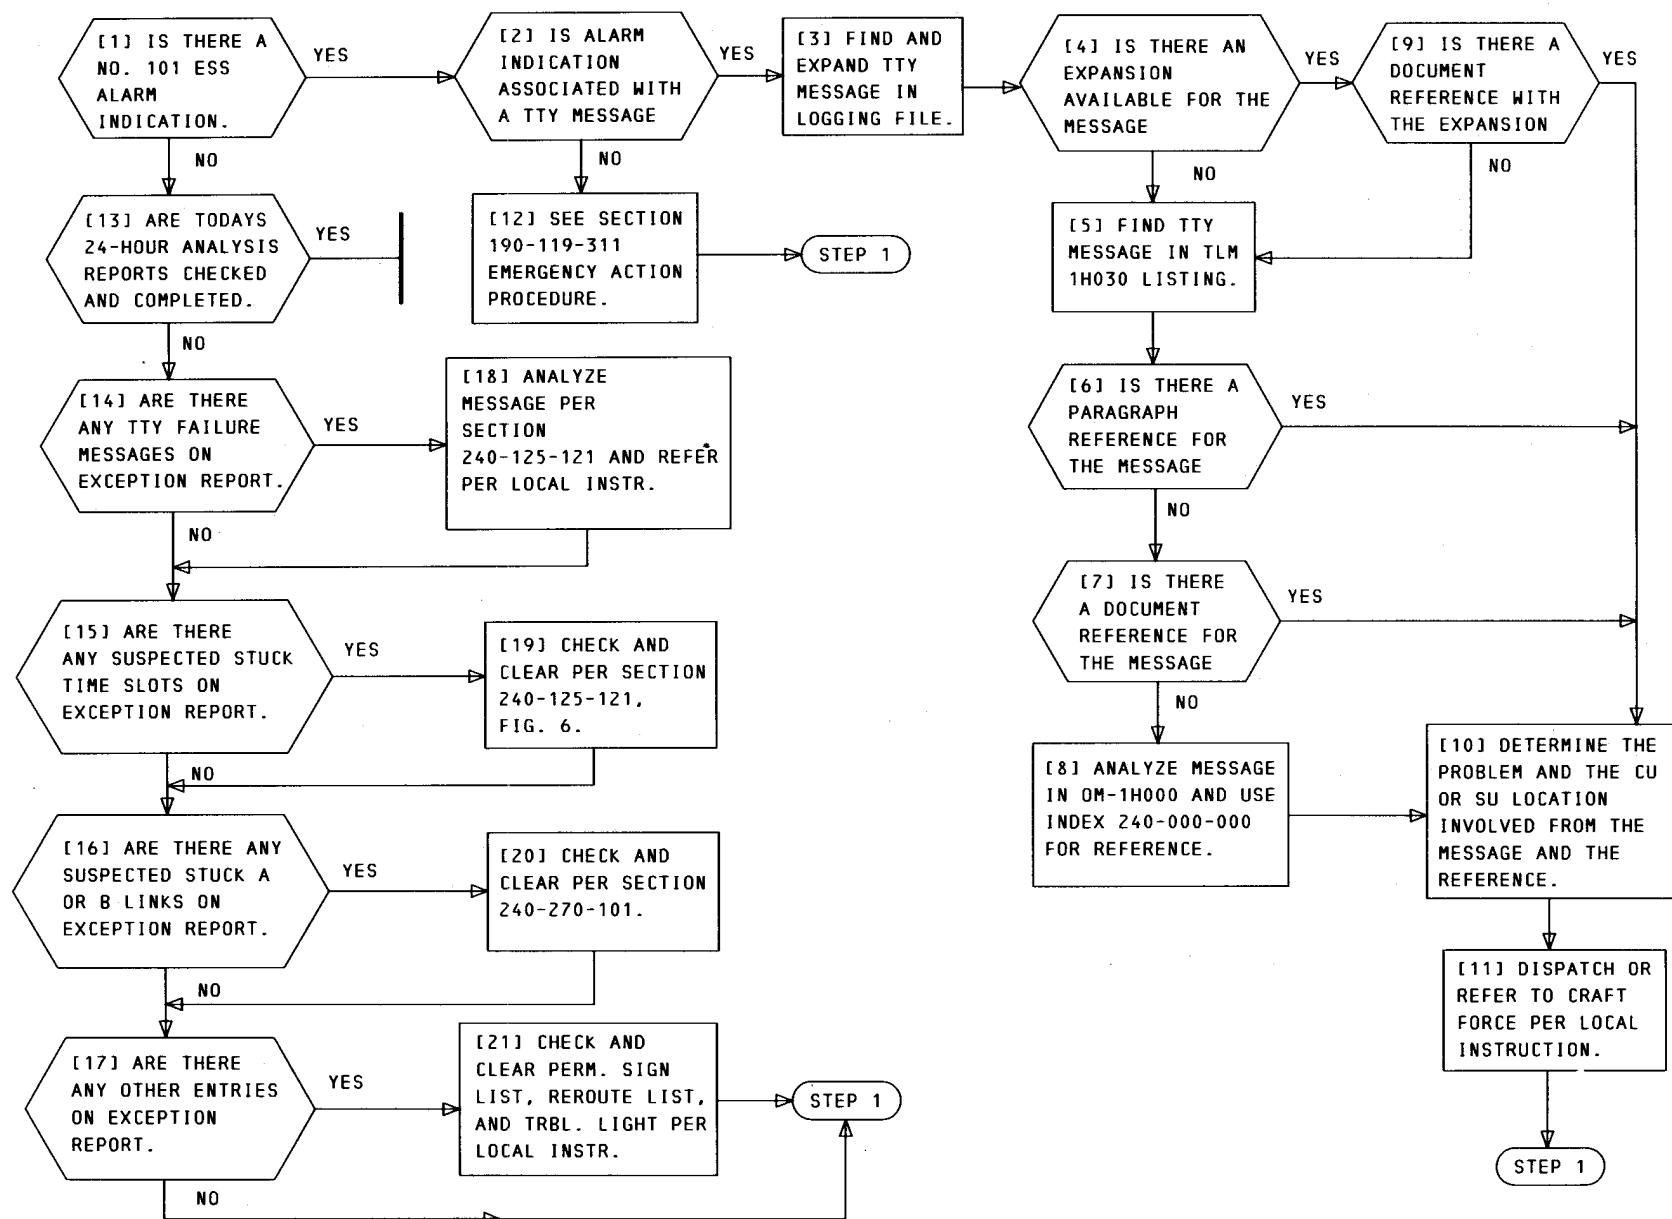

Fig. 1—No. 101 ESS Response Flowchart

SECTION 190-119-310

2.09 A craftperson sent to a No. 101 ESS SU location may use a portable TTY terminal to send messages to and receive messages from the control unit (CU) per trouble-locating procedure instructions. The portable TTY terminal is acoustically coupled to any telephone set at the No. 101 ESS SU location. The telephone set is used to dial a data terminal that is equipped with a remote work station port on the No. 2 SCCS computer. The TTY terminal connected this way has access to all No. 2 SCCS features except browsing and eliminates the need to have a craftperson to input TTY messages from the CU or SCCS location.

2.10 Fig. 1, Step 13, when looking for today's 24-hour analysis reports, consider the following:

- (a) One analysis report for each No. 101 ESS CU linked to the No. 2 SCCS
- (b) The time of day each 24-hour analysis report is scheduled compared to the present time
- (c) The reason a 24-hour analysis report is not available for today when scheduled time is past.

See PA-5P060, Section 11, for scheduling guidelines and local records for actual schedules. The 24-hour analysis report is dependent on the completion of the No. 101 ESS 24-hour maintenance printout.

3. 24-HOUR ANALYSIS REPORT RESPONSE

3.01 The No. 2 SCCS 24-hour analysis program sorts, filters, and formats the TTY messages from the No. 101 ESS 24-hour maintenance printout into a concise report. A typical No. 101 ESS 24-hour maintenance printout as entered in the logging file for CU ID4 follows.

Note: ID4 is in Illinois, downtown Chicago central office (CO), No. 4 CU.

