About this document

How to check the version and issue of this document

The version and issue of the document are indicated by numbers, for example, 01.01.

The first two digits indicate the version. The version number increases each time the document is updated to support a new software release. For example, the first release of a document is 01.01. In the next software release cycle, the first release of the same document is 02.01.

The second two digits indicate the issue. The issue number increases each time the document is revised but rereleased in the same software release cycle. For example, the second release of a document in the same software release cycle is 01.02.

To determine which version of this document applies to the software in your office and how documentation for your product is organized, check the release information in *Product Documentation Directory,* 297-8991-001.

References in this document

The following documents are referred to in this document:

- *1-Meg Modem Service Network Implementation Manual,* 297-8063-200
- *Alarm Clearing and Performance Monitoring Procedures*
- *Customer Data Schema Reference Manual,* 297-9051-351
- *Digital Recorded Announcement Machine DRAM and EDRAM Guide,* 297-1001-527
- *Product Documentation Direcotry,* 297-8991-001
- *Routine Maintenance Procedures*
- *Translations Guide, 297-9051-350*

As of NA0011 (LEC and LET) and EUR010 (EUR) releases, any references to the data schema section of the Translations Guide will be mapped to the Customer Data Schema Reference Manual.

What precautionary messages mean

The types of precautionary messages used in Nortel Networks documents include attention boxes and danger, warning, and caution messages.

An attention box identifies information that is necessary for the proper performance of a procedure or task or the correct interpretation of information or data. Danger, warning, and caution messages indicate possible risks.

Examples of the precautionary messages follow.

ATTENTION - Information needed to perform a task

ATTENTION

If the unused DS-3 ports are not deprovisioned before a DS-1/VT Mapper is installed, the DS-1 traffic will not be carried through the DS-1/VT Mapper, even though the DS-1/VT Mapper is properly provisioned.

DANGER - Possibility of personal injury

DANGER
Risk of electrocution
Do not open the front panel of the inverter unless fuses F1, F2, and F3 have been removed. The inverter contains high-voltage lines. Until the fuses are removed, the high-voltage lines are active, and you risk being electrocuted.

WARNING - Possibility of equipment damage

WARNING
Damage to the backplane connector pins
Align the card before seating it, to avoid bending the backplane connector pins. Use light thumb pressure to align the card with the connectors. Next, use the levers on the card to seat the card into the connectors.

CAUTION - Possibility of service interruption or degradation

> **CAUTION**
> **Possible loss of service**
> Before continuing, confirm that you are removing the card from the inactive unit of the peripheral module.
> Subscriber service will be lost if you remove a card from the active unit.

How commands, parameters, and responses are represented

Commands, parameters, and responses in this document conform to the following conventions.

Input prompt (>)

An input prompt (>) indicates that the information that follows is a command:

```
>BSY
```

Commands and fixed parameters

Commands and fixed parameters that are entered at a MAP terminal are shown in uppercase letters:

```
>BSY CTRL
```

Variables

Variables are shown in lowercase letters:

```
>BSY  CTRL  ctrl_no
```

The letters or numbers that the variable represents must be entered. Each variable is explained in a list that follows the command string.

Responses

Responses correspond to the MAP display and are shown in a different type:

```
FP 3 Busy CTRL 0: Command request has been submitted.

FP 3 Busy CTRL 0: Command passed.
```

1 SuperNode computing module card replacement procedures

Introduction

This chapter provides card replacement procedures for the SuperNode computing module (CM). The first section in this chapter provides designs that show SuperNode CM shelf designs.

Card replacement procedures for the SuperNode SE CM appear in the chapter "SuperNode SE computing module and system load module card replacement procedures".

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) are in the chapter "Frame supervisory panel and maintenance supervisory panel card replacement procedures".

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Application

This section identifies the CM card(s) covered by the replacement procedure.

Common procedures

This section lists common procedures included in the CM card replacement procedure. A common procedure is a series of steps repeated within maintenance procedures. Common procedures include procedures like the steps for the removal and replacement of a card. Common procedures appear in the common procedures chapter in this NTP.

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in office records:

- the serial number of the card replaced
- the date you replaced the card
- the reason you replaced the card

SuperNode CM shelf layouts

Application

This procedure provides the following design diagrams:

- two-plane combined core cabinet (DPCC)

- SuperNode computing module (CM)

Dual-plane combined core cabinet

SuperNode CM shelf layouts (end)

NT9X20
in a SuperNode CM

Application

Use this procedure to replace a NT9X20 in a SuperNode computing module (CM), as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT9X20	AA	DS512 paddle board	CM
NT9X20	BB	DS512 interface CM-MS EN-MS paddle board	CM

Refer to the Index if you cannot identify the following features for the card you want to replace:

• the product engineering code (PEC)

• the PEC suffix

• the provisioned shelf or frame

The Index provides a list of the cards, shelves, and frames in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

• *Verifying load compatibility of SuperNode cards*

• *Activity switch with memory match*

• *Switching the clock source*

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT9X20
in a SuperNode CM (continued)

Summary of replacing NT9X20 in a SuperNode CM

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT9X20 in a SuperNode CM

At the MAP terminal

1   Obtain a replacement card. Make sure that the replacement card has the same PEC and PEC suffix as the card you want to replace.

2   Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. Complete the procedure and return to this point.

3   To access the CM level of the MAP display, type

   >MAPCI;MTC;CM

   and press the Enter key.

   Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC   PMC
 0   no  cpu 1   .     .  yes   .      .    mbsy   .
```

4   Determine if the card that you replace associates with the active CPU or the inactive CPU.

   Note: The active CPU appears under the Act header on the MAP display. In the example in step 3, the active CPU is CPU 1

If the card	Do
associates with the inactive CPU	step 5
associates with the active CPU	step 12

5   Determine if the inactive CPU jammed.

   Note: The word yes under the Jam header indicates that the inactive CPU jammed.   A blank field indicates that the CPU is not jammed.

If the inactive CPU	Do
is not jammed	step 6
is jammed	step 8

NT9X20
in a SuperNode CM (continued)

At the CM reset terminal for the inactive CPU

6

> **DANGER**
> **Loss of service**
> Make sure that you do not jam the active CPU. If you jam the active CPU while the CM is not in sync, a cold restart occurs. The word Active on the top of the display identifies the reset terminal for the active CPU.

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

```
 Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

At the MAP terminal

8   Determine if the CM is synchronized.

> ***Note:*** A dot (.) or EccOn under the Sync header indicates that the CM is synchronized. The word NO means that the CM is not synchronized.

If the CM	Do
is synchronized	step 9
is not synchronized	step 13

9   To drop synchronization, type

>DPSYNC

NT9X20
in a SuperNode CM (continued)

and press the Enter key.

If the response	Do
is About to drop sync with CPU n active. The inactive CPU is JAMMED. Do you want to continue? Please confirm ("YES", "Y", "NO", or "N"):	step 10
is other than listed here	step 42

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU n.
```

At the CM reset terminal for the inactive CPU

11   Wait until A1 flashes on the reset terminal for the inactive CPU.

> **Note:** Allow 5-min for A1 to begin to flash.

If A1	Do
flashes	step 13
does not flash	step 42

12   Perform the procedure *Activity switch with memory match* in this document. Complete the procedure and return to this point.

NT9X20
in a SuperNode CM (continued)

At the MAP terminal

13

> ⚠️ **WARNING**
> **Loss of service**
> Make sure that the CM runs on the clock of the inactive CPU.
> A cold restart or a system image reload can occur if you
> power down the inactive side of the CM. Do not power down
> the inactive side of the CM while the CM runs on the clock of
> the inactive CPU.

To determine if the CM runs on the clock of the inactive CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM	Do
runs on the clock of the inactive CPU	step 14
runs on the clock of the active CPU	step 15

14   To run the CM on the clock of the active CPU, perform the procedure
Switching the clock source. This procedure is in this document. Complete
the procedure and return to this point.

15   To access the MC level of the MAP display, type

>MC

and press the Enter key.

Example of a MAP display:

```
MC 0    MC 1
mbsy      .
```

NT9X20
in a SuperNode CM (continued)

16 Determine the state of the message controller (MC) on the inactive CPU.

Note: The word mbsy under the MC header means that the MC is manually busy.

If the state of the MC	Do
is mbsy	step 18
is not mbsy	step 17

17

> **WARNING**
> **Loss of service**
> Make sure that you busy the MC that corresponds to the inactive CPU. A warm restart occurs if you power down the plane with the wrong MC busied.

To manually busy the MC, type

>BSY mc_number

and press the Enter key.

where

mc_number
  is the number of the MC on the inactive side (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC busied OK.
```

If the MC	Do
busied	step 18
did not busy	step 42

NT9X20
in a SuperNode CM (continued)

At the CM shelf

18

⚠	**WARNING** **Static electricity damage** Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist strap grounding point is on a frame supervisory panel (FSP) or modular supervisory panel (MSP). The wrist strap protects the cards against static electricity damage.

Power down the inactive CPU as follows:

a Press down and release the power switch on the faceplate of the NT9X30 power converter on the inactive side of the CM shelf.

  Note: For CPU 0, the power converter is in slots 4F through 6F. For CPU 1, the power converter is in slots 36F through 38F.

b Press down and release the power switch on the faceplate of the NT9X31 power converter on the inactive side of the CM shelf.

  Note: For CPU 0, the power converter is in slots 1F through 3F. For CPU 1, the power converter is in slots 33F through 35F.

19 Locate the card on the shelf.

20

✋	**DANGER** **Do not hold card by levers only** If you hold a card only by the levers, you can break the levers. When you pull the card half way out of the shelf, carefully grasp the card from below. Provide support while you continue to remove the card from the shelf. Make sure you do not touch any wires or internal parts on the card.

Open the locking levers on the card that you want to replace.

NT9X20
in a SuperNode CM (continued)

21

	DANGER
✋	**Damage to fiber cables**
	When you handle fiber cables, make sure you do not crimp or bend fiber cables to a radius of less than 25 mm (1 in.).

Label each fiber cable. Use Transmit for the top cable and Receive for the bottom cable.

22   Disconnect the fiber cables from the faceplate of the card as follows:

a   Loosen the fiber connections, with the locking levers open.

b   Carefully push in and turn the fiber cable connector counter clockwise one half turn until the connector slides from its receptacle.

Note: Refer to the figure on the next page.

NT9X20
in a SuperNode CM (continued)

NT9X20AA

1 ○ ────── Transmit
             port 0

2 ○ ────── Receive
             port 0

                            Receptacle

                            Fiber
                            cable
                            connector

23   While you grasp the locking levers, carefully pull the card toward you until the
             card protrudes 2 in. (5.1 cm) from the equipment shelf.

NT9X20
in a SuperNode CM (continued)

24   Hold the card by the face plate with one hand while you support the card from below with the other hand. Carefully pull the card toward you until the card clears the shelf.

25   Place the card you removed in an electrostatic discharge (ESD) protective container.

26   Make sure that the replacement card has the same PEC, including PEC suffix, as the card you removed.

27   Insert the replacement card into the shelf.

    a   Open the locking levers on the card.

    b   Hold the card by the face plate with one hand while you support the card from below with the other hand. Carefully slide the card into the shelf.

NT9X20
in a SuperNode CM (continued)

28

DANGER
Damage to fiber cables
When you handle fiber cables, do not crimp or bend fiber cables to a radius of less than 25 mm (1 in.).

Reconnect the fiber cables as follows:

a Tighten the cable connections, with the locking levers open.

b Carefully guide the cable connector into the receptacle notches of the connector.

c Push in and turn the cable connector clockwise half a turn until the connection is tight.

29 Seat and lock the card.

a Use your fingers or thumbs to push on the upper and lower edges of the faceplate. Make sure that the card sits completely in the shelf.

b Close the locking levers to secure the card.

30   Power up the inactive CPU as follows:

    a   Lift and release the power switch on the faceplate of the NT9X30 power converter on the inactive side of the CM shelf.

        Note: For CPU 0, the power converter is in slots 4F through 6F. For CPU 1, the power converter is in slots 36F through 38F.

    b   Lift and release the power switch on the faceplate of the NT9X31 power converter on the inactive side of the CM shelf.

        Note: For CPU 0, the power converter is in slots 1F through 3F. For CPU 1, the power converter is in slots 33F through 35F.

At the CM reset terminal for the inactive CPU

31

WARNING
Firmware tests must be completed
If firmware tests are not completed, the CPUs cannot synchronize.

Wait for the switch to complete firmware tests.

Example of an RTIF response:

NT9X20
in a SuperNode CM (continued)

```
Shelf       Slot
00          12          NT9X14DB...
00          13          NT9X14DB...
Waiting for activity...
```

> *Note:* When firmware testing is in progress, dots appear on the right side of the PEC. The PEC is in the firmware testing status line of the RTIF response. As you complete each firmware test, another dot appears until firmware testing for the card is complete. When the firmware test sequence stops, the dots do not appear. The display does not show another firmware testing status line or the prompt Waiting for activity when the firmware test sequence stops.

32   Determine if the firmware tests are complete.

> *Note:* If the firmware tests are complete and the CPU powered up, the display shows the message Waiting for activity.

If the inactive CPU	Do
powered up	step 33
did not power up	step 42

At the MAP terminal

33   Your next step depends on the reason for performing this procedure.

If you	Do
perform this procedure as a result of an MC Tbl alarm	step 37
perform this procedure as a result of a PMCFlt alarm	step 37
perform this procedure as a result of a PMCTbl alarm	step 37
perform this procedure as a result of a NoTOD alarm	step 37
perform this procedure as a result of an SBsyMC alarm	step 37
perform this procedure as a result of an MBsyMC alarm	step 37
perform this procedure as a result of a CBsyMC alarm	step 37
perform this procedure for any reason other than listed here	step 34

34   To access the MC level of the MAP display, type

>MC

and press the Enter key.

35   To return the manual busy MC to service, type

>RTS   mc_number

and press the Enter key.

where

mc_number
is the number of the manual-busy MC (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC RTS OK.
```

If the RTS command	Do
passed	step 36
failed	step 42

36   The next action depends on the reason for performing this procedure.

If you	Do
perform this procedure as a re-sult of a CM alarm clearing pro-cedure	step 37
perform this procedure for any reason other than listed here	step 38

37   Return to the alarm clearing procedure that directed you to this procedure and continue as directed.

38   To test the inactive CPU, type

>CM;TST

and press the Enter key.

Example of a MAP response:

NT9X20
in a SuperNode CM (continued)

```
The test(s) listed below will destroy
the software load in inactive CPU:

    Static RAM test

Do you want to do the test(s) anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

39   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Test passed.
```

If the TST command	Do
passed	step 40
is other than listed here	step 42

At the CM reset terminal for the inactive CPU

40   To release the jam on the inactive CPU, type

>\RELEASE   JAM

and press the Enter key.

RTIF response:

```
 JAM RELEASE DONE
```

At the MAP terminal

41   To synchronize the CM, type

>SYNC

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Synchronization successful.
```

If the response	Do
indicates the SYNC command was successful	step 43
is other than listed here	step 42

42   For additional help, contact the next level of support.

43   The procedure is complete.

System cards
in a SuperNode CM

Application

Use this procedure to replace the following cards in a SuperNode computing module (CM).

If you cannot identify the product engineering code (PEC), PEC suffix, or shelf or frame for the card to replace, refer to the "Index". The "Index" provides a list of the cards, shelves, and frames in this card replacement book.

(Sheet 1 of 2)

PEC	Suffix	Card name	Shelf or frame name
NT9X10	AA	33-MHz 88100 BRISC CPU card	CM
NT9X10	BA, CA	60-MHz 88110 BRISC CPU card	CM
NT9X10	DA	66-MHz 88110 BRISC CPU card	CM
NT9X12	AB, AC, AD	CPU port card	CM
NT9X13	BB, BC, BD	CPU processor card	CM
NT9X13	DB, DC	CPU 20-MHz card	CM
NT9X13	GA	DMS-core 33-MHz 68030 HPM-based CPU card	CM
NT9X13	HB	CPU (68030) 40-MHz card	CM
NT9X13	JA	CPU (68020) processor card	CM
NT9X14	BB	6-Mbyte memory card	CM
NT9X14	DB	24-Mbyte memory card	CM
NT9X14	EA, FA	96-Mbyte memory card	CM
NT9X21	AA	CM bus terminator paddle board	CM
NT9X21	AB	Bus terminator paddle board	CM
NT9X22	CA	CM subsystem clock paddle board	CM
NT9X26	AA, AB	Remote terminal interface paddle board	CM

**System cards
in a SuperNode CM** (continued)

(Sheet 2 of 2)

PEC	Suffix	Card name	Shelf or frame name
NT9X26	DA, DB, DC, EA, FA, GA	BRISC RTIF paddle board	CM
NT9X27	AA, BA	CM bus extender paddle board	CM
NT9X30	AA, AB	+5V 86-A power converter	CM
NT9X31	AA, AB	-5V 20-A power converter	CM

Common procedures

This procedure refers to the following common procedures:

- *Verifying load compatibility of SuperNode cards*
- *Activity switch with memory match*
- *Switching the clock source*
- *Replacing a card*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

System cards
in a SuperNode CM (continued)

Summary of replacing System cards in a SuperNode CM

System cards
in a SuperNode CM (continued)

Replacing System cards in a SuperNode CM

DANGER
Possible invalid memory configuration
Do not leave empty slots between memory cards or between the first memory card and a dual-port message controller card. Empty slots can cause an invalid memory configuration.

DANGER
Possible invalid memory configuration
Contact your next level of support if you replace an NT9X14DB card with an NT9X14EA card. This replacement can cause an invalid memory configuration.

DANGER
Possible invalid memory configuration
The NT9X10DA processor card, the NT9X26GA RTIF card, and the optional NT9X14FA memory card are designed to be used together. The NT9X10DA CPU card functions only with the NT9X26GA RTIF paddle board and the optional NT9X14FA extended memory card. Do not combine an NT9X14FA card with any other memory card. This results in an invalid memory configuration. Do not use the NT9X14FA memory card with any processor other than the NT9X10DA processor card.

At your current location

1   Obtain a replacement card. Make sure that the replacement card and the card to remove have the same product engineering code (PEC) and PEC suffix.

2   Perform the procedure *Verifying load compatibility of SuperNode cards.* Complete the procedure and return to this point.

System cards
in a SuperNode CM (continued)

At the MAP terminal

3   To access the CM level of the MAP display, type

>MAPCI;MTC;CM

and press the Enter key.

Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC   PMC
 0   no   cpu 1   .     .  yes   .     .    mbsy  .
```

4   Determine if the card you replace associates with the active CPU or the inactive CPU.

> ***Note:*** The active CPU appears under the Act header on the MAP display. In the example in step 3, the active CPU is CPU 1.

If the card	Do
associates with the inactive CPU	step 5
associates with the active CPU	step 12

5   Determine if the inactive CPU has a jam.

> ***Note:*** The word yes under the Jam header means that the inactive CPU has a jam. The area remains blank if the CPU does not have a jam.

If the inactive CPU	Do
is not jammed	step 6
is jammed	step 8

At the CM reset terminal for the inactive CPU

6

DANGER
Loss of service
Make sure that you do not jam the active CPU. If you jam the active CPU while the CM is not in sync, a cold restart occurs. The word Active on the top banner of the display identifies the reset terminal for the active CPU.

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

**System cards
in a SuperNode CM** (continued)

```
Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

At the MAP terminal

8   Determine if the CM is synchronized.

> ***Note:*** A dot (.) or EccOn under the Sync header means that the CM is
> synchronized. The word no means that the CM is not synchronized.

If the CM	Do
is synchronized	step 9
is not synchronized	step 13

9   To drop synchronization, type

>DPSYNC

and press the Enter key.

If the response	Do
is About to drop sync with CPU n active. The inactive CPU is JAMMED. Do you want to continue? Please confirm ("YES", "Y", "NO", or "N"):	step 10
is other than listed here	step 44

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU n.
```

System cards
in a SuperNode CM (continued)

At the CM reset terminal for the inactive CPU

11   Wait until A1 flashes on the reset terminal for the inactive CPU.

> ***Note:*** Allow 5 min for A1 to begin to flash.

If A1	Do
flashes	step 13
does not flash	step 44

12   Perform the procedure *Activity switch with memory match* in this document.
Complete the procedure and return to this point.

At the MAP terminal

13

	WARNING
⚡	**WARNING** **Loss of service** Make sure that the CM runs on the clock of the active CPU. A cold restart or a system image reload can occur if you power down the inactive side of the CM. Do not power down the inactive side of the CM while the CM runs on the clock of the inactive CPU.

To determine if the CM runs on the clock of the inactive CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM	Do
runs on the clock of the inactive CPU	step 14
runs on the clock of the active CPU	step 15

System cards
in a SuperNode CM (continued)

14   To run the CM on the clock of the active CPU, perform the procedure
Switching the clock source in this document. Complete the procedure and
return to this point.

15   To access the MC level of the MAP display, type

>**MC**

and press the Enter key.

Example of a MAP display:

```
MC 0    MC 1
mbsy        .
```

16   Determine the state of the message controller (MC) on the inactive CPU.

Note: The word mbsy under the MC header means that the MC is manual
busy.

If the state of the MC	Do
is mbsy	step 18
is not mbsy	step 17

17

WARNING
Loss of service
Make sure that you busy the MC that corresponds to the
inactive CPU. A warm restart occurs if you power down the
surface with the wrong MC busy.

To manually busy the MC that associates with the inactive CPU, type

>**BSY   mc_number**

and press the Enter key.

where

mc_number
is the number of the MC on the inactive side (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC busied OK.
```

If the MC	Do
busied	step 18

System cards
in a SuperNode CM (continued)

If the MC	Do
did not busy	step 44

18   The next action depends on the type of card you replace.

If the card being replaced	Do
is an NT9X22	step 19
is other than listed here	step 21

19   To access the Clock level of the MAP display, type

>CLOCK

and press the Enter key.

Example of a MAP display:

```
          TOD
        MC0    MC1
Link 0    .      .
Link 1    .      .
    SSC    f      .
```

20   To determine the location of the NT9X22 card, type

>LOCATE ssc_number

and press the Enter key.

where

    ssc_number
       is the number of the subsystem clock (0 or 1)

Example of a MAP response:

```
Site Flr    RPos  Bay_id Shf Description Slot EqPEC
HOST 00     A00    CMDC:00 18  SSC:00:0:0  16  9X22CA BACK
```

**System cards
in a SuperNode CM** (continued)

At the CM shelf

21

> ⚠ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle cards. The wrist strap protects the cards against static electricity damage.

Power down the inactive CPU as follows:

a Press down and release the power switch on the faceplate of the NT9X30 power converter on the inactive side of the CM shelf.

   Note: For CPU 0, the power converter is in slots 1F through 3F. For CPU 1, the power converter is in slots 33F through 35F.

b Press down and release the power switch on the faceplate of the NT9X31 power converter on the inactive side of the CM shelf.

   Note: For CPU 0, the power converter is in slots 4F through 6F. For CPU 1, the power converter is in slots 36F through 38F.

22 Perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

23 Power up the inactive CPU, as follows:

a Lift and release the power switch on the faceplate of the NT9X30 power converter on the inactive side of the CM shelf.

   Note: For CPU 0, the power converter is in slots 1F through 3F. For CPU 1, the power converter is in slots 33F through 35F.

b Lift and release the power switch on the faceplate of the NT9X31 power converter on the inactive side of the CM shelf.

   Note: For CPU 0, the power converter is in slots 4F through 6F. For CPU 1, the power converter is in slots 36F through 38F.

System cards
in a SuperNode CM (continued)

At the CM reset terminal for the inactive CPU

24

⚠

CAUTION
Firmware tests must be completed
If you do not complete the firmware tests, you can not
synchronize the CPUs.

Wait for the switch to complete firmware tests.

Example of an RTIF response:

```
Shelf      Slot
00         12              NT9X14DB...
00         13              NT9X14DB...
Waiting for activity...
```

> *Note:* When firmware testing is in progress, dots appear on the right side
> of the PEC. The PEC is in the firmware testing status line of the RTIF
> response. As each firmware test is complete, another dot appears, until
> firmware testing for the card is complete. If the dots do not appear and
> another firmware testing status line does not appear, firmware tests do not
> progress. If the dots do not appear and the prompt Waiting for activity does
> not appear, firmware tests do not progress.

25   Determine if the firmware tests were completed.

> *Note:* If the firmware tests are complete and CPU has powered up, the
> display shows the Waiting for activity message.

If the inactive CPU	Do
powered up	step 26
did not power up	step 44

26   The next action depends on the type of card you replace.

If the card being replaced	Do
is an NT9X14	step 29
is an NT9X22	step 27
is an NT9X26	step 31
is other than listed here	step 32

**System cards
in a SuperNode CM** (continued)

At the MAP terminal

27   To test the subsystem clock, type

>**TST SSC ssc_number**

and press the Enter key.

where

>**ssc_number**
>   is the number of the subsystem clock (0 or 1)

Example of a MAP response:

```
A complete test will include temporary loss of two links.
Please confirm ("YES", "Y", "NO", or "N"):
```

28   To confirm the command, type

>**YES**

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
SSC 0 test passed. No faults detected by hardware.
```

If the TST command	Do
passed	step 32
failed	step 44

At the MAP terminal

29   To access the Memory level of the MAP display, type

>**MEMORY**

and press the Enter key.

Example of a MAP display:

```
CM 0   Plane 0 │ Plane 1
                │
   0987654321  P│P  1234567890
   ────......       ......────
```

30   To test the replacement card, type

>**TST CARD card_number**

and press the Enter key.

where

>**card_number**
>   is the number of the replaced memory card (1 to 10).

System cards
in a SuperNode CM (continued)

Example of a MAP response:

```
Maintenance action submitted.
Memory test OK.
```

If the TST command	Do
passed	step 32
failed	step 44

At the CM reset terminal for the inactive CPU

31   To determine the result of the last self-test, type

>**SELF TEST**

and press the Enter key.

Example of a MAP response:

```
SELF TEST RESULTS: ROM OK   RAM OK   9X26 OK
```

If the self test	Do
passed	step 32
failed	step 44

32   Your next step depends on the reason for the performance of this procedure.

If you	Do
perform this procedure as a result of an MC Tbl alarm	step 46
perform this procedure as a result of a PMCFlt alarm	step 46
perform this procedure as a result of a PMCTbl alarm	step 46
perform this procedure as a result of a NoTOD alarm	step 46
perform this procedure as a result of an SBsyMC alarm	step 46
perform this procedure as a result of an MBsyMC alarm	step 46
perform this procedure as a result of a CBsyMC alarm	step 46

**System cards
in a SuperNode CM** (continued)

If you	Do
perform this procedure for any reason different from those listed here	step 33

33 The next action depends on the series of your SuperNode CM hardware.

If	Do
below Series 70 SuperNode CM hardware	step 34
Series 70 or above	step 36

34 To record all the card changes in the history database for each card, type

>**SWAPHW   shelf_no   slot_no   side_no**

and press the Enter key.

where

    shelf_no
      is the number of the shelf (0 or1)

    slot_no
      is the number of the slot (1 to 38)

    side_no
      is the side of the CM (front or back)

Example of a MAP response:

WARNING: You have indicated that the following circuit pack has been replaced. Please verify that this accurately reflects which circuit pack has been changed, and that the displayed PEC code matches what is currently equipped in that slot:

Site Flr RPOs Shf Description Slot EQPEC
HOST 00   A00   DPCC 0 18 CM 0;0;0 19 9X13BC

Do you wish to continue?
Please   confirm ("YES", "Y", "NO" "N") "Y" or "YES",
Card replacement has been recorded.

If the response	Do
is Card replacement has been record-ed.	step 36
is Aborted. Card replacement has NOT been recorded.	step 35

System cards
in a SuperNode CM (continued)

If the response	Do
is different from those listed here	step 44

> ***Note:*** The specified card joins the list of the cards that you replaced. The actual updates to the mismatch history database do not occur until the next manual SYNC attempt.

35   Enter the SWAPHW command as you did in step 34. If the command aborts a second time, contact the next level of support.

36   To access the MC level of the MAP display, type

    >MC

    and press the Enter key.

37   To return the manual busy MC to service, type

    >RTS mc_number

    and press the Enter key.

    where

       mc_number
         is the number of the manual-busy MC (0 or 1)

    Example of a MAP response:

```
Maintenance action submitted.
MC RTS OK.
```

38   The next action depends on the reason for performing this procedure.

If	Do
a CM alarm clearing procedure	step 42
anything else	step 39

39   Test the inactive CPU by typing

    >CM;TST

    and pressing the Enter key.

    Example of a MAP response:

```
The test(s) listed below will destroy
the software load in inactive CPU:

    Static RAM test

Do you want to do the test(s) anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

**System cards
in a SuperNode CM** (continued)

40   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
The PCCAB DRAM test will take
up to 10 minutes to run.

Do you wish to run this test anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

41   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Test passed.
```

If the TST command	Do
passed	step 42
anything else	step 44

At the CM reset terminal for the inactive CPU

42   Release the jam on the inactive CPU by typing

>\RELEASE JAM

and pressing the Enter key.

RTIF response:

```
JAM RELEASE DONE
```

At the MAP terminal

43   Synchronize the CM by typing

>SYNC

and pressing the Enter key.

Example of a MAP response:

System cards
in a SuperNode CM (end)

```
Maintenance action submitted.
Synchronization successful.
```

If	Do
the SYNC command was successful	step 45
anything else	step 44

44   For additional help, contact the next level of support.

45   The next action depends on the reason for performance of this procedure.

If	Do
a CM alarm clearing procedure	step 46
anything else	step 47

46   Return to the alarm clearing procedure that sent you to this procedure and continue as directed.

47   You have completed the procedure.

2 SuperNode SE computing module and system load module card replacement procedures

Introduction

This chapter provides card replacement procedures for the SuperNode SE computing module (CM) and system load module (SLM). The first section in the chapter provides diagrams of SuperNode SE CM/SLM shelf designs.

Card replacement procedures for the SuperNode CM are in the chapter "SuperNode computing module card replacement procedures".

Card replacement procedures for the SuperNode SLM are in the chapter "SuperNode system load module card replacement procedures".

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) are in the chapter "Frame supervisory panel and maintenance supervisory panel card replacement procedures".

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Application

This section identifies the CM and SLM card(s) discussed in the replacement procedure.

Common procedures

This section lists common procedures for the replacement of a CM or SLM card. A common procedure is a series of steps that repeats within maintenance procedures. For example, a card removal and replacement procedure is a common procedure. Common procedures are in the common procedures chapter in this NTP.
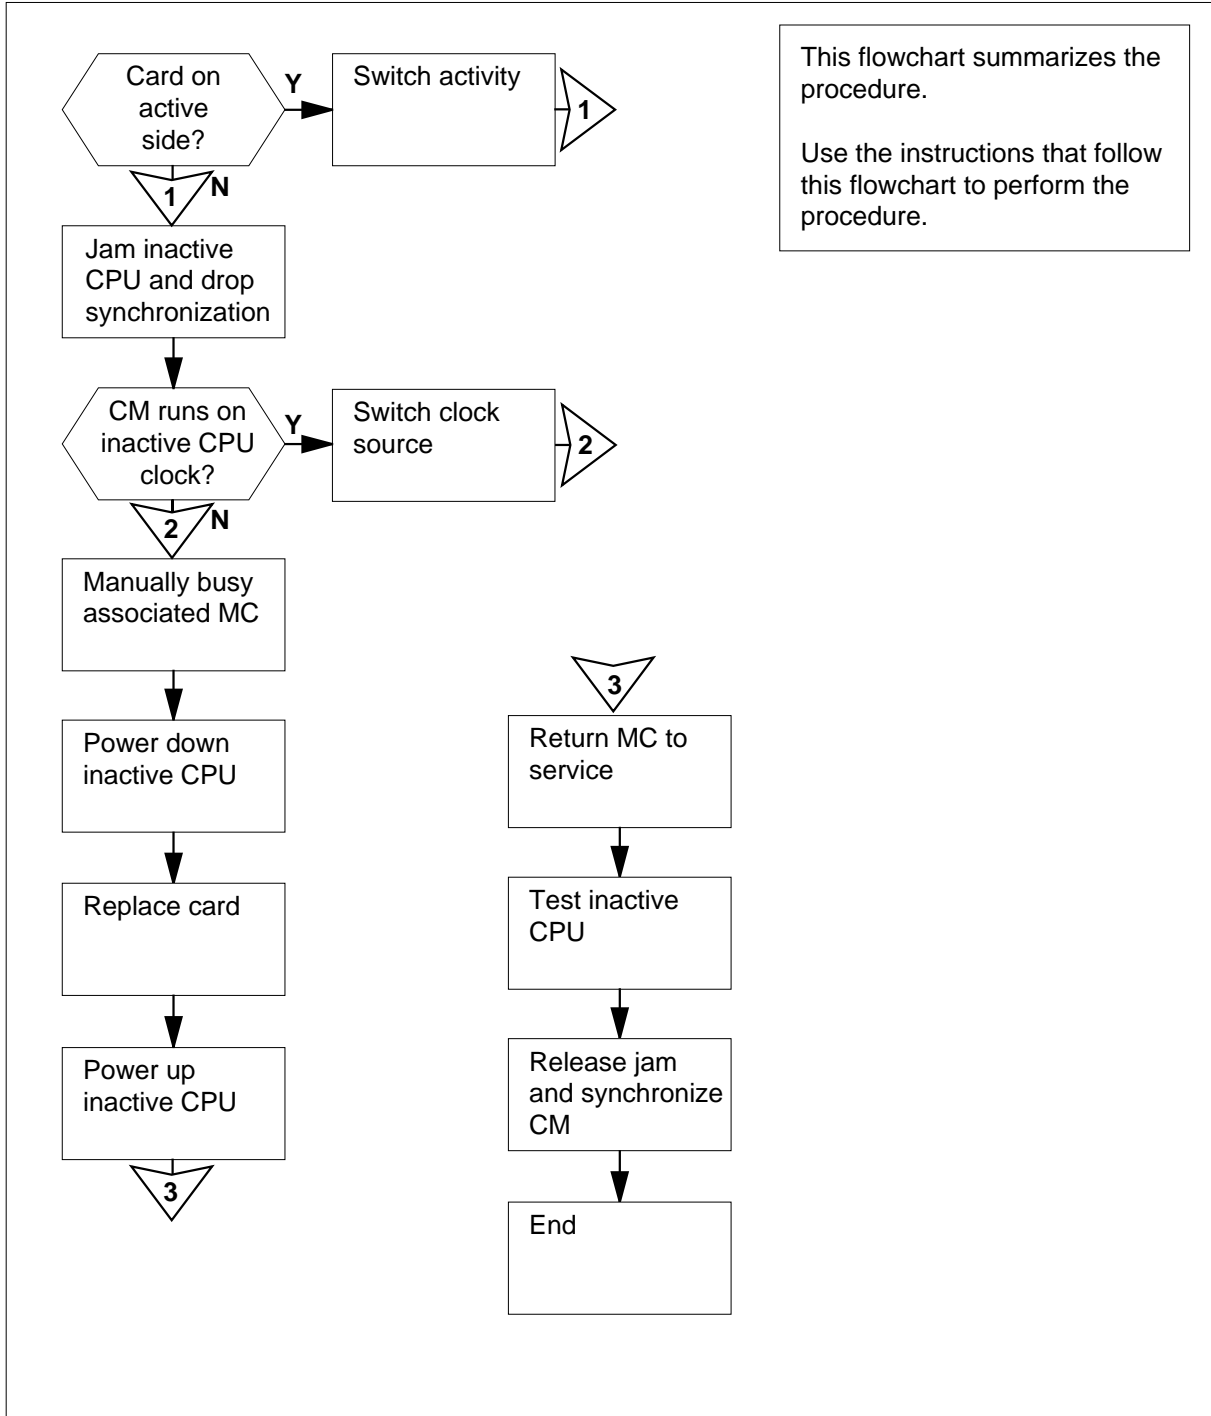

Do not use common procedures unless the step-action procedure directs you.

Action

This section contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in office records:

- the serial number of the card that you replaced

- the date of the card replacement

- the reason that you replaced the card

SuperNode SE CM/SLM shelf layouts

Application

This procedure provides the following design diagrams:

- single core cabinet (SCC)
- SuperNode SE computing module/system load module (CM/SLM)

NT9X44
in a SuperNode SE CM/SLM

Application

Use this procedure to replace an NT9X44 in a SuperNode SE system load module (SLM).

PEC	Suffix	Card name	Shelf or frame name
NT9X44	AC	System load module IA assembly	CM/SLM
NT9X44	AD	System load module III assembly	CM/SLM

Refer to the "Index", if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Sparing and field returns can cause SLM IIIs to have a combination of the current Connor and the new Tandberg drives. The SLM IIIs are in SuperNode and SuperNode SE switches. You can easily identify the drives with the new Tandberg drive that has a tape door.

Use the recommended tape cartridge as follows:

- DC600 for SLM I tape drive
- DC6250 for SLM IA and II tape drives
- DC6525 for SLM III tape drive

Common procedures

This procedure refers to the following common procedures:

- *Activity switch with memory match*
- *Switching the clock source*

NT9X44
in a SuperNode SE CM/SLM (continued)

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

in a SuperNode SE CM/SLM (continued)

Replacing a NT9X44 in a SuperNode SE CM/SLM

At your current location

1

> **CAUTION**
> **Loss of data recording services**
> This procedure removes the SLM from service. Make sure
> that another device assumes the data recording services of the
> SLM that you remove from service, before you attempt this
> procedure. Make sure that the other device has the data
> storage capacity to assume the recording.

Obtain a replacement card. Make sure that the replacement card has the
same PEC and PEC suffix, as the card that you replace.

2   Make sure that you have a backup SLM tape.

If you	Do
have a backup SLM tape	step 3
do not have a backup SLM tape	step 84

> *Note:* The backup tape must contain copies of all of the disk files on the
> SLM that you will replace.

At the MAP terminal

3   To access the CM level of the MAP display, type

>MAPCI;MTC;CM

and press the Enter key.

Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC   PMC
 0   no   cpu 1   .     .   yes    .     .     .    .
```

4   Determine if the computing module (CM) plane that contains the SLM you
want to replace also contains the inactive CPU.

> *Note:* The active CPU is the CPU shown under the Act header on the
> MAP display. In the example in step 3, the active CPU is CPU 1.

If the CM plane contains the	Do
inactive CPU	step 5

NT9X44
in a SuperNode SE CM/SLM (continued)

If the CM plane contains the	Do
active CPU	step 12

5   Determine if the inactive CPU is jammed.

> ***Note:*** The word yes under the Jam header indicates that the inactive CPU is jammed. A blank field indicates that the CPU is not jammed.

If the inactive CPU is	Do
not jammed	step 6
jammed	step 8

At the CM reset terminal for the inactive CPU

6

<table>
<tr><td></td><td>

DANGER
Loss of service
Make sure that you do not jam the active CPU. A cold restart occurs when you jam the active CPU while the CM is not in sync. The word Active on the top banner of the display identifies the reset terminal for the active CPU.
</td></tr>
</table>

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

```
Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

NT9X44
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

8   Determine if the CM is synchronized.

> ***Note:*** A dot (.) or EccOn under the Sync header indicates that the CM is synchronized. The word no indicates that the CM is not synchronized.

If the CM is	Do
synchronized	step 9
not synchronized	step 13

9   To drop synchronization, type

>DPSYNC

and press the Enter key.

If the response is	Do
About to drop sync with CPU n active. The inactive CPU is JAMMED. Do you want to continue? Please confirm ("YES", "Y", "NO", or "N"):	step 10
other than listed here	step 84

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU n.
```

At the CM reset terminal for the inactive CPU

11   Wait until A1 flashes on the reset terminal for the inactive CPU.

> ***Note:*** Allow approximately 5 min for A1 to start to flash.

If A1	Do
flashes	step 13
does not flash	step 84

12   Perform the procedure *Activity switch with memory match* in this document. Complete the procedure and return to this point.

NT9X44
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

13

> ⚠ **WARNING**
> **Loss of service**
> Make sure that the CM runs on the clock of the active CPU.
> A cold restart or a system image reload can occur if you
> power down the inactive side of the CM. Do not power down
> the inactive side of the CM while the CM runs on the clock of
> the inactive CPU.

To determine if the CM runs on the clock of the inactive CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM runs on the clock of the	Do
inactive CPU	step 14
active CPU	step 15

14   To run the CM on the clock of the active CPU, perform the procedure
Switching the clock source in this document. Complete the procedure and
return to this point.

15   To access the CMMNT level of the MAP display, type

>CMMNT

and press the Enter key.

Example of a MAP display:

NT9X44
in a SuperNode SE CM/SLM (continued)

```
CM   Sync  Act  CPU0  CPU1  Jam  Memory  CMMnt  MC   PMC
 0    no   cpu 0  .     .    yes    .      .     .    .

Traps:          Per minute =     0      Total =     5

AutoLdev:       Primary = SLM 0 DISK  Secondary =  SLM 1
DISK

Image Restartable = No image test since last restart

Next image restart type =  WARM

Last CM REXTST executed

System memory in kbytes as of  14:39:07
Memory (kbytes): Used = 105984 Avail =  12800 Total =
118784
```

16   Determine if the primary autoload device is on the same side of the switch as the active CPU or the inactive CPU.

Note: The primary autoload device appears on the right of the Primary header. In the example in step 15, the primary autoload device is the disk of SLM 0.

If the primary autoload device is on the same side of the switch as the	Do
active CPU	step 23
inactive CPU	step 17

17   To change the primary autoload device to a device on the same side of the switch as the active CPU, type

>AUTOLD SLM slm_number device_type

and press the Enter key.

where

   slm_number
      is the number of the active CPU (0 or 1)

   device_type
      is the type of SLM device (DISK or TAPE)

Example of a MAP response:

```
New autoload route has been set.
```

18   To access the DIRP level of the MAP display, type

    >IOD;DIRP

    and press the Enter key.

19   To determine if there are any active files for each subsystem on the SLM to be made busy, type

    >query ssys

    and press the Enter key.

    where

        ssys
          is the active subsystem (AMA, OM, or JF)

20   To close any active files for each subsystem on the SLM to be made busy, type

    >close ssys [active]

    and press the Enter key.

    where

        ssys
          is the active subsystem (AMA, OM, or JF)

21   Demount the volume by typing

    >DMNT ssys vol_name [paralel]

    and pressing the Enter key.

    where

        ssys
          is the subsystem (AMA, OM, or JF)

        vol_name
          is the name of the volume to be demounted

        [paralel]
          indicates that the volume is a parallel volume

    Example of a MAP response:

```
UPDATING VOLUME INFORMATION FOR
vol_name:  vol_no IN pool_type POOL
pool_no, pool_name
PLEASE CONFIRM ("YES" OR "NO"):.
```

22   Confirm the demount by typing

    >YES

    and pressing the Enter key.

    Example of a MAP response:

NT9X44
in a SuperNode SE CM/SLM (continued)

```
REGULAR VOLUME vol_name WILL BE
TAKEN OUT OF DIRP AS SOON AS
POSSIBLE..
```

23   To access the SLM that corresponds to the inactive CPU, type

>IOD;SLM slm_number

and press the Enter key.

where

> **slm_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP:  .    XFER:  .    DVI :  .    DPPP:  .    DPPU:  .
NOP :  .    SLM :  .    NX25:  .    MLP :  .    SCAI:  .

SLM   0  1
Stat  .  .

SLM 0       device      TAPE        DISK
            status        .           .
            drive       idle        on line
            user                    SYSTEM
```

> **Note:** Dots on the right of the SLM Stat header indicate that the associated SLMs are in service.

24   To manually busy the SLM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
SLM 0 busy passed.
```

Example of a MAP display:

```
SLM   0  1
Stat  M  .
```

> **Note:** The letter M on the right of the SLM Stat header indicates that the associated SLM is manual busy.

25   To offline the SLM, type

>OFFL

and press the Enter key.

> ***Note:*** Wait for the light on the faceplate of the SLM to turn off before you continue this procedure.

Example of a MAP response:

```
SLM 0 now offline. Do not remove SLM card
until disk drive is spun down! This will be
indicated when the SLM card light turns off.
```

26   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

Example of a MAP display:

```
        PMC 0
          .

PORT0:     .
PORT1:     .
```

27   To manually busy the port that corresponds to the inactive CPU, type

>BSY 0 PORT port_number

and press the Enter key.

where

> **port_number**
> is the number of the inactive CPU (0 or 1)

Example input

>BSY 0 PORT 0

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

NT9X44
in a SuperNode SE CM/SLM (continued)

At the CM/SLM shelf

28

DANGER
Equipment damage and possible loss of service
Make sure that you do not switch off the NTDX15 power converter. If you switch off the NTDX15 power converter, the associated CPU plane powers down. The SLM does not power down. The NT9X91 power converter powers the SLM.

WARNING
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Power down the inactive SLM side. To switch off the NT9X91 power converter, press down and release the power switch. The power switch is on the faceplate of the converter.

> *Note:* For CPU 0, NT9X91 the power converter is in slots 1F to 3F. For CPU 1, the NT9X91 power converter is in slots 36F to 38F.

29   Pull open the locking levers on the SLM until the levers are horizontal.

30   Grasp the locking levers. Pull the SLM toward you. Perform this procedure until the locking latch does not allow the SLM to clear the shelf. The locking latch is at the back of the SLM assembly.

---

31   Close the locking levers.

32   Grasp the carrying handle. Use your thumb to press the locking latch while you slide the SLM from the shelf.

33   Place the SLM you removed in an electrostatic discharge (ESD) protective container.

34   Lift the replacement SLM by the carrying handle.

35   Pull open the locking levers until the levers are horizontal.

36   Use your free hand to align the SLM with the slots in the shelf. Carefully slide the SLM into the shelf until the locking latch at the back of the SLM locks.

   Note: You do not need to use excessive force to slide the SLM into the shelf.

37   Slide the SLM completely into the shelf.

38   Use your fingers or thumbs to push on the upper and lower edges of the faceplate. Make sure that the SLM sits completely in the shelf.

39   Close the locking levers.

NT9X44
in a SuperNode SE CM/SLM (continued)

40 Turn on the inactive SLM side. To switch on the NT9X91 SLM power converter, lift and release the power switch. The power switch is on the faceplate of the converter.

> *Note:* For CPU 0, the NT9X91 power converter is in slots 1F to 3F. For CPU 1, the NT9X91 power converter is in slots 36F to 38F.

If the SLM has a	Do
Connor tape drive	step 41
Tandberg tape drive	step 43

41 Insert a scratch tape into the SLM. Use the tape cartridge specified in the application section at the beginning of this procedure.

> *Note:* Insert a tape cartridge with the metal plate to the left. The tape access opening faces towards the top.

42 To lock the tape in place, press down on the locking lever.

Go to step 44.

43 To open the drive door, push on the Tandberg drive door button. Insert a scratch tape with the read and write tape facing the bottom of the drive. Close the drive door.

At the MAP terminal

44 To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

45 To return the manual busy PMC port to service, type

>RTS 0 PORT port_number

and press the Enter key.

where

> **port_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

If the RTS command	Do
passed	step 46
failed	step 84

46 To access the MAP level for the SLM that you replaced, type

>IOD;SLM slm_number

and press the Enter key.

where

slm_number
is the number of the SLM (0 or 1) that you replaced

47   To manually busy the SLM, type

>BSY

and press the Enter key.

If the BSY command	Do
passed	step 48
failed	step 84

48   To spin up the SLM disk, type

>SPIN UP

and press the Enter key.

> ***Note:*** Wait for the light on the faceplate of the SLM to turn on before you continue this procedure.

Example of a MAP response:

```
Disk of SLM 0 is  ready.
```

49   To test the replacement SLM, type

>TST ALL

and press the Enter key.

MAP response:

```
The tape test will write on the tape media.
It is recommended to insert a scratch tape,
otherwise data on the current tape may be
destroyed.  Are you ready to continue?
Please confirm ("YES", "Y", "NO", or "N"):
```

50   To confirm the command, type

>YES

and press the Enter key.

If the response indicates	Do
the TST command passed	step 53
the TST command failed, and the system generated a card list	step 51

NT9X44
in a SuperNode SE CM/SLM (continued)

If the response indicates	Do
other than listed here	step 84

51   Record the location, description, slot number, PEC and the PEC suffix, of the cards on the list.

52   To replace each card on the list, perform the correct card replacement procedure in this document. Replace all the cards on the list and return to this point.

At the CM reset terminal for the inactive CPU

53   To release the jam on the inactive CPU, type

   >\RELEASE   JAM

   and press the Enter key.

   RTIF response:

   ```
   JAM RELEASE DONE
   ```

At the MAP terminal

54   To synchronize the CM, type

   >CM;SYNC

   and press the Enter key.

   Example of a MAP response:

   ```
   Maintenance action submitted.
   Synchronization successful.
   ```

If the response	Do
indicates the SYNC command was successful	step 55
other than listed here	step 84

55   To access the disk administration utility, type

   >DISKADM   disk_name

   and press the Enter key.

   where

   disk_name
   is the name of the disk in the SLM that you replaced (S00D for SLM 0, or S01D for SLM 1)

   Example of a MAP response:

```
Start up command sequence is in progress.
This may take a few minutes.
Administration of device S00D on CM is now active.
DISKADM; CM
```

56   To format the disk, type

>FORMATDISK disk_name

and press the Enter key.

where

> **disk_name**
> is the name of the disk in the SLM replaced (S00D for SLM 0, or S01D for SLM 1)

Example of a MAP response:

```
                    *****  WARNING  *****

Formatting of S00D
will destroy the contents of the disk.

The formatting will:
   allocate 3 spare or alternate sectors per track,
   allocate 16 spare or alternate tracks per disk,
   use the G defect list,
   assign S00D as the name for the disk.
   perform quick format,
   exclude force option.

 Do you want to continue?
 Please confirm ("YES", "Y", "NO", or "N"):
```

57   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:
Formatting of disk has started.This may take 10 to 30 minutes.Formatting of disk has finished.

58   To obtain a list of all the volumes required on the SLM disk, consult office records or operating company personnel.

59   To create a volume, type

>CREATEVOL volume_name volume_size STD

and press the Enter key.

where

NT9X44
in a SuperNode SE CM/SLM (continued)

> **volume_name**
> is the name of the volume (maximum of eight characters)

> **volume_size**
> is the size of the volume in megabytes

Example input:

```
>CREATEVOL  VOL1  20  STD
```

Example of a MAP response:

```
STD volume VOL1 will be created on S00D.

Volume size:                20 megabytes
File Directory size:       128 files
Volume Free Space Map size:  64 segments

Do you want to continue?
Please confirm ("YES", "Y", "NO", or "N"):
```

60 To confirm the command, type

```
>YES
```

and press the Enter key.

MAP response:

```
Creation of the volume is completed.
```

61 Repeat steps 59 and 60 for each volume on the list that you obtained in step 58.

62 To quit the disk administration utility, type

```
>QUIT
```

and press the Enter key.

63 To access the replacement SLM, type

```
>IOD;SLM  slm_number
```

and press the Enter key.

where

> **slm_number**
> is the number of the replacement SLM (0 or 1)

64 To return the SLM to service, type

```
>RTS
```

and press the Enter key.

Example of a MAP response:

```
SLM 0 return to service passed.
```

If the RTS command	Do
passed	step 65
failed	step 84

65   Obtain the backup tape for the SLM that you replaced.

If the SLM has a	Do
Connor tape drive	step 66
Tandberg tape drive	step 68

At the CM/SLM shelf

66   Remove the scratch tape and insert the backup tape into the SLM.

> ***Note:*** Insert a tape cartridge with the metal plate to the left. The tape access opening faces upwards.

67   To lock the tape in place, press down on the locking lever.

Go to step 70.

68   To open the drive door, push on the Tandberg drive door button. To release the tape cartridge, continue to push on the button. To withdraw the scratch tape, pull the scratch tape straight out of the drive unit.

69   Insert the backup tape with the read and write tape that faces the bottom of the drive. To close the door, push on the drive door to close the door.

> ***Note:*** A diagram on the inside of the Tandberg drive door indicates the position of the tape.

At the MAP terminal

70   To access the disk utility, type

>DISKUT

and press the Enter key.

MAP response:

```
Disk utility is now active.
DISKUT:
```

71   To mount the backup tape cartridge, type

>INSERTTAPE   tape_device_name

and press the Enter key.

where

NT9X44
in a SuperNode SE CM/SLM (continued)

> **tape_device_name**
> is the name of the tape device that contains the backupSLM tape (S00T for SLM 0, or S01T for SLM 1)

Example of a MAP response:

```
The INSERT operation may take
up to 5 minutes to tension the tape.
```

72   To list the files stored on the back-up SLM tape, type

>LISTFL tape_device_name

and press the Enter key.

where

> **tape_device_name**
> is the name of the tape device containing the back-upSLM tape (S00T for SLM0 or S01T for SLM1)

73   The next action depends on the name of the disk volume on tape.

If the disk volume name is	Do
the same on the backup tape and the SLM disk	step 74
not the same on the backup tape and the SLM disk	step 76

74   To copy the backup files to the disk in the SLM that you replaced, type

>RESTORE STDVOL disk_volume_name tape_device_name
tape_file_name

and press the Enter key.

where

> **disk_volume_name**
> is the name of the disk (S00D or S01D), and the name of the volume on the disk where you will restore the backup files

> **tape_device_name**
> is the name of the tape device (S00T or S01T) thatcontains the backup SLM tape

> **tape_file_name**
> is the name of the tape file that contains the backup files

Example input

>RESTORE STDVOL ROOTDIR.S00DPMLOADS S00T S00DPMLOADS

75   Repeat step 74 for each disk volume that you created. Go to step 78.

76   To copy the backup files to the disk in the SLM that you replaced, type

>RESTORE STDVOL disk_volume_name tape_device_name
tape_file_name

and press the Enter key.

where

NT9X44
in a SuperNode SE CM/SLM (continued)

       disk_volume_name
          is the name of the disk (S00D or S01D), and the name of the volume
          on the disk where you will restore the backup files

       tape_device_name
          is the name of the tape device (S00T or S01T) that contains the
          backup SLM tape

       tape_file_name
          is the name of the tape file that contains the backup files

Example input

`>RESTORE   STDVOL   S00DPMLOADS   S00T   PMLOADS`

77   Repeat step 76 for each disk volume that you created.

78   To demount the tape cartridge, type

`>EJECTTAPE   tape_device_name`

and press the Enter key.

where

       tape_device_name
          is the name of the tape device (S00T or S01T) thatcontains the backup
          SLM tape

Example of a MAP response:

```
 The eject operation may take up to 5 minutes
 to position the tape to the beginning.
```

79   To quit the disk utility, type

`>QUIT`

and press the Enter key.

80   Determine if an ITOC alarm is present under the IOD header of the alarm
       banner.

If an ITOC alarm is	Do
present	step 81
not present	step 82

81   Perform the correct ITOC alarm clearing procedure in *Alarm and
       Performance Monitoring Procedures*. Complete the procedure and return to
       this point.

82   Your next step depends on the reason that you perform this procedure.

If you perform this procedure as a result of	Do
another maintenance procedure	step 83

NT9X44
in a SuperNode SE CM/SLM (end)

If you perform this procedure as a result of	Do
other than listed here	step 85

83 Return to the maintenance procedure that directed you to this procedure and continue as directed.

84 For additional help, contact the next level of support.

85 The procedure is complete.

NT9X46
in a SuperNode SE CM/SLM

Application

Use this procedure to replace an NT9X46 in a SuperNode SE (SNSE) computing module (CM) or system load module (SLM), as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT9X46	AA	Parallel port interface paddle board	CM/SLM

Refer to the "Index", if you cannot identify the following features for the card you want to replace:

- the product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Activity switch with memory match*
- *Replacing a card*
- *Switching the clock source*
- *Verifying load compatibility of SuperNode cards*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT9X46
in a SuperNode SE CM/SLM (continued)

Summary of Replacing anNT9X46 in a SuperNode SE CM/SLM

Card on active side? —Y→ Switch activity → 1

1 / N

Jam inactive CPU and drop synchronization

CM on clock of inactive CPU? —Y→ Switch clock source → 2

2 / N

Primary autoload device on inact side? —Y→ Change primary autoload device → 3

3 / N

Busy SLM

Busy associated PMC port

Offline SLM

→ 4

4 → Card in CM subsystem? —Y→ Busy associated MC

N

Power down SLM side → 5

Power down CM side → 5

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

5 → Replace card

Power up CM/SLM side

Return MC and PMC port to service

Test SLM

Return SLM to service

Release jam and synchronize CM

End

Replacing anNT9X46 in a SuperNode SE CM/SLM

At your current location

1

	WARNING
⚡	**Possible loss of data recording services** This procedure manually busies the SLM on the same plane as the card that you will replace. Make sure that the SLM on the opposite plane from the card you replace assumes data recording services, before you attempt this procedure.

Obtain a replacement card. Make sure that the replacement card has the same PEC and PEC suffix as the card that you will replace.

2 Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. Complete the procedure and return to this point.

At the MAP terminal

3 To access the CM level of the MAP display, type

>MAPCI;MTC;CM

and press the Enter key.

Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC   PMC
 0   no   cpu 1   .     .  yes    .     .     .    .
```

4 Determine if the SLM assembly that you replaced associates with the active CPU or the inactive CPU.

> *Note:* The active CPU appears under the Act header on the MAP display. In the example in step 3, the active CPU is CPU 1.

If the SLM assembly	Do
associates with the inactive CPU	step 5
associates with the active CPU	step 12

NT9X46
in a SuperNode SE CM/SLM (continued)

5   Determine if the inactive CPU is jammed.

> *Note:* The word yes under the Jam header indicates that the inactive CPU is jammed. A blank field indicates that the CPU is not jammed.

If the inactive CPU	Do
is not jammed	step 8
is jammed	step 6

At the CM reset terminal for the inactive CPU

6

> **DANGER**
> **Loss of service**
> Make sure that you do not jam the active CPU. A cold restart occurs when you jam the active CPU while the CM is not in sync. The word Active on the top banner of the display identifies the reset terminal for the active CPU.

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

```
Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

At the MAP terminal

8   Determine if the CM is synchronized.

> *Note:* A dot (.) or EccOn under the Sync header indicates that the CM is synchronized. The word no indicates that the CM is not synchronized.

If the CM	Do
is synchronized	step 9

NT9X46
in a SuperNode SE CM/SLM (continued)

If the CM	Do
is not synchronized	step 13

9 To drop synchronization, type

>DPSYNC

and press the Enter key.

If the response	Do
is About to drop sync with CPU n active. The inactive CPU is JAMMED. Do you want to continue? Please confirm ("YES", "Y", "NO", or "N"):	step 10
is other than listed here	step 61

10 To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU n.
```

At the CM reset terminal for the inactive CPU

11 Wait until A1 flashes on the reset terminal for the inactive CPU.

> **Note:** Allow approximately 5 min for A1 to start to flash.

If A1	Do
flashes	step 13
does not flash	step 61

12 Perform the procedure *Activity switch with memory match* in this document. Complete the procedure and return to this point.

NT9X46
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

13

⚠️ **WARNING**
Loss of service
Make sure that the CM runs on the active clock of the CPU.
Do not power down the inactive side of the CM while the CM
runs on the clock of the inactive CPU. A cold restart or
system image reload can occur which results in loss of
service.

To determine if the CM runs on the inactive clock of the CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM	Do
runs on the inactive clock of the CPU	step 14
runs on the active clock of the CPU	step 15

14   To run the CM on the active clock of the CPU, perform the procedure
Switching the clock source in this document. Complete the procedure and
return to this point.

15   To access the CMMNT level of the MAP display, type

>CMMNT

and press the Enter key.

Example of a MAP display:

```
CM   Sync  Act  CPU0  CPU1  Jam  Memory  CMMnt  MC   PMC
 0   no   cpu 0  .     .     yes   .      .      .    .

Traps:         Per minute =     0     Total =     5

AutoLdev:       Primary = SLM 0 DISK  Secondary =  SLM 1
DISK

Image Restartable = No image test since last restart

Next image restart type =  WARM

Last CM REXTST executed

System memory in kbytes as of  14:39:07
Memory (kbytes): Used = 105984 Avail =  12800 Total =
118784
```

16   Determine if the primary autoload device is on the side of the switch with the active CPU or the inactive CPU.

    Note: The primary autoload device appears on the right side of the Primary header. In the example in step 15, the primary autoload device is the disk of SLM 0.

If the primary autoload device	Do
is on the side of the switch with the active CPU	step 18
is on the side of the switch with the inactive CPU	step 17

17   To change the primary autoload device to a device on the same side of the switch as the active CPU, type

    >AUTOLD SLM slm_number device_type

and press the Enter key.

where

    slm_number
        is the number of the active CPU (0 or 1)

    device_type
        is the type of SLM device (DISK or TAPE)

Example of a MAP response:

```
New autoload route has been set.
```

18   To access the SLM that corresponds to the inactive CPU, type

    >IOD;SLM slm_number

and press the Enter key.

NT9X46
in a SuperNode SE CM/SLM (continued)

where

> **slm_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP display:

```
IOD
IOC   0  1  2  3
STAT  .  .  .  .

DIRP:  .    XFER:  .    DVI :  .    DPPP:  .    DPPU:  .
NOP :  .    SLM :  .    NX25:  .    MLP :  .    SCAI:  .

SLM   0  1
Stat  .  .

SLM 0      device      TAPE        DISK
           status       .           .
           drive       idle        on line
           user                    SYSTEM
```

> **Note:** Dots on the right side of the SLM Stat header indicate that the associated SLMs are in service.

19 To manually busy the SLM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
SLM 0 busy passed.
```

Example of a MAP display:

```
SLM   0  1
Stat  M  .
```

> **Note:** The letter M on the right of the SLM Stat header indicates that the associated SLM is manual busy.

20 To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

Example of a MAP display:

```
        PMC 0
           .

PORT0:     .
PORT1:     .
```

21   To manually busy the port that corresponds to the inactive CPU, type

>BSY 0 PORT port_number

and press the Enter key.

where

> **port_number**
>   is the number of the inactive CPU (0 or 1)

Example input

>BSY 0 PORT 0

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

22   To spin down the SLM disk, type

>SPIN DOWN

and press the Enter key.

> *Note:* The light on the faceplate of the SLM starts to blink. After 1 min, the light turns off. Wait for the light to turn off before you continue this procedure.

Example of a MAP response:

```
Disk of SLM 0 is  not ready.
```

23   To offline the SLM, type

>OFFL

and press the Enter key.

Example of a MAP response:

```
SLM 0 now offline. Do not remove SLM card
until disk drive is spun down! This will be
indicated when the SLM card light turns off.
```

NT9X46
in a SuperNode SE CM/SLM (continued)

24   The next action depends on if the card that you replaced is part of the CM subsystem or the SLM subsystem.

If the card	Do
is part of the CM subsystem (card is in slot 17R or 22R)	step 25
is part of the SLM subsystem (card is in slot 7R or 28R)	step 32

25   To access the MC level of the MAP display, type

>MC

and press the Enter key.

Example of a MAP display:

```
MC 0     MC 1
 .        .
```

> ***Note:*** In the example, dots under the MC headers indicate that the associated MCs are in service.

26   Determine the state of the message controller (MC) on the inactive CPU.

> ***Note:*** The term mbsy under the MC header indicates that the MC is manual busy.

If the state of the MC	Do
is mbsy	step 28
is not mbsy	step 27

27

> **WARNING**
> **Possible loss of service**
> Make sure that you do not manually busy the MC that corresponds to the active CPU. Do not power down the inactive CPU plane with the MC that associates with the active busied CPU. This action will cause a warm restart.

To manually busy the MC that corresponds to the inactive CPU, type

>BSY mc_number

and press the Enter key.

where

mc_number
is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC busied OK.
```

| If the MC	Do
busied	step 28
did not busy	step 61

At the CM/SLM shelf

28

WARNING
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To power down the inactive CPU plane, press down and release the power switch on the faceplate of the NTDX15 power converter.

> *Note:* For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the NTDX15 power converter is in slots 33F to 35F.

29   Perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

30   To power up the inactive CPU plane, lift and release the power switch on the faceplate of the NTDX15 power converter.

> *Note:* For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the power converter is in slots 33F to 35F.

31   Go to step 37.

NT9X46
in a SuperNode SE CM/SLM (continued)

At the CM/SLM shelf

32

> **DANGER**
> **Equipment damage and possible loss of service**
> Make sure that you do not switch off the NTDX15 power converter. If you switch off the NTDX15 power converter, the associated CPU plane powers down. The SLM does not power down. The NT9X91 power converter powers the SLM.

Power down the inactive SLM side. To switch off the NT9X91 power converter, press down and release the power switch on the faceplate of the converter.

> ***Note:*** For CPU 0, NT9X91 the power converter is in slots 1F to 3F. For CPU 1, the NT9X91 power converter is in slots 36F to 38F.

33

> **WARNING**
> **Equipment damage and possible loss of service**
> Make sure that you remove the interconnect cable from the NT9X46 card on the inactive side only. Make sure that you disconnect the cable in the correct sequence.

Remove the interconnect cable from the NT9X46 cards on the inactive plane as follows:

a For plane 0:

　i Disconnect the cable from the card in slot 17R.

　ii Disconnect the cable from the card in slot 07R.

b For plane 1:

　i Disconnect the cable from the card in slot 22R.

　ii Disconnect the cable from the card in slot 28R.

34 Perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

35 Connect the interconnect cable to the NT9X46 cards on the inactive plane as follows:

a For plane 0:

　i Connect the cable to the card in slot 07R.

　ii Connect the cable to the card in slot 17R.

b For plane 1:

    i   Connect the cable to the card in slot 28R.

    ii   Connect the cable to the card in slot 22R.

36   To power up the inactive SLM side, lift and release the power switch on the faceplate of the NT9X91 power converter.

    Note: For plane 0, the power converter is in slots 1F to 3F. For plane 1, the power converter is in slots 36F to 38F.

At the CM reset terminal for the inactive CPU

37

> **WARNING**
> **You must complete the firmware tests**
> If you do not complete the firmware tests, the CPUs cannot synchronize.

Wait for the switch to complete firmware tests.

Example of an RTIF response:

```
Testing Memory:
Shelf     Slot        PEC Module Status
 00        15         NT9X14EA ......
 00        16         NT9X14EA ......
Waiting for activity...
```

    Note: When firmware testing is in progress, dots appear on the right of the PEC in the firmware testing status line of the RTIF response. As each firmware test is complete, another dot appears until firmware testing for the card is complete. If the dots do not continue to appear and another firmware testing status line does not appear, firmware tests stop. If the dots do not continue to appear and the prompt Waiting for activity does not appear, firmware tests stop.

38   Determine if the firmware tests completed.

    Note: If the firmware tests completed and the CPU powered up, the Waiting for activity message appears.

If the inactive CPU	Do
powered up	step 39
did not turn on	step 61

NT9X46
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

39   To make sure that you are at the PMC level of the MAP display, type

>**CM;PMC**

and press the Enter key.

40   To return the manual busy PMC port to service, type

>**RTS 0 PORT port_number**

and press the Enter key.

where

> **port_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

If the RTS command	Do
passed	step 41
failed	step 61

41   To access the SLM that associates with the card that you replaced, type

>**IOD;SLM slm_number**

and press the Enter key.

where

> **slm_number**
> is the number of the SLM (0 or 1)

42   To manually busy the SLM, type

>**BSY**

and press the Enter key.

If the BSY command	Do
passed	step 43
failed	step 61

43   To spin up the SLM disk, type

>**SPIN UP**

and press the Enter key.

> **Note:** Wait for the light on the faceplate of the SLM to turn on before you continue this procedure.

Example of a MAP response:

```
Disk of SLM 0 is  ready.
```

44   To test the SLM, type

>TST

and press the Enter key.

Example of a MAP response:

```
Minimum SLM 0 tests passed.
```

If the TST command	Do
passed	step 47
failed, and the system generated a card list	step 45
is other than listed here	step 61

45   Record the location, description, slot number, PEC and the PEC suffix of the cards on the list.

46   To replace each card on the list, perform the correct card replacement procedure in this document. Complete the procedure and return to this point.

47   To return the SLM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
SLM 0 return to service passed.
```

If the RTS command	Do
passed	step 48
failed	step 61

48   The next action depends on if the card that you replaced is part of the CM subsystem or the SLM subsystem.

If the card	Do
is part of the CM subsystem (card is in slot 17R or 22R)	step 49

NT9X46
in a SuperNode SE CM/SLM (continued)

If the card	Do
is part of the SLM subsystem (card is in slot 7R or 28R)	step 57

49   Your next step depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of a MC Tbl alarm	step 53
perform this procedure as a result of a PMCFlt alarm	step 53
perform this procedure as a result of a NoTOD alarm	step 53
perform this procedure as a result of a SBsyMC alarm	step 53
perform this procedure as a result of a MBsyMC alarm	step 53
perform this procedure as a result of a CBsyMC alarm	step 53
perform this procedure for any reason other than listed here	step 50

At the MAP terminal

50   To access the MC level of the MAP display, type

>**CM;MC**

and press the Enter key.

51   To return the manual busy MC to service, type

>**RTS mc_number**

and press the Enter key.

where

> **mc_number**
> is the number of the manual busy MC (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC RTS ok.
```

If the RTS command	Do
passed	step 52

If the RTS command	Do
failed	step 61

52   The next action depends on the reason that you performed this procedure.

If you	Do
perform this procedure as a result of a CM alarm clearing procedure	step 53
perform this procedure for any reason other than listed here	step 54

53   Return to the alarm clearing procedure that directed you to this procedure and continue as directed.

54   To access the CM level of the MAP display, type

>CM

and press the Enter key.

55   To test the inactive CPU, type

>TST

and press the Enter key.

Example of a MAP response:

```
The test(s) listed below will destroy
the software load in inactive CPU:

    Static RAM test

Do you want to do the test(s) anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

56   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
 Maintenance action submitted.
 Test passed.
```

If the TST command	Do
passed	step 57

NT9X46
in a SuperNode SE CM/SLM (end)

If the TST command	Do
is other than listed here	step 61

At the CM reset terminal for the inactive CPU

57 To release the jam on the inactive CPU, type

>\RELEASE   JAM

and press the Enter key.

RTIF response:

```
JAM RELEASE DONE
```

At the MAP terminal

58 To synchronize the CM, type

>SYNC

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Synchronization successful.
```

If the response	Do
indicates the SYNC command was successful	step 59
is other than listed here	step 61

59 The next action depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of another mainte-nance procedure	step 60
perform this procedure for any reason other than list-ed here	step 62

60 Return to the maintenance procedure that directed you to this procedure and continue as directed.

61 For additional help, contact the next level of support.

62 The procedure is complete.

NT9X62
in a SuperNode SE CM/SLM

Application

Use this procedure to replace an NT9X62 in a SuperNode SE (SNSE) computing module (CM) or system load module (SLM).

PEC	Suffix	Card name	Shelf or frame name
NT9X62	AA	Two-port subrate DS512 paddle board	CM/SLM
NT9X62	BA	Four-port subrate DS512 paddle board	CM/SLM

Refer to the "Index", if you cannot identify the following features for the card you want to replace:

- the product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Activity switch with memory match*
- *Switching the clock source*
- *Verifying load compatibility of SuperNode cards*

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT9X62
in a SuperNode SE CM/SLM (continued)

Replacing NT9X62 in a SuperNode SE CM/SLM

At your current location

1

> **WARNING**
> **Possible loss of data recording services**
> This procedure manually busies the SLM on the same plane as the card that you replace. Make sure that the SLM on the opposite plane assumes data recording services of the SLM that you remove from service, before you attempt this procedure.

Obtain a replacement card. Make sure that the replacement card has the same PEC and the PEC suffix as the card that you will replace.

2 Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. Complete the procedure and return to this point.

At the MAP terminal

3 To access the CM level of the MAP display, type

>MAPCI;MTC;CM

and press the Enter key.

Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC  PMC
 0   no  cpu 1   .     .  yes    .      .    .   .
```

4 Determine if the SLM assembly that you replace associates with the active CPU or the inactive CPU.

> **Note:** The active CPU appears under the Act header on the MAP display. In the example in step 3, the active CPU is CPU 1.

If the SLM assembly	Do
associates with the inactive CPU	step 5
associates with the active CPU	step 12

5 Determine if the inactive CPU is jammed.

> **Note:** The word yes under the Jam header indicates that the inactive CPU is jammed. A blank field indicates that the CPU is not jammed.

If the inactive CPU	Do
is not jammed	step 6

NT9X62
in a SuperNode SE CM/SLM (continued)

If the inactive CPU	Do
is jammed	step 8

At the CM reset terminal for the inactive CPU

6

> **DANGER**
> **Loss of service**
> Make sure that you do not jam the active CPU. A cold restart
> occurs when you jam the active CPU while the CM is not in
> sync. The word Active on the top banner of the display
> identifies the reset terminal for the active CPU.

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

```
Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

At the MAP terminal

8   Determine if the CM is synchronized.

> ***Note:*** A dot (.) or EccOn under the Sync header indicates that the CM is
> synchronized. The word no indicates that the CM is not synchronized.

If the CM	Do
is synchronized	step 9
is not synchronized	step 13

9   To drop synchronization, type

>DPSYNC

and press the Enter key.

If the response	Do
is About to drop sync with CPU n active. The inactive CPU is JAMMED. Do you want to continue? Please confirm ("YES", "Y", "NO", or "N")	step 10
is other than listed here	step 62

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU n.
```

At the CM reset terminal for the inactive CPU

11   Wait until A1 flashes on the reset terminal for the inactive CPU.

   Note: Allow approximately 5 min for A1 to start to flash.

If A1	Do
flashes	step 13
does not flash	step 62

12   Perform the procedure *Activity switch with memory match* in this document. Complete the procedure and return to this point.

NT9X62
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

13

> **WARNING**
> **Loss of service**
> Make sure that the CM runs on the active clock of the CPU.
> Do not power down the the inactive side of the CM while the
> CM runs on the inactive CPU clock. A cold restart or system
> image reload can occur which results in loss of service.

To determine if the CM runs on the inactive clock of the CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM	Do
runs on the incative clock of the CPU	step 14
runs on the active clock of the CPU	step 15

14 To run the CM on the active clock of the CPU, perform the procedure *Switching the clock source* in this document. Complete the procedure and return to this point.

15 To access the CMMNT level of the MAP display, type

>CMMNT

and press the Enter key.

Example of a MAP display:

```
CM   Sync  Act  CPU0  CPU1  Jam  Memory  CMMnt  MC  PMC
 0    no   cpu 0  .     .    yes    .       .    .   .

Traps:          Per minute =     0      Total =     5

AutoLdev:       Primary = SLM 0 DISK  Secondary =  SLM 1
DISK

Image Restartable = No image test since last restart

Next image restart type =  WARM

Last CM REXTST executed

System memory in kbytes as of  14:39:07
Memory (kbytes): Used = 105984 Avail =  12800 Total =
118784
```

16   Determine if the primary autoload device is on the same side of the switch as the active CPU or the inactive CPU.

> ***Note:*** The primary autoload device appears on the right of the Primary header. In the example in step 15, the primary autoload device is the disk of SLM 0.

If the primary autoload device	Do
is on the same side of the switch as the active CPU	step 18
is on the side of the same side of the switch as the inactive CPU	step 17

17   To change the primary autoload device to a device on the same side of the switch as the active CPU, type

>**>AUTOLD SLM slm_number device_type**

and press the Enter key.

where

> **slm_number**
>   is the number of the active CPU (0 or 1)

> **device_type**
>   is the type of SLM device (DISK or TAPE)

Example of a MAP response:

```
New autoload route has been set.
```

NT9X62
in a SuperNode SE CM/SLM (continued)

18   To access the SLM that corresponds to the inactive CPU, type

>IOD;SLM slm_number

and press the Enter key.

where

slm_number
is the number of the inactive CPU (0 or 1)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP:  .   XFER:  .   DVI :  .   DPPP:  .   DPPU:  .
NOP :  .   SLM :  .   NX25:  .   MLP :  .   SCAI:  .

SLM   0  1
Stat  .  .

SLM 0        device      TAPE        DISK
             status        .           .
             drive       idle        on line
             user                    SYSTEM
```

Note: Dots on the right of the SLM Stat header indicate that the associated SLMs are in service.

19   To manually busy the SLM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
SLM 0 busy passed.
```

Example of a MAP display:

```
SLM   0  1
Stat  M  .
```

Note: The letter M on the right of the SLM Stat header indicates that the associated SLM is manual busy.

20   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

Example of a MAP display:

```
            PMC 0

              .

