EYE SPY EDITORIAL SATELLITES, IEDs AND THE PUBLIC

It's never easy striking a balance between open reporting and responsible journalism, but Eye Spy is aware that students of terrorism often employ 'double standards' in respect of their ideology. Using methods carefully groomed in the world of espionage, terrorists are causing the security services more than a headache or two. The subject of improvised explosive devices (IEDs) regularly appears in the news; it is one that I am aware has become the most important subject to those employed in defeating terrorism. Thus I had no hesitation in withdrawing a feature that discussed IEDs, following a discussion with officials in London. IEDs are a cowardly tool that affords the user with opportunism and a slight 'edge' in terms of surprise, but countermeasures will prevail in the end.

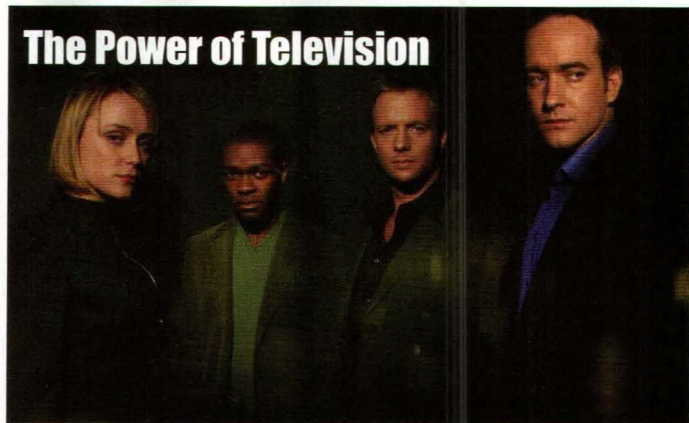

Eye Spy 37 takes a fleeting glance at what's happening a few thousand miles above our heads. Nations are launching satellites that can see into living rooms and read your newspaper, but beware... efforts are now apace that will generate rogue devices - hundreds of them - that could see communication, military, corporate and spy satellites terminated in seconds. If you don't think this could affect you, think again. Satellites are the primary provider of communications, thus telephone, television, and a host of other facilities could be lost if transmission fails. More worryingly, primary defence facilities rely on such devices, given they fail (or are disabled), the world faces a real dilemma. Science fiction? Read on.

On behalf of everyone at Eye Spy, thank you for your support and we wish you every success for 2006.

The Power of Television

MI5 drama series thwarts recruiting spymasters

Those of a scientific nature attuned to the influence television has on its viewers may well watch the next episode of the BBC drama 'Spooks', or 'MI-5' as it is called in the United States. Interesting statistics released in the media report that since the showing of the fourth series in the UK, females applying for work at the real home of MI5, have dropped dramatically. Surely this could have nothing to do with the deaths of two female actresses in the show? Well, apparently it may.

fallen to just 27%. Intelligence watchers believe it is no coincidence that MI5 recently advertised in two female magazines - *She* and *Cosmopolitan*, and though the drama is far from reality, it seems the possibility that joining the service may harm your health, and some viewers have been put off.

A security source told the *London Times*: "We want to attract more females but the Spooks programme may be having a bad effect because of the way some of the female characters have been killed off."

Some 45% of all recruits into the Security Service are female, but since the showing of an episode where one officer played by Fiona Carter was killed, applications from women have

In reality of course, statistics can be manipulated, and of 2,500-2,750 MI5 employees, around 47% are female.

INTELLIGENCE

MI5 Had 7/7 Terrorists Under Surveillance

Surveillance officers from MI5 had the four 7/7 London bombers under observation at least one year prior to them committing their devastating attacks in London. This contradicts earlier statements that the men were "clean skins" (unknowns to the security services). The men were allegedly on a list of 100 suspects.

Security coordinators stopped surveillance because the men "did not fit the preconceived terrorist profile." However, the head of the gang, 30-year-old Mohammed Sidique Khan had already been filmed with a suspected al-Qaida "fixer". A fifth man, believed to be associated with the bombers, was also tracked but he has apparently left Britain.

Intelligence officials have been informed that a man in custody in Indonesia said Khan met the infamous terrorist - Hambali, an al-Qaida commander from the Jemaah Islamiyah terror group, after travelling to Malaysia in 2001. Academic researcher Rohan Gunaratna was told that Khan "met and trained with leaders from the extremist group blamed for the 2002 Bali bomb attacks." The BBC also reported that Khan was picked up on CCTV in London prior to 7/7.

A number of politicians said the UK's surveillance system for identifying suspected terrorists was not working properly. Shadow homeland security minister Patrick Mercer said: "These men appear not to have been as unknown to the security services as was first

thought. If this is true, it suggests there are many more questions that need to be asked about our intelligence preparations prior to July 7. We will be demanding that these questions are answered."

Mohammed Sidique Khan made a video months prior to his attack

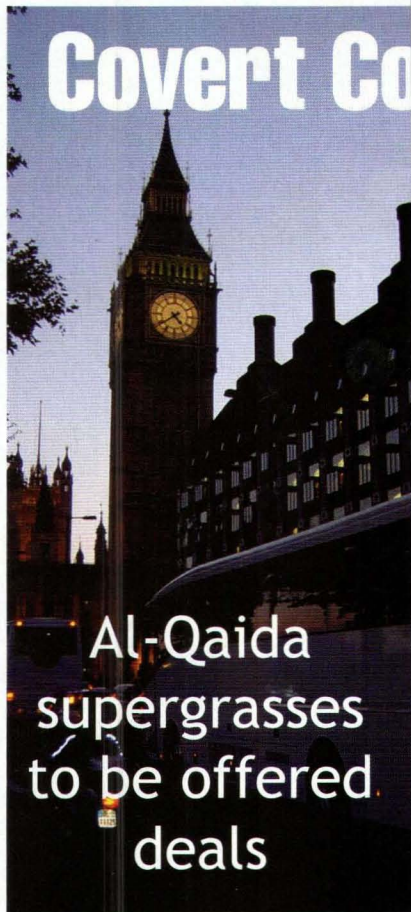

Wiretap 'Spy' Found Hanged

LEE SOO-IL, 63, former deputy chief of the National Intelligence Service, was found dead on 19 November 2005. He had apparently hanged himself. Sool-il was being investigated with other officers on suspicion that they had illegally listened in to telephone conversations of political and business leaders and journalists. "His death is an apparent suicide," a police official said by telephone, adding that no suicide note had been found.

We discovered some cases in which the spy agency used a signal tracking device, called "R-2," to intercept cell phone conversations among civilians under the Kim government," a prosecution official said.

In August, the NIS issued a statement saying it had carried out illegal wiretapping and eavesdropping activities. The agency then issued an official apology.

Covert Co

Al-Qaida supergrasses to be offered deals

THE DEMOLITION MAN

Bali Bomb Mastermind - the End Game

One of the world's most wanted al-Qaida terrorists - Azahari bin Husin - code-named the 'Demolition Man' and a brilliant bombs' expert, ironically blew himself up on 8 November 2005, after Indonesian police uncovered his whereabouts. Husin was a key planner in various al-Qaida attacks, but is known more widely for his role in the Bali bombings that killed 200 innocent civilians. After hearing of his demise, Australia's Foreign Minister Alexander Downer said: "It would be very good news if he had been taken out of the scene." Ninety-two Australian tourists died in the atrocity and it is widely believed intelligence agents from that country were on his trail.

The Malaysian bomb expert apparently triggered a bomb killing himself and two others after anti-terrorist police moved in on a villa in the East Java hill resort town of Batu, near Malang. The US trained anti-terrorism unit raided the

suspected terrorist hideout in Malang, a town about 850 kilometres east of Jakarta on Java island, at about 4.00pm.

"It appears that, and this comes as no surprise to us, that Azahari detonated a bomb when he was cornered by the police," a senior security official said. "We've believed for some time that would be one of his options, and two other people have been killed in that part of the operation."

Azahari bin Husin

Indonesian police are reasonably confident that he took his own life, though intelligence officials say he was shot dead as he tried to escape.

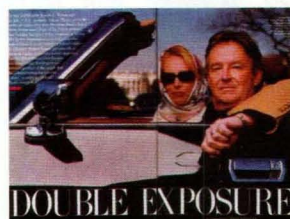

Azahari, a Malaysian who trained at various al-Qaida camps in Afghanistan, belonged to Jamaah Islamiyah (JI) an al-Qaida umbrella group. The group wants to establish an Islamic state spanning Indonesia, Malaysia, Singapore and the southern Philippines.

FOR THE INTELLIGENCE RECORD

CIA Officer Received Threats

WASHINGTON: Joseph Wilson, the former US diplomat who was sent to Africa to investigate the infamous Iraq-Niger uranium affair, has revealed that his wife, Valerie Plame whose identity was released to the press, has received "specific threats." Ms Plame's covert CIA life was exposed two years ago after Mr Wilson accused President Bush of misleading the world over the reasons for invading Iraq. The CIA is still assessing the damage done to other undercover operations, as Ms Plame almost certainly liaised with various other operatives. Mr Wilson, meanwhile, has not been specific with the type of threat issued against his wife.

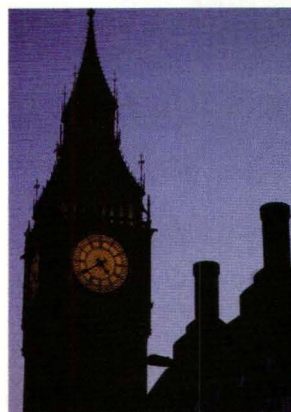

DOUBLE EXPOSURE

VANITY FAIR

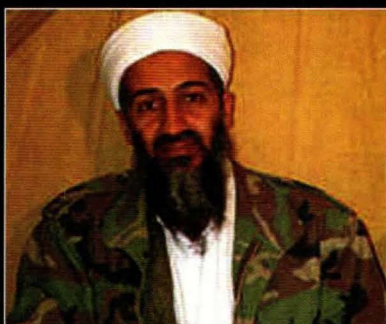

UK politicians playing with 'terrorists fire'

LONDON: British Prime Minister Tony Blair has insisted the security services should be able to hold terrorist suspects for 90 days without charge - even though he lost a Parliamentary vote regarding the proposed legislation. The move met with disapproval from over half the members of Parliament, but senior members of the security services are adamant that without the introduction of the new law, terrorists could simply walk free and escape. Scotland Yard has cited one case where it required more time to gather intelligence on one suspect. However, before all the evidence was acquired, a judge allowed the man to walk free. He has now fled the UK. Scotland Yard's anti-terrorist division say they now have overwhelming evidence that he was indeed a coordinator of terror, and that given the police had had the time to gather additional data, he would be under arrest. One senior intelligence source told Eye Spy: "Politicians are not in tune with information gathering. It takes time to cross-reference identity documents and their history. Some suspects carry multiple passports and the security services must be thorough." Tony Blair said members were "gambling with the security of the nation." For the record, an overwhelming majority of Britons supported the law.

Operation

Officials from the British Government and senior intelligence officials, have discussed offering terrorists lighter sentences for informing on their colleagues. The move is part of several anti-terrorist measures being discussed by security advisors. One senior Whitehall official commented on the proposal: "If information from a terror suspect already in custody today helped prevent another atrocity then I believe the public would accept a lighter sentence."

It is known that one terrorist suspect currently being held in Belmarsh top security prison was offered the opportunity to give MI5 intelligence. Eye Spy sources state that the information supplied would not be recorded and used only in intelligence operations. Anti-terrorist officials recognise that they cannot give any assurances that a lighter sentence would be forthcoming, but the judge would be informed of the defendant's covert cooperation.

Discussions have also taken place on Britain's current law regarding phone-tap evidence. MI5 intelligence gleaned by bugging cannot be used in prosecutions. Such evidence is heavily relied upon in the United States, Canada and Australia.

Counter-terrorist unit seize 'al-Qaida's grand Iraq plans'

BAGHDAD: US intelligence officials in Iraq have intercepted a 6,000-word letter written by Osama bin-Laden's deputy, Ayman al-Zawahiri, to Abu Musab al-Zarqawi, the most wanted terrorist in Iraq. In the letter, Zarqawi is criticised for many of his actions, including the beheadings and killings of civilians. However, al-Zawahiri, a key planner of 9/11, urges Zarqawi to continue fighting, even "beyond the removal of all Americans" from Iraq. Interestingly, al-Zawahiri warns that Zarqawi's appalling actions are losing al-Qaida vital support from neighbouring Arab states. The letter provides a unique insight into al-Qaida and is regarded as authentic.

Nuclear Attack on UK Possible

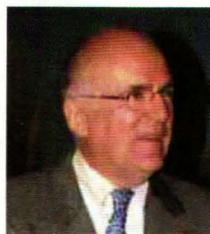

Former MI6 Chief Warns of Al-Qaida's Nuclear Ambitions

Sir Richard Dearlove, who retired as head of Britain's Secret Intelligence Service (MI6), in 2004, has painted a bleak picture about the on-going fight with al-Qaida. Speaking to delegates at a debate organised by UK law firm, Ashurst, Sir Richard said that the attacks in London in July, "bore the characteristic of a locally planned and carried-out event." He also warned that a chemical and biological terrorist attack is a real possibility in Britain and that al-Qaida could use nuclear weapons. He suspected that the bombings, which killed 52 civilians, did not yet amount to a "strategic terrorist event," though he concluded: "The clock is running on some much more dreadful events that could occur."

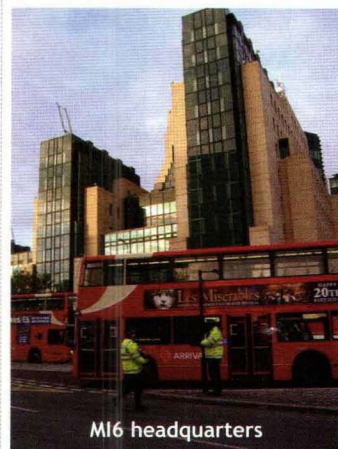

He noted that the Internet was a prime medium that provided access to

"some quite frightening dual-use technologies," he said. And though he refrained from identifying any attack thus far carried out by al-Qaida with such weapons, he said they would eventually be used.

"There is no question that bits of al-Qaida would have been extremely interested in biological weapons technology, chemical weapons technology, radiological devices and, ultimately, nuclear devices."

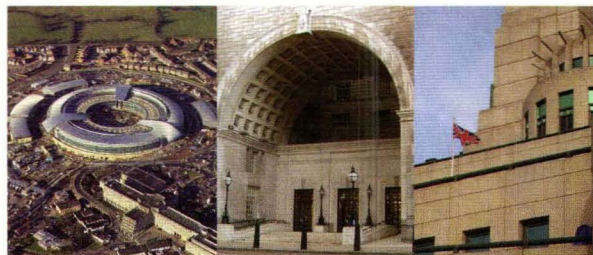

Sir Richard expressed empathy with the Government's approach to tackle terrorism, but was worried that there was "extensive complacency" in the UK about the danger the country faces.

MI6 headquarters

No Merger of MI5, MI6 and GCHQ in 2006

LONDON: Speaking to delegates at Gresham College, London, Downing Street's former security and intelligence coordinator Sir David Omand, warned against any attempt to merge Britain's three primary intelligence agencies simply to "save money." Sir David masterminded Britain's intelligence strategy following the terrorist attacks against the USA in 2001. He said that vital lessons had already been learned and that it was essential that MI5, MI6 and GCHQ operate as individual entities: "Collection of intelligence is a highly specialised activity that involves being able to recruit, train and motivate very different and unique kinds of people," he said. "Although from time to time cost-cutters cast glances at the overheads of running three agencies, the loss of effectiveness would be catastrophic."

INTERNAL AFFAIRS

9/11 - CIA OFFICERS' QUESTIONS

NEW YORK: Since the events of 9/11, several CIA officers have come forward to present opinions and relate information that may be relevant to on-going inquiries.

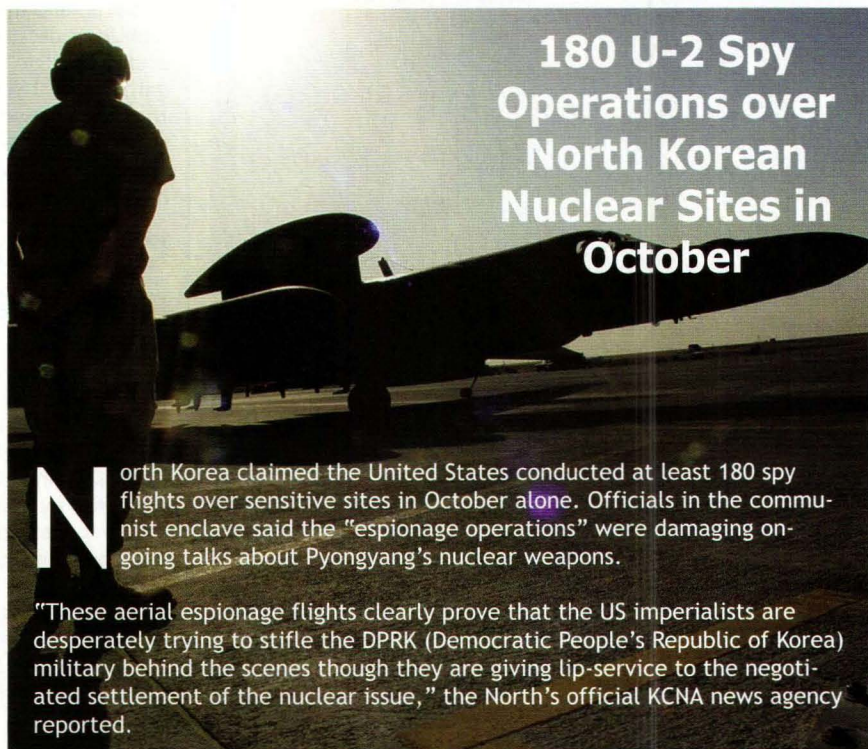

Eye Spy has learned that so much information has been passed on that a special unit has now been assigned to disseminate the intelligence. This material is regarded as top secret.

As part of the inquiry, officers have been allowed to express their opinions on certain intelligence matters, and a number of events that have puzzled officers since that day.

Many officers believe that more transparency is needed over certain unusual incidents, including the incident whereby 9/11 hijack leader Mohamad Atta's passport was found by a member of the public in New York City on the day of the attack.

180 U-2 Spy Operations over North Korean Nuclear Sites in October

North Korea claimed the United States conducted at least 180 spy flights over sensitive sites in October alone. Officials in the communist enclave said the "espionage operations" were damaging on-going talks about Pyongyang's nuclear weapons.

"These aerial espionage flights clearly prove that the US imperialists are desperately trying to stifle the DPRK (Democratic People's Republic of Korea) military behind the scenes though they are giving lip-service to the negotiated settlement of the nuclear issue," the North's official KCNA news agency reported.

Web-Site Announcement Provides Vital Intel

"Bragging" led to arrest of failed bomber

JORDAN: An al-Qaida-linked web site inadvertently tipped-off Jordanian intelligence officials on the identity of one of four bombers who attacked the Radisson, Days Inn and the Grand Hyatt hotels in Jordan's capital Amman.

Within hours of the attacks, Jordanian terrorist Abu Musab al-Zarqawi, claimed responsibility and revealed that one of the attackers was a woman who had died with her husband. Forensic specialists had already recovered the bodies of the terrorists, but were puzzled by the al-Qaida statement. A major search was then conducted and Sajida

Mubarak Atrous al-Rishawi, 35, was arrested a short time later at an al-Qaida safe-house already under surveillance. Al-Rishawi's explosives belt had failed to detonate.

The al-Qaida web site had declared the couple were the "first married suicide bomb team." Officials in Jordan said by "bragging about the event" the group had provided valuable intelligence. Al-Rishawi is the sister of a slain henchman of al-

Al-Zarqawi

Zarqawi, Mubarak Atrous al-Rishawi, who was killed by US forces in the Iraqi city of Fallujah.

After her arrest, she told interrogators her husband, Ali Hussein Ali al-Shamari, did all the work and she had no knowledge of the plot until they arrived in Jordan. Al-Zarqawi had provided the four bombers with fake passports and a vehicle.

Fifty-seven people, including many from a wedding party were killed in the blasts.

Suicide belt worn by bomber

BOMB AL-JAZEERA

LONDON: In November, the UK government warned media organisations they could be breaking the law if they publish details of an alleged leaked document that purports to show US President George W. Bush wanted to bomb Arabic television station Al-Jazeera. A senior lawyer warned editors in a note after the *Daily Mirror* newspaper reported that a secret government memo said Prime Minister Tony Blair had "talked Bush out of bombing the broadcaster" in April 2004. Several UK newspapers reported the attorney general's note and repeated the *Mirror's* allegations, which the White House said were "so outlandish" they did not merit a response. Blair's office declined to comment.

EYE SPY COMMENT: This controversial story will be major news in 2006, as not everything contained in the *Mirror's* report is as it appears. Conspiracy theory are two words that come to mind!

BLACK MARKET NUCLEAR BOMB PLANS

Iranian intelligence acquired nuclear warhead blueprint from rogue scientist

Suspicion that Iran has the know-how and capability to produce a nuclear weapon has increased. Nobel peace prizewinner Mohamed ElBaradei, head of the International Atomic Energy Agency (IAEA), revealed he had obtained several documents that reveal Iran did obtain a blueprint on how to build the core of a nuclear warhead. Iranian intelligence was provided with guidance and literature on the processing of uranium hexafluoride gas, casting and enriching uranium

from Abdul Qadeer Khan, the father of Pakistan's nuclear programme and a rogue nuclear weapons dealer.

The United Nations had previously avoided debate on the issue, despite much evidence presented by Western intelligence agencies. However, under pressure from UN officials, Iranian officials acknowledged that they had "not sought" the plans, but were "presented with them" by Mr Khan.

Dr ElBaradei's statement was contained in a confidential report to diplomats, prior to a meeting of IAEA officials in Vienna. Within days of the November disclosure, Iran announced it had started processing more uranium for its nuclear programme.

Dr ElBaradei is concerned by activities at two unidentified military nuclear sites and demanded that his inspectors be allowed to examine equipment and storage areas. He also requested interviews with key site staff. This was refused. "Transparency was indispensable and overdue," said Dr ElBaradei.

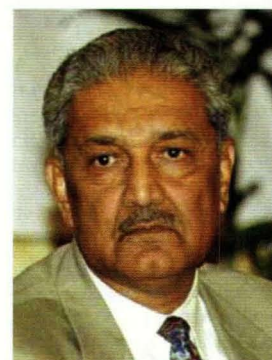

Britain, Germany and France have been negotiating with Iran over a deal that would allow Tehran a civilian nuclear power programme, but make it impossible to manufacture weapons grade uranium. US Secretary of State Condoleezza Rice supports this option and has requested the IAEA broker a deal.

Iran has managed a covert nuclear programme for eighteen years. When inspectors visited the plant at Natanz, they were "staggered" by what they found. Following further research, the agency discovered the nuclear weapons trafficking ring headed by Mr Khan.

Mohamed ElBaradei

Abdul Qadeer Khan

CAUGHT ON CAMERA

New Technology Introduced to Thwart

Due to the on-going al-Qaida threat to the UK and, following the London terrorist attacks, new security measures are being introduced at UK mainline railway stations and the London Underground. Senior security advisors told government officials that the bombs used in the 7/7 attacks could have been picked up by sensors and other equipment currently in use at British airports. The technology will be introduced in the next few months, though additional security measures are

already in place at some train stations. A 'millimetre wave camera' (MWC) has already been tested successfully at Heathrow Airport. All four terrorists used the rail network to carry out

An early MWC image - the technology has improved dramatically over the last few years

their deadly attacks. Passengers will have to pass through a MWC which can identify concealed weapons. Other systems will detect explosives and passengers may be "frisked" before they can board a train. Several interesting systems which could help identify potential suicide bombers are also being tested.

The measures were announced by Alistair Darling, the UK's Transport Secretary, and follow serious warnings issued by MI5.

The first station to test the millimetre wave camera is Paddington in London. Trains to Heathrow Airport and the Channel Tunnel depart from here. In 2004, al-Qaida plotted to smear the handles of toilets and hand rails of the Heathrow Express with anthrax.

Another security system that involves analysing suspicious behaviour is also being tested. This is almost certainly the same (or based on) that devised by Israeli

Similar systems are being developed elsewhere - this superb image was obtained from technology being tested in the USA

QinetiQ Millimetre Wave Camera

Defence contract firm QinetiQ has developed a world first in an advanced imaging system that can detect stowaways hidden inside vehicles and even weapons concealed under a person's clothing or in their baggage.

The 'Millimetre Wave Camera' system, developed by QinetiQ provides a real-time moving image scanning capability. The technology has its origins in a defence research programme developing

systems to allow soldiers and pilots to see through fog and cloud and to conduct operations in poor weather conditions. "We've actually come up with dozens of potential applications, from guiding airliners to their boarding gate in zero visibility to spotting people carrying concealed weapons going into football grounds" said Jeremy Attree, Commercial Director of QinetiQ's Sensors and Electronics Division.

The device works by

passively detecting naturally occurring radiation as it reflects off different objects. Metal objects completely reflect naturally occurring radiation, and hence knives or guns hidden under clothing or in baggage appear on the scanner's display as distinct illuminated shapes. The human body reflects 30% of the naturally occurring radiation around it, and this enables the scanner to detect a person's actual body shape beneath their clothes. Therefore, attempts to conceal almost any item under a person's clothing can be foiled by the QinetiQ device.

COURTESY QINETIQ

e Terrorists

intelligence and was recently examined by Homeland Security in the United States. Speaking to delegates at a transport security meeting, Mr Darling said: "We are continuing to learn the lessons of post-July 7. On trains and Underground systems - more varied security measures,

high-visibility policing, baggage reconciliation trials, beefing up CCTV.

"We also need to make sure that as new technologies are developed they are tested to see how they can help. We will test existing and new technologies to see how they might work on the rail and Tube, for example, passenger screening and participating in work on intelligent vision systems." He added: "We are facing a situation unprecedented in recent times. Right across the world - don't kid yourself it is just here or in the West - we face people who are prepared to kill. We will deal with this threat and we will win. But it needs single minded determination to do that."

During the trials, Paddington passengers will be chosen by random to go through

the machine. Sniffer dogs and other security measures will be tested, and some luggage may also be searched.

An insider with intimate knowledge of the plans says that Paddington was chosen because the station has numerous high-voltage power lines and diesel fumes are prevalent. Apparently the equipment is being tested because of the environment - "we simply don't know how the equipment will perform," he said. However, Eye Spy has learned that events relating to the Heathrow Express and failed 21/7 terrorist attack were relevant to the choice of the station. "Providing two barriers of security for Heathrow Airport was in the minds of the planners," a security source said.

In addition to its astonishing technical capabilities, the QinetiQ system has a number of practical benefits. In contrast to active detection systems incorporating low-level radiation emissions (e.g. x-ray scanners), QinetiQ's millimetre wave camera is a passive detection system, and therefore does not expose individuals to a radiation source.

Also, because the system works in real-time and provides an accurate moving image, vehicles or persons can be scanned without being stopped, thus greatly reducing transit time through security checkpoints.

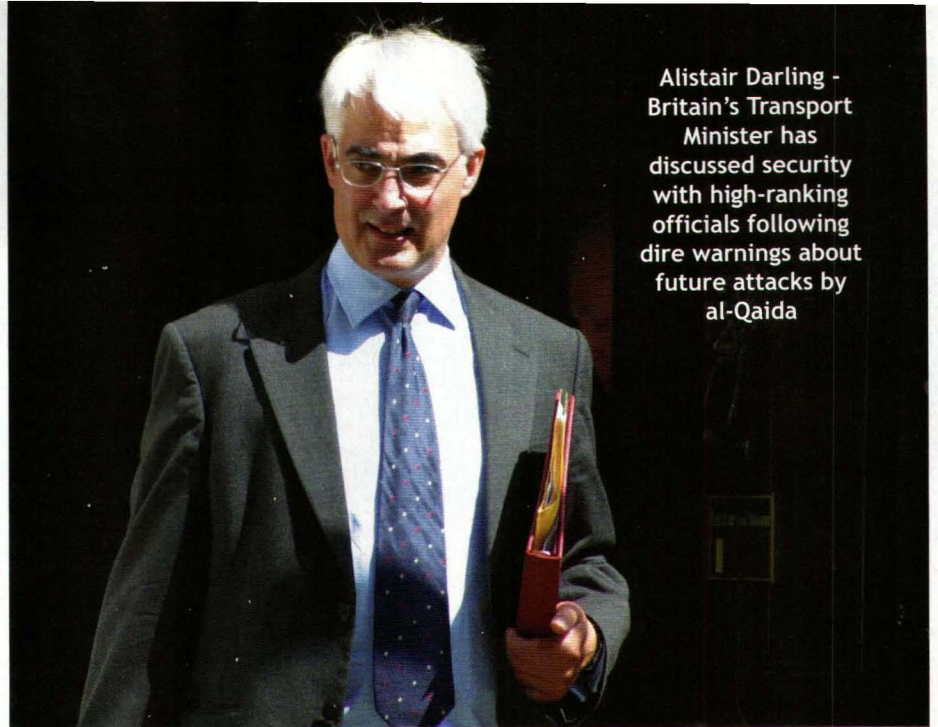

Current conventional security scanners, such as those installed at airports, can check a maximum of 16 or 17 people per minute, whilst the millimetre wave camera can cope with up to three times this amount. The system has been successfully tested at Eurotunnel's Calais terminal, and security specialists have been extremely impressed with the results.

- QinetiQ is a new science and technology powerhouse formed mainly from DERA, the British Government's elite defence research and development organisation.

LANTERN VERSES HORIZON

Iran's Russian-built - Russian-launched satellite "has the ability to spy on Israel," claimed Deputy Telecom Minister Ahmad Talebzadeh, who heads Tehran's space programme.

Sina-1 was launched in a blaze of publicity in October 2005, and its officially stated purpose is to examine disaster-prone areas in Iran and neighbouring countries. However, intelligence officials in the West feared the 375lb

said Mr Talebzadeh. However, when questioned if the satellite will be used for spy operations he conceded: "Technically speaking, yes. It can monitor Israel. But we don't need to do it. You can buy satellite photos of Israeli streets from the market." This wasn't enough to convince official in Israel.