*START OF 24 HR MTCE ID4

†END OF 24 HR MTCE ID4

3.02 The No. 2 SCCS 24-hour analysis program is scheduled after completion of the No. 101 ESS 24-hour maintenance program. The exception report generated by the 24-hour analysis program (Fig. 2) is available in the REPORT file and is optionally directed to a line printer when hard copy is needed. See PA-5P060, Section 18, for details of the program. Fig. 2 is the analysis report of the messages shown in 3.01 for CU ID4. Fig. 3 is another example of a report for CU ID1. ID1

and ID4 are the No. 101 ESS office identifications from the No. 2 SCCS used for the example.

Note: ID1 and ID4 are in Illinois, downtown Chicago CO, No. 1 and 4 CUs.

3.03 The SCCS craftperson should respond to the failure messages listed under Exceptions. Found portion of the analysis report first per Section 240-125-121. [For example, see Fig. 3 under Control Unit: MT1 24C5 --M2. This message is listed in Section 240-125-121 and leads to testing the on-line parity error (PE) circuitry. A failure requires a visit to the CU, but an OK test is logged and disregarded.]

3.04 When all failure messages are analyzed, the list of Suspected Stuck Time Slots is the next item needing response. Refer to Section 240-125-121, Fig. 6, and release stuck time slots when applicable.

3.05 Analysis of Suspected Stuck A- or B-Link Status Bits is the next item for response. See Fig. 2 under Switch Unit 00 for examples. Refer to Section 240-270-101, and type in a TTY semitrace for suspected A- or B-link. If the semitrace does not indicate an associated talking time slot, proceed to release time slot per Section 240-270-101.