   PORT0:     .
   PORT1:     .
```

21   To manually busy the port that corresponds to the inactive CPU, type

>BSY   0   PORT   port_number

and press the Enter key.

where

> **port_number**
>   is the number of the inactive CPU (0 or 1)

Example input

>BSY   0   PORT   0

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

22   To offline the SLM, type

>OFFL

and press the Enter key.

> **Note:** Wait for the light on the faceplate of the SLM to turn off before you continue this procedure.

Example of a MAP response:

```
SLM 0 now offline. Do not remove SLM card
until disk drive is spun down! This will be
indicated when the SLM card light turns off.
```

23   To access the MC level of the MAP display, type

>MC

and press the Enter key.

Example of a MAP display:

```
MC 0     MC 1
  .        .
```

> **Note:** In the preceding example, dots under the MC headers indicate that the associated MCs are in service.

NT9X62
in a SuperNode SE CM/SLM (continued)

24   Determine the state of the message controller (MC) on the inactive CPU.

> ***Note:*** The term mbsy under the MC header indicates that the MC is manual busy.

If the state of the MC	Do
is mbsy	step 26
is not mbsy	step 25

25

>
> **WARNING**
> **Possible loss of service**
> Make sure that you do not manually busy the MC that corresponds to the active CPU. Do not power down the inactive CPU plane with the MC that associates with the active busied CPU. This action causes a warm restart.

To manually busy the MC that corresponds to the inactive CPU, type

>BSY mc_ number

and press the Enter key.

where

mc_number
   is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC busied OK.
```

If the MC	Do
busied	step 26
did not busy	step 62

At the CM/SLM shelf

26

	WARNING
	Static electricity damage
	Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To power down the inactive CPU plane, press down and release the power switch on the faceplate of the NTDX15 power converter.

> *Note:* For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the NTDX15 power converter is in slots 33F to 35F.

27   Locate the card on the shelf.

28

	DANGER
	Do not hold card by levers only
	If you hold a card only by the levers, you can break the levers. When you pull the card half way out of the shelf, carefully grasp the card below for more support. While you continue to remove the card from the shelf, make sure that you do not touch any wires or internal parts on the card.

Open the locking levers on the card that you will replace.

**NT9X62
in a SuperNode SE CM/SLM** (continued)

29

> **DANGER**
> **Damage to fiber cables**
> When you handle fiber cables, make sure you do not crimp or
> bend fiber cables to a radius of less than 25 mm (1 in.).

Label each fiber cable. Use Transmit for the top cable and Receive for the bottom cable.

30 Disconnect the fiber cables from the faceplate of the card, as follows:

a Loosen the fiber connections with the locking levers open.

b Carefully push in and turn the fiber cable connector counterclockwise halfway until the connector slides out of the receptacle.

> *Note:* Refer to the following diagram.

NT9X62
in a SuperNode SE CM/SLM (continued)

31   While you grasp the locking levers, carefully pull the card toward you until the card protrudes approximately 2 in. (5.1 cm) from the equipment shelf.

NT9X62
in a SuperNode SE CM/SLM (continued)

32   Hold the card by the faceplate with one hand while you support the bottom edge with the other hand. Carefully pull the card toward you until the card is clear of the shelf.

33   Place the card that you removed in an electrostatic discharge (ESD) protective container.

34   Make sure that the replacement card has the same PEC and PEC suffix as the card that you just removed.

35   Insert the replacement card into the shelf, as follows.

       a   Open the locking levers on the card.

       b   Hold the card by the faceplate with one hand while you support the bottom edge with the other hand. Carefully slide the card into the shelf.

36

DANGER
Damage to fiber cable
When you handle fiber cables, make sure that you do not crimp or bend fiber cables to a radius of less than 25 mm (1 in.).

Connect the fiber cables, as follows:

a   Tighten the cable connections with the locking levers open.

b   Carefully guide the cable connector into the receptacle notches.

c   Push in and turn the cable connector clockwise halfway until the connection is secure.

37   Seat and lock the card.

a   Use your fingers or thumbs to push on the upper and lower edges of the faceplate. Make sure that the card sits completely in the shelf.

b   Close the locking levers to secure the card.

NT9X62
in a SuperNode SE CM/SLM (continued)

38   To power up the inactive CPU plane, lift and release the power switch located on the faceplate of the NTDX15 power converter.

> ***Note:*** For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the power converter is in slots 33F to 35F.

At the CM reset terminal for the inactive CPU

39

WARNING
You must complete the firmware tests
If you do not complete the firmware tests, the CPUs cannot synchronize.

Wait for the switch to complete firmware tests.

Example of an RTIF response:

```
Testing Memory:
Shelf     Slot       PEC Module Status
 00        15        NT9X14EA ......
 00        16        NT9X14EA ......
Waiting for activity...
```

Note: When firmware testing is in progress, dots appear on the right side of the PEC in the firmware testing status line of the RTIF response. As each firmware test is complete, another dot appears until firmware testing for the card is complete. If the dots do not continue to appear and another firmware testing status line does not appear, firmware tests stop. If the

dots do not appear and the prompt Waiting for activity does not appear, firmware tests stop.

40   Determine if the firmware tests completed.

> **Note:** If the firmware tests completed and the CPU powered up, the Waiting for activity message appears.

If the inactive CPU	Do
powered up	step 41
did not power up	step 62

At the MAP terminal

41   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

42   To return the manual busy PMC port to service, type

>RTS 0 PORT port_number

and press the Enter key.

where

> **port_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

If the RTS command	Do
passed	step 43
failed	step 62

43   To access the SLM that associates with the card that you replaced, type

>IOD;SLM slm_number

and press the Enter key.

where

> **slm_number**
> is the number of the SLM (0 or 1)

44   To manually busy the SLM, type

>BSY

and press the Enter key.

NT9X62
in a SuperNode SE CM/SLM (continued)

Example of a MAP response:

```
SLM 0 busy passed.
```

If the BSY command	Do
passed	step 45
failed	step 62

45 To spin up the SLM disk, type

>SPIN UP

and press the Enter key.

> ***Note:*** Wait for the light on the faceplate of the SLM to turn on before you continue this procedure.

Example of a MAP response:

```
Disk of SLM 0 is  ready.
```

46 To test the SLM, type

>TST

and press the Enter key.

Example of a MAP response:

```
Minimum SLM 0 tests passed.
```

If the TST command	Do
passed	step 49
failed, and the system generated a card list	step 47
is other than listed here	step 62

47 Record the location, description, slot number, PEC and PEC suffix of the first card on the list.

48 To replace each card on the list, perform the appropriate card replacement procedure in this document. Complete the procedure and return to this point.

49 To return the SLM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
SLM 0 return to service passed.
```

If the RTS command	Do
passed	step 50
failed	step 62

50   Your next step depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of a MC Tbl alarm	step 54
perform this procedure as a result of a PMCFlt alarm	step 54
perform this procedure as a result of a NoTOD alarm	step 54
perform this procedure as a result of a SBsyMC alarm	step 54
perform this procedure as a result of a MBsyMC alarm	step 54
perform this procedure as a result of a CBsyMC alarm	step 54
perform this procedure for any reason other than listed here	step 51

At the MAP terminal

51   To access the MC level of the MAP display, type

>CM;MC

and press the Enter key.

52   To return the manual busy MC to service, type

>RTS mc_number

and press the Enter key.

where

    mc_number
      is the number of the manual busy MC (0 or 1)

Example of a MAP response:

NT9X62
in a SuperNode SE CM/SLM (continued)

```
Maintenance action submitted.
MC RTS ok.
```

If the RTS command	Do
passed	step 53
failed	step 62

53   The next action depends on the reason that you perform this procedure.

If you	Do
perform the procedure as a result of a CM alarm clearing procedure	step 54
perform the procedure for any reason other than listed here	step 55

54   Return to the alarm clearing procedure that directed you to this procedure and continue as directed.

55   To access the CM level of the MAP display, type

    >CM

    and press the Enter key.

56   To test the inactive CPU, type

    >TST

    and press the Enter key.

    Example of a MAP response:

```
The test(s) listed below will destroy
the software load in inactive CPU:

    Static RAM test

Do you want to do the test(s) anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

57   To confirm the command, type

    >YES

    and press the Enter key.

    Example of a MAP response:

```
Maintenance action submitted.
Test passed.
```

If the TST command	Do
passed	step 58
is other than listed here	step 62

At the CM reset terminal for the inactive CPU

58   To release the jam on the inactive CPU, type

>**RELEASE JAM**

and press the Enter key.

RTIF response:

```
JAM RELEASE DONE
```

At the MAP terminal

59   To synchronize the CM, type

>**SYNC**

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Synchronization successful.
```

If the response	Do
indicates the SYNC command was successful	step 60
indicates the command was other than listed here	step 62

60   The next action depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of another maintenance procedure	step 61
perform this procedure for any reason other than listed here	step 63

NT9X62
in a SuperNode SE CM/SLM (end)

61 Return to the maintenance procedure that directed you to this procedure and continue as directed.

62 For additional help, contact the next level of support.

63 The procedure is complete.

Power converter cards
in a SuperNode SE CM/SLM

Application

Use this procedure to replace the following cards in a SuperNode SE (SNSE) computing module (CM) or system load module (SLM).

PEC	Suffix	Card name	Shelf or frame name
NT9X91	AA	Storage device power converter	CM/SLM
NTDX15	AA, AB	Global power converter ±5V	CM/SLM

Refer to the "Index", if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Activity switch with memory match*
- *Replacing a card*
- *Switching the clock source*
- *Verifying load compatibility of SuperNode cards*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Power converter cards
in a SuperNode SE CM/SLM (continued)

Summary of replacing Power converter cards in a SuperNode SE CM/SLM

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Card on active side? — **Y** → Switch activity — **1**

1 N

Jam inactive CPU and drop synchronization

CM runs on inactive clock of CPU? — **Y** → Switch clock source — **2**

2 N

Primary autoload device on inact side? — **Y** → Change primary autoload device — **3**

3 N

Busy SLM

Busy associated PMC port

Offline SLM

4

4

Card in CM subsystem? — **Y** → Busy associated MC

N

Power down SLM side

Power down CM side

5

5

5 → Replace card

Power up CM/SLM side

Return MC and PMC port to service

Test SLM

Return SLM to service

Release jam and synchronize CM

End

Power converter cards
in a SuperNode SE CM/SLM (continued)

Replacing Power converter cards in a SuperNode SE CM/SLM

At your current location

1

> ⚠ **WARNING**
> **Possible loss of data recording services**
> This procedure manually busies the SLM on the same plane as the card you will replace. Make sure that the SLM on the opposite plane from the card you replace assumes data recording services, before you attempt this procedure.

Obtain a replacement card. Make sure that the replacement card has the same PEC and PEC suffix as the card that you will replace.

2 Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. Complete the procedure and return to this point.

At the MAP terminal

3 To access the CM level of the MAP display, type

>MAPCI;MTC;CM

and press the Enter key.

Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC   PMC
 0   no   cpu 1   .     .  yes   .      .     .    .
```

4 Determine if the SLM assembly that you will replace associates with the active CPU or the inactive CPU.

> *Note:* The active CPU appears under the Act header on the MAP display. In the example in step 3, the active CPU is CPU 1.

If the SLM assembly	Do
associates with the inactive CPU	step 5
associates with the active CPU	step 12

Power converter cards
in a SuperNode SE CM/SLM (continued)

5   Determine if the inactive CPU is jammed.

> *Note:* The word yes under the Jam header indicates that the inactive CPU is jammed. A blank field indicates that the CPU is not jammed.

If the inactive CPU	Do
is not jammed	step 8
is jammed	step 6

At the CM reset terminal for the inactive CPU

6

> **DANGER**
> **Loss of service**
> Make sure that you do not jam the active CPU. A cold restart occurs when you jam the active CPU while the CM is not in sync. The word Active on the top banner of the display identifies the reset terminal for the active CPU.

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

```
Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

At the MAP terminal

8   Determine if the CM is synchronized.

> *Note:* A dot (.) or EccOn under the Sync header indicates that the CM is synchronized. The word no indicates that the CM is not synchronized.

If the CM	Do
is synchronized	step 9

<div align="right">

**Power converter cards
in a SuperNode SE CM/SLM** (continued)

</div>

If the CM	Do
is not synchronized	step 13

9   To drop synchronization, type

>DPSYNC

and press the Enter key.

If the response	Do
is About to drop sync with CPU n active. The inactive CPU is JAMMED. Do you want to continue? is Please confirm ("YES", "Y", "NO", or "N"):	step 10
is other than listed here	step 58

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU n.
```

At the CM reset terminal for the inactive CPU

11   Wait until A1 flashes on the reset terminal for the inactive CPU.

> ***Note:*** Allow approximately 5 min for A1 to start to flash.

If A1	Do
flashes	step 13
does not flash	step 58

12   Perform the procedure *Activity switch with memory match* in this document. Complete the procedure and return to this point.

Power converter cards
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

13

> ⚠ **WARNING**
> **Loss of service**
> Make sure that the CM runs on the active clock of the CPU.
> Do not power down the inactive side of the CM while the CM
> runs on the clock of the inactive CPU. A cold restart or
> system image reload can occur which results in loss of
> service.

To determine if the CM runs on the inactive clock of the CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM	Do
runs on the inactive clock of the CPU	step 14
runs on the active clock of the CPU	step 15

14   To run the CM on the active clock of the CPU, perform the procedure
Switching the clock source in this document. Complete the procedure and
return to this point.

15   To access the CMMNT level of the MAP display, type

>CMMNT

and press the Enter key.

Example of a MAP display:

Power converter cards
in a SuperNode SE CM/SLM (continued)

```
CM    Sync  Act  CPU0   CPU1   Jam   Memory  CMMnt  MC   PMC
 0    no    cpu 0  .      .     yes    .       .     .    .

Traps:          Per minute =    0      Total =     5

AutoLdev:       Primary = SLM 0 DISK   Secondary =  SLM 1
DISK

Image Restartable = No image test since last restart

Next image restart type =  WARM

Last CM REXTST executed

System memory in kbytes as of  14:39:07
Memory (kbytes): Used = 105984 Avail =  12800 Total =
118784
```

16   Determine if the primary autoload device is on the same side of the switch as the active CPU or the inactive CPU.

Note: The primary autoload device appears on the right of the Primary header. In the example in step 15, the primary autoload device is the disk of SLM 0.

If the primary autoload device	Do
is on the same side of the switch as the active CPU	step 18
is on the same side of the switch as the inactive CPU	step 17

17   To change the primary autoload device to a device on the same side of the switch as the active CPU, type

>AUTOLD SLM slm_number device_type

and press the Enter key.

where

slm_number
is the number of the active CPU (0 or 1)

device_type
is the type of SLM device (DISK or TAPE)

Example of a MAP response:

```
New autoload route has been set.
```

18   To access the SLM that corresponds to the inactive CPU, type

>IOD;SLM slm_number

and press the Enter key.

Power converter cards
in a SuperNode SE CM/SLM (continued)

where

> **slm_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP:  .   XFER:  .   DVI :  .   DPPP:  .    DPPU:  .
NOP :  .   SLM :  .   NX25:  .   MLP :  .    SCAI:  .

SLM   0  1
Stat  .  .

SLM 0       device      TAPE       DISK
            status        .          .
            drive       idle       on line
            user                   SYSTEM
```

> **Note:** Dots on the right of the SLM Stat header indicate that the associated SLMs are in service.

19   To manually busy the SLM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
SLM 0 busy passed.
```

Example of a MAP display:

```
SLM   0  1
Stat  M  .
```

> **Note:** The letter M on the right of the SLM Stat header indicates that the associated SLM is manual busy.

20   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

Example of a MAP display:

```
      PMC  0
        .

PORT0:     .
PORT1:     .
```

21   To manually busy the port that corresponds to the inactive CPU, type

>BSY   0   PORT   port_number

and press the Enter key.

where

>   **port_number**
>   is the number of the inactive CPU (0 or 1)

Example input

>BSY   0   PORT   0

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

22   To offline the SLM, type

>OFFL

and press the Enter key.

>   ***Note:*** Wait for the light on the faceplate of the SLM to turn off before you continue this procedure.

Example of a MAP response:

```
SLM 0 now offline. Do not remove SLM card
until disk drive is spun down! This will be
indicated when the SLM card light turns off.
```

23   The next action depends on if the card that you replaced is part of the CM subsystem or the SLM subsystem.

If the card	Do
is part of the CM subsystem (NT9X91)	step 24
is part of the SLM subsystem (NTDX15)	step 31

24   To access the message controller (MC) level of the MAP display, type

>MC

and press the Enter key.

Power converter cards
in a SuperNode SE CM/SLM (continued)

Example of a MAP display:

```
MC 0    MC 1
 .        .
```

> **Note:** In the example, dots under the MC headers indicate that the associated MCs are in service.

25   Determine the state of the MC on the inactive CPU.

> **Note:** The term mbsy under the MC header means that the MC is manual busy.

If the state of the MC	Do
is mbsy	step 27
is not mbsy	step 26

26

⚠ **WARNING**
Possible loss of service
Make sure that you do not manually busy the MC that corresponds to the active CPU. Do not power down the inactive CPU plane with the MC that associates with the active busied CPU. This action will cause a warm restart.

To manually busy the MC that corresponds to the inactive CPU, type

>BSY mc_ number

and press the Enter key.

where

   mc_number
      is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC busied OK.
```

If the MC	Do
busied	step 27
did not busy	step 58

Power converter cards
in a SuperNode SE CM/SLM (continued)

At the CM/SLM shelf

27

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To power down the inactive CPU plane, press down and release the power switch on the faceplate of the NTDX15 power converter.

> *Note:* For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the NTDX15 power converter is in slots 33F to 35F.

28   Perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

29   To power up the inactive CPU plane, lift and release the power switch located on the faceplate of the NTDX15 power converter.

> *Note:* For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the power converter is in slots 33F to 35F.

30   Go to step 34.

Power converter cards
in a SuperNode SE CM/SLM (continued)

At the CM/SLM shelf

31

> **DANGER**
> **Equipment damage and possible loss of service**
> Make sure that you do not switch off the NTDX15 power converter. If you switch off the NTDX15 power converter, the associated CPU plane powers down. The SLM does not power down. The NT9X91 power converter powers the SLM.

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Power down the inactive SLM side. Press down and release the power switch located on the faceplate of the converter to switch off the NT9X91 power converter.

> *Note:* For CPU 0, NT9X91 the power converter is in slots 1F to 3F. For CPU 1, the NT9X91 power converter is in slots 36F to 38F.

32 Perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

33 Lift and release the power switch on the faceplate of the NT9X91 power converter to power up the inactive SLM side.

> *Note:* For plane 0, the power converter is in slots 1F to 3F. For plane 1, the power converter is in slots 36F to 38F.

At the CM reset terminal for the inactive CPU

34

> **WARNING**
> **You must complete the firmware tests**
> If you do not complete the firmware tests, the CPUs cannot synchronize.

Wait for the switch to complete firmware tests.

Example of an RTIF response:

```
Testing Memory:
Shelf     Slot       PEC Module Status
 00        15        NT9X14EA ......
 00        16        NT9X14EA ......
Waiting for activity...
```

Note: When firmware testing is in progress, dots appear on the right of the PEC in the firmware testing status line of the RTIF response. As each firmware test is complete, another dot appears until firmware testing for the card is complete. If the dots do not continue to appear and another firmware testing status line does not appear, firmware tests stop. If the dots do not appear and the prompt Waiting for activity does not appear, firmware tests stop.

35   Determine if the firmware tests completed.

Note: If the firmware tests completed and the CPU powered up, the Waiting for activity message appears.

If the inactive CPU	Do
powered up	step 36
did not power up	step 58

At the MAP terminal

36   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

37   To return the manual busy PMC port to service, type

>RTS 0 PORT port_number

and press the Enter key.

where

> **port_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

If the RTS command	Do
passed	step 38
failed	step 58

Power converter cards
in a SuperNode SE CM/SLM (continued)

38   To access the SLM that associates with the card that you replaced, type

   >IOD;SLM slm_number

   and press the Enter key.

   where

   slm_number
       is the number of the SLM (0 or 1)

39   To manually busy the SLM, type

   >BSY

   and press the Enter key.

   Example of a MAP response:

   SLM 0 busy passed.

If the BSY command	Do
passed	step 40
failed	step 58

40   To spin up the SLM disk, type

   >SPIN UP

   and press the Enter key.

   Note: Wait for the light on the faceplate of the SLM to turn on before you
   continue this procedure.

   Example of a MAP response:

   Disk of SLM 0 is ready.

41   To test the SLM, type

   >TST

   and press the Enter key.

   Example of a MAP response:

   Minimum SLM 0 tests passed.

If the TST command	Do
passed	step 44
failed, and the system generated a card list	step 42
is other than listed here	step 58

Power converter cards
in a SuperNode SE CM/SLM (continued)

42   Record the location, description, slot number, PEC and PEC suffix of the first card on the list.

43   To replace each card on the list, perform the appropriate card replacement procedure in this document. Complete the procedure and return to this point.

44   To return the SLM to service, type

>**RTS**

and press the Enter key.

Example of a MAP response:

```
SLM 0 return to service passed.
```

If the RTS command	Do
passed	step 45
failed	step 58

45   The next action depends on if the card that you replaced is part of the CM subsystem or the SLM subsystem.

If the card	Do
is part of the CM subsystem (NT9X91)	step 46
is part of the SLM subsystem (NTDX15)	step 54

46   Your next step depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of a MC Tbl alarm	step 50
perform this procedure as a result of a PMCFlt alarm	step 50
perform this procedure as a result of a NoTOD alarm	step 50
perform this procedure as a result of a SBsyMC alarm	step 50
perform this procedure as a result of a MBsyMC alarm	step 50
perform this procedure as a result of a CBsyMC alarm	step 50
perform this procedure for any reason other than listed here	step 47

Power converter cards
in a SuperNode SE CM/SLM (continued)

At the MAP terminal

47   To access the MC level of the MAP display, type

>**CM;MC**

and press the Enter key.

48   To return the manual busy MC to service, type

>**RTS mc_number**

and press the Enter key.

where

mc_number
is the number of the manual busy MC (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC RTS ok.
```

If the RTS command	Do
passed	step 49
failed	step 58

49   The next action depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of a CM alarm clearing procedure	step 50
performed this procedure for any reason other than listed here	step 51

50   Return to the alarm clearing procedure that directed you this procedure and continue as directed.

51   To access the CM level of the MAP display, type

>**CM**

and press the Enter key.

52   To test the inactive CPU, type

>**TST**

and press the Enter key.

Example of a MAP response:

```
The test(s) listed below will destroy
the software load in inactive CPU:

    Static RAM test

Do you want to do the test(s) anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

53   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Test passed.
```

If the TST command	Do
passed	step 54
is other than listed here	step 58

At the CM reset terminal for the inactive CPU

54   To release the jam on the inactive CPU, type

>\RELEASE JAM

and press the Enter key.

RTIF response:

```
JAM RELEASE DONE
```

At the MAP terminal

55   To synchronize the CM, type

>SYNC

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Synchronization successful.
```

If the response	Do
indicates the SYNC command was successful	step 56

Power converter cards
in a SuperNode SE CM/SLM (end)

If the response	Do
is other than listed here	step 58

56   The next action depends on the reason that you perform this procedure.

If you	Do
perform this procedure for another maintenance procedure	step 57
perform this procedure for any reason other than listed here	step 59

57   Return to the maintenance procedure that directed you to this procedure and continue as directed.

58   For additional help, contact the next level of support.

59   The procedure is complete.

Replace system cards
in a SuperNode SE CM/SLM

Application

Use this procedure to replace the following cards in a Supernode SE computing module (CM) or system load module (SLM).

PEC	Suffix	Card Name	Shelf or frame name
NT9X10	AA	33-MHz 88100 BRISC CPU card	CM/SLM
NT9X10	BA, CA	60-MHz 88100 BRISC CPU card	CM/SLM
NT9X12	AA, AB, AC, AD	CPU port card	CM/SLM
NT9X13	MA, MB	Supernode SE core processor card	CM/SLM
NT9X14	DB	24-Mbyte memory card	CM/SLM
NT9X14	EA	96-Mbyte memory card	CM/SLM
NT9X21	AA	CM-bus terminator paddle board	CM/SLM
NT9X21	AB	Bus terminator paddle board	CM/SLM
NT9X26	AB, CA	Remote terminal interface paddle (RTIF) board	CM/SLM
NT9X26	DA, DB, DC, EA, FA	BRISC RTIF paddle board	CM/SLM
NT9X86	AA/AB	Dual-port message controller card	CM/SLM

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix

Replace system cards
in a SuperNode SE CM/SLM (continued)

- provisioned shelf

- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Activity switch with memory match*

- *Replacing a card*

- *Switching the clock source*

- *Verifying load compatibility of SuperNode cards*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Replace system cards
in a SuperNode SE CM/SLM (continued)

Summary of Replace system cards in a SuperNode SE CM/SLM

Card on active side? → **Y** → Switch activity → 1

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

1 **N**

Jam inactive CPU and drop synchronization

CM runs on inactive clock of CPU? → **Y** → Switch clock source → 2

2 **N**

Primary autoload device on inact side? → **Y** → Change primary autoload device → 3

3 **N**

Busy SLM

Busy associated PMC port

Offline SLM

Busy associated MC

4

4 → Power down CM side

Replace card

Power up CM side

Return MC and PMC port to service → 5

5 → Test SLM

Return SLM to service

Release jam and synchronize CM

Restore image volumes

End

Replace system cards
in a SuperNode SE CM/SLM (continued)

Replace system cards in a SuperNode SE CM/SLM

At your current location

1

> **DANGER**
> **Possible loss of data recording services**
> This procedure manually busies the SLM on the same plane
> as the card that you replace. Make sure that the SLM on the
> opposite plane from the card you replace assumes data
> recording services, before you attempt this procedure.

> **DANGER**
> **Possible incorrect memory configuration**
> Replacement of an NT9X14DB with an NT9X14EA can
> result in a memory configuration that is not supported. If you
> replace an NT9X14DB with an NT9X14EA, contact the next
> level of support.

> **DANGER**
> **Possible incorrect memory configuration**
> Do not leave empty slots between memory cards or between
> the first memory card and a two-port message controller card.
> The empty slots result in a memory configuration that is not
> supported.

> **DANGER**
> **Possible incorrect memory configuration**
> Do not mix NT9X14DB and NT9X14EA cards. Mixed cards
> result in a memory configuration that is not supported. Keep
> NT9X14EA cards together. Place the NT9X14EA cards next
> to the CPU card.

Obtain a replacement card. Make sure that the replacement card has the
same PEC and PEC suffix as the card that you will replace.

2   Perform the procedure *Verifying load compatibility of SuperNode cards* in this
document. Complete the procedure and return to this point.

**Replace system cards
in a SuperNode SE CM/SLM** (continued)

At the MAP terminal

3 To access the CM level of the MAP display, type

>MAPCI;MTC;CM

and press the Enter key.

Example of a MAP display:

```
CM  Sync  Act  CPU0  CPU1 Jam Memory CMMnt  MC  PMC
 0   no  cpu 1   .     .  yes    .     .     .   .
```

4 Determine if the SLM assembly that you replace associates with the active CPU or the inactive CPU.

> ***Note:*** The active CPU appears under the Act header on the MAP display. In the example in step 3, the active CPU is CPU 1.

If the SLM assembly	Do
associates with the inactive CPU	step 5
associates with the active CPU	step 12

5 Determine if the inactive CPU is jammed.

> ***Note:*** The word yes under the Jam header indicates that the inactive CPU is jammed. A blank field indicates that the CPU is not jammed.

If the inactive CPU	Do
is not jammed	step 6
is jammed	step 8

At the CM reset terminal (RTIF) for the inactive CPU

6

> **DANGER**
> **Loss of service**
> Make sure that you do not jam the active CPU. A cold restart occurs when you jam the active CPU while the CPU is not in sync. The word Active on the top banner of the display identifies the reset terminal for the active CPU.

To jam the inactive CPU, type

>\JAM

and press the Enter key.

RTIF response:

Replace system cards
in a SuperNode SE CM/SLM (continued)

```
Please confirm: (YES/NO)
```

7   To confirm the command, type

>YES

and press the Enter key.

RTIF response:

```
JAM DONE
```

At the MAP terminal

8   Determine if the CM is synchronized

> **Note:** A dot (.) or EccOn under the Sync header indicates that the CM is
> synchronized. The word no indicates that the CM is not synchronized.

If the CM	Do
is synchronized	step 9
is not synchronized	step 13

9   To drop synchronization, type

>DPSYNC

and press the Enter key.

If the response	Do
is About to drop sync with CPU 1 active. The inactive CPU is JAMMED. Do you want to continue? Please confirm ("YES", "Y", "NO", or "N"):	step 10
is other than listed here	step 70

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Running in simplex mode with active CPU 1.
```

Replace system cards
in a SuperNode SE CM/SLM (continued)

At the CM reset terminal (RTIF) for the inactive CPU

11 Wait until A1 flashes on the reset terminal for the inactive CPU.

> ***Note:*** Allow approximately 5 min for A1 to start to flash.

If A1	Do
flashes	step 13
does not flash	step 70

12 Perform the procedure *Activity switch with memory match* in this document. Complete the procedure and return to this point.

At the MAP terminal

13

> ⚠ **WARNING**
> **Loss of service**
> Make sure that the CM runs on the active clock of the CPU. Do not power down the inactive side of the CM while the CM runs on the clock of the inactive CPU. A cold restart or system image reload can occur which results in loss of service.

Determine if the CM runs on the inactive clock of the CPU, type

>INSYNC

and press the Enter key.

Example of a MAP response:

```
CPU pair is NOT insync, CPU 0 is active.
CM is running on active CPU clock.

Memory Error Correction is ENABLED.

The Inactive CPU is Jammed.
```

If the CM	Do
runs on the clock of the inactive CPU	step 14
runs on the clock of the active CPU	step 15

Replace system cards
in a SuperNode SE CM/SLM (continued)

14   To run the CM on the clock of the active CPU, perform the procedure *Switch the clock source* in this document. Complete the procedure and return to this point.

15   To access the CMMNT level of the MAP display, type

>**CMMNT**

and press the Enter key.

Example of a MAP display:

```
CM    Sync  Act  CPU0  CPU1  Jam  Memory  CMMnt  MC  PMC
 0     no  cpu 0   .     .    yes    .       .    .    .

Traps:          Per minute =    0      Total =    5

AutoLdev:   Primary = SLM 0 DISK  Secondary =  SLM 1 DISK

Image Restartable = No image test since last restart

Next image restart type =  WARM

Last CM REXTST executed

System memory in kbytes as of  14:39:07
Memory (kbytes): Used = 105984 Avail =  12800 Total =
118784
```

16   Determine if the primary autoload device is on the side of the switch with the active CPU or the inactive CPU.

> **Note:** The primary autoload device appears on the right of the Primary header. In the example in step 15, the primary autoload device is the disk of SLM 0.

If the primary autoload device	Do
is on the same side of the switch as the active CPU	step 18
is on the same side of the switch as the inactive CPU	step 17

17   To change the primary autoload device to a device on the same side of the switch as the active CPU, type

>**AUTOLD   SLM   slm_number   device_type**

and press the Enter key.

where

> **slm_number**
>   is the number of the active CPU (0 or 1)

> **device_type**
>   is the type of SLM device (DISK or TAPE)

**Replace system cards
in a SuperNode SE CM/SLM** (continued)

Example of a MAP response:

```
New autoload route has been set.
```

18   To access the SLM that corresponds to the inactive CPU, type

>IOD;SLM   slm_number

and press the Enter key.

where

    slm_number
       is the number of the inactive CPU (0 or 1)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .   .   .   .

DIRP:  .    XFER:  .    DVI :  .    DPPP:  .    DPPU:  .
NOP :  .    SLM :  .    NX25:  .    MLP :  .    SCAI:  .

SLM   0  1
Stat  .  .

SLM 0  primary  device        TAPE            DISK
                status         .               .
                drive          idle            on line
                user                           SYSTEM
```

Note: Dots on the right of the SLM Stat header indicate that the associated SLMs are in service.

If the SLM Stat header	Do
has dots	step 19
is other than listed here	step 70

19   To manually busy the SLM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
SLM 0 busy passed.
```

Example of a MAP display:

```
SLM   0  1
Stat  M  .
```

Replace system cards
in a SuperNode SE CM/SLM (continued)

Note: The letter M on the right of the SLM Stat header indicates that the associated SLM is manual busy.

If the SLM	Do
busied	step 22
did not busy	step 70

20   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

Example of a MAP display:

```
        PMC  0
          .

PORT0:    .
PORT1:    .
```

21   To manually busy the port that corresponds to the inactive CPU, type

>BSY 0 PORT port_number

and press the Enter key.

where

   port_number
        is the number of the inactive CPU (0 or 1)

Example input

>BSY 0 PORT 0

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

22   To offline the SLM, type

>OFFL

and press the Enter key.

   Note: Wait for the light on the faceplate of the SLM to turn off before you continue this procedure.

Example of a MAP response:

**Replace system cards
in a SuperNode SE CM/SLM** (continued)

```
SLM 0 now offline. Do not remove SLM card
until disk drive is spun down! This will be
indicated when the SLM card light turns off.
```

If the SLM	Do
offlined	step 23
did not offline	step 70

23   To access the MC level of the MAP display, type

>MC

and press the Enter key.

Example of a MAP display:

```
CM 0
  MC 0    MC 1
     .       .
```

    Note: In the example, dots under the MC headers indicate that the associated MCs are in service.

24   Determine the state of the message controller (MC) on the inactive CPU.

    Note: The term mbsy under the MC header indicates that the MC is manual busy.

If the state of the MC	Do
is mbsy	step 26
is not mbsy	step 25

25

> ⚠ **WARNING**
> **Possible loss of service**
> Make sure that you do not manually busy the MC that corresponds to the active CPU. Do not power down the inactive CPU plane with the MC that associates with the active busied CPU. This action will cause a warm restart.

To manually busy the MC that corresponds to the inactive CPU, type

>BSY mc_ number

and press the Enter key.

where

Replace system cards
in a SuperNode SE CM/SLM (continued)

mc_number
is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC busied OK.
```

If the MC	Do
busied	step 26
did not busy	step 70

At the CM/SLM shelf

26

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To power down the inactive CPU plane, press down and release the power switch on the faceplate of the NTDX15 power converter.

Note: For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the NTDX15 power converter is in slots 33F to 35F.

27 Perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

28 To power up the inactive CPU, lift and release the power switch on the faceplate of the NTDX15 power converter.

Note: For CPU 0, the NTDX15 power converter is in slots 4F to 6F. For CPU 1, the power converter is in slots 33F to 35F.

Replace system cards
in a SuperNode SE CM/SLM (continued)

At the CM reset terminal (RTIF) for the inactive CPU

29

> **WARNING**
> **You must complete the firmware tests**
> If you do not complete the firmware tests, the CPUs cannot
> synchronize.

Wait for the switch to complete firmware tests.

Example of an RTIF response:

```
Testing Memory:
Shelf     Slot        PEC Module Status
 00        15         NT9X14EA ...
 00        16         NT9X14EA ...
Waiting for activity...
```

> **Note:** When firmware testing is in progress, dots appear on the right of the
> PEC in the firmware testing status line of the RTIF response. As each
> firmware test is complete, another dot appears until firmware testing for the
> card is complete. If the dots do not continue to appear and another
> firmware testing status line does not appear, firmware tests stop. If the
> dots do not appear and the prompt Waiting for activity does not appear,
> firmware tests stop.

30   Determine if the firmware tests completed.

> **Note:** If the firmware tests completed and CPU powered up, the Waiting
> for activity message appears.

If the inactive CPU	Do
powered up	step 31
did not turn on	step 70

At the MAP terminal

31   To access the PMC level of the MAP display, type

>CM;PMC

and press the Enter key.

32   To return the manual busy PMC port to service, type

>RTS 0 PORT port_number

and press the Enter key.

where

Replace system cards
in a SuperNode SE CM/SLM (continued)

> **port_number**
> is the number of the inactive CPU (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
Passed.
```

If the RTS command	Do
passed	step 33
failed	step 70

33 To access the SLM that associates with the card that you replaced, type

>IOD;SLM slm_number

and press the Enter key.

where

> **slm_number**
> is the number of the SLM (0 or 1)

34 To return the SLM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
SLM 0 return to service passed.
```

If the RTS command	Do
passed	step 35
failed	step 70

35 The next action depends on the type of card that you replaced.

If the card that you replaced	Do
is an NT9X14	step 36
is an NT9X26	step 38
is other than listed here	step 39

36 To access the Memory level of the MAP display, type

>CM;MEMORY

and press the Enter key.

Example of a MAP display:

**Replace system cards
in a SuperNode SE CM/SLM** (continued)

```
CM 0  Plane 0  |  Plane 1
               |
     54321 P|P 12345
     .....     .....
```

37   To test the card that you replaced, type

>TST CARD card_number

and press the Enter key.

where

   card_number
       is the number of the memory card that you replaced(0 to 5)

Example of a MAP response:

```
Maintenance action submitted.
Memory test OK.
```

If the TST command	Do
passed	step 39
failed	step 70

At the CM reset terminal (RTIF) for the inactive CPU

38   To determine the result of the last self test, type

>\SELF TEST

and press the Enter key.

Example of a MAP response:

```
SELF TEST RESULTS: ROM OK  RAM OK  9X26 OK
```

If the self test	Do
passed	step 39
failed	step 70

39   Your next step depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of a MC Tbl alarm	step 43
perform this procedure as a result of a PMCFlt alarm	step 43

Replace system cards
in a SuperNode SE CM/SLM (continued)

If you	Do
perform this procedure as a result of a PMCTbl alarm	step 43
perform this procedure as a result of a NoTOD alarm	step 43
perform this procedure as a result of a SBsyMC alarm	step 43
perform this procedure as a result of a MBsyMC alarm	step 43
perform this procedure as a result of a CBsyMC alarm	step 43
perform this procedure for any reason other than listed here	step 40

At the MAP terminal

40   To access the MC level of the MAP display, type

>**CM;MC**

and press the Enter key.

41   To return the manual busy MC to service, type

>**RTS mc_ number**

and press the Enter key.

where

  mc_number
     is the number of the manual busy MC (0 or 1)

Example of a MAP response:

```
Maintenance action submitted.
MC RTS ok.
```

If the RTS command	Do
passed	step 42
failed	step 70

**Replace system cards
in a SuperNode SE CM/SLM** (continued)

42   The next step depends on the type of switch and the software load.

If the switch	Do
is a SuperNode SE Series 20 or 60 with software release BASE06	step 43
is other than listed here	step 45

43   To record all the card changes in the history database for each card, type

>SWAPHW   shelf_no   slot_no   side_no

and press the Enter key.

where

> **shelf_no**
> is the number of the shelf (0 or1)
>
> **slot_no**
> is the number of the slot (1 to 38)
>
> **side_no**
> is the side of the CM (front or back)

Example of a MAP response:

```
WARNING: You have indicated that the following circuit
pack has been replaced.  Please verify that this
accurately reflects which circuit pack has been changed,
and that the displayed PEC code matches what is currently
equipped in that slot:

Site  Flr  RPOs  Shf  Description  Slot  EQPEC
HOST  00   A00   DPCC 0  18  CM 0;0;0  19  9X13BC

Do you wish to continue?
Please confirm (YES", Y", NO" N") Y" or YES",

Card replacement has been recorded.
```

If the response	Do
is Card replacement has been record-ed.	step 45
is Aborted. Card replacement has NOT been recorded.	step 44
is other than listed here	step 70

Replace system cards
in a SuperNode SE CM/SLM (continued)

> ***Note:*** The specified card joins the list of the cards that you replaced. The actual updates to the mismatch history database do not occur until the next manual SYNC attempt.

44   Enter the SWAPHW command as you did in step 43.

45   Determine the reason for the return of the circuit card.

If the fault	Do
is memory fault correctable mismatches	step 46
is mismatches other than memory fault correctable	step 46
is REx test failures: manual or auto	step 50
is manual test failures	step 50
is other failures	step 50

46   To retrieve the mismatch logs that associate with the mismatches, type

     >LOGUTIL

     and press the Enter key.

47   Collect or print all MM and MFC logs.

If software	Do
is BCS33 or earlier	step 50
is BCS34 or later	step 48

48   To retrieve the MMINFO logs that associate with the memory fault correctable mismatches, type

     >MMINFO DECODE ALL

     and press the Enter key.

49   Print out all MMINFO logs.

50   Obtain associated failure logs.

51   Write the PEC and serial number of the returned card on the first page of the log printout.

> ***Note:*** If a minimum of two cards on a card list are returned, you only need one set of logs. If the failures are not the same, use separate logs as required for each card. On the return label of cards that do not have logs attached, indicate the card PEC code and serial number that the logs accompany.

     Example: Logs returned with card NT9X13BC, serial number bnt123455mm

If the fault	Do
is a memory fault correctable mismatches	step 52

Replace system cards
in a SuperNode SE CM/SLM (continued)

If the fault	Do
is mismatches other than memory fault correctable	step 54
is REX failures: manual or auto	step 56
is manual test failures	step 58
is other than listed here	step 60

52   Complete one return label (form 24-115) for each card that returns. Make sure that you include the following information:

- NT PEC
- serial number
- release number
- return authorization number from customer service
- BCS software release used at the time of replacement
- name of your company
- office identifier code
- your name
- site name

53   Enter the following in the failure description section of the label:

- reason for failure(failure caused by a memory fault correctable (MFC) ``nn" faults in "dd" days (example: 5 MFC in 4 days)
- the slot and CPU number(example: slot 23, CPU 1)
- that the logs are retrieved with the cards(example: logs are attached)
- for software release Base 06, include associated MFC logs
- if you removed other cards at the same time as the returned card(example: NT9X13BC, slot 20, CPU 1, #bnt12345mmm NT9x14DB, slot 14, CPU 0, #dgh744ggg)

Go to step 62.

54   Complete one return label (form 24-115) for each card returns. Make sure that you include the following information:

- NT PEC
- serial number
- release number
- return authorization number from customer service
- BCS software release used at the time of replacement
- name of your company
- office identifier code

Replace system cards
in a SuperNode SE CM/SLM (continued)

       •   your name

       •   site name

55   Enter the following in the failure description section of the label:

       •   reason for failure(example: failure occurred during manual/auto Rex)

       •   the slot and CPU number(example: slot 23, CPU 1)

       •   that the logs are retrieved with the cards(example: logs are attached)

       •   if the card is on the recommended card list and in what order(example: first on card list or did not appear on card list

       •   if you remove other cards at the same time as the returned card(example: NT9X13BC, slot 20, CPU 1, #bnt12345mmm #2 on card list NT9x14DB, slot 14, CPU 0, #dgh744ggg, not on card list)

    Go to step 62.

56   Complete one return label (form 24-115) to return for each card. Make sure that you include the following information:

       •   NT PEC

       •   serial number

       •   release number

       •   return authorization number from customer service

       •   BCS software release used at the time of replacement

       •   name of your company

       •   office identifier code

       •   your name

       •   site name

57   Enter the following in the failure description section of the label:

       •   failure due to memory fault correctable (MFC) ``nn" faults in "dd" days (example: 5 MFC in 4 days)

       •   the slot and CPU number(example: slot 23, CPU 1)

       •   that the logs are retrieved with the cards(example: logs are attached)

       •   if you removed other cards at the same time as the returned card(example: NT9X13BC, slot 20, CPU 1, #bnt12345mmm NT9x14DB, slot 14, CPU 0, #dgh744ggg)

    Go to step 62.

58   Complete one return label (form 24-115) for each card that will return. Make sure that you include the following information:

       •   NT PEC

       •   serial number

       •   release number

       •   return authorization number from customer service

Replace system cards
in a SuperNode SE CM/SLM (continued)

- BCS software release used at the time of replacement

- name of your company

- office identifier code

- your name

- site name

59   Enter the following in the failure description section of the label:

- reason for failure. Provide a short summary of occurrences and conditions.(example: Manual tests failed. Card reported in card list)

- the slot and CPU number(example: slot 23, CPU 1)

- that the logs are retrieved with the cards(example: logs are attached)

    Note: Include any available past logs. Past logs can indicate the possible fault.

- if the card is on the recommended card list and in what order(example: first on card list or did not appear on card list

- if you removed other cards at the same time as the returned card(example: NT9X13BC, slot 20, CPU 1, #bnt12345mmm, #2 on card list   NT9x14DB, slot 14, CPU 0, #dgh744ggg, not on card list)

    Go to step 62.

60   Complete one return label (form 24-115) for each card that you remove. Make sure that you include the following information:

- NT PEC

- serial number

- release number

- return authorization number from customer service

- BCS software release used at the time of replacement

- name of your company

- office identifier code

- your name

- site name

61   Enter the following in the failure description section of the label:

- reason for failure. Provide a short summary of occurrences and conditions.(example: Cannot sync. manual tests failed. Rotated cards. Able to sync with this card removed)

- the slot and CPU number(example: slot 23, CPU 1)

- that the logs are retrieved with the cards(example: attached logs)

    Note: Include any available past logs. Past logs can indicate the possible fault).

Replace system cards
in a SuperNode SE CM/SLM (continued)

- if the card is on the recommended card list and in what order(example: first on card list or did not appear on card list

- if you removed other cards at the same time as the returned card(example: NT9X13BC, slot 20, CPU 1, #bnt12345mmm, #2 on card list   NT9x14DB, slot 14, CPU 0, #dgh744ggg, not on card list)

62 When you complete this procedure, return the cards and associated documentation. To return the cards and associated documentation, refer to the procedure *Returning a card or assembly.*

63 Your next step depends on the reason that you perform this procedure.

If you	Do
perform this procedure as a result of the CM alarm clearing procedure	step 64
perform this procedure for any reason other than listed here	step 65

64 Return to the alarm clearing procedure that directed you this procedure and continue as directed.

65 To access the CM level of the MAP display, type

>**CM**

and press the Enter key.

66 To test the inactive CPU, type

>**TST**

and press the Enter key.

Example of a MAP response:

```
The test(s) listed below will destroy
the software load in inactive CPU:

    Static RAM test

Do you want to do the test(s) anyway?
Please confirm: ("YES", "Y", "NO", or "N"):
```

67 To confirm the command, type

>**YES**

and press the Enter key.

If the TST command	Do
passed	step 68
is other than listed here	step 70

Replace system cards
in a SuperNode SE CM/SLM (end)

At the CM reset terminal (RTIF) for the inactive CPU

68   To release the jam on the inactive CPU, type

>**RELEASE   JAM**

and press the Enter key.

RTIF response:

```
JAM RELEASE DONE
```

At the MAP terminal

69   To synchronize the CM, type

>**SYNC**

and press the Enter key.

Example of a MAP response:

```
Maintenance action submitted.
Synchronization successful.
```

If the response	Do
indicates the SYNC command was successful	step 71
is other than listed here	step 70

70   For additional help, contact the next level of support.

71   The procedure is complete.

3 Digital carrier module card replacement procedures

Introduction

This chapter provides card replacement procedures for the digital carrier module (DCM) and the digital echo suppressor (DES). The first section in the chapter provides diagrams of DCM and DES shelf designs.

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) are in the chapter "Frame supervisory panel and maintenance supervisory panel card replacement procedures".

Application

This section identifies the DCM or DES card(s) discussed in the replacement procedure.

Common procedures

This section lists common procedures in the DCM or DES card replacement procedure. A common procedure is a series of steps that you repeat within maintenance procedures. The procedure for the removal and replacement of a card. Common procedures are in the common procedures chapter in this NTP.

Do not go to the common procedures unless the step-action procedure directs you.

Action

This procedure provides a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in office records:

- the serial number of the card that you replaced

- the date that you replaced the card

- the reason that you replaced the card

DCM shelf layouts

Application

This module provides a frame design diagram for the digital carrier equipment (DCE) frame. The module also provides shelf diagrams for the following:

- digital carrier module (DCM), with two power converters
- DCM, with one power converter
- digital echo suppressor (DES)

Note: The frame and shelf designs on the following pages are common. The shelves in your office can have differences.

Control complex cards
in a digital carrier module

Application

Use this procedure to replace the following cards in the shelves or frames listed.

PEC	Suffix	Card name	Shelf or frame name
NT2X32	AA	Master processor card	Digital carrier module (DCM), Digital echo supressor (DES)
NT2X33		Control card	DCM, DES
NT2X34		Message supervision card	DCM, DES
NT2X37		Tone card	DCM, DES
NT2X38		Signaling timing card	DCM, DES

Refer to the "Index", if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Replacing a card*
- *Loading a PM*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Control complex cards
in a digital carrier module (continued)

       │
       ▼
┌─────────────┐
│ End         │
└─────────────┘
```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Control complex cards
in a digital carrier module (continued)

Replacing Control complex cards in a digital carrier module

At the MAP terminal

1

CAUTION
Loss of service
This procedure includes directions to manually busy a DCM
or DES. If you manually busy a DCM or DES, service
degradation can occur. Perform this procedure only if you
need to restore out-of-service components. In other events,
perform this procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card has the
same PEC and PEC suffix, as the card that you remove.

2   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

Example of a MAP display:

```
          SysB     ManB     OffL     CBsy     ISTb     InSv
    PM      6        1        0        0       23       24
```

3   To post the PM associated with the card that you replace, type

>POST   pm_type   pm_no

and press the Enter key.

where

   pm_type
       is the type of PM (DCM, DES)

   pm_no
       is the PM number (0 to 511)

Example of a MAP display:

```
              SysB     ManB     OffL     CBsy     ISTb     InSv
      PM        6        1        0        0       23       24
      DCM       1        0        0        0        1        4
DCM     0     InSv
```

Control complex cards
in a digital carrier module (continued)

4   Determine the state of the PM unit that associates with the card you want to replace.

If the state of the PM unit	Do
is ISTb, InSv, SysB, or CBsy	step 5
is ManB	step 7
is OffL	step 13

5   A maintenance flag (Mtce) can appear. The flag indicates that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status line before you proceed to the next step.

6   To manually busy the PM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
OK.
DCM 0 Bsy
```

If the BSY command	Do
passed	step 7
failed	step 15

At the shelf

7

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To replace the card, use the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> *Note:* If the card you replace has switches, make sure that the switches on the replacement card have the same settings.

Control complex cards
in a digital carrier module (end)

8   The next action depends on your reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 9
did not direct you to this procedure	step 10

9   Return to the maintenance procedure that directed you to this procedure and continue as directed.

At the MAP terminal

10   To load the PM, type

>LOADPM

and press the Enter key.

If the LOADPM command	Do
failed	step 11
passed	step 12

11   Perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

12   To return the PM to service, type

>RTS

and press the Enter key.

If the RTS command	Do
passed	step 16
passed, but the PM is ISTb as a result of a command protocol violation	step 14
failed	step 15

13   To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

14   A minor problem is present, but the PM can process traffic. For additional help, contact the next level of support.

15   For additional help, contact the next level of support.

16   The procedure is complete.

NT2X35
in a digital carrier module

Application

Use this procedure to replace an NT2X35 card in a digital carrier module (DCM), as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT2X35	AA	DCM interface card	DCM

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Replace a card*
- *Loading a PM*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT2X35
in a digital carrier module (continued)

Replacing an NT2X35 in a digital carrier module

At the MAP terminal

1

> **WARNING**
> **Loss of service**
> This procedure includes directions to manually busy a DCM
> DS1 trunk, a timing carrier, or a P-side node. Service
> degradation or service power failure can occur if you
> manually busy any of these components. Perform this
> procedure only if you need to restore out-of-service
> components. In other events, perform this procedure during
> periods of low traffic.

> **WARNING**
> **Loss of service**
> If you insert a defective NT2X35 card, the system can take
> the DCM out of service. Test the replacement card before
> you insert the card or use a tested spare.

Obtain a replacement card. Make sure that the replacement card has the
same PEC and PEC suffix as the card that you remove.

2   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

Example of a MAP display:

```
                SysB     ManB     OffL     CBsy     ISTb     InSv
PM                6        1        0        0       23       24
```

3   To post the DCM for the card that you replace, type

>POST DCM pm_no

and press the Enter key.

where

pm_no
is the PM number (0 to 511)

Example of a MAP display:

NT2X35
in a digital carrier module (continued)

```
                        SysB    ManB    OffL    CBsy    ISTb    InSv
            PM            6       1       0       0      23      24
            DCM           1       0       0       0       1       4

DCM     0    ISTb
```

4   To display a list of P-side links, type

>**TRNSL   P**

and press the Enter key.

Example #1 of a MAP response:

```
No P-side node.
LINK  0: Carrier of Class - Timing
LINK  1: Carrier of Class - Trunk
LINK  2: Carrier of Class - Trunk
LINK  3: Carrier of Class - Trunk
LINK  4: Carrier of Class - Trunk
```

Example #2 of a MAP response:

```
LINK  0: LM  REM1 00 0  0;CAP:MS;STATUS:MBsy    ;MsgCond:CLS
LINK  1: LM  REM1 00 0  1;CAP:MS;STATUS:OK      ;MsgCond:OPN
LINK  2: LM  REM1 00 0  2;CAP: S;STATUS:OK
LINK  3: Carrier of Class - Trunk
LINK  4: Carrier of Class - Trunk
```

5   Record the following information for links to P-side nodes:

- link number for carrier links

- carrier class for carrier links

- link number

- node type

- node site name

- frame number

- unit number

  Note 1: Links correspond to NT2X35 cards as follows: link 0 = slot 3, link 1 = slot 4, link 2 = slot 5, link 3 = slot 6, and link 4 = slot 7. Links are carriers of a class or links to P-side nodes (line modules or remote line modules).

  Note 2: Link number and carrier class identify the carrier links. In example #1 in step 4, link 0 is a carrier of class - timing. Note that example #1 shows that the DCM does not connect to a P-side node. P-side node links are identified by link number, node type, node site name, frame

NT2X35
in a digital carrier module (continued)

number, and unit number. In example #2 in step 4, link 0 is a message link to a line module (LM), site name REM1, frame 00, and unit 0.

If the link	Do
is an LM or remote line module (RLM)	step 6
is a carrier of class - timing	step 8
is a carrier of class - trunk	step 21

6   To post the LM that associates with the link, type

>POST   pm_type   site   frame_no   unit_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (LM, RLM)
>
> **site**
> is the LM site name (alphanumeric)
>
> **frame_no**
> is the number of the frame (0 to 511)
>
> **unit_no**
> is the number of the unit (0 to 9)

Example of a MAP display:

```
                    SysB     ManB     OffL     CBsy     ISTb     InSv
        PM           0        0        2        0        4       71
        LM           0        0        0        0        2        2

LM  REM1 00 0   ISTb                 TSTFAIL LINKS
RGen : 0 InSv        1 InSv
POST:
```

If the PM	Do
is InSv, ISTb, SysB, or CBsy	step 7
is ManB or Offl	step 28

7   To manually busy the PM, type

>BSY

and press the Enter key.

Example of a MAP display:

NT2X35
in a digital carrier module (continued)

```
                     SysB    ManB    OffL    CBsy    ISTb    InSv

Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.</td></tr>
</table>

To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

Note: If the card that you replace has switches, make sure that the switches on the replacement card have the same settings.

29   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 30
did not direct you to this procedure	step 31

30   Return to the maintenance procedure that directed you to this procedure and continue as directed.

At the MAP terminal

31   The next action depends on the type of link supported by the card that you replaced.

If the link	Do
is to a line module (LM or RLM)	step 32
is a carrier of class - timing	step 35
is a carrier of class - trunk	step 36

NT2X35
in a digital carrier module (continued)

32 To load the PM, type

 >LOADPM

 and press the Enter key.

 Example of a MAP response:

```
LM REM1 00 0  LoadPM  PASSED
Load ESA passed
```

If the LOADPM command	Do
passed	step 44
failed	step 33

33 To load the PM unit, use the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

34 To return the PM to service, type

 >RTS

 and press the Enter key.

 Example of a MAP response:

```
rts
OK.
InSvce Tests Initiated
OK.
```

If RTS command	Do
passed	step 44
failed	step 43

35 To return the timing carrier to service, type

 >RTS list_no

 and press the Enter key.

 where

  list_no
   is the list number (0 to 4) for the carrier

 Example of a MAP response:

```
OK.
```

If the RTS command	Do
passed	step 44

NT2X35
in a digital carrier module (continued)

If the RTS command	Do
failed	step 43

36   To return the trunking carrier to service, type

>RTS list_no

and press the Enter key.

where

  list_no
    is the list number (0 to 4) for the carrier

Example of a MAP response:

OK.

If the RTS command	Do
passed	step 37
failed	step 43

37   To access the TTP level of the MAP display, type

>TTP

and press the Enter key.

38   To post the link that associates with the card you replace, type

>POST D DCM pm_no link_no

and press the Enter key.

where

  pm_no
    is the PM number (0 to 999)

  link_no
    is the number of the link (0 to 19) that associates with the cardyou
    replace

If	Do
a set of circuits is posted	step 39
the response is NO CKT, SET IS EMPTY	step 44

39   To return all circuits to service, type

>RTS ALL

and press the Enter key.

NT2X35
in a digital carrier module (end)

40   To determine why the component is offline, consult operating company personnel. Continue this procedure as directed by office personnel.

41   To determine if you can remove the active timing link from service, consult the next level of support. Continue this procedure as directed by your next level of support.

42   A minor problem is present, but the DCM can process traffic. For additional help, contact the next level of support.

43   For additional help, contact the next level of support.

44   The procedure is complete.

NT2X36
in a digital carrier module

Application

Use this procedure to replace the NT2X36 card in a digital carrier module (DCM), as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT2X36	AA	Network interface card	DCM

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames this card replacement book documents.

Common procedures

This common procedure refers to the following common procedures:

- *Replacing a card*
- *Loading a PM*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT2X36
in a digital carrier module (continued)

Replacing an NT2X36 in a digital carrier module

At the MAP terminal

1

> **WARNING**
> **Loss of service**
> This procedure includes directions to manually busy a DCM.
> Service degradation can occur if you manually busy a DCM.
> Perform this procedure only if you need to restore
> out-of-service components. In other events, perform this
> procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card has the
same PEC and PEC suffix as the card that you remove.

2   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

Example of a MAP display:

```
          SysB      ManB      OffL      CBsy      ISTb      InSv
PM          6         1         0         0        23        24
```

3   To post the PM that associates with the card you replace, type

>POST   DCM   pm_no

and press the Enter key.

where

pm_no
is the PM number (0 to 511)

Example of a MAP display:

```
          SysB      ManB      OffL      CBsy      ISTb      InSv
PM          6         1         0         0        23        24
DCM         1         0         0         0         1         4

DCM     0    InSv
```

NT2X36
in a digital carrier module (continued)

4   Determine the state of the PM unit that associates with the card you want to
replace.

If the state of the PM unit	Do
is ISTb, InSv, SysB, or CBsy	step 5
is ManB	step 7
is OffL	step 31

5   A maintenance flag (Mtce) can appear. A Mtce flag indicates that
system-initiated maintenance tasks are in progress. Wait until the flag
disappears from the status line before you proceed to the next step.

6   To manually busy the DCM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
OK.DCM 0 Bsy
```

If the BSY command	Do
passed	step 7
failed	step 33

7   To display a list of C-side links, type

>TRNSL C

and press the Enter key.

Example #1 of a MAP response:

```
LINK  0: NET 0  1  1;CAP:MS;STATUS:OK    ,P;MsgCond:OPN
LINK  0: NET 1  1  1;CAP:MS;STATUS:OK    ,P;MsgCond:OPN
LINK  1:NET 0  1  5;CAP: S;STATUS:OK    ,P
LINK  1: NET 1  1  5;CAP: S;STATUS:OK    ,P
LINK  2: NET 0  1  9;CAP: S;STATUS:OK    ,P
LINK  2: NET 1  1  9;CAP: S;STATUS:OK    ,P
LINK  3: NET0  1 13;CAP: S;STATUS:OK    ,P
LINK  3: NET 1  1 13;CAP: S;STATUS:OK    ,P
```

Example #2 of a MAP response:

NT2X36
in a digital carrier module (continued)

```
LINK  0: ENET 0  0 18 04   ;CAP:MS;STATUS:OK  ,C  ;MsgCond:OPN
LINK  0: ENET 1  0 28 04   ;CAP:MS;STATUS:OK  ,C  ;MsgCond:OPN
LINK  1: ENET 0  0 18 05   ;CAP: S;STATUS:OK  ,C
LINK  1: ENET 1  0 28 05   ;CAP: S;STATUS:OK  ,C
LINK  2: ENET 0  0 18 06   ;CAP: S;STATUS:OK  ,C
LINK  2:ENET 1  0 28 06   ;CAP: S;STATUS:OK  ,C
LINK  3: ENET 0  018 07   ;CAP: S;STATUS:OK  ,C
LINK  3: ENET 1  0 28 07   ;CAP: S;STATUS:OK  ,C
```

If the network	Do
is a junctored network (JNET)	step 8
is a enhanced network (ENET)	step 13

8   Record the JNET plane, pair, and link for each C-side link.

   Note 1: The NT2X36 network interface card supports eight C-side links for each card - four links to each network plane.

   Note 2: The network plane, pair, and link are in columns 4, 5, and 6 of the response to a TRNSL command at the PM level. Example #1 in step 7 demonstrates this response. For example, C-side link 3 at the bottom of the display is on network plane 1, pair 1, link 13.

9   To access the NET level of the MAP display, type

   >NET

   and press the Enter key.

   Example of a MAP display:

```
Net                   11111  11111  22222  22222  33
Plane 01234  56789  01234  56789  01234  56789  01
0    L..
1    ...
```

10   To access the LINKS level of the MAP display, type

   >LINKS pair_no

   and press the Enter key.

   where

   pair_no
      is the number of the pair (0 to 31) that connects to the C-side links

   Example of a MAP display:

NT2X36
in a digital carrier module (continued)

```
Net                          11111  11111  22222  22222  33
  Plane  01234  56789  01234  56789  01234  56789  01
     0    L..
     1    ...
Net   1  Links              11   1111   1111   2222   2222   2233
      Plane  0123   4567   8901   2345   6789   0123   4567   8901
         0   ....   ....   ..P.   ....   .P..   .P..   .P..   .P..
         1   ....   ....   ..P.   ....   .P..   .P..   .P..   .P..
      Links  3333   3333   4444   4444   4455   5555   5555   6666
      Plane  2345   6789   0123   4567   8901   2345   6789   0123
         0   .P..   .P..   .P..   .P..   ..P.   ..-.   ..-.   ..-.
         1   .P..   .P..   .P..   .P..   ..P.   ..-.   ..-.   ..-.
```

11   To manually busy one of the links you recorded in step 8, type

>**BSY plane_no link_no**

and press the Enter key.

where

   plane_no
       is the number of the plane for the link (0 or 1)

   link_no
       is the link number (0 to 63)

Example of a MAP response:

```
 BSY 0 30OK
```

12   Repeat step 11 for all C-side links.

       Go to step 19.

13   Record the ENET plane, shelf, card, and link for each C-side link.

       Note 1: The NT2X36 network interface card supports eight C-side links
       for each card - four links to each network plane.

       Note 2: The network plane, shelf, card, and link are in columns 4, 5, 6, and
       7 of the response to a TRNSL command at the PM level. In example #2 in
       step 7 demonstrates this response. For example, C-side link 3 at the
       bottom of the display is on network plane 1, shelf 0, card 28, link 07.

14   To access the NET level of the MAP display, type

>**NET**

and press the Enter key.

Example of a MAP display:

```
ENET      System   Matrix  Shelf 0 1 2 3
 Plane 0 CSLink    .              F - - -
 Plane 1 CSLink     .              F - - -ENET:
```

15   To access the SHELF level of the MAP display, type

>**SHELF   shelf_no**

and press the Enter key.

where

> **shelf_no**
> is the number of the shelf (0 to 7) that connects to the C-side links

Example of a MAP display:

```
ENET      System   Matrix  Shelf 0 1 2 3
 Plane 0 CSLink     .              F - - -
 Plane 1 CSLink     .              F - - -

SHELF 00  Slot         1111111 11122222 22222333 333333
             123456 78 90123456 78901234 56789012 345678
Plane 0    .   .   IF ....---- -------- ----.... .  .
Plane 1    .   .   IF ....---- -------- ----.... .  .
```

16   To access the CARD level of the MAP display, type

>**CARD   card_no**

and press the Enter key.

where

> **card_no**
> is the number of the card (1 to 38) that connects to the C-side links

Example of a MAP display:

```
ENET      System   Matrix  Shelf 0 1 2 3
 Plane 0 CSLink     .              F - - -
 Plane 1 CSLink     .              F - - -

SHELF 00  Slot         1111111 11122222 22222333 333333
             123456 78 90123456 78901234 56789012 345678
Plane 0    .   .   IF ....---- -------- ----.... .  .
Plane 1    .   .   IF ....---- -------- ----.... .  .

 CARD 32   Front:     Back:   DS-512 Links
           Xpt        I/F     0 1 2 3
 Plane 0    .          .      . . . -
 Plane 1    .          .      . . . -
```

17   To manually busy the link that you recorded in step 13, type

>**BSY   plane_no   LINK   link_no**

and press the Enter key.

where

> **plane_no**
> is the number of the plane (0 or 1) for the link

NT2X36
in a digital carrier module (continued)

> **link_no**
> is the link number (0 to 63)

Example of a MAP response:

```
Request to MAN BUSY ENET Plane:0 Shelf:00 Slot:32 Link:01 submitted.
Request to MAN BUSY ENET Plane:0 Shelf:00 Slot:32 Link:01 passed.
```

18   Repeat step 17 for each link that you recorded in step 13. Go to step 19.

At the shelf

19

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> ***Note:*** If the card that you replace has switches, make sure that the switches on the replacement card have the same settings.

20   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 21
did not direct you to this procedure	step 22

21   Return to the maintenance procedure that directed you to this procedure and continue as directed.

At the MAP terminal

22   The next action depends on the type of network in the office.

If you	Do
are working on a JNET	step 23
are working on an ENET	step 25

23   To return to service one of the network links that associates with the PM unit, type

>RTS   plane_no   link_no

and press the Enter key.

where

    plane_no
      is the number of the plane (0 or 1) for the link

    link_no
      is the link number (0 to 63)

If the link	Do
returned to service and more manual busy links are present	step 24
returned to service and more manual busy links are not present	step 27
did not return to service	step 33

24   Repeat step 23 for all C-side links to the DCM.

Go to step 26.

25   To return the link to service, type

>RTS   plane_no   LINK   link_no

and press the Enter key.

where

    plane_no
      is the number of the plane (0 or 1) for the link

    link_no
      is the link number (0 to 63)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01 submitted.
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01 passed.
```

If the link	Do
returned to service	step 26
did not return to service	step 33

26   Repeat step 25 for all C-side links to the DCM. Complete the procedure and go to step 27.

NT2X36
in a digital carrier module (end)

27	To access the PM level of the MAP display, type
	>PM
	and press the Enter key.
28	To load the DCM, type
	>LOADPM
	and press the Enter key.

If the LOADPM command	Do
failed	step 29
passed	step 30

29	Perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.
30	To return the DCM to service, type
	>RTS
	and press the Enter key.

If the RTS command	Do
passed	step 34
passed, but the DCM is ISTb as a result of a command protocol violation	step 32
failed	step 33

31	To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.
32	A minor problem is present, but the DCM can process traffic. For additional help, contact the next level of support.
33	For additional help, contact the next level of support.
34	The procedure is complete.

NT3X65
in a digital echo suppressor

Application

Use this procedure to replace a NT3X65 card in a digital carrier module (DCM) digital echo suppressor (DES), as the following table shows.

PEC	Suffix	Card name	Shelf or frame name
NT3X65	AA	Digital echo suppressor tone CPU	DCM digital echo suppressor

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames this card replacement book.

Common procedures

This procedure refers to *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT3X65
in a digital echo suppressor (continued)

Summary of replacing an NT3X65 in a digital echo suppressor

Post the DCM

↓

Manually busy network links for the card

↓

Replace the card

↓

Return the network links to service

↓

End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Replacing NT3X65 in a digital echo suppressor

At the MAP terminal

1

> ⚠ **CAUTION**
> **Potential loss of service**
> This procedure includes directions to manually busy network links. Service degradation can occur if you manually busy a network link. Perform this procedure only if you need to restore out-of-service components. In other events, perform this procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card has the same PEC and PEC suffix as the card you remove.

2   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

Example of a MAP display:

```
          SysB      ManB      OffL      CBsy      ISTb      InSv
   PM       6         1         0         0        23        24
```

3   To post the PM that associates with the card you replace, type

>POST   DCM   pm_no

and press the Enter key.

where

> **pm_no**
> is the PM number (0 to 511)

Example of a MAP display:

```
          SysB      ManB      OffL      CBsy      ISTb      InSv
   PM       6         1         0         0        23        24
   DCM      1         0         0         0         1         4
   DCM      0       InSv
```

4   To display a list of C-side links,type

>TRNSL   C

NT3X65
in a digital echo suppressor (continued)

and press the Enter key.

Example #1 of a MAP response:

```
LINK  0: NET 0  1  1;CAP:MS;STATUS:OK      ,P;MsgCond:OPN
LINK  0: NET 1  1  1;CAP:MS;STATUS:OK      ,P;MsgCond:OPN
LINK  1: NET 0  1  5;CAP: S;STATUS:OK      ,P
LINK  1: NET 1  1  5;CAP: S;STATUS:OK      ,P
LINK  2: NET 0  1  9;CAP: S;STATUS:OK      ,P
LINK  2: NET 1  1  9;CAP: S;STATUS:OK      ,P
LINK  3: NET 0  1 13;CAP: S;STATUS:OK      ,P
LINK  3: NET 1  1 13;CAP: S;STATUS:OK
```

Example #2 of a MAP response:

```
LINK  0: ENET 0  0 18 04   ;CAP:MS;STATUS:OK   ,C ;MsgCond:OPN
LINK  0: ENET 1  0 28 04   ;CAP:MS;STATUS:OK   ,C ;MsgCond:OPN
LINK  1: ENET 0  0 18 05   ;CAP: S;STATUS:OK   ,C
LINK  1: ENET 1  0 28 05   ;CAP: S;STATUS:OK   ,C
LINK  2: ENET 0  0 18 06   ;CAP: S;STATUS:OK   ,C
LINK  2: ENET 1  0 28 06   ;CAP: S;STATUS:OK   ,C
LINK  3: ENET 0  0 18 07   ;CAP: S;STATUS:OK   ,C
LINK  3: ENET 1  0 28 07   ;CAP: S;STATUS:OK
```

5   Identify the links that associate with the card that you replace.

> *Note:* Links correspond to NT3X65 cards as follows: link 0 = slot 3, link 1 = slot 4, link 2 = slot 5, link 3 = slot 6, link 4 = slot 7, and link 5 = slot 8.

6   The next step depends on the type of network in your office.

If the network	Do
is a junctor network (JNET)	step 7
is an enhanced network (ENET)	step 12

7   Record the JNET plane, pair, and link number for both links that associate with the card you replace.

> *Note:* The network plane, pair, and link are in columns 4, 5, and 6 of the response to a TRNSL command at the PM level. Example #1 in step 4 demonstrates this response. For example, C-side link 3 at the bottom of the display is on network plane 1, pair 1, link 13.

8   To access the NET level of the MAP display, type

>NET

and press the Enter key.

Example of a MAP display:

```
        Net                        11111  11111  22222  22222  33
        Plane  01234  56789        01234  56789  01234  56789  01
           0     L..
           1     ...
```

9   To access the LINKS level of the MAP display, type

>LINKS pair_no

and press the Enter key.

where

> **pair_no**
>   is the number of the pair (0 to 31) that connects to the C-side links

Example of a MAP display:

```
Net                        11111  11111  22222  22222  33
 PlNet ane  01234  56789  01234  56789  01234  56789  01
   0     L..
   1     ...
Net    1  Links               11  1111  1111  2222  2222  2233
         Plane  0123  4567  8901  2345  6789  0123  4567  8901
            0   ....  ....  ..P.  ....  .P..  .P..  .P..  .P..
            1   ....  ....  ..P.  ....  .P..  .P..  .P..  .P..
         Links  3333  3333  4444  4444  4455  5555  5555  6666
         Plane  2345  6789  0123  4567  8901  2345  6789  0123
            0   .P..  .P..  .P..  .P..  ..P.  ..-.  ..-.  ..-.
            1   .P..  .P..  .P..  .P..  ..P.  ..-.  ..-.  ..-.
```

10   To manually busy one of the links that you recorded in step 7, type

>BSY plane_no link_no

and press the Enter key.

where

> **plane_no**
>   is the number of the plane for the link (0 or 1)
> **link_no**
>   is the link number (0 to 63)

Example of a MAP response:

```
BSY 0 30OK
```

11   Repeat step 10 for the other C-side links.

Complete the procedure and go to step 18.

NT3X65
in a digital echo suppressor (continued)

12   Record the ENET plane, shelf, card, and link number for both links that associate with the card you replace.

> **Note 1:** The NT2X36 network interface card supports eight C-side links for each card - four links to each network plane.

> **Note 2:** The network plane, shelf, card, and link are in columns 4, 5, 6, and 7 of the response to a TRNSL command at the PM level. Example #2 in step 4 demonstrates this response. For example, C-side link 3 at the bottom of the display is on network plane 1, shelf 0, card 28, link 07.

13   To access the NET level of the MAP display, type

>NET

and press the Enter key.

Example of a MAP display:

```
ENET      System   Matrix  Shelf 0 1 2 3 .
  Plane 0 CSLink                 F - - -
  Plane 1 CSLink      .          F - - -

ENET:
```

14   To access the SHELF level of the MAP display, type

>SHELF shelf_no

and press the Enter key.

where

    shelf_no
        is the number of the shelf (0 to 7) that connects to the C-side links

Example of a MAP display:

```
ENET      System   Matrix  Shelf 0 1 2 3
 Plane 0 CSLink       .            F - - -
 Plane 1 CSLink       .            F - - -

SHELF 00  Slot          1111111 11122222 22222333 333333
            123456 78 90123456 78901234 56789012 345678
Plane 0    .   .   IF ....---- -------- ----.... .   .
Plane 1    .   .   IF ....---- -------- ----.... .   .
```

15   To access the CARD level of the MAP display, type

>CARD card_no

and press the Enter key.

where

    card_no
        is the number of the card (1 to 38) that connects to the C-side links

Example of a MAP display:

NT3X65
in a digital echo suppressor (continued)

```
ENET      System   Matrix  Shelf 0 1 2 3
 Plane 0 CSLink     .              F - - -
 Plane 1 CSLink     .              F - - -

SHELF 00  Slot           1111111 11122222 22222333 333333
           123456 78 90123456 78901234 56789012 345678
Plane 0    .  .   IF ....---- -------- ----.... .  .
Plane 1    .  .   IF ....---- -------- ----.... .  .

 CARD 32   Front:    Back:   DS-512 Links
           Xpt       I/F    0 1 2 3
 Plane 0    .         .      . . . -
 Plane 1    .         .      . . . -
```

16   To manually busy the link that you recorded in step 12, type

> **>BSY plane_no LINK link_no**

and press the Enter key.

where

> **plane_no**
> is the number of the plane (0 or 1) for the link

> **link_no**
> is the link number (0 to 63)

Example of a MAP response:

```
 Request to MAN BUSY ENET Plane:0 Shelf:00 Slot:32 Link:01
 submitted.

 Request to MAN BUSY ENET Plane:0 Shelf:00
 Slot:32 Link:01 passed.
```

17   Repeat step 16 for the other link that associates with the card you replace.
        Go to step 18.

NT3X65
in a digital echo suppressor (continued)

At the shelf

18

> ⚠️ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding
> point of a frame supervisory panel (FSP) or a modular
> supervisory panel (MSP) to handle circuit cards. The wrist
> strap protects the cards against static electricity damage.

To replace the card, perform the procedure *Replacing a card* in this
document. Complete the procedure and return to this point.

> *Note:* If the card you replace has switches, make sure that the switches
> on the replacement card have the same settings.

