January 2004

Notes:

1	6A can be replaced by KCB10 for 5E4(2). KCB10 can be replaced with KCB17 if NT-1 is coded for KCB17 and terminal equipment is set to match live coding scheme.
2	VLMM compatible.
3	SCSI compatible.
4	Reserved.
5	3B20D (Model 2 only).
6	When substituting suffix coded MC4C127A1, it is essential that the samemicrocode be used in both sides of the DCF0 and DFC1. For example, ifMC4C127A1B is to be replaced by MC4C127A1C, the companion DFC must also be replaced by MC4C127A1C. In addition, it is recommended that the minimum level microcode for multiple disk pairs be as follows: Disk Pair    Minimum Level 1            MC4C127A1 2            MC4C127A1B 3            MC4C127A1C
7	CLI change to (one) 1.
8	MC5D032A1 can be substituted for MC5D001A1, but MC5D032A1 cannot be mixedwith MC5D001A1 within the same service group. That is, if one MC5D001A1 goes bad and MC5D032A1 is used as a replacement then all (max. 7)MC5D001A1 in the same service group have to be replaced.
9	TN841 can be substituted for MC5D002A1, but TN841 cannot be mixed withMC5D002A1 with the same service group. That is, if one MC5D002A1 goes badand TN841 is used as a replacement then all (max. 8) MC5D002A1 in the sameservice group have to be replaced.
10	CM1 only.
11	CM1 only when interfacing with an ORM.
12	When office retrofits from 5E1(1A) to 5E1(2)1 you must replace MC5D033A1Bwith MC5D049A1B.
13	When office retrofits from 5E1(2)1 to 5E1(2)2 you must replaceMC5D049A1B with MC5D052A1B.
14	When office retrofits from 5E1(2)2 or 5E1(2)3 to 5E1(2)2 you must replaceMC5D052A1B with MC5D053A1B.
15	When office retrofits from 5E2(1) to 5E2(2) you must replaceMC5D053A1B with MC5D080A1B.
16	When office retrofits from 5E2(2) to 5E3 you must replace MC5D080A1B with MC5D113A1B.
17	When office retrofits from 5E3 to 5E4(2) you must replace MC5D113A1B withMC5D132A1B.(per CN0366NW (AC)
18	MC5D114A( ) may be replaced as indicated, but additional feature(s) will not befunctional until office retrofits to the subsequent software release Circuit pack   Software Rel.    Feature MC5D114A1    5E4(2)    Customer Branding Phrases and Coin Phrases. MC5D114A2    5E5        Previous Feature Plus   Sub-Account Billing. MC5D114A3    5E6        Previous Feature Plus More Efficient Call Handling (Mech) MC5D114A4    5E7        Previous Feature Plus   Customer Account Services (CAS-R3)
19	Reserved.

Notes:

20	MC5D146A1B includes the APR (Auto Power Restart) feature. MC5D146A1C adds functionality for 56 kilobit applications, therefore either the A1B or the A1C packs may be replaced by MC5D146A1, if these two features are not applicable.
21	When using TN1077 or TN1077B on MCTU, it is good practice not to mix TN1077 and TN1077B on the same side within a unit. Timing may become temporarily unstable. -----Features----- TN1077B was developed to improve factory yield. TN1077C was developed to provide CEPT compliance. TN1077D was developed to meet CISPR 22 (EMC) requirements. TN1077E was developed to provide Auto Power Recovery (APR). TN1077F was developed to improve factory yield, but it also has the ability to accept a Stratum 3, or better, timing reference through the use of a T1/E1 line interface chip set. A faulty TN1077F can be replaced with a TN1077E with no degradation of service.
22	MC5D143A( ) may be replaced as indicated, but additional feature(s) will not be functional until office retrofits to the subsequent software release. Circuit Pack Software Rel. Feature(s) MC5D143A1 5E5 Automatic Customer Station Rearrangement (ACSR) MC5D143A2 5E6 Previous Feature Plus Screen List Editing (SLE) MC5D143A3 5E7 Previous Feature Plus Standard T.R.222 Compliant (LASS).
23	The MC5D147A1 has been changed to a TN1368. If MC5D147A1 exists, apply CN03086.1NW. The TN1368 is compatible with CM2 up until 5E12 release. The TN1800 is a replacement for TN1368 and compatible with any release after 5E6. The TN1871 is required for all CM1.
24	Customized.
25	For SMP23 only. MCTSI service groups (0-1) should not mix MC5D153A1B and MC5D169A1B on the same SM.
26	CM1 and single mod only.
27	CLI change to (three) 3.
28	Sugar Grove only.
29	TN1038 can be used with TN842B only. TN1038 replaces TN838 only when used with TN842B. TN838 can be used with either TN842 or TN842B.
30	CM1/multi mod office only.
31	TN1058B can be used either in the TN1048 slot or the TN1058B slot. TN1048 cannot replace TN1058B. TN1058B is a direct downward compatible replacement for TN1048. TN1048 replaced by TN1058 requires CLI change. Also when the TN1048 replaced by TN1058B requires CLI change. The TN1058C is downward compatible and can be used in TN1058B slot, or TN1058 or TN1048 slot.
32	Class "A" change to relabel CP UN192 is now carrier pack for MC5D104A1, J5D003BL-1.
33	You must remove 494RA and 495FB, and replace 410AA in the 495FB slot only. CN74537NW is an AC change that replaces all 410AA power units in CMCU on CM2, with 410AA2 power units. Read PCN carefully.

January 2004

Notes:

34	Reserved.
35	1 fan and 1 white Molex plug used on J5D003BN-1 6-fan unit.
36	1 fan and 1 black plug with 5 gold pins used on J5D003BN-2 6-fan unit.
37	1 fan with 5 plugs used on J5D003BE-1 3-fan unit.
38	233A 104306089 on ED5D195-10,G3, and 242A 104187422 on ED5D195-10, G-2.
39	MC5D104A1 can be replaced by MC5D124A1 when retrofitting to 5E4(2).
40	MC5D102A1 can be replaced by MC5D123A1 when retrofitting to 5E4(2).
41	When FIU interfaces with DLTU2 replace TN619 with TN1802.
42	The MC5D215A1 and MC5D222A1 boards are DA'd. The MC5D215A1 could not be substituted for the MC5D215A2, and MC5D222A1 could not be substituted for the MC5D222A2 board when the NC CLI value on RCV 17.16 is CLI=80 for the MC5D215A2 board or CLI=88 for the MC5D222A2.
43	TN876B is not a replacement for TN876.
44	TN1129B is not a replacement for TN1129.\
45	UN54 may be replaced with UN55, however when it is replaced, theMC4C061B1B must also be replaced with MC4C127A1. UN54 / MC4C061B1Bfunction as a pair and UN55 / MC4C127A1 function as a pair.
46	MC4C160A1 (UN145) When Keystone III Tape driveis equipped with enhanced buffer board, you musthave MC4C160A1B (UN145B).
47	If a UN133B is equipped in the 3B20D Processoryou must also have a UN43D. Using a UN43C may cause problems. If you must use UN43C,replace UN133B with UN133. The UN43C series4 may cause start up problems when used with MC4C076A1 (UN135). If there is a problem, use UN43C series 3 or series 5. UN43C series 4 should be sent to the factory.Feature Descriptions:UN133B - add address bit 24 (EMM)UN133C - required for VLMM feature.UN133D - recoded for 4ESS.UN43C - used with feature that required "Read And Clear"UN43D - required for EMM. UN43E - to provide ATB flush circuit for Cypress memory device.
48	The Line Group power circuit pack (KCD2/553B) andthe auxiliary Power Supply circuit pack (KCB16)can be used in any Generic Office less than5E6 or 5EE4.2. The Line Group circuit pack (KCD2)and the auxiliary power circuit pack (KCB16)can be equipped within the same unit as theLine Group power supply (553A or 553B), but not within the same Line Group.
49	When growing SM2000 onto existing offices or new SM2000 ships, LU3is always equipped with TN335E circuit packs. Spare TN335C's should notbe used for replacement of defective TN335E's in the SM2000 cabinets.The TN335C's suffixed packs will not take the LU3 out of service, however it will double or triple the diagnostic interval. TN335Eis not compatible with LU1.
50	TM17 can be replaced by TM683.
51	TM12 can be replaced by TM682.
52	TM16 can be replaced by TM684.
53	MC3F006A1 can be replaced by MC3F007A1. And MC3F007A1 can be replacedby MC3F012A1.
54	CN03119NW introduced MC5D216A1 ISSUE 8:8. Problems with 8:8 requiredpoint issue CN03119.1NW to return all packs to 7:7.