3.06 The remaining Suspected Permanent Signals, Bad Reroute List, and Trouble Light Expansion items are administered per local procedures.

NO. 101 ESS 24-HOUR EXCEPTION REPORT — id4
FOR Thu Apr 15 1976

CONTROL UNIT SUMMARY: (CP 1 ON-LINE)

ALARM SUMMARY:

<u>SOURCE</u>	<u>MAJOR</u>	<u>MINOR</u>	<u>EQPT RMV.</u>	<u>MINOR</u>
MISC. MAINT.	—	0	0	0
SWITCH UNIT	—	0	1	0
CALL PROCESSOR	—	0	0	0

AUDIT RELEASES:

<u>SOURCE</u>	<u>NUMBER RELEASED</u>	
DIGIT RECEIVERS	—	0
DIGIT TRUNKS	—	0
TRUNKS	—	19

EXCEPTIONS FOUND:

SWITCH UNIT 00:

SUSPECTED STUCK A-LINK STATUS BITS:

ADDRESS= -428	BIT= 1
ADDRESS= -426	BIT= 1
ADDRESS= -422	BIT= 8

SUSPECTED STUCK B-LINK STATUS BITS:

B-LINK	GVH=	12-4-1	ADDR= -- T4	BIT= 3	TDS= 0
B-LINK	GVH=	12-6-0	ADDR= -- T6	BIT= 1	TDS= 0
B-LINK	GVH=	12-0-6	ADDR= -- T—	BIT= 14	TDS= 1
B-LINK	GVH=	12-3-0	ADDR= -- T3	BIT= 2	TDS= 1
B-LINK	GVH=	13-7-6	ADDR= -- TR	BIT= 13	TDS= 0

SUSPECTED PERMANENT SIGNALS: (lcen= f/d/1)

LCEN= 1/2/25	B-LINK	GVH= 10-2-0	LC= 0
LCEN= 0/7/6	B-LINK	GVH= 9-7-5	LC= 1

SECTION 190-119-310**4. REFERENCES**

4.01 The following sections are provided for further details of the data links and the TTY equipment:

SECTION	TITLE
591-014-XXX	103A-Type Data Set
591-028-XXX	108D- and 108E-Type Data Sets
591-039-XXX	103J-Type Data Set
591-812-XXX	Secure Model 28 Teletypewriter Station
573-101-100	28 Automatic Send-Receive (ASR) Teletypewriter Set Description
574-228-100	35 Cabinet for Automatic Send-Receive Sets General Description and Operation

4.02 The following sections and manuals are provided for further details for the No. 2 SCCS equipment:

SECTION	TITLE
190-110-110	No. 2 SCCS Common Application Description
190-110-310	No. 2 SCCS Common Application Operating Procedures
190-119-110	No. 2 SCCS 101 ESS Application Description
190-119-311	No. 2 SCCS 101 ESS Application Emergency Action Procedure

MANUAL	TITLE
IM-1P131-01	No. 2 Switching Control Center System, Input Message Manual
PA-1P131-01	No. 2 Switching Control Center System, Common Application Program Application Instruction
PA-5P060-01	No. 2 Switching Control Center System, No. 101 ESS Application Program Application Instruction

4.03 The following sections and manuals are provided for further details of the No. 101 ESS equipment:

SECTION	TITLE
240-110-101	Maintenance Programs—Description of System Operations, No. 101 ESS
240-125-121	24-Hour Maintenance Printout, No. 101 ESS
240-125-122	Direct Access Direct Inward Dialing—Printout Analysis, No. 101 ESS
240-125-123	Analysis of Miscellaneous—Maintenance Printouts, No. 101 ESS
240-200-501	Switch Unit Periodic Maintenance Routine, No. 101 ESS
240-200-502	Switch Unit Maintenance—Retry Printout Analysis, No. 101 ESS
240-250-301	No. 101 ESS Guide to Trouble Analysis, 2A Switch Unit
240-260-301	No. 101 ESS Guide to Trouble Analysis, 3A Switch Unit
240-270-301	No. 101 ESS Guide to Trouble Analysis, 4A Switch Unit
240-300-301	Emergency Action Procedures Control Unit, No. 101 ESS
240-300-302	Night Coverage Procedure Control Unit, No. 101 ESS
966-300-100	No. 101 ESS General Descriptive Information
MANUAL	TITLE
IM-1H000	No. 101 ESS Input Message Manual
OM-1H000	No. 101 ESS Output Message Manual
TLM-1H030	No. 101 ESS Trouble-Locating Manual

4.04 The following list of acronyms are used in this section:

CRT	Cathode Ray Tube	GVH	Group Vertical Horizontal
CO	Central Office	MC	Maintenance Center
CU	Control Unit	PE	Parity Error
ESS	Electronic Switching System	SCCS	Switching Control Center System
		SU	Switch Unit
		TTY	Teletypewriter