19   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 20
did not direct you to this procedure	step 21

20   Return to the maintenance procedure that directed you to this procedure and
continue as directed.

At the MAP terminal

21   The next action depends on the type of network in the office.

If you	Do
are working on a JNET	step 22
are working on an ENET	step 24

22   To return to service one of the JNET links that associates with the PM unit,
type

>RTS plane_no link_no

and press the Enter key.

where

> **plane_no**
> is the number of the plane (0 or 1) for the link

NT3X65
in a digital echo suppressor (continued)

link_no
   is the link number (0 to 63)

If the link	Do
returned to service and one more manual-busy link is present	step 23
returned to service and more manual busy links are not present	step 29
did not return to service	step 28

23   Repeat step 22 for the other link.

Go to step 29.

24   Return to service one of the ENET links that associates with the PM unit, type

>RTS   plane_no   LINK   link_no

and press the Enter key.

where

plane_no
   is the number of the plane (0 or 1) for the link

link_no
   is the link number (0 to 63)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01
submitted.

Request to RTS ENET Plane:0 Shelf:00 Slot:32
Link:01 passed.
```

If the link	Do
returned to service and one more manual-busy link is present	step 25
returned to service and more manual-busy links are not present	step 29
did not return to service	step 28

25   Repeat step 24 for the other link. Complete the procedure and go to step 29.

26   To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

NT3X65
in a digital echo suppressor (end)

27   A minor problem is present, but the DCM can process traffic. For additional help, contact the next level of support.

28   For additional help, contact the next level of support.

29   The procedure is complete.

Power converter cards in a digital carrier module

Application

Use this procedure to replace the following cards in the shelves or frames listed.

PEC	Suffix	Card name	Shelf or frame name
NT2X06	AA	Power converter card	Digital carrier module (DCM), Digital echo suppressor (DES)
NT2X07	AA	Power converter card	DCM, DES
NT2X70	AA, AB, AC, AD	-48V power converter card	DCM, DES

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The Index contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Replacing a card*
- *Loading a PM*

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Power converter cards
in a digital carrier module (continued)

Replacing Power converter cards in a digital carrier module

At the MAP terminal

1

> **WARNING**
> **Loss of service**
> This procedure includes directions to manually busy a DCM or DES. Service power failure can occur if you manually busy a DCM or DES. Perform this procedure only if you need to restore out-of-service components. In other events, perform this procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card has the same PEC and PEC suffix, as the card that you remove.

2   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

Example of a MAP display:

```
        SysB    ManB    OffL    CBsy    ISTb    InSv
   PM     6       1       0       0      23      24
```

3   To post the PM that associates with the card you replace, type

>POST pm_type pm_no

and press the Enter key.

where

   pm_type
      is the type of PM (DCM, DES)

   pm_no
      is the PM number (0 to 511)

Example of a MAP display:

```
        SysB    ManB    OffL    CBsy    ISTb    InSv
   PM     6       1       0       0      23      24
   DCM    1       0       0       0       1       4

DCM     0    InSv
```

Power converter cards
in a digital carrier module (continued)

4 Determine the state of the PM unit that associates with the card you want to replace.

If the state of the PM unit	Do
is ISTb, InSv, SysB, or CBsy	step 5
is ManB	step 7
is OffL	step 23

5 A maintenance flag (Mtce) can appear. A Mtce flag indicates that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status line before you proceed to the next step.

6 To manually busy the PM, type

>BSY

and press the Enter key.

Example of a MAP response:

```
OK.DCM 0 Bsy
```

If the BSY command	Do
passed	step 7
failed	step 25

At the shelf

7

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

For the power converter you replace, pull down and set the handle of the POWER switch to the OFF position.

8 The next action depends on the power configuration of the shelf.

If the shelf	Do
has a single NT2X70	step 10

**Power converter cards
in a digital carrier module** (continued)

If the shelf	Do
has an NT2X06 and an NT2X07	step 9

9   For the mate power converter, pull down and set the handle of the POWER switch to the OFF position.

10   To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> ***Note 1:*** Make sure that the handle of the POWER switch on the replacement power converter is in the OFF position.

> ***Note 2:*** If the card you replace has switches, make sure that the switches on the replacement card have the same settings.

11   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 12
did not direct to this procedure	step 13

12   Return to the maintenance procedure that directed you to this procedure and continue as directed.

13   The next action depends on the power converter version and the type of supervisory panel.

If you	Do
replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 14
replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 15
do not replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 16
do not replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 17

14   Power up the converter.

     a   Pull up and set the handle of the POWER switch to the RESET position and hold the POWER switch.

     b   Set the handle of the converter circuit breaker on the FSP or MSP up until the handle clicks into place.

     c   Release the handle of the POWER switch.

     d   Go to step 20.

Power converter cards
in a digital carrier module (continued)

15 Power up the converter, as follows.

    a Pull up and set the handle of the POWER switch to the RESET position. Hold the switch until the CONVERTER FAIL LED goes off.

    b Release the handle of the POWER switch.

    c Go to step 20.

16 Power up the converter, as follows.

    a Pull up and set the handle of the POWER switch to the ON position.

    b Press and hold the RESET button on the power converter.

    c Set the handle of the converter circuit breaker on the FSP or MSP up until the handle clicks into place.

    d Release the RESET button.

    e Go to step 20.

17 Power up the converter.

    a Pull up and set the handle of the POWER switch to the ON position.

    b Press the RESET button on the power converter until the CONVERTER FAIL LED goes off.

    c Release the RESET button.

18 The next action depends on the number of power converters on the shelf.

If	Do
one power converter is present	step 20
two power converters are present, and you powered up both power converters	step 20
two power converters are present, and you powered up only one of the power converters	step 19

19 Repeat steps 13 to 18 for the other power converter on the shelf.

At the MAP terminal

20 To load the PM, type

    >LOADPM

and press the Enter key.

If the LOADPM command	Do
failed	step 21
passed	step 22

21 Perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

Power converter cards
in a digital carrier module (end)

22   To return the PM to service, type

>**RTS**

and press the Enter key.

If the RTS command	Do
passed	step 26
passed, but the PM is ISTb as a result of a command protocol violation	step 24
failed	step 25

23   To determine why the component is offline, consult operating company personnel. Continue this procedure as directed by operating company personnel.

24   A minor problem is present, but the PM can process traffic. For additional help, contact the next level of support.

25   For additional help, contact the next level of support.

26   The procedure is complete.

4 Enhanced link peripheral processor card replacement procedures

Introduction

This chapter contains card replacement procedures for the enhanced link peripheral processor (ELPP). The first section in the chapter provides diagrams that show ELPP shelf designs.

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) appear in the chapter "Frame supervisory panel and modular supervisory panel card replacement procedures."

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Application

This section identifies the ELPP cards that this procedure covers.

Common procedures

This section lists common procedures that you use during the ELPP card replacement procedure. A common procedure is a series of steps that repeat in maintenance procedures. An example of a common procedure is the removal and replacement of a card. Common procedures appear in the common procedures chapter in this NTP.

Do not go to common procedures unless the step-action procedure instructs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

Record the following information in office records when you replace a card.

- the serial number of the card you replaced

- the date you replaced the card

- the reason you replaced the card

ELPP shelf layouts

Application

This section shows frame layouts for the enhanced link peripheral processor (ELPP), as follows:

- triple F-bus configuration in an ELPP cabinet

- a link interface module (LIM) with LMS units 0 and 1

- a link interface shelf (LIS) with common fill cards

- a LIS with a dual link interface unit (DLIU)

A DLIU is a set of high-speed link (HSL) termination hardware. Each set consists of:

- a high-speed link interface unit (HLIU)

- a high-speed link router (HSLR)

Note: The diagrams that follow show standard frame and shelf layouts. Minor differences can occur in different offices.

Note: The DLIU set, which consists of three HLIU cards and one HSLR card, must start in slot number 8, 12, 16, 20, 24, or 28.

Common fill paddle boards
in an ELPP LIS

Application

Use this procedure to replace the following cards in a link interface shelf (LIS) in an enhanced link peripheral processor (ELPP).

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the "Index" for a list of the cards, shelves, and frames documented in this card replacement book.

Common fill paddle boards for an ELPP LIS

PEC	Suffix	Card name	Shelf or frame name
NT9X74	DA	F-bus repeater	LIS in an ELPP
NT9X79	BA	F-bus termination paddle board	LIS in an ELPP
NTEX20	AA, BA	Intrashelf termination paddle board	LIS in an ELPP

Note 1: A link interface module (LIM) is also referred to as a local message switch (LMS) in some documentation. LIM unit 0 corresponds to LMS 0; LIM unit 1 corresponds to LMS 1. In MAP commands, responses, and displays, the term LIM unit is used to designate an LMS.

Note 2: The ELPP is referred to as a LIM when the entire ELPP is meant, paralleling how the LISs in the ELPP are closely associated with the LIM. MAP displays and data schema tables also refer to the ELPP as a LIM.

Common procedures

Replacing a card is referenced in this procedure.

Do not go to the common procedure unless directed to do so in the step-action procedure.

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

Common fill paddle boards
in an ELPP LIS (continued)

```

This flowchart summarizes the procedure.

Use the instructions in the procedure that follows this flowchart to perform the procedure.

Common fill paddle boards
in an ELPP LIS (continued)

Replacing Common fill paddle boards in an ELPP LIS

At your current location

1

> ⚠ **CAUTION**
> **Loss of service**
> This procedure provides instructions for removing an F-bus
> from service, thereby removing redundancy from the ELPP.
> Perform this procedure only if it is necessary to return the
> F-buses to service. Otherwise, perform this procedure only
> during periods of low traffic.

Obtain a replacement card. Ensure that the replacement card has the same
PEC, including suffix, as the card being removed.

At the MAP terminal

2   Ensure that the replacement card is compatible with the software load by
typing

>**CHECKREL LIS pec release**

and pressing the Enter key.

where

pec
is the PEC and suffix of the new card

release
is the two-character code located on the faceplate of thereplacement
card

Example input:

>**CHECKREL LIS NT9X74DA 2Z**

Example of a MAP response:

```
   PEC     BASELINE    EXCEPT    RELEASE     COMPATIBLE
NT9X74DA      09        None        2Z          YES
OK. Card release is above baseline.
```

If the replacement card is	Do
below baseline	step 3
on or above baseline	step 6

Common fill paddle boards
in an ELPP LIS (continued)

3   From the MAP display, record the baseline release code (BASELINE) and any exception release codes (EXCEPT).

4   Determine which release codes are compatible with the software load in the switch. A compatible release code is one that is

- greater than or equal to the baseline release code, and

- not an exception release code

    Note: The range of release codes in ascending order is 01 to 09, 0A to 0Z, and 10 to VZ.

5   Obtain a replacement card with a compatible release code.

If you	Do
can obtain a compatible replacement card	step 2
cannot obtain a compatible replacement card	step 21

6   Access the PM level of the MAP display by typing

>MAPCI;MTC;PM

and pressing the Enter key.

Example of a MAP display:

```
          SysB   ManB   OffL   CBsy   ISTb   InSv
PM          0      0      28     0      0      18
```

7   Post the LIM associated with the card you are replacing by typing

>POST LIM lim_no

and pressing the Enter key.

where

    lim_no
       is the number of the LIM (0 to 16)

Note: Refer to the table located at the end of this document to identify the LIM unit associated with the card you are replacing.

Example of a MAP display:

```
          SysB   ManB   OffL   CBsy   ISTb
PM          0      0      28     0      0
LIM         0      0      1      0      0
 0 InSv              OOS   OOS Taps
```

8   Determine the state of the LIM.

Note: The state of the LIM is shown to the right of the LIM number on the MAP display.

If the state of the LIM is	Do
Offl	step 20

If the state of the LIM is	Do
any other in-service or out-of-service state	step 9

9 Determine the state of the mate LIM unit. Refer to the table located at the end of this document to identify the LIM associated with the card you are replacing.

> **Note:** The state of the LIM units is shown to the right of the LIM unit number on the MAP display.

If the state of the mate LIM unit is	Do
InSv	step 10
anything else	step 18

10 Access the LIS level of the MAP display by typing

>LIS lis_no

and pressing the Enter key.

where

lis_no
is the number of the LIS (1, 2, or 3)

Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb    InSv
    PM      0       0      28       0       0      18
    LIM     0       0       1       0       0       1
LIM  0 InSv
                  OOS   OOS_Taps
                  Links   LIS1  LIS2  LIS3
Unit0: InSv         .       .     .     .
Unit1: InSv         .       .     .     .

        LIS2      Tap:   0      4      8
FBus0: InSv              ....   ....   ....
FBus1: InSv              ....   ....   ....
```

Common fill paddle boards
in an ELPP LIS (continued)

11

> **CAUTION**
> **Potential loss of service**
> Ensure that the mate F-bus, and the F-bus taps on the mate
> are in service before manually busying the F-bus associated
> with the card to be replaced. Manually busying the F-bus
> isolates nodes on the LIS if the mate resources are out of
> service.

Determine the states of the F-bus and the provisioned F-bus taps for the mate
LIM unit.

Note: The state of the F-buses is shown to the right of the F-bus numbers
on the MAP display. Refer to the table located at the end of this document
to identify the LIM and F-bus components associated with the card you are
replacing.

If the states are	Do
in-service (state of the F-bus is `InSv` and all F-bus taps are either `.` (dot) or - (dash).	step 12
any other state (state of the F-bus is not `InSv` and one or more F-bus taps are not either `.` (dot) or - (dash)	step 19

12 Manually busy the F-bus associated with the card to be replaced by typing

>**BSY FBUS fbus_no**

and pressing the Enter key.

where

> **fbus_no**
> is the number of the F-bus (0 or 1)

Note: Refer to the table located at the end of this document to identify the
F-bus components associated with the card you are replacing.

Example of a MAP response:

```
LIM 0 LIS 1 FBus 0 Busy requires confirmation
Please confirm ("YES", "Y", "NO", or "N"):
```

If	Do
the command passes	step 14
you must confirm the command	step 13

Common fill paddle boards
in an ELPP LIS (continued)

13   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
LIM 0 LIS 2 FBus 0 Busy initiated.
LIM 0 LIS 2 FBus 0 Busy passed.
```

At the shelf

14

> ⚠ **WARNING**
> **Static electricity damage**
> Wear a wrist strap connected to the wrist-strap grounding
> point of a frame supervisory panel (FSP) or a modular
> supervisory panel (MSP) while handling circuit cards. This
> protects the cards against damage caused by static electricity.

Replace the card using the procedure *Replacing a card* in this document.
When you have completed the procedure, return to this point.

> ***Note:*** If the card to be replaced has switches, ensure that the switches on
> the replacement card have the same settings.

15   The next action depends on your reason for performing this procedure.

If you were	Do
sent to this procedure from another maintenance procedure	step 16
not sent to this procedure from another maintenance procedure	step 17

16   Return to the maintenance procedure that sent you to this procedure and
continue as directed.

17   Return the F-bus to service by typing

>RTS FBUS fbus_no

and pressing the Enter key.

where

> **fbus_no**
> is the number of F-bus (0 or 1)

Example of a MAP response:

Common fill paddle boards
in an ELPP LIS (end)

```
LIM 0 LIS 2 FBus 0 Return to Service initiated.
LIM 0 LIS2 FBus 0 Return to Service passed.
```

If the RTS command	Do
passed	step 22
failed	step 21

18   Continuing with this procedure removes the entire LIM from service, thereby isolating application specific units (ASU) on the LIS. Consult office personnel or your next level of support to determine if you should continue with this procedure, and proceed as directed.

19   Continuing with this procedure isolates one or more application specific units (ASU) on the LIS. Consult office personnel or your next level of support to determine if you should continue with this procedure, and proceed as directed.

20   Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

21   For further assistance, contact the personnel responsible for the next level of support.

22   You have completed this procedure.

Common fill paddle boards and associated LIM components

PEC	Slot	Associated LIM and F-buses	
NT9X74	07F		
NT9X79	07R	LIM unit number: Mate LIM unit number:	0 1
NTEX20	30R	F-bus number: Mate F-bus number:	0 1
NT9X74	32F		
NT9X79	32R	LIM unit number: Mate LIM unit number:	1 0
NTEX20	08R	F-bus number: Mate F-bus number:	1 0

Note: A LIM unit is also referred to as an LMS. LIM unit 0 corresponds to LMS 0; LIM unit 1 corresponds to LMS 1. In MAP commands, responses, and displays, the term LIM unit is used to mean an LMS. The term LIM is also used to include the ELPP where the entire ELPP cabinet is meant.

HLIU cards in an ELPP LIS

Application

Use this procedure to replace the following cards in a high-speed link interface unit (HLIU) in an enhanced link peripheral processor (ELPP) link interface shelf (LIS).

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the Index for a list of the cards, shelves, and frames documented in this card replacement NTP.

PEC	Suffix	Card name	Shelf or frame name
NTEX22	CA	Integrated processor and F-bus interface card	HLIU in an ELPP LIS
NTEX76	AA	High-speed signaling terminal card	HLIU in an ELPP LIS
NTEX78	AA	DS-1 interface paddle board	HLIU in an ELPP LIS

Common procedures

The following common procedures are referenced:

- *Activating CCS7 links*
- *Deactivating CCS7 links*
- *Loading a PM*
- *Replacing a card*
- *Reseating cards in equipment shelves*
- *Unseating cards in equipment shelves*

Do not go to the common procedure unless directed to do so in the step-action procedure.

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

HLIU cards in an ELPP LIS (continued)

```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Replacing HLIU cards in an ELPP LIS

At your current location

1

CAUTION
Loss of service
This procedure removes an HLIU from service and
temporarily interrupts messaging on the associated CCS7
link. Perform this procedure only if necessary to return the
HLIU to service. Otherwise, perform this procedure only
during periods of low traffic.

Obtain a replacement card. Ensure that the replacement card has the same
PEC, including suffix, as the card being removed.

At the MAP terminal

2   Ensure that the replacement card is compatible with the software load by
typing

>CHECKREL LIM pec release

and pressing the Enter key.

where

   pec
      is the PEC and suffix of the new card

   release
      is the two-character code located on the faceplate of thereplacement
      card

Example input:

>CHECKREL LIM NTEX22CA 2Z

Example of a MAP response:

```
    PEC     BASELINE     EXCEPT     RELEASE     COMPATIBLE
 NTEX22CA      01         None         2Z          YES
 OK. Card release is above baseline.
```

If the replacement card is	Do
below baseline	step 3
on or above baseline	step 6

3   From the MAP display, record the baseline release code (BASELINE) and
any exception release codes (EXCEPT).

HLIU cards in an ELPP LIS (continued)

4   Determine which release codes are compatible with the software load in the switch. A compatible release code is one that is

- greater than or equal to the baseline release code, and

- not an exception release code

   Note: The range of release codes in ascending order is 01 to 09, 0A to 0Z, and 10 to VZ.

5   Obtain a replacement card with a compatible release code.

If you	Do
can obtain a compatible replacement card	step 2
cannot obtain a compatible replacement card	step 38

6   Access the PM level of the MAP display by typing

   >MAPCI;MTC;PM

   and pressing the Enter key.

   Example of a MAP display:

```
           SysB    ManB    OffL    CBsy    ISTb    InSv
PM            1       0       2       0       3       6
```

7   Post the HLIU that contains the card to be replaced by typing

   >POST   HLIU   hliu_no

   and pressing the Enter key.

   where

   hliu_no
        is the number of the HLIU (0 to 511)

   Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
 PM            1       0       2       0       3       6
 HLIU          1       0       0       0       0       3
HLIU 208 InSv        Rsvd
```

8   Determine the state of the HLIU.

If the state of the HLIU is	Do
SysB, SysB (NA), ISTb, or InSv	step 9
ManB or ManB (NA)	step 12
OffL	step 37

9   Deactivate the CCS7 link (if there is one) associated with the HLIU using the procedure *Deactivating CCS7 links* in this document. When you have completed the procedure, return to this point.

10   Manually busy the HLIU by typing

>**BSY FORCE**

and pressing the Enter key.

If	Do
you need to confirm the com- mand	step 11
the command passed	step 12

11   Confirm the command by typing

>**YES**

and pressing the Enter key.

12   Display information about the HLIU by typing

>**QUERYPM**

and pressing the Enter key.

Example of a MAP response:

```
PM type: HLIU   PM No.: 208     Status: InSv
LIM: 2  Shelf: 2    Slot:10     LIU FTA:  4247 1000
Default Load: HCA04BD
Running Load: HCA04BD
LMS States:      ISTb          ISTb
Auditing:        Yes           Yes
Msg Channels:    Acc           Acc
TAP 8:           .             .
Reserved HLIU forms part of CCS7 Linkset:SSP208_LS SLC:0
LIU is not allocated
```

13   Record the number of the link interface module (LIM), link interface shelf (LIS), and the taps that are associated with the HLIU you are working on.

>   ***Note:*** The LIM number follows the word LIM on the second line of the display. In the example in step 12, the LIM number is 2. The LIS number follows the word shelf on the second line of the display. In the example in step 12, the LIS number is 2. The tap number follows the word TAP on the line below Msg Channels. In the example in step 12, the TAP number is 8.

14   Post the LIM by typing

>**POST LIM lim_no**

and pressing the Enter key.

where

>   **lim_no**
>   is the number of the LIM you recorded in step 13

Example of a MAP display:

HLIU cards in an ELPP LIS (continued)

```
                        SysB    ManB    OffL    CBsy    ISTb    InSv
           PM            1       0       2       0       3       6
           LIM           0       0       0       0       1       0

LIM 2 ISTb
                    OOS     OOS_Taps
                    Links   LIS1  LIS2  LIS3
Unit0: ISTb          .       .     .     .
Unit1: InSv          .       .     .     .
```

15   Access the LIS level of the MAP display by typing

>LIS lis_no

and pressing the Enter key.

where

> **lis_no**
> is the number of the LIS you recorded in step 13

Example of a MAP display:

```
                        LIS2       Tap: 0        4       8
        FBus0: InSv                        ....    ....    ....
        FBus1: ManB                        BBBB    BBBB    BBBB
```

16   Manually busy the HLIU tap on F-bus 0 by typing

>BSY FBUS 0 tap_no

and pressing the Enter key.

where

> **tap_no**
> is the number of the HLIU tap recorded in step 13

If	Do
you need to confirm the command	step 17
you do not need to confirm the command	step 18

17   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
    Confirmed ...LIM 2 LIS 2 FBus 0 Tap 8 Busy initiated.
                LIM2 LIS 2 FBus 0 Tap 8 Busy passed.
```

18   Manually busy the HLIU tap on F-bus 1 by typing

>BSY FBUS 1 tap_no

and pressing the Enter key.

where

> **tap_no**
> is the number of the HLIU tap recorded in step 13

Example of a MAP response:

```
LIM 2 FBus 1 Tap 8 Busy requires confirmation because
a SEVERE system
OUTAGE may occur if the following node isisolated:
HLIU 208
Do you wish to proceed with this operation?
Please confirm ("YES", "Y", "NO", or "N"):
```

19   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
Confirmed ...LIM 2 LIS 2 FBus 1 Tap 8 Busy initiated.
              LIM2 LIS 2 FBus 1 Tap 8 Busy
passed.
```

└───┘

Determine your next step based on the card you are replacing.

If you are replacing an	Do
NTEX76	step 21
NTEX22	step 23
NTEX78	step 26

21   To begin changing an NTEX76 card, unseat and reseat cards in the HLIU using the following sub-steps. To unseat a card, use the procedure *Unseating cards in equipment shelves* in this document. To reseat a card, use the procedure *Reseating cards in equipment shelves* in this document.a. Unseat the NTEX76 high-speed signaling terminal card.b. Unseat the NTEX22 link general processor card.c. Reseat the NTEX22 link general processor card.

HLIU cards in an ELPP LIS (continued)

22   Replace the NTEX76 card using the procedure *Replacing a card* in this document. When you have completed the procedure, return to this point.

      Go to step 27.

23   To begin changing an NTEX22 card, unseat the NTEX76 high-speed signaling terminal card using the procedure *Unseating cards in equipment shelves* in this document. When you have finished the procedure, return to this point.

24   Replace the NTEX22 card using the procedure *Replacing a card* in this document. When you have completed the procedure, return to this point.

      Note: If the card to be replaced has switches, ensure that the switches on the replacement card have the same settings.

25   Reseat the NTEX76 HLIU high-speed signaling terminal card using the procedure *Reseating cards in equipment shelves* in this document. When you have finished the procedure, return to this point.

      Go to step 27.

26   Replace the card using the procedure *Replacing a card* in this document. When you have completed the procedure, return to this point.

27   The next action depends on your reason for performing this procedure.

If you were	Do
directed to this procedure from another maintenance procedure	step 28
not directed to this procedure from another maintenance procedure	step 29

28   Return to the maintenance procedure that sent you to this procedure and continue as directed.

At the MAP terminal

29   Return the HLIU tap on F-bus 0 to service by typing

      >RTS FBUS 0 tap_no

      and pressing the Enter key.

      where

          tap_no
            is the number of the HLIU tap you recorded in step 13

      Example of a MAP response:

```
LIM 1 LIS 2 FBus 0 Tap 8 Return to Service initiated.
LIM 1 LIS 2 FBus 0 Tap 8 Return to Service passed.
```

If the RTS command	Do
passed	step 30

If the RTS command	Do
failed	step 38

30   Return the HLIU tap on F-bus 1 to service by typing

>RTS FBUS 1 tap_no

and pressing the Enter key.

where

tap_no
is the number of the HLIU tap you recorded in step 13

Example of a MAP response:

```
LIM 1 LIS 2 FBus 1 Tap 8 Return to Service initiated.
LIM 1 LIS 2 FBus 1 Tap 8 Return to Service passed.
```

If the RTS command	Do
passed	step 31
failed	step 38

31   Quit from the F-bus level of the MAP display by typing

>QUIT

and pressing the Enter key.

32   Post the HLIU you are working on by typing

>POST HLIU hliu_no

and pressing the Enter key.

where

hliu_no
is the number of the HLIU (0 to 511)

33   Load the HLIU by typing

>LOADPM

and pressing the Enter key.

Example of a MAP response:

```
HLIU 208 LOADPM Passed
```

If the LOADPM command	Do
passed	step 35
failed	step 34

HLIU cards in an ELPP LIS (end)

34 Load the PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

35 Return the HLIU to service by typing

>RTS

and pressing the Enter key.

Example of a MAP response:

```
HLIU 100 RTS Passed
```

If the RTS command	Do
passed	step 36
failed	step 38

36 Activate the CCS7 link (if there is one) associated with the HLIU using the procedure *Activating CCS7 links* in this document. When you have completed the procedure, return to this point.

Go to step 39.

37 Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

38 For further assistance, contact the personnel responsible for the next level of support.

39 You have completed this procedure.

HSLR cards in an ELPP LIS

Application

Use this procedure to replace the following cards in a high-speed link router (HSLR) in an enhanced link peripheral processor (ELPP) link interface shelf (LIS).

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the Index for a list of the cards, shelves, and frames documented in this card replacement NTP.

PEC	Suffix	Card name	Shelf or frame name
NTEX22	CA	Integrated processor and F-bus interface card	HSLR in an ELPP LIS

Common procedures

The following common procedures are referenced:

- *Activating CCS7 links*
- *Deactivating CCS7 links*
- *Loading a PM*
- *Replacing a card*

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

this flowchart to perform the
procedure.

Replacing HSLR cards in an ELPP LIS

At your current location

1

> **CAUTION**
> **Loss of service**
> This procedure removes an HSLR from service and
> temporarily interrupts messaging on the associated CCS7
> link. Perform this procedure only if necessary to return the
> HSLR to service. Otherwise, perform this procedure only
> during periods of low traffic.

Obtain a replacement card. Ensure that the replacement card has the same
PEC, including suffix, as the card being removed.

At the MAP terminal

2   Ensure that the replacement card is compatible with the software load by
typing

> **>CHECKREL LIM pec release**

and pressing the Enter key.

where

> **pec**
>   is the PEC and suffix of the new card
>
> **release**
>   is the two-character code located on the faceplate of thereplacement
>   card

Example input:

> **>CHECKREL LIM NTEX22CA 2Z**

Example of a MAP response:

```
   PEC     BASELINE    EXCEPT    RELEASE    COMPATIBLE
NTEX22CA       01        None       2Z         YES
OK. Card release is above baseline.
```

If the replacement card is	Do
below baseline	step 3
on or above baseline	step 6

3   From the MAP display, record the baseline release code (BASELINE) and
any exception release codes (EXCEPT).

HSLR cards in an ELPP LIS (continued)

4   Determine which release codes are compatible with the software load in the switch. A compatible release code is one that is

- greater than or equal to the baseline release code, and
- not an exception release code

    Note: The range of release codes in ascending order is 01 to 09, 0A to 0Z, and 10 to VZ.

5   Obtain a replacement card with a compatible release code.

If you	Do
can obtain a compatible replacement card	step 2
cannot obtain a compatible replacement card	step 32

6   Access the PM level of the MAP display by typing

>MAPCI;MTC;PM

and pressing the Enter key.

Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb    InSv
PM         1       0       2       0       3       6
```

7   Post the HSLR that contains the card to be replaced by typing

>POST HSLR hslr_no

and pressing the Enter key.

where

    hslr_no
       is the number of the HSLR (0 to 511)

Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb    InSv
PM         1       0       2       0       3       6
HSLR       1       0       0       0       0       3

HSLR  208 InSv        Rsvd
```

8   Determine the state of the HSLR.

If the state of the HSLR is	Do
SysB, SysB (NA), ISTb, or InSv	step 9
ManB or ManB (NA)	step 12
OffL	step 31

9   Deactivate the CCS7 link (if there is one) associated with the HSLR using the procedure *Deactivating CCS7 links* in this document. When you have completed the procedure, return to this point.

10   Manually busy the HSLR by typing

>BSY FORCE

and pressing the Enter key.

If	Do
you need to confirm the command	step 11
the command passed	step 12

11   Confirm the command by typing

>YES

and pressing the Enter key.

12   Display information about the HSLR by typing

>QUERYPM

and pressing the Enter key.

Example of a MAP response:

```
PM type: HSLR    PM No.: 208      Status: InSv
LIM: 2  Shelf: 2     Slot:10      LIU FTA:  4247 1000
Default Load: HCA04BD
Running Load: HCA04BD
LMS States:     ISTb          ISTb
Auditing:       Yes           Yes
Msg Channels:   Acc           Acc
TAP 8:                 .             .
Reserved HSLR forms part of CCS7 Linkset:SSP208_LS SLC:0
LIU is not allocated
```

13   Record the number of the link interface module (LIM), link interface shelf (LIS), and the taps that are associated with the HSLR you are working on.

> **Note:** The LIM number follows the word LIM on the second line of the display. In the example in step 12, the LIM number is 2. The LIS number follows the word Shelf on the second line of the display. In the example in step 12, the LIS number is 2. The tap number follows the word TAP on the line below Msg Channels. In the example in step 12, the TAP number is 8.

14   Post the LIM by typing

>POST LIM lim_no

and pressing the Enter key.

where

> **lim_no**
> is the number of the LIM you recorded in step 13

HSLR cards in an ELPP LIS (continued)

Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
      PM     1       0       2       0       3       6
      LIM     0       0       0       0       1       0

 LIM 2 ISTb
                    OOS     OOS_Taps
                    Links   LIS1  LIS2  LIS3
 Unit0: ISTb         .       .     .     .
 Unit1: InSv         .       .     .     .
```

15   Access the LIS level of the MAP display by typing

    >LIS lis_no

    and pressing the Enter key.

    where

        lis_no
          is the number of the LIS you recorded in step 13

    Example of a MAP display:

```
            LIS2        Tap:  0       4       8
   FBus0: InSv                ....    ....    ....
   FBus1: ManB                BBBB    BBBB    BBBB
```

16   Manually busy the HSLR tap on F-bus 0 by typing

    >BSY FBUS 0 tap_no

    and pressing the Enter key.

    where

        tap_no
          is the number of the HSLR tap recorded in step 13

If	Do
you need to confirm the command	step 17
you do not need to confirm the command	step 18

17   Confirm the command by typing

    >YES

    and pressing the Enter key.

    Example of a MAP response:

```
 Confirmed ...LIM 2 LIS 2 FBus 0 Tap 8 Busy initiated.
              LIM2 LIS 2 FBus 0 Tap 8 Busy passed.
```

18   Manually busy the HSLR tap on F-bus 1 by typing

    >BSY FBUS 1 tap_no

and pressing the Enter key.

where

> **tap_no**
> is the number of the HSLR tap recorded in step 13

Example of a MAP response:

```
LIM 2 FBus 1 Tap 8 Busy requires confirmation because
a SEVERE system OUTAGE may occur if the following
node is isolated:
HSLR 208
Do you wish to proceed with this operation?
Please confirm ("YES", "Y", "NO", or "N"):
```

19   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
Confirmed ...LIM 2 LIS 2 FBus 1 Tap 8 Busy initiated.
          LIM2 LIS 2 FBus 1 Tap 8 Busy passed.
```

> protects the cards against damage caused by static electricity.

Replace the NTEX22 card using the procedure *Replacing a card* in this
document. When you have completed the procedure, return to this point.

> **Note:** If the card to be replaced has switches, ensure that the switches on
> the replacement card have the same settings.

21   The next action depends on your reason for performing this procedure.

If you were	Do
directed to this procedure from another maintenance procedure	step 22
not directed to this procedure from another maintenance procedure	step 23

HSLR cards in an ELPP LIS (continued)

22   Return to the maintenance procedure that sent you to this procedure and continue as directed.

At the MAP terminal

23   Return the HSLR tap on F-bus 0 to service by typing

>**RTS   FBUS   0   tap_no**

and pressing the Enter key.

where

    tap_no
      is the number of the HSLR tap you recorded in step 13

Example of a MAP response:

```
LIM 1 LIS 2 FBus 0 Tap 8 Return to Service initiated.
LIM 1 LIS 2 FBus 0 Tap 8 Return to Service passed.
```

If the RTS command	Do
passed	step 24
failed	step 32

24   Return the HSLR tap on F-bus 1 to service by typing

>**RTS   FBUS   1   tap_no**

and pressing the Enter key.

where

    tap_no
      is the number of the HSLR tap you recorded in step 13

Example of a MAP response:

```
LIM 1 LIS 2 FBus 1 Tap 8 Return to Service initiated.
LIM 1 LIS 2 FBus 1 Tap 8 Return to Service passed.
```

If the RTS command	Do
passed	step 25
failed	step 32

25   Quit from the F-bus level of the MAP display by typing

>**QUIT**

and pressing the Enter key.

26   Post the HSLR you are working on by typing

>**POST   HSLR   hslr_no**

and pressing the Enter key.

HSLR cards in an ELPP LIS (end)

where

> **hslr_no**
> > is the number of the HSLR (0 to 511)

27 Load the HSLR by typing

>LOADPM

and pressing the Enter key.

Example of a MAP response:

```
HSLR 208 LOADPM Passed
```

If the LOADPM command	Do
passed	step 29
failed	step 28

28 Load the PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

29 Return the HSLR to service by typing

>RTS

and pressing the Enter key.

Example of a MAP response:

```
HSLR 100 RTS Passed
```

If the RTS command	Do
passed	step 30
failed	step 32

30 Activate the CCS7 link (if there is one) associated with the HSLR using the procedure *Activating CCS7 links* in this document. When you have completed the procedure, return to this point.

Go to step 33.

31 Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

32 For further assistance, contact the personnel responsible for the next level of support.

33 You have completed this procedure.

MLIU cards
in an LPP LIS

Application

Use this procedure to replace the following cards in a multiple link interface unit (MLIU) in a link peripheral processor (LPP) link interface shelf (LIS).

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the "Index". The Index provides a list of the cards, shelves, and frames documented in this card replacement NTP.

PEC	Suffix	Card name	Shelf or frame name
NTEX22	CA	Integrated processor and F-bus interface card	MLIU in an LPP LIS
NTEX26	BA	MLIU channel-bus interface card	MLIU in an LPP LIS

Common procedures

This procedure refers to the following common procedures:

- *Verifying load compatibility of SuperNode cards*
- *Deactivating CCS7 links*
- *Unseating cards in equipment shelves*
- *Replacing a card*
- *Reseating cards in equipment shelves*
- *Loading a PM*
- *Activating CCS7 links*

Do not go to the common procedure unless directed to in the step-action procedure.

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

Summary of replacing MLIU cards in an LPP LIS

Deactivate all
links for the
MLIU

↓

Manually busy
the MLIU

↓

Manually busy
the F-bus taps
for the MLIU

↓

Unseat and
reseat other
MLIU cards

↓

Change the
card you are
working on

↓

Return F-bus
taps to service

↓

Load and
return the
MLIU to
service

↓

Reactivate all
links for the
MLIU   →   End

This flowchart summarizes the
procedure.

Use the instructions that follow
this flowchart to perform the
procedure.

MLIU cards
in an LPP LIS (continued)

Replacing MLIU cards in an LPP LIS

> ⚠️ **CAUTION**
> **Loss of service**
> This procedure removes an MLIU from service and
> temporarily interrupts messaging on the associated CCS7
> links. Perform this procedure only if necessary to return
> the MLIU to service. Otherwise, perform this procedure
> only during periods of low traffic.

At your current location

1   Get a replacement card. Make sure that the replacement card has the same
        PEC, including suffix, as the card being removed.

2   Make sure that the replacement card is compatible with the software load by
        using the procedure *Verifying load compatibility of SuperNode cards* in this
        document. Complete the procedure and return to this point.

At the MAP terminal

3   Access the PM level of the maintenance and administration position (MAP)
        display by typing

        >MAPCI;MTC;PM

        Press the Enter key.

        Example of a MAP display:

```
                SysB    ManB    OffL    CBsy    ISTb    InSv
        PM         1       0       2       0       3       6
```

4   Post the MLIU that contains the card to replace by typing

        >POST MLIU liu_no

        Press the Enter key.

        Where

            liu_no
                is the number of the MLIU (0 to 511)

        Example of a MAP display:

```
                SysB    ManB    OffL    CBsy    ISTb    InSv
        PM         1       0       2       0       3       6
        MLIU       1       0       0       0       0       3

        MLIU   208 InSv        Rsvd
```

---

5   Determine the state of the MLIU.

If the state of the MLIU	Do
is `SysB`, `SysB` `(NA)`, `ISTb`, or `InSv`	step 6
is `ManB` or `ManB` `(NA)`	step 19
is `OffL`	step 36

6   Deactivate the CCS7 link (if there is one) associated with the MLIU using the procedure *Deactivating CCS7 links* in this document. Complete the procedure and return to this point.

7   Manually force bsy the MLIU by typing

>BSY FORCE

Press the Enter key.

If	Do
you need to confirm the command	step 10
the command passed	step 11
MAP response is WARNING: MLIU 208 is |currently being imaged. Do you wish to abort imaging to proceed with the BSY request? Please confirm ("YES", "Y", "NO", or "N"):	step 8

8   Determine if it is safe to continue with this procedure.

If it is safe	Do
continue with BSY FORCE request	step 9
abort BSY FORCE request	step 38

9   Force bsy the MLIU by typing

>YES

Press the Enter key. Go to step 11.

Example of a MAP response:

MLIU cards
in an LPP LIS (continued)

```
          Imaging will be aborted on MLIU 208.
```

10   Confirm the command by typing

>YES

Press the Enter key.

11   Display information about the MLIU by typing

>QUERYPM

Press the Enter key.

Example of a MAP response:

```
PM type: MLIU    PM No.: 208     Status: InSv
LIM: 2  Shelf: 2  Slot: 8       LIU FTA:  4247 1000
Default Load: MCA12AT
Running Load: MCA12AT
LMS States  :  ISTb           ISTb
Auditing    :  Yes            Yes
Msg Channels:  Acc            Acc
TAP 8       :  .              .
Reserved MLIU forms part of CCS7 Linkset: SSP208_LS SLC: 0
LIU is not allocated
```

12   Record the number of the link interface module (LIM) and the taps that are associated with the MLIU you are working on.

> *Note:* The LIM number follows the word LIM on the second line of the display. In the preceding example, the LIM number is 0. The tap number follows the word TAP on the line below Msg Channels. In the preceding example, the TAP number is 8.

13   Post the LIM by typing

>POST   LIM   lim_no

Press the Enter key.

Where

> **lim_no**
>   is the number of the LIM you recorded in step 12

Example of a MAP display:

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
PM            1       0       2       0       3       6
LIM           0       0       0       0       1       0

LIM  2 ISTb
                  Links_OOS Taps_OOS
Unit0: ISTb           4         .
Unit1: InSv           .         .
```

14   Access the F-bus level of the MAP display by typing

   >FBUS

   Press the Enter key.

   Example of a MAP display:

```
              Tap: 0    4    8    12   16   20   24   28   32
FBus0: InSv        ...- ---- ---. .-.- ---- ---- ...- -..- -...
FBus1: InSv        ...- ---- ---. .-.- ---- ---- ...- -..- -...
```

15   Manually busy the MLIU tap on F-bus 0 by typing

   >BSY   FBUS   0   tap_no

   Press the Enter key.

   Where

   tap_no
   is the number of the MLIU tap recorded in step 12

If you	Do
need to confirm the command	step 16
do not need to confirm the command	step 17

16   Confirm the command by typing

   >YES

   Press the Enter key.

   Example of a MAP response:

```
Confirmed ...
IM 2 FBus 0 Tap 8 Busy initiated.
LIM 2 FBus 0 Tap 8 Busy passed.
```

17   Manually busy the MLIU tap on F-bus 1 by typing

   >BSY   FBUS   1   tap_no

   Press the Enter key.

   Where

   tap_no
   is the number of the MLIU tap recorded in step 12

   Example of a MAP response:

```
LIM 2 FBus 1 Tap 8 Busy requires confirmation because a
SEVERE system OUTAGE may occur if the followingnode is
isolated:MLIU 208
Do you wish to proceed with this operation?
Please confirm ("YES", "Y", "NO", or "N"):
```

MLIU cards
in an LPP LIS (continued)

18   Confirm the command by typing

    >YES

    Press the Enter key.

    Example of a MAP response:

```
Confirmed ...
LIM 2 FBus 1 Tap 8 Busy initiated.
LIM 2 FBus 1 Tap 8 Busy passed.
```

DANGER
Static electricity damage
Wear a wrist strap connected to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) while handling circuit cards. This protects the cards against damage caused by static electricity.
</td></tr>
</table>

Determine your next step based on the card you are replacing.

If you are replacing an	Do
NTEX76	step 20
NTEX22	step 22
any back plane card	step 25

20   To change an NTEX76 card, unseat and reseat cards in the MLIU using the following sub-steps. To unseat a card, use the procedure *Unseating cards in equipment shelves* in this document. To reseat a card, use the procedure *Reseating cards in equipment shelves* in this document.

    a   Unseat the NTEX76 ST signaling terminal card.

    b   Unseat the NTEX22 link general processor card.

    c   Reseat the NTEX22 link general processor card.

21   Replace the NTEX76 card using the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

    Note: If the card to replace has switches, make sure that the switches on the replacement card have the same settings.

    Go to step 26.

22   To change an NTEX22 card, unseat the NTEX76 STP signaling terminal card using the procedure *Unseating cards in equipment shelves* in this document. Complete the procedure and return to this point.

---

23   Replace the NTEX22 card using the procedure *Replacing a card* in this
document. Complete the procedure,and return to this point.

>   ***Note:*** If the card to replace has switches, make sure that the switches on
>   the replacement card have the same settings.

24   Reseat the NTEX76 ST signaling terminal card using the procedure
Reseating cards in equipment shelves in this document. Complete the
procedure and return to this point.

Go to step 26.

25   Replace the card using the procedure *Replacing a card* in this document.
Complete the procedure and return to this point.

>   ***Note:*** If the card to replace has switches, make sure that the switches on
>   the replacement card have the same settings.

26   The next action depends on your reason for performing this procedure.

If another maintenance proce-dure	Do
directed you to this procedure	step 27
did not direct you to this proce-dure	step 28

27   Return to the maintenance procedure that sent you to this procedure.
Continue as directed.

At the MAP terminal

28   Return the MLIU tap on F-bus 0 to service by typing

>   `>RTS   FBUS   0   tap_no`

Press the Enter key.

Where

>   **tap_no**
>   is the number of the MLIU tap you recorded in step 12

Example of a MAP response:
LIM 1 FBus 0 Tap 8 Return to Service passed- local maintenance not
accessible.

If the RTS command	Do
passed	step 29
failed	step 37

29   Return the MLIU tap on F-bus 1 to service by typing

>   `>RTS   FBUS   1   tap_no`

Press the Enter key.

MLIU cards
in an LPP LIS (continued)

Where

   tap_no
        is the number of the MLIU tap you recorded in step 12

Example of a MAP response:

```
LIM 1 FBus 1 Tap 8 Return to Service initiated.
LIM 1 FBus 1 Tap 8 Return to Service passed.
```

If the RTS command	Do
passed	step 30
failed	step 37

30   Quit from the F-bus level of the MAP display by typing

   >QUIT

   Press the Enter key.

31   Post the MLIU you are working on by typing

   >POST MLIU liu_no

   Press the Enter key.

   Where

      liu_no
           is the number of the MLIU (0 to 511)

32   Load the MLIU by typing

   >LOADPM

   Press the Enter key.

   Example of a MAP response:

```
MLIU 208 LOADPM Passed
```

If the LOADPM command	Do
passed	step 34
failed	step 33

33   Load the PM using the procedure *Loading a PM* in this document. Complete
         the procedure, and return to this point.

34   Return the MLIU to service by typing

   >RTS

   Press the Enter key.

   Example of a MAP response:

**MLIU cards
in an LPP LIS** (end)

```
MLIU 100 RTS Passed
```

If the RTS command	Do
passed	step 35
failed	step 37

35   Activate the CCS7 link (if there is one) associated with the MLIU using the procedure *Activating CCS7 links* in this document. Complete the procedure and return to this point.

Go to step 39.

36   Contact operating company personnel to determine why the component is offline. Continue as directed.

37   For additional help, contact the next level of support.

38   Abort the BSY FORCE request by typing

>NO

Press the Enter key. The BSY request is aborted. Node imaging continues.

39   The procedure is complete.

NT9X13
in an ELPP LIM unit

Application

Use this procedure to replace an NT9X13 in a link interface module (LIM) unit of an enhanced link peripheral processor (ELPP).

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the Index for a list of the cards, shelves, and frames documented in this card replacement book.

PEC	Suffixes	Card name	Shelf/frame name
NT9X13	DE	CPU 20-MHz card	LIM unit of an ELPP

Note 1: A link interface module (LIM) unit is also referred to as a local message switch (LMS) in some documentation. LIM unit 0 corresponds to LMS 0; LIM unit 1 corresponds to LMS 1. In MAP commands, responses, and displays, the term LIM unit is used to designate an LMS.

Note 2: The ELPP is referred to as a link interface module (LIM) where the entire ELPP is indicated, paralleling how the LISs in the ELPP are closely associated with the LIM. MAP displays and data schema tables also refer to the ELPP as a LIM.

Common procedures

The following common procedures are referenced:

- *Loading a PM*
- *Replacing a card*
- *Unseating cards in equipment shelves*

Do not go to the common procedure unless directed to do so in the step-action procedure.

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

```

This flowchart summarizes the procedure.

Use the instructions in the procedure that follows this flowchart to perform the procedure.

NT9X13
in an ELPP LIM unit (continued)

Replacing NT9X13 in an ELPP LIM unit

At your current location

1

CAUTION
Loss of service
This procedure provides instructions to remove a LIM unit
from service, thereby removing redundancy from the ELPP.
Perform this procedure only if necessary to return the LIM
unit to service. Otherwise, perform this procedure only
during periods of low traffic.

Obtain a replacement card. Ensure that the replacement card has the same
PEC, including suffix, as the card being removed.

At the MAP terminal

2   Ensure that the replacement card is compatible with the software load by
typing

>CHECKREL LIM pec release

and pressing the Enter key.

where

pec
is the PEC and suffix of the new card

release
is the two-character code located on the faceplate of thereplacement
card

Example input:

>CHECKREL LIM NT9X13DE 2Z

Example of a MAP response:

```
    PEC     BASELINE     EXCEPT     RELEASE     COMPATIBLE
NT9X13DE       01         None         2Z          Yes
OK. Card release is above baseline.
```

If the replacement card is	Do
below baseline	step 3
on or above baseline	step 6

3   From the MAP display, record the baseline release code (BASELINE) and any exception release codes (EXCEPT).

4   Determine which release codes are compatible with the software load in the switch. A compatible release code is one that is

- greater than or equal to the baseline release code, and

- not an exception release code

      Note: The range of release codes in ascending order is 01 to 09, 0A to 0Z, and 10 to VZ.

5   Obtain a replacement card with a compatible release code.

If you	Do
can obtain a compatible replacement card	step 2
cannot obtain a compatible replacement card	step 31

6   Access the PM level of the MAP display by typing

>MAPCI;MTC;PM

and pressing the Enter key.

Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb    InSv
PM          0       0      28       0       0      18
```

7   Post the LIM that contains the card to be replaced by typing

>POST LIM lim_no

and pressing the Enter key.

where

   lim_no
        is the number of the LIM to be posted (0 to 16)

Example of a MAP display:

```
           SysB    ManB    OffL    CBsy    ISTb    InSv
      PM     0       0      28       0       0      18
      LIM    0       0       1       0       0       1

LIM 0 InSv
              OOS    OOS_Taps
              Links  LIS1  LIS2  LIS3
Unit0: InSv     .      .     .     .
Unit1: InSv     .      .     .     .
```

NT9X13
in an ELPP LIM unit (continued)

8   Determine the state of the LIM.

  Note: The state of the LIM is shown to the right of the LIM number on the MAP display.

If the state of the LIM is	Do
Offl	step 30
any other in-service or out-of-service state	step 9

9   Determine the state of the LIM units. Refer to the table at the end of this document to identify the LIM unit, the F-bus, and the mates associated with the card you are replacing.

  Note: The state of the LIM units is shown to the right of the LIM unit number on the MAP display.

If the state of the mate LIM unit is	Do
InSv	step 10
ISTb, and the state of the LIM unit associated with the card you are replacing is InSv or ISTb	step 10
ISTb, and the LIM unit associated with the card you are replacing is out of service	step 10
any out-of-service state, and the state of the LIM unit associated with the card you are replacing is InSv or ISTb	step 28
any out-of-service state, and the LIM unit associated with the card you are replacing is out of service	step 10

  Note: Steps 10 through 13 must be repeated for each LIS on the LIM unit.

10   Access the LIS level of the MAP display by typing

  >LIS lis_no

  and pressing the Enter key.

  where

  lis_no
    is the number of the LIS (1, 2, or 3)

  Example of a MAP display:

```
                SysB     ManB     OffL     CBsy     ISTb     InSv
       PM         0        0       28        0        0       18
       LIM        0        0        1        0        0        1

LIM   0  InSv
                  OOS    OOS_Taps
                  Links  LIS1  LIS2  LIS3
Unit0:  InSv        .      .     .     .
Unit1:  InSv        .      .     .     .

       LIS2        Tap:   0      4     8
FBus0:  InSv             ....  ....  ....
FBus1:  InSv             ....  ....  ....
```

11

CAUTION
Potential loss of service
Ensure that the mate LIM unit, the mate F-bus, and the F-bus taps on the mate are in service before manually busying the LIM unit and F-bus associated with the card to be replaced. Manually busying the F-bus and the LIM unit will isolate nodes on the link interface shelves (LIS) if the mates are out of service.

Determine the states of the F-bus and the F-bus taps for the mate LIM unit.

Note: The state of the F-buses is shown to the right of the F-bus numbers on the MAP display. Refer to the table at the end of this document to identify the LIM unit associated with the card you are replacing.

If the states of the mate resources are	Do
in-service (state of the F-bus is `InSv` and all F-bus taps are `.` [dot])	step 10 for the next LIS OR step 12 (if steps 10 and 11 have been repeated for each LIS)
any other state (state of the F-bus is not `InSv` and one or more F-bus taps are not `.` [dot])	step 29

12 Manually busy the F-bus associated with the card to be replaced by typing

>BSY FBUS fbus_no

NT9X13
in an ELPP LIM unit (continued)

and pressing the Enter key.

where

fbus_no
is the number of the F-bus (0 or 1)

Note: Refer to the table at the end of this document to identify the LIM unit associated with the card you are replacing.

Example of a MAP display:

```
            SysB      ManB      OffL      CBsy      ISTb      InSv
PM             0         0        28         0         0        18
LIM            0         0         1         0         1         0

 LIM  0 ISTb

                  OOS    OOS_Taps
                 Links    LIS1  LIS2  LIS3
Unit0: ISTb        .       .      12     .
Unit1: InSv        .       .       .     .

        LIS2      Tap:  0      4      8
FBus0: ManB             BBBB   BBBB   BBBB
FBus1: InSv             ....   ....   ....
```

If	Do
the command passes	step 12 for the next LIS OR step 14 (if step 12 has been repeated for each LIS)
you must confirm the command	step 13

13 Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
LIM 0 LIS 2 FBus 0 Busy initiated.
LIM 0 LIS 2 FBus 0 Busy passed.
```

If	Do
step 12 has been repeated for each LIS	step 14

If	Do
step 12 has not been repeated for each LIS	step 12 for the next LIS

14   Quit the LIS level of the MAP display by typing

>QUIT

and pressing the Enter key.

15   Manually busy the LIM unit corresponding to the card to be replaced by typing

>BSY UNIT unit_no

and pressing the Enter key.

where

> **unit_no**
>> is the number of the LIM unit (0 or 1)

Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
PM            0       0      28       0      17      13
LIM           0       0       1       0       1       0

LIM  0 ISTb

 OOSOOS_Taps
                    Links  LIS1  LIS2  LIS3
Unit0:  ManB          2     .     12    .
Unit1:  ISTb          2     .     .     .

         LIS2        Tap:   0     4     8
FBus 0:  ManB               BBBB BBBB BBBB
FBus 1:  InSv               .... .... ....
```

At the shelf

16

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap connected to the wrist-strap grounding
> point of a frame supervisory panel (FSP) or a modular
> supervisory panel (MSP) while handling circuit cards. This
> protects the cards against damage caused by static electricity.

Press down and release the power switch on the faceplate of the NT9X30
power converter (slot 04F) associated with the card to be replaced. Refer to

NT9X13
in an ELPP LIM unit (continued)

the table at the end of this document to identify the power converter associated with the LIM unit you are working on.

Note: The CONVERTER OFF LED is lit when the NT9X30 power converter is powered down.

If the CONVERTER OFF LED is	Do
lit	step 19
not lit	step 17

17

> **CAUTION**
> **Possible loss of service**
> Unseating the NT9X13 card bypasses the safety interlock. Ensure that the card to be removed is in the manual-busy LIM unit.

Unseat the NT9X13 associated with the LIM unit you are working on using the procedure *Unseating cards in equipment shelves* in this document. When you have completed the procedure, return to this point.

18 Press down and release the power switch on the faceplate of the NT9X30 power converter (slot 36F) associated with the card to be replaced. Refer to the table at the end of this document to identify the power converter associated with the LIM unit you are working on.

19 Replace the card using the procedure *Replacing a card* in this document. When you have completed the procedure, return to this point.

20 Release the power switch on the faceplate of the NT9X30 power converter associated with the card you have replaced.

Note: The CONVERTER OFF LED is not lit when the NT9X30 power converter is powered up.

21 The next action depends on your reason for performing this procedure.

If you were	Do
sent to this procedure from another maintenance procedure	step 22
not sent to this procedure from another maintenance procedure	step 23

22 Return to the maintenance procedure that sent you to this procedure and continue as directed.

At the MAP terminal

23   Load the LIM unit by typing

>LOADPM   UNIT   unit_no

and pressing the Enter key.

where

> **unit_no**
>   is the number of the LIM unit (0 or 1)

Example of a MAP response:

```
LIM 0 UNIT 0 Load initiated.
LIM 0 UNIT 0 Load passed.
```

If the LOADPM command	Do
passed	step 25
failed	step 24

24   Load the PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

25   Return the LIM unit to service by typing

>RTS   UNIT   unit_no

and pressing the Enter key.

where

> **unit_no**
>   is the number of the LIM unit (0 or 1)

Example of a MAP response:

```
LIM 0 UNIT 0 Return to Service initiated.
LIM 0 UNIT 0Return to Service passed.
```

If the RTS command	Do
passed	step 26
failed	step 31

> **Note:** Steps 26 and 27 must be repeated for each LIS on the LIM unit.

26   Access the LIS level of the MAP display by typing

>LIS lis_no

and pressing the Enter key.

where

NT9X13
in an ELPP LIM unit (continued)

lis_no
is the number of the LIS (0, 1, or 2)

Example of a MAP display:

```
         SysB    ManB    OffL    CBsy    ISTb    InSv
   PM      0       0      28       0       0      18
   LIM     0       0       1       0       0       1

LIM 0 ISTb
                   OOS   OOS_Taps
                  Links LIS1  LIS2  LIS3
Unit0: ISTb        .     .     .     .
Unit1: InSv        .     .     .     .

        LIS2      Tap:
                     0     4     8
FBus0: ManB          BBBB  BBBB  BBBB
FBus1: InSv          ....  ....  ....
```

27　　Return the F-bus to service by typing

>RTS　FBUS　fbus_no

and pressing the Enter key.

where

fbus_no
is the number of the F-bus that you busied (0 or 1)

Example of a MAP response:

```
LIM 0 FBus 0 Return to Service initiated.
LIM 0 FBus 0Return to Service passed.
```

If the RTS command	Do
passed	step 26 for the next LIS　　　　　OR step 32 (if step 26 has been repeated for each LIS)
failed	step 31

28　　Continuing with this procedure will remove both LIM units from service, thereby isolating application specific units (ASU) on the link interface shelves (LIS). Consult office personnel or your next level of support to determine if you should continue with this procedure, and proceed as directed.

29　　Continuing with this procedure may isolate one or more application specific units (ASU) on the link interface shelves (LIS). Consult office personnel or your next level of support to determine if you should continue with this procedure, and proceed as directed.

30　　Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

NT9X13
in an ELPP LIM unit (end)

31   For further assistance, contact the personnel responsible for the next level of support.

32   You have completed this procedure.

NT9X13 card and associated LIM components

PEC	Slot	Associated LIM hardware and F-buses	
NT9X13	17F	LIM unit number:	0
		Mate LIM unit number:	1
		F-bus number:	0
		Mate F-bus number:	1
		Location of NT9X30 (+5 V) power converter:	slot 04F
NT9X13	22F	LIM unit number:	1
		Mate LIM unit number:	0
		F-bus number:	1
		Mate F-bus number:	0
		Location of NT9X30 (+5 V) power converter:	slot 36F

Note: A LIM unit is also referred to as an LMS. LIM unit 0 corresponds to LMS 0; LIM unit 1 corresponds to LMS 1. In MAP commands, responses, and displays, the term LIM unit is used to mean an LMS. The term LIM is also used to refer to the ELPP if the entire ELPP cabinet is meant.

System and power cards
in an ELPP LIM unit

Application

Use this procedure to replace the following cards in a link interface module (LIM) unit of an enhanced link peripheral processor (ELPP).

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the Index for a list of the cards, shelves, and frames documented in this card replacement book.

System and power cards in an ELPP LIM unit

PEC	Suffix	Card name	Shelf or frame name
NT9X15	AA	Mapper card	LIM unit of an ELPP
NT9X17	AD	Message switch four-port card	LIM unit of an ELPP
NT9X26	AA, BA, CA	Remote terminal interface paddle board	LIM unit of an ELPP
NT9X30	AA	+5V 86-A power converter card	LIM unit of an ELPP
NT9X30	AB	Global +5V 86-A power converter card	LIM unit of an ELPP
NT9X31	AB	-5V power converter card	LIM unit of an ELPP
NT9X49	CA	Message switch P-bus terminator card	LIM unit of an ELPP
NT9X52	AA	Message switch T-bus access card	LIM unit of an ELPP
NT9X53	AD	Message switch system clock card	LIM unit of an ELPP
NT9X62	BB	Four-port sub-rate DS512 paddleboard	LIM unit of an ELPP
NT9X73	BB	LMS F-bus rate adapter card	LIM unit of an ELPP
NT9X79	BB	F-bus termination paddle board	LIM unit of an ELPP

> *Note 1:* A link interface module (LIM) is also referred to as an LMS. LIM unit 0 corresponds to LMS 0; LIM unit 1 corresponds to LMS 1. In MAP commands, responses, and displays, the term LIM is used to mean an LMS.
>
> *Note 2:* The ELPP is referred to as a LIM when the entire ELPP is meant, paralleling how the LISs in the ELPP are closely associated with the LIM. MAP displays and data schema tables also refer to the ELPP as a LIM.

Common procedures

The following common procedures are referenced:

- *Loading a PM*
- *Manually busying LIM-to-MS SR128 links*
- *Replacing a card*
- *Reseating cards in equipment shelves*
- *Returning LIM-to-MS SR128 links to service*
- *Unseating cards in equipment shelves*

Do not go to the common procedure unless directed to do so in the step-action procedure.

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

System and power cards
in an ELPP LIM unit (continued)

Summary of Replacing System and power cards in an ELPP LIM unit

Check card release compatibility → 1

Compatible? — Y → Check that mate LIM, F-buses, and taps are InSv

Compatible? — N → Obtain a compatible card → 1

This flowchart summarizes the procedure.

Use the instructions in the procedure that follows this flowchart to perform the procedure.

Check that mate LIM, F-buses, and taps are InSv → Manually busy all F-buses for LIM unit

Replacing LMS port cards? — Y → Manually busy SR128 links on the MS

Replacing LMS port cards? — N → Manually busy the LIM unit

Manually busy SR128 links on the MS → N

Manually busy the LIM unit → Power down the LIM unit → Replace the card → Power up the LIM unit

Replacing LMS port cards? — Y → Return SR128 links to service → 2

Replacing LMS port cards? — N → 2

2 → Load the LIM unit → Return the LIM unit to service → Test the LIM unit → Return the F-buses to service → Test the F-buses → End

Replacing System and power cards in an ELPP LIM unit

At your current location

1

> ⚠ **CAUTION**
> **Loss of service**
> This procedure provides instructions for removing a LIM unit from service, thereby removing redundancy from the ELPP. Perform this procedure only if necessary to return the LIM unit to service. Otherwise, perform this procedure only during periods of low traffic.

Obtain a replacement card. Ensure that the replacement card has the same PEC, including suffix, as the card being removed.

At the MAP terminal

2 Ensure that the replacement card is compatible with the software load by typing

>CHECKREL LIM pec release

and pressing the Enter key.

where

    pec
        is the PEC and suffix of the new card

    release
        is the two-character code located on the faceplate of thereplacement card

Example input:

>CHECKREL LIM NT9X15AA 2Z

Example of a MAP response:

```
    PEC     BASELINE     EXCEPT     RELEASE     COMPATIBLE
NT9X15AA       40         None        2Z          *NO
Card release is below baseline.
Do not plug the card into the LIM.
```

If the replacement card is	Do
below baseline	step 3
on or above baseline	step 6

System and power cards
in an ELPP LIM unit (continued)

3   From the MAP display, record the baseline release code (BASELINE) and any exception release codes (EXCEPT).

4   Determine which release codes are compatible with the software load in the switch. A compatible release code is one that is

   •   greater than or equal to the baseline release code, and

   •   not an exception release code

      Note: The range of release codes in ascending order is 01 to 09, 0A to 0Z, and 10 to VZ.

5   Obtain a replacement card with a compatible release code.

If you	Do
can obtain a compatible replacement card	step 2
cannot obtain a compatible replacement card	step 40

6   Access the PM level of the MAP display by typing

   >MAPCI;MTC;PM

   and pressing the Enter key.

   Example of a MAP display:

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
PM             0       0       28      0       0       18
```

7   Post the LIM unit that contains the card to be replaced by typing

   >POST LIM lim_no

   and pressing the Enter key.

   where

   lim_no
      is the number of the LIM to be posted (0 to 16)

   Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
      PM     0       0       28      0       0       18
      LIM    0       0       1       0       0       1

LIM 0 InSv
                          OOS    OOS_Taps
Links                     LIS1   LIS2  LIS3
Unit0: InSv       .        .      .     .
Unit1: InSv       .        .      .     .
```

**System and power cards
in an ELPP LIM unit** (continued)

8   Determine the state of the LIM.

Note: The state of the LIM is shown to the right of the LIM number on the
MAP display.

If the state of the LIM is	Do
Offl	step 39
any other in-service or out-of-service state	step 9

9   Determine the state of the mate LIM unit. Refer to the table at the end of this
document to identify the LIM unit associated with the card you are replacing.

Note: The state of the LIM units is shown to the right of the LIM unit
number on the MAP display.

If the state of the mate LIM unit is	Do
InSv	step 10
ISTb, and the state of the LIM unit associated with the card you are replacing is InSv or ISTb	step 10
ISTb, and the LIM unit associated with the card you are replacing is out of service	step 10
any out-of-service state, and the state of the LIM unit associated with the card you are replacing is InSv or ISTb	step 37
any out-of-service state, and the LIM unit associated with the card you are replacing is out of service	step 10

Note: Steps 10 and 11 must be repeated for each LIS on the LIM unit.

10   Access the LIS level of the MAP display by typing

>LIS lis_no

and pressing the Enter key.

where

lis_no
    is the number of the LIS (1, 2, or 3)

Example of a MAP display:

System and power cards
in an ELPP LIM unit (continued)

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
      PM        0       0      28       0       0      18
      LIM       0       0       1       0       0       1

LIM 0 InSv

                      OOS   OOS_Taps
                     Links  LIS1  LIS2  LIS3
Unit0: InSv            .      .     .     .
Unit1: InSv            .      .     .     .

       LIS2          Tap:  0     4     8
FBus0: InSv                ....  ....  ....
FBus1: InSv                ....  ....  ....
```

11

> **CAUTION**
> **Potential loss of service**
> Ensure that the mate LIM unit, the mate F-buses, and the
> F-bus taps on the mate are in service before manually
> busying the LIM unit and F-buses associated with the card to
> be replaced. Manually busying the F-buses and the LIM unit
> isolates nodes on the link interface shelves (LIS) if the mate
> resources are out of service.

Determine the states of the F-bus and the provisioned F-bus taps for the mate
LIM unit.

> **Note:** The state of the F-buses is shown to the right of the F-bus numbers
> on the MAP display. Refer to the table at the end of this document to
> identify the LIM and F-bus components associated with the card you are
> replacing.

If the states are	Do
in-service (state of the F-bus is `InSv` and all F-bus taps are `.` [dot])	step 10 for the next LIS 　　　OR step 12 (if steps 10 and 11 have been repeated for each LIS)
any other state (state of the F-bus is not `InSv` and one or more F-bus taps are not `.` [dot])	step 38

> **Note:** Step 12 must be repeated for each LIS on the LIM unit.

**System and power cards
in an ELPP LIM unit** (continued)

12   Manually busy the F-bus on the LIS corresponding to the LIM that is
associated with the card to be replaced, by typing

>BSY FBUS fbus_no

and pressing the Enter key.

where

   fbus_no
      is the number of the F-bus (0 or 1)

   Note: Refer to the table at the end of this document to identify the F-bus
   components corresponding to the LIM associated with the card you are
   replacing.

Example of a MAP response:

```
LIM 0 LIS 2 FBus 0 Busy requires confirmation
Please confirm ("YES", "Y", "NO", or "N"):
```

If	Do
the command passes	step 12 for the next LIS OR- step 14 (if step 12 has been re- peated for each LIS)
you must confirm the command	step 13

13   Confirm the command by typing

>YES

and pressing the Enter key.

Example of a MAP response:

```
LIM 0 LIS 1 FBus 0 Busy initiated.
LIM 0 LIS 1 FBus 0 Busy passed.
```

If	Do
step 12 has been repeated for each LIS	step 14
step 12 has NOT been repeated for each LIS	step 12 for the next LIS

14   Quit the LIS level of the MAP display by typing

>QUIT

and pressing the Enter key.

System and power cards
in an ELPP LIM unit (continued)

15 The next step depends on the card you are replacing

If you are replacing	Do
an NT9X17 or an NT9X62 (MS port cards)	step 16
any other card	step 17

16

> **CAUTION**
> **Possible service impact**
> Manually busy only the SR128 links associated with a
> specific NT9X17 or NT9X62 card in the LIM unit. The
> remaining SR128 links associated with the LIM unit must
> remain in service.

Manually busy the SR128 links using the procedure *Manually busying
LIM-to-MS SR128 links* in this document. When you have completed the
procedure, return to this point.

17 Manually busy the LIM unit corresponding to the card to be replaced, by
typing

>BSY UNIT unit_no

and pressing the Enter key.

where

unit_no
is the number of the LIM unit (0 or 1)

Example of a MAP response:

```
bsy unit 0
LIM 0 UNIT 0 Busy initiated.
LIM 0 UNIT 0 Busy passed.
```

System and power cards
in an ELPP LIM unit (continued)

At the shelf

18

> **DANGER**
> **Static electricity damage**
> Wear a wrist strap connected to the wrist-strap grounding
> point of a frame supervisory panel (FSP) or a modular
> supervisory panel (MSP) while handling circuit cards. This
> protects the cards against damage caused by static electricity.

Press down and release the power switch on the faceplate of the NT9X30 and
NT9X31 power converter associated with the card to be replaced. Refer to
the table at the end of this document to identify the power converter
associated with the LIM unit you are working on.

> *Note:* The CONVERTER OFF LED is lit when the NT9X30 and NT9X31
> power converter is powered down.

If the CONVERTER OFF LED is	Do
lit	step 21
not lit	step 19

19

> **CAUTION**
> **Possible loss of service**
> Unseating the NT9X13 card bypasses the safety interlock.
> Ensure that the card to be removed is in the manual-busy
> LIM unit.

Unseat the NT9X13 associated with the LIM unit you are working on using
the procedure *Unseating cards in equipment shelves* in this document. When
you have completed the procedure, return to this point.

> *Note:* Refer to the table at the end of this document to identify the
> NT9X13 associated with the LIM unit you are working on.

20   Press down and release the power switch on the faceplate of the NT9X30 and
NT9X31 power converter associated with the card to be replaced. Refer to
the table at the end of this document to identify the power converter
associated with the LIM unit you are working on.

21   Replace the card using the procedure *Replacing a card* in this document.
When you have completed the procedure, return to this point.

> *Note 1:* Ensure that the handle of the power switch on the replacement
> power converter is also in the OFF position.

System and power cards
in an ELPP LIM unit (continued)

> ***Note 2:*** If the card to be replaced has switches, ensure that the switches on the replacement card have the same settings.

22 The next step depends on the condition of the NT9X13 card associated with the card you have replaced.

If the NT9X13 is	Do
seated	step 24
unseated	step 23

23 Reseat the NT9X13 associated with the card you are replacing using the procedure *Reseating cards in equipment shelves* in this document. When you have completed the procedure, return to this point.

24 Release the power switch on the faceplate of the NT9X30 and NT9X31 power converter associated with the card you have replaced.

> ***Note:*** The CONVERTER OFF LED is not lit when the NT9X30 and NT9X31 power converter is powered up.

25 The next action depends on your reason for performing this procedure

If you were	Do
sent to this procedure from another maintenance procedure	step 26
not sent to this procedure from another maintenance procedure	step 27

26 Return to the maintenance procedure that sent you to this procedure and continue as directed.

At the MAP terminal

27 The next step depends on the card you are replacing.

If you are replacing	Do
an NT9X17 or an NT9X62 (LMS port cards)	step 28
any other card	step 29

28 Return the SR128 links to service using the procedure *Returning LIM-to-MS SR128 links to service* in this document. When you have completed the procedure, return to this point.

29 Load the LIM unit by typing

>**`>LOADPM  UNIT  unit_no`**

and pressing the Enter key.

where

unit_no
is the number of the LIM unit (0 or 1)

Example of a MAP response:

```
LIM 0 UNIT 0 Load initiated.
LIM 0 UNIT 0 Load passed.
```

If the LOADPM command	Do
passed	step 31
failed	step 30

30   Load the PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

31   Perform an out-of-service (OOS) test on the LIM unit by typing

>TST   UNIT   unit_no

and pressing the Enter key.

where

unit_no
is the number of the LIM unit (0 or 1)

Example of a MAP response:

```
LIM 0 UNIT 0 Test initiated.
LIM 0 UNIT 0 Test passed.
```

If the TST command	Do
passed	step 32
failed	step 40

32   Return the LIM unit to service by typing

>RTS   UNIT   unit_no

and pressing the Enter key.

where

unit_no
is the number of the LIM unit (0 or 1)

Example of a MAP response:

System and power cards
in an ELPP LIM unit (continued)

```
LIM 0 UNIT 0 Return to Service initiated.
LIM 0 UNIT 0Return to Service passed.
```

If the RTS command	Do
passed	step 33
failed	step 40

33   Perform an in-service (InSv) test on the LIM unit by typing

>TST UNIT unit_no

and pressing the Enter key.

where

    unit_no
       is the number of the LIM unit (0 or 1)

Example of a MAP response:

```
LIM 0 UNIT 0 Test initiated.
LIM 0 UNIT 0 Test passed.
```

If the TST command	Do
passed	step 34
failed	step 40

    Note: Steps 34, 35, and 36 must be repeated for each LIS on the LIM unit.

34   Access the LIS level of the MAP display by typing

>LIS lis_no

and pressing the Enter key.

where

    lis_no
       is the number of the LIS (0, 1, or 2)

Example of a MAP display:

```
            SysB     ManB     OffL     CBsy     ISTb     InSv
     PM      0        0        28       0        0        18
     LIM     0        0        1        0        1        1

LIM 0 ISTb
                 OOS    OOS_Taps
                 Links  LIS1  LIS2  LIS3
Unit0: ISTb        .      .     12     .
Unit1: InSv        .      .      .     .

          LIS2      Tap:  0      4      8
FBus0: ManB               BBBB   BBBB   BBBB
FBus1: InSv               ....   ....   ....
```

35   Return the F-bus to service by typing

>RTS   FBUS   fbus_no

and pressing the Enter key.

where

> **fbus_no**
>   is the number of the F-bus that you busied (0 or 1)

Example of a MAP response:

```
LIM 0 LIS 2 FBus 0 Return to Service initiated.LIM 0 L
2 FBus 0 Return to Service passed.
```

If the RTS command	Do
passed	step 36 for the next LIS OR step 41 (if step 36 has been re-peated for each LIS)
failed	step 40

36   Perform an InSv test on the F-bus for each LIS by typing

>TST   FBUS   fbus_no

and pressing the Enter key.

where

> **fbus_no**
>   is the number of the F-bus (0 or 1)

Example of a MAP response:

System and power cards
in an ELPP LIM unit (end)

```
LIM 0 UNIT 0 Test initiated.
LIM 0 UNIT 0 Test passed.
```

If the TST command	Do
passed	step 36 for the next LIS OR step 41 (if step 36 has been repeated for each LIS)
failed	step 40

37 Continuing with this procedure removes the entire LIM from service, isolating application specific units (ASU) on the LIS. Consult office personnel or your next level of support to determine if you should continue with this procedure, and proceed as directed.

38 Continuing with this procedure isolates one or more application specific units (ASU) on the LIS. Consult office personnel or your next level of support to determine if you should continue with this procedure, and proceed as directed.

39 Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

40 For further assistance, contact the personnel responsible for the next level of support.

41 You have completed this procedure.

System cards and associated LIM hardware (Sheet 1 of 3)

PEC	Slot	Associated LIM hardware and F-buses	
NT9X15	15F	LIM unit number Mate LIM unit number:	0 1

5 SuperNode SE enhanced network card replacement procedures

Introduction

This chapter provides card replacement procedures for the SuperNode SE enhanced network (ENET). The first section in the chapter provides diagrams of SuperNode SE ENET shelf designs.

Card replacement procedures for the SuperNode ENET are in the chapter "SuperNode network card replacement procedures".

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) are in the chapter "Frame supervisory panel and maintenance supervisory panel card replacement procedures".

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Application

This section identifies the ENET card(s) covered by the replacement procedure.

Common procedures

This section lists common procedures in the ENET card replacement procedure. A common procedure is a series of steps repeated within maintenance procedures. Steps for the removal replacement of a card are examples of common procedures. Common procedures are in the common procedures chapter in this NTP.

Do not use common procedures unless the step-action procedure directs you.

Action

This section contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in office records:

- the serial number of the card replaced
- the date that you replaced the card
- the reason that you replaced the card

SuperNode SE ENET shelf designs

Application

This procedure provides the following design figures:

- single core cabinet (SCC, SuperNode SE 16k ENET)

- SuperNode SE 32k ENET cabinet

- SuperNode SE enhanced network and interface (ENI) shelf (16k ENET)

- SuperNode SE ENET shelf, 32k ENET

Crosspoint and interface cards
in a SuperNode SE 16k ENET

Application

Use this procedure to replace the following cards in a SuperNode SE (SNSE) 16k enhanced network (ENET).