January 2004

Notes:

56	Non-AT&T components for Keystone III Tape Drive.
57	Non-AT&T components for 340 MB Disk Drive.
58	Required for PBX applications.
59	MC5D217A1 was recoded to TN1306b.
61	MC5X400A1G, In addition to Transmission Test Functions,A1G provides ATME1N test call capabilities for CISapplications. In NON-CIS countries the MC5X400A1F andMC5X400A1G are interchangeable.
62	UN359 equipped in the IDCU is replaced by UN586 per CN44531NW (AU).
63	Provides a firmware upgrade required for AWS-2000 and US applications.
64	UN375C "C" suffix introduces a one inch (1") disk drive.
65	TN137B was developed to provide a " Dead System Alarm"for the Dutch PTT. This feature is not available to anyother market at this time, therefore a TN137 can replacea TN137B with no service degradation in all markets except the Dutch PTT.
66	TN1407B = "B" suffix did not add new features, therefore TN1407B may be replaced with a non-suffix pack without loss of functionality.
67	TN1408B = "B" suffix was developed for SMP23X memory expansion to 64 Mbyte. SMP23X is for NSI applications, therefore non-SMP23X applications may replace TN1408B with non-suffix packs without loss of functionality.
68	CN44520NW CL:AC was canceled.
69	Offices using generic 5E5/5EE4 or later may mix TN1374 (4MB) andTN1376 (8MB) and TN1661 (16MB) on the same unit, but max must notexceed 6.
70	Feature for:MC4C049A1C/TN84 - Class A change to correct DMA data transfer towrong location.
71	Feature for:TN82-MC4C052A1B - to allow to work in switched carrier mode. -MC4C052A1C - changed operating frequency to 64K for V.35 interface. -MC4C052A1D - to report physical level errors until error condition is removed. For specific compatibility for MC4C052A1B see Switching Flash #8902006.5ESS.
72	Feature description:UN28B - MC4C077A1B - CL:A to initialize channels during microboot. - MC4C077A1C - Required for fast backup feature. - MC4C059A1C - Feature for UNIX 6.0 (Simplex Only)
73	Feature description:TN68 - MC4C061A1B - Allow booting from 160 or 675 MB disk. - MC4C061B1C - For CDS disk drive with disk pack interchange problem.
74	Feature description:TN19 - MC4C127A1B - to correct DFC timeout B5-74 during disk write operation. - MC4C127A1C - correct head select timing to meet original design intent. - MC4C127A1D - eliminate buffer loading after sysgen command.
76	Feature Description:TN899 - MC5X400A1B - - MC5X400A1C - - MC5X400A1D - - MC5X400A1F -TN899B-MC5X400A1F - MC5X400A1G - in addition to transmission test fuctions,provides ATME1N test call.
77	Feature Description:TN3B - improved resistance to nearby lightening strikes.TN3C - never shipped.TN3D - meets ETSI voltage requirements. (European Telecommunication Standards Institute).
78	Feature Description:TN5B - improved resistance to nearby lightening strikes.TN5D - meets ETSI voltage requirements.
79	Feature Description:TN6B - improved resistance to nearby lightening striking.TN6C - meets ETSI voltage requirements.
80	Feature Description:TN70B - TN70C - CL:A change to fix sanity timer glitch.