The move is seen as a direct response to the launch of Israel's own spy satellite series. Ofek-5, (Ofek means horizon in Hebrew) which was put into orbit in

Iranian Satellite Can Spy on Israel's Secret Military Sites

2002 and has a life-span of about five years. The probe overflies Syria, Iran and other countries. According to senior intelligence sources, Mossad demanded

IRAN SENDS ITS SPIES IN

device, which has a life-span of just three years, was more attuned to surveillance than monitoring natural disaster zones.

The launch of Sina-1 came just weeks prior to remarks made by Iran's president who said "Israel should be wiped off the map." Analysts note that Sina-1 orbits the planet 14 times a day at an altitude of 600 miles. Controllers can manoeuvre its powerful cameras to areas across the Middle East and focus on points of interest to a 50-yard resolution. This would be sufficient to reveal buildings, aircraft-types and a plethora of intelligence.

"Sina-1 is a research satellite. It's not possible to use it for military purposes,"

Primary Iranian nuclear sites

SENA-1 was part of a payload carried by a Russian Kosmos-3M rocket, from the north-western Plesetsk launch site. The rocket also carried a Russian military Mozhayets-5 satellite, a

Chinese China-DMC, a British Topsat, a European Space Agency SSETI Express, a Norwegian NCube, a German UVE-1 and a Japanese XI-V.

In January 2005, Iran signed a huge contract with Russia to build and launch a telecommunications satellite called Zohreh, or Venus. Western intelligence estimates Iran could have as many as 10 orbiting satellites by 2010.

the launch of Ofek 5 to gather vital information on Iran's nuclear sites.

Israel's Ofek-6 spy satellite plummeted into the Mediterranean Sea on 6 September 2004, close to the port city of Ashdod, after a booster malfunctioned.

SPACE

Mossad believes that Iran clandestinely fanned its 15 known nuclear installations out across the country, an area of 636,000 square miles to avoid "blanket surveillance." Ofek-6, together with its predecessor, would have enabled greater surveillance. Iran's primary nuclear sites are located in the south, at Fasa, Bushehr and Dakhovin, at the tip of the Shatt al-Arb waterway; in central Iran, at Natanz, Saghand, Tabas, which is close to the Afghan border, Chalus and Neka on the southern shore of the

Caspian Sea; in the north, at Bonab and Tabriz. The most remote

Moments from the end - Ofek-6 is launched but minutes later crashes

sites have been sunk below ground in enormous bunkers, some of them decoys to deceive spy satellites.

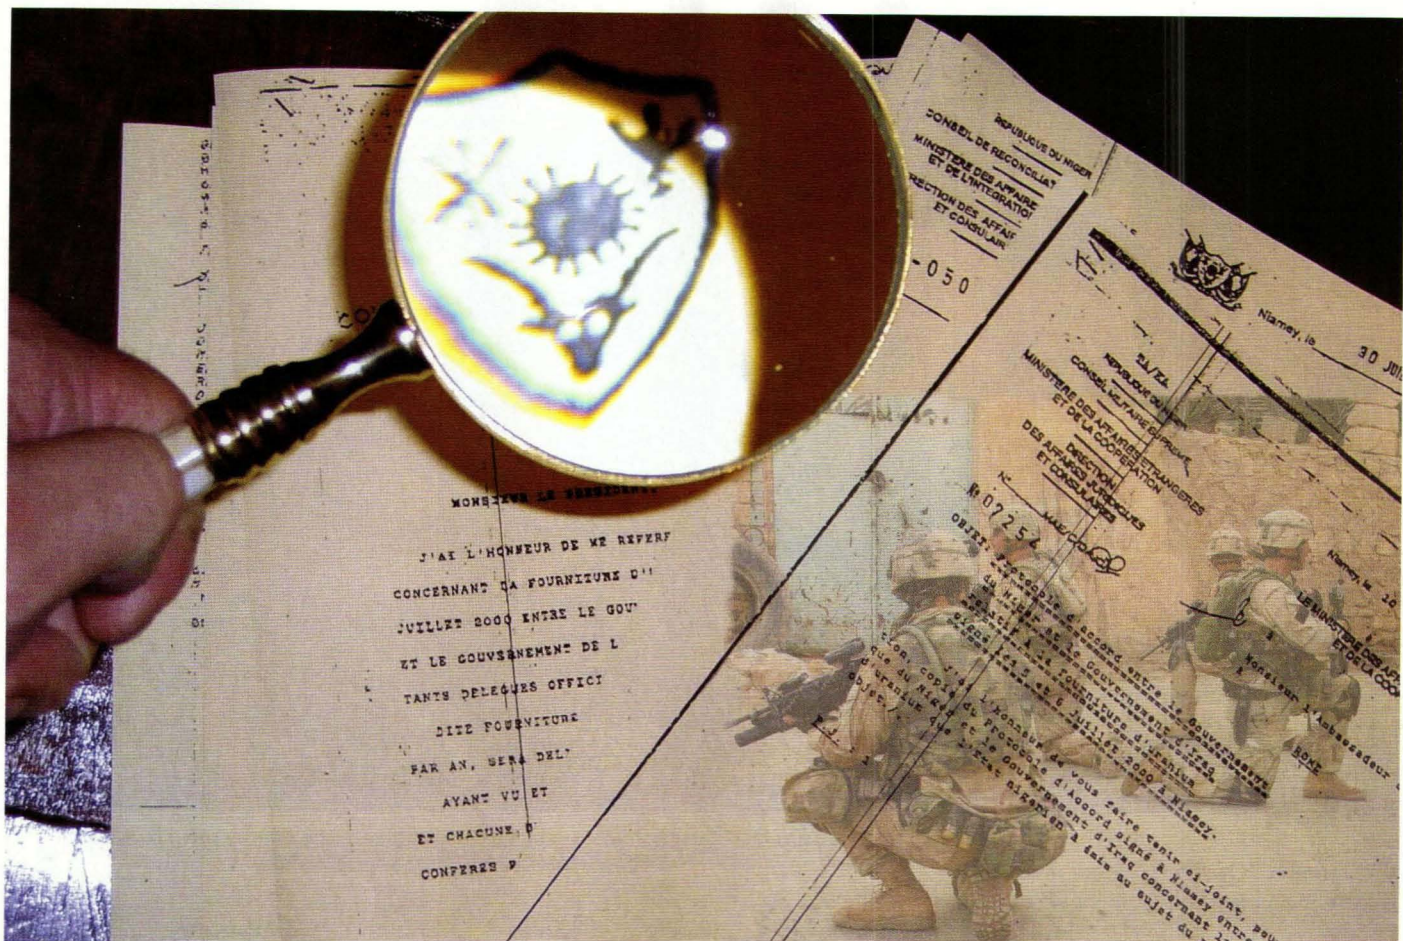

Iran has also announced it will launch a domestically built telecommunications satellite, codenamed Mesbah (Lantern), into orbit from a site in Russia in early 2006. The CIA notes Iran used Western technology in Mesbah, and it is almost

certainly a reconnaissance satellite. "Mesbah is ready for launch now," Mr Talebzadeh said.

Israel's spy satellite technology is second only to America, and following the loss of Ofek 6, Tel Aviv immediately fast-tracked two other projects Ofek-7 and Techstar. Initial estimates say both satellites will be ready for launch in 2007.

FOOL'S GOLD

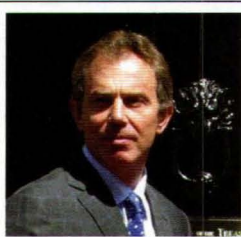

Who Forged the Niger-Yellowcake

Rome may be several thousands of miles away from Washington DC, but as President Bush reels away from the shadowy affair concerning the leaking of a CIA officer's name to the press, a little affair in Italy may well come back to haunt him. The Italians are trying to determine just who manufactured the infamous set of documents that were used in part to justify the war in Iraq. They have a direct connection to the incident in Washington involving US diplomat Joseph C. Wilson IV, (whose wife Valerie Plame was the covert CIA operative whose identity was leaked by a White House official), who was given the task of investigating a claim that Saddam was trying to buy uranium from Niger. The 'Niger documents', which surfaced in Rome, contained information that

Saddam had despatched a covert mission to the African country to acquire yellowcake, needed for the production of uranium.

Both Prime Minister Blair and President Bush accused Iraq of attempting to obtain uranium, and for a time, the White House based its claim on the bogus documents. Downing Street has always maintained that MI6 had provided a different source. Ultimately, Wilson, a former US ambassador to Niger, openly declared he

Prime Minister Blair has always maintained Britain's intelligence on Saddam's attempt to purchase yellowcake from Africa, had nothing to do with the Niger documents

Italian journalist Elisabetta Burba worked for the magazine *Panorama* - a title owned by Prime Minister Berlusconi. She received a copy of the documents and was instructed to deliver a copy to the CIA via the US Embassy in Rome. She feels "used in the affair"

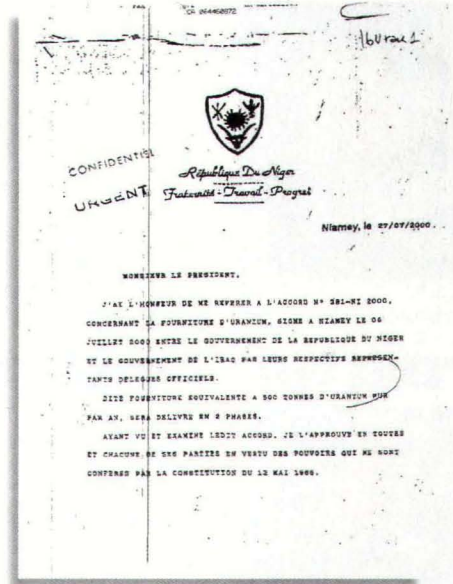

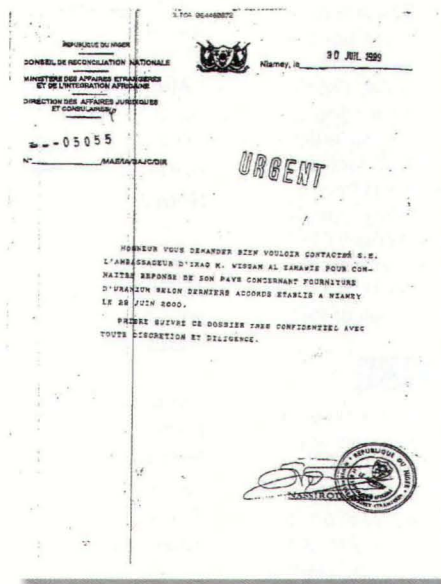

found "little evidence" to back the UK's and America's claim. Today he maintains the leaking of Plame's name was in retaliation over his views.

THE ROME CONNECTION

There is a great deal of information that has since emerged on how the documents surfaced: first to Italy's intelligence service, and then to the CIA, but no news as yet on the identity of the forger. Speculation that Nicolo Pollari, head of Italy's military secret service (SISMI) "disseminated the false information to the Bush administration" on orders from Prime Minister Silvio Berlusconi, is still far from certain. So too are spurious reports that the CIA manufactured them. However, Pollari did meet with US deputy national security advisor Stephen J. Hadley on 9 September 2002, just days before the documents surfaced. Pollari told Italy's Parliamentary Supervisory Committee on Intelligence: "SISMI is in possession of documentary evidence of the trade in pure uranium between a central African

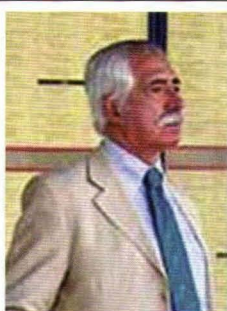

The American Embassy in Rome. It was here a copy of the Niger documents was delivered. CIA analysts soon discovered they were bogus and contained a plethora of mistakes

Documents?

US President George Bush and Italian Premier Silvio Berlusconi - both men have tried to distance themselves from the Niger yellowcake affair

The mysterious middle-man in the entire affair - Rocco Martino worked for several intelligence agencies as a peddler of information. However, he was more inclined to pass material to Italy's SISMI. He supplied a copy of the Niger papers to Burba, but not before he had given a set to the French

country and Iraq." Hadley would ultimately become the 'fall guy' as President Bush used some of the information in his 2003 State of the Union address. Intelligence sources suggest that Pollari went directly to Hadley, because CIA officials in Rome believed the Niger documents were "not credible."

Pollari has already given evidence at the closed hearing of the Italian Parliament and explained his role. As for Berlusconi's government, Italy has always maintained its military intelligence service played no role in the

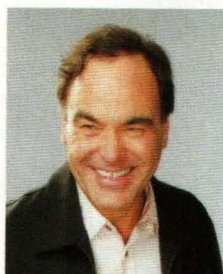

manufacture of the documents. "The [Italian] government flatly denies any truth to the allegations, as per our communiqués issued in July 2003 and August 2004," said an official. One Italian newspaper suggested otherwise. *La Repubblica* believes that Rome was fully involved in the affair, but an Italian official said the allegation was "false and devoid of all foundation."

In 2004, *Eye Spy* published details of an intelligence 'peddler' - Rocco Martino, an occasional Italian agent and businessman, who also worked with

ON THE INTELLIGENCE RECORD

STONE MAKES 9/11 MOVIE - WITH HEART

NEW YORK: Oliver Stone, one of the world's greatest Hollywood producers has begun shooting a new film about 9/11. However, he will not be including major scenes of the devastation after discussing his plans with community and family groups directly affected by the terrorist attacks.

The movie is yet to be named, but Stone has promised to "tread carefully" - avoiding sensitive issues after concern by the families of the 3,000 people who died. The central scenes

- the collapse of the World Trade Center - will be shot in Los Angeles. Indeed, film goers will only see real footage played on television screens in the background. "We're not doing the 'Towering Inferno-Titanic' version," said Michael Shambert, who's producing the Paramount film with his partner, Stacey Sher. Nicolas Cage stars as one of two policemen who survived the towers' collapse and were rescued from the building ruins after 22 hours.

CASTRO ILLNESS INTERESTS CIA

HAVANA: The wheels of interest are turning at CIA headquarters in Langley, for it has been discovered Cuban dictator Fidel Castro is suffering from Parkinson's disease. The CIA believes he will soon relinquish his grip on the communist state. An intelligence briefing given to Congress members by the CIA disclosed the 79-year-old communist leader has been suffering from the illness for some time but it has recently worsened. Many retired CIA officers still retain the bruises inflicted on the CIA after Castro's followers repulsed a CIA-sponsored attack in 1967, an affair better known as the 'Bay of Pigs'.

"SKIES DARK" - AL-QAIDA WARNING

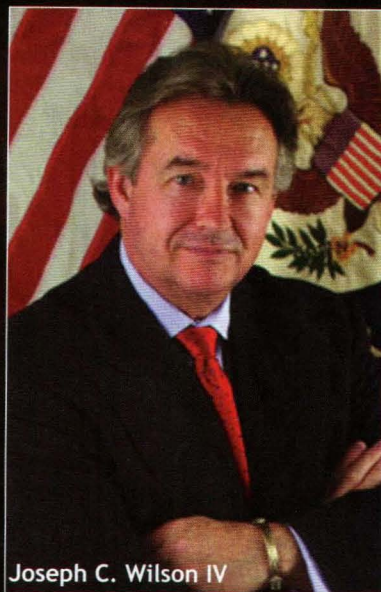

LONDON: Since the July terrorist attacks in London, at least two major operations in London have been foiled. The Metropolitan Police Commissioner Sir Ian Blair has warned more terror attacks are being planned. One of the attacks reportedly involved detonating explosives in parked vehicles. A number of suspects have been arrested. No details have been officially released, but Sir Ian said: "The sky is dark. Intelligence exists to suggest that other groups will attempt to attack Britain in the coming months."

'WARM-UP MAN' THREATENS QUEEN

LONDON: Al-Qaida's second-in-command, Ayman al-Zawahiri, CIA code-name the 'warm-up man', because he always appeared just before bin-Laden on video, has called the Queen "one of the severest enemies of Islam."

In a video released by the terrorist group just after the London bombings in July 2005, al-Zawahiri said the Queen was "ultimately responsible for the crusader laws against Muslims." UK security officials withheld the complete text for analysis, but details emerged in November. The video tape has been thoroughly examined by SO14, the Metropolitan Police Royalty Protection Branch. Though royal officials have been reluctant to comment on the threat, MI5 believe it to be "significant" to warrant even tighter security.

Joseph C. Wilson IV

Continued from page 13

THE NIGER DOCUMENTS

other intelligence services. After coming under scrutiny over his involvement with the Niger documents, Martino admitted that he obtained the papers through an attache and contact at the Niger Embassy in Rome. He initially offered the papers to a French intelligence service but Paris was just one of several 'targets'.

After coming under scrutiny again in October 2005, Martino issued another statement through his lawyer, Giuseppe Placidi: "The less I say, the better." At the time, Martino believed the material was authentic and insisted he did not acquire the papers from any intelligence source.

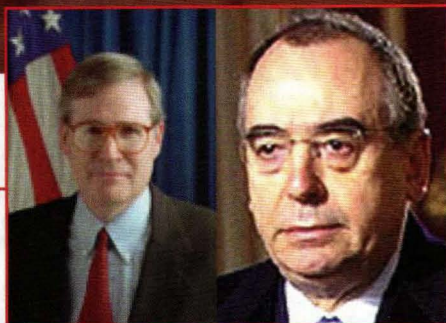

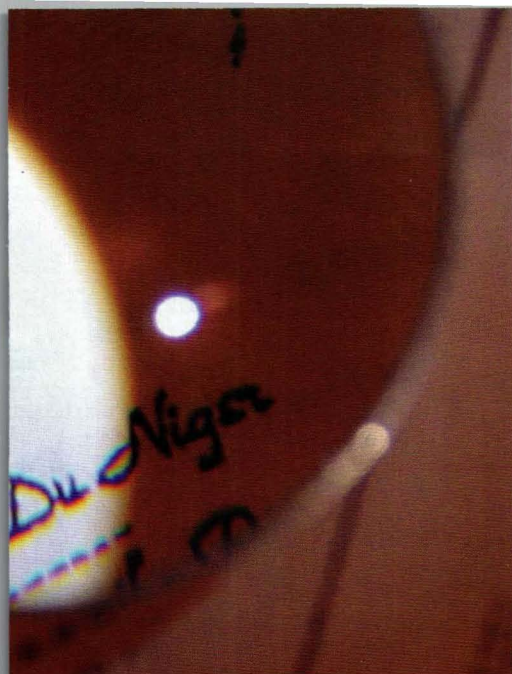

Many people within the intelligence world are familiar with Martino. He has been described as a "double-dealing - dishonest spy" and has apparently lost what semblance of credibility he had with the Italian secret service.

The Niger documents then fell into the hands of Italian reporter, Elisabetta Burba, 43, a credible journalist who worked for *Panorama*, a title owned by Prime Minister Berlusconi. Burba has never identified who passed her the documents, though she did describe him as "usually reliable" and a "security consultant." Some investigators believe this man to be Martino.

When *Panorama* analysed the documents, a senior editor told Burba to send a copy to the US Embassy in Rome; this she did in February 2003, just weeks before the invasion of Iraq. Like any good journalist would, she also travelled to Niger to determine if Iraq was really attempting to buy the "500 tons" of yellowcake, as alleged in the documents. Like Joseph Wilson, she found "no evidence" and concluded the information was "not reliable."

Burba is as keen as anyone to get to the bottom of the mystery, for the Niger documents played no small part in the invasion of Iraq and the public naming of a CIA officer, plus the resignation of a senior White House official. "I am very mad," Burba said. "I was used. And the documents have been used to justify a war where people are being killed. This makes me very uneasy."

The documents were obvious fakes, and it was evident to CIA officers in Rome who viewed the material. An analyst simply ran the name of one Niger minister and department identified in the documents. He was not even at the ministry at the time the

Intelligence chief Pollari (right) met with US deputy national security advisor Stephen J. Hadley on 9 September 2002, just days before the documents surfaced

papers were supposedly written. The International Atomic Energy Agency (IAEA), did the same, and reached an identical conclusion.

The FBI closed its investigation into the forger in November 2005. SISMI have recently released a statement saying it was not behind the fraud. Niger officials have long rejected the authenticity of the documents, though a major clue could be afforded by further examining the break-in at Niger's Rome Embassy. Official letter-headed paper (including a government stamp) was stolen months before the documents emerged. It seems unlikely Rocco Martino actually forged them, but he was key to their distribution. In recent weeks some intelligence analysts have started to probe another theory. This involves former Israeli intelligence officers allegedly trained years ago by the KGB. There are also snippets of information that suggest a Washington connection; though it would seem bizarre given that the CIA dismissed the papers within weeks.

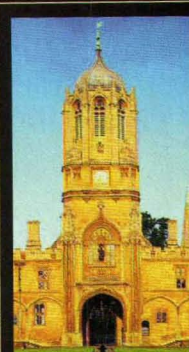

It will be interesting to learn the outcome of the Italian inquiry, but even when the dust settles, it is unlikely the forger will ever be identified....

INTERNATIONAL
CONFERENCE

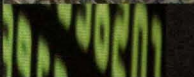

Spies, Lies & Intelligence

Post-war intelligence, intelligence after 9/11, the future of intelligence

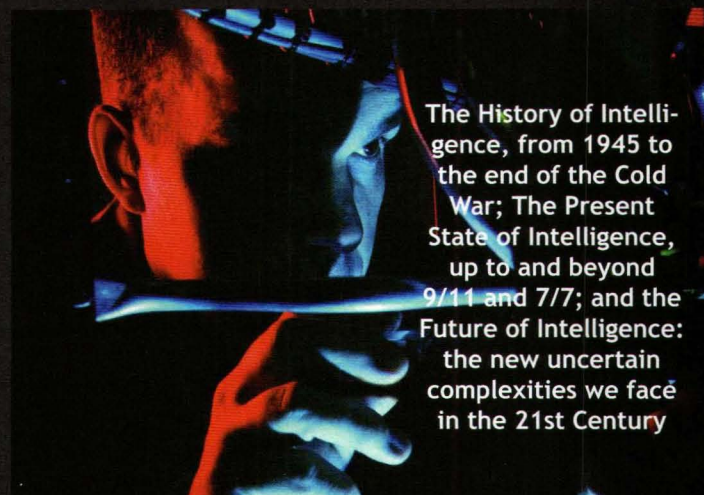

Conference at Christ Church,
University of Oxford 2-8 September 2006

The Conference is organised by Christ Church, a founder member of the Oxford Consortium and an Investor in People organisation

The conference brings together authors, experts and intelligence practitioners of international standing and examines the evolution of intelligence, espionage and deception across more than half a century since the end of World War II

The History of Intelligence, from 1945 to the end of the Cold War; The Present State of Intelligence, up to and beyond 9/11 and 7/7; and the Future of Intelligence: the new uncertain complexities we face in the 21st Century

Speakers include: Professor Richard Aldrich, Chapman Pincher, Professor Christopher Bellamy, Dr David Khan, Nigel West, Bill Duff, Dr Stevey Gibson, Dr Michael Goodman, Mark Seaman, Major R.A.M. Seegar, Dr Stephen J Weiss, Amir Taheri, Baroness Daphne Park... Full speaker biography www.eyespy.com

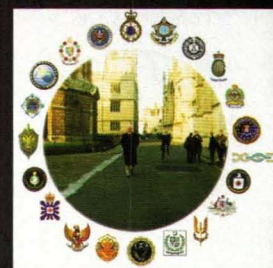

For more information, brochure and booking form, please write:

FRENCH SPY Who Never Was

Somewhere, though almost certainly not in Europe, a brilliant fraudster and bogus spy known only as "Gilbert C" is probably sipping champagne and enjoying the good life. He has already been described by detectives as one of the "greatest conmen" ever, after he persuaded several banks to lend him more than \$3.5 million (\$6.0m). For months Gilbert carefully planned his audacious fraud in the dim-lit bars of Paris, Hong Kong and beyond. How could he convince leading banks to hand over a fortune in cash?

Gilbert then struck gold - literally. He devised a cunning scheme that required all the skill, know-how and daring of a real-life spy, indeed, he presented himself as just that and convinced several bank managers he was in the employment of the secret service and his role was to "out" suspected terrorists who were laundering money. A French detective said: "This man is going to become a hero if we don't catch him... the case is exceptional, perfect and unbelievably surreal."

Interpol has released only partial details of Gilbert's adventures, but his first 'sting' probably occurred in June 2005. An accomplice telephoned a manager at a local branch of La Poste - France's general post office. He said he was Jean-Paul Bailly, La Poste's senior manager, and explained that the manager would be contacted shortly by an official from the DGSE (General Directorate for External Security) - France's foreign intelligence service.

*The Great
'DGSE Bank
Robbery'*

A quick way to make a million bucks...

Hong Kong Police headquarters - officers are trying to establish if Gilbert C travelled to the city

About one hour later, Gilbert telephoned and posed as a DGSE officer. He explained that the manager should buy a new mobile phone, give him the number and keep it switched on night and day. He was told not to discuss anything with colleagues as the matter was of national importance and vital to the security of France. Gilbert then telephoned the manager some forty times over the next two days to gain her confidence. She truly believed she was central to an intelligence operation.

And then the sting. In his very last call he quietly invited her to reveal the six richest customers who frequented her office. He then explained that one of the names she had divulged was involved with the financing of terrorist activity and about to make a large withdrawal of cash. He then said it was essential she deliver all the cash at the post office to the DGSE so his officers could secretly mark the money with "tracking devices" thus the terrorist could be followed and the cash tracked to other persons. She was then instructed to put around £200,000 (\$350,000) in a briefcase and place it under the door of a toilet at a designated cafe. The manager duly obeyed and Gilbert arrived at the cafe and took the money.

His next operation was far more intricate, though no less cunning. Gilbert spent weeks examining a whole host of business deals in France's financial papers. He then carefully selected a number of major banks and conversed in a thoroughly professional manner with managers and senior executives. He informed them that during the next few days some major transactions were going to take place - a number of these were terrorist "money laundering operations." It was important, he stressed, that the DGSE should be allowed to follow the perpetrators and the money, thus it would be necessary for them to cooperate and follow each and every instruction carefully. Gilbert then injected a caveat, "the money must only be released if its destination was a foreign account."

It is understood three banks fell for the ruse. Millions of pounds were duly transferred to accounts in Geneva and Hong Kong. Gilbert then made his move to withdraw the cash, but just before he could do so, the authorities blocked the transaction. However, not to be undone, Gilbert tried again, and this time he was successful. A French bank transferred around £3.5 million to an account in Estonia. Gilbert was

1. Firstly Gilbert identified local French La Poste branches to try out his plan

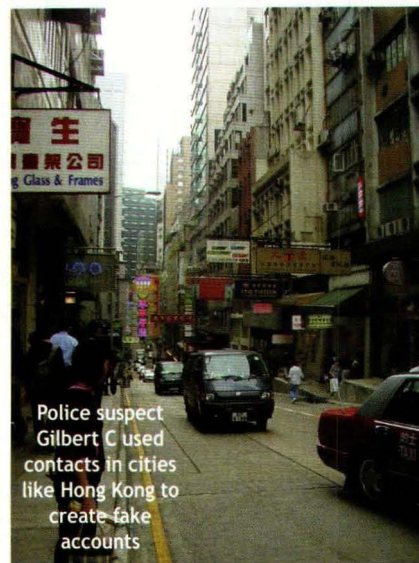

2. He called managers pretending to be a DGSE intelligence executive on the trail of al-Qaida's money men -

3. One manager then delivered about £200,000 to a cafe - she was told agents would track the money

4. Satisfied the play would work again he convinced some national bank managers to cooperate and allow bogus computer transactions to take place - this he said would allow the DGSE to track the money

5. Millions of pounds transferred to accounts in various countries

6. Some banks realised it was a ruse, but before police could arrest Gilbert C he made a huge cash withdrawal from an account in Estonia - he then escaped to Israel on a plane

Police suspect Gilbert C used contacts in cities like Hong Kong to create fake accounts

waiting and reportedly took the money. Unbeknown to him, the police were monitoring his phone calls, but before they could act, he had flown to Israel. Interpol investigators were on his trail, but he had disappeared again, no doubt under an assumed name and with that amount of a cash, a new identity and lifestyle awaited him.

Fuming French police officers immediately arrested his wife and mother-in-law at their home near Paris. And of course, they denied any knowledge of the affair, and the spy who never was.

Surveillance officers from ASIO uncover attempt to breach security at Australia's only nuclear site

Al-Qaida is as determined as ever to strike a nuclear facility. The list of attempts to breach security at nuclear sites is growing. Since 2001, at least six major operations have been thwarted whereby al-Qaida operatives planned to destroy reactors or acquire components and materials. Eye Spy has learned that reconnaissance operations have taken place in the UK, USA, Germany, France and Russia. That list has now been enlarged as evidence emerges that Australian counter-terrorist police foiled an extremely well-planned operation against a nuclear reactor on the outskirts of southern Sydney.