PEC	Suffix	Card name	Shelf or frame name
NT9X35	FA	DMS SuperNode processor card	Enhanced network and interface (ENI)
NT9X40	BA, BB, DA	ENET + quad fiber paddle board	ENI, slots 13 to 19 and 23 to 29
NT9X41	BA	16-port DS30 paddle board	ENI
NT9X45	BA	Three-DS512 link and 16-DS30 port paddle board	ENI

Note: Use the procedure *System cards in a Supernode SE 16k ENET* in this chapter to replace an NT9X40 in ENI shelf slots 11 or 21.

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Verifying load compatibility of SuperNode cards*
- *Replacing a card*
- *Cleaning fiber optic components and assemblies*

Do not go to the common procedure unless the step-action procedure directs you.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

Action

This procedure contains a summary flowchart and a list of terms. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

Summary of Replacing Crosspoint and interface cards in a SuperNode SE 16k ENET

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Determine if the affected ENET plane is SysB

Affected ENET plane SysB?

Y → Clear SysB state → 1

1 / N

Set deload for the ENET plane

Wait 30 min for traffic to clear

Manually busy and offline the card

Replace the card

2

2

Test the card

Return the card to service

Return the ENET plane to service

Clear the deload for the ENET plane

End

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

Replacing Crosspoint and interface cards in a SuperNode SE 16k ENET

At your current location

1   Determine the type and location of the card that you replace.

If the card	Do
is an NT9X40 in slots 11 or 21	step 2
is other than listed here	step 3

2   To replace the card, perform the procedure *System cards in a SuperNode SE 16k ENET* in this chapter.

3

![!] **CAUTION**
System can drop calls
This procedure can remove an ENET card or MS-ENET link from service, which can cause the system to drop calls that are in progress. Perform this procedure only when you need to return an interface or crosspoint card to service. If you do not need to return the interface or crosspoint card to service, perform this procedure during periods of low traffic.

    Obtain a replacement card. Make sure that the replacement card has the same PEC and PEC suffix as the card you that you remove.

    Note: For North American switches, NT9X40BA and NT9X40BB can interchange and can be present with other switches at the same time. International switches can contain only NT9X40BB.

4   To make sure the replacement card is compatible with the software load, perform the procedure *Verifying load compatibility of SuperNode cards*. The procedure *Verifying load compatibility of SuperNode cards* appears in this document. Complete the procedure and return to this point.

At the MAP terminal

5   To access the NET;SYSTEM level of the MAP display, type

    >MAPCI;MTC;NET;SYSTEM

    and press the Enter key.

    Example of a MAP display:

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

```
                    SYSTEM
                      Shelf       Plane 0                    Plane 1
                       00            I CSLink 1 closed          .
```

6 Determine the state of the ENET plane that contains the card that you replace. The state appears under the Plane headers on the SYSTEM level MAP display. In the MAP display example in step 5, plane 0 is in-service trouble I and plane 1 is in service.

If the state of the ENET plane	Do
is T (being tested)	step 7
is S (system busy)	step 8
is other than listed here	step 10

7 Wait for the system to complete the system-initiated testing. To evaluate the state of the ENET plane, go to step 6.

8 You must clear the system busy state of the ENET plane before you attempt to replace the card. Obtain copies of recent ENET log reports. Determine from the log messages if ENET system cards or power converters require replacement.

If	Do
any system cards or power converters require replacement	step 9
system cards or power converters do not require replacement	step 65

9 To replace the card (or cards), perform the correct procedure in this chapter. Complete the card replacement and return to step 6.

10 To determine if deloaded crosspoint cards are in the other ENET plane, type

 >DELOAD plane_no 0 QUERY

and press the Enter key.

where

  plane_no
   is the ENET plane number (0 or 1) for the mate node

Example of a MAP response:

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

```
Request to QUERY DELOAD ENET Plane:0 Shelf:00 submitted.
Request to QUERY DELOAD ENET Plane:0 Shelf:00 passed.
            1111111 111
            0123456 789
Plane:0 Shelf:00 .Y.---- ---
```

> **Note:** The letter Y under the slot number indicates a deloaded crosspoint card.

If the other ENET plane	Do
has deloaded cards	step 64
does not have deloaded cards	step 11

11   To determine if the ENET plane has any deloaded crosspoint cards, type

>**DELOAD   plane_no   0   QUERY**

and press the Enter key.

where

> **plane_no**
> is the number of the ENET plane (0 or 1) that contains the card that you replace

If the ENET plane	Do
has deloaded cards	step 12
does not have deloaded cards	step 13

12   Record the plane number slot number for any deloaded crosspoint cards in the ENET plane. Use this list to make sure that these cards are returned to the deloaded state when you complete this procedure.

13   To set all crosspoint cards to a deloaded status for the ENET plane that contains the card you replace, type

>**DELOAD   plane_no   0   SET**

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to SET DELOAD ENET Plane:0 Shelf:00 submitted.
Request to SET DELOAD ENET Plane:0 Shelf:00 passed.
```

14   Wait 30 min to permit network traffic on the ENET plane to clear.

**Crosspoint and interface cards
in a SuperNode SE 16k ENET** (continued)

15   The next action depends on the state of the ENET plane.

If the ENET plane	Do
is O (offline)	step 20
is M (manual busy)	step 18
is other than listed here	step 16

16   To manually busy the ENET plane, type

>BSY plane_no 0

and press the Enter key.

where

> **plane_no**
> is the number of the ENET plane (0 or 1) that contains the card you replace

Example of a MAP response:

Request to MAN BUSY ENET Plane:0 Shelf:00 submitted.
Request to MAN BUSY ENET Plane:0 Shelf:00 passed.

If the response	Do
requests confirmation	step 17
indicates the BSY command passed	step 18

17   To confirm the command, type

>YES

and press the Enter key.

If the BSY command	Do
passed	step 18
failed	step 66

18   To offline the ENET plane, type

>OFFL plane_no 0

and press the Enter key.

where

> **plane_no**
> is the number of the ENET plane (0 or 1) that contains the card you replace

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

Example of a MAP response:

WARNING: A power down of ENET plane:1 shelf:00 may affect LIU
components.
Please confirm ("YES", "Y", "NO", or "N"):

19 To confirm the command, type

>YES

and press the Enter key.

If the OFFL command	Do
passed	step 26
failed	step 66

20 To locate the message switch (MS) chain head card that associates with the
ENET plane, type

>TRNSL plane_no 0

and press the Enter key.

where

plane_no
is the ENET plane number (0 or 1)

Example of a MAP response:

Request to TRNSL ENET Plane:0 Shelf:00 submitted.
Request to TRNSL ENET Plane:0 Shelf:00 passed.
ENET Plane:0 Shelf:00 : MS 0 and 1 Card:05 Link:00 Port:000

> **Note:** In the example, the number of the chain head card is 5. The link
> number is 0.

21 Record the number of the chain head card and the link number.

22 To access the MS SHELF level of the MAP display, type

>MS;SHELF

and press the Enter key.

Example of a MAP display:

```
      Message Switch        Clock      Shelf  0         Inter-MS Link  0  1
MS 0       .                Slave            .                          .  .
MS 1       .                 M Free          .                          .  .

Shelf 0                           1 1 1 1
Card  1 2 3 4 5 6 7 8 9 0 1 2 3
Chain          |
MS 0 . . . . . .- - . . . . . .
MS 1 . . . . . .- - . . . . . .
```

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

23   To post the chain head card, type

>**CHAIN   card_no**

and press the Enter key.

where

>**card_no**
>>is the card number that you recorded in step 21

Example of a MAP display:
Chain 05 Range Link   0 1
MS 0   . 05-05 DS512 . .
MS 1   . 05-05 DS512 . .

24   To manually busy the link on the chain on MS 0, type

>**BSY   0   LINK   link_no**

and press the Enter key.

where

>**link_no**
>>is the link number that you recorded in step 21

Example of a MAP response:
Request to MAN BUSY MS: 0 shelf: 0 chain:05 link 0 submitted.
Request to MAN BUSY MS: 0 shelf: 0 chain:05 link 0 passed.

If the BSY command	Do
passed	step 25
failed	step 66

25   To manually busy the link on the chain on MS 1, type

>**BSY   1   LINK   link_no**

and press the Enter key.

where

>**link_no**
>>is the link number that you recorded in step 21

If the BSY command	Do
passed	step 26
failed	step 66

26   To access the ENET SHELF level of the MAP display, type

>**ENET;SHELF**

and press the Enter key.

Example of a MAP display:

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

```
ENET      System    Matrix   Shelf 0
 Plane 0   .          .              .
 Plane 1   .        Fault            F

SHELF 00  Power    LIU   ENET-Plane 0 ENET-Plane 1  LIU  Power
                    11   11111111 22   22222222  333   333333

Slot      123456   789  01  23456789 01  23456789  012  345678
           .  .          ..  ........ ..  .....F..        .  .
```

27   To access the CARD level for the card you replace, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the number of the card you replace

Example of a MAP display:

```
CARD   Plane  Front:     Back:
              Xpt        NIL
12     0      .          -
22     1      .          -
```

28   To confirm the command, type

>YES

and press the Enter key.

29   To offline all cards in the ENET shelf, type

>OFFL plane_no ALL

and press the Enter key.

where

> **plane_no**
> is the number of the ENET plane (0 or 1) that contains the card you
> replace

Example of a MAP response:

```
Request to OFFLINE ENET Plane:0 Shelf:00 Slot:12 submitted.
Request to OFFLINE ENET Plane:0 Shelf:00 Slot:12 passed.
```

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

At the ENET shelf

30

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

The next action depends on the card you replace.

If you	Do
replace an NT9X35	step 31
replace an NT9X41	step 32
replace an NT9X40 or NT9X45	step 35

31 To replace the card, perform the procedure *Replacing a card* in this NTP. Complete the procedure and go to step 44.

32 Locate the NT9X41 card and disconnect the DS30 connectors.

> **Note:** The DS30 connectors appear in the diagram on the next page.

a Loosen the screws that retain the connector.

b Unplug the connectors.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

33   To replace the card, perform the procedure *Replacing a card* in this NTP. Complete the procedure and return to this point.

34   Reconnect the DS30 connectors.

         a   Plug the connectors into the card.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

    b Tighten the screws that retain the connector.

        Go to step 44.

35

ATTENTION

Make sure that you identify connector zone numbers correctly. To identify zone numbers, refer to figure "NT9X40BA/BB connector zone numbers" for the NT9X40 and figure "NT9X45BA connector zone numbers" for the NT9X45. Figure "NT9X40BA/BB connector zone numbers" appears at the end of this procedure. Figures "Fiber connector detail" and "Fiber connector and receptacle detail" are diagrams of fiber connector components for these cards.

Make sure that you are at the correct ENET node and the interface card, before you disconnect the fiber cables. To identify the ENET node, check the plane and shelf identification. To identify the interface card, check the slot.

36   Make sure that each cable has a label that contains the following information:

- ENET shelf number
- plane number
- slot numbers
- link number
- signal type

The signal type can be transmit or receive. If this information is not present, create a label and attach the label to the cable. This label provides the information that you need to connect the fiber cables to the card correctly.

Example of a label:

ENCO	00	39
10R	04	17T
LTE	000	18
22R	RX	

Label field descriptions

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

ENCO	ENET plane (0 or 1)
00	cabinet number
39	ENET shelf by the base mounting position number
10R	slot number and position (R for rear, or F for front)
04	zone number
17T	link number and the signal type (T for transmit, R for receive)
LTE	PM that the cable terminates on
000	PM frame number
18	PM shelf by the base mounting position number
22R	slot number and position (R for rear, or F for front)
RX	signal type at the PM end (RX for receive or TX for transmit)

37

DANGER
Avoid contamination of the fiber tip surface
Make sure that you do not touch the tip of the fiber. Dirt or oil from the skin transferred to the fiber tip surface degrades fiber performance.

DANGER
Fiber cable can become defective
Make sure that you handle fiber cables carefully. Do not crimp fiber cables or bend fiber cables to a radius of less than 3 cm (1.180 in.).

Disconnect the transmit and receive connectors for each fiber cable as follows.

Note: When you disconnect the connectors, place dust caps on the ends of the connectors.

a Grasp the sleeve with two fingers. Carefully push the sleeve toward the frame.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

b   Turn the connector counterclockwise until the connector pin is in the position shown in the following diagram.

c   Carefully pull the connector away from the frame.

Note: Perform the procedure, *Cleaning fiber optic components and assemblies* in this NTP.

38   The next action depends on the card that you replace.

If you	Do
replace an NT9X45	step 39
replace an NT9X40	step 40

39   Disconnect the DS30 connectors, as follows:

a   Loosen the screws that retain the connector.

b   Unplug the connectors.

40   To replace the card, perform the procedure *Replacing a card* in this NTP. Complete the procedure and return to this point.

41   Remove the dust caps on the transmit and receive connectors as you connect the connectors to the new card.

Reconnect the transmit and receive connectors for each fiber cable, as follows.

a   Align the connector pin and slot with the receptacle slot and pin, in the sequence given, as shown.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

b   Carefully slide the connector into the receptacle.

c   Turn the connector clockwise to lock the connector in place.

d   Release the connector. The following figure illustrates the final connector position.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

42 The next action depends on the card you replace.

If you	Do
replace an NT9X45	step 43
replace an NT9X40	step 44

43 Reconnect the DS30 connectors, as follows.

  a Plug the connectors into the card.

  b Tighten the screws that retain the connector.

At the MAP terminal

44 To access the MS Chain card level of the MAP display, type

  >MS;SHELF;CHAIN card_no

  and press the Enter key.

  where

  card_no
      is the card number that you recorded in step 21

45 To return the link on the chain on MS 0 to service, type

  >RTS 0 LINK link_no

  and press the Enter key.

  where

  link_no
      is the link number that you recorded in step 21

  Example of a MAP response:

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

```
Request to RTS MS: 0 shelf: 0 chain:05 link 0 submitted.
Request to RTS MS: 0 shelf: 0 chain:05 link 0 passed.
```

If the RTS command	Do
passed	step 46
failed	step 66

46   To return the link on the chain on MS 1 to service, type

>RTS 1 LINK link_no

and press the Enter key.

where

    link_no
        is the link number that you recorded in step 21

If the RTS command	Do
passed	step 47
failed	step 66

47   To access the NET;SYSTEM level of the MAP display, type

>NET;SYSTEM

and press the Enter key.

48   To manually busy the ENET plane that contains the replacement card, type

>BSY plane_no 0

and press the Enter key.

where

    plane_no
        is the number of the ENET plane (0 or 1) that contains the card

If the respobse	Do
requests confirmation	step 49
indicates the BSY command passed	step 50

49   To confirm the command, type

>YES

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

and press the Enter key.

If the BSY command	Do
passed	step 50
failed	step 66

50   To return the ENET plane to service, type

>RTS   plane_no   0

and press the Enter key.

where

> **plane_no**
>   is the number of the ENET plane (0 or 1) that contains the card

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:01 submitted.
Request to RTS ENET Plane:0 Shelf:01 passed.
```

If the RTS command	Do
passed	step 51
failed	step 66

51   To access the SHELF level of the MAP display, type

>SHELF

and press the Enter key.

52   To manually busy all cards on the ENET shelf, type

>BSY   plane_no ALL

and press the Enter key.

where

> **plane_no**
>   is the number of the ENET plane (0 or 1) that contains the card

If the BSY command	Do
passed	step 53
failed	step 66

53   To return the card to service, type

>RTS   plane_no

and press the Enter key.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

where

> **plane_no**
>> is the number of the ENET plane (0 or 1) that contains the card

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 Slot:12 submitted.
Request to RTS ENET Plane:0 Shelf:00 Slot:12 passed.
```

If the RTS command	Do
passed	step 56
failed	step 66

54 The replacement card is faulty. Obtain another replacement card.

55 To access the SYSTEM level of the MAP display, type

>SYSTEM

and press the Enter key.

Go to step 16

56 To access the NET;SYSTEM level of the MAP display, type

>SYSTEM

and press the Enter key.

57 To clear the deload condition on all crosspoint cards in the ENET plane, type

>DELOAD plane_no 0 CLEAR

and press the Enter key.

where

> **plane_no**
>> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 submitted.
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 passed.
```

58 The next action depends on if you recorded a card list in step 12.

If you	Do
recorded a card list	step 59
did not record a card list	step 62

59 To access the SHELF level of the MAP display, type

>SHELF 0

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

and press the Enter key.

60   To set the first card on the list to the deloaded status, type

>**DELOAD plane_no slot_no SET**

and press the Enter key.

where

plane_no
is the ENET plane number (0 or 1)

slot_no
is the number of the slot the card occupies (slots 12 to 19 on plane 0 or slots 22 to 29 on plane 1)

If all cards on the list	Do
are not set to deloaded status	step 61
are set to deloaded status	step 62

61   Repeat step 60 for the next card on the list.

62   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 63
did not direct you to this procedure	step 67

63   Return to the maintenance procedure that directed you to this procedure and continue as directed.

64   This procedure instructs you to deload a node. Continue this procedure only under special conditions because the mate node has deloaded cards. Consult office personnel or the next level of support. Continue as directed.

65   To obtain help on how to identify the cause of the system busy condition, contact the next level of support. Continue as directed.

66   For additional help, contact the next level of support.

67   The procedure is complete.

Crosspoint and interface cards
in a SuperNode SE 16k ENET (continued)

NT9X40BA/BB connector zone numbers

The figure correlates the zone numbers (1 to 8) to the link numbers. The zone numbers appear on the face of the card. The link numbers appear on the MAP display for the NT9X40BA or NT9X40BB interface card. Note that the diagram indicates fiber connections only. Observe carefully the zone identification marks for transmit and receive.

in a SuperNode SE 16k ENET (end)

Fiber connector detail

This figure shows the type of connector used to connect fiber to an NT9X40 or NT9X45 paddle board.

Fiber connector and receptacle detail

This figure shows the different parts of the connector and receptacle.

Crosspoint and interface cards in a SuperNode SE 32k ENET

Application

Use this procedure to replace the following cards in a SuperNode SE 32k enhanced network (ENET) shelf.

To identify the product engineering code (PEC), suffix, the provisioned shelf or frame of the removed card, refer to the Index. The Index contains a list of cards, shelves, and frames in this card replacement book.

PEC	Suffix	Card name	Shelf or frame name
NT9X35	BA, CA	128K ENET crosspoint card	32k ENET
NT9X40	BA, BB, DA	ENET quad fiber interface paddle board	32k ENET, slots 10 to 16 and 25 to 32
NT9X41	BA	International 16-port DS-30 paddle board	32k ENET
NT9X45	BA	Three DS-512 link and 16 DS-30 port paddle board	32k ENET

Note: To replace an NT9X40 in slot 8, refer to the *System cards in a Supernode SE 32k ENET* procedure in this chapter.

Common procedures

This document contains references to the following:

- *Replacing a card*
- *Verifying load compatibility of SuperNode cards*
- *Cleaning fiber optic components and assemblies*

The instructions in this procedure will indicate when to refer to the common procedures.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. To replace the card, follow the instructions in the steps to perform the procedure.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

Summary of Replacing Crosspoint and interface cards in a SuperNode SE 32k ENET

Set deload for the plane and shelf

↓

Wait 30 min for traffic to clear

↓

Manually-busy the MS chain head cards

↓

Manually-busy and offline the plane and shelf

↓

Replace the card

↓

Return the MS chain head cards to service

↓

Manually-busy the plane and shelf

↓

Return the plane and shelf to service → Clear deload for the plane and shelf → End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

Replacing Crosspoint and interface cards in a SuperNode SE 32k ENET

At your current location

1   Determine the type and location of the removed card.

If the card	Do
is an NT9X40 card in slot 8	step 2
is other than listed here	step 3

2   To replace the card, refer to the *System cards in a SuperNode SE 32k ENET* procedure in this chapter.

3

>
> **WARNING**
> **Calls may be dropped**
> This procedure removes an ENET card from service, potentially dropping calls currently in progress. Perform this procedure only if necessary to return an interface or crosspoint card to service. Otherwise, perform this procedure only during periods of low traffic.

      Obtain a replacement card. Ensure that the replacement card has the same PEC, including suffix, as the removed card.

      Note: For North American switches, NT9X40BA and NT9X40BB are interchangeable and can coexist with the other switches. Only NT9X40BB are available for international switches.

4   Make sure that the replacement card is compatible with the software load. To verify the compatibility, refer to the *Verifying the load compatibility of SuperNode cards* procedure in this NTP. When the procedure is complete, return to this point.

At the MAP terminal

5   To access the NET;SYSTEM level of the MAP display, type

      >MAPCI;MTC;NET;SYSTEM

      and press the Enter key.

      Example of a MAP display:

```
SYSTEM
 Shelf    Plane 0                    Plane
  00        I CSLink 1 closed          .
```

6   Determine the state of the plane that contains the card. An indication of the state appears under the Plane headers on the SYSTEM level MAP display.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

In the MAP display example shown in step 5, plane 0 is in-service trouble (I) and plane 1 in service.

If the state of the plane	Do
is T , tested	step 7
is other than listed here	step 8

7   When the system initiated testing is complete, go to step 6 to evaluate the state of the ENET plane again.

8   To determine if there are deloaded crosspoint cards in the other plane, type

>**DELOAD   plane_no   0   QUERY**

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1) of the mate node

Example of a MAP response:

```
Request to QUERY DELOAD ENET Plane:0 Shelf:00 submitted.
Request to QUERY DELOAD ENET Plane:0 Shelf:00 passed.
          1111111 11122222 22222333
          90123456 78901234 56789012
Plane:0 Shelf:00 ..Y.---- -------- ----....
```

> **Note:** The letter Y under the slot number indicates a deloaded crosspoint card.

If the plane	Do
has deloaded cards	step 57
does not have deloaded cards	step 9

9   To determine if there are deloaded crosspoint cards in the current plane, type

>**DELOAD   plane_no   0   QUERY**

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

If the plane	Do
has deloaded cards	step 10
does not have deloaded cards	step 11

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

10   Record the plane number and slot number for any deloaded crosspoint cards in the plane. Use this list to ensure that these cards return to the deloaded state when this procedure is complete.

11   On the plane associated with the removed card, to set all crosspoint cards to a deloaded status, type

>**DELOAD plane_no 0 SET**

and press the Enter key.

where

    plane_no
      is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to SET DELOAD ENET Plane:0 Shelf:00 submitted.
Request to SET DELOAD ENET Plane:0 Shelf:00 passed.
```

12   Wait 30 min to allow network traffic on the node to clear.

13   The next action depends on the current state of the ENET plane.

If the ENET plane	Do
is O,offline	step 25
is M, manually-busy	step 15
is other than listed here	step 14

14   To manually busy the current plane, type

>**BSY plane_no 0**

and press the Enter key.

where

    plane_no
      is the ENET plane number (0 or 1)

Example of a MAP response:
Request to MAN BUSY ENET Plane:0 Shelf:00 submitted.
Request to MAN BUSY ENET Plane:0 Shelf:00 passed.

If the BSY command	Do
passes	step 15
fails	step 58

15   To set the plane offline, type

>**OFFL plane_no 0**

and press the Enter key.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to OFFL ENET Plane:0 Shelf:00 submitted.
Request to OFFL ENET Plane:0 Shelf:00 passed
```

.

If the OFFL command	Do
passes	step 25
fails	step 58

16   To locate the message switch (MS) chain head card associated with the current ENET plane, type

>TRNSL plane_no 0

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to TRNSL ENET Plane:0 Shelf:00 submitted.
Request to TRNSL ENET Plane:0 Shelf:00 passed.
ENET Plane:0  Shelf:00 :  MS 0 and 1 Card:16 Link:00 Port:000
```

> **Note:** In the example, the number of the chain head card is 16. The link number is 0.

17   Record the number of the chain head card and the link number.

18   To access the MS;SHELF level of the MAP display, type

>MS;SHELF

and press the Enter key.

Example of a MAP display:

```
      Message Switch    Clock     Shelf  0         Inter-MS Link 0 1
MS 0       M            Slave          C                       - -
MS 1       .            M Free         F                       - -

Shelf 0                   1 1 1 1 1 1 1 1 1 1 2 2 2 2 2 2 2
Card  1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6
Chain                                     | |
MS 0  . . . . . . - - - - - - - - - - - . . . . . . . . . F I
MS 1  . . . . . . - - - - - - - - - - - . . . . . . . . . F I
```

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

19   To post the chain head card, type

>**CHAIN   card_no**

and press the Enter key.

where

card_no
is the card number recorded in step 17

Example of a MAP display:

```
Chain 16  Range  Link   0 1
MS 0   .  16-17  DS512  . .
MS 1   .  16-17  DS512  . .
```

20   To manually busy the link on the chain on MS 0, type

>**BSY 0 LINK link_no**

and press the Enter key.

where

link_no
is the link number recorded in step 17

Example of a MAP response:

```
Request to MAN BUSY MS: 0 shelf: 0 chain:16 link 0
submitted.
Request to MAN BUSY MS: 0 shelf: 0 chain:16 link 0 passed
```

  .

If the BSY command	Do
passes	step 21
fails	step 58

21   To manually busy the link on the chain on MS 1, type

>**BSY 1 LINK link_no**

and press the Enter key.

where

link_no
is the link number recorded in step 17

If the BSY command	Do
passes	step 22
fails	step 58

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

22   To access the ENET SHELF level of the MAP display, type

>NET;SHELF 0

and press the Enter key.

Example of a MAP display:

```
SHELF 01  Slot         1111111 11122222 22222333 333333
               123456 78 90123456 78901234 56789012 345678
 Plane 0    O  O   OO CCCCCCCC -------- CCCCCCCC O  O
 Plane 1    .  .   .. ........ -------- ........ .  .
```

23   To manually busy all cards on the ENET shelf, type

>BSY plane_no ALL

and press the Enter key.

where

   plane_no
      is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to MAN BUSY ENET Plane:0 Shelf:00 submitted.
Warning: Card replacement requires front and back bsy/rts
to prevent possible service degradation to peripherals.
Request to MAN BUSY ENET Plane:0 Shelf:01 passed.
```

24   To set all card on the ENET shelf offline, type

>OFFL plane_no ALL

and press the Enter key.

where

   plane_no
      is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to OFFLINE ENET Plane:0 Shelf:01 submitted.
Request to OFFLINE ENET Plane:0 Shelf:01 passed.
```

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

At the ENET shelf

25

> ⚠ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

The next action depends on the removed card.

If you	Do
remove an NT9X35	step 26
remove an NT9X41	step 27
remove an NT9X40 or an NT9X45	step c

26   To replace the card, refer to the the *Replacing a card* procedure in this NTP. When the procedure is complete, go to step 38.
> *Note:* Make sure that the switches on the replacement card have the same settings as the removed card.

27   Locate the NT9X41 card and disconnect the DS30 connectors.

> *Note:* The DS30 connectors appear in the figure on the next page.

a   Loosen the connector retaining screws.

b   Unplug the connectors.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

28 To replace the card, refer to the *Replacing a card* procedure in this NTP. When the procedure is complete, return to this point.

29 Reconnect the DS30 connectors.

    a Plug the connectors into the card.

    b Tighten the connector retaining screws.

       Go to step 38.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

30

ATTENTION

Identify connector zone numbers correctly. To identify zone numbers refer to figure "NT9X40BA/BB connector zone numbers", at the end of this procedure, for the NT9X40. Refer to figure "NT9X45BA connector zone numebrs" for the NT9X45 for the zone numbers. Illustrations of fiber connector components for these cards are provided in figures "Fiber connector detail" and "Fiber connector and receptacle detail".

Make sure that the plane and shelf identification of the ENET node and the slot of the interface card are correct. Proceed to disconnect the fiber cables.

Check each cable for a label that contains all of the correct information. If the information is not present, create a label and attach the label to the cable. This label provides the necessary information for correctly reconnecting the fiber cables to the card. A label must include the following information:

- the ENET shelf number

- plane number

- slot number

- link number and signal type

- transmit or receive

Example of a label:

ENCO	00	39
10R	04	17T
LTE	000	18
22R	RX	

Label field descriptions

ENC0
 ENET plane (0 or 1)

00
 cabinet number

39
 ENET shelf from the base mounting position number

10R
 slot number and position (R for rear, or F for front)

04
 zone number

17T
 link number and the signal type (T for transmit, R for receive)

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

LTE
   PM where the cable terminated

000
   PM frame number

18
   PM shelf from the base mounting position number

22R
   slot number and position (R for rear, or F for front)

RX
   signal type at the PM end (RX for receive or TX for transmit)

31

DANGER
Do not contaminate the fiber tip surface
Do not touch the tip of the fiber. Dirt or oil from the skin transferred to the fiber tip surface degrades fiber performance.

DANGER
Damage to the fiber cable
Exercise care in handling fiber cables. Do not crimp fiber cables or bend fiber cables to a radius of less than 3 cm (1.180 in.).

Disconnect the transmit and receive connectors for each fiber cable.

   Note: Place dust caps on the ends of the connectors as you disconnect them.

a   Grasp the sleeve with two fingers and slowly push the sleeve toward the frame.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

b   Turn the connector counter clockwise and the connector pin is in the position shown at the right.

c   Slowly pull the connector away from the frame.

> ***Note:*** Perform the procedure, *Cleaning fiber optic components and assemblies* in this NTP.

32   The next action depends on the replaced card.

If you	Do
replace an NT9X45	step 33
replace an NT9X40	step 34

**33**   Disconnect the DS30 connectors.

a   Loosen the connector retaining screws.

b   Unplug the connectors.

34   To replace the card, refer to the *Replacing a card* procedure in this NTP. When the procedure is complete, return to this point.
> ***Note:*** Make sure that the switches on the replacement card have the same settings as the removed card.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

**35**   Remove the dust caps on the transmit and receive connectors as you reconnect them to the new card.

Reconnect the transmit and receive connectors for each fiber cable.

a   Align the connector pin and slot with the receptacle slot and pin.

**b**   Slowly slide the connector into the receptacle.

c   Turn the connector clockwise to lock the connector in place.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

d Release the connector. The following figure shows the final connector position.

36 The next action depends on the removed card..

If you	Do
remove an NT9X45 card	step 37
remove an NT9X40 card	step 38

37 Reconnect the DS30 connectors.

a Plug the connectors into the card.

b Tighten the connector retaining screws.

At the MAP terminal

38 To access the Chain level of the MAP display, type

>MS;SHELF;CHAIN card_no

and press the Enter key.

where

> **card_no**
> is the card number recorded in step 17

39 To return the link on the chain on MS 0 to service, type

>RTS 0 LINK link_no

and press the Enter key.

where

> **link_no**
> is the link number recorded in step 17

Example of a MAP response:

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

```
Request to RTS MS: 0 shelf: 0 chain:16 submitted.
Request to RTS MS: 0 shelf: 0 chain:16 passed.
```

If the RTS command	Do
passes	step 40
fails	step 58

40   To return the link on the chain on MS 1 to service, type

>RTS 1 LINK link_no

and press the Enter key.

where

    link_no
      is the link number recorded in step 17

If the RTS command	Do
passes	step 41
fails	step 58

41   To access the NET;SYSTEM level of the MAP display, type

>NET;SYSTEM

and press the Enter key.

42   To manually busy the current plane, type

>BSY plane_no 0

and press the Enter key.

where

    plane_no
      is the ENET plane number (0 or 1)

If the BSY command	Do
passes	step 43
fails	step 58

43   To return the plane to service, type

>RTS plane_no 0

and press the Enter key.

where

    plane_no
      is the ENET plane number (0 or 1)

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 submitted.
Request to RTS ENET Plane:0 Shelf:00 passed.
There are no suspect cards
```

If the RTS command	Do
passes	step 44
fails	step 58

44 To access the ENET SHELF level of the MAP display, type

>**SHELF 0**

and press the Enter key.

45 To manually busy all cards in the ENET plane, type

>**BSY plane_no ALL**

and press the Enter key.

where

plane_no
    is the ENET plane number (0 or 1)

46 To return all cards in the ENET plane to service, type

>**RTS plane_no ALL**

and press the Enter key.

where

plane_no
    is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:01 submitted.
Request to RTs ENET Plane:0 Shelf:01 passed.
```

If the RTS command	Do
passes	step 49
fails	step 47

47 The replacement card has faults. Obtain another replacement card.

48 To access the ENET system level of the MAP display, type

>**SYSTEM**

and press the Enter key.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

Go to step 14.

49   To access the ENET system level of the MAP display, type

>SYSTEM

and press the Enter key.

50   To clear the deload condition on all crosspoint cards in the plane, type

>DELOAD plane_no 0 CLEAR

and press the Enter key.

where

    plane_no
        is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 submitted.
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 passed.
```

51   The next action depends on if the deloaded cards appear in the list from step 10.

If	Do
cards are listed	step 52
cards are not listed	step 55

52   To access the SHELF level of the MAP display, type

>SHELF 0

and press the Enter key.

53   To set the first card on the list to deloaded state, type

>DELOAD plane_no slot_no SET

and press the Enter key.

where

    plane_no
        is the ENET plane number (0 or 1)
    slot_no
        is the slot number (9 to 32)

If all the cards on the list	Do
are not set to the deloaded state	step 54
are set to the deloaded state	step 55

**54**   Repeat step 53 for the next card on the list.

Crosspoint and interface cards
in a SuperNode SE 32k ENET (continued)

55   The next action depends on the reason for this procedure.

If	Do
a maintenance procedure directed you to this procedure	step 56
you were not directed to this procedure from a maintenance procedure	step 59

56   Return to the maintenance procedure and continue as directed.

57   This procedure contains the instructions to deload a node. When the mate node has deloaded cards, do not continue this procedure, except under special conditions. Consult office personnel or your next level of support and continue as directed.

58   For additional help, contact the personnel responsible for the next level of support.
59   This procedure is complete.

NT9X45BA connector zone numbers

The figure correlates the zone numbers from 1 to 12, that appear on the face of the card to the link numbers that appear on the MAP display for the NT9X45BA interface card. Note that only fiber connections are shown. Notice the zone designations for transmit and receive.

# Crosspoint and interface cards
in a SuperNode SE 32k ENET (end)

Fiber connector detail

This figure shows the type of connector used for fiber connections to an NT9X40 or NT9X45 paddle board.

Fiber connector and receptacle detail

This figure shows the different parts of the connector and receptacle.

Power converter cards
in a SuperNode SE 16k ENET

Application

Use this procedure to replace the following cards in a SuperNode SE (SNSE) 16k enhanced network (ENET).

PEC	Suffix	Card name	Shelf or frame name
NT9X30	AA, AB	+ 5V 86-A power converter card	Enhanced network and interface (ENI)
NT9X31	AA, AB	- 5V 20-A power converter card	ENI

Note: You can not replace NT9X30AA with NT9X30AB, nor can you replace NT9X31AA with NT9X31AB.

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card to replace, refer to the Index. The Index provides a list of the cards, shelves, and frames documented in this card replacement book.

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

• product engineering code (PEC)

• PEC suffix

• provisioned shelf

• provisioned frame

Common procedures

This procedure refers to the following common procedures:

• *Activating CCS7 links*

• *Deactivating CCS7 links*

• *Loading a PM*

• *Replacing a card*

• *Verifying load compatibility of SuperNode cards*

Do not go to the common procedure unless the step-action procedure directs you.

## Power converter cards
in a SuperNode SE 16k ENET (continued)

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Replace card            End

        │
        ▽1
```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Power converter cards
in a SuperNode SE 16k ENET (continued)

Replacing Power converter cards in a SuperNode SE 16k ENET

At the MAP terminal

1

> ⚠ **WARNING**
> **System can drop calls**
> This procedure removes an ENET shelf from service, which
> can cause the system to drop calls now in progress. Perform
> this procedure if you need to return system cards to service.
> If you do not need to return system cards to service, perform
> this procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card and the
card that you remove have the same PEC and PEC suffix.

2 To make sure that the replacement card is compatible with the software load,
perform the procedure *Verifying load compatibility of SuperNode cards*. The
procedure *Verifying load compatibility of SuperNode cards* appears in this
NTP. Complete the procedure and return to this point.

3 To access the NET;SYSTEM level of the MAP display, type

>**MAPCI;MTC;NET;SYSTEM**

and press the Enter key.

Example of a MAP display:

```
SYSTEM
 Shelf    Plane 0                    Plane 1
   00     I CSLink 1 closed             .
```

4 Check the state of the ENET plane that contains the card you replace. The
state appears under the Plane headers on the SYSTEM level MAP display.
In the MAP display example in step 3, plane 0 is in-service trouble (I). The
other plane is in service.

If the state of the ENET plane	Do
is T (being tested)	step 5
is other than listed here	step 6

5 Wait for the system to complete system-initiated testing. Go to step 4 to
evaluate the state of the ENET plane.

**Power converter cards
in a SuperNode SE 16k ENET** (continued)

6   To determine if deloaded crosspoint cards are in the other plane of the ENET, type

>**DELOAD   plane_no   0   QUERY**

and press the Enter key.

where

plane_no
is the ENET plane number (0 or 1) for the mate node

Example of a MAP response:

```
Request to QUERY DELOAD ENET Plane:0 Shelf:00  submitted.
Request to QUERY DELOAD ENET Plane:0 Shelf:00 passed.

                 1111111 111
                 0123456 789
Plane:0 Shelf:00 .Y.---- ---
```

> **Note:** The letter Y under the slot number indicates a deloaded crosspoint card.

If the other ENET plane	Do
has deloaded cards	step 87
does not have deloaded cards	step 7

7   To determine if deloaded crosspoint cards are in the ENET plane, type

>**DELOAD   plane_no   0   QUERY**

and press the Enter key.

where

plane_no
is the number of the ENET plane (0 or 1) that contains the card

If the ENET plane	Do
has deloaded cards	step 8
does not have deloaded cards	step 9

8   Record the plane number and slot number for any deloaded crosspoint cards in the node. Use the list to make sure that these cards are returned to the deloaded state when you complete this procedure.

9   To set all crosspoint cards for the ENET plane that contains the card that you replace to a deloaded state, type

>**DELOAD   plane_no   0   SET**

and press the Enter key.

where

Power converter cards
in a SuperNode SE 16k ENET (continued)

        plane_no
          is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to SET DELOAD ENET Plane:0 Shelf:00   submitted.
Request to SET DELOAD ENET Plane:0 Shelf:00   passed.
```

10   Wait 30 min to allow network traffic on the ENET plane to clear.

11   The next step depends on the state of the ENET plane that contains the card you replace.

If the ENET plane	Do
is O (offline)	step 16
is M (manual busy)	step 14
is other than listed here	step 12

12   To manually busy the ENET plane, type

     >BSY plane_no 0

     and press the Enter key.

     where

         plane_no
           is the number of the ENET plane (0 or 1) that contains the card

     Example of a MAP response:

```
Request to MAN BUSY ENET Plane:0 Shelf:00   submitted.
Request to MAN BUSY ENET Plane:0 Shelf:00   passed.
```

If the response	Do
requests confirmation	step 13
indicates the BSY command passed	step 14

13   To confirm the command, type

     >YES

     and press the Enter key.

If the BSY command	Do
passed	step 14
failed	step 90

Power converter cards
in a SuperNode SE 16k ENET (continued)

14   To offline the ENET plane, type

>OFFL   plane_no   0

and press the Enter key.

where

> **plane_no**
>   is the number of the ENET plane (0 or 1) that contains the card

Example of a MAP response:

```
WARNING: A power down of ENET plane:1 shelf:00 may affect
LIU components.
Please confirm ("YES", "Y", "NO", or "N"):
```

If the response	Do
requests confirmation	step 15
indicates the OFFL the com-mand passed	step 16

15   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Request to OFFLINE ENET Plane:1 Shelf:00 submitted.
Request to OFFLINE ENET Plane:1 Shelf:00 passed.
```

If the OFFL command	Do
passed	step 16
failed	step 90

16   To locate the message switch (MS) chain head card that associates with the ENET plane, type

>TRNSL   plane_no   0

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

Example of a MAP response:

Power converter cards
in a SuperNode SE 16k ENET (continued)

```
Request to TRNSL ENET Plane:0 Shelf:00 submitted.
Requestto TRNSL ENET Plane:0 Shelf:00 passed.
ENET Plane:0 Shelf:00 :  MS 0 and 1 Card:05 Link:00 Port:000
```

> ***Note:*** In the example, the number of the chain head card is 5. The link number is 0.

17 Record the number of the chain head card and the link number.

18 To access the MS;SHELF level of the MAP display, type

>**>MS;SHELF**

and press the Enter key.

Example of a MAP display:

```
    Message Switch   Clock    Shelf  0    Inter-MS Link 0 1
MS 0        .        Slave         .                    . .
MS 1        .        M Free        .                    . .

Shelf 0                    1 1 1 1
 Card 1 2 3 4 5 6 7 8 9 0 1 2 3
Chain        |
MS 0  . . . . ‾ ‾ . . . . . .
MS 1  . . . .. ‾ ‾ . . . . . .
```

19 To post the chain head card, type

>**>CHAIN   card_no**

and press the Enter key.

where

> **card_no**
>> is the card number you recorded in step 17

Example of a MAP display:

```
Chain 05  Range  Link   0 1
MS 0   .  05-05  DS512  . .
MS 1   .  05-05  DS512  . .
```

20 To manually busy the link on the chain on MS 0, type

>**>BSY 0 LINK link_no**

and press the Enter key.

where

> **link_no**
>> is the link number that you recorded in step 17

Example of a MAP response:

Power converter cards
in a SuperNode SE 16k ENET (continued)

```
Request to MAN BUSY MS: 0 shelf: 0 chain:16 link 0 submitted.
Request to MAN BUSY MS: 0 shelf: 0 chain:16 link 0 passed.
```

If the BSY command	Do
passed	step 21
failed	step 90

21   To manually busy the link on the chain on MS 1, type

>BSY 1 LINK link_no

and press the Enter key.

where

> **link_no**
>   is the link number that you recorded in step 17

If the BSY command	Do
passed	step 22
failed	step 90

22   To access the ENET SHELF level of the MAP display, type

>NET;SHELF

and press the Enter key.

Example of a MAP display:

```
ENET      System   Matrix  Shelf 0
   Plane 0 CSLink   Fault          F
   Plane 1 CSLink      .           F

SHELF 00  Power   LIU   ENET-Plane 0 ENET-Plane 1  LIU   Power
                         11  11111111 22  22222222  333  333333
   Slot      123456789  01  23456789 01  23456789  012  345678
           .    .           .F  SSSSSSSS .F  ........      .   .
```

23   To manually busy all crosspoint cards on the shelf side, type

>BSY plane_no ALL

and press the Enter key.

Example of a MAP response:

Power converter cards
in a SuperNode SE 16k ENET (continued)

```
WARNING:
      This action will be performed on ALL XPT slots
      in ENET Plane:1 that are MBSY, INSV, OFFL,
      SBSY, or CBSY.
Please confirm ("YES", "Y", "NO", or "N"):
```

24   To confirm the command, type

   >YES

   and press the Enter key.

   Example of a MAP response:

```
Request to MAN BSY ALL ENET Plane:1 Shelf:00 submitted.
Request to MAN BSY ALL ENET Plane:1 Shelf:00 completed.
```

25   To offline all crosspoint cards on the shelf side, type

   >OFFL plane_no ALL

   and press the Enter key.

   where

   plane_no
        is the ENET plane number (0 or 1)

   Example of a MAP response:

```
Request to MAN BSY ALL ENET Plane:1 Shelf:00 submitted.
Request to MAN BSY ALL ENET Plane:1 Shelf:00 completed.
```

26   The next action depends if the ENET shelf has CCS7 link interface units (LIU7).

If the ENET shelf	Do
has LIU7	step 27
does not have LIU7	step 33

27   To access the PM level of the MAP display, type

   >MAPCI;MTC;PM

   and press the Enter key.

   Example of a MAP display:

```
         SysB    ManB    OffL    CBsy    ISTb    InSv
PM       11       0      11       4      16      38
```

Power converter cards
in a SuperNode SE 16k ENET (continued)

28

> **WARNING**
> **Loss of service**
> The following procedure removes an LIU7 from service.
> Removal of an LIU7 can temporarily interrupt messaging on
> the associated CCS7 link.

To post one of the LIU7s on the shelf side, type

>POST   LIU7   liu_no

and press the Enter key.

where

liu_no
  is the number of the LIU7 (0 to 511)

Example of a MAP display:

```
            SysB     ManB     OffL     CBsy     ISTb     InSv
   PM         1        0        2        0        3        6
   LIU7       1        0        0        0        0        3

LIU7   208 InSv        Rsvd
```

29   To deactivate the CCS7 link associated with the LIU7, perform the procedure
Deactivating CCS7 links in this document. Complete the procedure and
return to this point.

30   Determine the state of the LIU7.

  Note: The LIU7 state appears on the right of the LIU7 number, as shown
  in the example MAP display in step 28.

If the state of the LIU7	Do
is SysB, SysB (NA), ISTb, or InSv	step 31
is ManB or ManB (NA)	step 33
is OffL	step 88
Rsvd	step 90

31   To manually busy the LIU7, type

>BSY   FORCE

Power converter cards
in a SuperNode SE 16k ENET (continued)

and press the Enter key.

If	Do
the MAP display prompts you to confirm the command	step 32
the command passed	step 33

32   To confirm the command, type

>YES

and press the Enter key.

33   To access the MS level of the MAP display, type

>MAPCI;MTC;MS

and press the Enter key.

```
     Message Switch  Clock    Shelf 0 Inter-MS Link 0 1
MS 0     .           M Free
MS 1     .           Slave          .                . .
```

```
     Message Switch  Clock    Shelf 0 Inter-MS Link 0 1
MS 0     .           M Free                          . .
MS 1     .           Slave          .                . .
```

34   Determine the state of the MS that controls the mate F-bus.

> ***Note:*** F-bus 0 is the mate F-bus for a card in slot 32F, 32R, or 30R. MS 0 controls F-bus 0. F-bus 1 is the mate F-bus for a card in slot 7F, 7R, or 8R. MS 1 controls F-bus 1.

If the MS that controls mate F-bus	Do
is in service or in-service trouble	step 36
is other than listed here	step 35

35   To return the MS to service, perform the correct MS alarm clearing procedure in *Alarm and Performance Monitoring Procedures*. Complete the procedure and return to this point.

36   To access the SHELF level of the MAP display, type

>SHELF

and press the Enter key.

37   To access the F-bus level of the MAP display, type

>CARD 12

and press the Enter key.

Example of a MAP display:

**Power converter cards
in a SuperNode SE 16k ENET** (continued)

```
Shelf 0                  1 1 1 1
Card  1 2 3 4 5 6 7 8 9 0 1 2 3
Chain         |
MS 0  . . . . . – – . . . . . .
MS 1  . . . . . – – . . . . . .

Card 12          FBus Tap: 0          11 12   16   20
MS 0  .                .        .          . .... .... ....
MS 1  .                .        .          . .... .... ....

CARD:
```

> **Note 1:** A dot (.) under the F-bus header indicates the F-bus is in service. An S indicates the F-bus is system busy. An M indicates the F-bus is manual busy. An I indicates the F-bus is in-service trouble. An O indicates the F-bus is offline.

> **Note 2:** Under the F-bus tap numbers, different characters indicate different states. The letter C indicates that the F-bus is manual busy or the MS or MS port that controls the F-bus tap is system or manual busy. An S indicates the F-bus tap is system busy. A dot indicates the F-bus tap is in service. An M indicates the F-bus tap is manual busy. An I indicates the F-bus tap is in-service trouble. A dash (-) indicates the F-bus tap is offline.

38   Determine the state of the mate F-bus and the mate F-bus taps.

> **Note:** F-bus 0 is the mate F-bus associated with a card in slot 30R, 32R, or 32F. MS-0 controls F-bus 0. F-bus 1 is the mate associated with a card in slot 7R, 8R, or 7F. MS 1 controls F-bus 1.

If	Do
the state of the F-bus is `InSv` and all F-bus taps are `.` (dot)	step 39
the states are other than listed here	step 89

39

	WARNING
⚠	**Potential loss of service** Make sure that the mate F-bus and F-bus taps are in service before you manually busy the F-bus that associates with the card you replace. If you manually busy the F-bus while the mates are out of service, you isolate the node on the other side of the shelf.

To manually busy the F-bus that associates with the card you replace, type

>BSY   ms_no   FBUS

Power converter cards
in a SuperNode SE 16k ENET (continued)

and press the Enter key.

where

ms_no
is the number of the MS (0 or 1) that controls the F-bus

Note: F-bus 0 associates with a card in slot 1 or 4. MS 0 controls F-bus 0. F-bus 1 associates with a card in slot 33 or 36. MS 1 controls F-bus 1.

Example of a MAP response:

```
Request MAN BSY MS: 0 shelf 0 card:12 port 0
FBus requires confirmation because
the following NIUs may be active on this bus...
NIU 001 unit 0
NIU 001 unit 1
Please confirm("YES", "Y", "NO", or "N")
```

If the response	Do
indicates the BSY command passed	step 41
requests confirmation	step 40

40   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Request MAN BSY MS: 0 shelf 0 card:12 port 0FBus submitted
Request MAN BSY MS: 0 shelf 0 card:12 port 0FBus passed
```

41   To manually busy the mate F-bus tap that associates with the card you replace, type

>BSY ms_no TAP tap_no

and press the Enter key.

where

ms_no
is the number of the MS (0 or 1) that controls the mate F-bus

tap_no
is 0 if you replace a card in slots 1 or 4is 11 if you replace a card in slots 33 or 36

Note: F-bus 0 is the mate F-bus for a card in slot 33 or 36. MS 0 controls F-bus 0. F-bus 1 is the mate F-bus for a card in slot 1 or 4. MS 1 controls F-bus 1.

Example of a MAP display:

Power converter cards
in a SuperNode SE 16k ENET (continued)

```
Warning, P-side nodes may be isolated.
Please confirm ("YES", "Y", "NO", or "N"):
```

42   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Request to MAN BSY MS: 0 shelf: 0 card:12 tap: 0 submitted.
Request to MAN BSY MS: 0 shelf: 0 card:12 tap: 0 passed.
```

At the ENET shelf

43

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding
> point of a frame supervisory panel (FSP) or a modular
> supervisory panel (MSP) to handle circuit cards. The wrist
> strap protects the cards against static electricity damage.

Power down the NT9X31 card that associates with the ENET shelf side. To
power down the card, press down and release the power switch on the
faceplate of the card.

> ***Note:*** The CONVERTER OFF LED turns on when the converter powers
> down.

If the CONVERTER OFF LED	Do
is lit	step 44
is not lit	step 90

44   Power down the NT9X30 card that associates with the ENET shelf side you
are working on. To power down the card, press down and release the power
switch on the faceplate of the card.

> ***Note:*** The CONVERTER OFF LED turns on when the converter powers
> down.

If the CONVERTER OFF LED	Do
is lit	step 45
is not lit	step 90

Power converter cards
in a SuperNode SE 16k ENET (continued)

45

> ⚡ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To replace the card, perform the procedure *Replacing a card* in this NTP. Complete the procedure and return to this point.

> *Note 1:* Make sure that the handle of the PWR switch on the replacement power converter is in the OFF position.

> *Note 2:* If the card that you replace has switches, make sure that the switches on the replacement card have the same settings.

46 To power up the NT9X30 card, press up and release the power switch on the faceplate of the card.

> *Note:* The CONVERTER OFF LED turns off when the converter powers up.

If the CONVERTER OFF LED	Do
is not lit	step 47
is lit	step 90

47 To power up the NT9X31 card, press up and release the power switch on the faceplate of the card.

> *Note:* The CONVERTER OFF LED turns off when the converter powers up.

If the CONVERTER OFF LED	Do
is not lit	step 48
is lit	step 90

At the MAP terminal

48 To make sure that you are at the MS;SHELF level of the MAP display, type

>**MS;SHELF**

and press the Enter key.

49 To post the chain head card that you posted in step 19, type

>**CHAIN   card_no**

and press the Enter key.

**Power converter cards
in a SuperNode SE 16k ENET** (continued)

where

> **card_no**
> is the card number that you recorded in step 17

50   To return the link on the chain on MS 0 to service, type

>RTS 0 LINK link_no

and press the Enter key.

where

> **link_no**
> is the link number that you recorded in step 17

Example of a MAP response:

```
Request to RTS MS: 0 shelf: 0 chain:16 link 0 submitted.
Request to RTS MS: 0 shelf: 0 chain:16 link 0 passed.
```

If the RTS command	Do
passed	step 51
failed	step 90

51   To return the link on the chain on MS 1 to service, type

>RTS 1 LINK link_no

and press the Enter key.

where

> **link_no**
> is the link number that you recorded in step 17

If the RTS command	Do
passed	step 52
failed	step 90

52   To access the F-bus level of the MAP display, type

>CARD 12

and press the Enter key.

53   To return the manual busy F-bus to service, type

>RTS ms_no FBUS

and press the Enter key.

where

> **ms_no**
> is 0 if you replaced a card in slots 1 or 4is 1 if you replaced a card in slots 33 or 36

Power converter cards
in a SuperNode SE 16k ENET (continued)

54   To return the tap on the mate F-bus to service, type

>RTS   ms_no   TAP   tap_no

and press the Enter key.

where

> **ms_no**
> is 0 if you replaced a card in slots 1 or 4is 1 if you replaced a card in slots 33 or 36

> **tap_no**
> is 0 if you replaced a card in slots 1 or 4is 11 if you replaced a card in slots 33 or 36

Example of a MAP response:

```
Request to RTS MS: 0 shelf: 0 card:12 tap: 0  submitted.
Request to RTS MS: 0 shelf: 0 card:12 tap: 0  passed.
```

55   To access the NET;SYSTEM level of the MAP display, type

>NET;SYSTEM

and press the Enter key.

56   To manually busy the ENET node, type

>BSY   plane_no   0

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to MAN BUSY ENET Plane:1 Shelf:00 submitted.
Request to MAN BUSY ENET Plane:1 Shelf:00 passed.
```

If the response	Do
requests confirmation	step 57
indicates that the BSY command passed	step 58

57   To confirm the command, type

>YES

and press the Enter key.

If the BSY command	Do
passed	step 58

**Power converter cards
in a SuperNode SE 16k ENET** (continued)

If the BSY command	Do
failed	step 90

58   The next action depends on the location of the load file.

If the load file	Do
is as specified in tables PMLOADS and ENINV	step 59
is different from the file specified in tables PM-LOADS and ENINV	step 60

59   To load the ENET node, type

>LOADEN plane_no 0

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

Example of a MAP response:

```
WARNING
Any software load in the ENET will be destroyed.
Please confirm ("YES" or "NO"):
```

Go to step 66.

60   To access the CI level of the MAP display, type

>QUIT ALL

and press the Enter key.

61   To access the disk utility, type

>DISKUT

and press the Enter key.

Example of a MAP response:

```
 Disk utility is now active.DISKUT:
```

62   To list the contents for the volume that contains the loadfile, type

>LISTFILE vol_name

and press the Enter key.

where

> **vol_name**
>   is the name of the volume that contains the ENET load file

Example of a MAP response:

Power converter cards
in a SuperNode SE 16k ENET (continued)

```

   940426      0 O F         784        392   1024 MPCX33AB
   930427      0 O F         314       2006     80 MTULI01
```

63   To quit the disk utility, type

>**QUIT**

and press the Enter key.

64   To access the NET;SYSTEM level of the MAP display, type

>**MAPCI;MTC;NET;SYSTEM**

and press the Enter key.

65   To load the ENET node, type

>**LOADEN plane_no 0 filename**

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

> **filename**
> is the name of the load file

Example of a MAP response:

```
WARNING
Any software load in the ENET will be destroyed.
Please confirm ("YES" or "NO"):
```

66   To confirm the command, type

>**YES**

and press the Enter key.

Example of a MAP response:

**Power converter cards
in a SuperNode SE 16k ENET** (continued)

```
Request to LOADEN ENET Plane:0 Shelf:00 submitted.
Request to LOADEN ENET Plane:0 Shelf:00 passed.
```

67   To return the ENET node to service, type

>RTS plane_no 0

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 submitted.
Request toRTS ENET Plane:0 Shelf:00 passed.
There are no suspect cards.
```

If the RTS command	Do
passed	step 68
failed	step 90

68   To access the ENET SHELF level of the MAP display, type

>SHELF

and press the Enter key.

69   To manually busy all crosspoint cards on the shelf side, type

>BSY plane_no ALL

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

70   To confirm the command, type

>YES

and press the Enter key.

71   To return all crosspoint cards on the shelf side, type

>RTS plane_no ALL

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

Example of a MAP response:

Power converter cards
in a SuperNode SE 16k ENET (continued)

```
Request to RTS ENET Plane:1 Shelf:00 submitted.
Request to RTS ENET Plane:1 Shelf:00 passed.
```

72   To access the ENET SYSTEM level of the MAP, type

>SYSTEM

and press the Enter key.

73   To clear the deload condition on all crosspoint cards in the node, type

>DELOAD plane_no 0 CLEAR

and press the Enter key.

where

> **plane_no**
>   is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 submitted.
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 passed.
```

74   The next action depends if you recorded a list of deloaded cards in step 8.

If you	Do
recorded a card list	step 75
did not record a card list	step 78

75   To access the ENET SHELF level of the MAP display, type

>SHELF 0

and press the Enter key.

76   To set the first card on the list to the deloaded state, type

>DELOAD plane_no slot_no SET

and press the Enter key.

where

> **plane_no**
>   is the number of the ENET plane (0 or 1)

> **slot_no**
>   is the number of the slot the card occupies (slots 12 to 19 on plane 0, slots 22 to 29 on plane 1)

If	Do
more cards on the list are not de-loaded	step 77

Power converter cards
in a SuperNode SE 16k ENET (continued)

If	Do
all cards on the list are deloaded	step 78

77   Repeat step 76 for the next card on the list.

78   The next action depends if the ENET shelf has LIU7s.

If the ENET shelf	Do
has LIU7s	step 79
does not have LIU7s	step 91

79   To access the PM level of the MAP display, type

>**MAPCI;MTC;PM**

and press the Enter key.

80   To post the LIU7 on the shelf side, type

>**POST LIU7 liu_no**

and press the Enter key.

where

   liu_no
      is the number of the LIU7 (0 to 511)

81   To load the LIU7, type

>**LOADPM**

and press the Enter key.

Example of a MAP response:

```
LIU7 208 LOADPM Passed
```

If the LOADPM command	Do
passed	step 83
failed	step 82

82   To load the LIU7, perform the procedure *Loading a PM* in this NTP. Complete the procedure and return to this point.

83   To return the LIU7 to service, type

>**RTS**

and press the Enter key.

Example of a MAP response:

Power converter cards
in a SuperNode SE 16k ENET (end)

```
LIU7 100 RTS Passed
```

If the RTS command	Do
passed	step 84
failed	step 90

84   To activate the CCS7 link associated with the LIU7, perform the procedure *Activating CCS7 links* in this NTP. Complete the procedure and return to this point.

85   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 86
did not direct you to this procedure	step 91

86   Return to the maintenance procedure that directed you to this procedure and continue as directed.

87   This procedure instructs you to deload and manually busy an ENET node. Continue this procedure only under special conditions because the mate ENET node has deloaded cards. Consult office personnel or the next level of support. Continue as directed.

88   To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

89   If you continue this procedure, you can isolate the LIU7 on the other side of the shelf. To determine if you must continue this procedure, contact office company personnel or the next level of support. Continue as directed.

90   For additional help, contact the next level of support.

91   The procedure is complete.

System cards
in a SuperNode SE 16k ENET

Application

Use this procedure to replace the following cards in a SuperNode SE (SNSE) 16k enhanced network (ENET).

PEC	Suffix	Card name	Shelf or frame name
NT9X13	FA, KA	DMS SuperNode processor card	Enhanced network and interface (ENI)
NT9X26	AA, AB	Remote terminal interface paddle board	ENI
NT9X36	BA	ENET message clock card	ENI
NT9X40	BA, BB, DA	ENET + quad fiber paddle board	ENI slots 11 or 21

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Replacing a card*
- *Reseating cards in equipment shelves*
- *Unseating cards in equipment shelves*
- *Verifying load compatibility of SuperNode cards*
- *Cleaning fiber optic components and assemblies*

Do not go to the common procedure unless the step-action procedure directs you.

System cards
in a SuperNode SE 16k ENET (continued)

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

System cards
in a SuperNode SE 16k ENET (continued)

Summary of replacing System cards in a SuperNode SE 16k ENET

Set deload for
the plane

↓

Wait 30 min for
traffic to clear

↓

Manually busy
and offline ENET
plane

↓

Replace the
card

↓

Manually busy
the ENET
plane

↓

Load the
ENET plane

↓

Return the
ENET plane

↓

Clear the deload
for the ENET
plane → End

This flowchart summarizes the
procedure.

Use the instructions that follow
this flowchart to perform the
procedure.

System cards
in a SuperNode SE 16k ENET (continued)

Replacing System cards in a SuperNode SE 16k ENET

At the MAP terminal

1

> ⚠️ **WARNING**
> **System can drop calls**
> This procedure removes an ENET shelf from service, which can cause the system to drop calls now in progress. Perform this procedure only if you need to return system cards to service. If you do not need to return system cards to service, perform this procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card and the card that you remove have the same PEC and PEC suffix.

2   To make sure that the replacement card is compatible with the software load, perform the procedure *Verifying load compatibility of SuperNode cards*. The procedure *Verifying load compatibility of SuperNode cards* appears in this NTP. Complete the procedure and return to this point.

3   To access the NET;SYSTEM level of the MAP display, type

>**MAPCI;MTC;NET;SYSTEM**

and press the Enter key.

Example of a MAP display:

```
 SYSTEM
   Shelf    Plane 0                      Plane 1
    00          I CSLink 1 closed           .
```

4   Determine the state of the plane that contains the card that you replace. The state appears under the Plane headers on the SYSTEM level MAP display. In the MAP display example in step 3, plane 0 is in-service trouble (I) and plane 1 is in service.

If the status of the node	Do
is T (being tested)	step 5
is other than listed here	step 6

5   Wait for the system to complete system-initiated testing. To evaluate the state of the node again, go to step 4.

6   To determine if deloaded crosspoint cards are in the other ENET plane, type

>**DELOAD plane_no 0 QUERY**

and press the Enter key.

where

System cards
in a SuperNode SE 16k ENET (continued)

> **plane_no**
> is the ENET plane number (0 or 1) for the mate node

Example of a MAP response:

```
Request to QUERY DELOAD ENET Plane:0 Shelf:00 submitted.
Request to QUERY DELOAD ENET Plane:0 Shelf:00 passed.
                 1111111 111
                 0123456 789
Plane:0 Shelf:00 .Y.---- ---
```

> **Note:** The letter Y under the slot number indicates a deloaded crosspoint card.

If the other ENET plane	Do
has deloaded cards	step 65
does not have deloaded cards	step 7

7   To determine if deloaded crosspoint cards are in the plane, type

>DELOAD   plane_no   0   QUERY

and press the Enter key.

where

> **plane_no**
> is the number of the ENET plane (0 or 1) that contains the card that you replace

If the ENET plane	Do
has deloaded cards	step 8
does not have deloaded cards	step 9

8   Record the plane number and slot number for any deloaded crosspoint cards in the plane. Use this list to make sure that these cards are returned to the deloaded state when you complete this procedure.

9   To set all crosspoint cards for the ENET plane that contains the card that you will replace to a deloaded state, type

>DELOAD   plane_no   0   SET

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to SET DELOAD ENET Plane:0 Shelf:00 submitted.
Request to SET DELOAD ENET Plane:0 Shelf:00 passed.
```

System cards
in a SuperNode SE 16k ENET (continued)

10   Wait 30 min to permit network traffic on the node to clear.

11   The next step depends on the state of the ENET plane that contains the card that you replace.

If the ENET plane	Do
is O (offline)	step 17
is M (manual busy)	step 15
is other than listed here	step 12

12   To manually busy the ENET plane, type

>BSY plane_no 0

and press the Enter key.

where

> **plane_no**
>   is the number of the ENET plane (0 or 1) that contains the card you replace

If the response is	Do
WARNING: This action will abort ENET dump.Please confirm ("YES", "Y","NO, or "N"): Note: The above Warning message is generated when a BSY request and ENET imaging take place at the same time. As card replacement procedures are usually performed during scheduled maintenance periods this conflict may never occur.	step 13
Request to MAN BUSY ENET Plane:0 Shelf:00 Slot:25 submitted. Request to MAN BUSY ENET Plane:0 Shelf:00 Slot:25 passed.	step 15

13   Continue procedure by

If Responding to the message	Do
with YES, abort dump and continue with busy	step 14
with NO, abort busy, continue with dump	step 67

System cards
in a SuperNode SE 16k ENET (continued)

14   To abort ENET dump and continue with BSY, type

>YES

and press the Enter key.

15   To offline the ENET plane, type

>OFFL plane_no 0

and press the Enter key.

where

> **plane_no**
> is the number of the ENET plane (0 or 1) that contains the card you
> replace

Example of a MAP response:

```
WARNING: A power down of ENET plane:1 shelf:00 may affect
LIU components.
Please confirm ("YES", "Y", "NO", or "N"):
```

16   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Request to OFFLINE ENET Plane:1 Shelf:00 submitted.
Request to OFFLINE ENET Plane:1 Shelf:00 passed.
```

If the OFFL command	Do
passed	step 17
failed	step 66

17   To locate the message switch (MS) chain head card that associates with the
ENET plane, type

>TRNSL plane_no 0

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to TRNSL ENET Plane:0 Shelf:00 submitted.
Request to TRNSL ENET Plane:0 Shelf:00 passed.
ENET Plane:0  Shelf:00 :  MS 0 and 1 Card:05 Link:00 Port:000
```

System cards
in a SuperNode SE 16k ENET (continued)

> *Note:* In the example, the number of the chain head card is 5. The link number is 0.

18 Record the number of the chain head card and the link number.

19 To access the MS;SHELF level of the MAP display, type

>**MS;SHELF**

and press the Enter key.

Example of a MAP display:

```
    Message Switch   Clock    Shelf  0     Inter-MS Link 0 1
MS 0        .        Slave           .                     . .
MS 1        .        M Free          .                     . .

Shelf 0                     1 1 1 1
Card  1 2 3 4 5 6 7 8 9 0 1 2 3
Chain           |
MS 0  . . . . . − − . . . . . .
MS 1  . . . . . − − . . . . . .
```

20 To post the chain head card, type

>**CHAIN   card_no**

and press the Enter key.

where

> **card_no**
>   is the card number that you recorded in step 18

Example of a MAP display:

```
 Chain 05  Range   Link   0 1
 MS 0   .  05-05  DS512   . .
 MS 1   .  05-05  DS512   . .
```

21 To manually busy the link on the chain on MS 0, type

>**BSY   0   LINK   link_no**

and press the Enter key.

where

> **link_no**
>   is the link number that you recorded in step 18

Example of a MAP response:

```
 Request to MAN BUSY MS: 0 shelf: 0 chain:05 link 0 submitted
 Request to MAN BUSY MS: 0 shelf: 0 chain:05 link 0 passed.
```

If the BSY command	Do
passed	step 22

System cards
in a SuperNode SE 16k ENET (continued)

If the BSY command	**Do**
failed	step 66

22 To manually busy the link on the chain on MS 1, type

>BSY 1 LINK link_no

and press the Enter key.

where

    link_no
        is the link number that you recorded in step 18

If the BSY command	**Do**
passed	step 23
failed	step 66

23 To access the ENET SHELF level of the MAP display, type

>NET;SHELF

and press the Enter key.

where

    plane_no
        is the ENET plane number (0 or 1)

Example of a MAP display:

```
ENET      System   Matrix   Shelf 0
 Plane 0 CSLink    Fault            F
 Plane 1 CSLink      .              F

SHELF 00   Power    LIU   ENET-Plane 0 ENET-Plane 1  LIU  Power
                    11   11111111 22   22222222  333  333333
 Slot      123456  789   01  23456789 01  23456789  012  345678
           . .            .F  SSSSSSSS .F  ........       . .
```

24 To manually busy all crosspoint cards on the shelf side, type

>BSY plane_no ALL

and press the Enter key.

where

    plane_no
        is the ENET plane number (0 or 1)

Example of a MAP response:

System cards
in a SuperNode SE 16k ENET (continued)

```
WARNING: This action will be performed on ALL XPT slots
         in ENET Plane:1 that are MBSY, INSV, OFFL,
         SBSY, or CBSY.
Please confirm ("YES", "Y", "NO", or "N"):
```

25   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Request to MAN BSY ALL ENET Plane:1 Shelf:00 submitted.
Request to MAN BSY ALL ENET Plane:1 Shelf:00 completed.
```

26   To ofline all crosspoint cards in the ENET shelf, type

>OFFL plane_no ALL

and press the Enter key.

where

plane_no
is the number of the ENET plane (0 or 1) containing the card you are replacing

Example of a MAP response:

```
Request to OFFLINE ENET Plane:0 Shelf:00 submitted.
Request to OFFLINE ENET Plane:0 Shelf:00 passed.
```

At the ENET shelf

27

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap connected to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

The next action depends on the type of card that you replace.

If the card	Do
is an NT9X13	step 28
is an NT9X40	step 30

System cards
in a SuperNode SE 16k ENET (continued)

If the card	**Do**
is an NT9X26 or NT9X36	step 33

28   To unseat the NT9X36 (messaging clock) card on the shelf side, perform the procedure *Unseating cards in equipment shelves.* The procedure *Unseating cards in equipment shelves* appears in this NTP. Complete the procedure. Wait 20 s and return to this point.

29   To reseat the NT9X36 card, perform the procedure *Reseating cards in equipment shelves* in this NTP. Complete the procedure. Wait 20 s and return to this point.

Go to step 33.

30

ATTENTION

Make sure that you identify connector zone numbers correctly. To identify zone numbers, refer to figure "NT9X40BA/BB connector zone numbers" for the NT9X40. Figures "Fiber connector detail" and "Fiber connector and receptable detail" are diagrams of fiber connector components for these cards. The figures are at the end of this procedure.

Make sure that you are at the correct ENET node and interface card before you disconnect the fiber cables. To identify the ENET node, check the plane and shelf identification. To identify the interface card, check the slot.

31   Make sure that each cable has a label that contains the following information:

- ENET shelf number
- plane number
- slot number
- link number
- signal type

The signal type can be transmit or receive. If this information is not present, create a label and attach the label to the cable. This label provides information on how to connect the fiber cables to the card.

Example of a label:

```
ENCO    00     39
10R     04     17T
LTE     000    18
22R     RX
```

Label field descriptions

System cards
in a SuperNode SE 16k ENET (continued)

ENCO	ENET plane (0 or 1)
00	cabinet number
39	ENET shelf by the base mounting position number
10R	slot number and position (R for rear, or F for front)
04	zone number
17T	link number and the signal type (T for transmit, R for receive)
LTE	PM that the cable terminates on
000	PM frame number
18	PM shelf by the base mounting position number
22R	slot number and position (R for rear, or F for front)
RX	signal type at the PM end (RX for receive or TX for transmit)

32

DANGER
Avoid contamination of the fiber tip surface
Make sure that you do not touch the tip of the fiber. Dirt or oil from the skin transferred to the fiber tip surface degrades fiber performance.

DANGER
Fiber cable can become defective
Make sure that you handle fiber cables carefully. Do not crimp fiber cables or bend fiber cables to a radius of less than 3 cm (1.180 in.).

Disconnect the transmit and receive connectors for each fiber cable.

Note: When you disconnect the connectors, place dust caps on the ends of the connectors.

a   Grasp the sleeve with two fingers. Carefully push the sleeve toward the frame.

System cards
in a SuperNode SE 16k ENET (continued)

b   Turn the connector counterclockwise until the connector pin is in the
position shown in the following diagram.

c   Carefully pull the connector away from the frame.

Note: Perform the procedure, *Cleaning fiber optic components and
assemblies* in this NTP.

System cards
in a SuperNode SE 16k ENET (continued)

33   To replace the card, perform the procedure *Replacing a card* in this NTP. Complete the procedure and return to this point.

   Note: If the card that you replace has switches, make sure that the switches on the replacement card have the same settings.

34   The next action depends on the type of card that you replace.

If the card	Do
is an NT9X13	step c
is an NT9X40	step 35
is an NT9X26 or NT9X36	step b

35   When you connect the connectors to the new card, remove the dust caps on the transmit and receive connectors.

   Connect the transmit and receive connectors for each fiber cable.

a   Align the connector pin and slot with the receptacle slot and pin, in the sequence given, as shown in the following diagram.

b   Carefully slide the connector into the receptacle.

c   Turn the connector clockwise to lock the connector in place.

System cards
in a SuperNode SE 16k ENET (continued)

d   Release the connector. The following figure displays the final connector position.

36   To unseat the NT9X13 (processor) card on the shelf side, perform the procedure *Unseating cards from equipment shelves.* The procedure *Unseating cards in equipment shelves* appears in this NTP. Complete the procedure. Wait 20 s and return to this point.

37   To reseat the NT9X13 card on the shelf side, perform the procedure *Reseating cards in equipment shelves.* The procedure *Reseating cards in equipment shelves* appears in this NTP. Complete the procedure and return to this point.

>   *Note:* Wait a minimum of 30 s before you continue this procedure.

At the MAP terminal

38   To access the MS Chain card level of the MAP display, type

>   `>MS;SHELF;CHAIN  card_no`

>   and press the Enter key.

>   *where*

System cards
in a SuperNode SE 16k ENET (continued)

> **card_no**
>> is the card number that you recorded in step 18

39 To return the link on the chain on MS 0 to service, type

>RTS 0 LINK link_no

and press the Enter key.

where

> **link_no**
>> is the link number that you recorded in step 18

Example of a MAP response:

```
Request to RTS MS: 0 shelf: 0 chain:05 link 0 submitted.
Request to RTS MS: 0 shelf: 0 chain:05 link 0 passed.
```

If the RTS command	Do
passed	step 40
failed	step 66

40 To return the link on the chain on MS 1 to service, type

>RTS 1 LINK link_no

and press the Enter key.

where

> **link_no**
>> is the link number that you recorded in step 18

If the RTS command	Do
passed	step 41
failed	step 66

41 To access the NET;SYSTEM level of the MAP display, type

>NET;SYSTEM

and press the Enter key.

42 To manually busy the ENET plane, type

>BSY plane_no 0

and press the Enter key.

where

System cards
in a SuperNode SE 16k ENET (continued)

> **plane_no**
> is the ENET plane number (0 or 1)

If the response	Do
requests confirmation	step 43
indicates the BSY command passed	step 44

43   To confirm the command, type

>YES

and press the Enter key.

If the BSY command	Do
passed	step 44
failed	step 66

44   The next action depends on the location of the load file.

If the load file	Do
is as specified in tables PMLOADS and ENINV	step 45
is different from the file specified in tables PMLOADS and ENINV	step 46

45   To load the ENET node, type

>LOADEN plane_no 0

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
WARNING  Any software load in the ENET will be destroyed.
Please confirm ("YES" or "NO"):
```

Go to step 52.

46   To access the CI level of the MAP display, type

>QUIT ALL

and press the Enter key.

System cards
in a SuperNode SE 16k ENET (continued)

47   To access the disk utility, type

>**DISKUT**

and press the Enter key.

Example of a MAP response:

```
 Disk utility is now active.
 DISKUT:
```

48   To list the contents for the volume that contains the load file, type

>**LISTFL   vol_name**

and press the Enter key.

where

vol_name
    is the name of the volume that contains the ENET load file

Example of a MAP response:

```
File information for volume S00DVOL1:
{NOTE:  1 BLOCK = 512 BYTES }
-----------------------------------------------------------------
  LAST FILE O R I O      FILE      NUM OF   MAX     FILE NAME

930427      0 O F          314        2006    80 MTULI01
```

49   To quit the disk utility, type

>**QUIT**

and press the Enter key.

50   To access the NET;SYSTEM level of the MAP display, type

>**MAPCI;MTC;NET;SYSTEM**

and press the Enter key.

51   To load the ENET node, type

>**LOADEN   plane_no   0   filename**

and press the Enter key.

System cards
in a SuperNode SE 16k ENET (continued)

where

    plane_no
        is the ENET plane number (0 or 1)

    filename
        is the name of the load file

Example of a MAP response:

```
WARNING  Any software load in the ENET will be destroyed.
Please confirm ("YES" or "NO"):
```

52   To confirm the command, type

     >YES

     and press the Enter key.

     Example of a MAP response:

```
Request to LOADEN ENET Plane:0 Shelf:00 submitted.
Request to LOADEN ENET Plane:0 Shelf:00 passed.
```

53   To return the ENET plane to service, type

     >RTS plane_no 0

     and press the Enter key.

     where

         plane_no
            is the ENET plane number (0 or 1)

     Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 submitted.
Request to RTS ENET Plane:0 Shelf:00 passed.

There are no suspect cards.
```

If the RTS command	Do
passed	step 54
failed	step 66

54   To access the ENET SHELF level of the MAP, type

     >SHELF 0

     and press the Enter key.

