
How to find a serial in Speaking Clock Deluxe

Cracker: **stealthFIGHTER**

Target: **Speaking Clock Deluxe v3.03**

Tools: Soft-Ice
Brain

Where: <http://www.lux-aeterna.com/clock/>

Protection: Serial number is calculated from our name.

Sorry for my English, it's not my mother language.

Step 1:

=====
Run SCD > About/Registration > Enter s/n > type your name and fake s/n. Don't push "OK". Go to Soft-Ice and type
bpx HMEMCPY (we set breakpoint, when was something copied to memory). Go back and push "OK" => Soft-Ice pops-up.

=====
Soft-Ice breaks two times, because we have two input boxes => press **F5**, then **F11** and **F12** until you get to the program code
and pass all **RETs** instructions (= RETURN). You should be here:

=====
:004C41F2 E8F9FEF3FF **CALL 004040F0** ; Start of the calculation routine
:004C41F7 754F JNZ 004C4248 ; If they are not same, jump to bad boy

=====
Stop at the **CALL**. Type **D EDX** and in the data window you should see you fake s/n. In the **Register Window** you can see that
the **EAX** register is highlighted => type **D EAX** and in the data window the right s/n appear. Note it!

=====
Try to register again. It's registered!
=====