In November 2005, eighteen people were arrested in Australia and charged with various offences. The government said that they had stopped a 'cata-

strophic attack' by members of a terror cell, embedded in Australian society. The raids on several addresses were the result of a lengthy surveillance operation by officers from the Australian Security Intelligence Organisation - and a specialist unit within ASIO - Protective Security Section T-4. It is understood the operation to identify suspects began in December 2004, after officials stopped a vehicle carrying an off-the-road motorcycle close to the Lucas Heights nuclear reactor in semi-rural southern Sydney. When the men were challenged they said they were going to test the bike. However, when police interviewed Mazen Touma, Mohammed Elomar and

NUCL FACILITY IDENT

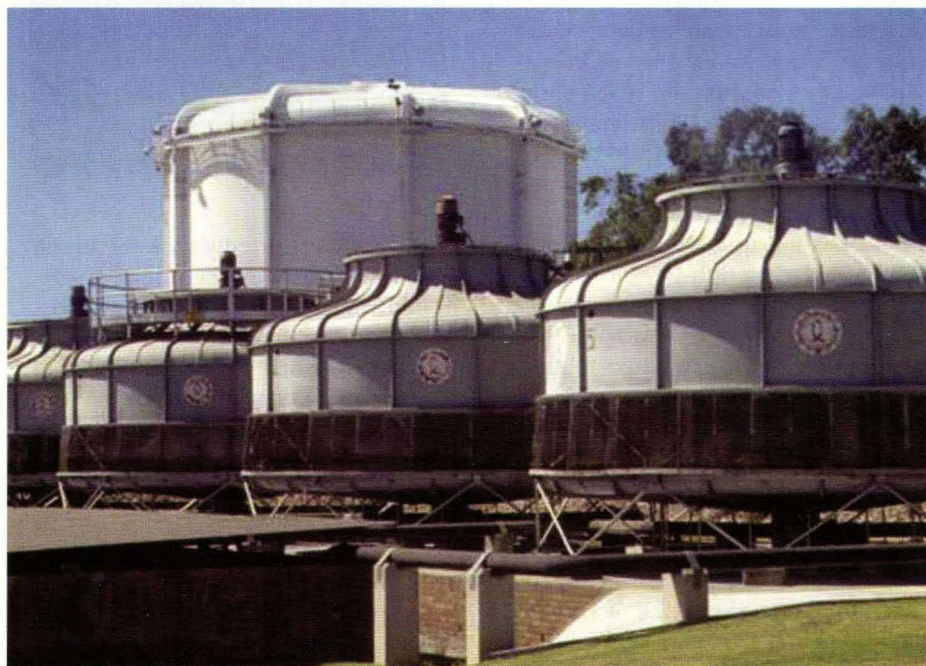

Abdul Rakib Hasan separately - all three gave very different stories. A search of the perimeter fence revealed a lock on one gate had "recently been cut off." The men were released but unbeknown to them were put under surveillance. (The three were part of the alleged cell arrested in November).

Australia's biggest anti-terrorist operation was authorised and involved over 100 officers. As officers gathered intelligence, it became clear the primary target was still Lucas Heights. Watchers monitored the movements of the three men and identified other accomplices. It is alleged some members of the cell attended military-style training camps in the remote Australian outback.

According to intelligence sources, the terror cell then "sourced or attempted to source materials (primarily sulphuric acid, acetone and peroxide) for the production of peroxide-based explosives." Fearing an attack was nearing, security officers searched Elomar's home on 27 June. Police said they found a computer memory stick which contained instructions in Arabic for making TATP, or triacetone triperoxide, a highly unstable explosive made from commercially available chemicals such as hydrochloric and sulphuric acids, brake fluid and hydrogen peroxide. The materials were virtually identical to those used by the London terror gangs in July 2005.

Steve Bracks, the Victoria State Premier, said "the police have disrupted probably

AR STING?

IED IN 'CATASTROPHIC ATTACK' PLANS

Steve Bracks

the most serious preparation for a terrorist attack that we have ever seen in Australia."

New South Wales Police Commissioner Ken Moroney, said:

"I'm satisfied that we have disrupted what I would regard as the final stages of a terrorist attack or the launch of a terrorist attack."

Intelligence sources believe that the most probable target was the transport system or the Australian stock exchange. Wiretap conversations alluded to this theory, though it is believed surveillance officers had monitored "likely reconnaissance operations," by some of the suspects.

Maurice Lemma, New South Wales state premier, sought to reassure the public that the reactor was safe: "Lucas Heights is a Commonwealth facility, but we have extensive plans in critical infrastructure protection which form part of our counter terrorism plans."

Lucas Heights is Australia's only nuclear reactor and is used for making radioactive material for medical uses and does not generate power. In 2000, ahead of the Sydney Olympics, detectives in New Zealand said they had uncovered a possible plot to attack the reactor, but no arrests were ever made.

The eight Sydney men have been charged with conspiring to manufacture explosives in preparation for a terrorist act, and the 10 Melbourne men are accused of being members of a terrorist organisation.

Defence lawyers said the case against the men is "very weak."

Aerial view of the Lucas Heights Science and Technology Centre. The Lucas Heights facility has a 1.6 kilometre buffer zone. It is one of the few research reactors in the world to have a buffer zone of this size. Similar research reactors can be found around the world in capital cities and on university campuses.

Australian Security Intelligence Organisation (ASIO)

The Australian Security Intelligence Organisation (ASIO) is Australia's national security service. The service is the equivalent of Britain's Security Service - MI5, though it does occasionally gather foreign-based intelligence.

ASIO's main role is to gather information and produce intelligence that enables it to warn the government about activities or situations that might endanger Australia's national security. The ASIO Act defines 'security' as the protection of Australia and its people from espionage,

sabotage, politically motivated violence, the promotion of communal violence, attacks on Australia's defence system, and acts of foreign interference.

ASIO focuses on terrorists, people who may act violently for political reasons, and people who may clandestinely obtain sensitive government information (spies) or otherwise harm Australia's interests in order to further their own causes or the interests of foreign governments.

ASIO does not investigate lawful protest activity, nor does it investigate purely criminal activities.

Other ASIO functions include providing security assessments, protective security advice and collecting foreign intelligence in Australia. In conducting security assessments, ASIO assesses candidates general suitability for

access to classified information. In the case of security assessments for visa applicants, ASIO adopts a risk-management approach to identify people wanting to travel to Australia who may pose a security risk. Protective security advice is given by ASIO to government agencies seeking cost-effective ways to protect their assets. ASIO only collects foreign intelligence - information on the capabilities, intentions and activities of foreign powers - at the request of the Minister for Foreign Affairs or the Minister for Defence.

ASIO has a staff of around 900 which is expected to grow to around 1000. Its Central Office (headquarters - above) is in Canberra, and there is a local office in each mainland state and territory capital.

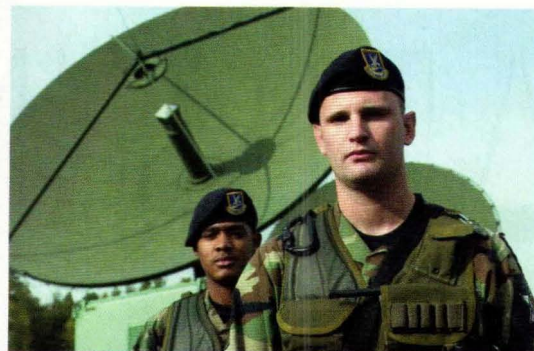

ASIO Director Paul O'Sullivan

DEEP Espionage BLACK War in Space

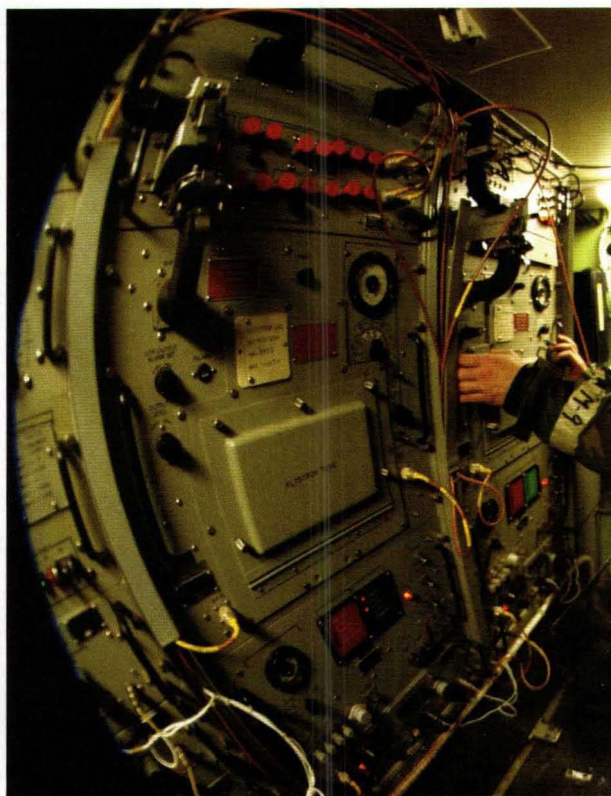

Preparing for a
Space Pearl
Harbour

The launch of Sputnik by the Soviet Union in 1957, marked the beginning of a superpower rivalry with the United States that lasted throughout the Cold War. Both Moscow and Washington recognised the value and significance of space. Since then, hundreds of satellites have been launched for military and civilian scientific exploration. However, no longer do the two nations compete to provide a "three minute warning", or seek to destroy relative missile launching sites.

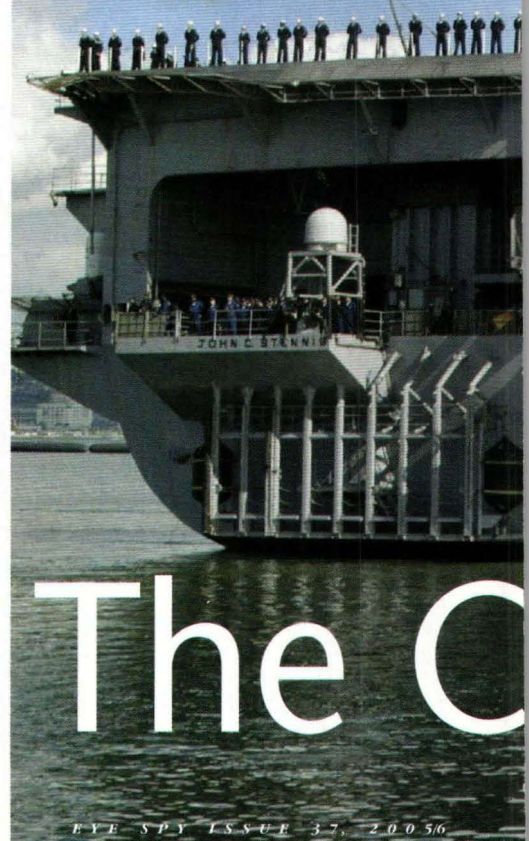

The new threat is an emerging one, and an unqualified puzzle that now sees analysts across the world scrambling for answers. In the last two decades, the revolution in computers and telecommunications has resulted in a new element in the space arena: commercial utilization. Miniaturisation, efficient power sources and growth in computing power has made smaller satellites possible and thus affordable to many countries. In a world free of suspicion and reason, this new technology would be hailed as a breakthrough, but dig ever so slightly beneath the surface and you will find a very different scenario. "Deep Black" has suddenly assumed a different meaning.

Mag

America's Aegis technology... and more falls into China's hands as FBI breaks-up suspected spy ring

Eye Spy 35 contained a report on how China surprisingly obtained vital technology that appeared to mimic the US Navy's Aegis battle management systems - the core technology used in many US Navy destroyers and cruisers. Unbeknown to the intelligence world, the FBI were already on the trail of those supposedly responsible for

EYE SPY ISSUE 37, 2005/6

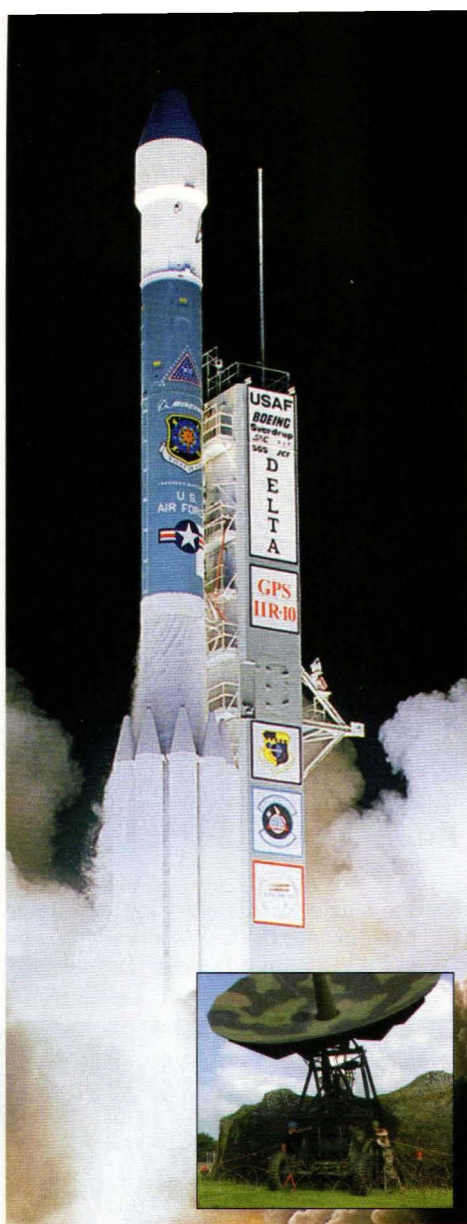

NORAD's task of identifying and tracking each and every object would be unimaginably difficult.

ESPIONAGE

Satellites that orbit the Earth are already intercepting messages and intelligence 24-hours-a-day. Virtually every phone call; be it encrypted or by cell phone, can be recorded in space. Defence systems also rely heavily on satellites, but they are now vulnerable to attack as the costs to launch satellites and the technology used in such systems shrinks every year.

The US has already created satellite-carried laser weapons that could, if required, strike targets on land. Britain and other nations enjoy the benefits of ECHELON, the world's most powerful spy-satellite system (see Eye Spy 36), and security is achieved. While most governments would like to sweep the issue of vulnerability under the carpet, it is clear much debate is needed. An unwritten law is currently in place whereby nations cooperate, but as our atmosphere and skies start to be populated by many more satellites, the rules of the game will change. Just one incident could lead to a real furore. The status quo is fast becoming assigned to history as more nations eye the wonders of space.

Intelligence experts agree, though many reluctantly, that space is the future 'espionage battleground' of Earth. Thus, don't be surprised in the months and years to come, when one government complains "one of our satellites is missing..."

protect the country's interests, the United States must promote the peaceful use of space." It said further that the US and most other nations interpret "peaceful" to mean "non-aggressive," which comports with customary international law allowing for routine military exercises in outer space, much like such activities on the high seas and in international airspace. Unfortunately events over the last few years have created a new mind-set.

The United States and its allies already have a 'head-start' on any nation in terms of using space as both an offensive and defensive 'tool'. And though microsattellites have a major advantage over their larger counterparts, NORAD already tracks over 10,000 satellites and pieces of space debris in Earth's atmosphere. Thirty years ago the organisation had the ability to detect an object the size of a golf ball over Moscow; thus one can only surmise today, that it would have little difficulty in identifying rogue satellites the size of a teacup. However, the Pentagon acknowledges that some nations are already researching 'stealth-type' satellites that could be virtually invisible. If "swarm satellites" are in orbit,

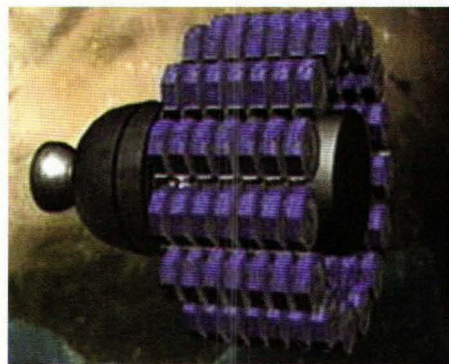

In the middle on nowhere

This military unit plots its position on a map via information received from an orbiting satellite. Without such technology special operations would be severely hampered

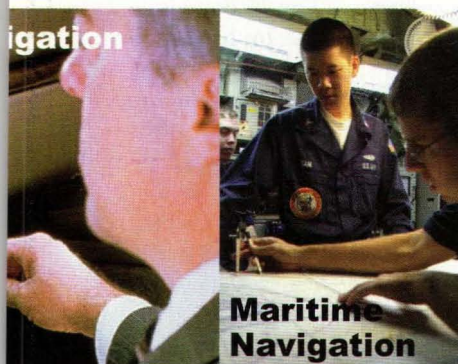

of the planet. Satellites are delicate instruments and very vulnerable.

In 2000, the US established the 'Commission to Assess National Security Space Management and Organisation', chaired by Donald Rumsfeld. The charter concentrated on military and intelligence space operations and cited a critical need for "national leadership to elevate space on the national security agenda." It also concluded that "the United States has an urgent interest in promoting and protecting the peaceful use of space." The Commission deemed conflict in space is inevitable; it said that since air, land, and sea had become arenas for conflict, space will be no different.

The report sites that "there is no blanket prohibition in international law on placing or using weapons in space, applying force from space to Earth or conducting military operations in and through space." It emphasised that "To

The USA is already well on the way to producing a tiny delivery system that can put into orbit as many as 100 nanosatellites

ALL AT RISK IN THE EVENT OF FAILURE

COURTESY: US AIR FORCE

the military with an unparalleled advantage over adversaries to apply overwhelming force without significantly risking its assets or lives of its troops. At the same time, the dependence on space is apparent to any adversary.

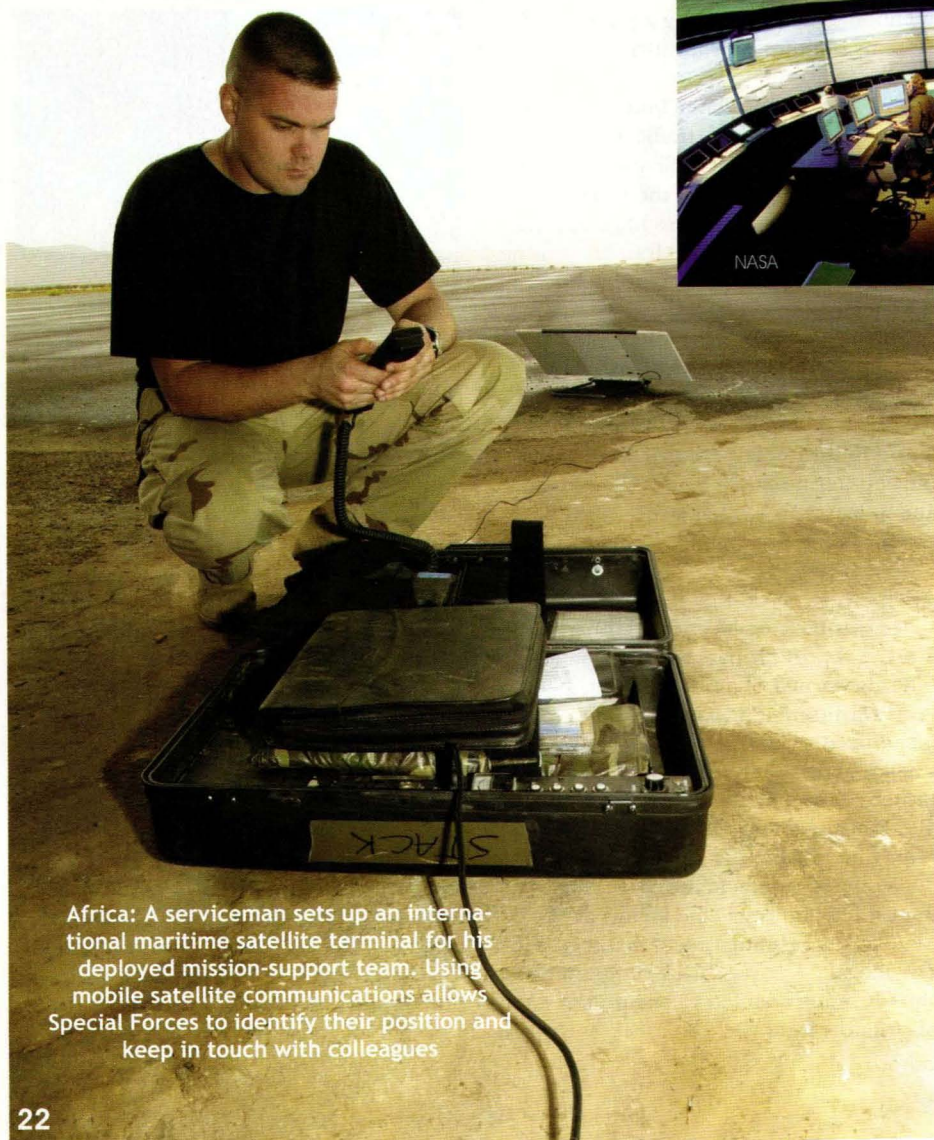

VULNERABILITIES AND THREATS

The intelligence community is constantly monitoring the launch of small, lightweight satellites that are increasingly accessible to more countries. 'Microsatellites' are inexpensive and highly capable systems that can perform satellite inspection, imaging and could easily be adapted as weapons. In 2001, the US learned that China had developed a tiny satellite capable of being covertly deployed and attached to any satellite. During a conflict, commands could be sent that would interfere or destroy the host satellite in less than one minute. The intelligence assessment was correct. In April 2004, Nano-satellite I, weighing just 25kg, became the first nanotechnology-based satellite to be successfully launched. This made China only the fourth country in the world capable of launching nano-satellites after Russia, the United States and Britain.

It is this technology that concerns the West. Given a future conflict arises, the implications for organisations such as NORAD, or those charged with countering a nuclear attack, could be devastating. Communications and the trigger to launch countermeasures could be severed in seconds.

Microsatellites require less capable launch vehicles, are cheaper to build and are difficult to detect by space surveillance systems. US intelligence estimates that over 400 such satellites have been launched over the last 20 years. An internal intelligence document prepared by some of the most prestigious satellite and military officials believe this type of satellite could also be adapted for use as a 'space mine'. Analysts fear that in the very near future rockets could launch a payload that could release multiple devices that would seek their host and lay in wait - undetected. Some satellites currently being developed measure just two inches in diameter. Such destructive satellites would maintain their orbital

COURTESY: US ARMY/DOD

Africa: A serviceman sets up an international maritime satellite terminal for his deployed mission-support team. Using mobile satellite communications allows Special Forces to identify their position and keep in touch with colleagues

position in the vicinity of the target satellite, ready to launch an attack in seconds. Space mines could use explosives or other means to destroy the target satellite or could be used to jam communications or otherwise obstruct the operation of the satellite. There is also the real possibility that the rogue satellite could insert disinformation into the system, resulting in confusion and more. "It's no longer science fiction," a US defence specialist said, "but such technology is now available on the free market."

Other attacks on satellites could be in the form of ballistic missiles, ground-based laser systems and on low-earth orbit satellites and laser illumination that could potentially cause power loss and damage. Another threat is that of a high altitude nuclear explosion to knock out virtually all satellites in low earth orbit. Any nuclear attack would result in radioactive debris impacting a large area

A USAF officer runs through a checklist during Global Positioning System satellite operations. This operations centre in Colorado controls a constellation of 29 orbiting satellites that provides navigation data to military and civilian users world-wide. The implications of satellite disruption are obvious

Many nations are now launching satellites or planning for future programmes. Innocent university studies are driving private industry and photographs taken of previously top secret sites appear regularly. Satellites can now be "driven" to different locations in space and emerging

technology is augmenting a plethora of systems built for new industries.

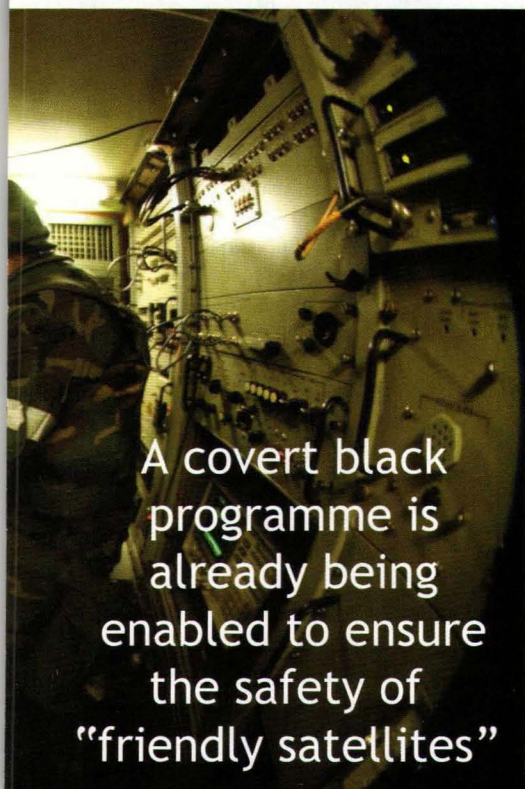

Most satellites are launched to provide communications data, traffic and travel guidance, help in scientific discovery or weather monitoring, but the modus operandi of others are less than transparent. Even nations such as Iran are joining the 'space race', but some intelligence watchers believe rogue satellites blanketed in seemingly benevolent programmes are now orbiting Earth. Such rogue satellites will pose an enormous threat to the intelligence and defence world in future days, thus it was inevitable countermeasures by the USA, Russia and at least three other nations are rapidly being discussed.

Fears were raised that the neutrality of space was nearing its end in January 2001. A report prepared by US defence officials warned of a potential "Space Pearl Harbour" if measures were not introduced to counter rogue satellites. No small wonder, therefore, that in 2002, the United States quietly withdrew from the Anti Ballistic Missile Treaty, thereby removing most of the legal barriers to deploying weapons in space. In reality, the United States has the means to remove any orbiting object that it considers "illegal." A covert black programme is already being enabled to ensure the safety of "friendly satellites".

More than 2,700 non-military satellites orbit the Earth today. Nearly 85% belong to the US and the former Soviet Union, with other nations such as China, Japan and India joining the list of space faring countries. This figure will appear non-consequential in the near future as the technology shrinks and payloads release upto 100 devices in orbit. The growth rate in the utilization of space for military affairs has been staggering; with largely commercial satellites providing the bandwidth for laser or GPS guided bombs dropped in 2001 and 2002 in Afghanistan.

Military applications of satellites in the past were primarily in the areas of intelligence gathering, reconnaissance and communications. Throughout the Cold War, satellites were not openly used during warfare for tactical purposes such as active targeting or guidance of weapons. Today, commercial satellites provide

A covert black programme is already being enabled to ensure the safety of "friendly satellites"

delivering to China, one of America's greatest military secrets. Following a major surveillance and wiretap operation, four people were subsequently arrested and charged with espionage. The alleged Los Angeles-based spy ring included an engineer and a Chinese television director. Intelligence watchers believe the group may have been operating undetected for 15 years. FBI investigators recovered thousands of government documents from the Californian home of one of the suspects.

In 2005, China's navy proudly displayed new warships that used identical technology carried by US military vessels, including submarines. Pentagon officials were horrified. Covert investigations into numerous defence contractors were ordered, and soon FBI investigators believed they had their prime suspects.

The spy ring was allegedly headed by Chi Mak, a naturalized US citizen from

China and his wife, Rebecca Laiwah Chiu. Other members included Chi's brother Tai Wang Mak, a broadcast and engineering director for the Phoenix North American Chinese Channel and his wife, Fuk Heung Li. The group originally faced charges of stealing government property, aiding and abetting, transportation of stolen goods and conspiracy.

The FBI say Chi Mak copied Aegis information onto CDs and delivered them to his brother. He had already purchased airline tickets to Hong Kong and was scheduled to depart on 28 October. Intelligence sources learned he was to meet a contact in Guangzhou to pass on the material. It is understood a surveillance operation (initiated in 2004) was mounted and a closed circuit television camera hidden in Chi Mak's home to monitor his computer. The FBI also intercepted hundreds of e-mails. An electronic wiretap revealed how information on Quiet Electric Drive

Main image: Nimitz-class nuclear powered carrier USS John C. Stennis. One man arrested by the FBI worked on the Stennis

(QED) systems used in Navy warships was downloaded on to the CDs. An FBI affidavit described the QED technology as "extremely sensitive" and banned from export. Another wiretap showed that the Tai's were "very nervous" and discussed the risks of carrying the disks to China.

Chinese Spy Ring

Déjà Vu as US Navy curse strikes again

The alleged Chinese agents were not the first US citizens charged with passing secret naval information to a foreign power. Twenty-years ago John Anthony Walker (pictured below) and his son, Michael Lance Walker, were indicted on 28 May 1985 by a Federal grand jury in Baltimore on six counts of espionage.

The elder Walker, a retired Navy warrant officer who had held a Top Secret Crypto clearance, was charged with having sold classified material to Soviet agents for the past 18 years. During his military career, Walker made some investments in which he lost money. To make up for his losses, in late 1968 at the age of 30, Walker went to the Soviet Embassy in Washington, DC, and offered his services for purposes of espionage. He compromised key cards used for enciphering messages and also provided information on the encryption devices themselves. At least a million classified messages of the military services and US intelligence agencies were compromised. A Soviet defector said the KGB considered this the most important operation in its history.

Michael Walker, a petty officer assigned to the USS Nimitz, was accused of providing classified Navy documents to his father for sale to the Soviets. Fifteen pounds of classified material

were in his possession at the time of arrest on the Nimitz. John Walker's arrest resulted from a tip to the FBI from his former wife. He was apprehended at a Maryland motel after depositing a number of documents at a roadside drop. Soviet Embassy official, Alexei Tkachenko, who was spotted in the area, returned to Moscow within days of Walker's arrest. John Walker allegedly recruited his brother, Arthur James Walker, and former Navy friend, Jerry Alfred Whitworth, as sources of classified intelligence.

On 28 October John and Michael Walker pleaded guilty to espionage charges under a plea agreement by which the senior Walker agreed to testify in the trial of Jerry Whitworth and to provide full information on what was given to the Soviets in exchange for a lesser sentence for his son. On 6 November 1986, John Walker was sentenced to two life terms plus 10 years to be served concurrently. Michael was sentenced to 25 years.

Eye Spy reported on the theft of the Aegis technology months prior to the arrests in Los Angeles

Tai Wang Mak also had access to sensitive US aircraft carrier secrets and once worked on the Nimitz-class nuclear powered carrier USS John C. Stennis. A Pentagon memorandum published earlier this year warned of China's increasing carrier potential. Intelligence officials said Chi held a secret-level security clearance and worked on more than 200 US defence and military contracts as an electronic engineer with the defence contractor Power Paragon. Chi used his position to collect information he had been asked to provide. He obtained the information from his office and took it home, where it was copied on CDs and passed to Tai, who encrypted the data using a coding software programme.

Other technology that could have been passed to China relates to America's burgeoning research into electromagnetic pulse weapons - weapons that simulate the electronic shock caused by a nuclear blast - that disrupt electronics. On one occasion detectives searched through a

China's Spies Steal US Aegis Technology

US-based firm, company in espionage (see story)

The theft of the Aegis technology by Chinese spies is a major blow to US naval power. The technology is a key component of the US Navy's fleet and is used to track and destroy enemy ships and submarines. The theft of this technology would allow China to develop its own fleet and become a major naval power.

The theft of the Aegis technology is a major blow to US naval power. The technology is a key component of the US Navy's fleet and is used to track and destroy enemy ships and submarines. The theft of this technology would allow China to develop its own fleet and become a major naval power.

rubbish bin at Chi Mak's home. A number of documents had been torn into pieces, including a list of military technologies being sought by China such as a space-based electromagnetic intercept system, aircraft carrier electronic systems, defence against nuclear attack technology and data on the next-generation destroyer known as the DDX. FBI investigators also fear information relating to UAVs (unmanned aerial vehicles) has also been stolen.