January 2004

Notes:

81	Feature Description:TN82B - MC4C052A1E - changed frequency to 64K for V.35 interface.
82	Feature Description:TN9B - meets ETSI voltage requirements.
83	Feature Description:UN10B - UN10C - required for EMM feature. (Extended Main Memory)UN10D - to suppress memory address noise.UN10E - to change memory device supplier.
84	Feature Description:UN11B - UN11D - required for EMM feature.
85	TF3 is replaced by TF4B to provide extended input voltage operation.
86	Feature Description:UN22C - for attached processor application (Simplex Only).
87	Feature Description:UN33B - UN33C - to meet ETSI voltage requirements.UN33D - to fix false detection of closed scan points.
88	feature Description:UN3B - UN3C - incorporated co-processing feature and reset change.
89	Enhanced ALIT functions for future software releases.
90	Feature Description:UN45B - UN45D - for noise suppression on memory address leads.UN45E - changed memory device supplier to eliminate high soft error rate.
91	Feature Description:UN46B - improve noise margins.UN46C - improve noise margins.UN46D - required for VLMM feature.
92	Feature Description:UN59B -UN59C - required for EMM feature.
93	Feature Description:TN4B - to allow to run at 19.2K baud.
94	TN915 is not compatible with TN1803. If you replace a TN915 with aTN1803 you must replace all TN915's in the unit with TN1803's. Donot intermix TN915 with TN1803 in the same unit.
95	KBN8B was developed to be compatible with UN560. If UN560(64 M-byte on-board memory) is equipped, KBN8B MUST be equipped.If UN540 or UN540B is equipped instead of UN560, either KBN8or KBN8B may be equipped..spUN560 is replaced by UN594 in SMPU4,UN560 is replaced by UN588 in SMPU5.
96	suffix designed to improve factory yield, therefore, suffixedpack may be replaced by a non-suffix pack.
97	These 'B' suffix meets the 2500 Volt lighting surge limit recommendation in the LSSGR.
98	MPU1B, in addition to directly powering an NT1, has the ability topower a regeneration terminal. 4.0 watts of power versus 2.61 wattsin the MPU1.
99	Initial design, NO non-suffix code.
100	Improve lighting protection.
101	International Standards (CEPT) Compatible.
102	Automatic Power Restart (APR) Compatible.
103	UL Approved.
104	TN1410 / TN1411 can be substituted for MC5X405A1 or MC5X405A1B, lfa minimum of 2 are replaced. In addition, the replacement must occurat both the REMOTE & HOST sites, and software must be a minimum ofrelease 5EE5.2.CN0312NW introduced MC5X405A1 Issue 8:8. Problems with 8:8 requireda point issue of CN0312.1NW to return the pack to series 7:7.
105	Greater reliability against nuisance or false triggering of hazardousvoltage on craft alarm.
106	Provides software controlled saturation detection at different levels.
107	Provides power failure alarm feature.