55   To manually busy all crosspoint cards in the ENET shelf, type

     >BSY plane_no ALL

     and press the Enter key.

     where

System cards
in a SuperNode SE 16k ENET (continued)

> **plane_no**
> is the number of the ENET plane (0 or 1) containing the card you are working on

If the BSY command	Do
passed	step 56
failed	step 66

56   To return all crosspoint cards on the shelf to service, type

>RTS   plane_no   ALL

and press the Enter key.

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to RTS ENET Plane:1 Shelf:00 submitted.
Request to RTS ENET Plane:1 Shelf:00 passed.
```

57   To access the ENET SYSTEM level of the MAP display, type

>SYSTEM

and press the Enter key.

58   To clear the deload condition on all crosspoint cards in the plane, type

>DELOAD   plane_no   0   CLEAR

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 submitted.
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 passed.
```

59   The next action depends if you recorded a list of deloaded cards in step 8.

If you	Do
recorded a card list	step 60
did not record a card list	step 63

60   To access the SHELF level of the MAP display, type

>SHELF   0

and press the Enter key.

System cards
in a SuperNode SE 16k ENET (continued)

61   Set the first card on the list to the deloaded state , type

    >DELOAD   plane_no   slot_no   SET

    and press the Enter key.

    where

        plane_no
            is the ENET plane number (0 or 1)

        slot_no
            is the number of the slot the card occupies (slots 12 to 19 on plane 0
            or slots 22 to 29 on plane 1

If all cards on the list	Do
are not set to a deloaded state	step 62
are set to a deloaded state	step 63

62   Repeat step 61 for the next card on the list.

63   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 64
did not direct you to this procedure	step 68

64   Return to the maintenance procedure that directed you to this procedure and continue as directed.

65   This procedure instructs you to deload a node. Continue this procedure only under special conditions because the mate node has deloaded cards. Consult office personnel or the next level of support. Continue as directed.

66   For additional help, contact the next level of support.

67   To abort BSY command and continue with dump, type

    >NO

    and press the Enter key BSY has been aborted, ENET dump is continuing.

68   The procedure is complete.

System cards
in a SuperNode SE 16k ENET (continued)

NT9X40BA/BB connector zone numbers

The figure correlates the zone numbers (1 to 8) to the link numbers. The zone numbers appear on the face of the card. The link numbers appear on the MAP display for the NT9X40BA or NT9X40BB interface card. The figure indicates the fiber connections only. Observe carefully the zone identification marks for transmit and receive.

System cards
in a SuperNode SE 16k ENET (end)

Fiber connector detail

This figure shows the type of connector used to connect fibers to an NT9X40 or NT9X45 paddle board.

Fiber connector and receptacle detail

This figure shows the different parts of the connector and receptacle.

System cards
in a SuperNode SE 32k ENET

Application

Use this procedure to replace the following cards in a SuperNode SE 32k enhanced network shelf (ENET).

PEC	Suffix	Card name	Shelf or frame name
NT9X13	FA, KA	DMS SuperNode processor card	32k ENET
NT9X26	AA, AB	Reset terminal interface (RTIF) paddle board	32k ENET
NT9X30	AA, AB	+5V 86-A power converter card	32k ENET
NT9X31	AA, AB	-5V 20-A power converter for DMS-100E card	32k ENET
NT9X36	BA	ENET messaging clock card	32k ENET
NT9X40	BA, BB, DA	ENET + quad fiber paddle board	32k ENET, slot 8

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

**System cards
in a SuperNode SE 32k ENET** (continued)

Common procedures

This procedure refers to the following common procedures:

- *Replacing a card*

- *Verifying load compatibility of SuperNode cards*

- *Cleaning fiber optic components and assemblies*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

System cards
in a SuperNode SE 32k ENET (continued)

Replacing System cards in a SuperNode SE 32k ENET

At your current location

1

> ### CAUTION
> **System can drop calls**
> This procedure removes an ENET shelf from service, which can cause the system to drop calls now in progress. Perform this procedure only if you need to return system and power converter cards to service. If you do not need to return the cards to service, perform this procedure during periods of low traffic.

> ### WARNING
> **System can drop calls**
> This procedure removes an ENET shelf from service, which can cause the system to drop calls now in progress. Perform this procedure only if you need to return system and power converter cards to service. If you do not need to return the cards to service, perform this procedure during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card and the card that you remove have the same PEC and PEC suffix.

2   To make sure that the replacement card is compatible with the software load, perform the procedure *Verifying load compatibility of SuperNode cards*. The procedure *Verifying load compatibility of SuperNode cards* appears in this document. Complete the procedure and return to this point.

At the MAP terminal

3   To access the NET;SYSTEM level of the MAP display, type

>MAPCI;MTC;NET;SYSTEM

and press the Enter key.

Example of a MAP display:

```
SYSTEM
  Shelf     Plane 0                    Plane 1
   00          I CSLink 1 closed          .
```

4   Check the state of the ENET plane that contains the card you replace. The state appears under the Plane headers on the SYSTEM level MAP display.

System cards
in a SuperNode SE 32k ENET (continued)

In the example shown in step 3, plane 0 is in-service trouble (I) and plane 1 is in service.

If the state of the plane	Do
is T (being tested)	step 5
is other than listed here	step 6

5   Wait until the system completes system-initiated testing. To evaluate the state of the plane again, go to step 4.

6   To determine if deloaded crosspoint cards are in the other plane, type

>**DELOAD   plane_no   0 QUERY**

and press the Enter key.

where

    plane_no
       is the ENET plane number (0 or 1) for the mate node

Example of a MAP response:

```
Request to QUERY DELOAD ENET Plane:0 Shelf:00 submitted.
Request to QUERY DELOAD ENET Plane:0 Shelf:00 passed.
                  1111111 11122222 22222333
                  90123456 78901234 56789012
Plane:0 Shelf:00 ..Y.---- -------- ----....
```

    Note: The letter Y under the slot number indicates a deloaded crosspoint card.

If the plane	Do
has deloaded cards	step 66
does not have deloaded cards	step 7

7   To determine if deloaded crosspoint cards are in the plane, type

>**DELOAD   plane_no   0   QUERY**

and press the Enter key.

where

    plane_no
       is the ENET plane number (0 or 1)

If the plane	Do
has deloaded cards	step 8
does not have deloaded cards	step 9

System cards
in a SuperNode SE 32k ENET (continued)

8   Record the slot number for any deloaded crosspoint cards in the plane. Use this list to make sure that these cards are returned to the deloaded state when you complete this procedure.

9   To set all crosspoint cards for the plane that associates with the card that you will replace to a deloaded state, type

>DELOAD plane_no 0 SET

and press the Enter key.

where

    plane_no
       is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to SET DELOAD ENET Plane:0 Shelf:00 submitted.
Request to SET DELOAD ENET Plane:0 Shelf:00 passed.
```

10   Wait 30 min to allow network traffic on the plane to clear.

11   The next step depends on the state of the ENET plane that contains the card you replace.

If the ENET plane	Do
is O (offline)	step 14
is M (manual busy)	step 13
is other than listed here	step 12

12   To manually busy the ENET plane that contains the card you replace, type

>BSY plane_no 0

and press the Enter key.

where

    plane_no
       is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to MAN BUSY ENET Plane:0 Shelf:00 submitted.
Request to MAN BUSY ENET Plane:0 Shelf:00 passed.
```

If the BSY command	Do
passed	step 13
failed	step 57

System cards
in a SuperNode SE 32k ENET (continued)

13 To offline the ENET plane, type

>**OFFL plane_no 0**

and press the Enter key.

where

> **plane_no**
>> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to OFFL ENET Plane:0 Shelf:00 submitted.
Request to OFFL ENET Plane:0 Shelf:00 passed.
```

If the OFFL command	Do
passed	step 14
failed	step 57

14 To locate the message switch (MS) chain head card that associates with the ENET plane, type

>**TRNSL plane_no 0**

and press the Enter key.

where

> **plane_no**
>> is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to TRNSL ENET Plane:0 Shelf:00 submitted.
Request to TRNSL ENET Plane:0 Shelf:00 passed.
ENET Plane:0  Shelf:00 :  MS 0 and 1 Card:16 Link:00 Port:000
```

> ***Note:*** In the example, the number of the chain head card on the MS is 16. The link number is 0.

15 Record the number of the chain head card and the link number.

16 To access the MS;SHELF level of the MAP display, type

>**MS;SHELF**

and press the Enter key.

Example of a MAP display:

System cards
in a SuperNode SE 32k ENET (continued)

```
        Message Switch    Clock    Shelf  0            Inter-MS Link 0 1
MS 0         M            Slave            C                        - -
MS 1         .            M Free           F                        - -

Shelf 0                    1 1 1 1 1 1 1 1 1 1 2 2 2 2 2 2 2
Card  1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6
Chain                                 | |
MS 0  . . . . . - - - - - - - - - - - . . . . . . . . . F I
MS 1  . . . . . - - - - - - - - - - - . . . . . . . . . F I
```

17   To access the Chain level of the MAP display, type

>**CHAIN card_no**

and press the Enter key.

where

card_no
is the card number that you recorded in step 15

Example of a MAP display:

```
Chain 05  Range  Link   0 1
MS 0   .  16-17  DS512  . .
MS 1   .  16-17  DS512  . .
```

18   To manually busy the link on the chain on MS 0, type

>**BSY 0 LINK link_no**

and press the Enter key.

where

link_no
is the link number that you recorded in step 15

Example of a MAP response:

```
Request to MAN BUSY MS: 0 shelf: 0 chain:16 link 0
submitted.
Request to MAN BUSY MS: 0 shelf: 0 chain:16 link 0 passed.
```

If the BSY command	Do
passed	step 19
failed	step 67

19   To manually busy the link on the chain on MS 1, type

>**BSY 1 LINK link_no**

and press the Enter key.

where

System cards
in a SuperNode SE 32k ENET (continued)

        link_no
           is the link number that you recorded in step 15

20   To confirm the command, type

      >YES

      and press the Enter key.

      Example of a MAP response:

```
Request to MAN BUSY MS: 1 shelf: 0 chain:16 link 0
submitted.
Request to MAN BUSY MS: 1 shelf: 0 chain:16 link 1 passed.
```

If the BSY command	Do
passed	step 21
failed	step 67

21   To access the ENET SHELF level of the MAP display, type

      >NET;SHELF 0

      and press the Enter key.

      where

           plane_no
              is the ENET plane number (0 or 1)

      Example of a MAP display:

```
 SHELF 01  Slot       1111111 11122222 22222333 333333
             123456 78 90123456 78901234 56789012 345678
  Plane 0   O  O    OO CCCCCCCC -------- CCCCCCCC O  O
  Plane 1   .  .    .. ........ -------- ........ .  .
```

22   To busy all crosspoint cards on the shelf, type

      >BSY plane_no ALL

      and press the Enter key.

      where

           plane_no
              is the ENET plane number (0 or 1)

      Example of a MAP response:

```
 WARNING: This action will be performed on ALL XPT slots
          in ENET Plane:1 that are MBSY, INSV, OFFL,
          SBSY, or CBSY.
 Please confirm ("YES", "Y", "NO", or "N"):
```

System cards
in a SuperNode SE 32k ENET (continued)

23   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Request to MAN BSY ALL ENET Plane:1 Shelf:00 submitted.
Request to MAN BSY ALL ENET Plane:1 Shelf:00 completed.
```

If the BSY command	Do
passed	step 21
failed	step 67

24   To offline all crosspoint cards on the shelf, type

>OFFL plane_no ALL

and press the Enter key.

Example of a MAP response:

```
Request to OFFLINE ALL ENET Plane:1 Shelf:00 submitted.
Request to OFFLINE ALL ENET Plane:1 Shelf:00 completed.
```

At the ENET shelf

25

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding
> point of a frame supervisory panel (FSP) or a modular
> supervisory panel (MSP) to handle circuit cards. The wrist
> strap protects the cards against static electricity damage.

The next action depends on the ENET card that you replace.

If you	Do
replace an NT9X30 or NT9X31	step 28
replace an NT9X13	step 26
replace an NT9X40	step 30
replace an NT9X26 or NT9X36	step b

System cards
in a SuperNode SE 32k ENET (continued)

26 To unseat the NT9X36 (messaging clock) card on the shelf, perform the procedure *Unseating cards in equipment shelves*. The procedure *Unseating cards in equipment shelves* appears in this NTP. Complete the procedure. Wait 20 s and return to this point.

27 To reseat the NT9X36 card, perform the procedure *Reseating cards in equipment shelves* in this NTP. Complete the procedure. Wait 20 s and return to this point.

Go to step 33.

28 Power down the NT9X31 card that associates with the ENET shelf. To power down the card, press down and release the power switch on the faceplate of the card.

> *Note:* The CONVERTER OFF LED turns on when the converter powers down.

If the CONVERTER OFF LED	Do
is lit	step 29
is not lit	step 67

29 Power down the NT9X30 card that associates with the ENET shelf. To power down the card, press down and release the power switch on the faceplate of the card.

> *Note:* The CONVERTER OFF LED turns on when the converter powers down.

If the CONVERTER OFF LED	Do
is lit	step 33
is not lit	step 67

30

ATTENTION

Make sure that you identify connector zone numbers correctly. To identify zone numbers, refer to figure "NT9X40BA/BB connector zone nu,ber" for the NT9X40. Figures "Fiber connector detail" and "Fiber connector receptacle detail" are diagrams of fiber connector components for these cards. These figures are at the end of this chapter.

Make sure that you are at the correct ENET node and interface card, before you disconnect the fiber cables. To identify the ENET node, check the plane and shelf identification. To identify the interface card, check the slot.

System cards
in a SuperNode SE 32k ENET (continued)

31   Make sure that each cable has a label that contains the following information:

- ENET shelf number
- plane number
- slot number
- link number
- signal type

The signal type can be transmit or receive. If this information is not present, create a label and attach the label to the cable. This label provides information on how to connect the fiber cables to the card.

Example of a label:

```
ENCO    00     39
10R     04     17T
LTE     000    18
22R     RX
```

Label field descriptions

ENCO	ENET plane (0 or 1)
00	cabinet number
39	ENET shelf by the base mounting position number
10R	slot number and position (R for rear, or F for front)
04	zone number
17T	link number and the signal type (T for transmit, R for receive)
LTE	PM that the cable terminates on
000	PM frame number
18	PM shelf by the base mounting position number
22R	slot number and position (R for rear, or F for front)
RX	signal type at the PM end (RX for receive or TX for transmit)

32

DANGER
Avoid contamination of the fiber tip surface
Make sure that you do not touch the tip of the fiber. Dirt or oil from the skin transferred to the fiber tip surface degrades fiber performance.

System cards
in a SuperNode SE 32k ENET (continued)

> **DANGER**
> **Fiber cable can become damaged**
> Make sure that you handle fiber cables carefully. Do not
> crimp fiber cables or bend fiber cables to a radius of less than
> 3 cm (1.180 in.).

Disconnect the transmit and receive connectors for each fiber cable.

> *Note:* When you disconnect the connectors, place dust caps on the ends
> of the connectors.

a Grasp the sleeve with two fingers. Carefully push the sleeve toward the
frame.

b Turn the connector counterclockwise until the connector pin is in the
position shown in the following diagram.

c Carefully pull the connector away from the frame.

System cards
in a SuperNode SE 32k ENET (continued)

> **Note:** Perform the procedure, *Cleaning fiber optic components and assemblies* in this NTP.

33 To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> **Note 1:** If you replace the power converter card, make sure that the PWR switch on the replacement power converter is in the OFF position.

> **Note 2:** If the card that you replace has switches, make sure that the switches on the replacement card have the same settings.

34 The next action depends on the card that you replace.

If you	Do
replace a NT9X30 or NT9X31	step 35
replace a NT9X26 or NT9X36	step 38
replace a NT9X40	step 37
replace a NT9X13	step 40

35 To power up the NT9X30 card, press up and release the power switch on the faceplate of the card.

> **Note:** The CONVERTER OFF LED turns off when the converter powers up.

If the CONVERTER OFF LED	Do
is not lit	step 36
is lit	step 67

System cards
in a SuperNode SE 32k ENET (continued)

36   To power up the NT9X31 card, press up and release the power switch on the faceplate of the card.

> ***Note:*** The CONVERTER OFF LED turns off when the converter powers up.

If the CONVERTER OFF LED	Do
is not lit	step 40
is lit	step 67

37   When you connect the connectors to the new card, remove the dust caps on the transmit and receive connectors.

Connect the transmit and receive connectors for each fiber cable.

a   Align the connector pin and slot with the receptacle slot and pin, in the sequence given, as shown in the following diagram.

b   Carefully slide the connector into the receptacle.

c   Turn the connector clockwise to lock the connector in place.

System cards
in a SuperNode SE 32k ENET (continued)

    d   Release the connector. The following figure displays the final connector position.

38   To unseat the NT9X13 (processor) card on the shelf side, perform the procedure *Unseating cards in equipment shelves.* The procedure *Unseating cards in equipment shelves* appears in this NTP. Complete the procedure and return to this point.

39   To reseat the NT9X13 card on the shelf side, perform the procedure *Reseating cards in equipment shelves*. The procedure *Reseating cards in equipment shelves* appears in this NTP. Complete the procedure and return to this point.

At the MAP terminal

40   To access the Chain level of the MAP display, type

    >MS;SHELF;CHAIN card_no

    and press the Enter key.

    where

        card_no
            is the card number that you recorded in step 15

41   To return the link on the chain on MS 0 to service, type

    >RTS 0 LINK link_no

System cards
in a SuperNode SE 32k ENET (continued)

and press the Enter key.

where

> **link_no**
> is the link number that you recorded in step 15

Example of a MAP response:

```
Request to RTS MS: 0 shelf: 0 chain:16 link 0 submitted.
Request to RTS MS: 0 shelf: 0 chain:16 link 0 passed.
```

If the RTS command	Do
passed	step 42
failed	step 67

42   To return the link on the chain on MS 1 to service, type

>RTS 1 LINK link_no

and press the Enter key.

where

> **link_no**
> is the link number that you recorded in step 15

If the RTS command	Do
passed	step 43
failed	step 67

43   To access the NET;SYSTEM level of the MAP display, type

>NET;SYSTEM

and press the Enter key.

44   To manually busy the ENET plane, type

>BSY plane_no

and press the Enter key.

where

> **plane_no**
> is the ENET plane number (0 or 1)

If the BSY command	Do
passed	step 45
failed	step 67

System cards
in a SuperNode SE 32k ENET (continued)

45   The next action depends on the location of the load file.

If the load file	Do
is the same as specified in tables PMLOADS and ENINV	step 46
is different from the file specified in tables PMLOADS and ENINV	step 47

46   To load the plane, type

>LOADEN plane_no 0

and press the Enter key.

where

>   **plane_no**
>   is the ENET plane number (0 or 1)

Example of a MAP response:

```
WARNING  Any software load in the ENET will be destroyed.
Please confirm ("YES" or "NO"):
```

Go to step 53.

47   To access the CI level of the MAP display, type

>QUIT ALL

and press the Enter key.

48   To access the disk utility, type

>DISKUT

and press the Enter key.

Example of a MAP response:

```
Disk utility is now active.
DISKUT:
```

49   To list the contents for the volume that contains the loadfile, type

>LISTFILE vol_name

and press the Enter key.

where

>   **vol_name**
>   is the name of the volume that contains the loadfile

Example of a MAP response:

System cards
in a SuperNode SE 32k ENET (continued)

```
File information for volume S00DVOL1:

```

50   To quit the disk utility, type

    >QUIT

    and press the Enter key.

51   To return to the NET;SYSTEM level of the MAP display, type

    >MAPCI;MTC;NET;SYSTEM

    and press the Enter key.

52   To load the plane, type

    >LOADEN plane_no 0 filename

    and press the Enter key.

    where

        plane_no
          is the ENET plane number (0 or 1)

        filename
          is the name of the load file

    Example of a MAP response:

```
 WARNING  Any software load in the ENET will be destroyed.
 Please confirm ("YES" or "NO"):
```

53   To confirm the command, type

    >YES

    and press the Enter key.

    Example of a MAP response:

```
 Request to LOADEN ENET Plane:0 Shelf:00 submitted.
 Request to LOADEN ENET Plane:0 Shelf:00 passed.
```

System cards
in a SuperNode SE 32k ENET (continued)

54   To return the ENET plane to service, type

>**RTS   plane_no**

and press the Enter key.

where

  plane_no
       is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 submitted.
Request to RTS ENET Plane:0 Shelf:00 passed.

There are no suspect cards.
```

If the RTS command	Do
passed	step 55
failed	step 67

55   To access the ENET SHELF level of the MAP, type

>**SHELF   0**

and press the Enter key.

56   To busy all crosspoint cards on the shelf, type

>**BSY   plane_no   ALL**

and press the Enter key.

  plane_no
       is the ENET plane number (0 or 1)

57   To return all crosspoint cards on the shelf to service, type

>**RTS   plane_no   ALL**

and press the Enter key.

  plane_no
       is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to RTS ALL ENET Plane:1 Shelf:00 submitted.
Request to RTS ALL ENET Plane:1 Shelf:00 completed.
```

58   To access the ENET SYSTEM level of the MAP display, type

>**SYSTEM**

and press the Enter key.

59   To clear the deload condition on all crosspoint cards in the plane, type

>**DELOAD   plane_no   0   CLEAR**

System cards
in a SuperNode SE 32k ENET (continued)

and press the Enter key.

where

plane_no
is the ENET plane number (0 or 1)

Example of a MAP response:

```
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 submitted.
Request to CLEAR DELOAD ENET Plane:0 Shelf:00 passed.
```

60   The next action depends if you recorded a list of deloaded cards in step 8.

If you	Do
recorded a card list	step 61
did not record a card list	step 64

61   To access the SHELF level of the MAP display, type

>SHELF   0

and press the Enter key.

62   To set the first card on the list to the deloaded state, type

>DELOAD   plane_no   slot_no   SET

and press the Enter key.

where

plane_no
is the ENET plane number (0 or 1)

slot_no
is the slot number (8 to 32)

If all the cards on the list	Do
are deloaded	step 63
are not deloaded	step 64

63   Repeat step 62 for the next card on the list.

64   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 65
did not direct you to this procedure	step 68

65   Return to the maintenance procedure that directed you to this procedure and continue as directed.

System cards
in a SuperNode SE 32k ENET (continued)

66   This procedure instructs you to deload and manually busy a node. Continue this procedure only under special conditions because the mate node has deloaded cards. Consult office personnel or the next level of support. Continue as directed.

67   For additional help, contact the next level of support.

68   The procedure is complete.

System cards
in a SuperNode SE 32k ENET (continued)

NT9X40BA/BB connector zone numbers

The figure correlates the zone numbers (1 to 8) to the link numbers. The zone numbers appear on the face of the card. The link numbers appear on the MAP display for the NT9X40BA or NT9X40BB interface card. Note that the figure indicates fiber connections only. Observe carefully the zone identification marks for transmit and receive.

System cards
in a SuperNode SE 32k ENET (end)

Fiber connector detail

The preceding figure displays the type of connector used to connect fibers to an NT9X40 or NT9X45 paddle board.

Fiber connector and receptacle detail

This figure shows the different parts of the connector and receptacle.

6 File processor card replacement procedures

Introduction

This chapter provides card replacement procedures for the file processor (FP). The first section in the chapter provides illustrations of FP shelf designs.

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) are in the chapter "Frame supervisory panel and maintenance supervisory panel card replacement procedures".

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Application

This section identifies the FP card(s) the replacement procedure covers.

Common procedures

This section lists common procedures in the FP card replacement procedure. A common procedure is a series of steps that you repeat within maintenance procedures. The procedure for the removal and replacement of a card is an example of a common procedure. Common procedures are in the common procedures chapter in this NTP.

Do not go to the common procedures unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in office records:

- the serial number of the card you replaced

- the date you replaced the card

- the reason you replaced the card

SuperNode Multicomputing Base shelf layouts

Application

This procedure contains the following design diagrams:

- application processor cabinet (APC)
- file processor (FP) shelf
- FP storage device shelf

Figure 1 Application processor cabinet with FP

NT9X89
in a storage device shelf in a file processor

Application

Use this procedure to replace a NT9X89 in a storage device shelf for a SuperNode Multicomputing Base (SMB) file processor (FP). The following table lists the SMB FP.

PEC	Suffix	Card name	Shelf or frame name
NT9X89	AA, BA	SCSI device interface paddle board	FP storage device

Refer to the "Index" if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)

- PEC suffix

- provisioned shelf

- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedures:

- *Verifying load compatibility of SuperNode cards*

- *Replacing a card*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT9X89
in a storage device shelf in a file processor (continued)

Replacing a NT9X89in a storage device shelf in a file processor

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT9X89
in a storage device shelf in a file processor (continued)

Replacing a NT9X89 in a storage device shelf in a file processor

At your Current Location

1 Obtain a replacement card. Make sure the replacement card and the card you remove have the same PEC and PEC suffix.

2 Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. You must perform this procedure to make sure that the replacement card is compatible with the software load. Complete the procedure and return to this point.

At the MAP terminal

3 To post the FP that contains the card you replace, type

>MAPCI;MTC;PM;POST FP fp_no

and press the Enter key.

where

fp_no
is the number of the FP (0 to 99) that contains the card you will replace

Example of a MAP display:

```
            SysB      ManB      OffL      CBsy      ISTb      InSv
    PM       0         0         14        0         5         11
    FP       0         0         2         0         5         4

    FP 20:      FP20_QPI0      Plane     Devices
    ISTb                       NoSync     1SysB
```

4 To access the Devices level of the MAP display, type

>DEVICES

and press the Enter key.

Example of a MAP display:

```
    FP 3:      FP3_SR256      Plane      Devices
    ISTb                      NoSync   .

                CTRL0          CTRL1          DEVICE
    DABM         .              .            0 1 2 3 4 5
    SCSI 0      .(EN)          .(DIS)        - . - . - -
    SCSI 1      .(EN)          .(DIS)        - .  - . - -
```

NT9X89
in a storage device shelf in a file processor (continued)

5   Determine if the NT9X89 card you replace connects to an enabled (EN) or disabled (DIS) SCSI bus.

If the SCSI bus	Do
is enabled	step 6
is disabled	step 7

Note: The EN indicates the SCSI bus is enabled. The DIS indicates the SCSI bus is disabled. CTRL0 (controller 0) corresponds to plane 0 and CTRL1 corresponds to plane 1. The MAP display in step 4 indicates that both SCSI buses on plane 0 are enabled. The MAP display also indicates that both SCSI buses on plane 1 are disabled.

6   To switch enable the SCSI bus that associates with the NT9X89 card you replace, type

>SWEN   scsi_no

and press the Enter key.

where

>   **scsi_no**
>   is the number of the enabled SCSI bus (0 or 1)

Example of a MAP response:

```
FP 1 SwEn SCSI 0: Command request has been submitted.

FP 1 SwEn SCSI 0: Command passed.
```

If the SWEN command	Do
passed	step 7
failed	step 33

7   To manually busy the disabled SCSI bus, type

>BSY   SCSI   scsi_no

and press the Enter key.

where

>   **scsi_no**
>   is the number of the disabled SCSI bus (0 or 1)

Example of a MAP response:

NT9X89
in a storage device shelf in a file processor (continued)

```
FP 1 Busy SCSI 0: Command request has been submitted.
FP 1 Busy SCSI 0: Command passed.
```

If the BSY command	Do
passed	step 8
failed	step 33

8   To query the SCSI components of the FP, type

>QUERYFP SCSI scsi_no

and press the Enter key.

where

>   **scsi_no**
>   is the number of the disabled SCSI bus (0 or 1)

Example of a MAP response:

```
Card Firmware Ctrl SCSI Dev Quad Shelf Slot Status
---- -------- ---- ---- --- ---- ----- ---- ------
SIP  SXFW35CV  0    0    -   0     0    11   InSv
SDIP 910822    0    0    0   0     3     8   SysB
SIP  SXFW35CV  1    0    -   1     0    16   InSv
SDIP 910822    1    0    0   0     3     9   InSv
```

9   Record the following information for the NT9X89 card (SDIP) you replace:

- SCSI number
- device number
- quadrant location
- shelf number
- slot number

    Note: The SCSI number appears under the SCSI header in the MAP response example in step 8. The device number appears under the Dev header. The quadrant number appears under the Quad header. The shelf number appears under the Shelf header. The slot number appears under the Slot header.

10   To query the device that associates with the NT9X89 card that you replace, type

>QUERYFP DEV scsi_no dev_no

and press the Enter key.

where

>   **scsi_no**
>   is the SCSI number (0 or 1) you recorded in step 9

dev_no
is the device number you recorded in step 9

Example of a MAP response:

```
Dev Name SCSI Dev Type Quad Shelf Slot Status
-------- ----  --- ---- ---- ----- ---- ------
DK00      0   0   dk    0    3    8    InSv
```

11 Record the following information for the storage device that associates with the NT9X89 card (SDIP) you replace:

- device name
- device type

    Note: The device name appears under the Dev Name header of the MAP response that the system generated in step 10. The device type appears under the Type header.

If the device type	Do
is dk	step 12
is ct	step 17

12 Determine if the disk drive is a member of a shadow set.

    Note: Shadow sets are datafilled in table SHADOW.

If the disk drive	Do
is a member of a shadow set	step 13
is not a member of a shadow set	step 17

13 Determine the name of the shadow set.

14 To access the shadow utility for the FP on which the disk drive resides, type

>SHADOWUT FP fp_no

and press the Enter key

where

fp_no
is the number of the FP (0 to 99) that contains the disk drive

Example of a MAP response:

```
FP22 is now node of reference
Disk shadowing utility is now active
SHADOWUT; FP22
```

NT9X89
in a storage device shelf in a file processor (continued)

15   To stop the shadow set member, type

>**STM   ss_name   device_name**

and press the Enter key.

where

   ss_name
      is the name of the shadow set (SS00 or SS01)

   device_name
      is the device name you recorded in step 11

Example input:

>**STM   SS00   DK02**

Example of a MAP response:

```
*****************************************************
**
***  WARNING:                                     ***
***    If this is the last in-service member then File ***
***    Processing will no longer be available on the   ***
***    shadow set: SS00                            ***
*****************************************************
**
Do you wish to proceed?
Please confirm ("Yes", "Y", "No", or "N"):
```

16   To confirm the command, type

>**YES**

and press the Enter key.

Example of a MAP response:

```
Ok, Shadow Set Member stopped.
Approximately 1 minute to complete.
```

Go to step 18.

17   To manually busy the storage device, type

>**BSY   DEV   scsi_no   dev_no**

and press the Enter key.

where

   scsi_no
      is the SCSI number you recorded in step 9

   dev_no
      is the device number you recorded in step 9

Example input:

>**BSY   DEV   0   1**

NT9X89
in a storage device shelf in a file processor (continued)

Example of a MAP response:

```
FP 1 Busy DEV 0 1:
Command request has been submitted.
FP 1 Busy DEV 0 1: Command passed.
```

If the BSY command	Do
passed	step 18
failed	step 33

18   To offline the device, type

>OFFL DEV scsi_no dev_no

and press the Enter key.

where

> **scsi_no**
> is the SCSI number you recorded in step 9
>
> **dev_no**
> is the device number you recorded in step 9

Example input:

>OFFL DEV 0 1

Example of a MAP response:

```
FP 1 Offline DEV 0 1: Command request has been
submitted.
FP 1 Offline DEV 0 1: Command passed.
```

If the OFFL command	Do
passed	step 19
failed	step 33

At the storage device shelf

19   Locate the NT9X89 card that you must replace.

20   Determine the state of the LEDs on the card.

If	Do
no LEDs are lit	step 21
one or both LEDs are lit	step 33

NT9X89
in a storage device shelf in a file processor (continued)

21 Loosen the two screws that secure the connector to the back of the card.

22 To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

23 Tighten the screws that secure the connector at the back of the card.

At the MAP terminal

24 To test the SCSI bus you busied in step 7, type

>**TST SCSI scsi_no**

and press the Enter key.

where

> **scsi_no**
> is the number of the disabled SCSI bus (0 or 1)

Example of a MAP response:

```
FP 1 Test DEV 0 1: Command request has been submitted.
FP 1 Test DEV 0 1: Command passed.
```

If the TST command	Do
passed	step 25
failed	step 33

25 To return the SCSI bus to service, type

>**RTS SCSI scsi_no**

and press the Enter key.

where

> **scsi_no**
> is the number of the disabled SCSI bus (0 or 1)

Example of a MAP response:

```
FP 1 RTS DEV 0 1: Command request has been submitted.
FP 1 RTS DEV 0 1: Command passed.
```

If the RTS command	Do
passed	step 26
failed	step 33

26 To manually busy the storage device you offlined in step 18, type

>**BSY DEV scsi_no dev_no**

NT9X89
in a storage device shelf in a file processor (continued)

and press the Enter key.

where

scsi_no
is the SCSI number you recorded in step 9

dev_no
is the device number you recorded in step 9

Example input:

```
>BSY  DEV  0  1
```

Example of a MAP response:

```
FP 1 Busy DEV 0 1: Command request has been submitted.
FP 1 Busy DEV 0 1:
Command passed.
```

If the BSY command	Do
passed	step 27
failed	step 33

27   Determine the type of storage device you busied in step 17.

If the device type	Do
is dk	step 28
is ct	step 32

28   Determine if the disk drive is a member of a shadow set.

If the disk drive	Do
is a member of a shadow set	step 29
is not a member of a shadow set	step 32

29   To start the shadow set member, type

```
>SM  ss_name  device_name  FORCE
```

and press the Enter key.

where

ss_name
is the name of the shadow set (SS00 or SS01)

device_name
is the name of the shadow set member you stopped in step 15

NT9X89
in a storage device shelf in a file processor (continued)

Example input:

>SM SS00 DK02 FORCE

Example of a MAP response:

```
The member will be started with the following
parameter settings:

Node name      : FP2
Shadow set name: SS00
Device name    : DK02
Transfer length: Optimal
Interval       : 0
Synchronization: Default
Force          : NO

Do you want to continue?
Please confirm ("YES", "Y", "NO", or "N"):
```

30 To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
OK, Shadow Set Member start initiated.
```

If the SM command	Do
passed	step 31
failed	step 33

31 To quit the shadow utility, type

>QUIT

and press the Enter key.

Go to step 34.

32 To return the device to service, type

>RTS DEV scsi_no dev_no

and press the Enter key.

where

    scsi_no
      is the SCSI number you recorded in step 9

    dev_no
      is the device number you recorded in step 9

NT9X89
in a storage device shelf in a file processor (end)

Example of a MAP response:

```
FP 1 RTS DEV 0 1: Command request has been submitted.
FP 1 RTS DEV 0 1: Command passed.
```

If the RTS command	Do
passed	step 34
failed	step 33

33 For additional help, contact the next level of support.

34 The procedure is complete.

NT9X90
in a storage device shelf in a file processor

Application

Use this procedure to replace an NT9X90 in a storage device shelf for a SuperNode Multicomputing Base (SMB) file processor (FP). The following table lists the SMB FP.

PEC	Suffix	Card name	Shelf or frame name
NT9X90	AA	Storage device assembly (600-Mbyte disk)	FP storage device
NT9X90	AB	Storage device assembly (2.1-Gbyte disk)	FP storage device
NT9X90	BA	Storage device assembly (1.2-Gbyte DAT)	FP storage device

Refer to the "Index" if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to the following common procedure:

- *Verifying load compatibility of SuperNode cards*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT9X90
in a storage device shelf in a file processor (continued)

Replacing a NT9X90 in a storage device shelf in a file processor

At your current location

1   Obtain a replacement card. Make sure that the replacement card and the card you remove have the same PEC and PEC suffix.

2   Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. You must perform this procedure to make sure that the replacement card is compatible with the software load. Complete the procedure and return to this point.

At the MAP terminal

3   To post the FP that contains the card you will replace, type

>MAPCI;MTC;PM;POST FP fp_no

and press the Enter key.

where

  fp_no
     is the number of the FP (0 to 99) that contains the card you will replace

Example of a MAP display:

```
          SysB     ManB     OffL     CBsy     ISTb     InSv
PM          0        0       14        0        5       11
FP          0        0        2        0        5        4

FP 20:     FP20_QPI0     Plane     DevicesISTb
NoSync     1SysB
```

4   To access the Devices level of the MAP display, type

>DEVICES

and press the Enter key.

Example of a MAP display:

```
FP 3:           FP3_SR256      Plane     Devices
ISTb                           NoSync    .

                CTRL0          CTRL1       DEVICE
DABM              .              .        0 1 2 3 4 5
SCSI 0          .(EN)          .(DIS)     - . - . - -
SCSI 1          .(EN)          .(DIS)     - . - . - -
```

5   To query the device components for the FP, type

>QUERYFP DEV ALL ALL

and press the Enter key.

NT9X90
in a storage device shelf in a file processor (continued)

Example of a MAP response:

```
Dev Name SCSI Dev Type Quad Shelf Slot Status
-------- ---- --- ---- ---- ----- ---- ------
DK00        0   0  dk    0     2    8   InSv
CT01        0   1  ct    2     2   20   InSv
DK02        0   2  dk    0     3    8   InSv
DK03        0   3  dk    2     3   20   InSv
DK10        1   0  dk    1     2   14   SysB
CT11        1   1  ct    3     2   26   InSv
DK12        1   2  dk    1     3   14   InSv
DK13        1   3  dk    3     3   26   InSv
```

6   In the MAP display the system generated in step 5, identify the device you will replace. Record the following information for the device:

- SCSI number

- device number

- device type

- quadrant location

- shelf number

- slot number

   Note: The SCSI number appears under the SCSI header on the MAP display. The device number appears under the Dev header. The device type appears under the Type header. The quadrant location appears under the Quad header. The shelf number appears under the Shelf header. The slot number appears under the Slot header.

If the device	Do
is dk	step 7
is ct	step 16

7   The next action depends on why you perform this procedure.

If	Do
the procedure *Recovering disks in a shadow set after loss of both disks* directed you to this procedure	step 18
other than listed here	step 8

NT9X90
in a storage device shelf in a file processor (continued)

8 Determine if the disk drive is a member of a shadow set.

> **Note:** Datafill shadow sets in table SHADOW.

If the disk drive	Do
is a member of a shadow set	step 9
is not a member of a shadow set	step 16

9 Determine the name of the shadow set.

> **Note:** When you display and record the shadow set name, the SCP recovery procedure directs you to this procedure.   The SCP recovery procedure is *Recovering disks in a shadow set after loss of one disk.*

10 To access the shadow utility for the FP that contains the disk drive, type

>SHADOWUT FP fp_no

and press the Enter key.

where

> **fp_no**
> is the number of the FP (0 to 99) that contains the disk drive

11 To display information on the shadow set, type

>DIS ss_name

and press the Enter key.

where

> **ss_name**
> is the name of the shadow set (SS00 or SS01)

Example of a MAP response:

```
Information about shadow set #0:

Node name:              FP2
Shadow set name          SS00
Set definition state:    RUNNING
Set operational state:   IN SERVICE
Synchronization status:  SYNCHRONIZED
Multi-Writes:           Serial
Capacity (blocks)        1244655
Transfer length          Optimal
Interval:               0

==============================================
Information about member disks:

     Name       State    SyncState    Reads   Writes
      DK02      INSV       Yes
Perm DK13       INSV       Yes          0        0
```

12   Record the shadow set member that has faults.

Note: In the MAP display example in step 11, the shadow set member that has faults is DK02.

13   To stop the shadow set member, type

>STM ss_name device_name

and press the Enter key.

where

ss_name
is the name of the shadow set (SS00 or SS01)

device_name
is DK (disk drive) followed by two digits

Example input:

>STM SS00 DK02

Example of a MAP response:

```
***********************************************************
****    WARNING:
****** If this is the last in-service member then File
****** Processing will no longer be available on the
****** shadow set: SS00
************************************************
 Do you wish to proceed?
 Please confirm ("Yes", "Y", "No", or "N"):
```

14   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Ok, Shadow Set Member stopped.
Approximately 1 minute to complete.
```

15   To quit the shadow utility, type

>QUIT

and press the Enter key.

Go to step 17.

16   To manually busy the device that has faults, type

>BSY DEV scsi_no dev_no

and press the Enter key.

where

NT9X90
in a storage device shelf in a file processor (continued)

> **scsi_no**
> is the SCSI number you recorded in step 6

> **dev_no**
> is the device number you recorded in step 6

Example of a MAP response:

```
FP 1 Busy DEV 0 1: Command request has been submitted.
FP 1 Busy DEV 0 1: Command passed.
```

If the BSY command	Do
passed	step 17
failed	step 48

17   To offline the affected device, type

>OFFL DEV scsi_no dev_no

and press the Enter key.

where

> **scsi_no**
> is the SCSI number you recorded in step 6

> **dev_no**
> is the device number you recorded in step 6

Example input:

>OFFL DEV 0 1

Example of a MAP response:

```
FP 1 Offline DEV 0 1: Command request has been submitted.
FP 1 Offline   DEV 0 1: Command passed.
```

If the OFFL command	Do
passed	step 18
failed	step 48

At the storage device shelf

18   Determine the state of both LEDs on the storage device.

If	Do
no LEDs are lit	step 19

If	Do
one or both LEDs are lit	step 48

19   Open the locking levers on the faceplate until the levers are horizontal.

20   Carefully pull the device toward you. Continue to pull until the locking latch at the back of the storage device stops the device from clearing the shelf.

21   Close the locking levers.

22   Grasp the carrying handle for the storage device , and use your thumb to press the locking latch at the same time. Slide the storage device straight out from the shelf.

NT9X90
in a storage device shelf in a file processor (continued)

23 Place the storage device in an electrostatic discharge (ESD) protective container.

24 Lift the replacement device by the carrying handle.

25 Open the locking levers until the levers are horizontal.

26 Use your free hand to support and align the storage device with the slots in the shelf. Carefully slide the storage device into the shelf until the locking latch at the back of the device engages the shelf.

27 Use your fingers or thumbs to push on the upper and lower edges of the faceplate. Make sure the device sits completely in the shelf.

28 Close the locking levers.

At the MAP terminal

29 To manually busy the device you offlined in step 17, type

>BSY DEV scsi_no dev_no

and press the Enter key.

where

scsi_no
is the SCSI number you recorded in step 6

dev_no
is the device number you recorded in step 6

If the BSY command	Do
passed	step 30
failed	step 48

NT9X90
in a storage device shelf in a file processor (continued)

30   Determine the type of device you replaced.

If the device type	Do
is dk	step 31
is ct	step 46

31   Determine if the disk drive is a member of a shadow set.

If the disk drive	Do
is a member of a shadow set	step 32
is not a member of a shadow set	step 36

32   To access the shadow utility for the FP that contains the disk drive, type

>SHADOWUT FP fp_no

and press the Enter key.

where

> **fp_no**
> is the number of the FP (0 to 99) that contains the disk drive

33   To start the shadow set member you stopped in step 13, type

>SM ss_name device_name FORCE

and press the Enter key.

where

> **ss_name**
> is the name of the shadow set (SS00 or SS01)

> **device_name**
> is DK (disk drive) followed by two digits

Example input:

>SM SS00 DK02 FORCE

Example of a MAP response:

NT9X90
in a storage device shelf in a file processor (continued)

```
The member will be started with the following parameter
settings:

Node name      : FP2
Shadow set name: SS00
Device name    : DK02
Transfer length: Optimal
Interval       : 0
Synchronization: Default
Force          : NO

Do you want to continue?
Please confirm ("Yes", "Y", "No", or "N"):
```

34   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
OK, Shadow Set Member start initiated.
```

If the SM command	Do
passed	step 35
failed	step 48

35   To quit the shadow utility, type

>QUIT

and press the Enter key.

Go to step 49.

36   To test the storage device, type

>TST DEV scsi_no dev_no

and press the Enter key.

where

    scsi_no
        is the SCSI number you recorded in step 6

    dev_no
        is the device number you recorded in step 6

Example of a MAP response:

FP 1 Test DEV 0 1: Command request has been submitted.
FP 1 Test DEV 0   1: Command passed.

If the TST command	Do
passed	step 37
failed	step 48

37   To access the disk administration utility, type

>DISKADM disk_name node_name

and press the Enter key.

where

> **disk_name**
>   is the name of the disk

> **node_name**
>   is the FP name

Example input:

>DISKADM DK13 FP3

Example of a MAP response:

```
Start up command sequence is in progress.
This may take a few minutes.
Administration of device DK13 on FP3 is now active.
DISKADM;  FP3
```

38   To format the disk, type

>FORMATDISK disk_name

and press the Enter key.

where

> **disk_name**
>   is the name of the disk

Example of a MAP response:

NT9X90
in a storage device shelf in a file processor (continued)

```
                   *****  WARNING  *****
          Formatting of DK13 will
          destroy the contents of the disk.
          The formatting will:
              allocate 3 spare or alternate sectors per track,
              allocate 16 spare or alternate tracks per disk,
              use the G defect list,
              assign DK13 as the name for the disk.
              perform quick format,
              exclude force option.
          Do you want to continue?
          Please confirm ("Yes", "Y", "No", or "N"):
```

39   To confirm the command, type

>YES

and press the Enter key.

40   From your office records, determine the number, size, and type of volumes
the replacement disk requires.

41   To create a disk volume, type

>CREATEVOL vol_name vol_size vol_type

and press the Enter key.

where

vol_name
is the name of the disk volume

vol_size
is the size of the volume in Mbytes

vol_type
is the type of volume (STD or FTFS)

Example input:

>CREATEVOL MLSUP 60 FTFS

Example of a MAP response:

```
 FTFS volume MLSUP will be created on DK13.

 Volume size:                   60 megabytes
 First FID table extent size:  32754 entries
 Volume Free Space Map size:    7936 segments

 Do you want to continue?
 Please confirm ("Yes", "Y", "No", or "N"):
```

NT9X90
in a storage device shelf in a file processor (continued)

42	To confirm the command, type
	>YES
	and press the Enter key.
43	Repeat steps 41 and 42 for each disk volume required.
44	Restore the backup files in the disk drive that has faults to the replacement disk drive volumes.
45	To quit the disk administration utility, type
	>QUIT
	and press the Enter key.
	Go to step 47.
46	To test the device, type
	>TST DEV scsi_no dev_no
	and press the Enter key.
	where
	scsi_no
	is the SCSI number you recorded in step 6
	dev_no
	is the device number you recorded in step 6
	Example of a MAP response:

```
FP 1 Test DEV 0 1: Command request has been submitted.
FP 1 Test DEV 0 1: Command passed.
```

If the TST command	Do
passed	step 47
failed	step 48

47	To return the device to service, type
	>RTS DEV scsi_no dev_no
	and press the Enter key.
	where
	scsi_no
	is the SCSI number you recorded in step 6
	dev_no
	is the device number you recorded in step 6
	Example of a MAP response:

NT9X90
in a storage device shelf in a file processor (end)

```
FP 1 RTS DEV 0 1: Command request has been submitted.
FP 1 RTS DEV 0 1: Command passed.
```

If the RTS command	Do
passed	step 49
failed	step 48

48   For additional help, contact the next level of support.

49   The procedure is complete.

NT9X91
in a storage device shelf in a file processor

Application

Use this procedure to replace an NT9X91 in a storage device shelf for a
SuperNode Multicomputing Base (SMB) file processor (FP).   The following
table lists the SMB FP.

PEC	Suffix	Card name	Shelf or frame name
NT9X91	AA	Storage device power converter	FP storage device
NT9X91	AB	Power converter +5 V +12 V	FP storage device

Refer to the "Index" if you cannot identify the following features for the card
you want to replace:

*   product engineering code (PEC)

*   PEC suffix

*   provisioned shelf

*   provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this
card replacement book.

Common procedures

This procedure refers to the following common procedures:

*   *Verifying load compatibility of SuperNode cards*

*   *Replacing a card*

Do not go to the common procedure unless the step-action procedure directs
you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the
flowchart to review the procedure. Follow the steps to perform the procedure.

```

Replacing a NT9X91 in a storage device shelf in a file processor

At your current location

1   Obtain a replacement card. Make sure the replacement card and the card you replace have the same PEC and PEC suffix.

2   Perform the procedure *Verifying load compatibility of SuperNode cards* in this document. You must perform this procedure to make sure that the replacement card is compatible with the software load. Complete the procedure and return to this point.

At the MAP terminal

3   To post the FP that contains the card you will replace, type

      >MAPCI;MTC;PM;POST FP fp_no

      and press the Enter key.

      where

        fp_no
          is the number of the FP (0 to 99) that contains the card you will replace

      Example of a MAP display:

```
            SysB     ManB     OffL     CBsy     ISTb     InSv
PM           0        0        14       0        5        11
FP           0        0        2        0        5        4

FP 20:     FP20_QPI0    Plane   DevicesISTb
NoSync     1SysB
```

4   To access the Devices level of the MAP display, type

      >DEVICES

      and press the Enter key.

      Example of a MAP display:

```
FP 3:                FP3_SR256  Plane      Devices
ISTb                            NoSync   .
                     CTRL0      CTRL1       DEVICE
DABM                  .          .        0 1 2 3 4 5
SCSI 0               .(EN)      .(DIS)     - . - . - -
SCSI 1               .(EN)      .(DIS)     - . - . - -
```

NT9X91
in a storage device shelf in a file processor (continued)

At the MAP terminal

5   To post the device that the NT9X91 card powers, type

>**POSTDEV   scsi_bus_no   device_no**

and press the Enter key.

where

  scsi_bus_no
     is the number of the SCSI bus (0 or 1)

  device_no
     is the number of the device (0 to 5)

Example of a MAP display:

```
DK12      Type    DISK        SCSI bus    1  Device    2
Shelf  2  Status  InSv        Shadow set  Use SHADOWUT
Quad   1  Drive   On Line     User        SYSTEM
```

6   To query the device, type

>**QRYDEV**

and press the Enter key.

Example of a MAP response:

```
Dev Name SCSI Dev Type Quad   Shelf Slot Status
-------- ------- ---- ----    ----- ---- ------
DK00       0    0   dk    0      3    8   InSv
```

7   From the MAP display the system generated in step 6, record the following information for the device:

- SCSI number
- device number
- device type
- quadrant location
- shelf number
- slot number

  Note: The SCSI number appears under the SCSI header on the MAP display. The device number appears under the Dev header. The device type appears under the Type header. The quadrant location appears under the Quad header. The shelf number appears under the Shelf header. The slot number appears under the Slot header.

If the device	Do
is dk	step 8
is ct	step14

NT9X91
in a storage device shelf in a file processor (continued)

8   Determine if the associated disk drive is a member of a shadow set.

> ***Note:*** Datafill shadow sets in table SHADOW.

If the disk drive	Do
is a member of a shadow set	step 9
is not a member of a shadow set	step 14

9   To access the shadow utility for the FP on which the disk drive resides, type

>SHADOWUT FP fp_no

and press the Enter key.

where

> **fp_no**
>> is the number of the FP on which the disk drive resides

10   To display information on the shadow set, type

>DIS ss_name

and press the Enter key.

where

> **ss_name**
>> is the name of the shadow set (SS00 or SS01)

Example of a MAP response:

```
Information about shadow set #0:
Node name:               FP2
Shadow set name:           SS00
Set definition state:      RUNNING
Set operational state:     IN SERVICE
Synchronization status:    SYNCHRONIZED
Multi-Writes:          Serial
Capacity (blocks)          1244655
Transfer length:           Optimal
Interval:             0
=======================================================
Information about member disks:

    Name            State     SyncState     Reads Writes
    DK02            INSV      Yes
Perm DK13           INSV      Yes            0        0
Information about member disks:
```

If	Do
another shadow set member is in service	step 11
no other shadow set member is in service	step 26

Do you wish to proceed?
Please confirm ("Yes", "Y", "No", or "N"):
```

12   To confirm the response, type

>YES

and press the Enter key.

Example of a MAP response:

```
Ok, Shadow Set Member stopped.

Approximately 1 minute to complete.
```

13   To quit the shadow utility, type

>QUIT

and press the Enter key.

Go to step 15.

14   To manually busy the affected storage device, type

>**BSY   DEV   scsi_no   dev_no**

and press the Enter key.

where

    scsi_no
        is the SCSI number you recorded in step 7

    dev_no
        is the device number you recorded in step 7

Example of a MAP response:

```
FP 1 Busy DEV 0 1: Command request has been submitted.
FP 1 Busy DEV 0 1: Command passed.
```

At the storage device shelf

15

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding
> point of a frame supervisory panel (FSP) to handle cards.
> The wrist strap protects the cards against static electricity
> damage.

To power down the NT9X91, press down and release the switch on the
faceplate of the NT9X91.

If the alarm light on the power converter	Do
lights	step 16
does not light	step 26

16   To replace the card, perform the procedure *Replacing a card* in this
document.

17   To power up the power converter, lift and release the power switch on the
faceplate.

If the alarm light on the power converter	Do
turns off	step 18
remains on	step 26

NT9X91
in a storage device shelf in a file processor (continued)

18   Determine the type of device you noted in step 7.

If the device	Do
is dk	step 19
is ct	step 24

19   Determine if the disk drive is a member of a shadow set.

If the disk drive	Do
is a member of a shadow set	step 20
is not a member of a shadow set	step 24

At the MAP terminal

20   To access the shadow utility of the FP that contains the disk drive, type

>SHADOWUT FP fp_no

and press the Enter key.

where

    fp_no
      is the number of the FP (0 to 99) that contains the disk drive

21   To start the shadow set member, type

>SM ss_name device_name

and press the Enter key.

where

ss_name is the name of the shadow set (SS00 or SS01)

    device_name
      is DK (disk drive) followed by two digits

Example input:

>SM SS00 DK02

Example of a MAP response:

NT9X91
in a storage device shelf in a file processor (continued)

```
The member will be started with the following
parametersettings:

Node name      : FP2
Shadow set name: SS00
Device name    : DK02
Transfer length: Optimal
Interval       : 0
Synchronization: Default

NT9X91
in a storage device shelf in a file processor (end)

```
FP 1 Test DEV 0 1: Command request has been submitted.
FP 1 Test DEV 0 1: Command passed.
```

If the TST command	Do
passed	step 25
failed	step 26

25 To return the storage device to service, type

>RTS   scsi_no   dev_no

and press the Enter key.

where

> **scsi_no**
> is the SCSI number you recorded in step 7

> **dev_no**
> is the device number you recorded in step 7

Example of a MAP response:

```
FP 1 RTS DEV 0 1: Command request has been submitted.
FP 1 RTS DEV 0 1: Command passed.
```

If the RTS command	Do
passed	step 27
failed	step 26

26 For additional help, contact the next level of support.

27 The procedure is complete.

System cards
in a file processor

Application

Use this procedure to replace the following cards in a SuperNode
Multicomputing Base (SMB) file processor (FP).

PEC	Suffix	Card name	Shelf or frame name
NT9X13	LA	AP/FP 68030 HPM-based CPU card	FP
NT9X14	DB	24-Mbyte memory card	FP
NT9X21	AB	Bus terminator paddle board	FP
NT9X26	AA, AB	Remote terminal interface paddle board	FP
NT9X62	AA	Two-port subrate DS512 paddle board	FP
NT9X86	AA, AB	Two-port message controller card	FP
NT9X87	AA	Two-access buffer memory card	FP
NT9X88	AA	SCSI interface processor paddle board	FP
NTDX15	AA	Power converter ±5 V	FP
NTDX15	AB	Global power converter ±5 V	FP

If you cannot identify the product engineering code (PEC), suffix, or
provisioned shelf or frame for the card you want to replace, refer to the Index.
The index contains a list of the cards, shelves, and frames documented in this
card replacement book.

Refer to the "Index" if you cannot identify the following features for the card
you want to replace:

- product engineering code (PEC)

- PEC suffix

- provisioned shelf

- provisioned frame

System cards
in a file processor (continued)

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

The procedure refers to the following common procedures:

- *Verifying load compatibility of SuperNode cards*

- *Replacing a card*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

System cards
in a file processor (continued)

Summary of Replacing System cards in a file processor

System cards
in a file processor (continued)

Replacing System cards in a file processor

At your current location

1   Obtain a replacement card. Make sure that the replacement card and the
card you remove have the same PEC and PEC suffix.

2   Perform the procedure *Verifying load compatibility of SuperNode cards* in this
document. You must perform this procedure to make sure the replacement
card is compatible with the software load. Complete the procedure and return
to this point.

At the MAP terminal

3   To post the FP that contains the card you will replace, type

>MAPCI;MTC;PM;POST FP fp_no

and press the Enter key.

where

fp_no
is the number of the FP (0 to 99) that contains the card you will replace

Example of a MAP display:

```
FP 20:     FP20_QPI0     Plane  Devices
 InSv     .                   .       .
```

4   To access the Plane level of the MAP display, type

>PLANE

and press the Enter key.

Example of a MAP display:

```
Sync              CPU    Jam    DRAM  Port  MsgCh  PLink
No       state act             0123  Card  0  1   0  1

Plane 0   .     A              -...    .    .  .    .  .
Plane 1   .     I   No         -...    F    L  L    P  P
```

5   Determine if the card you will replace is on the active or the inactive plane.

Note: The letter A under the Act header indicates the plane is active. The
letter I indicates the plane is inactive.

If the card	Do
is on the active plane	step 6

System cards
in a file processor (continued)

If the card	Do
is on the inactive plane	step 13

6   Determine if the inactive CPU is jammed.

> **Note:** The word YES under the Jam header indicates that the CPU is jammed. The word NO indicates that the CPU is not jammed.

If the inactive CPU	Do
is jammed	step 7
is not jammed	step 8

7   Determine why the inactive CPU is jammed before you proceed. When you have permission, release the jam on the inactive CPU. To release the jam, type

>MATEJAM RELEASE

and press the Enter key.

Example of a MAP response:

```
FP 3 Jam Mate: Request has been submitted.
FP 3 Jam Mate:  Command Completed.
The inactive CPU is not jammed.
```

8   Determine if the FP is synchronized.

> **Note:** The word YES under the Sync header indicates that the FP synchronized. The word NO indicates that the FP did not synchronize.

If the FP	Do
is synchronized	step 10
is not synchronized	step 9

9   To synchronize the FP, type

>SYNC

and press the Enter key.

Example of a MAP response:

System cards
in a file processor (continued)

```
FP 3 Synchronization: Request has been submitted.
FP 3 Synchronization: Command completed.
The PM is now running in sync
```

If the SYNC command	Do
passed	step 10
failed	step 62

10   To switch activity, type

>SWACT

and press the Enter key.

Example of a MAP response:

```
FP 3 Activity Switch: Request has been submitted.
FP 3 Activity Switch: Command completed.
CPU 1 is now running active.
```

If the SWACT command	Do
passed	step 11
failed	step 62

11   To match the memories of the CPUs, type

>MATCH

and press the Enter key.

Example of a MAP response:

```
FP 3 Memory Match: Request has been submitted.
FP 3 Memory  Match: Command Completed.
Memory match was executed whilethe node was running in SYNC.
Memory contents have been  matched across the two planes
```

**System cards
in a file processor** (continued)

12   Determine if the system completed the following conditions as a result of the memory match:

- The memory match was successful.

- The system did not generate any mismatch logs (AP317, AP318, FP354).

- The FP remained synchronized, indicated by YES or NoOvr under the Sync header on the MAP display.

If the system	Do
completed the conditions	step 13
did not complete the conditions	step 62

13   To jam the inactive CPU, type

>MATEJAM   SET

and press the Enter key.

Example of a MAP response:

```
FP 3 Jam Mate: Request has been submitted.
FP 3 Jam Mate   Command completed.
The inactive CPU is jammed
```

14   To drop synchronization, type

>DPSYNC

and press the Enter key.

Example of a MAP response:

```
If you intend to jam the inactive CPU,
Please do so before dropping synchronization.
Please confirm ("YES" or "NO"):
```

15   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
 FP 3 Drop synchronization: Request has been submitted.
 FP 3 Drop synchronization: Command completed.

 Now running in simplex mode with CPU 1 active.
```

If the DPSYNC command	Do
passed	step 16

System cards
in a file processor (continued)

If the DPSYNC command	Do
failed	step 62

16 To access the Devices level of the MAP display, type

>DEVICES

and press the Enter key.

Example of a MAP display:

```
FP 3:FP3_SR256PlaneDevices
ISTbNoSync  .

CTRL0CTRL1  DEVICE
DABM  .  .0 1 2 3 4 5
SCSI 0   .(EN)  . (DIS)- . - . - -
SCSI 1  .(EN)  . (DIS)- . - . - -
```

17 Determine if the system disabled both SCSI buses on the inactive plane.

> **Note:** The CTRL0 (controller 0) corresponds to plane 0 and CTRL1 corresponds to plane 1. The EN indicates the SCSI bus is enabled. The DIS indicates the SCSI bus is disabled. In the MAP display example in step 16, both SCSI buses on plane 0 are enabled and both SCSI buses on plane 1 are disabled.

If both SCSI buses on the inactive plane	Do
are disabled	step 19
are enabled	step 18

18 To switch enable the SCSI bus on the inactive plane, type

>SWEN   scsi_no

and press the Enter key.

where

> **scsi_no**
>   is the number of the enabled SCSI bus (0 or 1) on the inactive plane

Example of a MAP response:

```
FP 1 SwEn SCSI 0: Command request has been submitted.
FP 1 SwEn SCSI 0: Command passed.
```

If the SWEN command	Do
passed	step 19
failed	step 62

System cards
in a file processor (continued)

19 To manually busy the controller on the inactive plane, type

 >BSY CTRL ctrl_no

 and press the Enter key.

 where

  ctrl_no
   is the number of the controller (0 or 1) on the inactive plane

 Example of a MAP response:

```
FP 1 Busy CTRL 0: Command request has been submitted.
FP 1 Busy CTRL 0: Command passed.
```

If the BSY command	Do
passed	step 20
failed	step 62

20 To access the Plane level of the MAP display, type

 >PLANE

 and press the Enter key.

 Example of a MAP display:

```
Sync            CPU    Jam   DRAM  Port  MsgCh  PLink
 No         state act        0123  Card  0  1   0  1
    Plane 0   .     A        -...   .    .  .   .  .
    Plane 1   .     I   Yes  -...   .    .  .   .  .
```

21 Determine if the inactive FP plane is 0 or 1.

  Note: The letter A under the Act header indicates that the plane is active.
  The letter I indicates the plane is inactive.

If the inactive plane	Do
is 0	step 22
is 1	step 24

22 To manually busy the P-links between plane 0 and P-link 0, type

 >BSY PORT 0 PLINK 0

 and press the Enter key.

 Example of a MAP response:

System cards
in a file processor (continued)

```
FP 3, Port 0 PLink 0, Busy PLink: Request has been
submitted.
FP 3, Port 0 Plink 0, Busy PLink: Command completed.
completed.

The PLink is manually busy.
```

If the BSY command	Do
passed	step 23
failed	step 62

23 To manually busy the P-links between plane 0 and P-link 1, type

>BSY PORT 0 PLINK 1

and press the Enter key.

Example of a MAP response:

```
FP 3, Port 0 PLink 1, Busy PLink: Request has been
submitted.
FP 3, Port 0 Plink 1, Busy PLink: Command completed.

The PLink is manually busy.
```

If the BSY command	Do
passed	step 26
failed	step 62

24 To manually busy the P-links between plane 1 and P-link 0, type

>BSY PORT 1 PLINK 0

and press the Enter key.

Example of a MAP response:

```
FP 3, Port 1 PLink 0, Busy PLink: Request has been
submitted.
FP 3, Port 1 Plink 0, Busy PLink: Command completed.

The PLink is manually busy.
```

If the BSY command	Do
passed	step 25
failed	step 62

System cards
in a file processor (continued)

25   To manually busy the P-links between plane 1 and P-link 1, type

   >BSY   PORT   1   PLINK   1

   and press the Enter key.

   Example of a MAP response:

```
FP 3, Port 1 PLink 1, Busy PLink: Request has been submitted.
FP 3, Port 1  Plink 1, Busy PLink: Command completed.

The PLink is manually busy.
```

If the BSY command	Do
passed	step 26
failed	step 62

At the FP shelf

26

	WARNING **Static electricity damage** Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Press down and release the power switch on the faceplate of the NTDX15 power converter. This procedure powers down the quadrant that corresponds to the card you replace.

If the alarm light on the power converter	Do
turns on	step 27
does not turn on	step 62

27   The next action depends on the type of card you replace.

If the card	Do
is an NT9X62	step 28
is other than listed here	step 34

System cards
in a file processor (continued)

28

> **DANGER**
> **Possible equipment damage**
> Make sure you do not contaminate the fiber tip surface. Do not touch the tip of the fiber. Dirt or oil from the skin transferred to the fiber tip surface degrades fiber performance.

> **DANGER**
> **Damage to fiber cable**
> Make sure you handle fiber cables carefully. Do not crimp or bend fiber cables to a radius of less than 25 mm (1 in.).

Locate the card you will remove.

29 Label each fiber link pair transmit for the top fiber of each port and receive for the bottom fiber of each port.

> *Note:* The fiber cable connections appear on the next page.

30 Disconnect the fiber links from the card as follows:

a Loosen the fiber connections with the latch handles up.

b Carefully push in and turn the fiber cable connector counter clockwise halfway until the connector slides out of the receptacle.

c When you disconnect the connectors, place dust caps on the ends of the connectors.

**System cards
in a file processor** (continued)

NT9X62AA

Receptacle

Connector

31   To replace the card, perform the procedure *Replacing a card* in this
         document. Complete the procedure and return to this point.

System cards
in a file processor (continued)

32

DANGER
Damage to fiber cable
Make sure you handle fiber cables carefully. Do not crimp or bend fiber cables to a radius of less than 25 mm (1 in.).

Reconnect the fiber links as follows:

a   Tighten the fiber connections with the latch handles up.

b   Carefully guide the fiber connector into the receptacle notches.

c   Push in and turn the fiber connector clockwise halfway until the connection is finger tight. Put a maximum of 0.169 N m (1.5 lbf in) of pressure on the fiber connector.

33   Go to step 35.

34   To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

35   To power up the NTDX15 power converter you powered down in step 26, lift and release the power switch on the faceplate.

If the alarm light on the power converter	Do
turns off	step 36
remains on	step 62

At the MAP terminal

36   Determine if the inactive FP plane is 0 or 1.

If the inactive plane	Do
is 0	step 37
is 1	step 39

37   To return the P-links between plane 0 and P-link 0 to service, type

>RTS   PORT   0   PLINK   0

and press the Enter key.

Example of a MAP response:

**System cards
in a file processor** (continued)

```
FP 3, Port 0 PLink 0, RTS PLink: Request has been
submitted.
FP 3, Port 0 PLink 0, RTS PLink: Command completed.

The PLink is in-serviceTest Passed
```

If the RTS command	Do
passed	step 38
failed	step 62

38   To return the P-links between plane 0 and P-link 1 to service, type

>RTS   PORT   0   PLINK   1

and press the Enter key.

Example of a MAP response:

```
FP 3, Port 0 PLink 1, RTS PLink: Request has been
submitted.
FP 3, Port 0 PLink 1, RTS PLink: Command completed.

The PLink is in-service Test Passed
```

If the RTS command	Do
passed	step 41
failed	step 62

39   To return the P-links between plane 1 and P-link 0 to service, type

>RTS   PORT   1   PLINK   0

and press the Enter key.

Example of a MAP response:

```
FP 3, Port 1 PLink 1, RTS PLink: Request has been
submitted.
FP 3, Port 1 PLink 1, RTS PLink: Command completed.

The PLink is in-service Test Passed
```

If the RTS command	Do
passed	step 40
failed	step 62

System cards
in a file processor (continued)

40   To return the P-links between plane 1 and P-link 0 to service, type

>RTS PORT 1 PLINK 1

and press the Enter key.

Example of a MAP response:

```
FP 3, Port 1 PLink 0, RTS PLink: Request has been
submitted.
FP 3, Port 1 PLink 0, RTS PLink: Command completed.

The PLink is in-service Test Passed
```

If the RTS command	Do
passed	step 41
failed	step 62

41   To access the Devices level of the MAP display, type

>DEVICES

and press the Enter key.

42   The next action depends on the type of card you replace.

If the card	Do
is an NT9X86	step 43
is other than listed here	step 47

43   To test the controller on the inactive plane, type

>TST CTRL ctrl_no

and press the Enter key.

where

   ctrl_no
        is the number of the controller (0 or 1) on the inactive plane

Example of a MAP response:

```
FP 3 Test CTRL  1: Command request has been submitted.
FP 3 Test CTRL  1: Command passed.
```

If the TST command	Do
passed	step 44
failed	step 62

**System cards
in a file processor** (continued)

44   To return the controller on the inactive plane to service, type

>**RTS   CTRL   ctrl_no**

and press the Enter key.

where

ctrl_no
is the number of the controller (0 or 1) on the inactive plane

Example of a MAP response:

```
FP 3 Busy CTRL 1: Command request has been submitted.
FP 3 Busy CTRL 1: Command passed.
```

If the RTS command	Do
passed	step 45
failed	step 62

45   To access the Plane level of the MAP display, type

>**PLANE**

and press the Enter key.

46   To test the ports that correspond to the card that you replaced, type

>**TST   PORT   plane_no**

and press the Enter key.

where

plane_no
is the number of the plane (0 or 1)

Example of a MAP response:

```
FP 3 Port Test: Request has been submitted.
FP 3, Port 1,    Port Test: Command completed.
Test Passed.
Port card 1 is OK.
```

If the TST command	Do
passed	step 60
failed	step 62

47   To return the controller on the inactive plane to service, type

>**RTS   CTRL   ctrl_no**

and press the Enter key.

where

System cards
in a file processor (continued)

       ctrl_no
          is the number of the controller (0 or 1) on the inactive plane

If the RTS command	Do
passed	step 48
failed	step 62

48   The next action depends on the type of card you replace.

If the card	Do
is a NT9X13, NT9X14, NT9X21, or NT9X26	step 49
is other than listed here	step 55

49   To access the Plane level of the MAP display, type

    >PLANE

    and press the Enter key.

50   The next action depends on the type of card you replaced.

If the card	Do
is a NT9X13	step 51
is a NT9X26	step 53
is a NT9X14 or NT9X21	step 54

51   To test the card, type

    >TST CPU HW

    and press the Enter key.

    Example of a MAP response:

```
CPU test of Static RAM will corrupt the load in the
inactive CPU.
Please confirm ("YES", "Y"' "NO", or "N")
```

52   To confirm the command, type

    >YES

    and press the Enter key.

    Example of a MAP response:

**System cards
in a file processor** (continued)

```
FP 3 CPU Hardware Test: Request has been submitted.
FP 3 CPU Hardware Test: Command completed.
Inactive CPU hardware has passed all tests issued.
```

If the TST command	Do
passed	step 60
failed	step 62

53   To test the card, type

>TST CPU HW RTIF

and press the Enter key.

Example of a MAP response:

```
FP 1 CPU hardware test: Request has been submitted.
FP 1 CPU hardware  test: Command completed.
Inactive CPU hardware has passed all tests issued
```

If the TST command	Do
passed	step 60
failed	step 62

54   To test the memory, type

>TST MEM

and press the Enter key.

Example of a MAP response:

```
FP 1 Memory Test: Request has been submitted.
FP 1 Memory  Test: Command completed.
Inactive memory test passed.
DRAM upgrade results:

DRAM Card 0: No DRAM upgrade was performed.
DRAM Card 1: No DRAM upgrade was performed.
DRAM Card 2: No DRAM upgrade was performed.
DRAM Card 3: No DRAM  upgrade was performed.
```

If the TST command	Do
passed	step 60

System cards
in a file processor (continued)

If the TST command	Do
failed	step 62

55 The next action depends on the type of card you replace.

If the card	Do
is a NT9X87 or NT9X88	step 56
is other than listed here	step 59

56 The next action depends on the type of card you replaced.

If the card	Do
is a NT9X87	step 57
is a NT9X88	step 58

57 To test the card you replaced, type

>TST DABM plane_no

and press the Enter key.

where

> **plane_no**
>> is the number of the plane (0 or 1) associated with the card you
>> replaced

Example of a MAP response:

```
FP 3 Test DABM  0: Command request has been submitted.

FP 3 Test DABM  0: Command passed.
```

If the TST command	Do
passed	step 59
failed	step 62

58 To test the card you replaced, type

>TST SCSI scsi_no ctrl_no

and press the Enter key.

where

> **scsi_no**
>> is the number of the SCSI bus (0 or 1) associated with the card you
>> replaced

System cards
in a file processor (end)

> **ctrl_no**
> is the number of the controller (0 or 1) on the inactive plane

Example of a MAP response:

```
FP 0 Test SCSI  0: Command request has been submitted.
FP 0 Test SCSI  0: Command passed.
```

If the TST command	Do
passed	step 59
failed	step 62

59 To access the Plane level of the MAP display, type

> **>PLANE**

and press the Enter key.

60 To release the jam on the inactive plane, type

> **>MATEJAM RELEASE**

and press the Enter key.

Example of a MAP response:

```
FP 3 Jam Mate: Request has been submitted.
FP 3 Jam Mate: Command completed,
The inactive CPU is not jammed.
```

61 To synchronize the FP, type

> **>SYNC**

and press the Enter key.

Example of a MAP response:

```
FP 3 Synchronization: Request has been submitted.
FP 3  Synchronization: Command completed.
The PM is now running in SYNC.
```

If the SYNC command	Do
passed	step 63
failed	step 62

62 For additional help, contact the next level of support.

63 The procedure is complete.

7 Frame supervisory panel and modular supervisory panel card replacement procedures

Introduction

This chapter contains card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP).

Each procedure contains the following sections:

- Application
- Common procedures
- Action

Application

This section identifies the FSP or MSP card(s) included in the replacement procedure.

Common procedures

This section lists common procedures for the FSP or MSP card replacement procedure. A common procedure is a series of steps that repeat within maintenance procedures. The removal and replacement of a card is an example of a common procedure. Common procedures are in the common procedures chapter in this NTP.

Do not use common procedures unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in the office records:

- the serial number of the card that you replaced

- the date that you replace the card

- the reason that you replaced the card

FSP cards
in a 42-in. (106.7-cm) SuperNode cabinet

Application

Use this procedure to replace the following cards in the shelves or frames listed.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA	FSP drive and alarm card	application processor (AP) cabinet, computing module (CM) cabinet, dual plane combined core (DPCC) cabinet, enhanced multipurpose cabinet (EMC), SuperNode SE (SNSE) cabinet, 128k enhanced network (ENET) cabinet, 64k ENET cabinet, link peripheral processor (LPP) cabinet, message switch (MS) cabinet, SuperNode compact (SNC) cabinet
NT6X36	AA, AF	ARLB FSP alarm card	AP cabinet, CM cabinet, DPCC cabinet, EMC, SNSE cabinet, 128k ENET cabinet, 64k ENET cabinet, LPP cabinet, MS cabinet, SNC cabinet

Note: Automatic recovery from low battery (ARLB)

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

There are no common procedures.

FSP cards
in a 42-in. (106.7-cm) SuperNode cabinet (continued)

Action

This procedure contains a summary of the flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

FSP cards
in a 42-in. (106.7-cm) SuperNode cabinet (continued)

Replacing FSP cards in a 42-in. (106.7-cm) SuperNode cabinet

At the frame

1

| | **DANGER**
Risk of electrocution
Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc.Make sure that you remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP. |

Obtain a replacement card. Make sure that the replacement card and the card that you replace have the same PEC and PEC suffix.

2

| | **WARNING**
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage. |

Unscrew the slotted nut on the left of the FSP.