According to sources, the suspects acquired other intelligence relating to America's new Virginia-class attack submarines. This effectively means that China will be able to track US submarines across the globe. The Pentagon is concerned its efforts to thwart any possible Chinese invasion of Taiwan could now be compromised.

"They were funnelling information to 2PLA" one official said referring to the

"The Chinese now know more about our military than we know about their entire country"

Tai Wang Mak

military intelligence unit of the People's Liberation Army. "The Chinese now know more about our military than we know about their entire country."

Intelligence officials in Washington are again questioning the vetting process used by many defence contract companies. Federal sources close to the case believe the case could dwarf the espionage antics of the Walker spy ring, when naval secrets were peddled by US Navy employees to the former Soviet Union (see sidebar feature).

- Chi Mak was recently cleared by a judge of espionage. He now faces a charge of failing to register as an agent of a foreign government. The Meks and their wives were accused in a criminal complaint of theft of government property, conspiracy, transporting stolen goods and aiding and abetting. But those charges were dropped because prosecutors said the information the defendants possessed was sensitive but not classified.

Magistrate Marc L. Goldman cited Chi Mak's US citizenship, his lack of a criminal record, his homeownership and employment as reasons for granting him bond. But he imposed numerous restrictions on his ability to travel. Assistant US Attorney Gregory W. Staples said he will appeal Goldman's ruling.

Jean Charles de Menezes

No order given to "shoot to kill"

Cressida Dick, the police commander who was 'Gold Command' during the controversial surveillance operation that resulted in the death of Jean Charles de Menezes, has denied issuing the seven-letter codeword that authorised officers to take the "ultimate sanction". Mr de Menezes was placed under surveillance just hours after the failed 22 July bombings in London. The innocent Brazilian electrician was shot dead under rules set out in Operation Kratos, the

UK's strategy for confronting suspected suicide bombers.

Ms Dick has apparently told colleagues that she did not issue the codeword to officers from Scotland Yard's CO19 firearms unit who had followed

Commander Cressida Dick

Mr de Menezes from his home to Stockwell Tube Station. It is understood she did say "stop him getting on the

Brazilian electrician Jean Charles de Menezes, 23, was tragically shot dead by a Scotland Yard firearms unit after officers mistook him for one of the failed 21/7 London bombers

train at all costs." The firearms unit almost certainly took that instruction as confirmation that he should be shot in the head.

Ten officers from various units, including Ms Dick have been served with police warnings that they may face disciplinary action. Various aspects of the surveillance operation are under investigation by officials from the Independent Police Complaints Commission (IPCC). The IPCC have already taken statements from witnesses. Some people claim Mr de Menezes was restrained before being shot eight times.

Eye Spy has learned that communication difficulties did arise when the suspect entered the tube station.

FOR YOUR EYES ONLY

UK and USA Intelligence in Secret War to Uncover Suppliers of Iraq's Deadly IEDs

Improvised Explosive Devices are nothing new, but their capacity to inflict harm is proving a major headache to those charged with countering these deadly weapons. Statistics rarely lie; in the six months after the invasion of Iraq, IEDs were responsible for eleven Coalition deaths. In the weeks sandwiched between April and November 2005, IEDs killed 214 US soldiers and an unspecified number of civilians. This amounts to over 60% of all fatalities.

Countermeasures are hurriedly being introduced, though a number of projects remain highly classified. Eye Spy has published details of two prominent US countemeasures' programmes called

Warlock Red and Warlock Green, but much more research is required.

During the early stages of the conflict, soldiers loyal to Saddam used every available method at their disposal to attack US forces. In most cases, old shells and dynamite sticks were hurriedly hidden in buildings and garbage. Other IEDs were made from soft-drink cans and disguised as everyday discarded objects. These were often detonated by small arms fire, basic charges or connected to timers.

Above all, most were "hit or miss". Today, insurgents use very sophisticated devices that are detonated by mobile phones, infrared and even trembler alarms. "It's a very worrying problem," a former South African security guard who served with British convoys in Iraq, told Eye Spy. "The IED danger is unseen and very unnerving."

Few in the intelligence world doubt that Iranian intelligence agents are assisting al-Qaida and insurgents in Iraq. Britain's SAS (Special Air Service) has been involved in a secret war with shadowy traffickers who cross the Iraq-Iran border for at least two years. Indeed, even Tehran has accused UK forces of cross-border attacks, though this is almost certainly propaganda. SAS soldiers, highly skilled in the art of surveillance, have provided remarkable intelligence on covert liaisons between al-Qaida supporters and Iranian agents. In recent months, Downing Street has been presented with so much intelligence that UK Prime Minister Tony Blair publicly criticised Iran for "meddling" in Iraq. Eight British soldiers have been killed in southern Iraq in recent months, the evidence suggests an "exterior influence," according to senior Whitehall sources. The SAS has recovered explosives, shells and other IED paraphernalia that was manufactured in Iran. Some of the explosives are very high-grade and almost certainly beyond that available to

al-Qaida from Iraq-based sources. Clever trigger devices and guidance was also offered.

One device regularly used by al-Qaida has been seized. "It works like a burglar alarm, a beam that goes across a doorway. Once the beam is broken it triggers the bomb," said Amyas Godfrey, a former British Army intelligence officer who left Iraq in October 2004 after serving two tours.

"The IED danger is unseen and very unnerving"

During the long war between Iraq and Iran (1980-1988), both sides became highly skilled builders of IEDs and 'booby traps'. Indeed, one CIA estimate presented prior to the present conflict suggested that as many as 10 million mines could have been buried in various

Specialist officer searches for a buried IED

An IED linked to a cell phone

© JIM SHORTT

locations to thwart enemy advances. The location of this ordnance would have been known to Saddam loyalists.

Today the Pentagon is employing some of the country's senior analysts to find countermeasures, said Major General Rick Lynch, a senior US military officer in Iraq. "We're studying very hard where this technology is coming from and what we can do to combat that technology," Lynch said in a briefing in Baghdad in November 2005.

That al-Qaida are now using methods devised by British SOE (Special Operations Executive) in WWII is clear. Unexploded IEDs reveal that the constructors are highly skilled and experienced in the art of bomb-building. Indeed, MI6 recently secured evidence that a concrete-block builder had been pressurised to insert IEDs into new products intended to thwart suicide bombers.

US and Iraqi troops search a house. Insurgents use civilian locations to prepare booby traps for unsuspecting soldiers

Man in a Suitcase?

'Dirty bomb man' indicted - but no mention of radiation plot

After spending three years in prison, Jose Padilla, the former Brooklyn gang member and alleged 'dirty bomber' was indicted on charges that he conspired to commit murder and provided support to al-Qaida terrorists. He has been in confinement in a US Navy facility since Washington declared him an enemy combatant in 2002. US Attorney General Alberto Gonzales announced that "Jose Padilla will be charged with terrorism related crimes," but there was no mention of the 'dirty bomb' in the indictment.

Padilla was arrested by FBI surveillance officers at Chicago's O'Hare International Airport in May 2002. Intelligence officials believed he was central to a plot to spread radioactive material across parts of America.

News of the suspect's involvement with a radiological 'dirty bomb' and, an al-Qaida plan to release poisonous gases in high-rise apartments, was leaked to the media. But three years on, the court documents contain no reference to either of

these operations. Instead, Padilla is charged with being part of a violent terrorism conspiracy, organising the forwarding of monies and [terrorist] recruits overseas in order to "murder, kidnap and maim individuals," according to the indictment.

"The indictment alleges that Padilla travelled overseas to train as a terrorist with the intention of fighting in violent jihad," Attorney General Alberto R. Gonzales said at a news conference in Washington. "Those trained as terrorists engage in acts of physical violence such as murder, maiming, kidnapping and hostage-taking against innocent civilians."

It is understood the charges rely heavily on intelligence gathered from exterior sources, and not from his time spent in the US Navy jail.

CODES AND SURVEILLANCE

Three of the four defendants also named in the indictment were previously charged with conspiracy-related crimes. Adham Amin Hassoun and

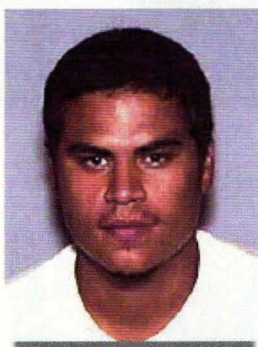

Jose Padilla

MAN IN A SUITCASE

Kifah Wael Jayyousi are in federal custody in Florida; a third, Mohamed Hesham Youssef, is in prison in Egypt. The fourth, Canadian national Kassem Daher, is believed to be overseas. Justice Department officials said. Three of the men had been under FBI surveillance since 1995.

Numerous transcripts of conversations between the suspects reveal hidden codes. For example, 'green goods', 'soccer game' or 'football match' refer to money, terrorist training and jihad, or holy war. Analysts failed to decode references of buying "zucchini." This could have started the theory on the 'dirty bomb' or poison gas plot.

The indictment says Padilla was re-

cruited into a terrorist support network run by the other defendants. FBI officials believe the men had begun raising money and "identified operatives for deployment in

Afghanistan, Bosnia, Kosovo, Chechnya, Egypt, Somalia and elsewhere," as early as 1993. The document does not identify Padilla as an al-Qaida member, as authorities have previously alleged. However, the group did liaise with two significant figures in the terrorist world - Omar Abdel Rahman - serving a life sentence for conspiring to blow up landmarks in New York, and Mohamed Zaky, a founder of Islamic charities who was killed in Chechnya in 1995.

Padilla allegedly completed a mujaheddin 'data form' in July 2000 in order to prepare for terrorist training in Afghanistan, which he entered in September 2000, according to the indictment.

Human rights officials said they welcomed the fact that the Padilla case is entering the court system again, but criticised the time Padilla has spent in jail without charges being levelled against him.

THE JOURNEY MAN

Jose Padilla's activities, according to the Justice Department and previous court filings:

- **March 2000:** Padilla joins the hajj pilgrimage to Mecca, Saudi Arabia, where he becomes interested in training in Afghanistan to become an al-Qaida fighter.

- **September-October 2000:** Padilla attends the al-Qaida - affiliated Al Farouq training camp in Afghanistan under the name Abdullah al Espani.

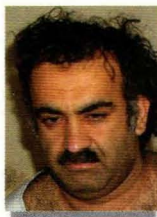

- **Early 2002:** Padilla and an unidentified accomplice approach al-Qaida's senior Afghan operations chief, Abu Zubeida (right), to propose that they travel to America and detonate a nuclear bomb they learned to make on the Internet. Zubeida

suggests a plot involving a radiological 'dirty bomb' instead.

- **March 2002:** Khalid Shaikh Mohammed (right), purported mastermind of the 11 September attacks and al-Qaida's operational planner and organiser, suggests Padilla target up to three high-rise buildings that use natural gas. New York City, Florida and Washington, D.C., are mentioned. Padilla is given \$15,000 to carry out the attacks.

- **8 May 2002:** Padilla arrives at Chicago's O'Hare International Airport from Pakistan carrying \$10,526, a cell-phone, names and phone numbers of his training camp recruiter and sponsor, and e-mail addresses for other al-Qaida operatives. He is arrested.

- **9 June 2002:** Padilla is listed as an "enemy combatant" and transferred to the Defense Department.

- **4 December 2002:** US District Judge Michael B. Mukasey rules that a federal court has authority to decide whether Padilla was properly detained as an enemy combatant.

- **18 December 2003:** The US 2nd Circuit Court of Appeals orders Padilla to be released from military custody within 30 days and, if the government chooses, tried in civilian court.

- **22 January 2004:** The Circuit Court agrees to suspend its ruling after the Bush administration appeals the case to the US Supreme Court.

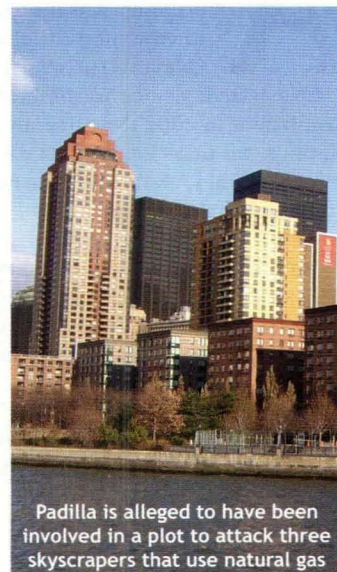

- **3 March 2004:** Lawyers for Padilla meet with him for the first time since his incarceration at a US Navy brig in June 2002.

- **9 September 2005:** A panel of the US 4th Circuit Court of Appeals rules

that the government can continue to hold Padilla indefinitely.

- **25 October 2005:** Padilla asks the Supreme Court to limit the government's power to hold him and other US terrorism suspects indefinitely and without charges.

- **22 November 2005:** Padilla is indicted by a federal grand jury in Miami on charges that he conspired to "murder, kidnap and maim" people overseas.

Padilla is alleged to have been involved in a plot to attack three skyscrapers that use natural gas

number of real issues that
enable spies to perform
with near impunity

UNDERGROUND

TRADECRAFT

THE ART OF GOING GREY

In the UK there is a clear distinction between an intelligence officer and agent. An officer is usually an official on the payroll of government and, if working overseas he or she is probably attached to an embassy or in the employment of a registered company. An agent can be anyone prepared to pass on useful information, be it a simple tip or high-grade intelligence, or he can be hired, trained and given guidance on how to obtain it. The agent is paid by the state via his controller or handler, but don't expect to find a wage slip. This description varies from country to country; some nations describe intelligence officers as 'agents', though for the purposes of this *Tradecraft* feature, we have used the British model.

Both officer and agent must remain anonymous to counter-intelligence agencies and both must be able to travel freely and conduct their activities without revealing their real purpose. This often requires using a false identity, creating an occupation and even adopting a foreign nationality. To those who work in the 'industry', going underground is a lonely art and not one easily performed.

To convince your adversary you are who you say you are usually takes months, if not years of training and experience. Agencies such as MI6 and the CIA, will only denote 'training time' to those persons who fit unique criteria (not examined or identified in this edition of *tradecraft*). Only through hours of

teaching, research, imagination and sometimes obscure methods, can an agent or operational officer prepare for what lies ahead. The biggest danger to any agent is his opponent, or counter-espionage officer. The Russians, for example, are past masters at examining behaviour and mannerisms of speech. It's essential therefore to be convincing. The former KGB were famous for 'outing' spies, much to the annoyance of their adversaries in the United States and Britain, and these techniques are still in use today. The FBI and CIA sometimes use technology and methods more befitting to the silver screen to penetrate human defences. However, they all have the same objective.

THE PAST CAN LIE

From those who perform simple surveillance operations, to agents inside a foreign embassy, the active operative must be able to create an authentic past. Illusion is an art that few persons have the ability to perform. MI6 and CIA both have facilities in place to create the 'perfect spy'. However, months or years before such people are transferred for operational duties, a certain technique known in the intelligence business as 'going grey' must be mastered.

Spies must have the ability to 'disappear', yet work in any environment. It is

Intelligence officers attached to embassies are usually protected by diplomatic immunity. This is not the case with agents or informants

CIA TRAINING FACILITY

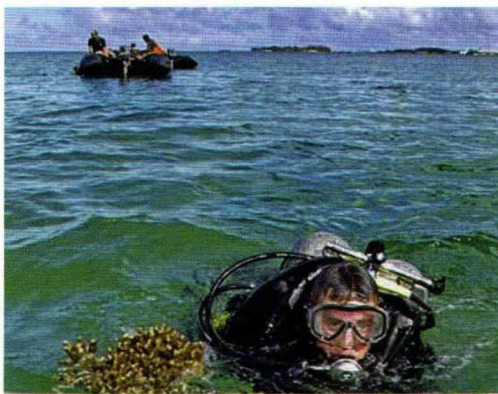

Prospective CIA Case Officers and associated staff who request operational field work usually pass through one of the most secret intelligence training sites in the world. Nicknamed 'The Farm', is a sprawling facility situated at Camp Peary near

Williamsburg, Virginia. CIA officers are trained in the art of infiltration, exfiltration, demolition, night-time parachute jumping, and other clandestine tradecraft such as lock-picking, bugging and covert photography.

The course has been described as "Outward Bound with guns," and participants can expect to spend a few days in a swamp escaping human predators. After the swamps and rivers, you get a chance to learn how to gather information at cocktail parties, set up clandestine

meetings, use short wave radios and secure communications equipment, perform counter-measures and write reports for superiors. It is also alleged that recruits spend time in "jail", are deprived of food, water, and sleep, and then interrogated for nearly two days.

Upon completion, successful officers may be transferred abroad and attached to diplomatic agencies (embassies). Some non-official cover officers, or NOC's may conduct undercover work to obtain intelligence. A major drawback for this type of employee, is that the CIA will probably disown you if you are captured.

crucial not to attract undue attention. Such tasks become even more difficult in foreign lands and in unfamiliar settings. It's a great temptation to dress the same and wear one's favourite shirt or footwear. A shirt label could lead counter-espionage officers to a particular shop already under surveillance. *Remember, even people working in the spy industry have favourite shops.*

Officers and agents of MI6 and CIA are great planners in selection of clothing and accessories to augment each and every task. 'Going grey' is one term used for 'invisibility', though some overseas agencies also use phrases such as 'ghost', or 'fog'.

OCCUPATION OR ROLE

Most spies are employed in a job or environment whereby intelligence can be gleaned or is specifically required. When travelling abroad, just like business persons or holidaymakers, counter-intelligence begins at the airport or border crossing. "What is the nature of your business" is probably the most common question asked by customs. Give a wrong answer and the operation could be compromised before it has begun. An experienced officer and agent will check every detail, from examining his vehicle for broken lights, or making sure a credit charge card has sufficient

MI6 TRAINING FACILITY 'THE FORT'

Like their 'cousins' in Virginia, MI6 also has a major training facility for officers and their associates. Nicknamed 'The Fort' the facility is officially called Fort Monckton and is located in Portsmouth, southern England. Few details of the facility were known until former renegade MI6 officer Richard Tomlinson wrote his controversial book 'The Big Breach'. Besides an

interesting number of operations revealed in the book, Mr Tomlinson gives a genuine and unique insight into recruitment and training, and it is perhaps this information that Whitehall did not want published.

This is how he described being driven to the base after a training exercise: "Fort Monckton, MI6's dramatic and atmospheric training base is situated on

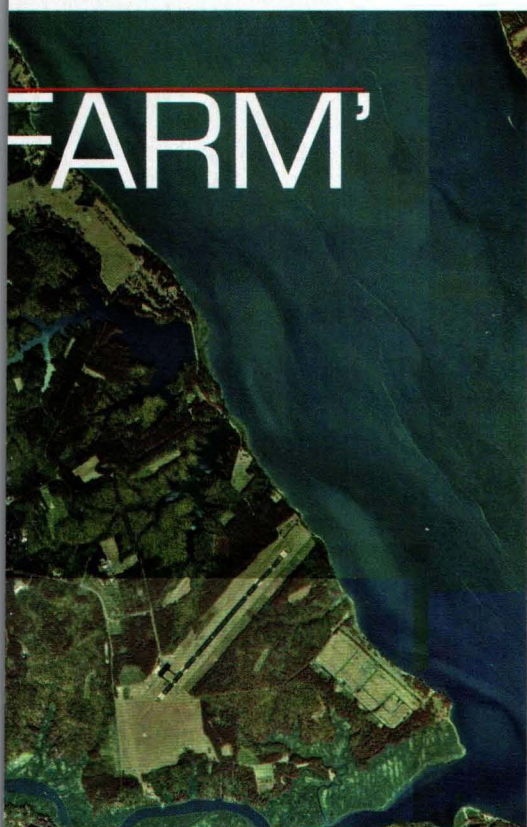

the bleak tip of the Gosport peninsula. The only access through the thick walls is across a drawbridge. Spread among its wings are a gymnasium, an indoor pistol range, photographic studios, technical workshops, laboratories and lecture rooms. At the extremity of the east wing is a helicopter landing pad and an outdoor pistol and submachinegun range."

funds. A convincing cover story is essential, and most operatives put in place a telephone number whereby a credible business associate can validate the story.

CLOTHING AND APPEARANCE

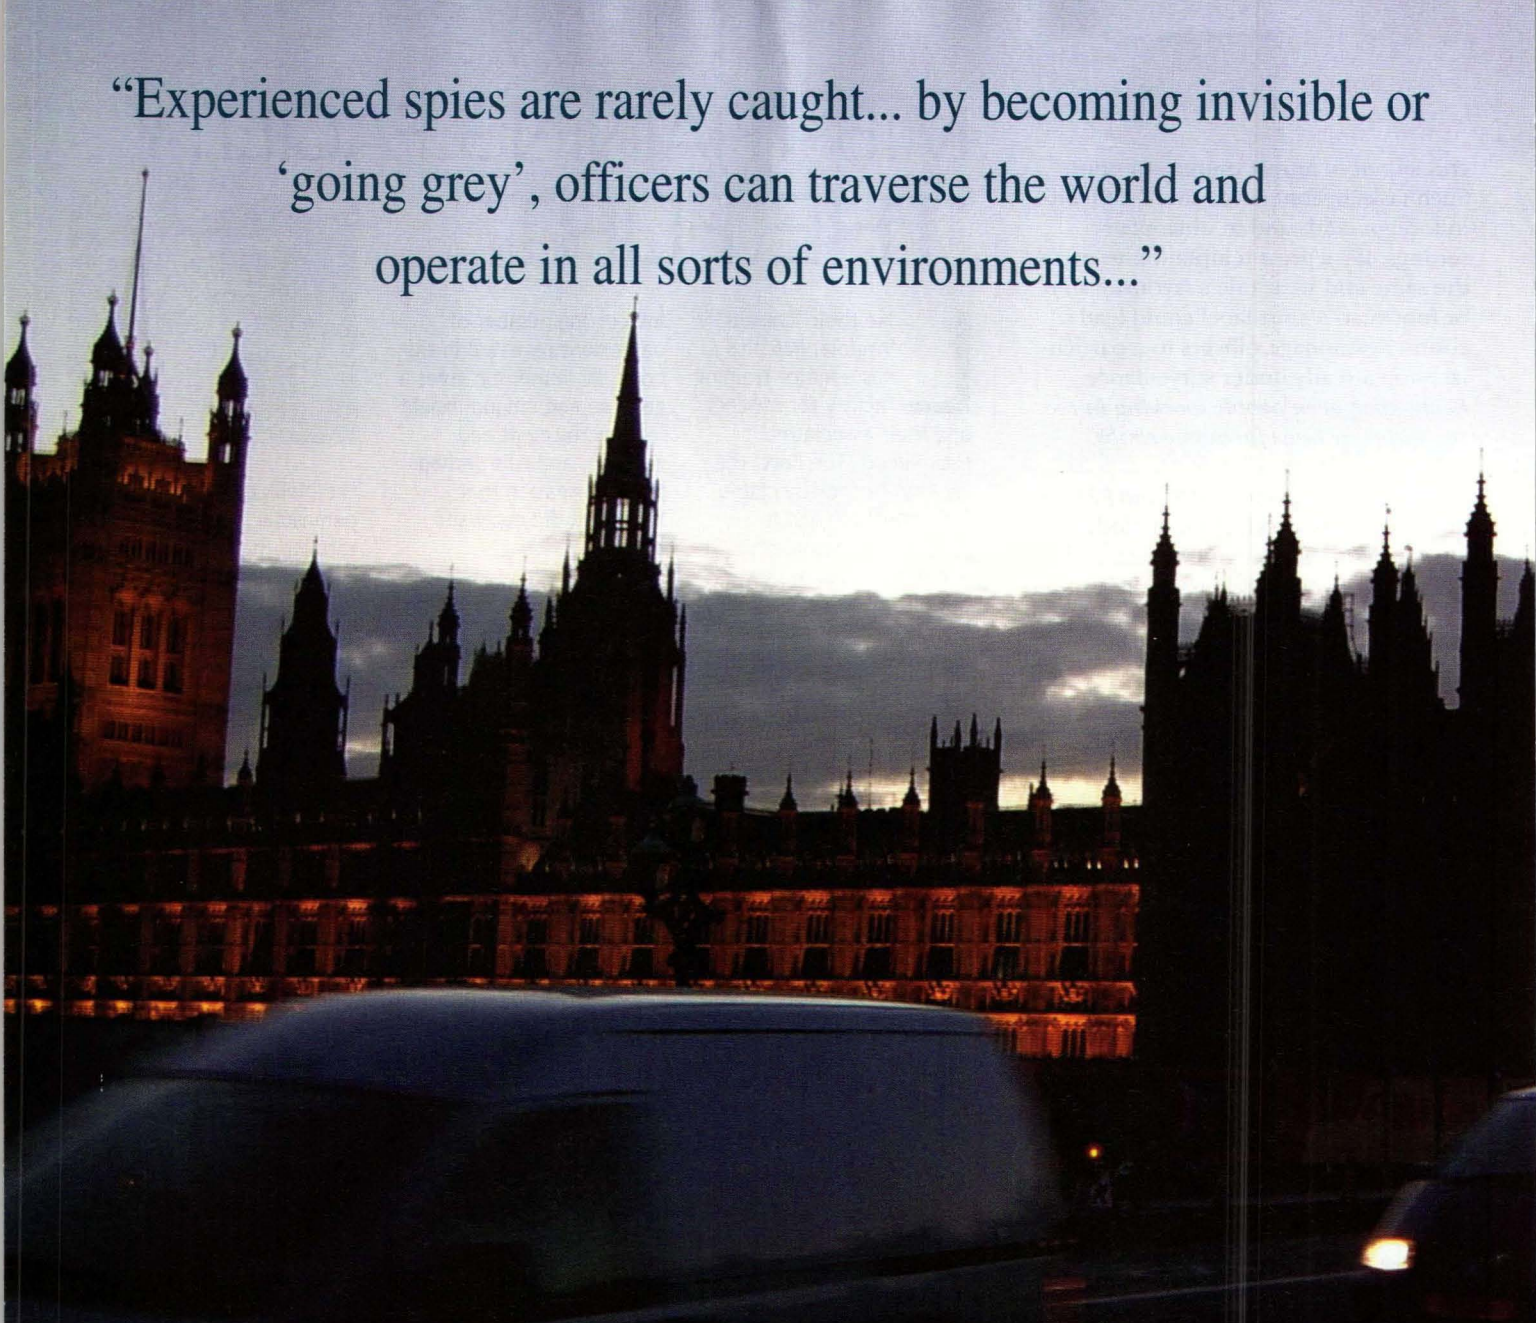

It seems bizarre that in these days of heightened tension and uncertainty, that political correctness even applies to the world of espionage. Just a few months ago, two undercover SAS surveillance officers were challenged in Iraq and their subsequent arrest resulted in a major incident. Both men were in a vehicle and wore local attire, yet they were betrayed by standard British Army boots. Blending in to any environment is by any definition crucial and most agents will reconnoitre their area of operations. Unfortunately, terrorists have learned this spy trait as well.

Clothing: It is crucial for any operative or undercover agent to don the correct attire. It is inconceivable and inappropriate to wear clothes, hats or sport

unusual haircuts. The wearing of jewellery, designer clothing or even a distinctive tattoo or earring could attract undue attention.

Professional counter-espionage and intelligence agencies are more than capable of following operational spies. The tricks of the trade are plentiful, but MI5 watchers, for example, are fully adept at spotting a spy's counter-measures. One method often employed is the 'heavy coat' routine used to conceal secondary garments. Inside pockets can carry a second pair of shoes, a hat or spectacles. Once the coat is discarded, a new person has been

“Experienced spies are rarely caught... by becoming invisible or ‘going grey’, officers can traverse the world and operate in all sorts of environments...”

created. Professional counter-surveillance teams are rarely fooled, and if it gets to this stage (surveillance), the spy has already attracted far too much attention. His or her usefulness is probably at an end.

Equipment: If compromised carrying specific ‘tools of the trade’, it could reveal the true nature of the mission. Agents must be fully conversant with how equipment functions. It’s of little use a supposed ‘electrician’ or ‘telephone engineer’ venturing into an embassy and fumbling around with phone systems. Such actions will undoubtedly be noticed by internal security.

Officers who handle agents are equally at risk in the event their agent is captured. When an intelligence-led operation goes wrong, any named official will probably be invited to leave the country. What sometimes follows is a tit-for-tat round of diplomatic expulsions - both countries will probably remove known

or suspected intelligence officers. However, in the high-risk game of espionage, the agent usually carries the full burden, thus priority and great detail should be given to the type of equipment issued to an agent or operative.

Mannerisms: One of the primary reasons intelligence agents are exposed is due to their body language. Despite excellent disguises, documentation, cover stories etc., agents are often caught out by their inability to overcome nervousness. This is a very difficult skill to learn.

In the UK, one of the first behaviours military personnel are taught is to look directly into the eyes of one’s adversary. Interrogators and psychologists agree that a lack of eye contact often means the subject is not being totally truthful. Similarly, spies must be wary of using excessive hand movements to convince others of truthfulness.

LOCATION AND LANGUAGES

When operating undercover, especially abroad, language is vitally important. If commissioned to gather intelligence abroad, learning dialect and understanding traditional local behaviours is very important. Some intelligence services avoid the subject of ‘perfect speech’ by providing officers with a manufactured past, i.e., an auntie or relative living in a foreign land: you spent your “early years abroad” - hence the dialect. Voice techniques and education are important and regional variations in language must be taken into account. A good excuse for being in an environment often quells inquisitive minds, therefore research in this area is essential.

Officers and agents are often chosen for specific tasks, and it is unlikely a pupil educated in Oxford speaking the ‘Queen’s English’ would be assigned to a task in a remote mining town in Russia. Selection is of paramount

EYE SPY BUGS**

UHF

UHF KEY RING TRANSMITTER

Ready to use in one second - Eye Spy's new key ring UHF transmitter requires the use of just one 3V lithium battery (included). Simply open the case, pop the battery in, and it starts transmitting immediately.

Order Code:
LSSKR
£180.00
\$330.00

With a range of 650 metres, this remarkable bug can be left in offices, vehicles or just about anywhere! Use with any of our UHF receivers.
Sound pick-up - excellent.