January 2004

**Notes:**

108	Provided Revertive Pulsing.
109	Provides Speed-Up feature.
110	Faster/increased capacity MDL Circuit Pack required for 1PSS & 1NCP Applications.
111	Series 1:2,1:8,1:11A,1:12,1:13 are good series. If series of TN831C is 1:3,1:4,1:5,1:6 or 1:7 should be replaced with 1:8. If TN831C is 1:8 this is a good pack. If TN831C is 1:9 it should be replaced with 1:11A. Refer to CN64521NW for detailed information. The TN831C and TN832C, only, are APR compatible.
112	Suffix 'B' established to provide tracking of the KS21722, I49 socket change.
113	Required for SM-2000.
114	Provides Automatic SLIM Compensation for DC Test pair.
115	Provides Automatic SLIM Compensation for DC Test pair plus ISDN BRA Metallic Testing.
116	Firmware required for 5EE1(2)2.
118	EMC compatible.
119	Introduction of surface mount components, therefore the preceding suffix code may be used. MC5D223A1B/TN1611B can be replaced with MC5D223A2C/TN1611C. The TN1611C was available, but was rejected by the factory and used for the carrier for MC5D223A2C. TN1611C is NOT orderable.
120	Provides firmware compatibility for the electronic loop segregation (ELS) feature.
121	24 channel application with a remote clock unit.
122	Required for Multi-Mod RSM's after April 1, 1988, either 24 or 30 channel applications.
123	Pre-April 1, 1988, single RSM, 24 channel applications.
124	Provides the speed-up feature.
125	Reserved
126	Provides the ISDN feature for PSU2.
127	Accommodates 12KHz/16KHz/50Hz and battery reversal test circuit.
128	When more than 4 packs are in the same office, replace with series 7 or later.
129	Per CN74526NW, Series 4, 5 & 6 are replaced by series 7 (1:7), but Series 1, 2 & 3 are still good.
130	Reserved.
131	FA1781B was cancelled and never issued to the field.
132	Series 1 Circuit Packs were replaced by series 2 in offices configured with less than full TMS complex prior to growth. Offices with full TMS complex did not require series 2. Series 2 Circuit Packs are not acceptable and were replaced by Series 3. Series 1 Circuit Packs are acceptable.
133	SJ5B Circuit Pack replaces the SJ5, SJ6 or SJ7 Circuit Packs and can be configured for the different cable lengths via an option plug on the pack.
134	SM9, Series 7 change was cancelled and never issued. SM9, Series 5:6 were changed to either 5:8 or 5:9 per CN# N71001MV.
135	KBN16 series 7 was originally an AC change with an interchangeability marking of 4:7. This change was upgraded to an AU change. Circuit Packs were deployed so the interchangeability marking was not changed. Series 4, 5 and 6 packs are no longer supported.

January 2004

**Notes:**

136	For the SMP23CDMX feature on the TN1423, the TN1418 was added to allow memory addressability greater than 32 MegaBytes to 52MegaBytes. The TN1418 allows the growth of up to 5 TN2012's.
137	3B20 Model 1 Only.
138	To use UN376C or UN376E as a replacement for UN376B the Generic for 5 ESS should be as follows; 5E9.2 with BWM 96.004, or 5E10.1 with BWM 96-0013. Generics 5E11 and 5E12 the software is set to allow the use of UN376C or UN376E. To go from UN376B to UN376C or UN376E you must have the correct Generic.
139	SEE ED4A286-40 FOR ADDITIONAL INFORMATION ON THE ANNOUNCEMENT ADMINISTRATION PROCESSOR.
140	MC3F022A1 is only allowed in AT&T Domestic 5ESS switches and supported up until 5E9.1.
141	The 140L1 is used in DIF frames with SM1 or SM1B circuit packs. When changing from the SM1 or SM1B to any other configuration, the 140L1 must be changed to the 141C1 or 141C2 power unit and the associated fuse changed from a 70H to a 70B.
142	When replacing the 245A with a 245C, both units in the bay must be changed.
143	If an asterisk (*) appears in the series field on the faceplate, the series number has too many digits to fit on the faceplate. The actual series number is ink stamped on the edge of the circuit pack.
144	UN399 series 4 (2:4) only is changed out by CN94507NW. NO series 4 packs should be in the field.
145	Used with 5ESS the Minimum Generic is 5E13.
146	Timing margins in the outside cabinets of 10 or 12 bay CM2's are indicating parity errors. replace KBN5 packs with series 10 or later and replace cables per CN C84514NW.
147	Software updates on 5E11.1 or 5EE8.1 and 5E12 or later, and 5EE10 or later, but not included in 5EE9.1 generic. The CN 94525 NW was implemented in EMEA ONLY. NO PCN EXISTS for it.
148	TN1275B Series 9 (1:9) or greater is the ONLY series that will work in a RSM application. This is International Standards Compatible (CEPT).
149	The MC5D147A1 has been changed to a TN1368. If MC5D147A1 exists, apply CN03086.1NW. The TN1368 is compatible with CM2 up until 5E12 release. The TN1800 is a replacement for TN1368 and compatible with any release after 5E6. The TN1871 is required for all CM1.
150	Automatic Power Restart (APR) Compatible.
151	Not Used
152	Not Used
153	Not Used