3   Open the FSP.

4   Remove the card.

5   Insert the replacement alarm and control card.

6   Close the FSP.

7   Tighten the slotted nut on the FSP.

8   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	**Do**
directed you to this procedure	step 9
did not direct you to this procedure	step 10

9   Return to the maintenance procedure that directed you to this procedure and continue as directed.

**FSP cards
in a 42-in. (106.7-cm) SuperNode cabinet** (end)

10 Check the CONVERTER FAIL LEDs on each power converter for each shelf.

If the LED for any power converter	Do
is lit	step 11
is not lit	step 12

11 To clear alarms, go to *Alarm and Performance Monitoring Procedures*. Do not return to this procedure.

12 The procedure is complete.

NT0X36
in a cabinetized input/output equipment frame

Application

Use this procedure to replace a NT0X36 in a cabinetized input/output equipment (CIOE) frame, as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT0X36	AB	Power control and alarm card	CIOE

Note: To perform this procedure, shelf positions 05, 19, and 33 must have one of the following:

- input/output controller (IOC)
- disk drive unit (DDU)
- magnetic tape drive unit (MTD)

If the shelf positions in the CIOE frame in your office have other subsystems or applications, contact the next level of support.

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

There are no common procedures.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT0X36
in a cabinetized input/output equipment frame (continued)

Summary of replacing NT0X36 in a cabinetized input/output equipment frame

Post the IOC

↓

Manually busy all ports and controllers

↓

Spin down the drives as required

↓

Power down the shelf

↓

Replace the card

↓

Power up the shelf

↓

Return ports and controllers to service

↓

Spin up the drives as required → End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X36

Replacing NT0X36 in a cabinetized input/output equipment frame

At your current location

1

ATTENTION

This procedure includes directions to manually busy all terminal controller cards for the IOC. Perform this procedure from a MAP terminal that does not connect to the IOC.

CAUTION
Potential loss of service
This procedure includes directions to manually busy an IOC and the IOC device controllers or a DDU. Perform this procedure only if you need to restore out-of-service components. If you do not need to restore out-of-service components, perform this procedure during periods of low traffic.

DANGER
Risk of electrocution
Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Make sure that you remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP.

Obtain a replacement card. Make sure that the replacement card and the card that you remove have the same PEC and PEC suffix.

At the cabinet

2   Unscrew the slotted nut on the left of the FSP.

3   Open the FSP.

NT0X36
in a cabinetized input/output equipment frame (continued)

4

> **CAUTION**
> **Potential loss of service**
> If the power distribution configuration in the following table does not match your office configuration, contact the next level of support. Contact the next level of support before you proceed.

> **WARNING**
> **Potential loss of service**
> If the power distribution configuration in the following table does not match your office configuration, contact the next level of support. Contact the next level of support before you proceed.

Use the following table to identify the shelf positions, subsystems, subsystem numbers, shelf side, and FSP fuse numbers that associate with the card you replace.

Power and alarm card slot	Shelf position	Sub-sy stem	Wiring option	Shelf side	FSP fuse number
PWR ALM 1	33	DPP		A	01
	33	MTD	A		
	19	IOC	A		02
PWR ALM 2	05	DDU 0		A	03
	05	ROS		A	
	19	IOC	B		04
PWR ALM 3	33	DPP		B	05
	33	MTD	B		
	05	DDU 1		B	06
	05	ROS		B

PWR ALM 2

NT0X36AB
card in slot
PWR ALM 3

Frame
supervisory panel

5   Record the shelf positions, shelf side (if needed), and fuse numbers that associate with the card that you replace.

6   Record the subsystem names and subsystem numbers (if needed) that associate with the power and alarm card that you replace.

> **Note:** Each power and alarm card associate with two shelves (a maximum of two subsystems).

At the MAP terminal

7   To access the IOD level of the MAP display, type

     >MAPCI;MTC;IOD

     and press the Enter key.

8   To post the affected input/output controller (IOC), type

     >IOC ioc_no

     and press the Enter key.

     where

         ioc_no
            is the number of the IOC (0 to 19)

NT0X36
in a cabinetized input/output equipment frame (continued)

9   Select a shelf position from the list that you recorded at step 5.

If the shelf	Do
contains DDUs	step 10
contains an IOC	step 16
contains other than listed here	step 92
does not contain a unit	step 46

10   To post the DDU controller for the affected DDU, type

>CARD   card_no

and press the Enter key.

where

card_no
is the card number (0 to 8)

Example of a MAP display:

```
IOD
IOC   0   1   2   3
STAT  .   .   .   .

9	TST	2809	50	D000	0	NO	0
10	AMA2	280A	500	D000	0	NO	0

If	Do
any files are open	step 85
all files are closed	step 13

13 To manually busy the DDU controller, type

>**BSY**

and press the Enter key.

14 Spin down the disk drive, type

>**STOP**

and press the Enter key.

15 Wait until the DDU spins down before you proceed to the next step. The status code spun_down appears under the Drive_State header on the MAP display.

16 Determine the state of the IOC.

If the state of the IOC	Do
is M	step 46
is other than listed here	step 17

NT0X36
in a cabinetized input/output equipment frame (continued)

17   The next action depends if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 18
are not on the shelf	step 24

18   To post the terminal controller card, type

>CARD   card_no

and press the Enter key.

where

>**card_no**
>is the card number (0 to 8)

Example of a MAP display:

```
IOD
IOC   0   1   2   3
STAT  .   .   .   .

DIRP: AMA  B XFER:    .     SLM : SLMbsy NOP :    .      NX25:    .

        Status       Ready       COMACT UNEQ    N/A    UNEQ    ENABLD
```

26   Determine the state of the card.

If the card state	Do
is MANB	step 31
is OFFL	step 84
is other than listed here	step 27

> *Note:* The card state listed appears under the BOARD header on the MAP display.

27   To display status information on current MPC conversations, type

>**QCONV**

and press the Enter key.

Example of a MAP response:

```
MPC  L  LCN  STATUS    CCC  SEC  PARDEV  INP  OPEN OWNER
---  -  ---  --------- ---- ---- ------  ---- ---- --------
 0  3    1  INACTIVE  none none none     FIL    0 none
 0  3    2  INACTIVE  none none none     FIL    0 none
```

If	Do
one or more sessions are active	step 28
all sessions are inactive	step 29

NT0X36
in a cabinetized input/output equipment frame (continued)

28   Notify all users that an interruption of MPC service will occur. Wait until all
             sessions are inactive before you proceed.

29   To manually busy the card and the card links, type

             >BSY ALL FORCE

             and press the Enter key.

             Example of a MAP response:

             TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
             Please   confirm ("YES", "Y", "NO", or "N"):

30   To confirm the command, type

             >YES

             and press the Enter key.

If the BSY command	Do
passed	step 31
failed	step 92

31   Repeat steps 25 to 30 for each MPC card on the shelf. Go to step 32.

32   The next action depends if disk drive controller cards are on the shelf.

If disk drive controller cards	Do
are on the shelf	step 33
are not on the shelf	step 38

33   To post the disk drive controller card, type

             >CARD card_no

             and press the Enter key.

             where

             card_no
                 is the card identification number (0 to 8)

NT0X36
in a cabinetized input/output equipment frame (continued)

40   Determine the state of the card.

If the card	Do
is ManBsy	step 43
is Offl	step 84
is Idle	step 42
is other than listed here	step 41

41   Notify all users that an interruption in service for the device will occur. Wait until all users finish with the device before you proceed to the next step.

42   To manually busy the card, type

   >BSY

   and press the Enter key.

   Example of a MAP response:

   ```
   bsy
   OK
   ```

43   Repeat steps 39 and 42 for each magnetic tape drive controller card on the shelf. Go to step 44.

44   To return to the IOC level of the MAP display, type

   >QUIT

   and press the Enter key.

45   To manually busy the affected IOC, type

   >BSY IOC

   and press the Enter key.

46   The next action depends on if the other subsystem that associates with the power and alarm card you replace is out of service.

If the other subsystem	Do
is out of service	step 48
is not out of service	step 47
that associates with the card you replace is not present	step 48

47   To remove the other subsystem that associates with the card you replace, go to step 9 and follow the procedure.

NT0X36
in a cabinetized input/output equipment frame (continued)

At the CIOE frame

48

> ⚠️ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

For each power converter on the shelf, set the handle of the power converter POWER switch down to the OFF position.

49 Remove the FSP fuses that associate with the alarm and control card you replace.

> ***Note:*** You recorded the fuse numbers in step 5.

50

> ⚠️ **WARNING**
> **Loss of service**
> Make sure that the alarm and control card you remove is the alarm that controls the subsystems that you removed from service. Removal of the wrong card causes a loss of service.

Remove the card from the slot that you recorded in step 5.

51 Insert the replacement card.

52 Close the FSP.

53 Tighten the slotted nut on the FSP.

54 Insert the fuses that you removed in step 49.

55 The next action depends on the power converter on the shelf.

If the power converter	Do
is a NT2X70AA/AB/AC/AD	step 56
is a NT2X70AE	step 58
is a NT1X78	step 60

56 Power up the converter, as follows.

a Pull up and set the handle of the POWER switch to the RESET position. Hold the switch until the CONVERTER FAIL LED turns off.

b Release the handle.

NT0X36
in a cabinetized input/output equipment frame (continued)

57 Go to step 61.

58 Power up the converter, as follows.

    a Pull up and set the handle of the POWER switch to the ON position.

    b Press and hold the RESET button on the power converter until the CONVERTER FAIL LED turns off.

    c Release the RESET button.

59 Go to step 61.

60 Reset the power converter:

    a Set the POWER switch on the converter to the ON position.

    b Press and hold the RESET button on the power converter.

    c When the CONVERTER FAIL lamp turns off, release the RESET button.

61 Verify that the power fail lamp is not lit. If the power lamps is not lit, the power converter is ON.

If the power fail lamp	Do
is not lit	step 63
is lit	step 92

At the MAP terminal

62 To return the IOC to service, type

    >RTS IOC

    and press the Enter key.

63 Select a shelf position from the list that you recorded in step 5.

If the shelf	Do
has DDUs	step 64
has an IOC	step 66

64 To post the DDU controller that you posted at step 10, type

    >CARD card_no

    and press the Enter key.

    where

        card_no
            is the card number (0 to 8)

65 To return the DDU controller to service, type

    >RTS

NT0X36
in a cabinetized input/output equipment frame (continued)

and press the Enter key.

> ***Note:*** The return to service process can require a maximum of 3 min. The RTS command spins up the disk drive.

If the RTS command	Do
passed (status is `Ready` and drive state is `on-line`)	step 62
failed (status or drive state is other than listed here)	step 92

66 The next action depends if the controller cards are on the shelf.

If disk drive or magnetic tape drive controller cards	Do
are on the shelf	step 67
are not on the shelf	step 70

67 To post the card, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the card number (0 to 8)

68 To return the card to service, type

>RTS

and press the Enter key.

69 Repeat steps 67 and 68 for each disk drive or magnetic tape drive controller card on the shelf. Go to step 70.

70 The next action depends on if MPC cards are on the shelf.

If MPC cards	Do
are on the shelf	step 71
are not on the shelf	step 77

71 To post the card, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the card number (0 to 8)

72   To load the MPC, type

>DOWNLD

and press the Enter key.

Example of a MAP response:

```
DOWNLOAD OF TABLE MPC FILE "MPC403AB" SUCCEEDED
```

If the DOWNLD command	Do
passed	step 73
failed	step 92

73   To return the MPC to service, type

>RTS ALL

and press the Enter key.

Example of a MAP response:

```
 REQUEST PASSED FOR CARD.REQUEST PASSED FOR LINKS.
```

74   Wait 1 min and check the status of MPC components.

If the system status	Do
is Ready, the board status is COMACT, and the link status is ENABLD for each provisioned link	step 75
is other than listed here	step 92

75   Repeat steps 71 to 74 for each card on the shelf. Go to step 76.

76   Notify users that MPC service is available.

77   The next action depends if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 78
are not on the shelf	step 80

78   To post the card, type

>CARD card_no

and press the Enter key.

where

NT0X36
in a cabinetized input/output equipment frame (continued)

       card_no
          is the card number (0 to 8)

79   To return a port on the card to service, type

    >RTS port_no

    and press the Enter key.

    where

       port_no
          is the port number (0 to 3)

If the RTS command	Do
passed	step 80
failed	step 92

80   The next action depends if the other subsystem that associates with the card you replaced was returned to service.

If the other subsystem	Do
was returned to service	step 82
was not returned to service	step 81
does not associate with the card you replaced	step 82

81   Go to step 63 and follow the procedure to return to service the other subsystem that associates with the the card you replaced.

82   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 83
did not direct you to this procedure	step 93

83   Return to the maintenance procedure that directed you to this procedure and continue as directed.

84   To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

NT0X36
in a cabinetized input/output equipment frame (continued)

85

> **WARNING**
> **Loss of data**
> If files are open do not busy the controller. If you busy the
> controller while files are open, billing data will be lost. For
> additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU.   Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

86   Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

>LOGUTIL;LISTDEVS

and press the Enter key.

87   Close files on volumes on the DDU of the IOC.

>STOPDEV   <dev_name>

and press the Enter key.

where

> **dev_name**
> is the name of the device

>QUIT

and press the Enter key.

88   Repeat the ALLOC command to determine if files are closed, by typing

>ALLOC

and pressing the Enter key.

If the files	Do
are open	step 89
are closed	step 90

89   Confirm that you have done steps 85 to 88. If the files are still open, contact your next level of support.

NT0X36
in a cabinetized input/output equipment frame (end)

90   Manually busy the DDU, by typing

>**BSY**

and pressing the Enter key.

If the DDU	Do
is MBSY	step 91
is not MBSY	step 92

91   When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

92   For additional help, contact the next level of support.

93   The procedure is complete.

NT0X36
in a cabinetized trunk module equipment frame

Application

Use this procedure to replace an NT0X36 in a cabinetized trunk module equipment (CTME) frame, as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT0X36	AB	Power control and alarm card	CTME equipped with maintenance trunk module (MTM), office alarm unit (OAU), or trunk module (TM). Meridian or packaged switch cabinet equipped with service trunk module (STM).

Refer to the "Index", if you cannot identify the following features for the card that you want to replace;

- product engineering code (PEC)

- PEC suffix

- provisioned shelf

- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to *Loading a PM*.

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT0X36

procedure.

Use the instructions that follow
this flowchart to perform the
procedure.

NT0X36
in a cabinetized trunk module equipment frame (continued)

Replacing NT0X36 in a cabinetized trunk module equipment frame

At your current location

1

> **CAUTION**
> **Loss of service**
> This procedure includes directions to remove an MTM, STM, or TM from service, which can cause service degradation. Perform this procedure only if you need to restore out-of-service components. If you do not need to restore out-of-service components, perform this procedure during periods of low traffic. Do not perform this procedure if essential services use PM resources.

> **DANGER**
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Make sure that you remove all jewelry before you replace a card in the FSP. Do not touch any terminal in the FSP.

Obtain a replacement card. Make sure that the replacement card and the card that you removed have the same PEC and PEC suffix.

At the cabinet

2   Unscrew the slotted nut on the left of the FSP.

3   Open the FSP.

4   To identify the shelf positions and FSP fuses that associate with the power and alarm card you will replace, use the following table and diagram.

 (Sheet 1 of 2)

Power and alarm card slot	FSP fuse number	Shelf position
PWR ALM 1	01	05
	02	33

NT0X36
in a cabinetized trunk module equipment frame (continued)

(Sheet 2 of 2)

Power and alarm card slot	FSP fuse number	Shelf position
PWR ALM 2	04	19
PWR ALM 3	05	47

NT0X36AB
card in slot
PWR ALM 1

NT0X36AB
card in slot
PWR ALM 2

NT0X36AB
card in slot
PWR ALM 3

Frame
supervisory panel

5

> **CAUTION**
> **Potential loss of service**
> If the power distribution in the following procedure does not match your office configuration, contact the next level of support before you proceed.

Record the fuse numbers and shelf positions that associate with the card you replace.

NT0X36
in a cabinetized trunk module equipment frame (continued)

6   Select a shelf that associates with the FSP card you replace.

At the MAP terminal

7   To access the PM level of the MAP display, type

      >MAPCI;MTC;PM

      and press the Enter key.

      Example of a MAP display:

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
PM             1               6                      102
```

8   The next step depends on the type of PM that is in the shelf.

If the PM	Do
is an OAU	step 9
is MTM, STM, or TM	step 13

9   To post the OAU, type

      >POST   OAU   pm_no

      and press the Enter key.

      where

          pm_no
            is the number of the PM (0 to 9999)

      Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
    PM       1       0       6       0       0      102
    OAU      1       0       0       0       0       0

OAU     0    SysB
```

10   Determine the state of the OAU.

        Note: The state of the OAU appears on the right of the PM number. In the example display in step 9, the OAU is system busy (SysB).

If the OAU	Do
is Offl	step 129
is ManB	step 40
is other than listed here	step 11

NT0X36
in a cabinetized trunk module equipment frame (continued)

11   A maintenance flag (Mtce) can appear. A Mtce flag indicates that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status line before you proceed to the next step.

12   To manually busy the PM, type

>**BSY**

and press the Enter key.

Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
PM            58       1       6      14      12      17
OAU            0       1       0       0       0       0

OAU     0    ManB
bsy
OAU 0 Bsy
OK.
```

Go to step 40.

13   From office records or operating company personnel, verify that essential services do not use the PM resources affected by this procedure.

> **Note:** When you verify resources that are in use, include all PMs that associate with the shelf. For all STMs and TMs, include NT1X80 cards and NT1X81 cards (single-card PMs) on the shelf. Remove these single-card PMs from service to complete this procedure. If the shelf has an STM, check essential services on the STM that is on the other half of the shelf. To complete the procedure, remove both STMs from service.

If essential services	Do
use PM resources, and a minimum of one PM is in service	step 128
use PM resources and all PMs are out of service	step 14
do not use PM resources	step 14

14   To post the PM, type

>**POST pm_type pm_no**

and press the Enter key.

where

> **pm_type**
>   is the type of PM (MTM, STM, TM)

> **pm_no**
>   is the number of the PM (0 to 9999)

Example of a MAP display:

NT0X36
in a cabinetized trunk module equipment frame (continued)

```
          SysB     ManB     OffL     CBsy     ISTb     InSv
PM          1        0        6        0        0       102
MTM         1        0        0        0        0        9

MTM     0    SysB
```

15   Determine the state of the PM.

> **Note:** The PM state appears on the right of the PM number. In the example display in step 14, the PM state is system busy (SysB).

If the PM	Do
is Offl	step 129
is other than listed here	step 16

16   To access the TTP level of the MAP display, type

>MAPCI;MTC;TRKS;TTP

and press the Enter key.

Example of a MAP display:

```
POST        DELQ            BUSYQ           DIG
TTP  6-013
CKT  TYPE     PM NO.          COM LANG     STA S R  DOT TE  RESULT
```

17   To post the circuits for the PM, type

>POST   P   pm_type   pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (MTM, STM, TM)

> **pm_no**
> is the number of the PM (0 to 9999)

Example of a MAP display:

NT0X36
in a cabinetized trunk module equipment frame (continued)

```
POST    17  DELQ             BUSYQ         DIG
TTP  6-013
CKT TYPE      PM NO.          COM LANG     STA S R  DOT TE  RESULT

CONF6    MTM   0  0   CF6P            0  IDL

post p MTM 0
LAST CKT = 17
SHORT CLLI IS: CF6P
OK,CKT POSTED
```

> **18**   Determine if the state of any of the circuits is installation busy (INB). The INB on the right of the trunk name on the MAP display indicates installation busy.
>
> > **Note:** Repeat the command NEXT until you determine the state of each circuit.

If	Do
a minimum of one circuit is in the INB state	step 19
circuits are not in the INB state	step 24

> **19**   Record the name and number of each circuit that is in the INB state.
>
> **20**   To manually busy all posted circuits, type
>
> > **>BSY ALL**
> >
> > and press the Enter key.
> >
> > *Example of a MAP display:*

```
POST    18  DELQ             BUSYQ  A  6  DIG
TTP  6-027
CKT TYPE      PM NO.          COM LANG     STA S R  DOT TE  RESULT

BSYQ ALL IDLE

bsy all
OK,POST SET IS SET IN BSYQ
```

> **21**   Wait until you manually busy all circuits before you proceed. When you manually busy circuits, you remove the circuits from the busy queue.
>
> > **Note:** The digit on the right of the BUSYQ header indicates the number of circuits that remain in use. As a circuit becomes available, you manually busy the circuit and the number in the queue decreases by one. A blank field indicates that all circuits are manual busy.

NT0X36
in a cabinetized trunk module equipment frame (continued)

22   The next action depends if the affected shelf has the NT1X80 enhanced digital recorded announcement machine (EDRAM) card or the NT1X81 conference card.

If the shelf	Do
contains the NT1X80 or the NT1X81	step 23
does not contain the NT1X80 or the NT1X81	step 27

23   To post the circuits for the single-card PM, type

>POST P pm_type pm_no

and press the Enter key.

where

pm_type
   is the type of single-card PM (CTM, DTM)

pm_no
   is the number of the PM (0 to 9999)

Note: The NT1X80 EDRAM card is a DTM on the MAP display. The NT1X81 conference card is a CTM. Both cards are single-card PMs.

24   To manually busy all posted circuits, type

>BSY ALL

and press the Enter key.

25   Wait until you manually busy all circuits before you proceed to the next step. When you manually busy circuits, you remove the circuits from the busy queue.

26   Repeat steps 23 to 25 for all NT1X80 and NT1X81 cards on the shelf.

27   To access the PM level of the MAP display, type

>PM

and press the Enter key.

28   To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

pm_type
   is the type of PM (MTM, STM, TM)

pm_no
   is the number of the PM (0 to 9999)

NT0X36
in a cabinetized trunk module equipment frame (continued)

29   Determine the state of the PM.

If the PM	Do
is ManB	step 31
is other than listed here	step 30

30   To manually busy the PM, type

>BSY

and press the Enter key.

Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb    InSv
PM          58       1       6      14      12      17
MTM          0       1       0       0       0       9

MTM    0    ManB
bsy
MTM 0 Bsy
OK.
```

31   The next action depends if the shelf is either the NT1X80 EDRAM card or the NT1X81 conference card.

If the shelf	Do
contains the NT1X80 or the NT1X81	step 32
does not contain the NT1X80 or the NT1X81	step 36

32   To post the single-card PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of single-card PM (CTM, DTM)
>
> **pm_no**
> is the number of the PM (0 to 9999)

33   Determine the state of the single-card PM.

If the PM	Do
is ManB	step 35
is other than listed here	step 34

34 To manually busy the single-card PM, type

>**BSY**

and press the Enter key.

35 Repeat steps 32 to 34 for all NT1X80 and NT1X81 cards on the shelf.

36 The next action depends if the shelf contains an STM.

If the shelf	Do
contains an STM, and you manually busied only one STM	step 37
contains an STM, and you manually busied both STMs	step 38

37

⚠	**WARNING** **Loss of service** If you turn off an STM, the mate power converter in the other STM on the shelf trips. Make sure that you manually busy and turn off STMs on a shelf.

Repeat steps 14 to 36 for the STM in the other half of the shelf.

38 The next action depends on how many shelves with PMs associate with the FSP that you replace.

If	Do
one shelf equipped with PMs associates with the card	step 40
two shelves equipped with PMs associate with the card, and you turned down functionality for only one shelf	step 39
two shelves equipped with PMs associate with the card, and you turned down functionality for both shelves	step 40

39 Repeat steps 6 to 38 for PMs in the other shelf that associates with the FSP card that you replace. Go to step 40.

NT0X36
in a cabinetized trunk module equipment frame (continued)

At the shelf

40

<table>
<tr>
<td>⚠️</td>
<td>WARNING
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.</td>
</tr>
</table>

Select a shelf to power down.

41 Pull down and set the handle of the POWER switch on the power converter to the OFF position.

42 The next action depends on the type of PM that is in the shelf.

If the shelf	Do
contains an STM (with or without DRAM)	step 43
contains an MTM (with or without DRAM)	step 44
contains a TM	step 45

43 For the mate power converter in the STM, pull down and set the handle of the POWER switch to the OFF position.

Go to step 45.

44 For the other power converter on the shelf, pull down and set the handle of the POWER switch to the OFF position.

45 The next action depends on how many shelves with PMs associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 47
two shelves equipped with PMs associate with the card, and you powered down only one shelf	step 46
two shelves equipped with PMs associate with the card, and you powered down both shelves	step 47

46 Repeat steps 41 to 45 for PMs in the other shelf that associates with the FSP card you replace. Go to step 47.

NT0X36
in a cabinetized trunk module equipment frame (continued)

At the FSP

47   Remove the alarm and control card.

48   Insert the replacement alarm and control card.

49   Close the FSP.

50   Tighten the slotted nut on the FSP.

51   Select a shelf to power up.

At the shelf

52   Power up the converter.

    a   Pull up and set the handle of the POWER switch to the ON position.

    b   Press and hold the RESET button on the power converter until the CONVERTER FAIL LED turns off.

    c   Release the RESET button.

53   The next action depends on the type of PM that is in the shelf, and if you powered up both power converters.

If the shelf	Do
contains an STM or an MTM (with or without DRAM) and you powered up both power converters	step 58
contains an STM (with or without DRAM)	step 54
contains an MTM (with or without DRAM)	step 55
contains a TM	step 58

54   For the mate power converter in the STM on the other half of the shelf, repeat steps 52 and 53. Go to step 56.

55   For the other power converter on the shelf, repeat steps 52 and 53. Go to step 56.

56   The next action depends on how many shelves associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 58
two shelves equipped with PMs associate with the card, and you powered up only one shelf	step 57
two shelves equipped with PMs associate with the card, and you powered up both shelves	step 58

NT0X36
in a cabinetized trunk module equipment frame (continued)

57   Repeat steps 52 to 56 for PMs in the other shelf that associates with the FSP card you replace. Go to step 58.

At the MAP terminal

58   To access the PM level of the MAP display, type

>PM

and press the Enter key.

59   The next step depends on the type of PM in the shelf.

If the PM	Do
is an OAU	step 60
is an STM, TM, or MTM	step 64

60   To post the OAU, type

>POST OAU pm_no

and press the Enter key.

where

    pm_no
      is the number of the PM (0 to 9999)

61   To load the OAU, type

>LOADPM

and press the Enter key.

Example of a MAP response:

```
OAU 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 63
failed	step 62

62   To load the PM, perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

63   To return the PM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
OAU 0 Rts Passed
```

If the RTS command	Do
passed	step 124
failed	step 130

64   To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (IMTM, STM, TM)
>
> **pm_no**
> is the number of the PM (0 to 9999)

65   To load the PM, type

>LOADPM

and press the Enter key.

Example of a MAP response:

```
MTM 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 67
failed	step 66

66   To load the PM, perform the procedure *Loading a PM* in this document.
Complete the procedure and return to this point.

67   To return the PM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
MTM 0 Rts Passed
```

If the RTS command	Do
passed, and the PM is InSv	step 76

NT0X36
in a cabinetized trunk module equipment frame (continued)

If the RTS command	Do
passed, and the PM is ISTb with a system-generated card list	step 68
failed	step 130

68 Record the messages on the MAP display for future reference.

69 The next action depends on if the affected shelf contains the NT1X80 (EDRAM) card or the NT1X81 conference card.

If the shelf	Do
contains the NT1X80 or the NT1X81	step 70
does not contain the NT1X80 or the NT1X81	step 76

70 To post the single-card PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (CTM or DTM)

> **pm_no**
> is the number of the PM (0 to 9999)

71 To load the single-card PM, type

>LOADPM

and press the Enter key.

Example of a MAP response:

```
DTM 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 73
failed	step 72

72 To load the single-card PM, perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

73 To return the PM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

NT0X36
in a cabinetized trunk module equipment frame (continued)

```
MTM 0 Rts Passed
```

If the RTS command	Do
passed, and the PM is `InSv`	step 75
passed, and the PM is `ISTb` with a system-generated card list	step 74
failed	step 130

74   Record the messages on the MAP display for future reference.

75   Repeat steps 70 to 74 for the other NT1X80 and NT1X81 cards on the shelf. Go to step 76.

76   To access the TTP level of the MAP display, type

>TRKS;TTP

and press the Enter key.

77   The next action depends if the shelf associated with the FSP card you replace contains a metallic test unit (MTU) or digital test unit (DTU).

> **Note:** The DTUs and MTUs are in pairs.

If the shelf	Do
has MTUs	step 78
has DTUs	step 93
does not have MTUs or DTUs	step 108

78   To post the first circuit in the MTU, type

>POST G MTU circuit_no

and press the Enter key.

where

> **circuit_no**
>   is the number of the first MTU circuit

79   To busy the circuit, type

>BSY

and press the Enter key.

80   To seize the circuit, type

>SEIZE

and press the Enter key.

NT0X36
in a cabinetized trunk module equipment frame (continued)

81   To put the circuit on hold, type

     >HOLD

     and press the Enter key.

82   To post the second circuit in the MTU, type

     >NEXT

     and press the Enter key.

83   To busy the circuit, type

     >BSY

     and press the Enter key.

84   To seize the circuit, type

     >SEIZE

     and press the Enter key.

85   To put the circuit on hold, type

     >HOLD

     and press the Enter key.

86   To access the disk utility, type

     >DISKUT

     and press the Enter key.

87   To list the files in the volume that contains the MTU load, type

     >LISTFL vol_name

     and press the Enter key.

     where

        vol_name
          is the name of the volume that contains the MTU load

88   Record the name of the MTU load file.

89   To quit the disk utility, type

     >QUIT

     and press the Enter key.

90   To load the MTU, type

     >LOADFW CC load_name

     and press the Enter key.

     where

load_name
is the load file name that you recorded in step 88

If the LOADFW command	Do
passed	step 91
failed	step 130

91 To release the first MTU circuit, type

>RLS MTU circuit_no

and press the Enter key.

where

circuit_no
is the number of the first MTU circuit that you busied, seized, and put on hold

92 To release the second MTU circuit, type

>RLS MTU circuit_no

and press the Enter key.

where

circuit_no
is the number of the second MTU circuit that you busied, seized, and put on hold

Go to step 108.

93 To post the first circuit in the DTU, type

>POST G DTU circuit_no

and press the Enter key.

where

circuit_no
is the number of the first DTU circuit

94 To busy the circuit, type

>BSY

and press the Enter key.

95 To seize the circuit, type

>SEIZE

and press the Enter key.

96 To put the circuit on hold, type

>HOLD

and press the Enter key.

NT0X36
in a cabinetized trunk module equipment frame (continued)

97   To post the second circuit in the DTU, type

>**NEXT**

and press the Enter key.

98   To busy the circuit, type

>**BSY**

and press the Enter key.

99   To seize the circuit, type

>**SEIZE**

and press the Enter key.

100   To put the circuit on hold, type

>**HOLD**

and press the Enter key.

101   To access the disk utility, type

>**DISKUT**

and press the Enter key.

102   To list the files in the volume that contains the DTU load, type

>**LISTFL   vol_name**

and press the Enter key.

where

    vol_name
      is the name of the volume that contains the MTU load

103   Record the name of the DTU load file.

104   To quit the disk utility, type

>**QUIT**

and press the Enter key.

105   To load the DTU, type

>**LOADFW   CC   load_name**

and press the Enter key.

where

    load_name
      is the load file name that you recorded in step 103

If the LOADFW command	Do
passed	step 106
failed	step 130

106   To release the first DTU circuit, type

>**RLS   RLS**

107   To release the second DTU circuit, type

>**RLS   RLS**

108   To post the circuits for the PM, type

>**POST   TM   pm_type   pm_no**

and press the Enter key.

where

    pm_type
      is the type of PM (MTM, STM, TM)

    pm_no
      is the number of the PM (0 to 9999)

109   To return all the circuits to service, type

>**RTS   ALL**

and press the Enter key.

Example of a MAP response:

```
RTS OK
```

110   The next action depends if you recorded INB circuits in step 19.

If you	Do
recorded INB circuits	step 111
did not record INB circuits	step 114

111   To post the first circuit on the list, type

>**POST   T   circuit_name   circuit_no**

and press the Enter key.

where

    circuit_name
      is the circuit name that you recorded in step 19

    circuit_no
      is the circuit number that you recorded in step 19

112   To return the circuit to the INB state, type

>**BSY   INB**

and press the Enter key.

113   Repeat steps 111 and 112 for each of the other circuits on the list that you
recorded in step 19.

NT0X36
in a cabinetized trunk module equipment frame (continued)

114   The next action depends on the results of the PM that you returned to service in step 67.

If the RTS command	Do
passed	step 121
passed, but in-service tests failed, and the system generated a card list	step 115

115   To manually busy all posted circuits, type

>BSY ALL

and press the Enter key.

116   To return all circuits to service, type

>RTS ALL

and press the Enter key.

117   To access the PM level of the MAP display, type

>PM

and press the Enter key.

118   To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (CTM, DTM, MTM, STM, TM)

> **pm_no**
> is the number of the PM (0 to 9999)

119   To perform an in-service test on the PM, type

>TST

and press the Enter key.

Example of a MAP response:

NT0X36
in a cabinetized trunk module equipment frame (continued)

```
MTM     0     ISTb              TSTFAIL

InSvce Tests Initiated
MTM 0 Tst Failed
 Site Flr RPos  Bay_id   Shf  Description    Slot     EqPEC

Following ISTb Exist :
Test Failed
```

If the TST command	Do
passed, and single-card PMs or an STM remain out of service	step 121
passed, and you worked on all PMs on the shelf and all PMs have been returned to service	step 124
passed, and you worked on all PMs on the shelf but one or more PMs have not been successfully returned to service	step 130
failed, and single-card PMs or an STM are present that you did not work on to return to service	step 120
failed, and you worked on all PMs on the shelf	step 130

120   Record the messages on the MAP display for future reference.

121   To access the PM level of the MAP display, type

>PM

and press the Enter key.

122   To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

   pm_type
      is the type of PM (MTM, STM, TM)

   pm_no
      is the number of the PM (0 to 9999)

123   Repeat steps 64 to 119 for other PMs on this shelf. Go to step 124.

NT0X36
in a cabinetized trunk module equipment frame (end)

124 The next action depends on how many shelves associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 126
two shelves equipped with PMs associate with the card, and you returned to service the PM on only one shelf	step 125
two shelves equipped with PMs associate with the card, and you returned to service the PM on both shelves	step 126

125 Repeat steps 59 to 124 for PMs in the other shelf that associates with the FSP card you replace. Go to step 126.

126 The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 127
did not direct you to this procedure	step 131

127 Return to the maintenance procedure that directed you to this procedure and continue as directed.

128 To determine how to handle essential services, consult the next level of support. Continue as directed by operating company personnel.

129 To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

130 For additional help, contact the next level of support.

131 The procedure is complete.

NT0X36
in an input/output equipment frame

Application

Use this procedure to replace an NT0X36 in an input/output equipment (IOE) frame, as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT0X36	AB	Power control and alarm card	IOE frame

Note: Shelf positions 04, 18, and 32 must contain an input/output controller (IOC) or a disk drive unit (DDU). Shelf positions 55 and 61 must contain a magnetic tape drive unit. A maximum of two of the three shelf positions can be unequipped and covered with filler faceplates. If the shelf positions in the IOE frame in your office have other subsystems or applications, contact the next level of support.

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" provides a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

There are no common procedures.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X36
in an input/output equipment frame (continued)

Replacing NT0X36 in an input/output equipment frame

At your current location

1

> **ATTENTION**
>
> This includes directions to manually busy all terminal controller cards for the IOC. Perform this procedure from a MAP terminal. Make sure that the MAP terminal does not connect to the IOC in use.

> **CAUTION**
> **Potential loss of service**
> This procedure includes directions to manually busy an IOC and IOC device controllers or a DDU. Perform this procedure only if you need to restore out-of-service components. If you do not need to restore out-of-service components, perform this procedure during periods of low traffic.

> **DANGER**
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Make sure that you remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP.

Obtain a replacement card. Make sure that the replacement card and the card that you remove have the same PEC and PEC suffix.

NT0X36
in an input/output equipment frame (continued)

At the frame

2   Use the following table to identify the PWR&ALM slot, shelf positions, and fuses that associate with the card you replace.

> *Note:* The alarm, control cards, and fuses are behind the FSP.

Alarm and control card	Slot	Shelf position	Fuse
NT0X36AB	slot 1	04	03
NT0X36AB	slot 1	32	01
NT0X36AB	slot 2	18	02

NT0X36AB card in slot PWR&ALM 1

NT0X36AB card in slot PWR&ALM 2

Frame supervisory panel

3   Record the PWR&ALM slot, shelf positions, and fuses that associate with the card you replace.

NT0X36
in an input/output equipment frame (continued)

4   Examine the shelf positions that associate with the card you replace. Record the type of equipment shelves provided.

> ***Note:*** If you replace the card in slot PWR & ALM 1, you can be required to manually busy functionality in a maximum of two shelves.

At the MAP terminal

5   To access the IOD level of the MAP display, type

>MAPCI;MTC;IOD

and press the Enter key.

6   To post the input/output controller (IOC), type

>IOC ioc_no

and press the Enter key.

where

> **ioc_no**
> is the number of the IOC (0 to 19)

7   Select a shelf position from the list that you recorded at step 3.

If the shelf	Do
contains one or two DDUs	step 8
contains an IOC	step 16
is empty	step 46
contains an item other than listed here	step 95

8   To post the DDU controller, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

Example of a MAP display:

NT0X36
in an input/output equipment frame (continued)

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP: AMA  B XFER:    .     SLM : SLMbsy NOP :   .      NX25:

 9     TST         2809        50   D000    0   NO       0
10     AMA2        280A       500   D000    0   NO       0
```

NT0X36
in an input/output equipment frame (continued)

If files	Do
are open	step 88
are closed	step 11

11   To manually busy the controller, type

>**BSY**

and press the Enter key.

12   To spin down the drive, type

>**STOP**

and press the Enter key.

13   Wait until the DDU spins down before you proceed to the next step. The status code spun_down appears under the Drive_State header on the MAP display.

14   The next action depends on the disk drive configuration in the IOC subsystem for your office.

Note: If you do not know the file system configuration for your office, contact the next level of support.

If	Do
other DDUs on the shelf are not present	step 46
another DDU is on the shelf, and both DDUs spun down	step 46
another DDU is on the shelf that is not the mate to the DDU that you spun down	step 15
another DDU is on the shelf that is the mate to the DDU that you spun down	step 95

15   Repeat steps 8 to 14 for each disk drive on the shelf. Go to step 46.

16   Determine the state of the IOC.

If the state of the IOC	Do
is M	step 46
is other than listed here	step 17

NT0X36
in an input/output equipment frame (continued)

17   The next action depends if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 18
are not on the shelf	step 24

18   To post the card, type

>CARD   card_no

and press the Enter key.

where

card_no
is the card identification number (0 to 8)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP: AMA  B XFER:    .     SLM : SLMbsy NOP :    .     NX25:    .
MLP :    .    DPPP:    .    DPPU:    .     SCAI:    .

IOC    CARD    0     1     2     3     4     5     6     7     8
 0     PORT  0123  0123  0123  0123  0123  0123  0123  0123  0123

```

19   Note the CONS ID and status for each port.

If	Do
all ports are ManBsy	step 23
a minimum of one port is Offl	step 87
a minimum of one port is . (dot)	step 20
all ports are in any other out-of-service state	step 21

20   Inform operating company personnel that you will remove from service the CONS IDs for the card you replace.

NT0X36
in an input/output equipment frame (continued)

21 To manually busy a port on the card, type

>**BSY port_no**

and press the Enter key.

where

>**port_no**
>is the port identification number (0 to 3)

If the BSY command	Do
passed	step 22
failed	step 95

22 Repeat step 21 until you manually busy all ports on the card. Go to step 23.

23 Repeat steps 18 to 22 for each terminal controller card on the shelf. Go to step 24.

24 The next action depends on if multiprotocol controller (MPC) cards are on the shelf.

If MPC cards	Do
are on the shelf	step 25
are not on the shelf	step 32

25 To post the card, type

>**CARD card_no**

and press the Enter key.

where

>**card_no**
>is the card identification number (0 to 8)

Example of a MAP display:

NT0X36
in an input/output equipment frame (continued)

```
IOD
IOC   0   1   2   3

         Status      Ready   COMACT  UNEQ   N/A    UNEQ   ENABLD
```

26 Determine the state of the card.

If the card state	Do
is MANB	step 31
is OFFL	step 87
is other than listed here	step 27

> ***Note:*** The card state appears under the BOARD header on the MAP display.95 95

27 To display status information on current MPC conversations, type

> **>QCONV**

and press the Enter key.

Example of a MAP response:

```
MPC   L   LCN   STATUS    CCC   SEC   PARDEV   INP   OPEN OWNER
---   -   ---   --------- ----  ----  ------   ----  ---- --------
 0    3     1   INACTIVE  none  none  none     FIL      0 none
 0    3     2   INACTIVE  none  none  none     FIL      0 none
```

If	Do
a minimum of one session is active	step 28

NT0X36
in an input/output equipment frame (continued)

If	Do
all sessions are inactive	step 29

28   Notify all users that an interruption of the MPC service will occur. Wait until all sessions are inactive before you proceed.

29   To manually busy the card and the card links, type

>BSY ALL FORCE

and press the Enter key.

Example of a MAP response:

```
TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
Please confirm ("YES", "Y", "NO", or "N"):
```

30   To confirm the command, type

>YES

and press the Enter key.

If the BSY command	Do
passed	step 31
failed	step 95

31   Repeat steps 25 to 30 for each MPC card on the shelf. Go to step 32.

32   The next action depends if disk drive controller cards are on the shelf.

If disk drive controller cards	Do
are on the shelf	step 33
are not on the shelf	step 17

33   To post the card, type

>CARD card_no

and press the Enter key.

where

  card_no
      is the card identification number (0 to 8)

Example of a MAP display:

NT0X36
in an input/output equipment frame (continued)

```
IOD

```

NT0X36
in an input/output equipment frame (continued)

If files	Do
are open	step 88
are closed	step 36

36 To manually busy the card, type

>BSY

and press the Enter key.

Example of a MAP response:
bsyOK

37 Repeat steps 33 to 36 for each disk drive controller card on the shelf. Go to step 38.

38 The next action depends on if magnetic tape drive controller cards are on the shelf.

If magnetic tape drive controller cards	Do
are on the shelf	step 39
are not on the shelf	step 44

39 To post the card, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

Example of a MAP display:

NT0X36
in an input/output equipment frame (continued)

```
IOD
IOC  0  1  2  3

         TapeName
         Status     Idle
         User
```

40   Determine the state of the card.

If the card	Do
is ManBsy	step 43
is Offl	step 87
is Idle	step 42
is other than listed here	step 41

41   Notify all users that interruption of service for the device will occur. Wait until all users finish with the device before you proceed to the next step.

42   To manually busy the card, type

>BSY

and press the Enter key.

Example of a MAP response:

```
 bsy
 OK
```

43   Repeat steps 39 and 42 for each magnetic tape drive controller card on the shelf. Go to step 31.

44   To return to the IOC level of the MAP display, type

>QUIT

and press the Enter key.

45   To manually busy the IOC, type

>BSY IOC

NT0X36
in an input/output equipment frame (continued)

and press the Enter key.

46   The next action depends on the FSP card you replace.

If you	Do
replace the card in slot PWR&ALM 1	step 47
replace the card in slot PWR&ALM 2	step 48

47   Repeat step 7 for the second shelf position that you recorded at step 3. Go to step 48.

At the frame

48

	WARNING
	Static electricity damage Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

For each power converter on the shelf, pull down and set the handle of the power converter POWER switch to the OFF position.

49   Remove the fuses that associate with the alarm and control card, as recorded in step 3.

50   Unscrew the slotted nut on the left of the FSP.

> ***Note:*** Friction clips fasten some FSP front panels. Hold the panel at each end. To remove the panel, pull the panel toward you.

51   Open the FSP.

52

	WARNING
	Loss of service Make sure that the alarm and control card that you remove controls the shelf that you turned down. Removal of the wrong card causes a loss of service.

Remove the card from the slot that you recorded in step 3.

53   Insert the replacement card.

NT0X36
in an input/output equipment frame (continued)

54 Close the FSP.

> **Note:** For FSP front panels fastened with friction clips, align the pins on the back of the panel with the holes on the FSP. Press the panel in tightly.

55 Tighten the slotted nut on the FSP.

56 Insert the fuses that you removed in step 49.

57 The next action depends on the power converter on the shelf.

If the power converter	Do
is an NT2X70AA/AB/AC/AD card	step 58
is an NT2X70AE card	step 59
is an NT1X78 card	step 60

58 Power up the converter.

   a Pull up and set the handle of the POWER switch to the RESET position. Hold the handle until the CONVERTER FAIL LED turns off.

   b Release the handle.

   c Go to step 61.

59 Power up the converter, as follows.

   a Pull up and set the handle of the POWER switch to the ON position.

   b Press and hold the RESET button on the power converter until the CONVERTER FAIL LED turns off.

   c Release the RESET button.

   d Go to step 61.

60 Reset the power converter:

   a Pull up and set the POWER switch on the converter to the ON position.

   b Press and hold the RESET button on the power converter.

   c When the CONVERTER FAIL lamp turns off, release the RESET button.

61 Verify that the power LED is lit. A lit power LED indicates that the power converter is ON.

If the power LED	Do
is lit, and is the only power converter on the shelf (IOC shelf or a single-DDU shelf)	step 63
is lit, and another power converter is on the shelf (two-DDU shelf)	step 62
is not lit	step 95

NT0X36
in an input/output equipment frame (continued)

62   Repeat step 57 for the other power converter on the shelf.

At the MAP terminal

63   Select a shelf position from the list that you recorded at step 3.

If the shelf	Do
has one or two DDUs	step 64
has an IOC	step 68

64   To post the DDU controller, type

>**CARD   card_no**

and press the Enter key.

where

> **card_no**
>   is the card identification number (0 to 8)

65   To return the DDU controller to service, type

>**RTS**

and press the Enter key.

> **Note:** The return to service process can require a maximum of 3 min. The RTS command also spins up the disk drive.

If the RTS command	Do
passed (status is Ready and drive state is on-line)	step 66
failed (status or drive state is other than listed here)	step 95

66   The next action depends on the disk drive configuration in the IOC subsystem for your office.

If	Do
other DDUs are not on the shelf	step 84
another DDU is on the shelf and both are in service	step 84
another DDU is on the shelf that you did not return to service	step 67

67   Repeat steps 64 to 66 for each disk drive on the shelf. Go to step 83.

68   To return the IOC to service, type

>**RTS   IOC**

and press the Enter key.

NT0X36
in an input/output equipment frame (continued)

69   The next action depends if the controller cards are on the shelf.

If disk drive or magnetic tape drive or magnetic tape drive controller cards	Do
are on the shelf	step 70
are not on the shelf	step 73

70   To post the card, type

>CARD   card_no

and press the Enter key.

where

   card_no
      is the card identification number (0 to 8)

71   To return the card to service, type

>RTS

and press the Enter key.

72   Repeat steps 70 and 71 for each disk drive or magnetic tape drive controller card on the shelf. Go to step 73.

73   The next action depends if MPC cards are on the shelf.

If MPC cards	Do
are on the shelf	step 74
are not on the shelf	step 80

74   To post the card, type

>CARD   card_no

and press the Enter key.

where

   card_no
      is the card identification number (0 to 8)

75   To load the MPC, type

>DOWNLD

and press the Enter key.

Example of a MAP response:

NT0X36
in an input/output equipment frame (continued)

```
DOWNLOAD OF TABLE MPC FILE "MPC403AB" SUCCEEDED.
```

If the DOWNLD command	Do
passed	step 76
failed	step 95

76   To return the MPC to service, type

>**RTS ALL**

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR CARD.REQUEST PASSED FOR LINKS.
```

77   Wait 1 min to determine the status of MPC components.

If the system status	Do
is Ready, the board status is COMACT, and the link status is ENABLD for each link	step 78
is other than listed here	step 95

78   Repeat steps 74 to 77 for each card on the shelf. Go to step 79.

79   Notify users that MPC service is available.

80   The next action depends if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 81
are not on the shelf	step 83

81   To post the card, type

>**CARD card_no**

and press the Enter key.

where

   card_no
      is the card identification number (0 to 8)

82   To return a port on the card to service, type

>**RTS port_no**

and press the Enter key.

NT0X36
in an input/output equipment frame (continued)

where

> **port_no**
> is the port identification number (0 to 3)

If the RTS command	Do
passed	step 83
failed	step 95

83 The next action depends on the FSP card that you replace.

If you	Do
replace the card in slot PWR&ALM 1	step 84
replace the card in slot PWR&ALM 2	step 85

84 Repeat step 63 for the second shelf position that you recorded in step 3. Go to step 85.

85 The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 86
did not direct you to this procedure	step 96

86 Return to the maintenance procedure that directed you to this procedure and continue as directed.

87 To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

88

⚠️ **WARNING**
Loss of data
If files are open do not busy the controller. If you busy the controller while files are open, billing data will be lost. For additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

NT0X36
in an input/output equipment frame (end)

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU. Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

89   Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

`>LOGUTIL;LISDEVS`

and press the Enter key.

90   Close files on volumes on the DDU of the IOC.

`>STOPDEV  dev_name`

and press the Enter key.

where

   dev_name
      is the name of the device

`>QUIT`

and press the Enter key.

91   Repeat the ALLOC command to determine if files are closed, by typing

`>ALLOC`

and pressing the Enter key.

If the files	Do
are open	step 92
are closed	step 93

92   Confirm that you have done steps 88 to 91. If the files are still open, contact your next level of support.

93   Manually busy the DDU, by typing

`>BSY`

and pressing the Enter key.

If the DDU	Do
is MBSY	step 94
is not MBSY	step 95

94   When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

95   For additional help, contact the next level of support.

96   The procedure is complete.

NT0X36
in an international cabinet auxiliary module

Application

Use this procedure to replace an NT0X36 in an international cabinet auxiliary module (ICAM), as listed in the following table.

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card you want to replace, refer to the "Index" for a list of the cards, shelves, and frames documented in this card replacement book.

PEC	Suffix	Card name	Shelf or frame name
NT0X36	AB	Power control and alarm card	CAM equipped with office alarm unit (OAU), international packaged trunk module (IPTM) or international maintenance trunk module (IMTM).

Common procedures

Loading a PM is referenced in this procedure.

Do not go to the common procedure unless directed to do so in the step-action procedure.

Action

The following flowchart is only a summary of the procedure. To replace the card, use the instructions in the step-action procedure that follows the flowchart.

NT0X36
in an international cabinet auxiliary module (continued)

Summary of Replacing an NT0X36 in an international cabinet auxiliary module

Post the PMs

↓

Manually busy the circuits

↓

Manually busy the PMs

↓

Power down the shelves

↓

Replace the card

↓

Power up the shelves

↓

Return the PMs to service

↓

Return the circuits to service → End

This flowchart summarizes the procedure.

Use the instructions in the procedure that follows this flowchart to perform the procedure.

NT0X36
in an international cabinet auxiliary module (continued)

Replacing an NT0X36 in an international cabinet auxiliary module

At your current location

1

DANGER
Risk of electrocution
Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Remove all jewelry before replacing a card in the FSP. Do not touch any terminal in the FSP.

CAUTION
Loss of service
This procedure includes directions to remove an IMTM, or an IPTM from service, which can cause service degradation. Perform this procedure only if necessary to restore out-of-service components. Otherwise, carry out this procedure during periods of low traffic. Do not perform this procedure if essential services are using PM resources.

Obtain a replacement card. Ensure that the replacement card has the same PEC, including suffix, as the card being removed.

At the cabinet

2 Unscrew the slotted nut on the left-hand side of the FSP.

3 Open the FSP.

4 Use the following table and illustration to identify the shelf positions and FSP fuses associated with the power and alarm card you are replacing.

(Sheet 1 of 2)

Power and alarm card slot	FSP fuse number	Shelf position
PWR ALM 1	01	05
	02	33

NT0X36
in an international cabinet auxiliary module (continued)

(Sheet 2 of 2)

Power and alarm card slot	FSP fuse number	Shelf position
PWR ALM 2	04	19
PWR ALM 3	05	47

NT0X36AB
card in slot
PWR ALM 1

NT0X36AB
card in slot
PWR ALM 2

NT0X36AB
card in slot
PWR ALM 3

Frame
supervisory panel

5

> **CAUTION**
> **Potential loss of service**
> If the power distribution in the procedure below does not
> match the configuration in your office, contact the next level
> of support before proceeding.

Record the fuse numbers and shelf positions associated with the card you are replacing.

NT0X36
in an international cabinet auxiliary module (continued)

6   Select a shelf associated with the FSP card you are replacing.

At the MAP terminal

7   Access the PM level of the MAP display by typing

      >MAPCI;MTC;PM

      and pressing the Enter key.

      Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
PM            1               6                      102
```

8   The next step depends on the type of PM that is provisioned in the shelf.

If the PM is an	Do
OAU	step 9
IMTM, or IPTM	step 13

9   Post the OAU by typing

      >POST   OAU   pm_no

      and pressing the Enter key.

      where

        pm_no
          is the number of the PM (0 to 9999)

      Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
PM            1       0       6       0       0      102
OAU          1       0       0       0       0       0

OAU     0    SysB
```

10   Determine the state of the OAU.

        Note: The state of the OAU is shown to the right of the PM number. In the example display in step 9, the OAU is system busy (SysB).

If the OAU is	Do
Offl	step 129

NT0X36
in an international cabinet auxiliary module (continued)

If the OAU is	Do
ManB	step 40
anything else	step 11

11 A maintenance flag (Mtce) may appear, indicating that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status line before proceeding to the next step.

12 Manually busy the PM by typing

>BSY

and pressing the Enter key.

Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb    InSv
PM          58       1       6      14      12      17
OAU          0       1       0       0       0       0

OAU    0    ManB
bsy
OAU 0 Bsy
OK.
```

Go to step 40.

13 From office records or office personnel, verify that essential services are not using the PM resources that will be affected by this procedure.

> **Note:** When verifying resources used, include all PMs that are associated with the shelf you are working on. For all service and trunk modules, include NT1X80 cards and NT1X81 cards (single-card PMs) provisioned on the shelf; these single-card PMs must be removed from service to complete this procedure. If the shelf is equipped with an STM, also check for essential services on the STM provisioned on the other half of the shelf; both STMs must be removed from service to complete this procedure.

If essential services	Do
are using PM resources and one or more PMs are in service	step 128
are using PM resources and all PMs are out of service	step 14
are not using PM resources	step 14

14 Post the PM by typing

>POST pm_type pm_no

and pressing the Enter key.

where

NT0X36
in an international cabinet auxiliary module (continued)

pm_type
is the type of PM (IMTM, IPTM)

pm_no
is the number of the PM (0 to 9999)

Example of a MAP display:

```
                SysB    ManB    OffL    CBsy    ISTb  InSv
PM                1       0       6       0       0   102
IMTM              1       0       0       0       0     9

IMTM     0    SysB
```

15 Determine the state of the PM.

> **Note:** The PM state is shown to the right of the PM number. In the example display in step 14, the PM state is system busy (SysB).

If the PM is	Do
Offl	step 129
anything else	step 16

16 Access the TTP level of the MAP display by typing

>MAPCI;MTC;TRKS;TTP

and pressing the Enter key.

Example of a MAP display:

```
POST        DELQ            BUSYQ        DIG
TTP  6-013
CKT TYPE     PM NO.         COM LANG    STA S R  DOT TE   RESULT
```

17 Post the circuits for the PM by typing

>POST P pm_type pm_no

and pressing the Enter key.

where

pm_type
is the type of PM (IMTM, IPTM)

pm_no
is the number of the PM (0 to 9999)

Example of a MAP display:

```
POST    17  DELQ             BUSYQ       DIG
TTP  6-013
CKT TYPE     PM NO.          COM LANG    STA S R  DOT TE  RESULT

CONF6    IMTM   0   0   CF6P            0  IDL

post p IMTM 0
LAST CKT = 17
SHORT CLLI IS: CF6P
OK,CKT POSTED
```

18   Determine if the state of any of the circuits is installation busy (INB), indicated by `INB` to the right of the trunk name on the MAP display.

> **Note:** The state of each circuit can be determined by repeating the command NEXT until the state of each circuit has been determined.

If	Do
one or more circuits is in the INB state	step 19
no circuits are in the INB state	step 24

19   Record the name and number of each of the circuits in the `INB` state.

20   Manually busy all posted circuits by typing

>**BSY   ALL**

and pressing the Enter key.

Example of a MAP display:

```
POST    18  DELQ             BUSYQ   A  6  DIG
TTP  6-027
CKT TYPE     PM NO.          COM LANG    STA S R  DOT TE  RESULT

BSYQ ALL IDLE

bsy all
OK,POST SET IS SET IN BSYQ
```

21   Wait until all circuits have been manually busied (removed from the busy queue) before proceeding to the next step.

> **Note:** The digit to the right of the BUSYQ header indicates the number of circuits still in use. As a circuit becomes available, it is manually busied and the number in the queue is decremented by one. When the field is blank, this indicates that all circuits have been manually busied.

NT0X36
in an international cabinet auxiliary module (continued)

22   The next action depends on whether the affected shelf is provisioned with either the NT1X80 enhanced digital recorded announcement machine (EDRAM) card or the NT1X81 conference card.

If the shelf is	Do
provisioned with either the NT1X80 or the NT1X81	step 23
not provisioned with either the NT1X80 or the NT1X81	step 27

23   Post the circuits for the single-card PM by typing

>**POST P pm_type pm_no**

and pressing the Enter key.

where

   pm_type
      is the type of single-card PM (CTM, DTM)

   pm_no
      is the number of the PM (0 to 9999)

   Note: The NT1X80 EDRAM card is referred to as a DTM on the MAP display, and the NT1X81 conference card is referred to as a CTM. Both cards are known as single-card PMs.

24   Manually busy all posted circuits by typing

>**BSY ALL**

and pressing the Enter key.

25   Wait until all circuits have been manually busied (removed from the busy queue) before proceeding to the next step.

26   Repeat steps 23 to 25 for all NT1X80 and NT1X81 cards provisioned on the shelf.

27   Access the PM level of the MAP display by typing

>**PM**

and pressing the Enter key.

28   Post the PM by typing

>**POST pm_type pm_no**

and pressing the Enter key.

where

   pm_type
      is the type of PM (IMTM, IPTM)

   pm_no
      is the number of the PM (0 to 9999)

29   Determine the state of the PM.

If the PM is	Do
ManB	step 31
anything else	step 30

30   Manually busy the PM by typing

>BSY

and pressing the Enter key.

Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
PM           58       1       6      14      12      17
IMTM          0       1       0       0       0       9

IMTM    0    ManB
bsy
IMTM 0 Bsy
OK.
```

31   The next action depends on whether the shelf is provisioned with either the NT1X80 enhanced digital recorded announcement machine (EDRAM) card or the NT1X81 conference card.

If the shelf is	Do
provisioned with either the NT1X80 or the NT1X81	step 32
not provisioned with either the NT1X80 or the NT1X81	step 36

32   Post the single-card PM by typing

>POST pm_type pm_no

and pressing the Enter key.

where

> **pm_type**
>   is the type of single-card PM (CTM, DTM)

> **pm_no**
>   is the number of the PM (0 to 9999)

33   Determine the state of the single-card PM.

If the PM is	Do
ManB	step 35

NT0X36
in an international cabinet auxiliary module (continued)

If the PM is	Do
anything else	step 34

34   Manually busy the single-card PM by typing

    >BSY

    and pressing the Enter key.

35   Repeat steps 32 to 34 for all NT1X80 and NT1X81 cards provisioned on the shelf.

36   The next action depends on whether the shelf is provisioned as an IPTM.

If the shelf is provisioned as	Do
an IPTM, and you have manually busied only one IPTM	step 37
an IPTM, and you have manually busied both IPTMs	step 38

37

> **⚠ CAUTION**
> **Loss of service**
> Powering down an IPTM will trip the mate power converter in the other IPTM provisioned on the shelf. Therefore, it is best to manually busy and power down both IPTMs on a shelf.

    Repeat steps 14 to 36 for the IPTM in the other half of the shelf.

38   The next action depends on how many shelves equipped with PMs are associated with the FSP card you are replacing.

If	Do
one shelf equipped with PMs is associated with the card	step 40
two shelves equipped with PMs are associated with the card, and you have turned down functionality for only one shelf	step 39
two shelves equipped with PMs are associated with the card, and you have turned down functionality for both shelves	step 40

NT0X36
in an international cabinet auxiliary module (continued)

39   Repeat steps 6 to 38 for PMs in the other shelf associated with the FSP card you are replacing, then go to step 40.

At the shelf

40

>
> **DANGER**
> **Static electricity damage**
> Wear a wrist strap connected to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) while handling circuit cards. This protects the cards against damage caused by static electricity.

Select a shelf to power down.

41   Pull and set the handle of the POWER switch on the power converter downward to the OFF position.

42   The next action depends on the type of PM that is provisioned in the shelf.

If the shelf is provisioned as	Do
an IPTM	step 43
an IMTM	step 44

43   For the mate power converter in the IPTM on the other half of the shelf, pull and set the handle of the POWER switch downward to the OFF position.

Go to step 45.

44   For the other power converter on the shelf, pull and set the handle of the POWER switch downward to the OFF position.

45   The next action depends on how many shelves equipped with PMs are associated with the FSP card you are replacing.

If	Do
one shelf equipped with PMs is associated with the card	step 47
two shelves equipped with PMs are associated with the card, and you have powered down only one shelf	step 46
two shelves equipped with PMs are associated with the card, and you have powered down both shelves	step 47

46   Repeat steps 41 to 45 for PMs in the other shelf associated with the FSP card you are replacing, then go to step 47.

NT0X36
in an international cabinet auxiliary module (continued)

At the FSP

47   Remove the alarm and control card.

48   Insert the replacement alarm and control card.

49   Close the FSP.

50   Tighten the slotted nut on the FSP.

51   Select a shelf to power up.

At the shelf

52   Power up the converter.

    a   Pull and set the handle of the POWER switch upward to the ON position.

    b   Press and hold the RESET button on the power converter until the CONVERTER FAIL LED goes off.

    c   Release the RESET button.

53   The next action depends on the type of PM that is provisioned in the shelf, and whether you have powered up both power converters.

If the shelf	Do
is provisioned as an IPTM or an IMTM and you have already powered up both power converters	step 58
is provisioned as an IPTM	step 54
is provisioned as an IMTM	step 55

54   For the mate power converter in the IPTM on the other half of the shelf, repeat steps 52 and 53, then go to step 56.

55   For the other power converter on the shelf, repeat steps 52 and 53, then go to step 56.

56   The next action depends on how many shelves are associated with the FSP card you are replacing.

If	Do
one shelf equipped with PMs is associated with the card	step 58
two shelves equipped with PMs are associated with the card, and you have powered up only one shelf	step 57
two shelves equipped with PMs are associated with the card, and you have powered up both shelves	step 58

57   Repeat steps 52 to 56 for PMs in the other shelf associated with the FSP card you are replacing, then go to step 58.

NT0X36
in an international cabinet auxiliary module (continued)

At the MAP terminal

58   Access the PM level of the MAP display by typing

     >PM

     and pressing the Enter key.

59   The next step depends on the type of PM that is provisioned in the shelf.

If the PM is	Do
an OAU	step 60
an IPTM, or IMTM	step 64

60   Post the OAU by typing

     >POST OAU pm_no

     and pressing the Enter key.

     where

        pm_no
          is the number of the PM (0 to 9999)

61   Load the OAU by typing

     >LOADPM

     and pressing the Enter key.

     Example of a MAP response:

```
OAU 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 63
failed	step 62

62   Load the PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

63   Return the PM to service by typing

     >RTS

     and pressing the Enter key.

     Example of a MAP response:

     OAU 0 Rts Passed

If the RTS command	Do
passed	step 124

NT0X36
in an international cabinet auxiliary module (continued)

If the RTS command	Do
failed	step 130

64   Post the PM by typing

>POST pm_type pm_no

and pressing the Enter key.

where

> **pm_type**
> is the type of PM (IMTM, IPTM)

> **pm_no**
> is the number of the PM (0 to 9999)

65   Load the PM by typing

>LOADPM

and pressing the Enter key.

Example of a MAP response:

```
MTM 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 67
failed	step 66

66   Load the PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

67   Return the PM to service by typing

>RTS

and pressing the Enter key.

Example of a MAP response:

```
MTM 0 Rts Passed
```

If the RTS command	Do
passed, and the PM is InSv	step 76
passed, and the PM is ISTb with a card list generated	step 68
failed	step 130

68   Record the messages on the MAP display for future reference.

69   The next action depends on whether the affected shelf is provisioned with either the NT1X80 (EDRAM) card or the NT1X81 conference card.

If the shelf is	Do
provisioned with either the NT1X80 or the NT1X81	step 70
not provisioned with either the NT1X80 or the NT1X81	step 76

70   Post the single-card PM by typing

>**POST   pm_type   pm_no**

and pressing the Enter key.

where

> **pm_type**
> is the type of PM (CTM or DTM)

> **pm_no**
> is the number of the PM (0 to 9999)

71   Load the single-card PM by typing

>**LOADPM**

and pressing the Enter key.

Example of a MAP response:

```
DTM 0 LoadPM   Passed
```

If the LOADPM command	Do
passed	step 73
failed	step 72

72   Load the single-card PM using the procedure *Loading a PM* in this document. When you have completed the procedure, return to this point.

73   Return the PM to service by typing

>**RTS**

and pressing the Enter key.

Example of a MAP response:

NT0X36
in an international cabinet auxiliary module (continued)

MTM 0 Rts Passed

If the RTS command	Do
passed, and the PM is `InSv`	step 75
passed, and the PM is `ISTb` with a card list generated	step 74
failed	step 130

74   Record the messages on the MAP display for future reference.

75   Repeat steps 70 to 74 for the other NT1X80 and NT1X81 cards provisioned on the shelf, then go to step 76.

76   Access the TTP level of the MAP display by typing

`>TRKS;TTP`

and pressing the Enter key.

77   The next action depends on whether the shelf associated with the FSP card you replaced is provisioned with metallic test units (MTU) or digital test units (DTU).

        Note: DTU and MTU are usually provisioned in pairs.

If the shelf is	Do
equipped with MTU	step 78
equipped with DTU	step 93
not equipped with MTU or DTU	step 108

78   Post the first circuit in the MTU by typing

`>POST  G  MTU  circuit_no`

and pressing the Enter key.

where

    circuit_no
      is the number of the first MTU circuit

79   Busy the circuit by typing

`>BSY`

and pressing the Enter key.

80   Seize the circuit by typing

`>SEIZE`

and pressing the Enter key.

NT0X36
in an international cabinet auxiliary module (continued)

81 Put the circuit on hold by typing

>HOLD

and pressing the Enter key.

82 Post the second circuit in the MTU by typing

>NEXT

and pressing the Enter key.

83 Busy the circuit by typing

>BSY

and pressing the Enter key.

84 Seize the circuit by typing

>SEIZE

and pressing the Enter key.

85 Put the circuit on hold by typing

>HOLD

and pressing the Enter key.

86 Access the disk utility by typing

>DISKUT

and pressing the Enter key.

87 List the files in the volume containing the MTU load by typing

>LISTFL vol_name

and pressing the Enter key.

where

   vol_name
      is the name of the volume containing the MTU load

88 Record the name of the MTU load file.

89 Quit the disk utility by typing

>QUIT

and pressing the Enter key.

90 Load the MTU by typing

>LOADFW CC load_name

and pressing the Enter key.

where

NT0X36
in an international cabinet auxiliary module (continued)

> **load_name**
> is the load file name recorded in step 88

If the LOADFW command	Do
passed	step 91
failed	step 130

91   Release the first MTU circuit by typing

    >RLS MTU circuit_no

    and pressing the Enter key.

    where

> **circuit_no**
> is the number of the first MTU circuit you busied, seized, and put on hold

92   Release the second MTU circuit to by typing

    >RLS MTU circuit_no

    and pressing the Enter key.

    where

> **circuit_no**
> is the number of the second MTU circuit you busied, seized, and put on hold

    Go to step 108.

93   Post the first circuit in the DTU by typing

    >POST G DTU circuit_no

    and pressing the Enter key.

    where

> **circuit_no**
> is the number of the first DTU circuit

94   Busy the circuit by typing

    >BSY

    and pressing the Enter key.

95   Seize the circuit by typing

    >SEIZE

    and pressing the Enter key.

96   Put the circuit on hold by typing

    >HOLD

    and pressing the Enter key.

97   Post the second circuit in the DTU by typing

>NEXT

and pressing the Enter key.

98   Busy the circuit by typing

>BSY

and pressing the Enter key.

99   Seize the circuit by typing

>SEIZE

and pressing the Enter key.

100   Put the circuit on hold by typing

>HOLD

and pressing the Enter key.

101   Access the disk utility by typing

>DISKUT

and pressing the Enter key.

102   List the files in the volume containing the DTU load by typing

>LISTFL   vol_name

and pressing the Enter key.

where

> **vol_name**
> is the name of the volume containing the MTU load

103   Record the name of the DTU load file.

104   Quit the disk utility by typing

>QUIT

and pressing the Enter key.

105   Load the DTU by typing

>LOADFW   CC   load_name

and pressing the Enter key.

where

> **load_name**
> is the load file name recorded in step 103

If the LOADFW command	Do
passed	step 106
failed	step 130

NT0X36
in an international cabinet auxiliary module (continued)

106   Release the first DTU circuit by typing

>**RLS RLS**

107   Release the second DTU circuit to by typing

>**RLS RLS**

108   Post the circuits for the PM by typing

>**POST TM pm_type pm_no**

and pressing the Enter key.

where

>   **pm_type**
>   is the type of PM (IMTM, IPTM)
>
>   **pm_no**
>   is the number of the PM (0 to 9999)

109   Return all the circuits to service by typing

>**RTS ALL**

and pressing the Enter key.

Example of a MAP response:

```
RTS OK
```

110   The next action depends on whether INB circuits were recorded in step 19.

If	Do
INB circuits were recorded	step 111
no INB circuits wre recorded	step 114

111   Post the first circuit on the list by typing

>**POST T circuit_name circuit_no**

and pressing the Enter key.

where

>   **circuit_name**
>   is the circuit name recorded in step 19
>
>   **circuit_no**
>   is the circuit number recorded in step 19

112   Return the circuit to the INB state by typing

>**BSY INB**

and pressing the Enter key.

113   Repeat steps 111 and 112 for each of the other circuits on the list recorded in step 19.

114   The next action depends on the results of the PM return to service in step 67.

If the RTS command	Do
passed unconditionally	step 121
passed, but in-service tests failed and a card list was generated	step 115

115   Manually busy all posted circuits by typing

>**BSY ALL**

and pressing the Enter key.

116   Return all circuits to service by typing

>**RTS ALL**

and pressing the Enter key.

117   Access the PM level of the MAP display by typing

>**PM**

and pressing the Enter key.

118   Post the PM by typing

>**POST pm_type pm_no**

and pressing the Enter key.

where

    pm_type
      is the type of PM (CTM, DTM, IMTM, IPTM)

    pm_no
      is the number of the PM (0 to 9999)

119   Perform an in-service test on the PM by typing

>**TST**

and pressing the Enter key.

Example of a MAP response:

NT0X36
in an international cabinet auxiliary module (continued)

```
MTM     0     ISTb          TSTFAIL

InSvce Tests Initiated
IMTM 0 Tst Failed
 Site Flr RPos  Bay_id   Shf  Description   Slot     EqPEC
 HOST  00  D06  TME  00   04  MTM : 000     04       2X59
 HOST  00  D06  TME  00   04  MTM : 000     02       0X70
Following ISTb Exist :
Test Failed
```

If the TST command	Do
passed, and there are single-card PMs or an IPTM still out of service	step 121
passed, and you have worked on all PMs provisioned on the shelf and all PMs have been returned to service	step 124
passed, and you have worked on all PMs provisioned on the shelf but one or more PMs have not been successfully returned to service	step 130
failed, and there are single-card PMs or an IPTM that you have not worked on to return to service	step 120
failed, and you have worked on all PMs provisioned on the shelf	step 130

120   Record the messages on the MAP display for future reference.

121   Access the PM level of the MAP display by typing

    >PM

    and pressing the Enter key.

122   Post the PM by typing

    >POST pm_type pm_no

    and pressing the Enter key.

    where

       pm_type
          is the type of PM (IMTM, IPTM)

       pm_no
          is the number of the PM (0 to 9999)

123   Repeat steps 64 to 119 for other PMs provisioned on this shelf, then go to step 124.

NT0X36
in an international cabinet auxiliary module (end)

124 The next action depends on how many shelves are associated with the FSP card you are replacing.

If	Do
one shelf equipped with PMs is associated with the card	step 126
two shelves equipped with PMs are associated with the card, and you have returned to service the PM on only one shelf	step 125
two shelves equipped with PMs are associated with the card, and you have returned to service the PM on both shelves	step 126

125 Repeat steps 59 to 124 for PMs in the other shelf associated with the FSP card you are replacing, then go to step 126.

126 The next action depends on your reason for performing this procedure.

If you were	Do
directed to this procedure from a maintenance procedure	step 127
not directed to this procedure from a maintenance procedure	step 131

127 Return to the maintenance procedure that sent you to this procedure and continue as directed.

128 Consult the personnel responsible for the next level of support to determine how essential services can be handled. Continue as directed by office personnel.

129 Consult office personnel to determine why the component is off line. Continue as directed by office personnel.

130 For further assistance, contact the personnel responsible for the next level of support.

131 You have completed this procedure.

NT0X91
in a CPCE frame

Application

Use this procedure to replace the NT0X91 in the common-peripheral controller equipment (CPCE) frame, as listed in the following table.

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card to replace, refer to the Index. The Index provides a list of the cards, shelves, and frames documented in this card replacement book.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA	FSP drive and alarm circuit pack	CPCE equipped with digital trunk controller (DTC), international DTC (IDTC), international line group controller (ILGC), international line trunk controller (ILTC), ISDN DTC (DTCI), ISDN line group controller (LGCI), ISDN line trunk controller (LTCI), line group controller (LGC), line trunk controller (LTC), PCM30 DTC (PDTC), PCM30 LGC (PLGC), PCM30 LTC (PLTC), SMS
NT0X91	AE	FSP drive and protection circuit pack	CPCE equipped with DTC, DTCI IDTC, ILGC, ILTC, LGC, LGCI , LTC, LTCI, PDTC, PLGC, PLTC, SMS

Common procedures

This procedure refers to the following common procedures:

- *Loading a PM*
- *Manually busying Series II PM and CPM C-side links*

NT0X91
in a CPCE frame (continued)

- *Reseating cards in equipment shelves*

- *Unseating cards in equipment shelves*

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT0X91
in a CPCE frame (continued)

Summary of replacing a NT0X91 in a CPCE frame

Post PMs and make units inactive

↓

Manually busy PM units and reset

↓

Manually busy network links

↓

Unseat control complex cards

↓

Power down shelves

↓

Replace the card

↓

Power up shelves

↓

Reseat control complex cards → Return network links to service → Load PM units and return to service → End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Replacing a NT0X91 in a CPCE frame

At your current location

1

🛑	**DANGER** **Risk of electrocution** Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP.

⚠️	**WARNING** **Loss of service** This procedure manually busies one or more peripheral module (PM) units, which can cause service degradation. Perform this procedure only if you need to restore out-of-service components. If this procedure is not needed for a return to service, perform this procedure only during periods of low traffic.

Obtain a replacement card. Make sure that the replacement card has the same PEC, including suffix, as the card being removed.

At the frame

2   Record the frame supervisory panel (FSP) slot, frame circuit breakers (CB), shelves, PM location and units, and power converter slots associated with the NT0X91 card you are replacing. Use the following table to obtain this information.

Card	FSP Slot	CB	Shelf and PM information	PC slot
NT0X91AA	CD1	CB5	shelf 18 (lower PM, unit 0)	25
NT0X91AA	CD1	CB4	shelf 51 (upper PM, unit 0)	25
NT0X91AE	CD2	CB2	shelf 32 (lower PM, unit 1)	25
NT0X91AE	CD2	CB1	shelf 65 (upper PM, unit 1)	25

NT0X91
in a CPCE frame (continued)

Card
holder

NT0X91AA
card in
slot CD1

NT0X91AE
card in
slot CD2

Frame
supervisory panel

3   Record the type of PMs associated with the NT0X91 that you will replace.

At the MAP terminal

4   To access the PM level of the MAP display, type

   >MAPCI;MTC;PM

   and press the Enter key.

   Example of a MAP display:

```
                SysB     ManB     OffL     CBsy     ISTb     InSv
      PM          0        0        0        0        3       39
```

5   To post one of the PMs associated with the NT0X91 you replace, type

>**POST   pm_type   pm_no**

and press the Enter key.

where

pm_type
is the PM type recorded in step 3

pm_no
is the PM number recorded in step 2

Example of a MAP display:

```
                    SysB     ManB     OffL     CBsy     ISTb     InSv
        PM            0        0        0        0        3       39
        DTC           0        0        0        0        0        4

DTC    0 InSv  Links_OOS: CSide  0 , PSide  0
Unit0:   Act    InSv
Unit1:   Inact  InSv
```

6   Determine the state of the PM unit associated with the card you replace.

If the state of the PM unit	Do
is ISTb, InSv, SysB, or CBsy, and active	step 7
is ISTb, InSv, SysB, or CBsy, and inactive	step 10
is ManB	step 12
is OffL	step 51

7   Determine the state of the mate PM unit.

If the state of the mate PM unit	Do
is ISTb or InSv	step 8
is other than listed here	step 52

8   To switch activity, type

>**SWACT**

and press the Enter key.

Example of a MAP response:

NT0X91
in a CPCE frame (continued)

```
DTC 0     A Warm SwAct will be performed after
          data sync of active terminals.
Please confirm ("YES", "Y", "NO", or "N"):
```

If	Do
you must confirm the command	step 9
the system rejects the SWACT	step 52

9 To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Unit0:   Inact SysB  Mtce
Unit1:   Act   ISTb

DTC 0    SwAct Passed
```

If the MAP response	Do
is SWACT passed	step 10
is other than listed here	step 52

10 A maintenance flag (Mtce) can appear. This flag indicates that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status lines for both PM units before you proceed to the next step.