UHF CREDIT CARD TRANSMITTER

This remarkable UHF transmitter is only 3mm thick and can be slipped in the side of a wallet, file, folder or pocket. It also has the advantage of voice activated transmission. Battery operated (included). Stunning quality. Range 850ft.
Use with any of our UHF receivers

Order Code:
LS-CCT
£195.00
\$350.00

UHF BODY WORN TRANSMITTER

Bodyworn or for a room this battery-operated UHF miniature transmitter is superb. The 6mm diameter microphone can even be pushed under door gaps to listen to sounds in another room.

Range 850ft

*Built by specialists
and used across
the world*

Order code: L-IR1 £125.00 \$230.00

UK AND USA PORTABLE MAINS-DOUBLE PLUG ADAPTOR UHF TRANSMITTER

United States model

A conventional fully mains-working double plug adaptor. Inside is a tiny UHF transmitter which becomes active and powered when plugged in. 24-hour-a-day transmission. No batteries needed just plug into any socket.
Range 850ft.

UK model

Order code: LH-1
£195.00 \$350.00

please state which model you require

UHF CALCULATOR TRANSMITTER

Fully working desk calculator conceals a tiny UHF transmitter. The unit can be left in an office or room environment without raising any suspicion. Range 850ft. Battery life of 15 hours. Use with any Eye Spy UHF receiver.

Order code: LS-TX-6 £195.00 \$350.00

calculator model may be different to that displayed - but of equal quality!

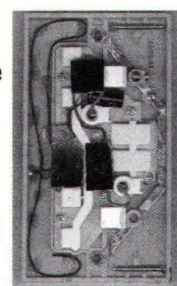

MAINS-DOUBLE SOCKET UHF TRANSMITTER

Using the identical UHF transmitter as the LH-1 (above - top), but inside is a fully working mains socket. This unit is ideal for permanent applications - easy to install. Continuous 24-hour-operation.
Range 850ft

Only UK model available

Order code: LS-TX-4 £195.00

UHF MAINS MODULE TRANSMITTER

This tiny Mains powered transmitter is one of the most powerful and reliable transmitters you can buy. Once connected to the Mains this device transmits 24-hours-a-day, as long as power is supplied to the point of connection. Easily concealed.

Only UK model available

Range 850ft

Order code: LS-MMT UK £195

ALL TRANSMITTERS REQUIRE A RECEIVER

Eye Spy stocks several models that are preprogrammed to receive transmissions from these units.

See RECEIVER section for our full range and our superb economy transmitter and receiver kits!

Our VHF transmitters operate between 170 ~ 175 MHz and are crystal locked which means that there is no tuning required. Just switch on the dedicated receiver and listen. The recommended receiver to use is the VHF 2 Channel Crystal Controlled Receiver

TELEPHONE ADAPTOR VHF TRANSMITTER

This telephone adaptor conceals a VHF telephone transmitter and automatically transmits both sides of the conversation whenever the telephone handset is lifted. Connected in series the device can be installed inside the telephone itself, a socket or adaptor. The device is line-powered so it requires no batteries and once installed will require no further maintenance. Transmission range is dependent upon factors such as location of transmitter and environmental conditions. Range 400 metres

Order code: LH-TA £110.00 \$176.00

VHF MINI ROOM TRANSMITTER

This VHF crystal controlled 9V battery powered room transmitter offers a good level of stability as no tuning is required. The transmitter can be concealed within a room or alternatively it is equally suitable for body worn applications. Supplied with battery. Range 600 metres

Order code: LH-MRT £110.00 \$176.00

FM TRANSMITTER AND RECEIVER KITS

FM transmissions are inferior in quality to UHF or VHF but are practical in many ways, not least because the price is far cheaper. Eye Spy has several FM transmitter devices all ideal for room operations or monitoring a location in near proximity to where the device is located. Transmissions are picked up by an ordinary air-band receiver which is included **FREE** with each package.

FM CALCULATOR TRANSMITTER

Range 75 metres - battery life 15 hours

Order Code: LS-FMC
£125.00 \$210

FM ADAPTOR TRANSMITTER

Range 100 metres - permanent operation as adaptor is plugged in to mains

Can be concealed almost anywhere in dry environment. Range 100 metres

TRANSMITTERS AND RECEIVER KITS

PROFESSIONAL 10 CHANNEL UHF RECEIVER AND TRANSMITTER KIT

This transmitter and receiver (both metal cased) kit is ready to use in seconds. Our tiny room transmitter, the size of a matchbox is extremely sensitive to sound and can be concealed absolutely anywhere.

It will pick up voices up to 40 feet away and transmit with amazing clarity to the receiver. With the 10 channel receiver you are able to add different transmitters in different locations, and simply flick through one at a time. Powered by one 9V battery. Range 450 yards. Comes complete with all earphones and accessories. Battery included.

Order code: HL-10 £290.00 \$575.00 US

PROFESSIONAL 12 CHANNEL UHF RECEIVER AND TRANSMITTER KIT

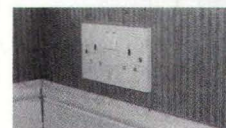

Economy 12 channel UHF receiver (hard plastic) and tiny room transmitter (metal cased). Like our 10 channel receiver it allows you to simply flick through channels allowing the operator to listen-in to bugs placed in as many as twelve locations. Channels are pre-programmed to accept transmissions. The unit has a range of around 450 yards which enables you to be at a safe distance when listening-in to transmissions. The stylish receiver comes in a hard-plastic carry case and is adapted so that you can simply plug in a recorder. The receiver comes complete with earphones for discreet listening, and is powered by a 9V battery (also included). One of Eye Spy's best-selling products. Ready to use immediately.

Order code: LS-EKT £275.00 \$500.00

Order Code: LS-FMRB
£80.00 \$150.00

FM DOUBLE SOCKET TRANSMITTER

Ideal for permanent transmission. Range 100 metres

RECEIVERS

HIGH QUALITY RECEIVERS FOR USE WITH ALL EYE SPY UHF AND VHF TRANSMITTERS

VHF CRYSTAL CONTROLLED RECEIVER

Pocket sized twin channel VHF Crystal controlled receiver. Can be used to monitor any of our VHF crystal controlled transmitters. Supplied with BNC type antenna and earphones. Record socket is provided and if a voice activated recorder is used, automatic unattended recording can be made. Supplied with battery.

Order code: LH-CCR
£130.00 \$208.00

UHF 3 CHANNEL MINI RECEIVER

Three channel metal case receiver can be used to monitor any of our UHF range of transmitters. It utilizes the latest surface mount technology and extensive filtering circuitry. This product provides greater sensitivity and crystal clear audio quality. A recording socket is provided and if a voice activated recorder is used, automatic unattended recordings can be made. It is supplied complete with audio lead for recording, earphones and antenna. Supplied with battery.

Order code: LH-3R £250.00 \$400.00

2 CHANNEL UHF MINI RECEIVER

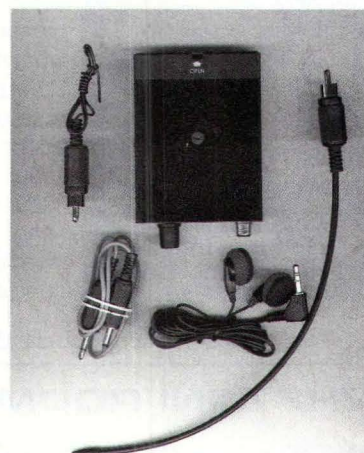

Twin channel dedicated ultra mini receiver. One of the smallest commercially available micro receivers in the world. Built-in antenna and light weight. High sensitivity combined with low noise amplifier ensures good results. The audio can be monitored via earphone or through built-in speaker. Unit incorporates auto-squelch enabling automatic recordings to be made via a suitable voice activated recorder. Works with all Eye Spy UHF transmitters. Power 2 x AAA batteries (included).

Order code: LH-2CR £120.00 \$200.00

12-CHANNEL METAL CASED UHF RECEIVER

Eye Spy's 12-channel UHF metal-case receiver unit that can be used to pick up transmissions from any of the transmitters listed. The unit can pick up transmissions from different UHF listening devices placed in several locations, simply by changing channels.

Powered by a 9V battery, the receiver has a range of 400 metres - comes with jack-plug so you can record transmissions and luxury earphones for privacy - all contained in a solid case.

Order code: L-SS-12CR
£145.00 \$290.00

12-CHANNEL PLASTIC CASED UHF RECEIVER

Eye Spy's superb 12-channel UHF plastic-case receiver unit that can be used to pick up transmissions from any of the transmitters listed. Specifications are identical to unit (pictured above), but this receiver has internal microphone that allows audio without using earphone. Comes with a handy carry-case. All accessories included.

Order code: L-12CR
£145.00 \$290.00

THE ULTIMATE DIGITAL TELEPHONE RECORDER 6900 HOURS - 41 WEEKS OF RECORDING TIME

The most sophisticated device of its kind ever built, yet is very simple to use and does not require any tapes. Effectively, it can record indefinitely, after it reaches 6900 hours of recordings it begins to record over the oldest calls. Unlike conventional recorders, locating the conversation you're searching for can take only seconds. The Ultimate Telephone Recorder automatically creates its own database, enabling you to

quickly and easily search for the desired conversation by date and time, assigned code number, phone number dialled on outgoing calls, or name/phone number on incoming calls (if you have Caller ID).

For additional privacy, this device allows you to use a PIN code to safeguard access, preventing anyone else from listening to or deleting telephone conversations. Because of its capacity, you

normally would not delete any conversations, but if you had an extremely sensitive call you wanted to delete, you could do so. The Ultimate Telephone Recorder also functions as a telephone (headset included), a state-of-the-art professional answering machine, and a high-capacity general use recorder (optional professional external microphone is required), which is great for recording lengthy meetings. These

recordings are also searchable by time, date, or assigned subject codes. It's even capable of functioning as a room "bug"! (Just set it to its voice-activated room-recording mode, and you'll have time-stamped recordings of everything said in the room while you were away). Simple

*Ideal for all
business and
corporate
solutions*

to use and compatible with most any type of telephone system. Size: 7 x 8 x 3 inches.

DETECTORS

TRADE STANDARD DETECTORS FOR
VARIOUS APPLICATIONS -
MAIL, BOMB, METAL ETC...

WIZARD MAIL AND PACKAGE SCANNER

Powerful coils and state of the art electronics allow the unit to be used in high security applications where precise detection is critical. The detector's powerful long range coil and unique design allows the unit to be used in any office, mail processing or home environment. The deep scanning loop allows for deep penetration of envelopes, boxes, bags, containers - be they paper, cardboard, plastic, wood or other materials - where dangerous or suspicious weapons or metals might be concealed.

Handheld or desktop metal detecting mail scanner

Responds equally well to all types of metal, steel, stainless steel, zinc, magnesium, and aluminium.

Operates on 9V battery (80 hours). Length: 14 inches - height 8 inches. Weight: 14oz

Order code: TX-WMPS £150.00 \$165.00

THE LITTLE WIZARD

The Little Wizard is a precision hand-held metal detector that accurately indicates metal by emitting a high pitch beep tone and illuminating an array of LED's. Its small size and unique detection strength allow it to be used in tight spaces where small metal objects may exist. The Little Wizard's adjustable sensitivity makes pinpointing easy and accurate. Perfect for finding concealed weapons and dangerous metal objects.

Order code: TX-LW£45.00 \$48.00

Portable Precision METAL DETECTOR

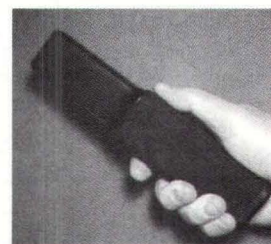

METAL-TEC 1400

Silently alerts by vibration to detect weapons, razor blades, handcuff keys or drugs in metal foil.

Works inches away giving a tactical advantage during searches, pat downs and security scans. METAL-TEC includes a heavy duty Nylon belt holster with a Velcro vehicle mounting

kit. Water resistant housing made of high impact ABS plastic can withstand 6,800 pounds per square inch.

Silent non-alerting vibration detection detects all metals. Simple operation, no adjustment needed, push on/off button concealed in grip. Approximately 2,000

searches with one 9V battery (included).

Order code:
TX-MT1400
£210.00 \$297.00

THE SECURITY WIZARD ADVANCED DETECTOR

The Security Wizard is the most advanced and most powerful security wand available. Its powerful coils and state of the art electronics allow the unit to be used in high security applications where precise detection is critical. Its powerful long range

coils and unique vibration capability allows the unit to be used without alarming patrons and suspects. The powerful scanning head allows for deep penetration of clothes, containers, and surfaces where dangerous or suspicious weapons or metals are

concealed. Responds equally well to all types of metals, operates with an automatic tuning transmit/receive circuit. Provides precision detection pattern which helps prevent false alarms from rebar in floors and other surrounding metal. The detectors' sensitivity is fully adjustable through

an access hole in the handle to prevent tampering - while providing convenient and easy adjustment.

Piezo tone beeper and LED red light indicator are used to indicate the presence of metal. Sensitivity: at maximum setting the unit will detect a medium pistol

at 12", small pistol at 9", razor blade at 5", hat pin at 1".

Order code: TX-SECWIZ
£155.00 \$178.00

EAR-2000 WALL PROBE

Professional grade contact microphone designed as a bomb detector. Locates the sound of ticking inside walls; countermeasures unit to locate the sound of hidden running tape recorders; or used as a hostage location unit.

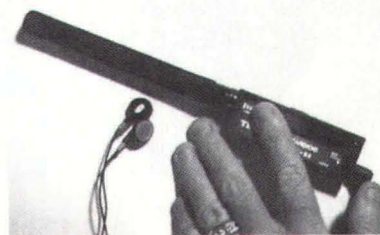

The probe works on an electro-acoustic principle in which it converts vibrations to voice band audio and output to the user's headphones. It will listen to, inside of and through virtually any surface. Can be used as a listen-through-the-wall audio mic under one party consent.

Order code:
TX-EAR2000
£210.00 \$320.00

MICRO SMALL SHOTGUN MIC THE WORLD'S SMALLEST ULTRA-POWERFUL SHOTGUN MIC SYSTEM

The unit is a highly directional sound-locating microphone with an internal high quality amplifier and earphone monitor. High quality miniature 'electret' condenser microphone

Supercardioid pick-up pattern. Isolate and pick-up distant sounds. Small, lightweight and compact; power supply uses a standard UM-4 battery with easy replacement. Sound levels adjustable by volume knob. Mounting hardware for use with binoculars or video cameras. The unit comes with the Micro Supercardioid Mic with built-in Amplifier, wind shield, inner-ear phones and battery.

Order code: TX-SSMIC £145.00 \$195.00

SONIC SUPER EAR

This state-of-the-art product is a technological breakthrough in amplified sound quality, size and price. The product contains a high tech multi-element microphone that is covered by a protective foam windscreen and mounted in an acoustically engineered sound boom that swivels 180 degrees for maximum directionality.

Accessories include a binocular mounting clip and Velcro strips for attaching the unit to binoculars, and a stainless steel pocket/belt clip for indoor and outdoor use.

Order code: TX-SSE £69.99 \$75.95

SOUND AMPLIFICATION

PARABOLIC MICS AND ACCESSORIES

SOUND PRO II SUPER AMPLIFIED SHOTGUN MIC

Broadcast quality clear and crisp results

The SoundPro II features double amplified sound enhancement and noise filtering for the very best results in sound amplification.

The 10" microphone actually is two microphones in one. One high power microphone element faces forward to capture sounds that are 'aimed' at and the second microphone 'cancels' noises coming in from the sides, creating the 'extended range' effect. The Sound Pro II features a background noise filter switch and output jack for tape recorder. This unit comes complete with microphone handle, camera mount, 1 Watt

RMS amplifier (+120Db Gain), Sony digital quality folding headset, 6" tape recorder connector cable, AA battery for microphone, 9V battery for amplifier, and slide lock hard carry case.

Order code:
TX-PRO2
£200.00 \$320.00

DETECTEAR

NEW GENERATION PARABOLIC MIC SYSTEM

Hear faint sounds with pinpoint accuracy at 300 yards with the DetectEar. This powerful sound enhancement tool incorporates a 20-inch diameter snap-together parabolic dish combined with the most advanced audio circuitry available. The DetectEar is also equipped with a 3-band equalizer to adjust for specific sound frequencies, recording jack, and communications input jack for outstanding sound enhancing capabilities. The DetectEar can be mounted to a tripod for extended use and comes with a hard carrying case for transportation. Powered by only 2 AAA batteries, the DetectEar is your ultimate professional listening device.

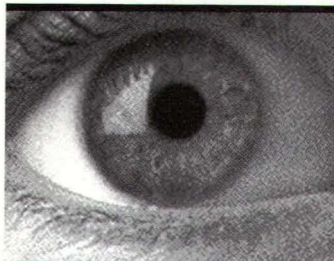

Order code: TX-DETE £400.00 \$725.00

PARABOLIC EAR SOUND SYSTEM

The Parabolic Ear Sound System is an exceptionally portable and rugged parabolic microphone. The detachable cone is only 12 inches in diameter and is constructed of waterproof, shock proof material. This product increases sound 37 times and has a range of 400 yards. Our Parabolic Ear uses a very sensitive microphone with intricate circuitry to amplify sound. The sounds are transmitted to an extremely high grade amp and then to a high grade headphones which include an automatic safety shut-off preventing harmful loud sounds from reaching the user's ears. The dish helps pinpoint and directionalize sound and reduce noise background. Unit has tape recorder patch cord for tape recording.

Order code: TX-PESS £150.00 \$195.00

ENIGMA AND SPY PHONES

POWERFUL DEVICES FOR SECURITY AND COVERT OPERATIONS

EYE SPY'S ENIGMA BUG

WORLD FAMOUS LISTENING DEVICE

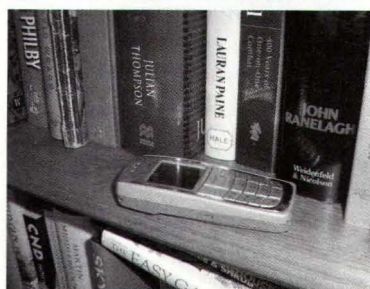

This is a very serious and powerful surveillance device that allows the operator to listen in to a conversation from anywhere in the world. The phone looks like any ordinary mobile-phone and comes with a SIM card, however, by dialling its number you can monitor any conver-

sation or sound that is within range of its highly impressive and advanced internal microphone.

When the Enigma is called it does not ring or light up, instead it opens a special microphone that can detect the quietest of whispers. The unit can be taken into meetings or any environment, allowing colleagues thousands of

miles away to listen in. Similarly, simply leave the phone at a location and dial up whenever you need to listen. A superb bug used by professionals only.

Now available for the USA cell phone network (SIM card not included)

Order Code: LS-ENIGMA
£295.00 \$599.00

THE MATRIX

This new development opens up the availability of listening into a phone conversation in real time from anywhere in the world.

Simply connect into the land line you wish to monitor and then programme the Matrix with the phone number (land, or mobile) you wish it to call. Whenever any phone on that line makes or receives a call the Matrix will automatically phone you allowing you to listen into that conversation. The Matrix is unblocked and comes with a sim card (UK). Overseas customers simply purchase a SIM card

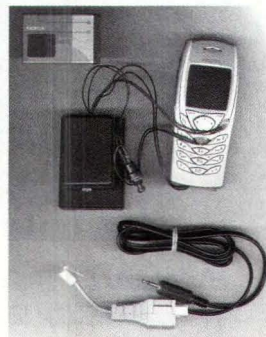

ENIGMA VEHICLE BUG 24-HOURS-A-DAY SURVEILLANCE

The Enigma Car cell phone bug comes with a simple attachment that connects to any car battery. This means that it is functioning 24 hours a day, unlike the standard device that will continue to work only as long as the battery is still alive.

Enigma slots behind the dashboard and a tiny seed microphone is hidden in any opening. When you call the Enigma you can monitor any sound within range of its highly impressive and advanced internal microphone. Like the ordinary Enigma, it does not ring when called. Driver and passengers are unaware that the device is in fact operating like any high-powered listening device. The range of the Enigma is infinite as long as there is a signal. These devices are in operation with security services and private investigators throughout the world. The Enigma Car cell phone bug is easily installed in minutes and its potential obvious. UK and European Enigma's come with SIM card - USA readers can purchase SIM cards at any local phone shop!

TRIMTRAK ULTRA ADVANCED GPS CAR TRACKING

For USA only

Now With Multiple Mapping Sources And Satellite Photo Access

Easy track, tracing and location right off the internet - now with multiple mapping sources and satellite photos - Trimtrak is the most advanced GPS surveillance tracker to be developed in 2005. You can sit in your office or car and track a moving vehicle through our new state-of-the-art UTrack online web site. This state-of-the-art GPS car tracker makes all other

car trackers obsolete. With Trimtrak, there are no more complicated wires, external battery packs or external antenna mountings to fool around with. Everything that makes the unit work is built into one very small light weight box. This tiny unit measures only 5" by 3" and is just one inch wide. Weight is less than 4 ounces. Runs on 4 standard AA batteries that install directly into the unit.

Because Trimtrak has a built-in motion detector,

it only activates when the unit detects motion (when the car starts moving) unless you use your online controls to 'ping it'. Battery life is over four weeks or longer under normal vehicle use.

SPECIALIST TORCHES

USED BY THE PROFESSIONALS

NITEPALM PC8 POLICE ONE TORCH - SEVEN RESPONSES

Designed specifically for police use and in accordance with force requirements, the Nitepalm PC8 is an exceptionally versatile lighting device. Strong, compact and lightweight, the eight intensely bright LEDs in white, red and blue deliver a total of seven lighting functions. The PC8 is an incredibly powerful lighting resource suitable for any emergency situation.

With up to 160 hours of continuous light output powered by only three AA batteries the PC8 is extremely economical, very affordable and will pay dividends both functionally and financially over other lighting devices currently in use.

Order Code: ES-PC8P
£40.00 \$85.00

NANO TORCH LIGHT IN A WORKING PEN

With a new generation patented crystal reflector tube, this little gem is brighter than most bulky flash lights and it's built into a working retractable ball point pen. Nano technology at its best. Lifetime warranty.

Order Code: TX-NTLP £30.00 \$35.95

NITEPALM PC8 OUTDOOR

Same specification as the PC8 Police but with a different LED configuration. The Nitepalm PC8 Outdoor is an exceptionally useful and versatile lighting device. Strong, compact and lightweight with eight intensely bright LEDs in white, red and green providing a total of seven different lighting functions. Four white LEDs give either a low light output, for general close up work, a powerful flood of super bright light, or an emergency strobe that can be seen from well over a mile away making it an ideal emergency device. The PC8 Outdoor is constructed to withstand many years of use with a virtually unbreakable and water resistant polycarbonate case for use in any weather.

Order Code: ES-PC8O £40.00 \$85.00

NITEPALM PALM4

The Nitepalm Palm4 multifunctional torch (flash-light) is an impressive and invaluable tool. The device is small enough to fit into any handbag or pocket, and uses a super intensity, white LED, which throws a beam of light almost 100ft through a 'fish-eye' lens and protective translucent, rubber lens cap. The Palm4 is easily attached to a belt or pocket or most items, so it can cast its impressive light on to any object or work area. Palm4 comes complete with a magnetic belt clip that rotates through 360 degrees.

Order Code: ES-NPALM4 £15.45 \$30.00

NANO LASER NIGHT VISION LIGHT ON A KEY CHAIN

German-engineered - light-chip powered - hand-held. This is a key chain you can palm in your hand. It is a powerful turbo torch light especially designed with a type of red light that lets you see better in the dark. The new generation red light feature preserves night vision because it does not cause the pupils to constrict. Red is an internationally recognized emergency colour. Ideal for motorist, surveillance, law enforcement, marine, astronomer, military and emergency use.

Order Code: TX-NL £25.00 \$25.95

NANO FLEX TORCH

More light than you get with most flash lights with a 360 degrees flex. Nano technology at its best. Batteries included 1 x AAA

Order Code: TX-NLFT £35.00 \$45.95

DIVERSION SAFES WITH SECRET COMPARTMENTS

A burglar spends an average of 8 minutes in a victims home. Put the odds in your favour and hide your valuables in plain sight. We offer a wide variety of personal care, household products and food containers with removable tops and bottoms. Valuables can be discreetly stored inside these safes and kept in their seemingly rightful places. Each is indistinguishable from the genuine product and is even weighted to feel full. HOME DRUG TESTS KITS FOR MARIJUANA AND COCAINE/CRACK

The perfect test for parents worried about their teens, for employers to use for pre-employment testing or cause and reasonable suspicion situations. The **Detect Now Marijuana**, and **Detect Now Cocaine** test kits are easy to use, cost effective, easy to dispose of and is backed by laboratory proven results.

FEATURES:

Simple spray provides an immediate drug test answer. The Detect Now drug test can be performed on any surface that has come into contact with the drug. Confidential non-invasive test kit works anytime, anyplace. It is the same test kit used by law enforcement agencies across the world. Very accurate, no lab work required. Test with or without the knowledge of the person being tested. Contains more than 10 test units per box. Complete illustrated directions, FAQ, "What to Do" and resource list included.

Order code: TX-MCTK £60.00 \$65.00

(please specify which kit you require)

COMBO UV PEN AND LIGHT HIGH-QUALITY AND PROFESSIONAL

When conducting countermeasure sweeps, as soon as you check and clear an electrical outlet, phone jack or electrical light switch, you can mark the screw heads with an invisible UV pen. Once done, all you have to do is check the screw head with a UV light source to know in an instant if the outlet has been opened. The UV mark shows that when the cover was cleared, the screw head had a

vertical line. The screw head now has almost a horizontal line which means that the screw head has been turned.

The countermeasures security pen has a UV marker on one end and a UV light on the other end which works with small watch batteries. Easy and simple to use, the countermeasures pen can be used to mark electrical outlets, the screw heads on phones, phone jacks, computers and anything else including clocks. Once security marked, you know in an instant if the target item has been tampered with and opened by simply checking the location of the screw heads with the UV light source.

UV AND STAIN DETECTION KIT

The kit included three powders and a UV light unit. The first powder is orange ultra violet that is visible for hours even if wiped off. The second is a stain powder very difficult to remove and spreads the more you try to wipe it off. The final powder is UV which can be blown or brushed over the target area. Invisible without the light unit - footprints, smudges, fingerprints - can be seen clearly.

Order code: UV-SDK £75.00 \$145.00

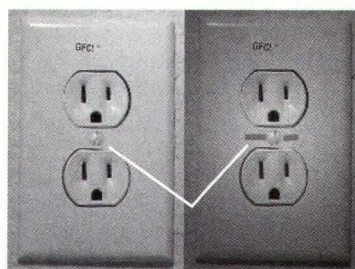

X-RAY SPRAY

Turns opaque paper temporarily translucent, allowing the user to view the contents of an envelope without ever opening it. Thirty seconds after the application, the envelope will return to its original state, leaving absolutely no markings, discoloration, or other indications of use. Each unit can treat several hundred square

inches. Non-flammable, non-conductive, and non-photo chemically reactive. Environmentally-friendly (contains no Freon or ozone-depleting compounds). Net weight: 9oz.

Order code: TX-MCTK
£35.00 \$53.00

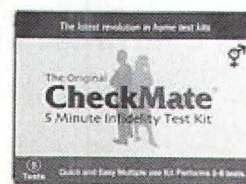

You can also use the Countermeasures Security Pen to mark money, place invisible serial numbers on products and invisibly mark anything. It will mark most surfaces and is a great detection tool.

Order code: TX-CUV
£45.00 \$45.00

CHECKMATE

5 MINUTE INFIDELITY TEST KIT
Quick and easy multiple use
kit performs 5-6 tests

Do you suffer from the nightmare of suspicion and doubt caused by the infidelity of a cheating spouse? Find out what's really going on.

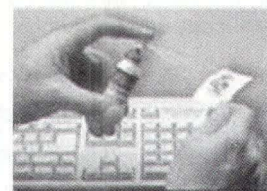

CheckMate can actually monitor your spouse's sexual activity outside of the home by detecting traces of semen left in undergarments after sex. CheckMate works on any type or colour of material including panties, auto upholstery, furniture, sheets and more... Leaves no trace and will not damage or stain the material being tested. Tests for both male and female infidelity. Confidential results known only to you and your client.

The CheckMate Semen Detection Test Kit is probably one of the most powerful products ever created and it really works.

Order code: TX-CSD
£75.00 \$80.00

MARIJUANA IDENTIFICATION SPRAY

Detect Now Marijuana Test is an aerosol-based drug test for detection and identification of marijuana. Using special drug wipes, simply wipe or touch the suspected surface or substance, then spray the drug wipes. Very accurate results in seconds.

Order code: TX-MIS

PROFESSIONAL BREATH ALCOHOL TESTER

Features digital readout, quick response, visible and audio warning beyond pre-set limit. **WARNING** - The Alco Nose Breath tester should be used only to give an indication of the possible presence of alcohol in the breath/blood. You should not rely upon it as the sole basis to determine intoxication or whether it is safe to drive a vehicle, operate equipment, or engage in dangerous activities.

Order code: TX-BAT £50.00 \$70.00

REVERSE PEEPHOLE VIEWER USED BY LAW ENFORCEMENT

The 'Reverse Peep-Hole Viewer' was developed with the help of the law enforcement industry to help them assess potential hazards behind doors. The unit is simple to use. The officer places it over the peephole in the door and can look into the dwelling without alerting anyone inside. They can assess any potential threats or activity before proceeding with their mission.

The unit fits 99% of most common peepholes used in apartments, condominiums and houses in the USA and most other countries.

Made of high quality lightweight materials, its housing is a strong, lightweight composite with an all-weather coating. The lenses are high-quality precision ground glass and custom designed for Reverse Peep-Hole Viewer.

Order code: TX-RPV £120.00 \$159.50

SIX MILE SURVEILLANCE ZOOM BINOCULARS

The unique SuperZoom compact binocular allows you to view at 20 x magnification and then zoom-in for pinpoint accuracy at 80 x power, without ever losing sight of your object. High performance prisms and fully coated lenses provide exceptionally sharp, high-contrast images.