Notes:

<p>154 A</p>	<p>KTU1 and KTU1B compatability guidelines                  The KTU1B circuit pack was developed as a technology migration of the KTU1. The KTU1B began shipping in late 1999 as a direct replacement for the KTU1 in all DNU-S applications. There are two functional differences between the KTU1 and the KTU1B circuit packs:</p> <ol style="list-style-type: none"> <li>1. The KTU1B includes a circuit change that resolves a DS1 framing pattern incompatibility that exists between DNU-S units equipped with KTU1's and 5ESS RSM's with umbilicals that terminate on ANN5(B) RDFI-1 circuit packs.</li> <li>2. The KTU1B includes a circuit change that resolves a 2-state trunk signaling incompatibility that exists between DNU-S units equipped with KTU1's and certain PBX's. The different KTU1B functionality can be enabled/disabled by software. In 5E13 and later generics, the functionality changes are enabled whenever the KTU1B circuit pack is equipped with CLI=1 and disabled whenever the KTU1B is equipped with CLI=0. With the changes disabled (CLI=0), the KTU1B is functionally equivalent to the KTU1.</li> </ol> <p>In pre-5E13 generics, the CLI must always be set to "0" when equipped either KTU1 or KTU1B circuit packs.                  The following application guidelines also apply:                  A KTU1 may be replaced with a KTU1B in any DNU-S application without any hardware or software changes (consistent with 235-700-120 circuit pack series guidelines for suffix coded packs).                  KTU1's must always be equipped with CLI=0. If a KTU1 is equipped with CLI=1, the following diagnostic will occur:                  DGN TMUX=192-0-0-6 STF PH 11 SEG 30 TEST 31234 MM H'f EXP H'8MASK H'ffff ACTL H'7                  Whenever there is KTU1B with CLI=1 in a TMUX service position in a data group, the spare TMUX in that data group must also be a KTU1B with CLI=1.</p>
<p>154 B</p>	<p>Attempts to grow in a KTU1B with CLI=1 in a service TMUX position without first equipping a KTU1B with CLI=1 in the spare position will be blocked by software checks and the following RC/V level 2 warning will be issued:                  DG0 STMX CLI must be equal to or higher than CLI in list DG0TMX.                  This restriction is enforced to protect against service interruptions that could occur if a KTU1 is used to spare a KTU1B that is providing RSM or PBX functionality as specified previously.                  Either KTU1's or KTU1B's will support RSM umbilicals that terminate on TN1612(B) RDFI-2 circuit packs at the remote. KTU1B's with CLI=1 are required for RSM umbilicals that terminate on ANN5(B) RDFI-1 circuit packs at the remote.                  The KTU1 handles two state signaling different from how the DFI handle two state signaling. This is causing interface problems with certain PBX's including the LUCENT System 75 PBX.                  The DFI can handle signaling if the signaling bit in the 6th frame differs from the signaling bit in the 12th frame (i.e. if the A and B signaling differs). The KTU1 only works if both the signaling bits the 6 &amp; 12th frame are the same (i.e. both 0 and 1).                  The PBX 2-state incompatibility problem may be resolved using either software procedures or by equipping a KTU1B with CLI=1 to support the facility carrying the PBX trunks. The software procedures requires that the slcpbx field in relation FC_PORTTYP be set to yes for each affected Trunk group member.                  This is done via the Office Data Base Editor. Dennis Pucci 11/06/2000 630-224-7711</p>