11 To manually busy the unit, type

>BSY UNIT unit_no

and press the Enter key.

where

> **unit_no**
> is the PM unit number (0 or 1) recorded in step 2

If the BSY command	Do
passed	step 12
failed	step 53

12 To reset the inactive PM unit, type

>PMRESET UNIT unit_no NORUN

and press the Enter key.

NT0X91
in a CPCE frame (continued)

where

> **unit_no**
>> is the PM unit number (0 or 1)

Example of a MAP response:

```
DTC 0 Unit 0    PMReset Passed
```

13 To manually busy all C-side links associated with the PM unit in use, use the procedure *Manually busying Series II PM and CPMC-side links* in this document. Complete the procedure and return to this point.

14 Repeat steps 5 to 13 for the other PM unit associated with the NT0X91 you are replacing.

At the shelf

15

> ⚠ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

If there are NT6X48 DS30A interface cards in slots 6 and 7, unseat them.

If you	Do
are working on any XPM with the NTMX77 unified processor (XPM plus)	step 18
are working on any 2-processor XPM (NT6X45-based)	step 16
are working on an international 3-processor XPM (NT6X45-based)	step 17

16 Unseat control complex cards (2-processor XPMs). For each sub-step below, use the procedure *Unseating cards in equipment shelves* in this document.

a According to the configuration of your unit, unseat either the NT6X43 message interface card or the NT6X69 message protocol card in slot 18.

b Unseat the NT6X45 signaling processor card in slot 12.

c Unseat the NT6X45 master processor card in slot 8.

NT0X91
in a CPCE frame (continued)

    d   Go to step 18.

17   Unseat control complex cards (international 3-processor XPMs). For each sub-step below, use the procedure *Unseating cards in equipment shelves* in this document.

    a   According to the configuration of your unit, unseat either the NT6X43 message interface card or the NT6X69 message protocol card in slot 10.

    b   Unseat the NT6X45 signaling processor card in slot 12.

    c   Unseat the NT6X45 PCM30 signaling processor card in slot 18.

    d   Unseat the NT6X45 master processor card in slot 14.

18   Pull and set the power converter POWER switch handle downward to the OFF position.

19   Repeat steps 15 to 18 for the second PM unit associated with NT0X91 you are replacing.

20   Verify that the CBs for the power converters associated with the NT0X91 you are replacing are in the OFF position.

21   Unscrew the slotted nut on the left-hand side of the FSP.

22   Open the FSP.

23

> **WARNING**
> **Loss of service**
> Make sure that the alarm and control card you remove controls the PM units that you manual busied. Removal of the wrong card causes a loss of service.

    Remove the NT0X91 card from the CD slot in the FSP.

24   Place the removed card in an electrostatic discharge (ESD) protective container.

25   Make sure that the replacement card has the same PEC, including suffix, as the removed card.

26   Insert the replacement card.

27   Close the FSP.

28   Tighten the slotted nut on the FSP.

29   The next action depends on the power converter version and the type of supervisory panel.

If the power converter	Do
is an NT2X70AE card and the FSP or MSP has circuit breakers	step 30

If the power converter	Do
is an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 31
is not an NT2X70AE card and the FSP or MSP has circuit breakers	step 32
is not an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 33

30   Power up the converter.

   a   Pull and set the POWER switch handle up to the RESET position and hold.

   b   Set the handle of the converter circuit breaker on the FSP or MSP up until it clicks into place.

   c   Release the POWER switch handle.

      Go to step 34.

31   Power up the converter.

   a   Pull and set the POWER switch handle up to the RESET position and hold until the CONVERTER FAIL LED goes off.

   b   Release the handle.

      Go to step 34.

32   Power up the converter.

   a   Pull and set the POWER switch handle up to the ON position.

   b   Press and hold the RESET button on the power converter.

   c   Set the handle of the converter circuit breaker on the FSP or MSP up until it clicks into place.

   d   Release the RESET button.

      Go to step 34.

33   Power up the converter.

   a   Pull and set the POWER switch handle up to the ON position.

   b   Press and hold the RESET button on the power converter until the CONVERTER FAIL LED goes off.

   c   Release the RESET button.

NT0X91
in a CPCE frame (continued)

34   The next action depends on the processor configuration of the PM you are working on.

If you	Do
are working on any XPM with the NTMX77 unified processor (XPM plus)	step 37
are working on any 2-processor XPM (NT6X45-based)	step 35
are working on an international 3-processor XPM (NT6X45-based)	step 36

35   Reseat control complex cards (2-processor XPMs). For each sub-step below, use the procedure *Reseating cards in equipment shelves* in this document.

   a   Reseat the NT6X45 master processor card in slot 8.

   b   Reseat the NT6X45 signaling processor card in slot 12.

   c   According to the configuration of your unit, reseat either the NT6X43 message interface card or the NT6X69 message protocol card in slot 18.

         Go to step 37.

36   Reseat control complex cards (3-processor international XPMs). For each sub-step below, use the procedure *Reseating cards in equipment shelves* in this document.

   a   Reseat the NT6X45 master processor card in slot 14.

   b   Reseat the NT6X45 PCM30 signaling processor card in slot 18.

   c   Reseat the NT6X45 signaling processor card in slot 12.

   d   According to the configuration, reseat either the NT6X43 message interface card or the NT6X69 message protocol card in slot 10.

37   If there are NT6X48 DS30A interface cards in slots 6 and 7, reseat them.

38   Repeat steps 29 to 37 for the other PM unit associated with the replaced NT0X91. Power up the power converter and reseat the control complex cards for both shelves and continue this procedure.

At the MAP terminal

39   The next action depends on the type of network in the office.

If you	Do
are working on JNET	step 40
are working on ENET	step 42

40   To return to service one of the network links associated with the PM unit in
use, type

>RTS   plane_no   link_no

and press the Enter key.

where

>**plane_no**
>>is the number of the plane (0 or 1) for the link

>**link_no**
>>is the link number (0 to 63)

If the link	Do
returned to service and more manual-busy links are present	step 41
returned to service and no more manual-busy links are present	step 43
did not return to service	step 53

41   Repeat step 40 for all C-side links to the shelf in use.

42   To return the network link to service, type

>RTS   plane_no   LINK   link_no

and press the Enter key.

where

>**plane_no**
>>is the number of the plane (0 or 1) for the link

>**link_no**
>>is the link number (0 to 3)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01 submitted.
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01 passed.
```

If the link	Do
returned to service	step 43
did not return to service	step 53

43   Repeat steps 39 to 42 for the other PM unit associated with the NT0X91 you
are replacing. Return all network links to service for both PM units and
continue this procedure.

44   To post one of the PMs in use, type

>PM;POST   pm_type   pm_no

NT0X91
in a CPCE frame (continued)

and press the Enter key.

where

> **pm_type**
> is the PM type (for example DTC, ILGC, LTCI, PDTC, etc.)

> **pm_no**
> is the PM number (0 to 255)

45   To load the inactive unit, type

`>LOADPM  UNIT  unit_no`

and press the Enter key.

where

> **unit_no**
> is the PM unit number (0 or 1)

If the LOADPM command	Do
passed	step 47
failed	step 46

46   To load the PM unit, use the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

47   To return the inactive unit to service, type

`>RTS  UNIT  unit_no`

and press the Enter key.

where

> **unit_no**
> is the PM unit number (0 or 1)

If the RTS command	Do
passed	step 48
failed	step 53

48   Repeat steps 44 to 47 for the PM unit in the other shelf associated with the NT0X91 you are replacing. Return both PM units to service. Go to step 49.

49   The next action depends on your reason for performing this procedure.

If	Do
a maintenance procedure directed you to this procedure	step 50
a maintenance procedure did not direct you to this procedure	step 54

NT0X91
in a CPCE frame (end)

50   Return to the maintenance procedure that sent you to this procedure and continue as directed.

51   Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

52   For additional help with switch of activity, contact the next level of support.

Note: If the system recommends using the SWACT command with the FORCE option, consult office personnel. Consult office personnel to determine if you have permission to use the FORCE option.

53   For additional help, contact the next level of support.

54   The procedure is complete.

NT0X91
in a digital carrier equipment frame

Application

Use this procedure to replace a NT0X91 in a digital carrier equipment (DCE) frame.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA, AB	Drive and alarm card	DCE equipped with digital carrier module (DCM), digital echo supressor (DES)
NT0X91	AD	Drive and protection card	DCE equipped with DCM, DES

Basic>Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to *Loading a PM*.

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X91
in a digital carrier equipment frame (continued)

Replacing a NT0X91 in a digital carrier equipment frame

At the frame

1

	DANGER **Risk of electrocution** Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Make sure that you remove all jewelry before you replace a card in the FSP. Do not touch any terminal in the FSP.

	CAUTION **Loss of service** This procedure includes directions to manually busy a DCM or DES. If you manually busy a DCM or DES, a service power failure can occur. Perform this procedure only if you need to restore out-of-service components. If you do not need to restore out-of-service components, perform this procedure during periods of low traffic. .

Obtain a replacement card. Make sure that the replacement card and the card that you replace have the same PEC and PEC suffix.

2   Use the table following the figure to identify the slot that contains the alarm and control card that you replace:

NT0X91
in a digital carrier equipment frame (continued)

IfAlarm and control card	DoSlot
is NT0X91AA	CD1
is NT0X91AB	CD2
is NT0X91AD	CD3

NT0X91
in a digital carrier equipment frame (continued)

3   Record information on FSP fuses, FSP circuit breakers (CB), and network shelf positions that associate with the card you replace. Use the following table to obtain this information.

FSP card	FSP card position	FSP circuit breakers	Shelf position
NT0X91AA	CD1	CB5	04
NT0X91AB	CD2	CB3	32
		CB1	65
NT0X91AD	CD3	CB4	18
		CB2	51
Note: A minimum of one shelf can be unequipped.			

4   Select a shelf that associates with the FSP card that you replace.

At the MAP terminal

5   To access the PM level of the MAP display, type

     >MAPCI;MTC;PM ndInstance>

     and press the Enter key.

     Example of a MAP display:

```
          SysB    ManB    OffL    CBsy    ISTb   InSv
   PM        6       1       0       0      23     24
```

6   To post the PM that associates with the card you replace, type

     >POST pm_type   pm_no

     and press the Enter key.

     where

         pm_type
           is the type of PM (DCM, DES)

         pm_no
           ption>

           is the PM number (0 to 511)

     Example of a MAP display:

NT0X91
in a digital carrier equipment frame (continued)

```
          SysB      ManB      OffL      CBsy      ISTb    InSv
PM          6         1         0         0         23      24
DCM         1         0         0         0          1       4

DCM       0      InSv
```

7   Determine the state of the PM.

          Note: The PM state appears on the right of the PM number. In the example display in step 6, the PM state is in service (InSv).

If the state of the PM unit	Do
is ISTb, InSv, SysB, or CBsy	step 8
is ManB	step 12
is OffL	step 41

8   A maintenance flag (Mtce) can appear. A Mtce indicates that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status line before you proceed to the next step.

9   To manually busy the PM, type

      >BSY e>

      and press the Enter key.

      Example of a MAP response:
      OK.DCM 0 Bsy

If the BSY command	Do
passed	step 10
failed	step 43

10   The next action depends on how many shelves equipped with PMs associate with the FSP card that you replace.

If	DoDo
one shelf equipped with PMs associate with the card	step 12
two shelves equipped with PMs associate with the card, and you turned down functionality for only one shelf	step 11

NT0X91
in a digital carrier equipment frame (continued)

If	DoDo
two shelves equipped with PMs associate with the card, and you turned down functionality for both shelves	step 12

11 Repeat steps 6 to10 for PMs in the other shelf that associates with the FSP card you replace. Go to step .12

At the frame

12

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Select a shelf to power down.

13 Pull down and set the handle of the POWER switch on the power converter to the OFF position.

14 The next action depends on the power configuration of the shelf.

If the shelf	Do
contains a single NT2X70	step 16
contains a NT2X06 and a NT2X07	step 15

15 For the mate power converter, pull down and set the handle of the POWER switch to the OFF position.

16 The next action depends on how many shelves equipped with PMs associate with the FSP card that you replace.

If	Do
one shelf equipped with PMs associate with the card	step 18
two shelves equipped with PMs associate with the card, and you powered down only one shelf	step 17
two shelves equipped with PMs associate with the card, and you powered down both shelves	step 18

NT0X91
in a digital carrier equipment frame (continued)

17 Repeat steps 13 to 16 for the PM in the other shelf that associates with the FSP card you replace. Go to step .18

18 Unscrew the slotted nut on the left of the FSP.

19 Open the FSP.

20 Remove the card.

21 Insert the replacement alarm and control card.

22 Close the FSP.

23 Tighten the slotted nut on the FSP.

24 The next action depends on the power converter version and the type of supervisory panel.

If you	Do
replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 25
replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 26
do not replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 27
do not replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 28

25 Power up the converter, as follows:

   a Pull up and set the handle of the POWER switch to the RESET position and hold.

   b Set the handle of the converter circuit breaker on the FSP or MSP up until the handle clicks into place.

   c Release the handle of the POWER switch.

   d Go to step 29

26 Power up the converter, as follows:

   a Pull up and set the handle of the POWER switch to the RESET position and hold until the CONVERTER FAIL LED turns off.

   b Release the handle of the POWER switch.

   c Go to step 29.

27 Power up the converter, as follows:

   a Pull up and set the handle of the POWER switch to the ON position.

   b Press and hold the RESET button on the power converter.

   c Set the handle of the converter circuit breaker on the FSP or MSP up until the handle clicks into place.

NT0X91
in a digital carrier equipment frame (continued)

	d	Release the RESET button.
	e	Go to step 29.
28		Power up the converter, as follows:
	a	Pull up and set the handle of the POWER switch to the ON position.
	b	Press and hold the RESET button on the power converter until the CONVERTER FAIL LED turns off.
	c	Release the RESET button.
29		The next action depends on the number of power converters on the shelf.

If	Do
one power converter is on the shelf	step 31
two power converters are on the shelf, and you powered up both of the converters	step 31
two power converters are on the shelf, and you powered up only one of the converters	step 30

30	Repeat steps 24 to 29 for the other power converter on the shelf.
31	The next action depends on how many shelves associate with the FSP card that you replace.

If	Do
one shelf equipped with PMs associates with the card	step 33
two shelves equipped with PMs associate with the card, and you powered up only one shelf	step 32
two shelves equipped with PMs associate with the card, and you powered up both shelves	step 33

32	Repeat steps 24 to 31 for PMs in the other shelf that associates with the FSP card you replace. Go to step 33.
33	At the MAP terminalTo post the PM, type

>**POST   pm_type   pm_no**

and press the Enter key.

where

>**pm_type**
>is the type of PM (DCM, DES)

>**pm_no**
>is the PM number (0 to 511)

34 To load the PM, type

> **>LOADPM ance>**

and press the Enter key.

If the LOADPM command	Do
failed	step 35
passed	step 36

35 Perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

36 To return the PM to service, type

> **>RTS e>**

and press the Enter key.

If the RTS command	Do
passed	step 37
passed, but the PM is ISTb as a result of a command protocol violation	step 42
failed	step 43

37 The next action depends on how many shelves associate with the FSP card that you replace.

If	Do
one shelf equipped with PMs associates with the card	step 39
two shelves equipped with PMs associate with the card, and you powered down only one shelf	step 38
two shelves equipped with PMs associate with the card, and you powered down both shelves	step 39

38 Repeat steps 33 to 37 for PMs in the other shelf that associates with the FSP card you replace. Go to step 39.

39 The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 40

NT0X91
in a digital carrier equipment frame (end)

If a maintenance procedure	Do
did not direct you to this maintenance procedure	step 24

40 Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

41 To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

42 A minor problem is present. The PM can process traffic. For additional help, contact the next level of support.

43 For additional help, contact the next level of support.

44 The procedure is complete.

NT0X91
in a line module equipment frame

Application

Use this procedure to replace a NT0X91 in a line module equipment (LME) frame, as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA	FSP drive and alarm card	FSP (NT0X29) in a LME
NT0X91	AD	FSP drive and protector card	FSP (NT0X29) in a LME

Refer to the "Index", if you cannot identify the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to *Loading a PM*.

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

↓

End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X91
in a line module equipment frame (continued)

Replacing a NT0X91 in a line module equipment frame

At your current location

1

> **CAUTION**
> **Potential loss of service**
> This procedure includes directions to manually busy a line module controller (LMC). If you manually busy an LMC, service degradation can occur. Perform this procedure only if you need to restore out-of-service components. If you do not need to restore out-of-service components, perform this procedure during periods of low traffic.

> **DANGER**
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Make sure that you remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP.

Obtain a replacement card. Make sure that the replacement card and the card that you replace have the same PEC and PEC suffix.

At the frame

2   Use the following table to identify the slot that contains the alarm and control card that you replace.

Card	Slot	Card position
NT0X91AA	slot CD1	rear
NT0X91AD	slot CD2	front

NT0X91
in a line module equipment frame (continued)

3 Use the following table to identify the converters and circuit breakers that associate with the alarm and control card you replace.

Card	Power converter	FSP circuit breaker
NT0X91AD	NT2X05 (RG 0) in slot 1	CB1
NT0X91AA	NT2X05 (RG 1) in slot 5	CB2
NT0X91AD	NT2X70 in slot 22	CB3

Note: Circuit breakers are on the FSP.

NT0X91
in a line module equipment frame (continued)

At the MAP terminal

4   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

5   To post the line module (LM) that contains the alarm and control card you want to replace, type

>POST LM bay_no pair_no

and press the Enter key.

where

> **bay_no**
> is the number of the LM bay (0 to 511)

> **pair_no**
> is the number of the LM in the bay (0 or 1)

6   The next action depends on the card that you replace.

If you	Do
replace the NT0X91AA	step 7
replace the NT0X91AD	step 11

7   Determine the state of the ringing generators (RG).

If	Do
either RG is Standby	step 34
RG 1 (slot 05) is InSv or ISTb and RG 0 (slot 01) is InSv or ISTb	step 8
RG 1 (slot 05) is InSv or ISTb and RG 0 (slot 01) is ManB or SysB	step 34
RG 1 (slot 05) is ManB	step 10
RG 1 (slot 05) is SysB	step 8

8   To manually busy the ringing generator interface (RGI) for RG 1, type

>BSY RGI 1

and press the Enter key.

Example of a MAP response:
WARNING:CALLS IN RINGING STATE USING THIS RGI WILL BE LOSTDO YOU WANT TO CONTINUE ?Please confirm ("YES", "Y", "NO", or "N"):

NT0X91
in a line module equipment frame (continued)

9   To confirm the command, type

    >YES

and press the Enter key.

Example of a MAP response:
OK

At the frame

10

	WARNING **Static electricity damage** Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Pull down and set the handle of the POWER switch on RG 1 (slot 5) to the OFF position.

Go to step 18.

11   Determine the state of the LM.

If the state of the LM	Do
is InSv or ISTb	step 12
is SysB or CBsy	step 15
is ManB	step 16
is Offl	step 35

12   To post the mate LM, type

    >POST LM site frame_no unit_no

and press the Enter key.

where

    site
       is the PM location (alphanumeric)

    frame_no
       is the frame number (0 to 511)

    unit_no
       is the PM unit number (0 or 1)

NT0X91
in a line module equipment frame (continued)

13   Determine the state of the mate LM and the state of the RGs of the mate LM.

If	Do
the state of the mate LM is `InSv` or `ISTb` and both RGs are `InSv`	step 14
the states of the mate LM and RGs are other than listed here	step 36

14   To post the LM on which you want to replace a card, type

>POST LM site frame_no unit_no

and press the Enter key.

where

>   **site**
>   is the PM location (alphanumeric)
>
>   **frame_no**
>   is the frame number (0 to 511)
>
>   **unit_no**
>   is the PM unit number (0 or 1)

15   To manually busy the LM, type

>BSY

and press the Enter key.

Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb   InSv
     PM       3       1       0       0       0     71

 RGen : 0 Standby     1 InSv
 bsy
 OK
```

NT0X91
in a line module equipment frame (continued)

At the frame

16

⚠	**WARNING** **Static electricity damage** Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Pull down and set the handle of the power converter POWER switch to the OFF position.

17 Pull down and set the handle of the POWER switch on RG 0 (slot 1) to the OFF position.

18 Unscrew the slotted nut on the left of the FSP.

19 Open the FSP.

20

⚠	**WARNING** **Loss of service** Make sure that the alarm and control card that you remove controls the power converter. The alarm and control card also can control the RG that you powered down. Removal of the wrong card causes a loss of service.

Remove the NT0X91 card from the slot that you identified in step 2.

21 Insert the replacement card.

22 Close the FSP.

23 Tighten the slotted nut on the FSP.

24 The next action depends on the card that you replace.

If you	Do
replace the NT0X91AA	step 25
replace the NT0X91AD	step 27

25 Power up RG 1.

   a Pull up and set the handle of the POWER switch to the ON position.

   b Press and hold the RESET button on the RG.

    c   Pull up and set the handle of the converter circuit breaker on the FSP or MSP until the handle clicks into place.

    d   Release the RESET button.

At the MAP terminal

26   To return the RGI to service, type

      >RTS RGI rgi_no

      and press the Enter key.

      where

          rgi_no
             is the number (0 or 1) of the RGI

      Example of a MAP response:

      OK.

      Go to step 32.

27   Power up the converter, as follows.

    a   Pull up and set the handle of the POWER switch to the ON position.

    b   Press and hold the RESET button on the power converter.

    c   Pull up and set the handle of the converter circuit breaker on the FSP or MSP until the handle clicks into place.

    d   Release the RESET button.

28   Power up RG 0.

    a   Pull up and set the handle of the POWER switch to the ON position.

    b   Press and hold the RESET button on the RG.

    c   Pull up and set the handle of the converter circuit breaker on the FSP or MSP until the handle clicks into place.

    d   Release the RESET button.

29   To load the LM, type

      >LOADPM

      and press the Enter key.

      Example of a MAP response:

      LM HOST 01 0 LoadPM PASSED

30   To load the PM unit, perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

31   To return the LM to service, type

      >RTS

      and press the Enter key.

NT0X91
in a line module equipment frame (end)

Example of a MAP response:

```
rts
OK.
InSvce Tests Initiated
OK.
```

32   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this maintenance procedure	step 33
did not direct you to this procedure	step 38

33   Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

34   If you manually busy the RG, you disable all RGs in the LM bay. To determine how to proceed, consult the next level of support. Continue as directed by the next level of support.

35   To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

36   If you manually busy the LMC, you lose calls in progress. To determine how to proceed, consult the next level of support. Continue as directed by the next level of support.

37   For additional help, contact the next level of support.

38   The procedure is complete.

NT0X91
in an MS6E

Application

Use this procedure to replace an NT0X91 in a CCS6 message switch equipment (MS6E) frame, as listed in the following table.

If you cannot identify the product engineering code (PEC), suffix, or shelf or frame for the card to replace, refer to the Index. The Index provides a list of the cards, shelves, and frames documented in this card replacement book.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA	FSP drive and alarm circuit pack	MS6E
NT0X91	AE	FSP drive and protection circuit pack	MS6E

Common procedures

This procedure refers to the following:

- *Manually busying Series II PM C-side links*

- *Loading a PM*

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT0X91
in an MS6E (continued)

     ▼
    (1)
```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X91 in an MS6E

At your current location

1

> ### DANGER
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP.

> ### DANGER
> **Loss of service**
> This procedure manually busies one or more peripheral module (PM) units, which can cause service degradation. Perform this procedure only if you need to restore out-of-service components. If this procedure is not needed for a return to service, perform this procedure during periods of low traffic only.

> ### DANGER
> **Loss of service**
> This procedure manually busies one or more signaling terminals (ST), which can cause service degradation. Perform this procedure only if you need to restore out-of-service components. If this procedure is not required for a return to service, perform this procedure during periods of low traffic only.

Obtain a replacement card. Make sure that the replacement card has the same PEC, including suffix, as the card being removed.

2   Record the FSP slot, frame circuit breakers (CB), shelves, signaling terminal controllers (STC), MSB6 unit number, and power converter slot associated

NT0X91
in an MS6E (continued)

with the NT0X91 card you will replace. Use the following table and diagram to obtain this information.

Card	FSP Slot	CB	Shelf and PM information	PC slot
NT0X91AA	CD1	CB5	shelf 51, MSB6 unit 0 (right side)	25
NT0X91AA	CD1	CB4	shelf 51, STCM 0 (left side)	01
NT0X91AE	CD2	CB2	shelf 65, MSB6 unit 1 (right side)	25
NT0X91AE	CD2	CB1	shelf 65, STCM 1 (left side)	01

At the MAP terminal

3   To access the PM level of the MAP display, type

>MAPCI;MTC;PM

and press the Enter key.

Example of a MAP display:

```
                 SysB     ManB     OffL     CBsy     ISTb     InSv
PM                12        0        2        0        13       24
```

4   To post the MSB, type

>POST MSB6 pm_no

and press the Enter key.

where

>   **pm_no**
>   is the PM number (0 to 999)

Example of a MAP display:

```
                     SysB     ManB     OffL     CBsy     ISTb
    PM                12        0        2        0        13
    MSB6               0        0        0        0        0

MSB6    0 InSv  Links_OOS: CSide  0 , PSide  0
Unit0:    Inact InSv
Unit1:    Act   InSv
```

5   Determine the state and activity of the PM unit associated with the card you are replacing.

If the state of the PM unit	Do
is ISTb, InSv, SysB, or CBsy, and active	step 6
is ISTb, InSv, SysB, or CBsy, and inactive	step 9
is ManB	step 11
is OffL	step 55

6   Determine the state of the mate PM unit.

If the state of the mate PM unit	Do
is ISTb or InSv	step 7
is other than listed here	step 57

NT0X91
in an MS6E (continued)

7 To switch activity, type

>SWACT

and press the Enter key.

Example of a MAP response:

```
MSB6 0    A Warm SwAct will be performed after
          data sync of active terminals.
Please confirm ("YES", "Y", "NO", or "N"):
```

If	Do
you must confirm the command	step 8
the system rejects the SWACT	step 56

8 To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

```
Unit0:   Inact SysB  Mtce
Unit1:   Act   ISTb

MSB6 0    SwAct Passed
```

If the MAP response	Do
is SWACT passed	step 9
is other than listed here	step 56

9 A maintenance flag (Mtce) can appear. This flag indicates that system-initiated maintenance tasks are in progress. Wait until the flag disappears from the status lines for both PM units before you proceed to the next step.

10 To manually busy the inactive unit, type

>BSY UNIT unit_no

and press the Enter key.

where

    unit_no
      is the PM unit number (0 or 1)

Example of a MAP response:

```
MSB6    0 ISTb  Links_OOS: CSide  0 , PSide  0
Unit0:   Inact ManB
Unit1:   Act   InSv
bsy unit 0
MSB6 0 Unit 0   Bsy Passed
```

If the BSY command	Do
passed	step 11
failed	step 57

11   To reset the PM unit, type

>PMRESET UNIT unit_no NORUN

and press the Enter key.

where

> **unit_no**
> is the PM unit number (0 or 1)

Example of a MAP response:

```
 MSB6 0 Unit 0   PMReset Passed
```

12   To access the STC level of the MAP display, type

>STC

and press the Enter key.

13   To post the STC that you recorded in step 2, type

>POST STCM stcm_no

and press the Enter key.

where

> **stcm_no**
> is the STCM number (0 to 9)

14   To manually busy the signaling terminals (ST), type

>BSY ALL

and press the Enter key.

Example of a MAP response:

```
STC 301
STC 302
STC 303
STC 304
This will busy the above STC(S)
Please confirm ("YES", "Y", "NO", or "N"):
```

NT0X91
in an MS6E (continued)

15   To confirm the command, type

     >YES

     and press the Enter key.

16   To return to the PM level of the MAP display, type

     >QUIT

     and press the Enter key.

17   To manually busy C-side links associated with the shelf in use, use the procedure *Manually busying Series II PM C-side links*. The procedure *Manually busying Series II PM C-side links* appears in this document. Complete the procedure and return to this point.

At the frame

18

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap connected to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

     Unseat cards in the control complex.

     a   Unseat the NT6X43 message interface card in slot 20.

     b   Unseat the NT6X45 signaling processor card in slot 19.

     c   Unseat the NT6X45 master processor card form slot 15.

19   To power down the power converter in slot 01, pull and set the POWER switch handle down to the OFF position.

20   To power down the power converter in slot 25, pull and set the POWER switch handle down to the OFF position.

21   Turn off the CBs for the shelf associated with the NT0X91 card you are replacing

22   Unscrew the slotted nut on the left-hand side of the FSP.

23   Open the FSP.

24

> ⚠ **WARNING**
> **Loss of service**
> Make sure that the alarm and control card you remove controls the shelves with the STs that you set to manually busy. Removal of the wrong card causes loss of service.

Remove the NT0X91 card from the CD slot in the FSP.

25 Place the removed card in an electrostatic discharge (ESD) protective container.

26 Make sure that the replacement card has the same PEC, including suffix, as the removed card.

27 Insert the replacement card.

28 Close the FSP.

29 Tighten the slotted nut on the FSP.

30 The next action depends on the power converter version and the type of supervisory panel.

If the power converter	Do
is an NT2X70AE card and the FSP has circuit breakers	step 31
is an NT2X70AE card and the FSP does not have circuit breakers	step 32
is not an NT2X70AE card and the FSP has circuit breakers	step 33
is not an NT2X70AE card and the FSP does not have circuit breakers	step 34

31 Power up the converter.

   a Pull the set the POWER switch handle up to the RESET position and hold.

   b Set the converter circuit breaker handle on the FSP up until it clicks into place.

   c Release the POWER switch handle.

    Go to step 35.

32 Power up the converter.

NT0X91
in an MS6E (continued)

    a Pull and set the POWER switch handle up to the RESET position and hold until the CONVERTER FAIL LED goes off.

    b Release the handle.

       Go to step 35.

33 Power up the converter.

    a Pull and set the POWER switch handle up to the ON position.

    b Press and hold the RESET button on the power converter.

    c Set the converter circuit breaker handle on the FSP up until it clicks into place.

    d Release the RESET button.

       Go to step 35.

34 Power up the converter.

    a Pull and set the POWER switch handle up to the ON position.

    b Press and hold the RESET button on the power converter until the CONVERTER FAIL LED goes off.

    c Release the RESET button.

35 Repeat steps 30 to 34 for the other power converter. Turn on both power converters and go to step 36.

36 Reseat cards in the control complex.

    a Reseat the NT6X45 master processor card in slot 15.

    b Reseat the NT6X45 signaling processor card in slot 19.

    c Reseat the NT6X43 message interface card in slot 20.

At the MAP terminal

37 The next action depends on the type of network in the office.

If you	Do
are working on JNET	step 38
are working on ENET	step 40

38 To return to service one of the network links associated with the PM unit in use, type

    >RTS plane_no link_no

and press the Enter key.

where

    plane_no
      is the number of the plane (0 or 1) for the link

link_no
is the link number (0 to 63)

If the link	Do
returned to service and more manual-busy links are present	step 39
returned to service and no more manual-busy links are present	step 41
did not return to service	step 57

39   Repeat step 38 for all C-side links for the PM unit in use. When you correctly return all C-side links to service, go to step 41.

40   To return the link to service, type

>RTS   plane_no   LINK   link_no

and press the Enter key.

where

plane_no
is the number of the plane (0 or 1) for the link

link_no
is the link number (0 to 63)

Example of a MAP response:

```
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01 sybmitted.
Request to RTS ENET Plane:0 Shelf:00 Slot:32 Link:01 passed.
```

If the link	Do
returned to service	step 41
did not return to service	step 57

41   To return to the STC level of the MAP display, type

>PM;STC

and press the Enter key.

42   To post the STCM, type

>POST   STCM   stcm_no

and press the Enter key.

where

stcm_no
is the STCM number (0 to 9)

NT0X91
in an MS6E (continued)

43   To load the STs, type

>**LOADPM   ALL**

and press the Enter key.

Example #1 of a MAP response:

```
STC 301  load Passed : <loadname>
STC 302  load Passed : <loadname>
STC 303  load Passed : <loadname>
STC 304  load Passed : <loadname>
```

Example #2 of a MAP response:

```
STC load '<loadname>' not in MSB6 0
```

If the LOADPM command	Do
passed	step 49
failed, with the message STC Load <loadname> not in <msb_unit>	step 44
failed, with messages other than listed here	step 46

> *Note:* As shown above in *Example of a MAP response #2*, loadname is the name of the ST load; msb_unit is the MSB6 and the unit number.

44   To return to the PM level of the MAP display, type

>**QUIT**

and press the Enter key.

45   To add the load to the MSB6, type

>**STCLOAD   UNIT   unit_no   ADD   loadname**

and press the Enter key.

where

   unit_no
      is the PM unit number (0 or 1)

   loadname
      is the STC load name

If the STCLOAD command	Do
failed	step 46
passed	step 49

46   To load the PM unit, use the procedure *How to load a PM* in this document. Complete the procedure and return to this point.

47   To return to the STC level of the MAP display, type

>STC

and press the Enter key.

48   To post the STCM, type

>POST   stcm_no

and press the Enter key.

where

> **stcm_no**
> is the STCM number (0 to 9)

Go to step 43.

49   To return the STs to service, type

>RTS   ALL

and press the Enter key.

Example of a MAP response:

```
STC 301   Out-of-service test initiated
STC 301 Tst Passed
STC 301 Rts Passed
STC 302   Out-of-service test initiated
STC 302 Tst Passed
STC 302 Rts Passed
STC 303   Out-of-service test initiated
STC 303 Tst Passed
STC 303 Rts Passed
STC 304   Out-of-service test initiated
STC 304 T Passed
STC 304 Rts Passed
```

If the RTS command	Do
passed for all STs	step 50
failed for any ST	step 57

50   The next action depends on your reason for performing this procedure.

If	Do
a maintenance procedure directed you to this procedure	step 51
a maintenance procedure did not direct you to this procedure	step 52

NT0X91
in an MS6E (end)

51   Return to the maintenance procedure that sent you to this procedure and continue as directed.

52   To load the inactive unit, type

       >LOADPM UNIT unit_no

       and press the Enter key.

       where

          unit_no
            is the PM unit number (0 or 1)

If the LOADPM command	Do
failed	step 53
passed	step 54

53   To load the PM unit, use the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

54   To return the inactive unit to service, type

       >RTS UNIT unit_no

       and press the Enter key.

       where

          unit_no
            is the PM unit number (0 or 1)

If the RTS command	Do
passed	step 57
failed	step 58

55   Consult office personnel to determine why the component is offline. Continue as directed by office personnel.

56   For additional help with switch of activity, contact the next level of support.

       Note: If the system recommends use of the SWACT command with the FORCE option, consult office personnel. Consult office personnel to determine if you have permission to use the option.

57   For additional help, contact the next level of support.

58   The procedure is complete.

NT0X91
in an MS7E, ST7E, or ST6E

Application

Use this procedure to replace a NT0X91 in the shelves or frames listed in the following table.

If you cannot identify the product engineering code (PEC), suffix, or provisioned shelf or frame for the card to replace, refer to the Index. The Index provides a list of the cards, shelves, and frames documented in this card replacement book.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA	FSP drive and alarm circuit card	signaling terminal 6 equipment (ST6E) frame, signaling terminal 7 equipment (ST7E) frame
NT0X91	AE	FSP drive and protection circuit card	CCS7 message buffer equipment (MS7E) frame, ST6E, ST7E

Note: This procedure is not used to change the NT0X91AA FSP drive and alarm circuit card in the MS7E frame. If card replacement is necessary for this card in the MS7E, contact your next level of support.

Common procedures

This procedure refers to *Loading a PM*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

```

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X91
in an MS7E, ST7E, or ST6E (continued)

Replacing a NT0X91 in an MS7E, ST7E, or ST6E

At your current location

1

> **DANGER**
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel (FSP) have an electrical potential of -48 V dc. Remove all jewelry before you replace a card in the FSP. Do not touch any terminal inside the FSP.

> **WARNING**
> **Loss of service**
> This procedure manually busies one or more signaling terminals (ST), which can cause service degradation. Perform this procedure during low traffic periods only.

The next action depends on the version of the NT0X91 you are replacing.

If the card you are replacing	Do
is a NT0X91AA in an MS7E	step 41
is a NT0X91AE in an MS7E	step 2
is a NT0X91AA or NT0X91AE in a ST7E or ST6E	step 5

2   Obtain a replacement card. Make sure that the replacement card has the same product engineering code (PEC), including suffix, as the card being removed.

3   For the MS7E, record the FSP slot, frame circuit breakers (CB), shelves, CCS7 signaling terminal groups (ST7G), and power converter slots associated with the NT0X91 card you are replacing. Use the following table to obtain this information.

> **Note:** The signaling terminal controller (STC) is called a signaling terminal controller module (STCM) for a CCS6 message switch and buffer (MSB6). The signaling terminal controller (STC) is called a CCS7 signaling terminal group (ST7G) for a CCS7 message switch and buffer

NT0X91
in an MS7E, ST7E, or ST6E (continued)

(MSB7). In this procedure, the name STC refers to both ST7Gs and signaling-terminal controller modules (STCM).

Card	FSP Slot	CB	Shelf and PM information	PC slot
NT0X91AE	CD2	CB4	shelf 51, ST7G 3 (right side)	01
NT0X91AE	CD2	CB3	shelf 18, ST7G 0 (right side)	01
NT0X91AE	CD3	CB5	shelf 32, ST7G 1 (left side)	01
NT0X91AE	CD3	CB1	shelf 51, ST7G 2 (left side)	25

Card holder

NT0X91AA card in slot CD1

NT0X91AE card in slot CD2

NT0X91AE card in slot CD3

FSP

Note: Each CB is associated with one half of a shelf, as indicated in the table. CBs are located on the front of the FSP.

4   Go to step 7.

NT0X91
in an MS7E, ST7E, or ST6E (continued)

5   Obtain a replacement card. Make sure that the replacement card has the same product engineering code (PEC), including suffix, as the card being removed.

6   For the ST6E and ST7E, record the FSP slot, frame circuit breakers (CB), shelves, signaling terminal controllers (STC), and power converter slots associated with the NT0X91 card you are replacing. Use the following table to obtain this information (see also the figure in step 3).

   Note: The signaling terminal controller (STC) is called a signaling terminal controller module (STCM) for a CCS6 message switch and buffer (MSB6). The signaling terminal controller (STC) is called a CCS7 signaling terminal group (ST7G) for a CCS7 message switch and buffer (MSB7). In this procedure, the name STC refers to both ST7Gs and signaling terminal controller modules (STCM).

Card	FSP Slot	CB	Shelf and PM information	PC slot
NT0X91AA	CD1	CB3	shelf 18, STC 5 (right side)	01
NT0X91AA	CD1	CB6	shelf 18, STC 4 (left side)	25
NT0X91AE	CD2	CB2	shelf 32, STC 7 (right side)	01
NT0X91AE	CD2	CB1	shelf 51, STC 9 (right side)	01
NT0X91AE	CD3	CB5	shelf 32, STC 6 (left side)	25
NT0X91AE	CD3	CB4	shelf 51, STC 8 (left side)	25

At the MAP terminal

7   To access the PM level of the MAP display, type

   >MAPCI;MTC;PM

   and press the Enter key.

   Example of a MAP display:

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
   PM                  0       5       6       0       2
```

8   To post the MSB, type

   >POST pm_type pm_no

   and press the Enter key.

   where

   pm_type
        is the PM type (MSB6, MSB7)

NT0X91
in an MS7E, ST7E, or ST6E (continued)

pm_no
is the PM number (0 to 999)

Example of a MAP display:

```
                    SysB      ManB      OffL      CBsy      ISTb      InSv
        PM            0         5         6         0         2        41
        MSB7          0         0         1         0         0         1

MSB7    0 InSv  Links_OOS: CSide  0 , PSide  0
Unit0:   Inact InSv
Unit1:   Act   InSv
```

9   To access the STC level of the MAP display, type

>STC

and press the Enter key.

Example of a MAP display:

```
                    SysB      ManB      OffL      CBsy      ISTb      InSv
        PM            0         5         6         0         2        41
        MSB7          0         0         1         0         0         1

MSB7    0 InSv  Links_OOS: CSide  0 , PSide  0
Unit0:   Inact InSv
Unit1:   Act   InSv

STC                   0         0         0         0         0

STC        STCM         Ctrl
```

10   To post one of the STCs that you recorded in previous steps, type

>POST stc_type stcm_no

and press the Enter key.

where

stc_type
is the STC type (STCM, ST7G)

stcm_no
is the STC number (0 to 9)

Example of a MAP display:

```
                    SysB    ManB    OffL    CBsy    ISTb    InSv
        PM            0       5       6       0       2       41
        MSB7          0       0       1       0       0       1

MSB7    0 InSv  Links_OOS: CSide  0 , PSide  0
Unit0:   Inact InSv
Unit1:   Act   InSv

    STC               0       0       0       0       0

STC  100    STCM  0     Ctrl  0     Bd    InSv
```

11   To manually busy the signaling terminals (ST), type

>BSY ALL

and press the Enter key.

Example of a MAP response:

```
STC 301
STC 302
STC 303
STC 304
This will busy the above STC(S)
Please confirm ("YES", "Y", "NO", or "N"):
```

12   To confirm the command, type

>YES

and press the Enter key.

If you	Do
set STs in both STCMs to busy	step 14
set STs in only one STCM to busy	step 13

13   Repeat steps 10 to 12 for the other STC.

NT0X91
in an MS7E, ST7E, or ST6E (continued)

At the frame

14

	WARNING
⚠	**Static electricity damage** Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

To power down the power converter for the first STC, pull and set the POWER switch handle down to the OFF position.

15 Repeat step 14 for the power converter for the second STC associated with the card you are replacing.

16 Turn off the CBs for the power converters associated with the card you are replacing.

17 Unscrew the slotted nut on the left-hand side of the FSP.

18 Open the FSP.

19

	WARNING
⚠	**Loss of service** Make sure that the alarm and control card you remove controls the shelves with the STs that you set to manually busy. Removal of the wrong card causes a loss of service.

Remove the NT0X91 card from the CD slot in the FSP.

20 Place the removed card in an electrostatic discharge (ESD) protective container.

21 Make sure that the replacement card has the same PEC, including suffix, as the removed card.

22 Insert the replacement card.

23 Close the FSP.

24 Tighten the slotted nut on the FSP.

25 The next action depends on the power converter version and the type of supervisory panel.

If the power converter	Do
is an NT2X70AE card and the FSP has circuit breakers	step 26

If the power converter	Do
is an NT2X70AE card and the FSP does not have circuit breakers	step 27
is not an NT2X70AE card and the FSP has circuit breakers	step 28
is not an NT2X70AE card and the FSP does not have circuit breakers	step 29

26 Power up the converter.

    a Pull and set the POWER switch handle up to the RESET position and hold.

    b Pull and set the converter circuit breaker handle on the FSP up until it clicks into place.

    c Release the POWER switch handle.

       Go to step 30.

27 Power up the converter.

    a Pull and set the POWER switch handle up to the RESET position and hold until the CONVERTER FAIL LED goes off.

    b Release the handle.

       Go to step 30.

28 Power up the converter.

    a Pull and set the POWER switch handle up to the ON position.

    b Press and hold the RESET button on the power converter.

    c Pull and set the converter circuit breaker handle on the FSP up until it clicks into place.

    d Release the RESET button.

       Go to step 30.

29 Power up the converter.

    a Pull and set the POWER switch handle up to the ON position.

    b Press and hold the RESET button on the power converter until the CONVERTER FAIL LED goes off.

    c Release the RESET button.

NT0X91
in an MS7E, ST7E, or ST6E (continued)

At the MAP terminal

30   To load the STs, type

>LOADPM ALL

and press the Enter key.

where

> **unit_no**
>   is the PM unit number (0 or 1)

Example #1 of a MAP response:

```
STC 301  load Passed : M7CQA01
STC 302  load Passed : M7CQA01
STC 303  load Passed : M7CQA01
STC 304  load Passed : M7CQA01
```

Example #2 of a MAP response:

```
STC load 'M7QA01' not in MSB7 0
```

If the LOADPM command	Do
passed	step 36
failed, with the message STC Load loadname not in msb_unit	step 31
failed, with a message other than listed here	step 33

> *Note:* As shown above in *Example #2 of a MAP response:*, `loadname` is the name of the ST load; `msb_unit` is the MSB (MSB6, MSB7) and the unit number.

31   To return to the PM level of the MAP display, type

>QUIT

and press the Enter key.

32   To add the load to the MSB, type

>STCLOAD PM ADD loadname

and press the Enter key.

where

loadname
is the STC load name

If the STCLOAD command	Do
failed	step 33
passed	step 34

33 To load the PM unit, use the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

34 To access the STC level of the MAP display, type

>STC

and press the Enter key.

35 To post the STC, type

>POST stcm_no

and press the Enter key.

where

stcm_no
is the STCM number (0 to 9)

Go to step 30.

36 To return the STs to service, type

>RTS ALL

and press the Enter key.

Example of a MAP response:
STC 301   Out-of-service test initiated
STC 301 Tst Passed
STC 301 Rts Passed
STC 302   Out-of-service test initiated
STC 302 Tst Passed
STC 302 Rts Passed
STC 303   Out-of-service test initiated
STC 303 Tst Passed
STC 303 Rts Passed
STC 304   Out-of-service test initiated
STC 304 TsT Passed
STC 304 Rts Passed

If the RTS command	Do
passed for all STs, and you have not worked on the other STC	step 37

NT0X91
in an MS7E, ST7E, or ST6E (end)

If the RTS command	Do
passed for all STs, and you have worked on the other STC	step 39
failed for any ST	step 42

37 To post the other STC, type

>POST stcm_no

and press the Enter key.

where

> **stcm_no**
>   is the STC number (0 to 9)

38 Repeat steps 30 to 36 for the other STC. When you have loaded and returned to service all STs, go to step 39.

39 The next action depends on your reason for performing this procedure.

If	Do
a maintenance procedure directed you to this procedure	step 40
a maintenance procedure did not direct you to this procedure	step 43

40 Return to the maintenance procedure that sent you to this procedure and continue as directed.

41 For additional help with changing the NT0X91AA in the MS7E, contact the next level of support.

> **Note:** To change the NT0X91AA, you must install a test strap to maintain power on the in-service PM unit. Use of a test strap in this event is advanced maintenance and qualified personnel must perform the installation.

42 For additional help, contact the next level of support.

43 The procedure is complete.

NT0X91
in a network equipment frame

Application

Use this procedure to replace an NT0X91 in the shelves or frames listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA	Drive and alarm card	NT0X48 single-bay network (NET), NT5X13 combined single-bay network (NETC), NT8X11 dual shelf network (DSN)
NT0X91	AE	Drive and protection card	NET, NETC, DSN

If you cannot identify the product engineering code (PEC), PEC suffix, or shelf or frame for the card to replace, refer to the Index. The Index provides a list of the cards, shelves, and frames in this card replacement book.

Common procedures

There are no common procedures.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X91
in a network equipment frame (continued)

Replacing a NT0X91 in a network equipment frame

At the frame

1

> **DANGER**
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel
> (FSP) have an electrical potential of -48 V dc. Remove all
> jewelry before you replace a card in the FSP.Make sure you
> do not touch any terminal inside the FSP.

> **WARNING**
> **Loss of service**
> Before you perform this procedure, notify all far-end offices
> with common channel signaling of a possible temporary
> alarm. The out-of-service test used in this procedure can
> cause a temporary alarm in far-end offices.

> **WARNING**
> **Loss of service**
> This procedure includes directions to manually busy one
> plane of a network pair, resulting in loss of network
> redundancy. Perform this procedure to restore out-of-service
> components as required. Unless it is urgent, carry out this
> procedure during periods of low traffic.

Obtain a replacement card. Make sure the replacement card and the card
you replace have the same PEC and PEC suffix.

2 Use the following table to identify the slot that contains the alarm and control
card that you replace:

NT0X91
in a network equipment frame (continued)

If Alarm and control card	Do Slot
is NT0X91AA	CD1
is NT0X91AE	CD2

NT0X91
in a network equipment frame (continued)

3   Record information on FSP fuses, FSP circuit breakers (CB), and network shelf positions associated with the card you replace. Use the following table to obtain this information.

(Sheet 1 of 2)

Network frame	FSP card	FSP card position	FSP fuses or CBs	Shelf position	Shelf function
NET (fuses)	NT0X91AA	CD1	F04	18	I/F
			F02	51	I/F
	NT0X91AE	CD2	F03	32	XPT
			F01	65	XPT
NET (CBs)	NT0X91AA	CD1	CB4	18	I/F
			CB2	51	I/F
	NT0X91AE	CD2	CB3	32	XPT
			CB1	65	XPT
NETC	NT0X91AA	CD1	CB2	51	XPT
			CB1	65	I/F
	NT0X91AE	CD2	CB5	18	I/F
			CB4	32	XPT
DSN	NT0X91AA	CD1	CB1	65	NM
			CB2	51	NM

Note 1: NET = NT0X48; NETC = NT5X13; DSN = NT8X11

Note 2: Some NT0X48 frames can have FSPs with fuses only.

Note 3: All NET shelves associate with a specific pair for a specified plane. NETC shelves 51 and 65 comprise the pair for plane 0, and shelves 18 and 32 comprise the pair for plane 1. DSN shelves 51 and 65 are each a pair associated with plane 0, and shelves 18 and 32 are each a pair that associate with plane 1.

Note 4: I/F = interface, XPT = crosspoint; NM = network module (combined I/F and XPT)

NT0X91
in a network equipment frame (continued)

(Sheet 2 of 2)

Network frame	FSP card	FSP card position	FSP fuses or CBs	Shelf position	Shelf function
	NT0X91AE	CD2	CB5	32	NM
			CB4	18	NM

Note 1: NET = NT0X48; NETC = NT5X13; DSN = NT8X11

Note 2: Some NT0X48 frames can have FSPs with fuses only.

Note 3: All NET shelves associate with a specific pair for a specified plane. NETC shelves 51 and 65 comprise the pair for plane 0, and shelves 18 and 32 comprise the pair for plane 1. DSN shelves 51 and 65 are each a pair associated with plane 0, and shelves 18 and 32 are each a pair that associate with plane 1.

Note 4: I/F = interface, XPT = crosspoint; NM = network module (combined I/F and XPT)

At the MAP terminal

4   To access the NET level of the MAP display, type

       >MAPCI;MTC;NET

       and press the Enter key.

       Example of a MAP display:

```
 Net                   11111 11111 22222 22222 33
  Plane 01234 56789 01234 56789 01234 56789 01
    0   S. . .
    1   . . . .
  JNET:
```

5   The next action depends on your knowledge about the network plane and pair associated with the card you replace.

If you	Do
know the network plane and pair associated with the card to replace	step 10
do not know the network plane and pair associated with the card to replace	step 6

6   Select a network plane and pair.

7   To display the frame and shelf location, type

       >LOC plane_no pair_no

NT0X91
in a network equipment frame (continued)

and press the Enter key.

where

plane_no
   is the network plane number (0 to 1)

pair_no
   is the network plane pair number (0 to 31)

Example of a MAP response:

```
Site Flr RPos  Bay_id   Shf  Description   Slot      EqPEC
HOST  01  B09  NET0 00       NM  0-00                5X13
```

> **Note:** The frame location appears under the Flr and RPos headers on the MAP display. For the NT8X11 DSN, the shelf location appears under the Shf header. The network plane and pair appear under the Bay_id header.

8   Correlate the location displayed with the known frame location of FSP card you will replace.

If the network module	Do
corresponds to the FSP card you replace	step 10
does not correspond to the FSP card you replace	step 9

9   Repeat step 6 for another network plane and pair. Identify a network plane and pair associated with the card you replace. Go to step 10.

10   To manually busy the plane and network module associated with the alarm and control card to replace, type

>BSY plane_no pair_no

and press the Enter key.

where

plane_no
   is the network plane number (0 to 1)

pair_no
   is the network plane pair number (0 to 31)

Example of a MAP response:

bsy 0 0
OK

If the BSY command	Do
passed	step 11

NT0X91
in a network equipment frame (continued)

If the BSY command	Do
needs confirmation	step 39
failed	step 40

11   Wait 30 min to make sure that calls in progress finish.

       Note: If you replace a card that failed, you do not need the waiting period. Calls do not process on that network plane and pair.

12   To obtain information on the link to the message switch (MS), type

       >TRNSL plane_no pair_no

       and press the Enter key.

       where

           plane_no
             is the number of the network plane (0 to 1)

           pair_no
             is the number of the network plane pair (0 to 31)

       Example of a MAP response:

       NM 0-0 = MS   0 and 1,   Card 22 Port 1

13   Record the slot position and the port number of the MS port card that connects to the network plane and pair. In the example MAP response in step 12, the slot position is 22 and the port number is 1.

14   To access the MS;SHELF level of the MAP display, type

       >MS;SHELF

       and press the Enter key.

       Example of a MAP display:

```
      Message Switch    Clock    Shelf   0            Inter-MS Link 0 1
MS 0         .          M Free           F                         - -
MS 1         S          Slave           C                         - -

Shelf 0                      1 1 1 1 1 1 1 1 1 1 2 2 2 2 2 2 2
Card  1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6
Chain
MS 0  . . I . . - - - - - - - - - - - - - . . . . . . . F .
MS 1  C C C C C - - - - - - - - - - - - - C C C C C C C C C
```

15   To post the card in the slot that you recorded in step 13, type

       >CARD slot_no

       and press the Enter key.

       where

slot_no
is the number of the card slot that you recorded in step 13

Example of a MAP display:

```
      Message Switch    Clock    Shelf  0          Inter-MS Link 0 1
MS 0          .          M Free            F                        - -
MS 1          S          Slave            C                        - -
Shelf 0                     1 1 1 1 1 1 1 1 1 1 2 2 2 2 2 2 2
Card   1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6 7 8 9 0 1 2 3 4 5 6
Chain
MS 0  . . I . . - - - - - - - - - - - - - . . . . . . . F .
MS 1  . . . . . - - - - - - - - - - - - - . . . . . . . . .

Card 22 Protocol Port  0_____3
MS 0  .   DS30      4    . P . . .
MS 1  .   DS30      4    . P . .
```

16   To manually busy the port on MS 0 that connects to the network plane and
         pair, type

         >BSY 0 PORT port_no

         and press the Enter key.

         where

              port_no
              is the port number that you recorded in step 13

         Example of a MAP response:

```
Request to MAN BUSY MS: 0 shelf: 0 card:22 port:  1 submitted.
Request to MAN BUSY MS: 0 shelf: 0 card:22 port:  1 passed.
```

17   To manually busy the port on MS1 that connects to the network plane and
         pair, type

         >BSY 1 PORT port_no

         and press the Enter key.

         where

              port_no
              is the port number that you recorded in step 13

NT0X91
in a network equipment frame (continued)

At the frame

> ⚠️ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) or a modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Power down the shelves associated with the FSP card you replace.

   a   Choose a shelf.

   b   Pull down and set the handle of the POWER switch on the power converter to the OFF position.

   c   Repeat steps 18a.a and 18b.b for each power converter on the shelf.

   d   Repeat steps 18a.a to 18c.c for each shelf associated with the FSP card that you replace.

19   Unscrew the slotted nut on the left of the FSP.

20   Open the FSP.

21

> ⚠️ **WARNING**
> **Loss of service**
> Make sure that the alarm and control card that you remove controls the network modules that you manually busied. Removal of the wrong card causes a loss of service.

Remove the NT0X91 card from the correct slot.

22   Insert the replacement card.

23   Close the FSP.

24   Tighten the slotted nut on the FSP.

25   The next action depends on the type of power converter in the affected shelves and the type of supervisory panel.

If the shelf	Do
has an NT2X70AE card and the FSP has circuit breakers	step 26

If the shelf	Do
has an NT2X70AE card and the FSP does not have circuit breakers	step 27
does not have an NT2X70AE card and the FSP has circuit breakers	step 28
does not have an NT2X70AE card and the FSP does not have circuit breakers	step 29

26   Power up the converter as follows:

    a   Pull up and set the handle of the POWER switch to the RESET position and hold.

    b   Pull up and set the handle of the converter circuit breaker on the FSP until the handle clicks into place.

    c   Release the handle of the POWER switch.

    Go to step 30.

27   Power up the converter as follows:

    a   Pull up and set the handle of the POWER switch to the RESET position until the CONVERTER FAIL LED turns off.

    b   Release the handle.

    Go to step 30.

28   Power up the converter as follows:

    a   Pull up and set the handle of the POWER switch to the ON position.

    b   Press and hold the RESET button on the power converter.

    c   Pull up and set the handle of the converter circuit breaker on the FSP until the handle clicks into place.

    d   Release the RESET button.

    Go to step 30.

29   Power up the converter as follows:

    a   Pull up and set the handle of the POWER switch to the ON position.

    b   Press and hold the RESET button on the power converter until the CONVERTER FAIL LED turns off.

    c   Release the RESET button.

30   The next action depends on the power converter configuration for the shelf.

If the shelf	Do
has one power converter	step 32

NT0X91
in a network equipment frame (continued)

If the shelf	Do
has two power converters, and you powered up both converters	step 32
has two power converters, you powered up only one converter, and the mate converter is an NT2X06 or an NT2X07	step 31

31 Repeat step 25 for the second power converter on the shelf. Go to step 32.

32 Repeat steps 25 to 31 for the other shelf associated with the FSP card you replace. Go to step 33.

At the MAP terminal

33 To return to service the port on MS0 that connects to the network plane and pair, type

   >RTS 0 PORT port_no

   and press the Enter key.

   where

   port_no
      is the port number that you recorded in step 13

   Example of a MAP response:

   ```
   Request to RTS MS: 0 shelf: 0 card:22 port:  1 submitted.
   Request to RTS MS: 0 shelf: 0 card:22 port:  1 passed.
   ```

34 To return to service the port on MS1 that connects to the network plane and pair in use, type

   >RTS 1 PORT port_no

   and press the Enter key.

   where

   port_no
      is the port number that you recorded in step 13

35 To access the NET level of the MAP display, type

   >NET

   and press the Enter key.

36 To return the network module to service, type

   >RTS plane_no pair_no

   and press the Enter key.

   where

NT0X91
in a network equipment frame (end)

plane_no
   is the number of the network plane (0 to 1)

pair_no
   is the number of the network plane pair (0 to 31)

Example of a MAP response:

```
rts 0 0
Request submitted. Reply expected within 3 mins.
Test Passed
OK
```

If the RTS command	Do
passed	step 37
failed	step 40

37   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 38
did not direct you to this procedure	step 41

38   Return to the maintenance procedure that directed you to this procedure and continue as directed.

39   To determine if you can manually busy the network plane and pair, contact operating company personnel or the next level of support. Continue as directed.

40   For additional help, contact the next level of support.

41   The procedure is complete.

NT0X91
in a trunk module equipment frame

Application

Use this procedure to replace an NT0X91 in a trunk module equipment (TME) frame, as listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT0X91	AA, AB	Drive and alarm card	TME equipped with integrated service module (ISM), maintenance trunk module (MTM), office alarm unit (OAU), service trunk module (STM), or trunk module (TM)
NT0X91	AD	Drive and protection card	TME equipped with ISM, MTM, OAU, STM, or TM

If you cannot identify the product engineering code (PEC), PEC suffix, or shelf or frame for the card to replace, refer to the Index. The Index provides a list of cards, shelves, and frames in this card replacement book.

Note: This procedure does not cover card replacement for DCE frames equipped with digital carrier modules (DCM). A separate procedure covers FSP card replacement for digital carrier equipment (DCE) frames.

Common procedures

This procedure refers to *Loading a PM*.

Do not go to the common procedure unless the step-action procedure directs you.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Summary of replacing a NT0X91 in a trunk module equipment frame

Post the PMs

↓

Manually busy the circuits

↓

Manually busy the PMs

↓

Power down the shelves

↓

Replace the card

↓

Power up the shelves

↓

Return the PMs to service

↓

Return the circuits to service → End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NT0X91
in a trunk module equipment frame (continued)

Replacing a NT0X91 in a trunk module equipment frame

At the frame

1

> **DANGER**
> **Risk of electrocution**
> Some of the terminals inside the frame supervisory panel
> (FSP) have an electrical potential of -48 V dc. Make sure
> you remove all jewelry before you replace a card in the FSP.
> Do not touch any terminal in the FSP.

> **WARNING**
> **Loss of service**
> This procedure removes an ISM, MTM, STM, or TM from
> service, which can cause service degradation. Perform this
> procedure only if you must restore out-of-service
> components. If you do not need to restore out-of-service
> components, perform this procedure during periods of low
> traffic. Do not perform this procedure if essential services use
> PM resources.

Obtain a replacement card. Make sure that the replacement card and the card you remove have the same PEC and PEC suffix.

2   Use the following table to identify the slot that contains the alarm and control card to replace:

NT0X91
in a trunk module equipment frame (continued)

If Alarm and control card	Do Slot
NT0X91AA	CD1
NT0X91AB	CD2
NT0X91AD	CD3

NT0X91
in a trunk module equipment frame (continued)

3 Record information on FSP fuses, FSP circuit breakers (CB), and network shelf positions associated with the card you replace. Use the following table to obtain this information.

FSP card	FSP card position	FSP circuit breakers	Shelf position
NT0X91AA	CD1	CB5	04
NT0X91AB	CD2	CB3	32
		CB1	65
NT0X91AD	CD3	CB4	18
		CB2	51

Note 1: A minimum of one shelf can be unequipped.

Note 2: If the TME is equipped with the OAU, shelf positions 51 and 65 are used for the magnetic tape drive. Only shelf positions 04, 18, and 32 can be equipped with PMs. In this event, only one shelf associates with each FSP card.

4 Select a shelf associated with the FSP card you replace.

At the MAP terminal

5 To access the PM level of the MAP display, type

 >MAPCI;MTC;PM

 and press the Enter key.

 Example of a MAP display:

```
            SysB    ManB    OffL    CBsy    ISTb    InSv
PM            1               6                        102
```

6 The next step depends on the type of PM that is in the shelf.

If the PM	Do
is an OAU	step 7
is an ISM, MTM, STM, or TM	step 11

7 To post the OAU, type

 >POST OAU pm_no

 and press the Enter key.

 where

NT0X91
in a trunk module equipment frame (continued)

pm_no
  is the number of the PM (0 to 9999)

Example of a MAP display:

```
                  SysB    ManB    OffL    CBsy    ISTb    InSv
PM                1       0       6       0       0       102
OAU               1       0       0       0       0

0OAU     0    SysB
```

8   Determine the state of the PM.

> *Note:* The PM state appears on the right of the PM number. In the
> example display in step 7, the PM state is system busy (SysB).

If the PM	Do
is Offl	step 89
is ManB	step 36
is other than listed here	step 9

9   A maintenance flag (Mtce) can appear. This flag indicates that
     system-initiated maintenance tasks are in progress. Wait until the flag
     disappears from the status line before you proceed to the next step.

10   To manually busy the PM, type

   >BSY

   and press the Enter key.

   Example of a MAP display:

```
                  SysB    ManB    OffL    CBsy    ISTb
     PM           58      1       6       14      12
     OAU          0       1       0       0       0

0OAU     0    ManB
bsy
OAU 0 Bsy
OK.
```

   Go to step 36.

11   Verify from office records or operating company personnel that necessary
     services do not use the PM resources that this procedure affects.

> *Note:* When you verify resources, include all PMs associated with the
> shelf. For all service and trunk modules, include NT1X80 cards and
> NT1X81 cards (single-card PMs) on the shelf. You must remove these
> single-card PMs from service to complete this procedure. If the shelf has
> an STM, check for necessary services on the STM on the other half of the

NT0X91
in a trunk module equipment frame (continued)

shelf. You must remove both STMs from service to complete this procedure.

If necessary services	Do
use PM resources and a minimum of one PM is in service	step 88
use PM resources and all PMs are out of service	step 12
do not use PM resources	step 12

12 To post the PM, type

>**POST pm_type pm_no**

and press the Enter key.

where

    pm_type
      is the type of PM (ISM, MTM, STM, TM)

    pm_no
      is the number of the PM (0 to 9999)

Example of a MAP display:

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
   PM           1       0       6       0       0     102
   MTM          1       0       0       0       0       9

MTM     0    SysB
```

13 Determine the state of the PM.

    Note: The PM state appears on the right of the PM number. In the example display in step 12, the PM state is system busy (SysB).

If the PM	Do
is Offl	step 89
is other than listed here	step 14

14 To access the TTP level of the MAP display, type

>**MAPCI;MTC;TRKS;TTP**

and press the Enter key.

Example of a MAP display:

```
POST         DELQ            BUSYQ         DIG
TTP  6-013
CKT TYPE     PM NO.          COM LANG     STA S R  DOT TE  RESULT
```

NT0X91
in a trunk module equipment frame (continued)

15   To post the circuits for the PM, type

>**POST P pm_type pm_no**

and press the Enter key.

where

pm_type
is the type of PM (ISM, MTM, STM, TM)

pm_no
is the number of the PM (0 to 9999)

Example of a MAP display:

```
POST    17  DELQ            BUSYQ         DIG
TTP  6-013
CKT TYPE     PM NO.          COM LANG    STA S R  DOT TE   RESULT
CONF6    MTM   0  0  CF6P            0  IDL

post p MTM 0
LAST CKT = 17
SHORT CLLI IS: CF6P
OK,CKT POSTED
```

16   To manually busy all posted circuits, type

>**BSY ALL**

and press the Enter key.

Example of a MAP display:

```
POST    18  DELQ            BUSYQ  A  6  DIG
TTP  6-027
CKT TYPE     PM NO.          COM LANG    STA S R  DOT TE   RESULT

BSYQ ALL IDLE

bsy all
OK,POST SET IS SET IN BSYQ
```

17   Wait until all circuits are manually busy (removed from the busy queue) before you proceed to the next step.

> **Note:** The digit on the right of the BUSYQ header indicates the number of circuits in use. As a circuit becomes available, the circuit is manually busy and the number in the queue decreases by one. A blank field indicates that all circuits are manually busy.

18   Determine if the shelf has the NT1X80 enhanced-digital recorded announcement machine (EDRAM) card or the NT1X81 conference card.

If the shelf	Do
has the NT1X80 or the NT1X81	step 19

NT0X91
in a trunk module equipment frame (continued)

If the shelf	Do
does not have the NT1X80 or the NT1X81	step 23

19 To post the circuits for the single-card PM, type

>POST P pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of single card PM (CTM, DTM)

> **pm_no**
> is the number of the PM (0 to 9999)

> **Note:** The MAP display refers to the NT1X80 EDRAM card as a DTM. The MAP display refers to the NT1X81 conference card as a CTM. Both cards are single-card PMs.

20 To manually busy all posted circuits, type

>BSY ALL

and press the Enter key.

21 Wait until all circuits are manually busy (removed from the busy queue) before you proceed to the next step.

22 Repeat steps 19 to 21 for all NT1X80 and NT1X81 cards on the shelf.

23 To access the PM level of the MAP display, type

>PM

and press the Enter key.

24 To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (ISM, MTM, STM, TM)

> **pm_no**
> is the number of the PM (0 to 9999)

25 Determine the state of the PM.

If the PM	Do
is ManB	step 27
is other than listed here	step 26

26   To manually busy the PM, type

>BSY

and press the Enter key.

Example of a MAP display:

```
              SysB    ManB    OffL    CBsy    ISTb    InSv
      PM        58       1       6      14      12      17
      MTM        0       1       0       0       0       9

MTM    0    ManB
bsy
MTM 0 Bsy
OK.
```

27   Determine if the shelf has the NT1X80 enhanced-digital recorded announcement machine (EDRAM) card or the NT1X81 conference card.

If the shelf	Do
has the NT1X80 or the NT1X81	step 28
does not have the NT1X80 or the NT1X81	step 32

28   To post the single-card PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of single card PM (CTM, DTM)

> **pm_no**
> is the number of the PM (0 to 9999)

29   Determine the state of the PM.

If the PM	Do
is ManB	step 35
is other than listed here	step 30

30   To manually busy the PM, type

>BSY

and press the Enter key.

31   Repeat steps 28 to 30 for all NT1X80 and NT1X81 cards on the shelf.

NT0X91
in a trunk module equipment frame (continued)

32   Determine if the shelf has a STM.

If the shelf	Do
has a STM, and only one STM is manually busy	step 33
has a STM, and both STMs are manually busy	step 34
has a STM	step 34

33

> **WARNING**
> **Loss of service**
> When you power down a STM, the mate power converter in the other STM on the shelf trips. It is recommended to manually busy and turn off both STMs on a shelf.

Repeat steps 12 to 32 for the STM in the other half of the shelf.

34   The next action depends on how many shelves equipped with PMs associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 36
two shelves equipped with PMs associate with the card, and you turned down functionality for only one shelf	step 35
two shelves equipped with PMs associate with the card, and you turned down functionality for both shelves	step 36

35   Repeat steps 4 to 34 for PMs in the other shelf associated with the FSP card you replace. Go to step 36.

NT0X91
in a trunk module equipment frame (continued)

At the shelf

36

> ⚠ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist-strap grounding point is on a modular supervisory panel (MSP) or a frame supervisory panel (FSP). The wrist-strap protects the cards against static electricity damage.

Select a shelf to turn off.

37 Pull and set the POWER switch handle on the power converter down to the OFF position.

38 The next action depends on the type of PM in the shelf.

If the shelf	Do
has an STM (with or without DRAM)	step 39
has an MTM (with or without DRAM)	step 40
has an ISM (with or without DRAM)	step 41
is equipped as a TM	step 41

39 For the mate power converter in the STM on the other half of the shelf, set the POWER switch to the OFF position.

Go to step 41.

40 For the other power converter on the shelf, pull and set the POWER switch handle to the OFF position.

41 The next action depends on how many shelves equipped with PMs associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 43

NT0X91
in a trunk module equipment frame (continued)

If	Do
two shelves equipped with PMs associate with the card, and you powered down only one shelf	step 46
two shelves equipped with PMs associate with the card, and you powered down both shelves	step 43

42	Repeat steps 37 to 41 for PMs in the other shelf associated with the FSP card you replace. Go to step 43.
43	Unscrew the slotted nut on the left-hand side of the FSP.
44	Open the FSP.
45	Remove the card.
46	Insert the replacement alarm and control card.
47	Close the FSP.
48	Tighten the slotted nut on the FSP.
49	Select a shelf to power up.
50	The next action depends on the type of power converter and the type of supervisory panel.

If you	Do
replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 51
replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 52
are not replacing an NT2X70AE card and the FSP or MSP has circuit breakers	step 53
do not replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 54

51		Power up the converter.
	a	Pull and set the POWER switch handle up to the RESET position and hold.

NT0X91
in a trunk module equipment frame (continued)

    b Pull and set the converter circuit breaker handle on the FSP or MSP up until the handle clicks into place.

    c Release the POWER switch handle.

        Go to step 55.

52   Power up the converter.

    a Pull and set the POWER switch handle up to the RESET position and hold until the CONVERTER FAIL LED goes off.

    b Release the handle.

        Go to step 55.

53   Power up the converter.

    a Pull and set the POWER switch handle up to the ON position.

    b Press and hold the RESET button on the power converter.

    c Pull the handle of the converter circuit breaker on the FSP or MSP up until the handle clicks into place.

    d Release the RESET button.

        Go to step 55.

54   Power up the converter.

    a Pull and set the POWER switch handle up to the ON position.

    b Press and hold the RESET button on the power converter until the CONVERTER FAIL LED goes off.

    c Release the RESET button.

55   Determine the type of PM in the shelf, and if you powered up both power converters.

If the shelf	Do
has an STM or an MTM (with or without DRAM) and you already powered up both power converters	step 60
has an STM (with or without DRAM)	step 56
has an MTM (with or without DRAM)	step 57
has an ISM (with or without DRAM)	step 60
is equipped as a TM	step 60

NT0X91
in a trunk module equipment frame (continued)

56   For the mate power converter in the STM on the other half of the shelf, repeat steps 50 to 55. Go to step 58.

57   For the other power converter on the shelf, repeat steps 50 to 55. Go to step 58.

58   The next action depends on how many shelves associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 60
two shelves equipped with PMs associate with the card, and you powered up only one shelf	step 59
two shelves equipped with PMs associate with the card, and you powered up both shelves	step 60

59   Repeat steps 50 to 58 for PMs in the other shelf associated with the FSP card you replace. Go to step 60.

At the MAP terminal

60   To access the PM level of the MAP display, type

>PM

and press the Enter key.

61   The next step depends on the type of PM that is in the shelf.

If the PM	Do
is an OAU	step 62
is an ISM, MTM, STM, or TM	step 66

62   To post the OAU, type

>POST OAU pm_no

and press the Enter key.

where

    pm_no
        is the number of the PM (0 to 9999)

63   To load the OAU, type

>LOADPM

and press the Enter key.

NT0X91
in a trunk module equipment frame (continued)

Example of a MAP response:

```
OAU 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 65
failed	step 64

64   To load the PM, perform the procedure *Loading a PM* in this document.
Complete the procedure and return to this point.

65   To return the PM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
OAU 0 Rts Passed
```

If the RTS command	Do
passed	step 84
failed	step 91

66   To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (ISM, MTM, STM, TM)

> **pm_no**
> is the number of the PM (0 to 9999)

67   To load the PM, type

>LOADPM

and press the Enter key.

Example of a MAP response:

```
MTM 0 LoadPM  Passed
```

If the LOADPM command	Do
passed	step 69

NT0X91
in a trunk module equipment frame (continued)

If the LOADPM command	Do
failed	step 68

68 To load the PM, perform the procedure *Loading a PM* in this document. Complete the procedure and return to this point.

69 To return the PM to service, type

>RTS

and press the Enter key.

Example of a MAP response:

```
MTM 0 Rts Passed
```

If the RTS command	Do
passed, and the PM is InSv	step 71
passed, and the PM is ISTb with a card list generated	step 70
failed	step 91

70 Record the messages on the MAP display for future reference.

71 To access the TTP level of the MAP display, type

>TRKS;TTP

and press the Enter key.

72 To post the circuits for the PM, type

>POST TM pm_type pm_no

and press the Enter key.

where

> **pm_type**
> is the type of PM (ISM, MTM, STM, TM)

> **pm_no**
> is the number of the PM (0 to 9999)

73 To return all circuits to service, type

>RTS ALL

and press the Enter key.

Example of a MAP response:

```
RTS OK
```

74   The next action depends on the results of the PM RTS in step 69.

If the RTS command	Do
passed without problems	step 81
passed, but in-service tests failed and the system generated a card list	step 75

75   To manually busy all posted circuits, type

>BSY ALL

and press the Enter key.