Complete with case, neck strap, lens cap and tripod adapter. Less than 13 ounces and are small and durable enough for long-lasting use anywhere. Manual zoom lever puts you in control, letting you zoom in or out with the slightest touch of your finger. Fitted with rubber eye cups designed to exclude extraneous external light. If you wear glasses, simply roll down the eye cups to bring your eyes closer to the lens for improved field of vision.

Order code: TX-SZB £120.00 \$215.00

VISEC HOME & OFFICE SECURITY PROGRAMME

Turn your computer into a video monitoring station - have the system call or email you - view video over the web from anywhere in the world

NASA programmers have developed the next generation computer programme called VISEC. View from any location in the world via the Internet. Use your computer's IP address to log on and immediately view live or past video. Record all video activity, or just when motion is detected. In motion detection mode you can be alerted by email, cell phone or PDA when motion is detected. Can also be used as a stealth surveillance system allowing the programme to operate secretly on your computer. Suspect an abusive nanny or cheating spouse? Simply set VISEC on 'secret' mode and record everything for possible evidence.

Easy to use. Installation and configuration takes 5 minutes. Record up to four cameras at once using your existing computer and any webcam, wireless or hidden camera. You can use your own webcam, but if you don't have one, we highly recommend the DigiGR8 webcam. Will work with hidden or wireless camera with the GraBee II.

Order code: VISEC (Software) £75.00 \$100.00
Order code: DIGIGRAB (USB Video Cam) £50.00 \$58.00

Order code: VISEC-COMplete (VISEC Software and DIGIGRAB USB Video Cam) £120.00 \$148.00

£170.00 \$178.00

REAR VISION SUNGLASSES

IDEAL FOR OVERT, COVERT AND COUNTERMEASURES

These high quality sunglasses look like regular sunglasses with one unique exception. They are a little wider on the ends and have mirrored edges on the inside so you can actually see behind you

while you are looking forward. Don't confuse these sunglasses with cheap toy models. This model is used by professional law enforcement agencies throughout the United States and elsewhere.

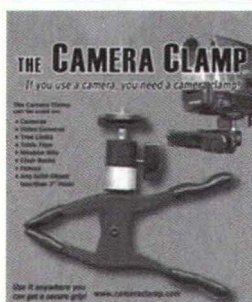

Order code: TX-RVS £30.00 \$31.00

THE CAMERA CLAMP

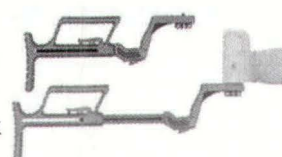

For cameras, spotter scopes, video cameras, high powered binoculars, night vision scopes and other surveillance optics. Clamps to almost anything. Developed for use where tripods are not practical, the Camera Clamp will attach to anything 2 inches or less in thickness. Solid, very portable, and allows the user to tilt, swivel and pan, just like a tripod.

Order code: TX-CCC £70.00 \$75.00

OPTIC STOCK FOR CAMERA/CAMCORDER

The camera/camcorder optics stock was designed to give the user a light weight, portable, quick deployment means of steadying a camera, video camera, or optics such as a telescope or spotting scope. Although not as stable as a tripod, this device will greatly enhance the ease, use, and stability of your optical and camera equipment. The stock can collapse to just 10" in length and weighs only about

9oz. It can extend to three different positions to match varying body sizes or clothing thickness. It uses a universal screw for mounting, and is compatible with any equipment designed to interface with a tripod. Constructed of black polymer with stainless steel hardware.

Order code: TX-OSCC £150.00 \$190.00

KEYKATCHER

KeyKatcher is the world's primary device for capturing all key strokes made on a keyboard. Measuring about one inch in length, KeyKatcher fits on the end of the mouse cable directly into the PC. It is designated a 'dead bug' as it does not emit any transmissions and can hold weeks of typed data. KeyKatcher can only be located through a visual search at the back of a PC, and is difficult to detect amongst the wires and cables. The device is hugely popular in the security and corporate world, for it can gather data that would otherwise be impossible to obtain. However, it is also welcomed by worried parents who are concerned about their children's use of the Internet. To retrieve the information, the user simply attaches the device to another computer and the typed data, codewords, messages and commands are instantly displayed.

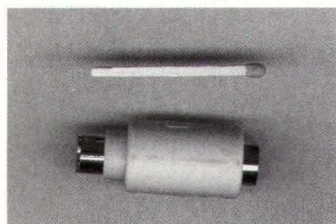

It is the ultimate spying device that comes at a very affordable price. The bigger the memory capacity, the more data can be stored. Three sizes to choose from.

Order code: ES/KK2 (mini size)

SELF DESTRUCTING PAPER

Looks like ordinary paper, but dissolves in seconds when in contact with liquid, resulting in a useless, non-reconstructible mulch. Far more secure than the output of any standard shredder. You can write on this paper normally, but any liquid, even saliva, transforms it into a secure mulch. It's ideal for those confidential notes that may have to "disappear" quickly with little advance notice. It comes in one pad of 32 sheets, each sheet is 2.75 x 4.25 inches in a sealable storage bag. **KEEP DRY!**

Order code: TX-SDP £12.50 \$15.00

ALARMS & WARNINGS

SAFETY, HOME AND WORK SECURITY

WIDE ANGLE DOOR VIEWER

A remarkable, high tech optical instrument, door viewer allows you to stand up to seven feet away from your door and get a camera's eye view of the outside. Door viewer works like a miniature video monitor, with a super wide angle and no distortion. Makes it easy to see and identify all visitors.

see who's there up to seven feet away

Order code: TX-WADV
£35.00 \$42.95

CAMERA DETERRENT

The slightest movement in the vicinity of this camera will trigger an infrared sensor. The camera then moves from side to side giving the impression it is actually recording. The unit also reacts to sudden changes in light. An ideal low-cost deterrent. Screws included for optional fixing to wall included. Works with 2 AA batteries.

Order code: MS-113 £15.00 \$30.00
Buy two for £20.00 \$40.00

MOTION ALARM

Projects an invisible beam across a doorway, hallway or window, and sounds an alarm when an intruder crosses the line. Adjust the beam from long and narrow or short and wide. Red LEDs provide a visual alert that the unit is armed and functioning. 20ft range maximum.

Requires 2 AA batteries (sold separately).

Order code: TX-MADOOR £20.00 \$18.95

ELECTRONIC WATCHDOG

Protection with none of the problems of owning a real dog

Police say a barking dog is an excellent way to deter burglars and this one never needs food, water or to be taken for a walk. The Electronic Watch Dog is the ideal watchdog because he does what even the best living, breathing watchdog can't do. With its electronic radar eyes, the Electronic Watch

Dog can "see" through thick doors, walls and glass. And once his cord is plugged in (120V), he'll stay on duty around the clock, indefinitely. The watch dog can protect homes and a variety of premises.

- Very realistic - barking gets louder and more

frequent as intruder gets closer.

- Switches from the watchdog to the tranquil sounds of nature with the simple switch of a button.
- Variable distance sensitivity (up to 30') as well as volume control.
- Senses movement

through walls, doors, and glass to alert you of a visitor's arrival.

- Maintenance free. Reliable 24-hour protection. No installation required.

Order code: TX-EWREX
£90.00 \$125.00

WINDOW ALERT

Window Alert is a 95 decibel glass breakage alarm that attaches to windows and set off by vibrations caused if someone tries to break through. Installs easily on any window. Solid, state of the art design. Battery included.

Order code: TX-PTPA £35.00 \$25.95

MOTION ALERT

Mace brand security products are highly innovative and known throughout the world for top quality. Motion Alert is a passive infrared system that detects motion in any selected area. Compact and attractive, it mounts easily (vertically or horizontally) near any entry area and is battery operated, eliminating any need for wiring. Unit can be coded with a personal

security code and can be set to utilize a two-tone entry chime instead of the alarm sound. Mounting screws included. 9V battery not included.

Order code: TX-MAA £45.00 \$64.00

ENTRANCE ALERT

Entrance Alert is a 95 decibel magnetic alarm that can be attached to a door or window. Alarm sounds when contact is broken. Automatically resets after 45 seconds. On/off switch allows for use only when necessary. Battery included. Excellent low-cost security product.

Order code: TX-MAA £30.00 \$32.95

DOOR STOP ALARM

Use this alarm to block a door from being opened. If anyone tries to open the door, a 125 decibel alarm will sound. There is also a movement sensor with adjustable sensitivity to activate the alarm if tampered with. An on/off switch allows the alarm to be turned off so that it doesn't sound when transported. Requires one 9V battery. This is a new and improved version of an older alarm that has sold by the tens of thousands for many years simply because it's so effective.

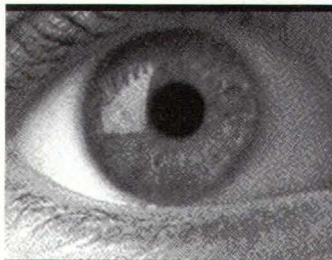

Order code: TX-DSAA
£30.00 \$28.95

LUGGAGE GUARD

This luggage alarm helps catch thieves red-handed. This unique device actually looks like a simple luggage tag and fits on any attaché case, suit case, laptop computer handle or any other luggage or carry-on piece. When activated, the touch sensitive Luggage Guard will sound a piercing, shrill alarm.

PORTABLE TELEPHONE SCRAMBLER KIT

**FOR BOTH CELL PHONES
AND LAND LINE PHONES**

This telephone scrambler attaches onto most cellular or land line telephone handsets. It is designed to scramble your conversations over the telephone line by using a unit on each end. This tactical device will protect your conversation from various methods of eavesdropping from wiretaps to electronic bugs. The unit is totally portable and can be used around the world on most telephones. This advanced security system uses a digital encryption algorithm based on DSA that is applied to the user code in order to create secure communication. By programming a code up to sixteen digits, an algorithm is created that rolls the scrambling code up to 65536 times. This provides over seventeen

**POWERFUL
ANTI-
SURVEILLANCE**

hours of continued use before the pattern repeats. The phone scrambler comes with an interconnect cable that will connect with Motorola, Samsung, LG

and other models of cellular telephones that have a 2.5mm headset jack. Adapters are available to attach the cable to other models of cellular phones. A cable is also available to connect the unit to a conventional land-line telephone.

The deluxe kit includes two high security scramblers with interfaces for both land-line and cell phones.

Packages and adaptors are available separately for land line or cell phone.

Order code: LS-TLC7
£170.00 US \$300.00

TELEPHONE EQUIPMENT + Continued

SUPERTAP BUSTER

The SuperTap Buster has been designed to automatically detect and disable most forms of wire tapping and telephone bugging. It has an LCD voltage meter to allow the user to monitor the phone line conditions. A red LED will flash if there is the possibility of wire tapping on your line. At the same time, your telephone conversation will automatically cut off to prevent your voice from being heard or recorded. When a switch is set a continuous warning "beep" will be transmitted to the person on the other end indicating that the conversation has been cut off due to wire tapping or telephone bugging.

The SuperTap Buster is housed in an attractive, ivory cabinet and is powered by 9V DC. (120V power supply and 6ft of telephone cable included). A voltage regulator is built into the rear panel for adjustability of dial tones worldwide.

Order code: TX-STB £250.00 US \$350.00

SECURE PHONE 2005

The Secure Phone defeats telephone bugging and tapping attempts. Automatic telephone recording devices, line transmitters, or any other voltage-activated devices will not function. The Secure Phone has the appearance of a normal telephone; its counter-measure circuitry is discreetly hidden inside.

Simply install the Secure Phone into any

modular phone jack. The green LED will light up when picking up the handset, indicating the "line guard" mode is on. To determine whether your phone is clear of taps or recording devices, simply lift the headset and listen for a dial tone. If a dial tone is present, your conversation will be secure. If there is no dial tone and the green

LED on the Secure Phone is off, there may be some type of listening device or low to medium impedance tap on your line.

Order code: TX-SP2005
£225.00 US \$335.95

TELEPHONE/FAX TAP DEFEAT PROFESSIONAL COUNTERMEASURES

This telephone/fax tap defeat is very clever and will defeat wiretaps or bugs that could be wired to your phone line. Set-up takes a matter of a few minutes. Now you can plug the TD1 into any socket on your line, (it doesn't necessarily have to be the one you're using). This means you can hide the unit discreetly in another room.

The unit will defeat any voice activated phone recorder by sending constant pulses of noise to fill up the recorder on the other end. The TD1 has an LCD line condition display and LED's to indicate the mode setting. Offers the following features: turn on or off any wiretap or bug, any phone recorder controlled by line voltage, any phone recorder controlled by voice activation. The unit can be controlled to pass on misleading information to the wire tap by simply using an on-off button.

Order code: L-TD1 £195.00 \$380.00

TELEPHONE/MODEM LOCKOUT SENTRY

This privacy unit is a very simple and inexpensive device. Invented for diplomatic private government conversations in which there are extensions on the same phone line. This device locks down your phone or modem so another extension or eavesdropping connection can not pick up the call. With use on a modem line or fax line, you will not have to worry about eavesdroppers or disconnections. The Lockout Sentry gives you total privacy protection. Each package comes with two units for instant privacy protection for two phones, modems or fax lines. (Price includes set of two 'sentry's)

Order code: TX-TMLS £45.00 US \$39.50

TAP DEACTIVATOR WITH ANTI-VOX SYSTEM

The Professional Safe Line Telephone Analyser and Tap Deactivator was designed by an Israeli government intelligence engineer to secure his own phone lines. Safe Line offers more levels of protection than any other device of its kind. Six levels of protection deactivate, neutralize, monitor and alert you to eavesdropping attempts. Both "on hook" and "off hook" line voltages are constantly displayed, alerting you to any type of equipment or "bug" that has been added to your phone line.

Digital display will reflect any change in your phone line. Automatically deactivates all known wire-tapping devices including parasitic, crystal controlled and VOX. Creates shift of frequencies in crystal line transmitters. Voice "simulation" causes VOX equipment to record noise when line is not in use-filling up any type of recording media.

- Turns off voltage sensing recording/transmitting devices.
- Instantly alerts user to extension eavesdropping attempts.
- 100% state-of-the-art digital surface mount technology never needs batteries or bulky AC adaptors, as it gets all the power it needs from the phone line itself. Installed in seconds with modular connector cable (included). In addition, to use on audio phone lines, this state-of-the-art privacy assessor can also provide secure fax lines.

Order code: TPVOX £265.00 \$395.00

WARNING: These products can only be used in a legal and lawful manner. Some of the devices may be illegal to operate in your state or country. Please familiarise yourself with the law and applicable regulations

EYE SPY'S HOLD INVADER LISTENING DEVICE

The Hold Invader is a unique and unusual telephone surveillance device. The party on the telephone call think they are on "hold", but in fact it's a "phantom hold". The phone has been effectively turned into a supersensitive room bug. An investigator might ask a leading or provocative statement regarding a desired subject, then ask the party to "hold" for a minute. The Hold Invader replicates the "call waiting" sound and the unit's "hold" switch is activated.

The device's sophisticated amplification electronics have effectively turned their phone into a supersensitive room bug. They may be conversing freely; very likely about the topic just "planted". The Hold Invader captures all the audio in the room while the party believes they are on "hold". A fantastic surveillance device.

Powered by one 9V alkaline battery (not included). Installs in seconds between the phone and the handset

(not compatible with phones with dials in the handset portion).

Order code: TX-HIL
\$200.00 US \$279.00

TELEPHONE TAP NULLIFIER

Will defeat all telephone taps. The nullifier utilizes technology that jams any listening device which use the telephone line to listen to room conversations. For use on any telephone or fax line anywhere in the world.

- Normal and secure calling modes
 - Monitors exact line voltage in on hook and off hook condition
 - Stops automatic recorder activators
 - Alerts to extension pick ups and lineman test
 - Deactivates automatic parallel line transmitters
 - Infinity transmitter and line tampering alerts
 - Fine tuning capability
 - Sturdy metal case
 - AC adapter 12V with 500mA
 - Telephone cord
- Order code: TX-TTN £450.00 US \$825.00

VOICE CHANGERS

PROFESSIONAL STANDARD UNITS

HIGH QUALITY VOICE CHANGER

You can change your voice from male to female at will or simply disguise your voice beyond recognition. Even your own spouse will not recognize you. The high quality acoustic coupler attaches to the headset and you simply talk into the mic on the unit. Runs on one 9 volt battery. Comes with handsome carrying case and detailed instruction manual.

Order code: TX-HQVC £200.00 US \$325.00

EXECUTIVE PRO VOICE TRANSFORMER INDUSTRY STANDARD

This unit is an entirely new generation of advanced voice disguise and transformation technology. The Voice Transformer gives you total and unparalleled control of timbre, tone, format, reverberation, and pitch. No other unit on the market offers these exclusive features.

User friendly design, 20-second installation, quality engineered and manufactured. Unit comes complete with a quality hands free microphone/ear piece, Size: 7 x 6.5 x 2in. (Not compatible with cellular phones, cordless phones, or dial-in-handset phones.)

Order code: TX-VCPVT £499.00 \$795.00

NEW CELL PHONE VOICE CHANGER

Available for the first time - telephone voice changer for mobile/cordless and cellular phones. Normal plus four different voices. Answer your cell phone or call someone on your cell phone without anyone recognizing your voice. Just switch a button and completely change your voice. Universal to fit all mobile/cordless and cellular phones.

When you are not using the item as a voice changer, it also makes a great hands-free head set for your cell phone, just switch the unit to normal voice and speak hands-free.

Order code: TX-CPVC £60.00 \$84.00

ECONOMY VOICE CHANGER

A small box that you place over the mouth piece of the phone - you can change the pitch of your voice in stages - down low or high. Comes with earphones so you can hear your own voice to create the desired

pitch. 1 9V pp3 battery.

Order code: LS-EVC
£80.00 \$150.00

SURVEILLANCE COUNTERMEASURES

USED BY THE PROFESSIONALS

ACS-007-ADVANCED COUNTERMEASURES SWEEP KIT

Everything you need to conduct professional level countermeasures sweeps. Sweeps phones and phone lines for wiretaps and rooms for bugs and wiretaps from 400KHZ to 8.5GHZ. Developed for Israeli military counter intelli-

gence. Diplomatic and military grade. This advanced system includes a hard shell carry case, RF probe, IR probe, all new phone line tone injection/locate unit and much more.

ISRAELI MILITARY COUNTER INTELLIGENCE

Order code: TX-ACS007
£1100.00 \$2295.00

Full specifications
available by post or

www.eyespyimag.com

VCD-43 ADVANCED VIDEO CAMERA DETECTOR

This unit features a five-step solid state meter that can help you zero in on those hidden video cameras. The sensitive external antenna is designed to pick up the horizontal oscillator frequency radiated by video cameras. Once the video camera is detected, its location can be quickly determined by using the five-step LED meter and sensitivity control. Tests with various cameras show a detection range of 2 to 15 feet, depending on the type of camera. The unit can be factory tuned to frequencies other than the NTSC standard; such as PAL and SECAM. For special tuning, please specify when ordering.

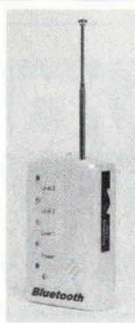

The VCD-43 has a rugged aluminium housing, measures 4.25 x 2.25 x 1.25in, weighs 10oz., and is furnished with two 9V batteries, plug-in antenna and illustrated instructions.

Order code: TX-VCD43 £210.00 \$300.00

BLUE TOOTH BUG TRACER

Pocket sized detector, sweeps from 10MW up to 6GHZ. The Blue Tooth bug detector will sweep for Bluetooth, WLAN, WI-FI, cellular phone, and digital spread spectrum wireless products. This detector also checks for wireless video signals. Most bug and video detectors now can check up to 3GHZ, but they are missing the new 5.8 hz cameras. With the new BLUE TOOTH detector, you won't miss a thing.

Order code: TX-BTBT £210.00 \$323.00

CMS COUNTERMEASURES KIT

The kit is built around the advanced transmitter detector which features both Geiger counter readings and audio readings through headphones, built in sensitivity switch and a verification mode so you'll know instantly if you are picking up a bug or just a radio signal. This unit sweeps frequencies up to 600KHz in two ranges. Three additional probes are included giving you the ability to provide extra measures of privacy protection. The infrared probe detects light beams, the line driver probe gives you the ability to check any wires and the carrier current probe and video camera probe detects for carrier current eavesdropping on all electrical wires and outlets and also detects the presence of hidden video cameras. The advanced wiretap detector is included in the CMS 12 kit which lets you conduct testing of telephone wires and the telephone itself for wiretaps. Comes with carrying case and detailed instruction manual.

Order code: TX-CMSCM £800.00 \$1295.00

THE BUG HUNTER

A popular bug detector that will locate any transmitters in the room or on the telephone. When sweeping a room a bar of LED lights warn of the presence of a bug. To detect on the phone line - simply plug the lead (supplied) into the detector. 1 9V battery.

Order code: LS-BH £180.00 \$320.00

ARM BAND BUG DETECTOR 3000

Dual purpose vibrating bug
detector in micro size

The new micro arm band bug detector is a tiny but powerful RF vibrating detector small enough to be worn on your body without being noticed. This tiny micro unit measures less than 2.5in. It can be used as a covert body worn detector with the included arm band or as a conventional bug detector to sweep a room or office. The range is amazing and features full spectrum coverage from 1 MHz to 3 GHz with no holes or gaps. On/off switch and sensitivity adjustment. The unit runs on one 1.5V battery which will last up to 500 hours on standby.

Order code: TX-BD3000 £220.00 \$323.00

NEW GENERATION PERSONAL RFD DETECTOR & SWEEPER

Sweeps up to 6GZh. The all new pocket size personal radio frequency detector locates transmitters or bugging devices in a room or automobile. This personal RF detector excels at silent detection of RF signals for RF security and counter-surveillance applications.

Internal NiCD battery pack, vibration motor and earphone for private detection, AC wall charger, 2.4GHz antenna and earphones.

Order code: TX-PRFDS £199.00 \$278.00

VCD-42 STANDARD VIDEO CAMERA DETECTOR

Because video surveillance is becoming more common, you need to be able to detect privacy invasion. The VCD-42 can help you quickly determine if hidden surveillance cameras are being used in any room.

Video cameras radiate a signal that can be picked up by the VCD-42's internal directional antenna. When a video camera is detected, the red LED on the VCD-42 glows brightly. By using the sensitivity control along with the directional antenna, you can quickly pinpoint the camera's location. Our tests with various cameras have shown a

detection range that varies from 3-12ft, depending on the type of camera.

The VCD-42 measures 4 x 2.5 x 1.5in, weighs 6oz. and is furnished complete with 9V battery and illustrated instructions.

Order code: TX-VCD42
£125.00 \$195.00

DP-19 RF/IR DETECTOR

For those who need a very sensitive radio frequency (RF) detector plus an infrared (IR) detector, we recommend the DP-19. With its bandwidth of 1 MHz to 2500 MHz and its extra sensitive circuitry, it will pick up signals that other detectors may miss. It is designed to pick up subminiature radio and infrared transmitters wherever they are located - in your home, office or car. The DP-19, which weighs 8oz. and is furnished in a high-impact case that measures 5.3 x 3.3 x 1.5in. The telescoping whip antenna can be extended 33". The unit comes complete with 9V battery, antenna and instructions.

Order code: TX-DP-19 £185.00 \$269.00

MD-12 MICROWAVE DETECTOR

Detects 2.4 GHz video and audio RF links. The MD-12 detects RF in the 900MHz to 3.2 GHz range and displays the relative signal strength on the sensitive front panel meter. Even low power 2.4GHz video links can be detected from 4 to 12 feet away. By using the sensitivity control along with the signal strength meter, you can quickly zero in on the location of hidden microwave transmitters, while special built-in filtering lets the unit ignore out-of-band signals. The MD-12 measures 5.3 x 3.3 x 1.5in. High-impact black case. Weighs 7oz and comes complete with 9V battery and illustrated instructions.

Order code: TX-MBT £180.00 \$224.00

MINI BUG TRACER

SCAN RANGE FROM
1 MHZ TO 3 GHZ

The amazing Mini Bug Tracer RF detector is great for finding those hidden 2.4GHz wireless cameras as well as audio eavesdropping devices. Outstanding performance in a small package. Keychain sized detector with telescopic antenna locates hidden wireless cameras fast, assuring your privacy. Red light flashes faster as you get closer to the hidden camera. HI/LO buttons allow you to check out the entire room, then "home-in" on the bug.

Order code: TX-MBT £85.00 \$108.00

SPY FINDER VIDEO CAMERA DETECTOR

The SpyFinder hidden camera detector/locator is the most reliable and easy to use technology on the market. Its function is based on the principle of optical augmentation. This refers to the phenomenon where light reflected from a focused optical system, such as a video camera, is reflected along the same path as the incident light. This means that if a hidden camera is illuminated and viewed with the SpyFinder technology, then a strong reflection

from the target camera will reveal its position to the user. Detects wired or wireless cameras, dead or alive at 30ft.

Order code: LS-SPYFIN
£125.00 \$199.00

WIRELESS CAMERA AND CELLULAR PHONE DETECTOR

This economy wireless camera and cellular phone detector is designed for user friendly operation in detecting all hidden cameras. Its compact size makes it easy to conceal and carry to protect privacy and information.

- Detects cellular phones up to 4ft

6V DC power (uses two CR2032 lithium batteries, included)
50MHz to 3.0GHz detecting frequency
Sound and LED warning

Specifications
• Detects wireless cameras up to 10ft.

Order code: TX-WCCPD £54.95 \$69.95

PALLADIUM 4.5

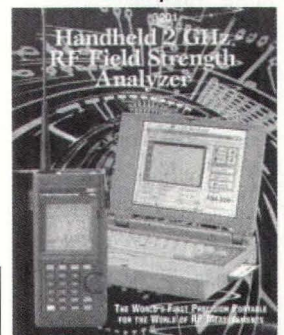

The Palladium 4.5 packs the performance of the professional equipment systems into a pocket sized device. Transmissions can be detected and verified with audio and visual alerts and a silent sweep can be conducted with a headphone connected. Can be carried inside a pocket and operate in silent vibrate mode. Easy to use and very reliable. Range 10MHz to 4.4GHz

Order code: LS-PAL45 £995.00 \$16.000

TE-3201 SPECTRUM/ FIELD ANALYSER

*With computer
interface state-of-the
art countermeasures
sweeps*

The World's first handheld field strength analyser/spectrum monitor with wide band reception ranging from 100 KHz to 2.060GHz, includes RS-232 cable for interface with computer or printer. The TE-3201 has been designed from the ground up with features only found in analysers costing up to 10 times the price. The TE-3201 is ideal for counter-measure applications, testing, installing and maintenance of mobile telecommunications systems, cellular phones, cordless phones, CB radios, paging, cable TV and satellite receiving equipment as well as installing and measuring antennas.

Order code: TX-TE3201
£1800.00 \$3350.00

SURVEILLANCE COUNTERMEASURES

Continued

ZAP CHECKER ONE

Measures radiation from cell phones, microwave ovens, 'bugs', two-way radios... etc. range: 10MHz to 4.5GHz, meter and led displays. Detects and displays RF (Radio Frequency) signal levels with uniquely high sensitivity, similar to a broadband receiver. It provides linear and logarithmic measurements of RF signals over a broad span of frequencies. The ZAP One allows the user to detect and measure signal strength and to distinguish between analogue and digital transmissions. Detect cellular phones and

covert 'bugs' at more than 50+ feet, transmissions from 'sealed' microwave ovens at 40+ feet, from walkie-talkies at 100+ feet, and from amateur radio transceivers at hundreds of feet.

Order code: TX-ZCO-19 £199.00 \$207.00

PNG 200 PORTABLE NOISE GENERATOR

DEFEATS EAVESDROPPERS

Designed as a portable acoustic noise generating unit. The circuitry has been optimized for voice band noise masking against listening devices and is designed to reduce the effectiveness of eavesdropping devices such as microphones and tape recorders. When multiple units are used in concert, a complete environment masking system can be easily installed in any environment. The PNG-200 can be

mounted to smooth surfaces using suction cups or simply placed in an area that potential eavesdropping devices may be present.

Power: Two 9V alkaline batteries or AC transformer (120 or 240 VAC). Includes: Carrying case, AC transformer, and suction cup window/wall mounting kit.

Order code: TX-PNG200 £239.00 \$277.00

PERSONAL RF DETECTOR AND BUG SWEEPER

NEW GENERATION - NOW SWEEPS UP TO 6 GHZ

The all new pocket size personal radio frequency detector locates stuck transmitters or bugging devices in a room or automobile. This personal RF detector excels at silent detecting of RF signals for RF security and counter-surveillance applications.

Vibration mode and earphones for private detection. 1MHz - 6GHz frequency range.

Order code: TX-RFDBS £200.00 \$275.00

ZAP CHECKER ADVANCED

The ZapChecker Advanced can detect and locate even the tiniest of transmitters. Its high sensitivity and wide bandwidths are achieved by utilizing new integrated circuits developed for use in cell phones and wireless devices. These new components enable the ZapChecker to detect even the weakest signals down to baseline ambient levels of radio frequencies.

All RF signals within the bandwidth are detected - analogue, digital, pulsed, hopping, spread spectrum, and trunking. The ZapChecker is hundreds of times more sensitive than standard field strength meters, and more sensitive than most spectrum analyzers. It is particularly suitable for the detection of RF signals from

transmitting bugs and covert cameras.

Operates on 2 AA batteries (not included) for over 60 hours.

Frequency range: 10MHz to 4.5GHz. Weight: 5oz. Size: 2.1 x 5 x 1.25in.

Order code: TX-ZCA £350.00 \$395.00

INTERCEPTOR

This detector has range finding properties between 10MHz and 3GHz and will alert you to the presence of a bug with an inbuilt row of LED lights.

Detect telephone transmitters by touching aerial to the phone line. Unit comes with headphones so you can listen in real-time. 9V battery.

Order code: LS-INTCP £199.00 \$350.00

COVERT PEN BUG DETECTOR

The covert pen bug detector can protect you from hidden cameras, bugs and wiretaps. Push button design saves valuable battery life. The red flashing frequency will increase while approaching the signal and is detectable up to 10 feet. This excellent bug hunter has been constructed in a handsome fully-functioning ball point pen, thus sweeps are easy to perform without attracting attention. Detects hidden cameras and transmitters 500MGz to 3HGz. PDA stylus for touch screen devices.

Order code: TX-CPBD £99.00 \$125.00

MDS 4001 SECURITY STANDARD

This professional multi detector system is top of the range in bug detectors, detects all transmissions between 3.5MHz to 5GHz. Comes complete with built-in charger, earphones, hand held interface which detects microwave, camera, frequency hoppers, infrared, mains carriers, vehicle trackers.

Order code: LS-MDS4001 £3550.00 \$6000.00

Full specifications available only by post

PRO HUNTER

Lipstick size wireless camera and RF detector. Scan range from 5MHz to 3GHz.

Simply switch the unit on and move around room. Unit will beep and the LED will flash upon approaching anything emitting an RF signal. Great for use in places where privacy is expected.

Order code: TX-PROHUN £80.00 \$108.00

TELE-DATA GUARD

Alerts the user if someone has picked up an extension. When the Tele-Data Guard is installed on all extensions, the extension you pick up automatically disconnects the others. Green LED alert light signals whether line is in use.

Protect faxes and modems from interruption.

Order code: TX-TDG £40.00 \$45.95

TRD-800 TAPE RECORDER AND RF DETECTOR

The TRD-800 is designed specifically to vibrate in the presence of a tape recorder* or RF bugging device. Designed to be worn on the body, the unit comes with dual mode wrist-band antenna and built-in rechargeable battery.

While copies of the TRD-800 may be cheaper, they do not provide the frequency performance and

sensitivity of the true TRD-800. Rechargeable battery pack (self-contained) with low battery LED indicator. Rugged, aircraft aluminium construction with padded carrying case.

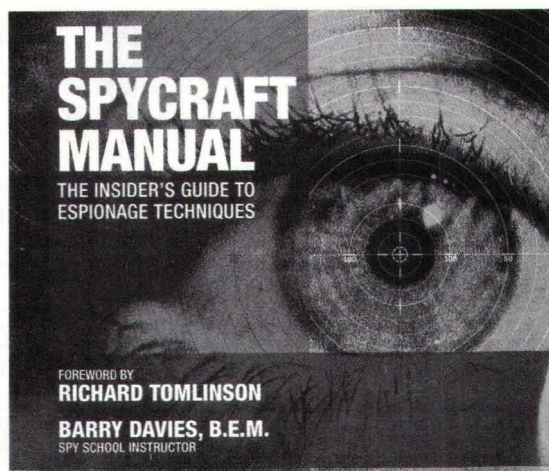

Frequency response: 10KHz-1GHz, VLF
magnetic response: 38-45KHz. Typical RF and tape recorder detection range is around 1-3ft

External charger: 115 or 230 VAC available.

*Tape recorders must contain magnetic bias oscillators to be detectable.

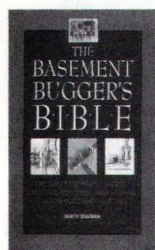

Order code: TX-TRD800

importance. The use and 'turning' of locals in foreign lands is a skill.

INVISIBILITY

Experienced spies are rarely caught, though it does happen. But by becoming invisible or 'going grey', officers can traverse the world and operate in all sorts of environments. MI6, the CIA and most intelligence agencies have embedded spies operating from the relative safety of their diplomatic missions abroad. Once the intelligence officer has secured a posting, it allows him or her to move in places without attracting undue attention. From here, the officer has the ability to lure agents through the use of monies, general assets or even the promise of permanent residence abroad. Occasionally contacts are political - certain people may be willing to help freely - though beware the 'honeypot' or undercover counter-intelligence officer.

When asked a difficult question, experienced intelligence officers will immediately respond. Often complex and delivered in a convincing manner, it should be sufficient to convince the person you are legitimate. Similarly, officers are trained in the art of 'opportunity'. If a situation occurs, be it at a dinner party or a local bar, these skills can be exploited to acquire the services of locals.

Occasionally officers and their agents are invited to perform very difficult tasks, including that of "sleeper". The person becomes so embedded that his or her identity will, in time, become invisible. Several years may pass before the agent or officer is asked to become active and assist in an operation. Training, endurance and devotion to duty are crucial. However, by this time the person will have become accepted by the local community. Bank accounts, grocery bills and a plethora of other circumstances will have resulted in the person's 'invisibility'.

T H E A S S A S S I N S

Syria's agents and intelligence friends implicated in a complex plot to assassinate the man who rebuilt Beirut

United Nations investigators have implicated Syrian intelligence in the assassination of former Lebanese Prime Minister, Rafik Hariri. The operation to kill Hariri was so complex and cunning that it could have been 'lifted' straight from a John Le Carre spy novel. UN investigators say but for one or two errors and a good slice of fortune, the "Syrians may well have got away with the murder of Hariri."

A UN fact-finding investigation began on 25 February 2005 and was led by Peter Fitzgerald, a senior Irish police officer. He reported that an official Lebanese investigation into Hariri's death on 14 February 2005, was "flawed and not credible."

Fitzgerald's findings included comments that said both Syrian and Lebanese security were at fault in the attack. The report claimed there was a "distinct lack of commitment" by Lebanese authorities to investigate the crime, and the investigation was not carried out "in accordance with acceptable international standards." So what really happened? Eye Spy examines some key aspects of the assassination of Hariri...

The genesis behind the assassination of Rafik Hariri can be traced back to the summer of 2004. Prime Minister Hariri wanted Lebanon free from Syria's influence and rid his country of the presence of its powerful intelligence service. According to a recent UN report published on the affair, Syria became fed up with Hariri and wanted him replaced with a more pro-Syrian leader... so they decided to kill him.

A chilling and audacious plan was carefully devised that would require bluff, a fake assassin, 24-hour surveillance, a bogus suicide tape, financial support, an array of equipment from vans to walkie talkies and ultimately a scapegoat.

In 2004, Syrian President Assad demanded that the Lebanese Government amend its constitution allowing his ally, President Émile Lahoud to extend his term in office. Hariri, a billionaire and hero of Lebanon (he had poured millions of dollars into rebuilding Beirut following 15-years of civil war) objected strongly.

Former
Lebanese
Prime Minister
Rafik Hariri

Hariri's refusal to bow to Syrian pressure turned out to be the beginning of the end for the likable minister.

Syrian officials summoned Hariri to Damascus on 26 August 2004. He met with President Assad for a meeting that lasted just 15 minutes. When Hariri arrived back in Lebanon, he told relatives that the president had threatened to "break Lebanon on his head," and described his time in Syria as "the worst day of his life."

The UN report included the transcript of a taped conversation with the Syrian deputy foreign minister, Walid al-Moallem, just two weeks before Hariri was killed. When Hariri protested about Syria's domination of Lebanon, al-Moallem replied: "We and the [security] services here have put you into a corner. Please do not take things lightly." ➤

Iraq's interim President Allawi and America's Colin Powell. The driver of the van believed Mr Allawi was in the convoy

Hariri gave in and, using his bloc vote changed the Constitution in a hastily called parliamentary session. Using Syrian money and experienced propaganda officials, newly printed posters of President Émile Lahoud started to appear on every street corner. When the vote was announced fireworks were seen across the capital. In October, an angry Hariri resigned in disgust.

By Christmas 2004, Hariri gave notice he was joining an anti-Syrian alliance in Beirut. It was around this time, according to UN investigators, General Mustafa Hamdan, commander of President Lahoud's personal security force, said: "We are going to send him on a trip - bye-bye Hariri."

Interestingly, when the UN released its initial report on the death of Hariri, one version sent by e-mail to several media outlets contained notes of conversations that have since been removed from the final version. Those passages also identified other key suspects and had apparently been edited out because the suspects have not yet been charged. They included President Assad's brother, Maher, his brother-in-law and General Asef Shawkat, head of military intelligence - also regarded as the second-most-powerful man in Syria.

The edited section reveals that shortly after the UN Security Council passed a resolution in Autumn 2004 calling for Syria to remove its forces from Lebanon, General Sayyed and other Lebanese security officials began travelling to Damascus to meet with General Shawkat. The final meeting took place just one week before Hariri's murder. One man at that meeting was General Hamdan.

"We are going to send him on a trip - bye-bye Hariri"

By then Hariri was already under 24-hour surveillance. The UN report notes that General Sayyed coordinated much of the operation with Syria's military intelligence director, General Rustum Ghazali and senior Lebanese security officials. Also in attendance and augmenting the surveillance operation was Ahmad Jibril, head of the Popular Front for the Liberation of Palestine, (General Command). This organisation is regarded as an 'agent' of Syrian intelligence. The report notes: "General Hamdan and General Azar provided logistical support,

providing money, telephones, cars, walkie-talkies, pagers, weapons, ID cards etc."

Colonel Ghassan Tufayli, of Lebanon's military intelligence, was given the task of wiretapping all landlines in offices and residences occupied by Hariri. Every day transcripts of the recordings were placed in log books and rushed to the headquarters of Syria's intelligence service.

"Several important people such as former presidents, prime ministers and deputies were permanently wiretapped," the report said. "Although Mr Hariri was no longer prime minister in early 2005, he was a very important political and economic figure in Lebanon and the Middle East. Therefore he was under permanent wiretapping."

SENIOR UN
INVESTIGATOR - DEPUTY
COMMISSIONER PETER FITZGERALD

Deputy Commissioner

Fitzgerald has seen overseas service in Namibia (UNTAG) with the UN Civilian Police from 1989-1990 and in Cambodia (UNTAC) from 1992-1993, as Chief of Operations of the UN Civilian Police. He also served as a UN Police Advisor on planning for a UN Mission to El Salvador in 1991. In January 1996 he was appointed Commissioner of International Police Task Force by the Secretary General of the UN. He served as Commissioner in Bosnia up to February 1997.

Meanwhile, Syrian intelligence ordered that a foreign vehicle be acquired for an operation against Hariri. A white Mitsubishi van was subsequently stolen thousands of miles away in Japan and driven to Syria. In Tripoli, Libya, an agent purchased a set of prepaid telephone cards. These were used to pay for ten mobile telephones allegedly carried by participants in the assassination. However, far from preventing investigators pursuing the case, the phone cards and mobiles provided vital evidence that led all the way to the desk of senior Syrian intelligence officers. UN officials noted that numerous calls were made around the time of the assassination, including a significant call to Al Jazeera, the Arab satellite news channel.

United Nations investigators said a powerful bomb was carefully placed in the stolen van at a Syrian military base. The surveillance team, meanwhile, had already gathered a plethora of intelligence on Hariri's movements and a telephone call signalled the start of the operation. The van entered Lebanon on a road used predominantly by military traffic and wended its way through the Bekaa Valley. Unbeknown to Syrian intelligence, a witness recalled seeing the van and its driver - allegedly a Syrian colonel from the 10th Army Division.

On 14 February 2005, just 14 minutes before the assassination, a CCTV camera located on a bank near the old St. George Hotel in Beirut picked up the van moving slowly through traffic. UN investigators said the van was driving much slower than surrounding traffic.

An eye witness said Zuhair Ibn Mohamed Said Saddik, a former Syrian intelligence operative, clearly described the

CLOAK AND DAGGER

driver of the van as an "Iraqi who had been led to believe that the target was Iraqi Prime Minister Ayad Allawi (who happened to be in Beirut just prior to the assassination)."

The surveillance team had Hariri's route noted, and the van was parked in a pre-arranged location near a hotel. The young Iraqi driver waited patiently, unaware that Prime Minister Ayad Allawi was not the real target. Seconds later Hariri's heavily armoured Mercedes and bodyguard convoy turned the corner and parked near his hotel. At 12.56pm the van exploded in front of the five-star hotels St. George and Phoenicia Intercontinental damaging buildings for hundreds of yards. The net result was 20 people dead,

Detlev Mehlis

as a distortion of the truth.

The report drawn up by German judge Detlev Mehlis is "full of contradictions and has distorted the truth and the facts," said the Front, which groups eight parties headed by President Bashar al-Assad's Baath.

"The parties trying to harm Syria will use the political issues contained in the report which is based on testimony from people who lack all credibility," it said in a statement.

DAMASCUS: Syria's highest political body, the National Progressive Front has rejected a UN report implicating Damascus in the killing of former Lebanese premier Rafiq Hariri

dozens injured, but the operation was a success, Hariri was also killed. The operation, however, was far from over. It was now time to cover all traces of Syrian involvement, according to UN investigators. An anonymous phone call was made to a journalist at Al Jazeera's Beirut bureau. A location was given where a videotape had been hidden - this would provide the "answer" to the bomb and deflect suspicion away from Syria. The journalist hurried to the area and discovered the videotape tucked away in the branches of a tree in central Beirut. The tape was identical to dozens of other recordings made by suicide bombers before their deadly missions. It showed a young Lebanese man - Ahmad Abu Adass. He claimed responsibility for killing the "infidel" Hariri.

Adass's family was interviewed and were adamant their son was a "most unlikely assassin."

UN investigators smelt a rat. According to numerous witnesses, Adass had been forced to make the tape at gunpoint. In the final report, General Shawkat was named as the man who had forced him to make the tape.

Syria and Lebanese officials deny any involvement, but Adass is nowhere to be found. Investigators were informed he was ushered away and is probably dead or being held captive in virtual secrecy.

The only support offered to Syria relating to the theory that Adass planned

Three Prime Suspects

Ali al-Hage

Lebanese security officials have arrested three former pro-Syrian security chiefs in connection with the murder of Rafiq Hariri: General security chief Jamil al-Sayed, ex-military intelligence head Raymond Azar and former internal security head Ali al-Hage, have all been detained. The head of the presidential guard Mustafa Hamdan turned himself in to UN investigators after Lebanon issued an arrest warrant against him.

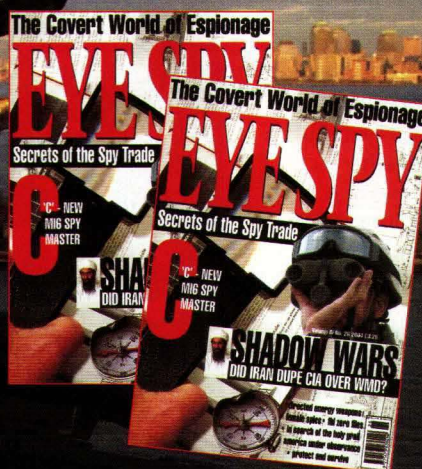

the entire event, came from Ahmad Abdel-Al, prominent in the Association of Islamic Philanthropic Projects, which the UN report described as "a Lebanese group with strong historical ties to the Syrian authorities." Ahmad Abdel-Al it has since been learned, was responsible for "Syria's public relations and military and intelligence."

The UN report contains a great deal of information that connects Abdel-Al and Syrian and Lebanese security officials. At around the time of the assassination, numerous call were made between various parties. Between January and April, there were 97 calls between his phone and General Hamdan's, and four shortly after the assassination.

The report also notes Abdel-Al made a call to Syria at 12.47pm on the day of the assassination, just nine minutes before the blast.

Set For Biggest Ever Challenge

Britain's Security Service, MI5, is creating a number of regional centres across the country to counter the growing threat of internal terrorism. Few details have been released, though it is envisaged each 'outpost' will be staffed by about 30 officers and headed by a regional coordinator. The organisation, sometimes referred to as "Box" because it once used an address "Box 500", has requested government funding for the project.

Initially Britain's largest cities such as Glasgow, Manchester, Leeds, Liverpool and Birmingham will host MI5 centres

outside London. Interestingly the move, planned prior to the July attacks in London, is also intended to create a climate whereby the organisation is able to recruit agents who have local knowledge. In Leeds, for example, one al-Qaida terrorist cell was able to plan the attack on London without the knowledge of MI5, despite the fact that he (and colleagues) were under observance from officers in London. The terrorists even constructed bombs used in the 7/7 operation using at least two safe houses. MI5 and Scotland Yard are convinced the bombers received support from persons in the area. With agents and watchers in situ, even the fear of being caught may dissuade other would-be terrorists. The organisation is also seeking to recruit at least 800 more staff.

Since its formation 100 years ago, MI5 has waged a long battle against foreign spies in Britain. During WWII it battled hard to counter Nazi propaganda, infiltration and espionage. The Cold War followed and MI5 pit its finest against the KGB. Prior to 9/11, MI5 also played a pivotal role in countering

IRA activities in Northern Ireland. It is a sobering thought that the Security Service is now more focused on countering al-Qaida terrorists than foreign spies.

Since the dreadful events in London, it is now recognised that al-Qaida terrorists have a firm foothold in the UK. Those who believe the 'noise' of al-Qaida will simply disappear are sadly misguided. Al-Qaida and its supporters are growing in number in Britain, despite the UK's attempts to remove the preachers of hate. Without doubt, the Security Service is facing its biggest challenge since WWII, when Hitler embarked upon his mad

'Outposts' To Tackle Al-Qaida Planned for 2006

mission to rule the world. Those who head al-Qaida are no different nor less crazy, but their ideology means the terror group are far more dangerous. Eye Spy has learned that following the London attacks, numerous high-level intelligence meetings involving some surprising nations and obscure government groups have already taken place. However, that shadowy units of the SAS and other intelligence groups are now involved in the battle against al-Qaida in Britain and beyond, gives some indication of the threat.

At present, few details of MI5's 'regional deployment plan' have been released, though it is expected MI5 will site its regional centres within existing government buildings which are already housed by Special Branch officers. Any move away from London would have been unthinkable just a few years ago, but the Security Service has adopted a more open policy in recent times and actively encourages the public to pass on information. Its web site has been redesigned and no longer

GONE WITH THE

America's B-2 stealth technology now in for

A former senior design engineer who worked for Northrop, creators of the impressive B-2 stealth bomber, and later a subcontractor at Los Alamos National Laboratories in New Mexico, has been accused of selling classified information to at least three foreign governments. During his time at the company, Noshir S. Gowadia, of Haiku, Hawaii, played a pivotal role in minimizing the infrared

signature of the B-2 stealth bomber. In total, the engineer provided eight countries with stealth secrets, in two instances going abroad to train foreign nationals using classified information.

Between November 1968 and April 1986, Gowadia worked for the Northrop Grumman Corporation, the primary company behind the design and manufacture of the B-2 'Spirit' Bomber. His knowledge of the aircraft's propulsion system, was also tremendous.

Gowadia, 61, was arrested in late October on suspicion of "willfully communicating national defence information to a person not entitled to receive it." If found guilty, he could be sentenced to 10 years in prison, the FBI said. "This is an extremely important case and we won't be commenting until we're prepared to do so," said US Attorney Ed Kubo.

The arrest stems from an incident that occurred on 23 October 2002. Gowadia

FBI arrest suspected spy following wiretap operation

WIND

in hands

allegedly faxed a secret document to a foreign official [country not yet identified] that contained details for developing infrared technology. The FBI believe the material could prove vital in developing the system for a foreign military aircraft, or endangering US stealth-type aircraft..

Following a long paper trail, and the use of wiretaps, officers from the US Air Force's Office of Special Investigations, FBI and the Bureau of Immigration and

The FBI lists three specific allegations against Noshir S. Gowadia:

- On or about 23 October 2002, Gowadia faxed a document containing details for developing infrared technology for a foreign military aircraft to a foreign official in 'Country A'.
- On or about 12 and 13 December 1999, Gowadia taught a course to foreigners in 'Country B' using materials that were classified.
- On "multiple occasions" Gowadia provided extensive amounts of defence technology assistance, some of which contained classified information to individuals in 'Country C'.

Customs Enforcement executed a search warrant at Gowadia's Maui home on 13 October 2005. Gowadia admitted: "I used examples based on my B-2 experience and knowledge. At that time I knew it was wrong and I did it for the money."

The faxed document was a proposal for infrared suppression; was determined to be classified at the Top Secret level by the original classification authority of the United States Air Force. The system, which can be used for military or civilian aircraft, allows aeroplanes to fly in enemy airspace without being detected by disguising the infrared signals emitted by the aircraft's engines.

Of concern to the US security services is that for a number of years, Gowadia "engaged in other specified criminal activity, during which he communicated or otherwise delivered classified information to two additional unnamed foreign governments or their representatives," the FBI said. It is believed Gowadia was "rewarded financially for his efforts."

Gowadia is listed with the state Department of Commerce and Consumer Affairs as owner of the company N.S. Gowadia Inc.

A 2004 article in Jane's International Defense Review referred to Gowadia and his company: "NTech Establishment, registered in Liechtenstein and operating from Hawaii, is developing an Advanced Infrared Suppression System (AIRSS) that it believes could render airliners and military airlifters virtually invulnerable to attack by IR-guided man-portable air-defense

systems. NTech's principal and chief designer, Noshir Gowadia, formerly led the team charged with minimizing the IR signature of the Northrop Grumman B-2 bomber and has participated in numerous other 'special-access' programmes."

• The B-2 is a strategic, long-range bomber that can fly more than 6,000 miles before refuelling while carrying 40,000 pounds of conventional or nuclear weapons, according to Northrop Grumman's Web site. Its stealth design allows it to fly virtually undetected by enemy radar at a ceiling of 50,000 feet. During Operation Allied Force and Operation Enduring Freedom, the bomber performed missions up to 44 hours long, according to the company.

Twenty one B-2 aircraft are in service. All are stationed with the 509th Bomb Wing at Whiteman Air Force Base, Missouri.

MI5 - OUTPOSTS

Continued from page 41

does it operate in total secrecy. Senior officials recognise that for MI5 to counter the ever-growing menace of al-Qaida in Britain, it must interact at 'junction points'. The big city regional centres will give MI5 an opportunity to grasp just what is happening outside London, and coordinate immediately with local police and an ever-growing number of agents (many from the British Muslim community). HUMINT (Human Intelligence) is the key, and MI5 are grasping every opportunity to infiltrate would-be terrorist cells.

The move is seen as helpful in removing the myth that the Security Service is still a shadowy agency staffed only by spies. Government ministers are expected to announce funding for the new centres in the near future, and will stress that their purpose is not only to root out extremists, but to protect Muslim communities from Islamophobic attacks and abuse.

Interestingly, MI5's sister organisation, MI6, is more inclined to talent spot in places of learning, relying heavily on "endorsements from trusted university dons," according to Michael Evans of the *London Times*. That is also set to change as the organisation has received thousands of applications via its new web site. *The Times* also reports that a large number have come from British Muslims wanting to help the intelligence service and their country.

The rise in such applications has not gone unnoticed by the heads of MI6 and government officials. Policy makers are discussing ways of placing "subtle" adverts in newspapers and elsewhere which would act as 'job recruitment' posters for those wanting to join MI6. It's a world away from the old methods of attracting people to work in the spy industry, but MI6 is not beyond noticing the world has changed somewhat since 9/11.

Successful MI6 candidates may find themselves despatched to foreign lands on a salary starting at around £25,000 (\$45,000). MI5 meanwhile, are still seeking staff for various posts and positions. And in contrast to MI6, who has its eyes on the twenty-somethings, the Security Service would also like to hear from the over-fifties!

Secret CIA

TERRORIST Holding Camps

Dozens of terrorist suspects captured in the CIA's global 'spider's web', are being questioned in top secret interrogation centres spread across the world - according to Eye Spy sources in Washington. Since 9/11, the CIA has traversed the globe in an unconventional war against al-Qaida, and though information exists on a shadowy airliner, nicknamed the '*Guantanamo Express*' that carries captives away in the night, few details have yet to emerge on the 'passengers' final destination. However, critics of the CIA operation believe that at least eight holding centres have been identified - two of them in Europe. Supporters of the action claim that critical intelligence is being gleaned from inmates. Eye Spy has learned that vital information from one suspect helped in the Australian intelligence operation that thwarted a devastating attack on one of that country's most important landmarks. Nevertheless, holding suspects in foreign lands

The Sa

without charge or access to a solicitor has sparked much debate and criticism from numerous law aficionados.

THE SALT PIT

Washington's policy of detaining and interviewing such prisoners is known as 'extraordinary rendition', and is regarded as crucial to the global war on terror - but it is undoubtedly controversial. Just six days after 9/11, the CIA were given sweeping powers to disrupt terrorist activity, and permission to detain members of al-Qaida anywhere in the world. United States law is structured in such a manner that it is illegal for such facilities to be operational on US soil, thus locations were sought in faraway places. The largest covert holding facility is situated near an abandoned brick-built factory near Kabul. Codenamed the 'Salt Pit', most

CIA GHOST PRISONERS

ABU ZUBAYDAH Palestinian-born al-Qaeda operational commander. One of the architects of 9/11. Arrested in Pakistan in 2002. Has provided intelligence that has foiled several major terrorist operations.

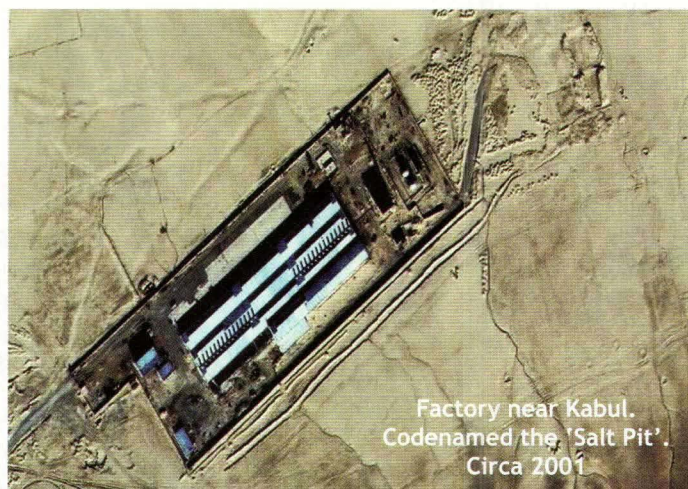

MUSTAFA AL-HAWSAWI 36-year-old Saudi-born computer expert and one of al-Qaeda's financial experts. Arrested in Pakistan in 2003. Has passed on information about numerous al-Qaeda sleeper cells. Initially detained in Afghanistan, he was taken to Diego Garcia.

IBN AL-SHUAKH AL-LIBI ran al-Qaeda's biggest training camp in Afghanistan. Arrested fleeing the Tora Bora cave complex in 2001

RAMZI BINALSHIBH liaison man for 9/11 hijackers. Arrested in Karachi on 11 September.

Factory near Kabul.
Codenamed the 'Salt Pit'.
Circa 2001

t Pit

of its inmates were probably captured in Afghanistan during the battle with Taliban forces and al-Qaida terrorists in 2001. The guards have been carefully vetted and regulated. In times gone by, warriors from Afghanistan factions often changed sides in return for goods and promises, but the CIA have been quick to understand this complex country's history. All regard the inmates and those who pass through the Salt Pit as their enemy.

Despite its huge security programme, the CIA is being pursued by Human Rights' groups who are determined to expose which countries are involved with the 'internment network'. A number have joined forces to track the ghost flights in an effort to embarrass participating nations. One flight involved an unmarked Boeing 737 that landed at Szczytno-Szymany, a former Polish military base in 2003. The aircraft then continued to the Mihail Kogalniceanu air base in Romania, before finally travelling to Guantanamo Bay, Cuba.

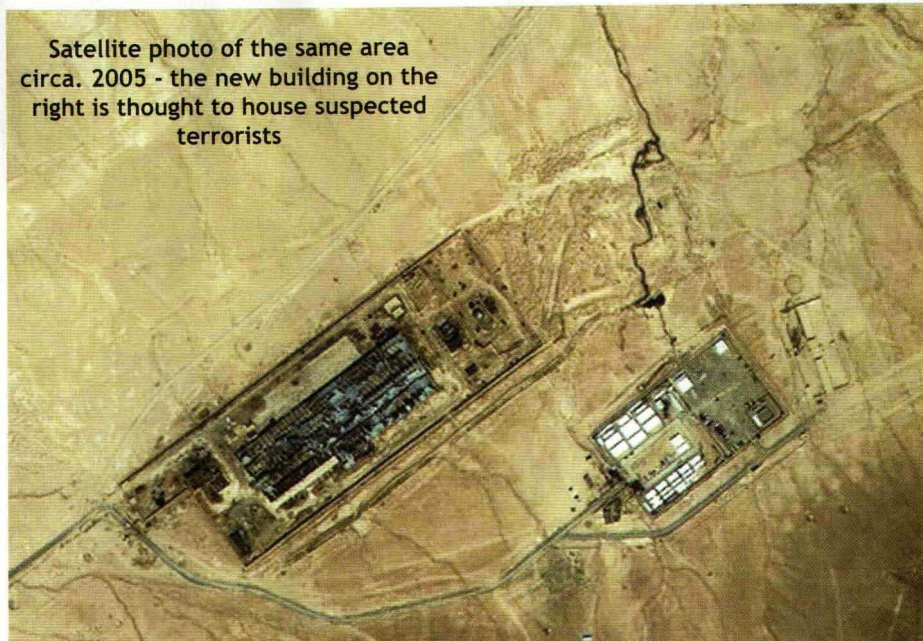

The CIA and foreign intelligence services are intent on keeping the system secret - even from their own governments. That may prove difficult, for it is believed someone in the CIA with knowledge of the sites has passed on classified material to media outlets in Washington.

BLACK SITES

The holding centres have been dubbed 'black sites' in classified White House, CIA, Justice Department and congressional documents. At present their locations are known only to a few officials in each host nation. Intelligence sources say that disclosing information about the sites, "might disrupt counterterrorism efforts in those countries and elsewhere and could make them targets of possible terrorist retaliation."

It is believed up to 100 suspected terrorists have been captured in CIA foreign operations. Journalists have traced abductees from such countries as Sweden and France. According to informants, at least 30 are considered "major terrorism suspects."

digital footprints

Abstract

The world enjoys unlimited benefits from new technologies in an electronic world. But electronic services send information in two directions, and the access to our personal data has never been more open. As we go about our daily lives, the use of electronic devices and systems create digital trails of where we are, what we do, whom we talk to, what we buy and more. This article will provide an understanding of digital footprints, their dangers, sources and what the consequences are for all of us.

Tracks can be followed, and being followed means you can be caught. Just as we leave behind footprints on a sandy beach, we leave behind digital footprints as we go about our daily lives. Most of our interaction and activities occur through the miracles of technology. Using technology creates a digital

footprint. This could be the product of a credit card transaction, web activity, a cell phone call, and even your vehicle. They could also be tied to your computer keystrokes if you work for an untrusting company. You may think these are the only ways you could be tracked digitally, but this is not the case. As technology progresses and wireless connections of sensors, cameras and other devices expand, so too do our digital footprints. Failure to understand these digital footprints puts individuals who work in security, law enforcement and intelligence at risk. Understanding how information about you flows throughout the digital world, will help protect your anonymity. It's also an important consideration if you want to protect your identity from being stolen.