76   To return all circuits to service, type

>RTS ALL

and press the Enter key.

77   To access the PM level of the MAP display, type

>PM

and press the Enter key.

78   To post the PM, type

>POST pm_type pm_no

and press the Enter key.

where

   pm_type
       is the type of PM (CTM, DTM, ISM, MTM, STM, TM)

   pm_no
       is the number of the PM (0 to 9999)

79   To perform an in-service test on the PM, type

>TST

and press the Enter key.

Example of a MAP response:

NT0X91
in a trunk module equipment frame (continued)

```
MTM      0     ISTb            TSTFAIL

InSvce Tests Initiated
MTM 0 Tst Failed
Site Flr RPos  Bay_id   Shf  Description   Slot     EqPEC
HOST  00  D06  TME  00   04  MTM : 000     04       2X59
HOST  00  D06  TME  00   04  MTM : 000     02       0X70
Following ISTb Exist :
Test Failed
```

If the TST command	Do
passed, and single-card PMs or an STM are out of service	step 81
passed, and you worked on all PMs on the shelf and you returned all PMs to service	step 84
passed, and you worked on all PMs on the shelf, not all PMs returned to service	step 91
failed, and single-card PMs or an STM that you did not work on that you must return to service	step 80
failed, and you worked on all PMs on the shelf	step 91

80   Record the messages on the MAP display for future reference.

81   To access the PM level of the MAP display, type

>**PM**

and press the Enter key.

82   To post the PM, type

>**POST   pm_type   pm_no**

and press the Enter key.

where

pm_type
is the type of PM (ISM, MTM, STM, TM)

pm_no
is the number of the PM (0 to 9999)

83   Repeat steps 66 to 79 for all PMs on this shelf. Go to step 84.

NT0X91
in a trunk module equipment frame (end)

84   Determine how many shelves associate with the FSP card you replace.

If	Do
one shelf equipped with PMs associates with the card	step 86
two shelves equipped with PMs associate with the card, and you returned to service the PM on only one shelf	step 85
two shelves equipped with PMs associate with the card, and you returned to service the PM on both shelves	step 86

85   Repeat steps 61 to 84 for PMs in the other shelf associated with the FSP card you replace. Go to step 86.

86   Determine if the maintenance procedure directed you to this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 87
did not direct you to this procedure	step 92

87   Return to the maintenance procedure that sent you to this procedure and continue as directed.

88   Contact the next level of support to determine how to handle necessary services. Continue as directed.

89   Contact operating company personnel to determine why the component is offline. Continue as directed.

90   Report the results of the maintenance activity to the next level of support.

91   For additional help, contact the next level of support.

92   The procedure is complete.

NT6X36
in LCE-type frames and CLCE

Application

Use this procedure to replace the following cards in the shelves or frames listed.

PEC	Suffix	Card name	Shelf or frame name
NT6X36	AA, AB	FSP alarm card	line concentrating equipment (LCE) frame
NT6X36	AA, EA	FSP alarm card	enhanced line concentrating equipment (LCEI) frame
NT6x36	AA, AB	FSP alarm card	cabinetized line concentrating equipment (CLCE), PEC NTRX30AA

Refer to the "Index" if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

There are no common procedures.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

10   Check the CONVERTER FAIL LEDs on each power converter for each shelf.

If	Do
the LED is lit for any power converter	step 11
the LED is not lit for each power converter	step 12

11   To clear alarms, go to *Alarm clearing and performance monitoring*. Do not return to this procedure.

12   The procedure is complete.

NTRX41
in MSP in streamline B cabinets

Application

Use this procedure to replace the following cards in a modular supervisory panel (MSP). The following table lists the cards.

PEC	Suffix	Card name	Shelf or frame name
NTRX41	AA	Alarm module	Cabinetized two-shelf network (CDSN)
NTRX41	AA	Alarm module	Cabinetized input-output equipment (CIOE)
NTRX41	AA	Alarm module	Cabinetized international peripheral equipment (CIPE)
NTRX41	AA	Alarm module	Cabinetized miscellaneous equipment (CMIS)
NTRX41	AA	Alarm module	Cabinetized trunk module equipment (CTME)
NTRX41	AA	Alarm module	Cabinetized digital trunk controller offshore (CDTO)
NTRX41	AA	Alarm module	Cabinetized line group controller offshore (CLGO)
NTRX41	AA	Alarm module	Cabinetized message switch 7 (CMS7)

Refer to the "Index" if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement NTP.

procedure.

NTRX41
in MSP in streamline B cabinets (continued)

Replacing a NTRX41 in MSP in streamline B cabinets

At your current location

1 Obtain a replacement module. Make sure that the replacement module and the module you remove have the same PEC and PEC suffix.

At the front of the MSP

2 To open the front cover of the MSP, pull out at the finger holes provided. Swing the cover down to the open position.

3

WARNING
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of a frame supervisory panel (FSP) to handle modules. The wrist strap protects the modules against static electricity damage.

DANGER
Risk of injury from high energy levels, equipment damage
When you remove or insert a module, do not apply direct pressure to module components. Make sure you do not force a module into a slot.

Put on a wrist strap.

At the front of the MSP

4   Remove the NTRX41 (alarm module) as follows:

    a   Locate the module.

        Note: The NTRX41 is in slots 5 and 6.

    b   Disengage (loosen) the captive screw at the top of the module.

    c   Pull down (open) the locking lever on the lower left corner of the module.

    d   Carefully pull the module toward you until the module clears the shelf.

5   Make sure the replacement module and the module you removed have the same PEC and PEC suffix.

6   Insert the replacement module as follows:

    a   Open the locking lever on the replacement module.

    b   Align the module with the slots in the shelf and carefully slide the module into the shelf.

    c   Use your fingers or thumbs to push on the upper and lower edges of the faceplate. Make sure the module sits completely in the shelf.

    d   Close the locking lever.

NTRX41
in MSP in streamline B cabinets (end)

    e   Tighten the captive screw at the top of the module.

If the MSP alarm LED	Do
remains off	step 8
turns on	step 7

7   For additional help, contact the next level of support.

8   The procedure is complete.

8 Input/output device card replacement procedures

Introduction

This chapter contains card replacement procedures for the input/output device (IOD). The first section in the chapter provides illustrations that show shelf layouts.

Card replacement procedures for the frame supervisory panel (FSP) and modular supervisory panel (MSP) are in the chapter "Frame supervisory panel and maintenance supervisory panel card replacement procedures".

Each procedure contains the following sections:

*   Application
*   Common procedures
*   Action

Application

This section identifies the IOD card(s) that the replacement procedure covers.

Common procedures

This section lists common procedures for the IOD card replacement procedure. A common procedure is a series of steps you repeat within maintenance procedures. The procedure for the removal and replacement of a card is a common procedure. Common procedures are in the common procedures chapter in this NTP.

Do not go to the common procedures unless the step-action procedure directs you to go.

Action

This procedure contains a summary flow chart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

Recording card replacement activities

When you replace a card, record the following information in office records:

- the serial number of the card you replaced

- the date you replaced the card

- the reason you replaced the card

IOD shelf layouts

Application

This module contains a frame layout diagram for the input/output equipment (IOE) frame. The module contains a cabinetized layout diagram for the integrated services cabinet (CISM). The module contains shelf layouts for the following:

- input/output controller (IOC) shelf

- single disk drive unit (DDU) shelf

- two DDU shelf

- input/output module (IOM) housed in a integrated services module (ISM) shelf

Note: The frame and shelf layouts on the following pages are standard. Differences in the shelves in your office can be present.

IOD shelf layouts (continued)

Disk drive and magnetic tape controller cards in an IOC

Application

Use this procedure to replace the following cards in an input/output controller (IOC).

PEC	Suffix	Card name	Shelf or frame name
NT1X55	AA, AB, BA, CA, DA	Disk drive controller card	IOC
NT1X55	FA	SCSI disk drive unit	IOC
NT1X68	AA, AB, AC, BB, BC, BD	Magnetic tape interface card	IOC

Refer to the "Index" if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- provisioned shelf
- provisioned frame

The "Index" contains a list of the cards, shelves, and frames documented in this card replacement book.

Note: If the IOC shelf contains a minimum of one NT1X55FA disk drive unit (DDU), the shelf must not contain the following power converter cards:

- NT2X70AA
- NT2X70AB
- NT2X70AC

If the IOC contains these cards, a loss of service on the DDUs can occur and a loss of data results. Contact the operating company personnel responsible for the next level of support.

Common procedures

Refer to *Replacing a card* in this document.

Disk drive and magnetic tape controller cards
in an IOC (continued)

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

At the shelf

13

	DANGER
	Static electricity damage
	Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist-strap grounding point is on a frame supervisory panel (FSP) or a modular supervisory panel (MSP). The wrist strap protects the cards against static electricity damage.

	WARNING
	Static electricity damage
	Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist-strap grounding point is on a frame supervisory panel (FSP) or a modular supervisory panel (MSP). The wrist strap protects the cards against static electricity damage.

To replace the card, use the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> **Note 1:** Make sure the handle of the PWR switch on the replacement power converter is in the OFF position.

> **Note 2:** Determine if the card you will replace has switches. Make sure the switches for the replacement card and the card you will replace have the same settings.

14   The next action depends on the type of card you replace.

If the card you replace	Do
is NT1X55FA	step 15
is other than listed here	step 26

At the MAP terminal

15   To start the disk drive motor, type

>**START**

and press the Enter key.

MAP response:

```
Disk Start Successful
```

Disk drive and magnetic tape controller cards
in an IOC (continued)

16   To test the disk drive, type

>**TST**

and press the Enter key.

Example of a MAP display:

```
Card 8  Unit    0
        User    SYSTEM  Drive_State
        Status  BSY     spinning
```

If the TST command	Do
passed	step 17
failed	step 40

17   To perform the volume allocation tests, perform the procedure *Allocating test volumes on 8-in., 5.25-in., or 2.5-in. DDUs* in *Routine Maintenance Procedures*. Complete the procedure and return to this point.

18   To perform interference and file transfer tests, perform the procedure *Performing DDU interference and file transfer tests.* This document is in *Routine Maintenance Procedures*. Complete the procedure and return to this point.

19   To access the CI level of the MAP display, type

>**QUIT   ALL**

and press the Enter key.

20   To access the allocation utility, type

>**ALLOC   ddu_no**

and press the Enter key.

where

   ddu_no
     is the DDU number (0 to 9)

21   To confirm the command, type

>**YES**

and press the Enter key.

22   To add a volume to the disk, type

>**ADD   vol_name   vol_size**

and press the Enter key.

   Note: You recorded the names and sizes of the required disk volumes in step 7.

where

   vol_name
     is the volume name you recorded in step 7

Disk drive and magnetic tape controller cards
in an IOC (continued)

> **vol_size**
> is the volume size you recorded in step 7

23 Repeat step 22 for each of the disk volumes that remain.

24 To enforce the allocation of the volumes, type

>**UPDATE**

and press the Enter key.

Example of a MAP response:

```
WARNING:  A break HX of this process may cause
          severe corruption on the disk that may
          require it to be reformatted.
Writing label of Volume IMAGE
Successful
Starting Initialization of Volume IMAGE
A break HX of this process may cause severe corruption
on this volume that may require reinitialization of all
non initialized volumes.
Number of Bad Blocks = 0
Successful
Update Done
```

25 To quit the allocation utility, type

>**QUIT**

and press the Enter key.

26 To manually busy the card, type

>**BSY**

and press the Enter key.

27 To test the card, type

>**TST**

and press the Enter key.

28 To return the card to service, type

>**RTS**

and press the Enter key.

> *Note:* If an NT1X55 is in use, the RTS command requires 75 s to complete.

If the RTS command	Do
passed	step 29
failed	step 40

Disk drive and magnetic tape controller cards
in an IOC (continued)

29   The next action depends on why you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 30
did not direct you to this procedure	step 41

30   Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

31

> ⚠ **WARNING**
> **Loss of data**
> If files are open do not busy the controller. If you busy the controller while files are open, billing data will be lost. For additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU.   Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

32   Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

>LOGUTIL;LISTDEVS

and press the Enter key.

33   Close files on volumes on the DDU of the IOC by typing

>STOPDEV   dev_name

and pressing the Enter key.

where

dev_name
    is the name of the device

34   To quit the allocation utility, type

>QUIT

and press the Enter key.

Disk drive and magnetic tape controller cards
in an IOC (end)

35 Repeat the ALLOC command to determine if the files are closed by typing

`>ALLOC`

and pressing the Enter key.

If the files	Do
are open	step 36
are closed	step 37

36 Confirm that you have done steps 31 to 35. If the files are still open, contact your next level of support.

37 Manually busy the DDU, by typing

`>BSY`

and pressing the Enter key.

If the DDU	Do
is ManB	step 9
is not ManB	step 40

38 When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

39 To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

40 For additional help, contact the next level of support.

41 The procedure is complete.

NT1X67
in an IOC

Application

Use this procedure to replace an NT1X67 in an input/output controller (IOC).

PEC	Suffix	Card name	Shelf or frame name
NT1X67	AA, AB, BC, BD, CB	Terminal controller card	IOC
NT1X67	BA, DA	Datalink controller card	IOC
NT1X67	BB, DB	DATAPAC controller card	IOC
NT1X67	FA	SMDI controller card	IOC

Refer to the Index if you cannot identify the following features for the card you want to replace:

*   product engineering code (PEC)

*   PEC suffix

*   provisioned shelf

*   provisioned frame

The Index contains a list of the cards, shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT1X67
in an IOC (continued)

Summary of replacing a NT1X67 in an IOC

Post the IOC

↓

Post the card

↓

Manually busy all ports on the card

↓

Replace the card

↓

Return all ports to service

↓

End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Replacing a NT1X67 in an IOC

At the shelf

1

> **WARNING**
> **Loss of billing and other data**
> Do not proceed if NT2X70AA, NT2X70AB, or NT2X70AC power converter cards power the IOC shelf. The following cards may not function reliably in an IOC powered by NT2X70AA, NT2X70AB, or NT2X70AC cards: NT1X55FA, NT1X89, or NT1X67BC/BD that run applications at 9600 baud (on one port or all four ports combined). Contact the personnel responsible for the next level of support.

> **WARNING**
> **Loss of service**
> If you remove IOC P-side ports from service, you can affect MAP access for other operating company personnel. Perform this procedure during periods of low maintenance activity.

Obtain a replacement card. Make sure the replacement card and the card you remove have the same PEC and PEC suffix.

2 Determine which power converter card is on the shelf that contains the card you want to replace.

If the power converter card is	Do
an NT2X70AA, NT2X70AB, or NT2X70AC	step 19
an NT2X70AD or NT2X70AE	step 3

At the MAP terminal

3 To access the IOD level of the MAP display, type

>**MAPCI;MTC;IOD**

and press the Enter key.

Example of a MAP display:

NT1X67
in an IOC (continued)

```
            IOD
            IOC  0  1  2  3
            STAT .  .  .  .
```

4   To post the IOC that associates with the card you will replace, type

>IOC ioc_no

and press the Enter key.

where

ioc_no
is the IOC identification number (0 to 19)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

```

6   Note the CONS ID and status for each port.

> ***Note:*** If you use a minimum of one of these IDs to access the MAP maintenance levels, logout. Use an ID on a different card or a different IOC.

If	Do
all ports are ManBsy	step 12
a minimum of one port is Offl	step 20
a minimum of one port is . (dot)	step 7
all ports are in any other out-of-service state	step 8

7   Notify all operating company personnel that you will remove from service the CONS IDs that associate with the card you replace.

8   To manually busy a port on the card, type

>BSY port_no

and press the Enter key.

where

   port_no
      is the port identification number (0 to 3)

If the BSY command	Do
passed	step 9
failed	step 21

9   Repeat step 8 until you manually busy all ports on the card. Go to step 10.

NT1X67
in an IOC (continued)

10   To offline a port on the card, type

        >OFFL port_no

        and press the Enter key.

        where

            port_no
                is the port identification number (0 to 3)

If the OFFL command	Do
passed	step 11
failed	step 21

11   Repeat step 10 until you offline all ports on the card. Go to step 12.

At the shelf

12

WARNING
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist-strap grounding point is on a frame supervisory panel (FSP) or a modular supervisory panel (MSP). The wrist trap protects the cards against static electricity damage.

        To replace the card, use the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

          Note: Determine if the card you replace has switches. Make sure the switches on the replacement card and the card you replace have the same settings.

At the MAP terminal

13   To manually busy a port on the card, type

        >BSY port_no

        and press the Enter key.

        where

            port_no
                is the port identification number (0 to 3)

If the BSY command	Do
passed	step 14

NT1X67
in an IOC (end)

If the BSY command	Do
failed	step 21

14   Repeat step 13 until you manually busy all ports on the card. Go to step 15.

15   To return a port to service, type

>RTS   port_no

and press the Enter key.

where

    port_no
       is the port identification number (0 to 3)

If the RTS command	Do
passed	step 16
failed	step 21

16   Repeat step 15 until you return all ports to service. Go to step 17.

17   The next action depends on why you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 18
did not direct you to this procedure	step 22

18   Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

19   Do not proceed if NT2X70AA, NT2X70AB, or NT2X70AC power converter cards power the IOC shelf. The following cards may not function reliably in an IOC powered by NT2X70AA, NT2X70AB, or NT2X70AC power converter cards:

- NT1X55FA

- NT1X67BC or NT1X67BD the run applications at 9600 baud (on one port or all four ports combined)

- NT1X89

Go to step 21.

20   To determine why the port is offline, consult operating company personnel. Continue as directed by operating company personnel.

21   For additional help, contact the operating company personnel responsible for the next level of support.

22   The procedure is complete.

NT1X78
in an IOE DDU shelf

Application

Use this procedure to replace an NT1X78 in the shelves or frames listed in the following table.

PEC	Suffix	Card name	Shelf or frame name
NT1X78	AA	Power converter card (+5V, -5V, -12V, +24V)	single-disk drive unit (DDU) shelf in an input/output equipment (IOE) frame; two-DDU shelf in an IOE frame
NT1X78	KA	-60V power converter card (+5V, -5V, -12V, +24V)	single-DDU shelf in an IOE frame; two-DDU shelf in an IOE frame

Refer to the Index if you cannot identify the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- equipped shelf
- equipped frame

The Index contains a list of the cars, shelves, and frames documented in this card replacement book.

Refer to figure Figure , "DDU shelf" on page -36 on page 8-26 for a diagram of the NT1X78 in a single-DDU shelf.

Common procedures

This procedure refers to *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

The following flowchart is a summary of the procedure. To replace the card, use the instructions that follow the flowchart.

NT1X78
in an IOE DDU shelf (continued)

Replacing a NT1X89 in an IOC shelf

At the MAP terminal

1

> ⚠ **WARNING**
> **Loss of billing and other data**
> Do not proceed if NT2X70AA, NT2X70AB, or NT2X70AC power converter cards power the IOC shelf. The following cards may not function reliably in an IOC powered by NT2X70AA, NT2X70AB, or NT2X70AC cards: NT1X55FA, NT1X89, or NT1X67BC/BD that run applications at 9600 baud (on one port or all four ports combined). Contact the personnel responsible for the next level of support.

> ⚠ **WARNING**
> **Loss of service**
> Perform this procedure during periods of low traffic. If you remove a multiprotocol controller (MPC) card from service you can affect Data Packet Network (DPN) service and the service of any other MPC cards on the same IOC shelf.

Obtain a replacement card. Make sure the replacement card and the you remove have the same PEC and PEC suffix.

2   Determine which power converter card is on the shelf that contains the card you want to replace.

If the power converter card	Do
is an NT2X70AA, NT2X70AB, or NT2X70AC	step 18
is an NT2X70AD or NT2X70AE	step 3

3   To access the IOD level of the MAP display, type

>MAPCI;MTC;IOD

and press the Enter key.

Example of a MAP display:

NT1X89
in an IOC shelf (continued)

```
IOD
IOC  0  1  2  3
STAT .  .  .  .
```

4   To post the IOC associated with the card you will replace, type

>**IOC ioc_no**

and press the Enter key.

where

    ioc_no
      is the IOC identification number (0 to 19)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP: AMA  B XFER:    .     SLM : SLMbsy NOP :    .      NX25:    .
MLP :    .    DPPP:    .     DPPU:    .     SCAI:    .

IOC    CARD    0     1     2     3     4     5     6     7     8
 0     PORT  0123  0123  0123  0123  0123  0123  0123  0123  0123
       STAT  .---  .---  ....  .---  ....  ----  ..--  .---  ----
       TYPE  MTD   DDU   CONS  MPC   CONS        CONS  MPC
```

5   To post the card, type

>**CARD card_no**

and press the Enter key.

where

    card_no
      is the card identification number (0 to 8)

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP: AMA  B XFER:    .     SLM : SLMbsy NOP :    .      NX25:    .
MLP :    .    DPPP:    .     DPPU:    .     SCAI:    .

IOC    CARD    0     1     2     3     4     5     6     7     8
 0     PORT  0123  0123  0123  0123  0123  0123  0123  0123  0123
       STAT  .---  .---  ....  .---  ....  ----  ..--  .---  ----
       TYPE  MTD   DDU   CONS  MPC   CONS        CONS  MPC
Card 3 Unit           0
       User       SYSTEM    BOARD  LINK0  LINK1  LINK2  LINK3
       Status      Ready    COMACT UNEQ   N/A    UNEQ   ENABLD
```

6   Determine the state of the card.

If the card state is	Do
MANB	step 11
OFFL	step 19
other than listed here	step 7

> **Note:** The card state appears under the BOARD header on the MAP display.

7   To display status information on current MPC conversations, type

>QCONV

and press the Enter key.

Example of a MAP response:

```
MPC  L  LCN  STATUS     CCC  SEC  PARDEV  INP  OPEN OWNER
---  -  ---  ---------  ---- ---- ------  ---- ---- ------
  0  3    1  INACTIVE   none none none     FIL    0 none
  0  3    2  INACTIVE   none none none     FIL    0 none
```

If	Do
a minimum of one session is active	step 8
all sessions are inactive	step 9

8   Notify all users of the MPC card you will replace that an interruption of service will occur. Also notify all users of the other MPC cards on the same IOC shelf that an interruption of service may occur.

Wait until all sessions are inactive before you proceed. If you need to verify MPC activity, repeat step 6.

9   To manually busy the card and the links of the card, type

>BSY   ALL   FORCE

and press the Enter key.

Example of a MAP response:

```
TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
Please confirm ("YES", "Y", "NO", or "N"):
```

10   To confirm the command, type

>YES

and press the Enter key.

Example of a MAP response:

NT1X89
in an IOC shelf (continued)

```
REQUEST PASSED FOR LINKS.
REQUEST PASSED FOR CARD.
```

If the BSY command	Do
passed	step 11
failed	step 20

At the shelf

11

⚠️ **WARNING**
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist-strap grounding point is on a frame supervisory panel (FSP) or a modular supervisory panel (MSP). The wrist strap protects the cards against static electricity damage.

To replace the card, use the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> *Note:* Determine if the card you replace has switches. Make sure the switches on the replacement card and the card you replace have the same settings.

12 The next action depends on why you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 13
did not direct you to this procedure	step 14

13 Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

At the MAP terminal

14 To load the MPC, type

>**DOWNLD**

and press the Enter key.

Example of a MAP response:

```
DOWNLOAD OF TABLE MPC FILE "MPC403AB" SUCCEEDED.
```

If the DOWNLD command	Do
passed	step 15
failed	step 20

15   To return the MP to service, type

>RTS ALL

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR CARD.
REQUEST PASSED FOR LINKS.
```

16   Wait 1 min to determine the status of MPC components.

If	Do
the system status is Ready, the board status is COMACT, and the link status is ENABLD for each provisioned link	step 17
the status of MPC components is other than listed here	step 20

17   Notify users that the MPC is in service.

18   Do not proceed if NT2X70AA, NT2X70AB, or NT2X70AC power converter cards power the IOC shelf. The following cards may not function reliably in an IOC powered by NT2X70AA, NT2X70AB, or NT2X70AC power converter cards:

- NT1X55FA

- NT1X67BC or NT1X67BD the run applications at 9600 baud (on one port or all four ports combined)

- NT1X89

Go to step 20.

19   To determine why the MPC is offline, contact operating company personnel. Continue as directed by operating company personnel.

20   For additional help, contact the next level of support.

21   The procedure is complete.

NT2X70
in an IOC

Application

Use this procedure to replace an NT2X70 in an input/output controller (IOC).

PEC	Suffix	Card name	Shelf or frame name
NT2X70	AD, AE, AF	Power converter card	IOC
NT2X70	EA	-48 V power converter card	IOC

If NT2X70AA, NT2X70AB, or NT2X70AC power converter cards power the IOC shelf, contact the personnel responsible for the next level of support. The following cards may not function reliably in an IOC powered by NT2X70AA, NT2X70AB, or NT2X70AC cards:

- NT1X55FA
- NT1X67BC or NT1X67BD that run applications at 9600 baud (on one port or all four ports combined)
- NT1X89

Refer to the Index if you cannot identify one of the following features for the card you want to replace:

- product engineering code (PEC)
- PEC suffix
- equipped shelf
- equipped frame

The Index contains a list of cards,shelves, and frames documented in this card replacement book.

Common procedures

This procedure refers to *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

NT2X70
in an IOC (continued)

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NT2X70
in an IOC (continued)

Replacing a NT2X70 in an IOC

At the MAP terminal

1

> **ATTENTION**
> This procedure directs you to manually busy all terminal controller cards for
> the IOC. Perform this procedure from a MAP terminal that does not connect
> to the IOC.

> **WARNING**
> **Loss of service**
> This procedure directs you to remove an IOC and the device
> controllers from service. Perform this procedure only if you
> need to recover out-of-service components. Unless it si
> urgent, perform this procedure during periods of low traffic
> only.

> **WARNING**
> **Loss of billing and other data**
> If NT2X70AA, NT2X70AB, or NT2X70AC power converter
> cards power the IOC shelf, contact the personnel responsible
> for the next level of support. The following cards may not
> function reliably in an IOC powered by NT2X70AA,
> NT2X70AB, or NT2X70AC cards: NT1X55FA, NT1X89, or
> NT1X67BC/BD that run applications at 9600 baud (on one
> port or all four ports combined).

Obtain a replacement card. Make sure that the replacement card and the
card you remove have the same PEC and PEC suffix.

2   To access the IOD level of the MAP display, type

    >MAPCI;MTC;IOD

and press the Enter key.

3   To post the IOC that associates with the card you will replace, type

    >IOC ioc_no

and press the Enter key.

where

NT2X70
in an IOC (continued)

> **ioc_no**
> is the IOC identification number (0 to 19)

Example of a MAP display:

```
IOC  0  1  2  3
STAT .  .  .  .

DIRP: NO AMA XFER:   .     SLM :   .     NOP :   .     NX25:   .
MLP :   .      DPPP:   .    DPPU:   .     SCAI:   .

IOC    CARD   0     1     2     3     4     5     6     7     8
 0     PORT  0123  0123  0123  0123  0123  0123  0123  0123  0123

       STAT  P---  P---  ....  .---  ....  .---  ....  .---  ....

       TYPE  MTD   DDU   CONS  MPC   CONS  CONS  CONS  MPC   CONS
```

4   The next action depends on if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 5
are not on the shelf	step 11

5   To post the card, type

>CARD   card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

Example of a MAP response:

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP: AMA  B XFER:    .      SLM : SLMbsy NOP :    .      NX25:    .
MLP :   .      DPPP:    .      DPPU:    .      SCAI:    .

IOC    CARD    0     1     2     3     4     5     6     7     8
 0     PORT  0123  0123  0123  0123  0123  0123  0123  0123  0123

       STAT  .---  .---  ....  .---  ....  ----  ..--  .---  ----

       TYPE  MTD   DDU   CONS  MPC   CONS        CONS  MPC
Card   6    Ckt    0           1     2           3
Status              .           .     -           -
Cons Id            RD040       RD041  TEAM4       TEAM6
ConType            VT100       VT100  VT100       VT100
```

6   Note the CONS ID and status for each port.

If	Do
all ports are ManBsy	step 10
a minimum of one port is Offl	step 60
a minimum of one port is . (dot)	step 7
all ports are in any other out-of-service state	step 8

7   Notify all operating company personnel that you will remove from service the CONS IDs that associate with the card you replace. Wait until all operating company personnel cease activity for these CONS IDs.

8   To manually busy a port on the card, type

>BSY port_no

and press the Enter key.

where

port_no
is the port identification number (0 to 3)

If the BSY command	Do
passed	step 9
failed	step 68

9   Repeat step 8 until all ports on the card are manually busy. Go to step 10.

NT2X70
in an IOC (continued)

10   Repeat steps 5 to 9 for each terminal controller card on the shelf. Go to step 11.

11   The next action depends on if multiprotocol controller cards (MPC) are on the shelf.

If MPC cards	Do
are on the shelf	step 12
are not on the shelf	step 19

12   To post the card, type

    >CARD card_no

    and press the Enter key.

    where

        card_no
          is the card identification number (0 to 8)

    Example of a MAP response:

```
IOD
IOC   0   1   2   3
STAT  .   .   .   .

DIRP: AMA  B XFER:   .     SLM : SLMbsy NOP :    .     NX25:    .
MLP :  .      DPPP:   .     DPPU:   .     SCAI:    .

IOC   CARD    0      1      2      3      4      5      6      7      8
 0    PORT   0123   0123   0123   0123   0123   0123   0123   0123   0123

      STAT   .---   .---   ....   .---   ....   ----   ..--   .---   ----

      TYPE  MTD    DDU   CONS   MPC    CONS          CONS   MPC
Card 3  Unit          0
        User          SYSTEM    BOARD  LINK0  LINK1  LINK2  LINK3
        Status        Ready     COMACT UNEQ   N/A    UNEQ   ENABLD
```

13   Determine the state of the card.

If the card state	Do
is MANB	step 18
is OFFL	step 60
is other than listed here	step 14

    Note: The card state appears under the BOARD header on the MAP display.

14 To display status information on current MPC conversations, type

>**QCONV**

and press the Enter key.

Example of a MAP response:

```
MPC  L  LCN  STATUS     CCC  SEC  PARDEV  INP  OPEN OWNER
---  -  ---  ---------- ---- ---- ------  ---- ---- -------
 0   3    1 INACTIVE   none none none     FIL   0 none
 0   3    2 INACTIVE   none none none     FIL   0 none
```

If	Do
a minimum of one session is active	step 15
all sessions are inactive	step 16

15 Notify all users that an interruption of MPC service will occur. Wait until all sessions are inactive before you proceed. Repeat step 14 if you need to verify MPC session activity.

16 To manually busy the card and links, type

>**BSY ALL FORCE**

and press the Enter key.

Example of a MAP response:

```
TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
Please confirm ("YES", "Y", "NO", or "N"):
```

17 To confirm the command, type

>**YES**

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR LINKS.REQUEST PASSED FOR CARD.
```

If the BSY command	Do
passed	step18
failed	step 68

18 Repeat steps 12 to 17 for each MPC card on the shelf. Go to step 19.

NT2X70
in an IOC (continued)

19   The next action depends on if disk drive or magnetic tape controller cards are on the shelf.

If disk drive controller cards	Do
are on the shelf	step 20
are not on the shelf	step 25

20   To post the card, type

>CARD   card_no

and press the Enter key.

where

card_no
is the card identification number (0 to 8)

Example of a MAP response:

```
IOD
IOC   0  1  2  3
STAT  .  .  .  .

DIRP: AMA   B XFER:    .     SLM : SLMbsy NOP :    .     NX25:    .
MLP :    .     DPPP:    .     DPPU:    .     SCAI:    .

IOC    CARD    0     1     2     3     4     5     6     7     8
 0     PORT   0123  0123  0123  0123  0123  0123  0123  0123  0123

       STAT   .---  .---  ....  .---  ....  ----  ..--  .---  ----

       TYPE  MTD   DDU   CONS  MPC   CONS        CONS  MPC
Card 0   MTD              0
       TapeName
       Status      Idle
       User
```

21   Determine the state of the card.

If the card	Do
is MBSY	step 24
is OFFL	step 60
is other than listed here	step 22

22   To determine if files are open on the DDU, type

>ALLOC

and press the Enter key.

Example of a MAP response:

NT2X70
in an IOC (continued)

```
VOLID   VOL_NAME  SERIAL_NO  BLOCKS  ADDR   TYPE   R/O   FILES_OPEN

         User
```

27   Determine the state of the card.

If the card	Do
is ManBsy	step 30
is Offl	step 60
is Idle	step 29
is other than listed here	step 28

28   Notify all users that an interruption of service for the device will occur. Wait until all users cease to access the device before you proceed to the next step.

29   To manually busy the card, type

>**BSY**

and press the Enter key.

Example of a MAP response:
bsyOK

30   Repeat steps 26 to 29 for each magnetic tape drive controller card on the shelf. Go to step 31.

31   To return to the IOC level of the map display, type

>**QUIT**

and press the Enter key.

32   Determine the state of the IOC.

If the state of the IOC	Do
is M	step 34

If the state of the IOC	Do
is other than listed here	step 33

33   To manually busy the IOC, type

>BSY IOC

and press the Enter key.

At the shelf

34

⚠	**WARNING** **Static electricity damage** Wear a wrist strap that connects to the wrist-strap grounding point to handle circuit cards. The wrist-strap grounding point is on a frame supervisory panel (FSP) or a modular supervisory panel (MSP). The wrist strap protects the cards against static electricity damage.

Pull down and set the handle of the power converter POWER switch to the OFF position.

35   To replace the card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

> ***Note 1:*** Make sure the handle of the PWR switch on the replacement power converter is in the OFF position.

> ***Note 2:*** Determine if the card you replace has switches. Make sure the switches on the replacement card and the card you replace have the same settings.

36   The next action depends on the power converter version and the type of supervisory panel.

If you	Do
replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 33
replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 38
do not replace an NT2X70AE card and the FSP or MSP has circuit breakers	step 39
do not replace an NT2X70AE card and the FSP or MSP does not have circuit breakers	step 40

NT2X70
in an IOC (continued)

37 Power up the converter as follows:

    a Pull up and set the handle of the POWER switch to the RESET position and hold.

    b Pull up and set the handle of the converter circuit breaker on the FSP or MSP until the handle clicks into place.

    c Release the handle.

    d Go to step 41.

38 Power up the converter as follows:

    a Pull up and set the handle of the POWER switch to the RESET position and hold until the CONVERTER FAIL LED turns off.

    b Release the handle.

    c Go to step 41.

39 Power up the converter as follows:

    a Pull up and set the handle of the POWER switch to the ON position.

    b Press and hold the RESET button on the power converter.

    c Pull up and set the handle of the converter circuit breaker on the FSP or MSP until the handle clicks into place.

    d Release the RESET button.

    e Go to step 41.

40 Power up the converter as follows:

    a Pull up and set the handle of the POWER switch to the ON position.

    b Press the RESET button on the power converter until the CONVERTER FAIL LED turns off.

    c Release the RESET button.

41 The next action depends on the reason you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 42
did not direct you to this procedure	step 43

42 Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

At the MAP terminal

43 To return the IOC to service, type

    >RTS IOC

    and press the Enter key.

NT2X70
in an IOC (continued)

44 The next action depends on if disk drive or magnetic tape controller cards are on the shelf.

If disk drive or magnetic tape controller cards	Do
are on the shelf	step 45
are not on the shelf	step 48

45 To post the card, type

>CARD   card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

46 To return the controller to service, type

>RTS

and press the Enter key.

47 Repeat steps 45 and 46 for each disk drive or magnetic tape controller card on the shelf. Go to step 48.

48 The next action depends on if MPC cards are on the shelf.

If MPC cards	Do
are on the shelf	step 49
are not on the shelf	step 55

49 To post the card, type

>CARD   card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

50 To load the MPC, type

>DOWNLD

and press the Enter key.

Example of a MAP response:

NT2X70
in an IOC (continued)

```
DOWNLOAD OF TABLE MPC FILE "MPC403AB" SUCCEEDED.
```

If the DOWNLD command	Do
passed	step 51
failed	step 68

51   To return the MPC to service, type

>RTS ALL

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR CARD.REQUEST PASSED FOR LINKS.
```

52   Wait 1 min to determine the status of MPC components.

If	Do
the system status is `Ready`, the board status is `CO-MACT`, and the link status is `ENABLD` for each link	step 53
the status of the MPC components are other than listed here	step 68

53   Notify all users that the MPC is in service.

54   Repeat steps 49 to 53 for each MPC card on the shelf. Go to step 55.

55   The next action depends on if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 56
are not on the shelf	step 68

56   To post the card, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

57   To return a port on the card to service, type

>RTS port_no

and press the Enter key.

where

> **port_no**
>> is the port identification number (0 to 3)

If the RTS command	Do
passed	step 58
failed	step 68

58   Repeat step 57 until all ports on the card are manually busy. Go to step 59.

59   Repeat steps 56 to 58 for each terminal controller card on the shelf. Go to step 68.

60   To determine why the component is offline, contact operating company personnel. Continue as directed by operating company personnel.

61

> ⚠ **WARNING**
> **Loss of data**
> If files are open do not busy the controller. If you busy the controller while files are open, billing data will be lost. For additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU. Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

62   Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

>LOGUTIL;LISTDEVS

and press the Enter key.

63   Close files on volumes on the DDU of the IOC.

>STOPDEV dev_name

and press the Enter key.

where

NT2X70
in an IOC (end)

> **dev_name**
>> is the name of the device

>**>QUI**

and press the Enter key.

64 Repeat the ALLOC command to determine if files are closed, by typing

>**>ALLOC**

and pressing the Enter key.

If the files	Do
are open	step 65
are closed	step 66

65 Confirm that you have done steps 61 to 64. If the files are still open, contact your next level of support.

66 Manually busy the DDU, by typing

>**>BSY**

and pressing the Enter key.

If the DDU	Do
is MBSY	step 67
is not MBSY	step 68

67 When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

68 For additional help, contact the next level of support.

69 The procedure is complete.

NTFX30
in an ISM

Application

Use this procedure to replace an NTFX30 IOM controller card in an integrated services module (ISM) shelf.

PEC	Suffix	Card name	Shelf or frame name
NTFX30	AA	Controller card	ISM

Refer to the Index, if you cannot identify one of the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- equipped frame
- equipped shelf

The Index contains a list of the cards, shelves, and frames that this card replacement book documents.

Common procedures

This procedure refers to the common procedure *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NTFX30
in an ISM (continued)

Summary of replacing a NTFX30 in an ISM

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Post the IOM

↓

Manually busy all devices

NTFX30
in an ISM (continued)

Replacing a NTFX30 in an ISM

ATTENTION

This procedure directs you to manually busy the controller card for the
IOM. Perform this procedure from a MAP terminal that does not
connect to the IOM.

WARNING
Loss of service
This procedure instructs you to remove the controller card
for the IOM. Perform this procedure only if you need to
recover out-of-service components. Unless it is urgent,
perform this procedure during periods of low traffic only.

At the MAP terminal

1   Obtain a replacement card. Make sure that the replacement card and the
        card that you remove have the same PEC and PEC suffix.

At the MAP terminal

2   To access the IOD level of the MAP display, type

        >MAPCI;MTC;IOD

        and press the Enter key.

        Example of a MAP display:

        ```
        IOD
        IOC  0  1  2  3
        STAT .  .  .  S

        DIRP: SMDR B XFER:   .   SLM :   .   NPO:   .   NX25:  .
        MLP :   .    DPPP:   .   DPPU:   .   SCAI :
        ```

3   To post the IOM controller system configured, type

        >IOC ioc_no

        and press the Enter key.

        where

            ioc_no
                is the IOM identification number

        Example of an IOM MAP display:

NTFX30
in an ISM (continued)

```
IOD
IOC   0   1   2   3
STAT  .   .   .   S

DIRP: SMDR B XFER:    .    SLM :    .    NPO:    .    NX25:    .
MLP :    .     DPPP:    .    DPPU:    .    SCAI :

IOC    PORT 0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17
(IOM)  STAT . . . - . . - - - . -  -  -  -  -  -  -  -  -
0      TYPE C C C   C M       M                      S  S
            O O O   O T       P                      C  C
            N N N   N D       C                      S  S
```

4   The next action depends on if terminal controller ports are on the shelf.

If terminal controller ports	Do
are on the shelf	step 5
are not on the shelf	step 10

5   Note the consoles (CONS) ID and status for each port.

If	Do
all ports are ManBsy	step 10
a minimum of one port is Offl	step 55
a minimum of one port is . (dot)	step 6
all ports are in any other out-of-service state	step 8

6   Notify all operating company personnel that you will remove from service the CONS IDs that associate with the card you manually busy. Wait until all operating company personnel terminate the activity of these CONS IDs.

7   To post the port that associates with the CONS you replace, type

>PORT port_no

and press the Enter key.

where

   port_no
      is the port identification number

Example of an IOM MAP display:

```
Port    0    Status      Disc
             Cons Id     1CONS
             ConType     VT100
```

8   To manually busy the device, type

>BSY

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

If the BSY command	Do
passed	step 9
failed	step 63

9   Repeat step 8 until all CONS ports are manually busy.

10   The next action depends on if multiprotocol ports (MPC) are on the controller card.

If MPC ports	Do
are on the controller card	step 11
are not on the controller card	step 18

11   To post a port that associates with the MPC, type

>PORT   port_no

and press the Enter key.

where

>   **port_no**
>   is the port identification number

Example of an IOM MAP display:

```
Port 9   Unit    1
         User   SYSTEM    PROTOCOL      LINK
         Status Ready     X2584         COMACT ENABLED
```

12   Determine the state of the port.

If the port state	Do
is ManB	step 17

NTFX30
in an ISM (continued)

If the port state	Do
is OFFL	step 55
is other than listed here	step 13

13   To display status information on current MPC conversations, type

>QCONV

and press the Enter key.

Example of a MAP response:

```
MPC  L  LCN  STATUS  CCC   SEC   PARDEV  INP  OPEN  OWNER
---  -  ---  ------  ---   ---   ------  ---  ----  -----
 0   3   1   INACTIVE none  none  none    FIL   0    none
 0   3   2   INACTIVE none  none  none    FIL   0    none
```

If	Do
a minimum of one session is active	step 14
all sessions are inactive	step 15

14   Notify all users that an interruption of MPC service will occur. Wait until all sessions are inactive before you proceed. To verify MPC session activity, repeat step 13.

15   To manually busy the port and the port links, type

>BSY FORCE

and press the Enter key.

Example of MAP response:

```
TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
Please confirm ("YES", "Y", "NO", or "N")
```

16   To confirm the command, type

>YES

and press the Enter key.

Example of MAP response:

```
REQUEST PASSED FOR UNIT
REQUEST PASSED FOR LINK
```

If the BSY command	Do
passed	step 17

NTFX30
in an ISM (continued)

If the BSY command	Do
failed	step 63

17   Repeat steps 11 to 16 for each MPC port on the IOM.

18   The next action depends on if disk drive ports are on the controller card.

If disk drive ports	Do
are on the shelf	step 19
are not on the shelf	step 24

19   To post a port that associates with the disk drive unit (DDU), type

>PORT   port_no

and press the Enter key.

where

    port_no
      is the port identification number

Example of a IOM MAP display:

```
Port 16  Unit      0
(SCSI)   User      system     Drive_State
         Status    Ready      On_line
```

20   Determine the state of the port.

If the port	Do
is ManB	step 24
is OFFL	step 55
is other than listed here	step 21

21   To determine if open files are on the DDU, type

>ALLOC

and press the Enter key.

Example of a MAP display:

NTFX30
in an ISM (continued)

```
VOLID  VOL_NAME  SERIAL_NO  BLOCKS  ADDR  TYPE  R/O  FILES_OPEN
   0   IMAGE     2800       45000   D000   0    NO       0
   1   XPMLOADS  2801       35000   D000   0    NO       0
   2   RTMLOADS  2802       20000   D000   0    NO       0
   .
   .
   .
   7   SMDR      2807        5000   D000   0    NO       0
   8   AMA1      2808        5000   D000   0    NO       0
   9   TST       2809          50   D000   0    NO       0
  10   AMA2      280A         500   D000   0    NO       0
```

If open files	Do
are on the DDU	step 56
are not on the DDU	step 22

22   To manually busy the device on the controller card, type

>BSY

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

23   If a second DDU is on the controller card, repeat steps 19 to 22.

24   The next action depends on if magnetic tape drive (MTD) or digital audio tape (DAT) ports are on the controller card.

If MTD or DAT ports	Do
are on the controller card	step 25
are not on the controller card	step 30

25   To post a port that associates with the MTD or DAT, type

>PORT   port_no

and press the Enter key.

where

  port_no
    is the port identification number

Example of a IOM MAP display:

```
Port 5    MTD                      DevType
          TapeName                 User
          Status         Ready
```

26   Determine the state of the port.

If the port state	Do
is ManB	step 30
is OFFL	step 55
is Idle	step 28
is other than listed here	step 27

27   Notify all users that an interruption of service for the device will occur. Wait until all users cease to access the device before you proceed to the next step.

28   To manually busy the port, type

>BSY

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

29   Repeat steps 25 to 28 for each magnetic tape drive or digital audio port on the controller card.

30   To return to the IOC level of the MAP display, type

>QUIT

and press the Enter key.

31   Determine the state of the IOM.

If the state of the IOM	Do
is M	step 33
is other than listed here	step 32

32   To manually busy the IOM controller card, type

>BSY IOC

and press the Enter key.

Example of MAP response:

NTFX30
in an ISM (continued)

```
bsy
OK
```

At the ISM shelf

<table>
<tr>
<td>⚠</td>
<td>

WARNING
Static electricity damage
Wear a wrist strap that connects to the wrist-strap grounding point of the modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.
</td>
</tr>
</table>

To replace the controller card, perform the procedure *Replacing a card* in this document. Complete the procedure and return to this point.

34 Wait for internal diagnostic tests on the card to complete.

Note 1: After you insert the new NTFX30 card, the LED is off for approximately 30 seconds. The color of the LED changes to red and then to green if the internal diagnostic tests pass. The internal diagnostic tests take less than 2 minutes.

Note 2: You view the LED through a small plastic window on the card faceplate.

35 To list the IOM load file, type

>DISKUT;LF VOLUME

and press the Enter key.

36 To access the TOOLSUP control, type

>TOOLSUP

and press the Enter key.

37 To access the UPGIOM tool, type

>ACCESS ON UPGIOM

and press the Enter key.

Note: The command response asks for a password. To obtain the password, call Northern Telecom. Use the password to enter.

38

> ### DANGER
> **How to download IOM load file**
> This command downloads the complete IOM load file as specified in the parameter. The command provides reprogramming options for the flash.

To reprogram the IOM flash ROM on the new controller card, type

>UPGIOM file_name RPGM

and press the Enter key.

where

> **file_name**
>   is the IOM load file

Note: RPGM is the optional parameter that indicates if the system specifies the reprogramming option

Example input

>UPGIOM IOMRAA01 RPGM

Example of MAP response:

```
WARNING:  This command will reprogram the onboard IOM
Flash memory.  Proceed with caution.

Reprogramming 100%
Reprogram IOC 14 successful
```

If the reprogram	Do
passes	step 41
fails	step 39

Flash memory.  Proceed with caution.

Reprogramming 100%
Reprogram IOC 14 successful
```

If the reprogram	Do
passes	step 41
fails	step 63

41   To quit the TOOLSUP utility, type

>**QUIT**

and press the Enter key.

42   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 43
did not direct you to this procedure	step 44

43   Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure..

At the MAP terminal

44   To return the IOM to service, type

>**RTS IOC**

and press the Enter key.

45   The next action depends on if consoles, disk drives, magnetic tape drives or DAT tape ports are present.

If console, disk drive, magnetic drive or DAT ports	Do
are present	step 46
are not present	step 49

46   To post the device port, type

>**PORT port_no**

and press the Enter key.

where

NTFX30
in an ISM (continued)

port_no
    is the port identification number (0 to 17)

47   To return the port to service, type

>RTS

and press the Enter key.

If RTS command	Do
passes	step 48
fails	step 63

48   Repeat steps 46 and 47 for each disk drive, magnetic tape drive or DAT tape port.

49   The next action depends on if MPC ports are present.

If MPC ports	Do
are present	step 50
are not present	step 64

50   To post the MPC port, type

>PORT   port_no

and press the Enter key.

where

port_no
    is the port identification number (0 to 17)

51   To return the MPC port to service, type

>RTS

and press the Enter key.

Example of MAP response:

```
REQUEST PASSED FOR UNIT
REQUEST PASSED FOR LINKS
```

If RTS command	Do
passes	step 52
fails	step 63

52   Check the status of MPC components

If	Do
the system status is Ready, the port status is COMACT, and the link status is ENABLED for each link.	step 50
status of MPC components is other than listed here	step 63

53   Repeat steps 50 to 52 for each port on the shelf.

54   Notify users that MPC service is available.

55   To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

56

WARNING
Loss of data
If files are open do not busy the controller. If you busy the controller while files are open, billing data will be lost. For additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU.   Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

57   Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

>LOGUTIL;LISTDEVS

and press the Enter key.

58   Close files on volumes on the DDU of the IOC.

>STODEV   dev_name

and press the Enter key.

where

   dev_name
      is the name of the device

>QUIT

NTFX30
in an ISM (end)

and press the Enter key.

59   Repeat the ALLOC command to determine if files are closed, by typing

>ALLOC

and pressing the Enter key.

If the files	Do
are open	step 60
are closed	step 61

60   Confirm that you have done steps 56 to 59. If the files are still open, contact your next level of support.

61   Manually busy the DDU, by typing

>BSY

and pressing the Enter key.

If the DDU	Do
is MBSY	step 62
is not MBSY	step 63

62   When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

63   For additional help, contact the next level of support.

64   The procedure is complete.

NTFX31
in an ISM

Application

Use this procedure to replace an NTFX31 paddle board assembly in an input/output module (IOM) in an integrated services module (ISM) shelf.

PEC	Suffix	Card name	Shelf or frame name
NTFX31	AA	Paddle board assembly	ISM

Refer to the Index, if you cannot identify one of the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- equipped frame
- equipped shelf

The Index contains a list of the cards, shelves, and frames that this card replacement book documents.

Common procedures

This procedure refers to the common procedure *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NTFX31
in an ISM (continued)

Summary of replacing a NTFX31 in an ISM

Post the IOC

↓

Manually busy
all devices

↓

Manually busy
the IOM

↓

Disconnect
IOM cable
harness

↓

Replace the card
and connect
harness

↓

Return the IOC
to service

↓

Return all ports
to service

↓

End

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

NTFX31 in an ISM

ATTENTION

This procedure directs you to manually busy the controller card for the
IOM. Perform this procedure from a MAP terminal that does not
connect to the IOM.

WARNING
Loss of service

This procedure instructs you to remove the paddle board
for the IOM. Perform this procedure only if you need to
recover out-of-service components. Unless it is urgent,
perform this procedure during periods of low traffic only.

At the MAP terminal

1   Obtain a replacement card. Make sure that the replacement card and the
card that you remove have the same PEC and PEC suffix.

At the MAP terminal

2   To access the IOD level of the MAP display, type

>MAPCI;MTC;IOD

and press the Enter key.

Example of a MAP display:

```
IOD
IOC  0  1  2  3
STAT .  .  .  S

DIRP: SMDR B XFER:   .    SLM :   .    NPO:   .    NX25:  .
MLP :   .     DPPP:   .    DPPU:   .    SCAI :
```

3   To post the configured IOM controller, type

>IOC ioc_no

and press the Enter key.

where

> **ioc_no**
> is the IOM identification number

Example of an IOM MAP display:

NTFX31
in an ISM (continued)

```
IOD
IOC  0  1  2  3
STAT .  .  .  S

DIRP: SMDR B XFER:    .    SLM :    .    NPO:    .    NX25:   .
MLP :    .    DPPP:    .    DPPU:    .    SCAI :

IOC    PORT 0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17
(IOM)  STAT . . . - . . - - - . - - - - - - - - -
0      TYPE C C C   C M       M                   S  S
            O O O   O T       P                   C  C
            N N N   N D       C                   S  S
```

4   The next action depends on if terminal controller ports are on the shelf.

If terminal controller ports	Do
are on the shelf	step 5
are not on the shelf	step 10

5   Note the consoles (CONS) ID and status for each port.

If	Do
all ports are ManBsy	step 9
a minimum of one port is Offl	step 65
a minimum of one port is (.) dot	step 6
all ports are in any other out-of- service state	step 8

6   Notify all operating company personnel that you will remove from service the CONS IDs that associate with the controller card that you manually busy. Wait until all operating company personnel terminate activity for these CONS IDs.

7   To post the port that associates with the CONS that you replace, type

>PORT port_no

and press the Enter key.

where

port_no
    is the port identification number

Example of an IOM MAP display:

```
Port    2    Status       Disc
             Cons Id      1CONS
             ConType      VT100
```

8   To manually busy the device, type

>BSY

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

If the BSY command	Do
passed	step 9
failed	step 66

9   Repeat step 7 and 8 until all CONS ports are manually busy.

10   The next action depends on if multiprotocol ports (MPC) are on the controller card.

If MPC ports	Do
are on the controller card	step 11
are not on the controller card	step 18

11   To post a port that associates with the MPC, type

>PORT   port_no

and press the Enter key.

where

> **port_no**
>   is the port identification number

Example of an IOM MAP display:

```
Port 9    Unit    1
          User   SYSTEM   PROTOCOL     LINK
          Status Ready    X2584        COMACT ENABLED
```

12   Determine the state of the port.

If the port	Do
is ManB	step18

NTFX31
in an ISM (continued)

If the port	Do
is OFFL	step 65
is other than listed here	step13

13   To display status information on current MPC conversations, type

>**QCONV**

and press the Enter key.

Example of a MAP response:

```
MPC  L  LCN  STATUS  CCC  SEC  PARDEV  INP  OPEN  OWNER
---  -  ---  ------  ---  ---  ------  ---  ----  -----
 0   3   1   INACTIVE none  none  none   FIL   0   none
 0   3   2   INACTIVE none  none  none   FIL   0   none
```

If	Do
a minimum of one session is active	step14
all sessions are inactive	step15

14   Notify all users that an interruption of MPC service will occur. Wait until all sessions are inactive before you proceed. To verify MPC session activity, repeat step 13.

15   To manually busy the port and port links, type

>**BSY FORCE**

and press the Enter key.

Example of a MAP response:

```
TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
Please confirm ("YES", "Y", "NO", or "N")
```

16   To confirm the command, type

>**YES**

and press the Enter key.

Example of MAP response:

```
REQUEST PASSED FOR UNIT
REQUEST PASSED FOR LINK
```

If the BSY command	Do
passed	step 17

If the BSY command	Do
failed	step 66

17   Repeat steps 11 to 16 for each MPC port on the IOM.

18   The next action depends on if disk drive unit (DDU) ports are on the controller card.

If DDU ports	Do
are on the shelf	step 19
are not on the shelf	step 24

19   To post a port that associates with the DDU, type

>PORT   port_no

and press the Enter key.

where

> **port_no**
> is the port identification number

Example of an IOM MAP display:

```
Port 16  Unit        0
(SCSI)   User        system      Drive_State
         Status      Ready       On_line
```

20   Determine the state of the port.

If the port	Do
is ManB	step 24
is OFFL	step 65
is other than listed here	step 21

21   To determine if open files are on the DDU, type

>ALLOC

and press the Enter key.

Example of a MAP display:

NTFX31
in an ISM (continued)

```
VOLID  VOL_NAME  SERIAL_NO  BLOCKS  ADDR  TYPE  R/O  FILES_OPEN
  0    IMAGE     2800       45000   D000  0     NO      0
  1    XPMLOADS  2801       35000   D000  0     NO      0
  2    RTMLOADS  2802       20000   D000  0     NO      0
  .
  .
  .
  7    SMDR      2807        5000   D000  0     NO      0
  8    AMA1      2808        5000   D000  0     NO      0
  9    TST       2809          50   D000  0     NO      0
 10    AMA2      280A         500   D000  0     NO      0
```

If open files	Do
are on the DDU	step 57
are not on the DDU	step 22

22   To manually busy the device on the controller card, type

>BSY

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

23   Repeat steps 19 to 22 if a second DDU is on the controller card.

24   The next action depends on if magnetic tape drive (MTD) or digital audio tape (DAT) ports are on the controller card.

If MTD or DAT ports	Do
are on the controller card	step 25
are not on the controller card	step 30

25   To post a port that associates with the MTD or DAT, type

>PORT   port_no

and press the Enter key.

where

> **port_no**
>   is the port identification number

Example of an IOM MAP display:

```
Port 5    MTD                    DevType
          TapeName               User
          Status          Idle
```

26   Determine the state of the port.

If the port	Do
is ManBsy	step 29
is OFFL	step 65
is Idle	step 28
is other than listed here	step 27

27   Notify all users that an interruption of service for the device will occur. Wait until all users cease to access the device before you proceed to the next step.

28   To manually busy the device, type

>BSY

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

29   Repeat steps 25 to 28 for each MTD device or DAT on the IOM.

30   To return to the IOC level of the MAP display, type

>QUIT

and press the Enter key.

31   Determine the state of the IOM.

If the state of the IOM	Do
is M	step 33
is other than listed here	step 32

32   To manually busy the IOM controller card, type

>BSY   IOC

and press the Enter key.

Example of MAP response:

```
bsy
OK
```

NTFX31
in an ISM (continued)

At the front of the ISM shelf

33

> ⚠️ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of the modular supervisory panel (MSP) to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Unseat the IOM controller card NTFX30 in slot 3 or 4 of the ISM shelf.

34 If the media storage card NTFX32 is equipped, unseat the card. The card is in slots 4 and 5.

At the rear of the ISM shelf

35

> ⚠️ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of MSP to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Locate the paddle board assembly in slot 03 or 04 on the backplane. Note the numbers and positions of the connectors on the harness from the paddle board. Detach the connectors on the harness from the paddle board.

Disconnect the cable harness that connects the paddle board to the DDU/DAT connector on the backplane.

IOM controller

Storage media card

DDU

DDU/DAT

Backplane

Paddleboard assembly

Power and loopback circuits

SCSI cable for DDU/DAT units

Ground cable

36 Locate the paddle board ground cable. Disconnect at the backplane end of the cable. Refer to the diagram in step 35.

37 To replace the paddle board assembly in slots 03 or 04, remove the bolts that secure the paddle board bracket to the backplane. Secure the paddle board assembly in position with screws and washers. Refer to the diagram in step 35.

38 Connect the paddle board ground cable. Refer to the diagram in step 35.

39 Connect the connectors on the cable harness to the receptacles on the paddleboard assembly and the DDU/DAT connector on the backplane. Make sure that the names on the cable connectors match the names on the paddle board.

40 Connect the cable harness to the DDU/DAT connector on the backplane.

NTFX31
in an ISM (continued)

At the front of the ISM shelf

41

> **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding point of the MSP to handle circuit cards. The wrist strap protects the cards against static electricity damage.

Reseat the NTFX32 card that you unseated in step 34.

> ***Note 1:*** After you reseat the NTFX32 card, both LEDs on the faceplate must be on.

> ***Note 2:*** You view the LED through a plastic window (light pipe) on the card faceplate.

42   Reseat the NTFX30 card that you unseated in step 33.

43   Wait for internal diagnostic tests on the NTFX30 card to complete.

> ***Note 1:*** After you reseat the NTFX30 card, the LED is off for approximately 30 seconds. The color of the LED changes to red and then to green if the internal diagnostic tests pass. The internal diagnostic tests take less than 2 minutes.

> ***Note 2:*** You view the LED through a small plastic window on the card faceplate.

44   The next action depends on the reason that you perform the procedure.

If a maintenance procedure	Do
directed you to this procedure	step 45
did not direct you to this procedure	step 46

45   Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

At the MAP terminal

46   To return the IOM to service, type

>RTS IOC

and press the Enter key.

47   The next action depends on if consoles, disk drives, MTDs, or DAT tape ports are present.

If consoles, disk drives, MTDs, or DAT ports	Do
are present	step 48

If consoles, disk drives, MTDs, or DAT ports	Do
are not present	step 51

48   To post the device port, type

>PORT   port_no

and press the Enter key.

where

> **port_no**
> is the port identification number (0 to 17)

49   To return the port to service, type

>RTS

and press the Enter key.

If the RTS command	Do
passes	step 50
fails	step 66

50   Repeat steps 48 and 49 for each disk drive, MTD, or DAT tape port.

51   The next action depends on if MPC ports are present.

If MPC ports	Do
are present	step 52
are not present	step 67

52   To post the MPC port, type

>PORT   port_no

and press the Enter key.

where

> **port_no**
> is the port identification number (0 to 17)

53   To return the MPC port to service, type

>RTS   ALL

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR PORT
REQUEST PASSED FOR LINKS
```

NTFX31
in an ISM (continued)

54   Check the status of MPC components.

If	Do
the system status is Ready, the port status is COMACT, and the link status the system status is ENABLED for each link.	step 55
the status of MPC components is other than listed here	step 66

55   Repeat steps 52 to 54 for each port on the shelf.

56   Notify users that MPC service is available.

57

> **WARNING**
> **Loss of data**
> If files are open do not busy the controller. If you busy the controller while files are open, billing data will be lost. For additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU.   Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

58   Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

>LOGUTIL;LISTDEVS

and press the Enter key.

59   Close files on volumes on the DDU of the IOC.

>STOPDEV dev_name

and press the Enter key.

where

   dev_name
      is the name of the device

NTFX31
in an ISM (end)

60 To quit the disk utility, type

`>QUIT`

and press the Enter key.

61 Repeat the ALLOC command to determine if files are closed, by typing

`>ALLOC`

and pressing the Enter key.

If the files	Do
are open	step 62
are closed	step 63

62 Confirm that you have done steps 57 to 61. If the files are still open, contact your next level of support.

63 Manually busy the DDU, by typing

`>BSY`

and pressing the Enter key.

If the DDU is	Do
MBSY	step 64
not MBSY	step 66

64 When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

65 To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

66 For additional help, contact the next level of support.

67 The procedure is complete.

NTFX32AA
in an ISM

Application

Use this procedure to replace an NTFX32AA storage media card in the shelves or frames identified in the following table.

PEC	Suffixes	Card name	Shelf/frame name
NTFX32	AA	Storage media card	ISM

To replace an NTFX32BA (3.5-in. disk drive unit) and an NTFX32CA (digital audio tape unit) see *Trouble Locating and Clearing Procedures*.

Refer to the Index, if you cannot identify one of the following features for the card that you want to replace:

- product engineering code (PEC)
- PEC suffix
- equipped frame
- equipped shelf

The Index contains a list of the cards, shelves, and frames that this card replacement NTP documents.

Common procedures

This procedure refers to the common procedure *Replacing a card*.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

NTFX32AA
in an ISM (continued)

Summary of replacing an NTFX32AA in an ISM

This flowchart summarizes the procedure.

Use the instructions that follow this flowchart to perform the procedure.

Post the IOC

↓

Remove DDU from media card

↓

Remove DAT unit from media card

↓

Replace the card

↓

Install the DDU on the media card

↓

Install the DAT unit on the media card

↓

Return IOM controller to service

↓

End

NTFX32AA
in an ISM (continued)

NTFX32AA in an ISM

At the MAP terminal

1   Obtain a replacement card. Make sure that the replacement card and the card that you remove have the same PEC and PEC suffix.

2   To access the IOD level of the MAP display, type

>**MAPCI;MTC;IOD**

and press the Enter key.

Example of a MAP display:

```
IOD
IOC   0   1   2   3
STAT  .   .   .   S

DIRP: SMDR B XFER:    .    SLM :    .    NPO:    .    NX25:  .
MLP :    .      DPPP:    .    DPPU:    .    SCAI :
```

3   To post the IOM controller system configured, type

>**IOC ioc_no**

and press the Enter key.

where

ioc_no
is the IOM identification number

Example of an IOM MAP display:

```
IOD
IOC   0   1   2   3
STAT  .   .   .   S

DIRP: SMDR B XFER:    .    SLM :    .    NPO:    .    NX25:  .
MLP :    .      DPPP:    .    DPPU:    .    SCAI :

```

NTFX32AA
in an ISM (continued)

4   The next action depends on if a 3.5-in. disk drive unit (DDU)NTFX32 BA or a digital audio tape (DAT) unit NTFX32CA is on the media storage card.

If the media storage card	Do
contains a 3.5-in. DDU	step 5
contains a DAT unit	step 6

At the ISM shelf

5   To remove the 3.5-in. DDU, perform the correct procedure in *Trouble Locating and Clearing Procedures*. Complete the section of the procedure to remove the disk drive and return to this point.

6   To remove the DAT unit, perform the correct procedure in *Trouble Locating and Clearing Procedures*. Complete the section of the procedure to remove the tape unit and return to this point.

7   To replace the media storage card, perform the procedure *How to replace a card*. Complete the procedure and return to this point.

If the media storage card	Do
contains a 3.5-in. DDU	step 8
contains a DAT unit	step 9

8   To install the 3.5-in. DDU unit that you removed in step 6, perform the correct procedure in *Trouble Locating and Clearing Procedures*. Complete the section of the procedure to remove the disk drive and return to this point.

9   To install the DAT unit that you removed in step 6, perform the correct procedure in *Trouble Locating and Clearing Procedures*. Complete the section of the procedure to remove the tape unit and return to this point.

10   The next action depends on the reason that you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step11
did not direct you to this procedure	step12

11   Return to the maintenance procedure that directed you to this procedure. Continue as directed by the maintenance procedure.

At the MAP terminal

12   To return the IOM to service, type

>**RTS**

and press the Enter key.

13   For additional help, contact the next level of support.

NTFX32AA
in an ISM (end)

      14   The procedure is complete.

**System cards
in an IOC**

Application

Use this procedure to replace the following cards in an input/output controller (IOC).

PEC	Suffix	Card name	Shelf or frame name
NT0X67	AA	IOC terminator card	IOC
NT1X62	AA	Input/output controller card	IOC
NT1X62	AB	IOC message controller card	IOC
NT1X62	CA, CB	IOC message processor card	IOC

Refer to the Index, if you cannot identify one of the following features for the card that you want to replace:

- product engineering code (PEC)

- PEC suffix

- equipped frame

- equipped shelf

The Index contains a list of the cards, shelves, and frames that this card replacement book documents.

Common procedures

This procedure refers to the common procedure *Replacing a card*.

Do not go to the common procedure unless the step-action procedure directs you to go.

Action

This procedure contains a summary flowchart and a list of steps. Use the flowchart to review the procedure. Follow the steps to perform the procedure.

System cards
in an IOC (continued)

Summary of replacing System cards in an IOC

Post the IOC

IOC   CARD   0     1     2     3     4     5     6     7     8
 0    PORT  0123  0123  0123  01230123  0123  0123  0123  0123
      STAT  .---  .---  .....---  ....  ----  ..--  .---  ----
      TYPE  MTD   DDU   CONS  MPC   CONS        CONS  MPC
Card  6   Ckt      0          1          2          3
Status              .          .          _          _
Cons Id          RD040      RD041      TEAM4      TEAM6
ConType          VT100      VT100      VT100      VT100
```

6   Note the CONS ID and the status for each port.

If	Do
all ports are ManBsy	step 10

**System cards
in an IOC** (continued)

If	Do
a minimum of one port is `Offl`	step 61
a minimum of one port is `.` (dot)	step 7
all ports are in any other out-of-service state	step 8

7 Notify all operating company personnel that you will remove from service all CONS IDs that associate with the card you manually busy. Wait until all operating company personnel terminate the activity of these CONS IDs.

8 To manually busy a port on the card, type

> **>BSY port_no**

and press the Enter key.

where

> **port_no**
> is the port identification number (0 to 3)

If the BSY command	Do
passed	step 9
failed	step 62

9 Repeat step 8 until you manually busy all ports on the card. Go to step 10.

10 Repeat steps 5 to 9 for each terminal controller card on the shelf. Go to step 11.

11 The next action depends on if multiprotocol controller (MPC) cards are on the shelf.

If MPC cards	Do
are on the shelf	step 12
are not on the shelf	step 19

12 To post the card, type

> **>CARD card_no**

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

Example of a MAP display:

System cards
in an IOC (continued)

```
IOD
IOC   0  1  2  3
STAT  .  .  .  .

DIRP: AMA  B XFER:    .            SLM : SLMbsy NOP :   .      NX25:   .
MLP :  .      DPPP:   .            DPPU:   .     SCAI:   .

IOC    CARD    0      1      2      3   4      5      6      7      8
 0     PORT  0123   0123   0123   01230123   0123   0123   0123   0123
       STAT  .---   .---   .....--   ....   ----   ..--   .---   ----
       TYPE  MTD    DDU    CONS    MPC   CONS           CONS   MPC
Card 3 Unit           0
       User        SYSTEM      BOARD  LINK0  LINK1  LINK2      LINK3
       Status       Ready      COMACT UNEQ   N/A    UNEQ       ENABLD
```

13   Determine the state of the card.

If the card state	Do
is MANB	step 18
is OFFL	step 61
is other than listed here	step 14

Note: The card state appears under the BOARD header on the MAP display.

14   To display status information on current MPC conversations, type

>QCONV

and press the Enter key.

Example of a MAP response:

```
MPC  L  LCN  STATUS    CCC   SEC  PARDEV  INP  OPEN OWNER
---  -  ---  --------- ----  ---- ------  ---- ---- -----
  0  3    1  INACTIVE  none  none none    FIL    0  none
  0  3    2  INACTIVE  none  none none    FIL    0  none
```

If	Do
a minimum of one session is active	step 15
all sessions are inactive	step 16

15   Notify all users that an interruption of MPC service will occur. Wait until all sessions are inactive before you proceed. To verify MPC session activity, repeat step 14.

**System cards
in an IOC** (continued)

16 To manually busy the card and card links, type

>**BSY ALL FORCE**

and press the Enter key.

Example of a MAP response:

```
TYPE YES TO VERIFY FORCE, NO TO CANCEL COMMAND
Please confirm ("YES", "Y", "NO", or "N"):
```

17 To confirm the command, type

>**YES**

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR LINKS.
REQUEST PASSED FOR CARD.
```

If the BSY command	Do
passed	step 18
failed	step 62

18 Repeat steps 12 to 17 for each MPC card on the shelf. Go to step 19.

19 The next action depends on if disk drive controller cards are on the shelf.

If disk drive controller cards	Do
are on the shelf	step 20
are not on the shelf	step 25

20 To post the card, type

>**CARD card_no**

and press the Enter key.

where

>**card_no**
>is the card identification number (0 to 8)

Example of a MAP display:

System cards
in an IOC (continued)

```
IOD
IOC  0  1  2  3
STAT .  .  .  .

DIRP: AMA  B XFER:    .        SLM : SLMbsy NOP :    .       NX25:

 9     TST         2809        50  D000     0     NO        0
10     AMA2        280A       500D000       0     NO        0
```

If files	Do
are open	step 54
are closed	step 23

23   To manually busy the controller, type

>BSY

and press the Enter key.

Example of a MAP response:

```
bsy
OK
```

24   Repeat steps 20 to 23 for each disk drive controller card on the shelf. Go to
step 25.

25   The next action depends on if magnetic tape drive (MTD) controller cards are
on the shelf.

If MTD controller cards	Do
are on the shelf	step 26
are not on the shelf	step 31

26   To post the card, type

>CARD card_no

and press the Enter key.

where

    card_no
      is the card identification number (0 to 8)

Example of a MAP display:

```
IOD
IOC  0  1  2  3

> **30** Repeat steps 26 and 29 for each MTD controller card on the shelf. Go to step 31.

> **31** To return to the IOC level of the MAP display, type
>
> **>QUIT**
>
> and press the Enter key.

> **32** Determine the state of the IOC.

If the state of the IOC	Do
is M	step 34
is other than listed here	step 33

> **33** To manually busy the IOC, type
>
> **>BSY IOC**
>
> and press the Enter key.

At the shelf

34

> ⚠ **WARNING**
> **Static electricity damage**
> Wear a wrist strap that connects to the wrist-strap grounding
> point of the frame supervisory panel (FSP) or the modular
> supervisory panel (MSP) to handle circuit cards. The wrist
> strap protects the cards against static electricity damage.

To replace the card, perform the procedure *Replacing a card* in this
document. Complete the procedure and return to this point.

> *Note:* If the card you replace has switches, make sure that the switches
> on the replacement card have the same settings.

35   The next action depends on the reason you perform this procedure.

If a maintenance procedure	Do
directed you to this procedure	step 36
did not direct you to this procedure	step 37

36   Return to the maintenance procedure that directed you to this procedure.
Continue as directed by the maintenance procedure.

At the MAP terminal

37   To return the IOC to service, type

>RTS IOC

and press the Enter key.

38   The next action depends on if disk drive or MTD controller cards are on the
shelf.

If disk drive or MTD controller cards	Do
are on the shelf	step 39
are not on the shelf	step 42

39   To post the card, type

>CARD card_no

and press the Enter key.

where

System cards
in an IOC (continued)

> **card_no**
> is the card identification number (0 to 8)

40   To return the controller to service, type

>RTS

and press the Enter key.

41   Repeat steps 39 and 40 for each disk drive or MTD controller card on the shelf. Go to step 42.

42   The next action depends on if MPC cards are on the shelf.

If MPC cards	Do
are on the shelf	step 43
are not on the shelf	step 49

43   To post the card, type

>CARD card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

44   To load the MPC, type

>DOWNLD

and press the Enter key.

Example of a MAP response:

```
DOWNLOAD OF TABLE MPC FILE "MPC403AB" SUCCEEDED.
```

If the DOWNLD command	Do
passed	step 45
failed	step 62

45   To return the MPC to service, type

>RTS ALL

and press the Enter key.

Example of a MAP response:

```
REQUEST PASSED FOR CARD.REQUEST PASSED FOR LINKS.
```

System cards
in an IOC (continued)

46   Wait 1 min to check the status of MPC components.

If	Do
the system status is `Ready`, the board status is `CO-MACT`, and the link status is `ENABLD` for each link	step 47
these statuses are other than listed here	step 62

47   Repeat steps 43 to 46 for each card on the shelf. Go to step 48.

48   Notify users that MPC service is available.

49   The next action depends on if terminal controller cards are on the shelf.

If terminal controller cards	Do
are on the shelf	step 50
are not on the shelf	step 63

50   To post the card, type

>CARD   card_no

and press the Enter key.

where

> **card_no**
> is the card identification number (0 to 8)

51   To return a port on the card to service, type

>RTS   port_no

and press the Enter key.

where

> **port_no**
> is the port identification number (0 to 3)

If the RTS command	Do
passed	step 52
failed	step 62

52   Repeat step 51 until you return to service all ports on the terminal controller card. Go to step 53.

53   Repeat steps 50 to 52 for each terminal controller card on the shelf. Go to step 63.

System cards
in an IOC (continued)

54

> ⚠ **WARNING**
> **Loss of data**
> If files are open do not busy the controller. If you busy the controller while files are open, billing data will be lost. For additional help, contact the next level of support.

If device independent recording package (DIRP) volumes are open, the following events occur:

- the DDU drops SysB

- billing data is lost

- open Logutil files are lost or corrupted

Before starting card replacement procedures, close the DIRP volumes. Close files from DIRP and demount active volumes from the DDU. Use the procedure, "Deallocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

55 Stop files recording to and from the Logutil. Type the following command at the Logutil command level:

`>LOGUTIL;LISTDEVS`

and press the Enter key.

56 Close files on volumes on the DDU of the IOC.

`>STOPDEV  dev_name`

and press the Enter key.

where

> **dev_name**
> is the name of the device

`>QUIT`

and press the Enter key.

57 Repeat the ALLOC command to determine if files are closed, by typing

`>ALLOC`

and pressing the Enter key.

If the files	Do
are open	step 58
are closed	step 59

58 Confirm that you have done steps 54 to 57. If the files are still open, contact your next level of support.

**System cards
in an IOC** (end)

59 Manually busy the DDU, by typing

>**BSY**

and pressing the Enter key.

If the DDU	Do
is MBSY	step 60
is not MBSY	step 62

60 When cards are replaced and the DDU is in service, open the files. Use the procedure "Allocating Recording Volumes in the DIRP Utility" in *Routine Maintenance Procedures*.

61 To determine why the component is offline, consult operating company personnel. Continue as directed by operating company personnel.

62 For additional help, contact the next level of support.

63 The procedure is complete.