BLACK BOXES IN VEHICLES

One of the best-kept secrets in the auto industry is that along with their airbags,

many late-model cars now have electronic devices installed called Black Boxes to record data. These devices working with Global Positioning System systems and systems like ONSTAR create huge digital footprints. They track the vehicle, its duration at a particular point, how fast the vehicle is travelling and much more. Electronic vehicle tags also create a digital footprint. In the United

LEARNING AND UNDERSTANDING

THE SERIES - PART 4

OFF THE INTELLIGENCE RECORD

Intelligence expert Kevin Coleman continues the interactive reader series on intelligence. This training brief examines how 'digital footprints' can betray more than just your everyday movements

States, systems that allow motorists to pay toll charges without stopping are becoming popular nationwide. Each tag has its digital fingerprint, which is recorded on a computer bank that notes the day, time and tollbooth location each time it is used. Records of those electronic payments are commonly sought for legal proceedings.

CELL PHONES

Cell phone companies record where customers place calls, what phones they use, and gather profiles of calling habits for billing, customer service and marketing programmes. Companies such as Verizon Wireless have invested billions of dollars in building the next generation of cellular service and phones that can provide photos, video, weather information, games and locating technologies such as the Global Positioning System. As cell phones become more powerful and versatile, they also generate more detailed records of calling patterns - who watches what digital video clip and when, for example.

PHOTO BY HEATHER SCHMAEDEKE FOR THE US CENSUS BUREAU

AUTOMATIC TELLER MACHINES

Automatic Teller Machines (ATMs) are banking terminals that accept deposits and dispense cash. ATMs are activated by inserting a cash or credit card that contains the user's account number and PIN on a magnetic stripe.

Magnetic strips are built into many plastic cards such as cheque guarantee card, cash-point cards and personal identity cards. The magnetic strip can hold personal details

INTELLIGENCE

Assassination Fears?

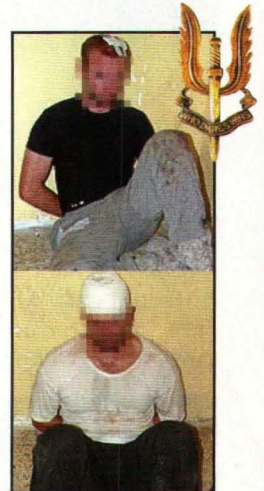

DUBLIN: An Irish university allegedly cancelled a guest lecture on 12 November by former MI5 renegade officer David Shayler over fears he could be assassinated. UCC officials said it was inappropriate for the lecture to go ahead.

Mr Shayler was booked to speak for the Irish 9/11 Truth Movement at the university's Boole Library, and though the university played down "assassination fears", it did admit there were some security issues with the proposed engagement. "This was a provisional booking - we are perfectly within our rights to decline confirmation," one UCC official insisted. Morgan Stack of the Irish 9/11 Movement said his members were informed by the college that the decision was taken purely on security grounds. "I called a meeting about six weeks ago specifically to address (their) security concerns," Mr Stack explained. "I told them that this individual, David Shayler, did have an attempt on his life about four years ago. He worked on counter-terrorism in the 1990s involving al-Qaida and the IRA..."

Captured SAS troops

LONDON: The two SAS soldiers arrested by Iraqis in September and freed after a British military operation near Basra, were actually on a surveillance mission monitoring a police commander who was torturing prisoners with an electric drill. The Special Air Service had been ordered to gather intelligence on several Iraqis working at the notorious Jamiyat prison in the city. The move followed the discovery in April of the body of a man suspected of gun-running. A post-mortem revealed a drill had been used on his head, arms and legs. The two-man SAS team were compromised on 19 September 2005 following a shoot-out with undercover police. The men were then handed over to unidentified persons. The British Army stormed a Basrah prison and ultimately found the SAS soldiers. Both men had been beaten, blindfolded and handcuffed. Intelligence sources believe they could easily have been handed to insurgents and their fate would have been sealed.

Deep Impact Fear as MN4 Approaches

WASHINGTON: Like a scene from the Hollywood blockbuster of the same name, US intelligence officials were informed that an asteroid some 500 metres in diameter is approaching Earth. NASA experts have described space object MN4, otherwise known as 'Apophis', as the most dangerous "heavenly body of the century." By the time it reaches our planet it will be 320 metres wide. "Haven't we been here before?" said an official. "Probably," came the response. But according to intelligence sources, MN4 is a little closer and more menacing. NASA predicts that given its current trajectory Apophis could collide with Earth on 13 April 2029. Analysts say the impact would be 100 times greater than the atomic bomb dropped on Hiroshima in 1945.

Apophis was discovered by NASA man Steve Chesley in June 2004. He caused quite a commotion when he told colleagues that the object was "definitely going to ram into Earth." Intelligence analysts requested more data and after a recalculation, experts said the asteroid would just miss our planet. "In any event," said a security source in Washington, "by that time NASA and the Pentagon will have the ability to knock it off course."

According to our sources in the USA, MN4 will be monitored a little more closely than previous Earthbound lumps of rock.

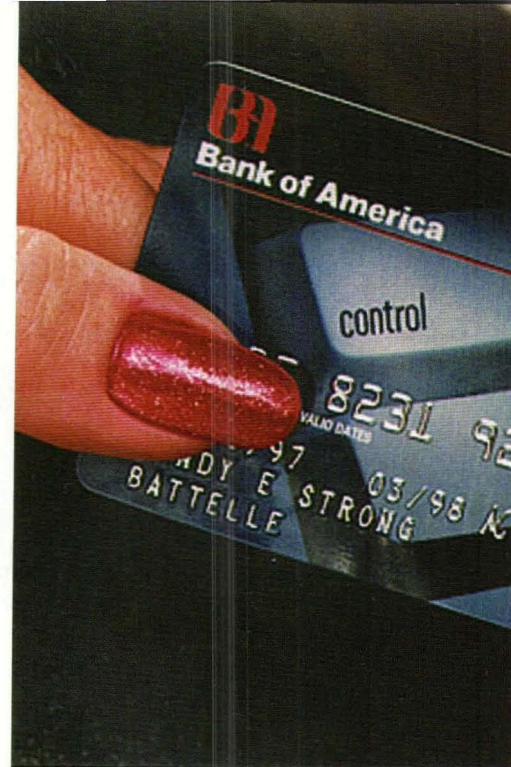

to verify the balance, dispense the cash and then transmit a completed transaction notice.

ATMs collect a significant amount of data and not just about the financial transactions, but other data including surveillance information. A surveillance camera is positioned at most ATM locations. The camera captures and records all transactions and activities at or near the ATM machine 24-hours a day.

Surveillance Function of ATMs include:

- Cameras - capture your photo while you make an ATM transaction.
- Data - ATMs capture time and date and location of your transactions.
- Images - images of you, in your vehicle are captured and stored with the transaction data.
- Radar - used at ATMs to sense when a vehicle or individual is approaching.
- Vehicle Probe Data - these probes are used to detect the presence of a vehicle and often trigger video surveillance.

of the card owner and, with the necessary PIN, will allow access to secure information such as bank account details. The strip can contain up to 79 characters of information, either numbers or digits (the capability to hold up to 107 characters currently exists) which is stored magnetically. This is true of credit cards and ATM cards. ATMs call up the bank's computers

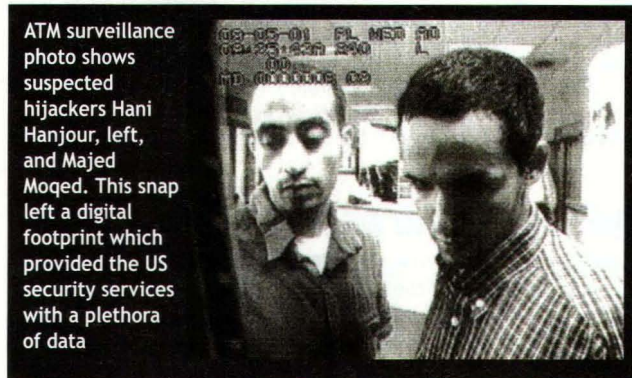

Retailers are increasingly recording credit card purchase histories, pushing customers to sign up for affinity cards and asking for phone numbers with purchases. Consumer product companies buy data collected on which product combinations are bought at specific grocery stores. Meanwhile, the stores are enhancing their data collection on individual shoppers. One major retailer for example, maintains records of every purchase made with a credit card for as long as 90 days, plus video footage of each cash register. It's primarily to speed product returns and prevent theft, but it can also be used for mailings based on a customer's demographics.

CREDIT CARDS

Whenever you use your credit card it creates an electronic transaction. The transaction location, the time and date stamp, and data about the purchase, including whether or not the card was swiped through a reader or the card numbers were just input, is collected and stored.

COMPUTERS

Today, over fifty percent of the population uses a computer. Not only are official documents and consumer profiles being collected, but the very essence of our daily online existence is of great interest to those who follow and use digital footprints. Our political opinions,

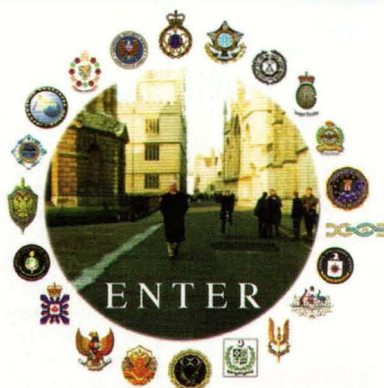

ATM surveillance photo shows suspected hijackers Hani Hanjour, left, and Majed Moqed. This snap left a digital footprint which provided the US security services with a plethora of data

prejudices, religious beliefs, sexual tastes and personal quirks are all becoming part of an immense, organic media soup that is congealing into a permanent public record. Many believe that when they erase a document from their computer or floppy disk the evidence is lost forever. This is usually not the case. The information that people attempt to delete from their computers varies from user to user. Whenever you delete a file, you're really not deleting the file; the data is still technically there. For as long as computers have been around, so has the science of computer forensics. It is a science that has been used for various purposes, especially compiling electronic evidence for use in criminal investigations.

Even without hidden spyware, an ordinary computer offers a wealth of data to those who know where to look. Web browsers keep a record of web sites that the user has recently visited. The history file, which is stored on a computer's hard drive, conveniently allows users to look back at a list of recently visited sites without having to bookmark or remember a site's web address. The history file is not password protected; therefore, someone who leaves a computer turned on but

unattended makes this information available to anyone else who accesses the computer. Many web sites also employ 'cookies' as a means to identify visitors. A cookie is a small piece of information that the site being visited places on the visiting user's local hard drive. Ostensibly, cookies are intended to function as a means to expedite a user's return visits to favourite sites or personalise the information received from a site. But in reality, cookies can identify and track you as you surf the web and transit, or move, from web site to web site. This can often provide valuable data to investigators, but in the wrong hands, could compromise your security.

CONSEQUENCES

What are the consequences for us with our digital footprints? Anyone who communicates via electronic device or uses credit cards, ATMs or even drives a car should be aware that he or she may be leaving permanent digital footprints. These footprints remain for years in the archives of businesses globally. As technology advances and wireless communications become more pervasive, the ability to collect more and more information about individual's daily activities will increase. Failure to understand the mechanics and uses of digital footprints put individuals in security, law enforcement and intelligence at a disadvantage when attempting to track terrorists, spies, organised crime and other petty (or violent) criminals.

KEY FACTS

- *Black Boxes are installed in millions of cars across North America.*
- *In the 1990's, an intelligence service killed a government leader by having a missile track his cell phone signal.*
- *The FBI is investigating the hacking of cell phones belonging to Hollywood celebrities through the information contained in the memory.*
- *There are currently about 50,000 shared ATMs in the United States.*
- *Canadians logged 43 ATM transactions per Canadian in 2003.*
- *In 1999, the FBI loaded key logging software onto the computer of reputed organised crime figure Nicodemo Scarfo Jr., recording every keystroke made on his computer.*

SUMMARY

Digital footprints are created by electronic sensors and transactions that are commonly used throughout our daily lives. Cell phones, vehicles, credit cards, two-way pagers and ATMs are only a few of the many devices that create digital footprints. While digital footprints assist in tracking terrorists and spies, they also pose a threat to our own security and privacy. Counter-surveillance techniques for operating in the digital world are still evolving and, in many cases, have not been fully tested. Care must be exercised if we want to protect our anonymity, and not leave a trail of digital footprints behind.

Examination

TEST YOUR SKILLS

Earn a certificate in future spy technology by completing our examination paper. Send a stamped addressed envelope to Eye Spy to receive the exam paper. Complete the exam using the information contained in this feature and submit it to Eye Spy Intelligence Magazine along with a cheque or credit card information. The cost of each continuing education module is \$10 USD £5.00. Upon successful completion you will receive a colour **Certificate of Completion** that identifies the number of continuing education units for that specific programme. This professional programme has been developed through a cooperative agreement between Technolytics and Spy-Ops (USA) and Eye Spy Intelligence Magazine.

The exam paper for Digital Footprints along with Part 1 - Future Spy Technology From 'Q's' Lab (issue 34); Part 2 - DNA Technology (issue 35) and Part 3 Money Laundering (issue 36) can also be downloaded at www.eyespyimag.com

For additional training briefs visit:

www.spy-ops.com

A covert intelligence-led operation in Baghdad in July 2005, resulted in the shooting dead of three al-Qaida suicide bombers. Details of the case have been slow to appear, but its exposure has also revealed a new and deadly unit made up of soldiers from the UK's Special Air Service and America's Delta Force. The sixteen men are part of Task Force Black, a secret unit operating in and around Baghdad.

Operation Marlborough was initiated after MI6 infiltrated an al-Qaida cell in Iraq. Intelligence was passed on that three suicide bombers were set to embark upon a series of operations. MI6, working with a liaison officer in Task Force Black launched a surveillance operation on a house in Baghdad. The informant explained that the terrorists planned to detonate explo-

sives in cafes frequented by Iraqi troops and police.

The sixteen soldiers divided into groups of four and surrounded the house. Their instructions were simple, "kill the terrorists simultaneously." The feeling amongst senior officers was if any of the bombers escaped, they could run into a busy area and detonate their explosives.

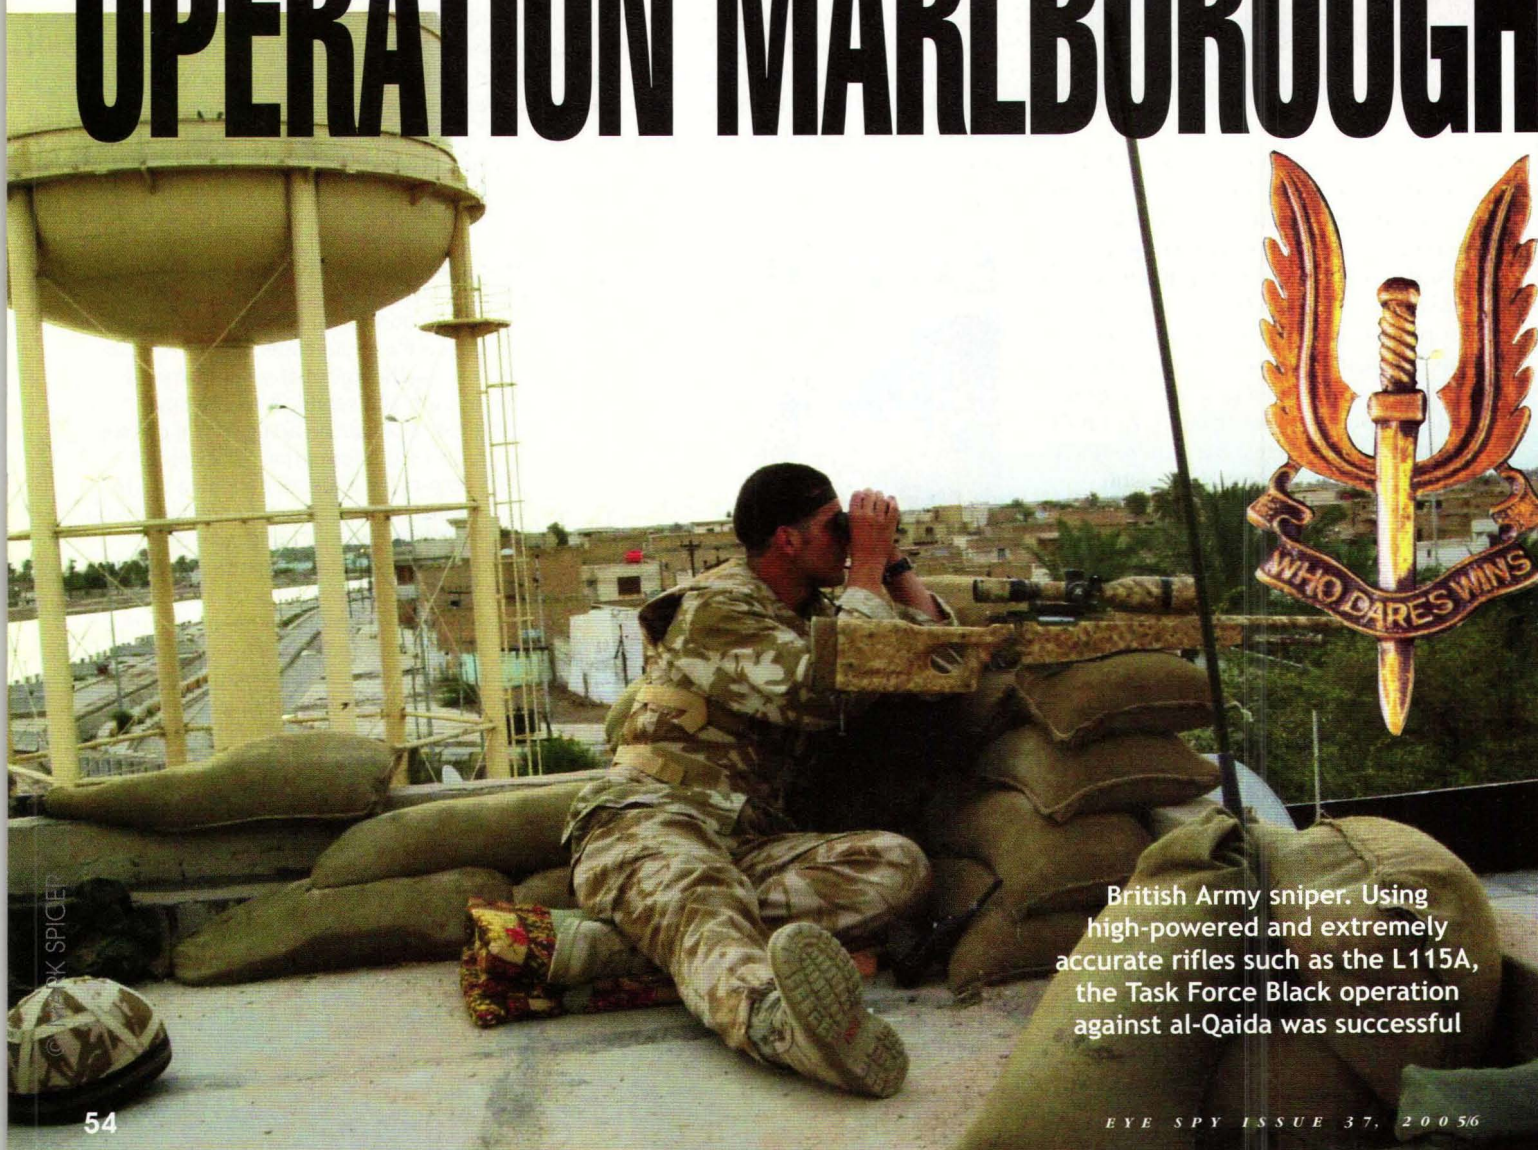

Professional marksmen then took up their position. It is understood several listening devices had been placed inside the building - with Iraqi translators providing information to the waiting soldiers. Above the scene a Predator UAV provided airborne intelligence.

At around 8.00am, a signal was received that the terrorists were about to leave their hideout. Moments later

Details emerge of crack US-UK Special Forces unit - Task Force Black

OPERATION MARLBOROUGH

British Army sniper. Using high-powered and extremely accurate rifles such as the L115A, the Task Force Black operation against al-Qaida was successful

British Army sniper wearing clothing that makes him virtually invisible. Such specialist troops are trained to operate in all environments

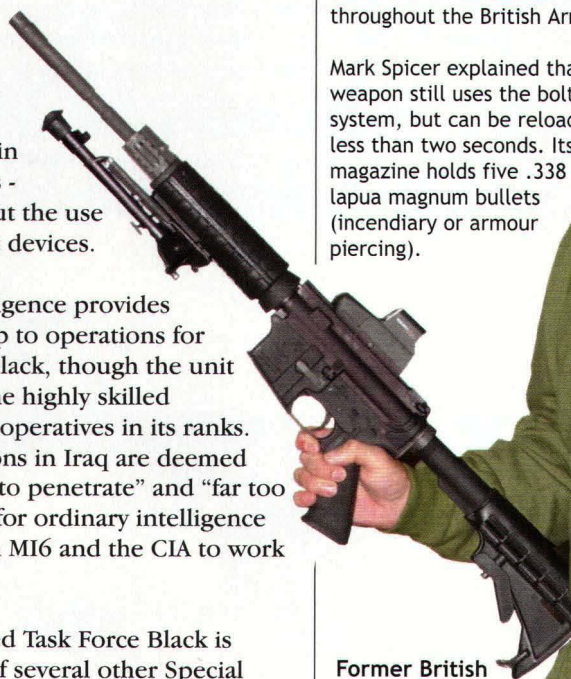

the three targets were dead and a nearby explosives team moved in to make safe their semtex-laden belts.

Task Force Black is just one of a number of specialist military-intelligence units operating in Iraq. It is known that a unit comprising of CIA officers and US Navy Seals, has been on the trail of Iraq's leading terrorist al-Zarqawi, for some time. On two occasions the unit almost managed to capture him. A similar situation also exists in Afghanistan, where Special Forces have been assigned to track Osama bin-Laden. And while they have had little success in the badlands that straddle the border between Afghanistan and Pakistan, the al-Qaida leader has found himself increasingly isolated and unable to communicate properly. A plethora of signals teams and listening units are also operating in Iraq's troubled areas. Unbeknown to al-Qaida

and insurgents, communications are being intercepted in various ways - many without the use of electronic devices.

Such intelligence provides the backdrop to operations for Task Force Black, though the unit also has some highly skilled surveillance operatives in its ranks. Many locations in Iraq are deemed "impossible to penetrate" and "far too dangerous" for ordinary intelligence officers from MI6 and the CIA to work in.

It is believed Task Force Black is comprised of several other Special Forces, including Britain's SBS (Special Boat Service) and US Navy Seals.

CHOICE OF THE PROFESSIONALS

The L115A.338

The L115A .338 calibre sniper rifle used against the suicide bombers is highly regarded by Special Forces across the world. Already tested in Afghanistan, a single round can penetrate armour and is so accurate that targets well over a thousand yards away can easily be struck. Former British Army marksman, Mark Spicer, said the weapon is "superb, very powerful and easy to use."

A Ministry of Defence (MOD) official described its use by the SAS in Afghanistan against an al-Qaida convoy: "The first round takes care of the pick-up truck or lorry by shattering the engine block. At 1,200 metres, with the shot echoing around a valley, they won't have a clue what's going on. "This is a fantastic piece of kit. It can stop any car in its tracks by splitting the engine block in two, and it can also pierce the armour of light tanks or armoured personnel carriers. With a decent sniper, it can hit anything within its range. Body armour is no defence."

The SAS chose this weapon because of its power and accuracy, though Eye Spy has learned that the MOD has taken a decision to make the L115A standard issue throughout the British Army.

Mark Spicer explained that the weapon still uses the bolt-action system, but can be reloaded in less than two seconds. Its magazine holds five .338 lapua magnum bullets (incendiary or armour piercing).

Former British Army marksman Mark Spicer

AVAILABLE FROM EYE SPY

Not only is this well constructed item a valuable security tool, it is ideal for parents to protect children from the ever-present dangers on the internet. You will see conversations they are having and know which web sites they are visiting. E-mail and chat room activities are captured for you to see.

Although there is no "off-the-shelf" solution for effective parenting, the KEYKatcher will be your eyes when you're away. It will provide you with the information you need to protect and communicate with your family.

THE EASIEST WAY TO MONITOR YOUR PC!
monitors chat room, e-mail and internet activity
installs in seconds • uses no system resources
works on all PC operating systems • easy to use

- Search capability
- Memory remains intact even when unplugged or during power loss
- No software to install
- Virtually undetectable

System Requirements

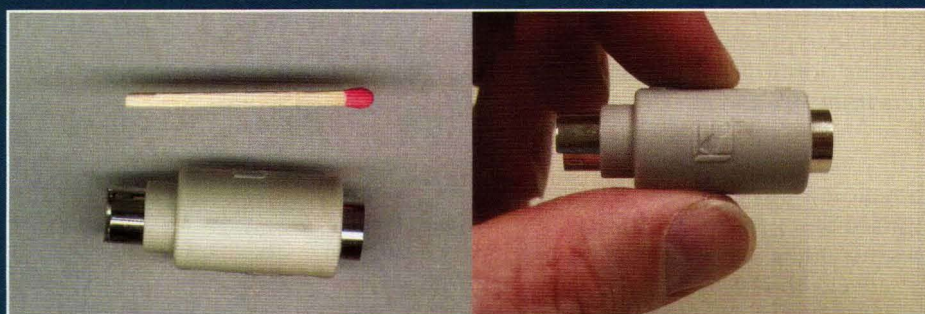

IBM PC compatible computer
(Windows 98, 95, NT Linux)

PS/2 keyboard connector

PORTABLE: The Keykatcher is a hardware only monitoring device. Unlike software, it can be easily moved from computer to computer. You can record on one computer, and read the memory contents on another computer. A compact size allows it to be taken anywhere.

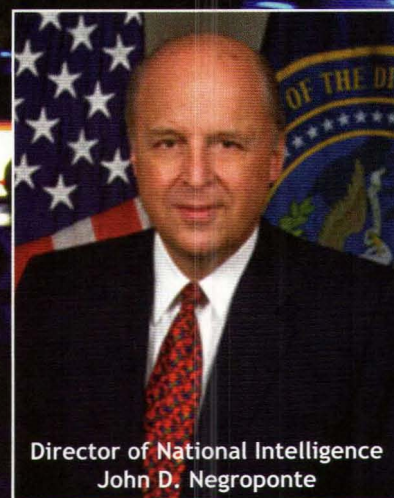

Five various-size KeyKatchers are available from Eye Spy - these prices include postage and packing and air mail to America and rest of world

ES/KK2 (mini size) 32K memory £68.00 \$69.00
ES/KK4 (mini size) 64K memory £75.00 \$89.00
ES/KK5 (standard size) 128K memory £78.00 \$99.00

Under Th

Intelligence watchers were somewhat baffled at the name of the new service, but acknowledge the move will allow the CIA to dramatically increase its operations abroad. Secretly, the agency is still kicking itself over the events leading up to 9/11, and the many clues it missed in respect of the hijackers and their plans. After months of internal debate, senior officials recognise that the agency must secure superior HUMINT (human intelligence), and regain its cutting edge in respect of spying and other more shadowy traits, including its once legendary ability for executing 'dirty tricks'. "The CIA went soft," an intelligence source told Eye Spy, "the NCS will draw its 'staff' from a variety of related missions and help the CIA regain its ability to spy in foreign lands." The CIA was green-lighted to increase, by 50 per cent, the number of case officers and analysts.

CIA creates power National

Counter Intelligence

Following several well publicised intelligence problems, including its failure to collect any hard evidence of Saddam's weapons of mass destruction, the CIA has moved swiftly by announcing the creation of the National Clandestine Service

The NCS, will effectively conduct intelligence gathering (spying), currently overseen by the CIA's Directorate of Operations. The new service will also coordinate covert overseas activities that are run by other federal bodies, including the FBI and the Pentagon.

"This is another positive step in building an intelligence community that is more unified, coordinated and effective," said Director of National Intelligence John D. Negroponte, whose directorate oversees all US intelligence agencies.

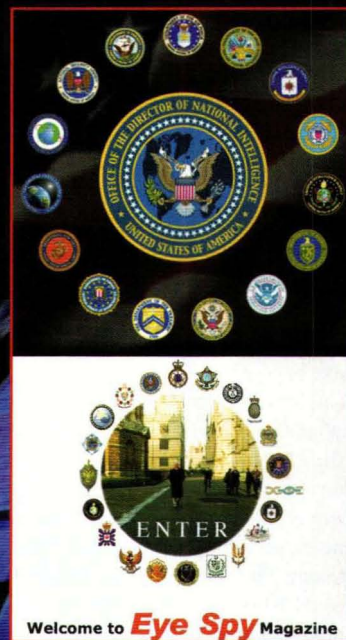

Military and FBI intelligence operations have also increased dramatically, resulting in a huge amount of data influx. There was general agreement

that the NCS should manage and help analyse the intelligence gathered by a variety of US services.

The move gives CIA Director Porter J. Goss yet another title, 'National HUMINT Manager'. The director of the National Clandestine Service will report to Goss, but the new service's work will be overseen by Negroponte's staff. Negroponte's deputy, Mary Margaret Graham, a former CIA operations officer, will oversee the NCS and all human intelligence collection overseas.

Many senior CIA officials had feared that the agency's effectiveness would be diluted by the recent restructuring of the US intelligence community, but with the creation of the NCS, comes an

endorsement by Washington that the CIA is still vitally important to America. John D. Rockefeller on the Senate Select Committee on Intelligence said: "This decision reaffirms the agency's status as the nation's premier human intelligence organisation and gives the director of the CIA the tools he needs to ensure an effective and coordinated effort across all agencies involved with human intelligence."

Eye Spy noted the new web site front page of the Office of the Director of National Intelligence - looks very familiar to our readers!

ul new agency -

Clandestine Service

Michael Hayden,
Director of the
super secret
National Security
Agency has been
chosen as
Negroponte's
deputy

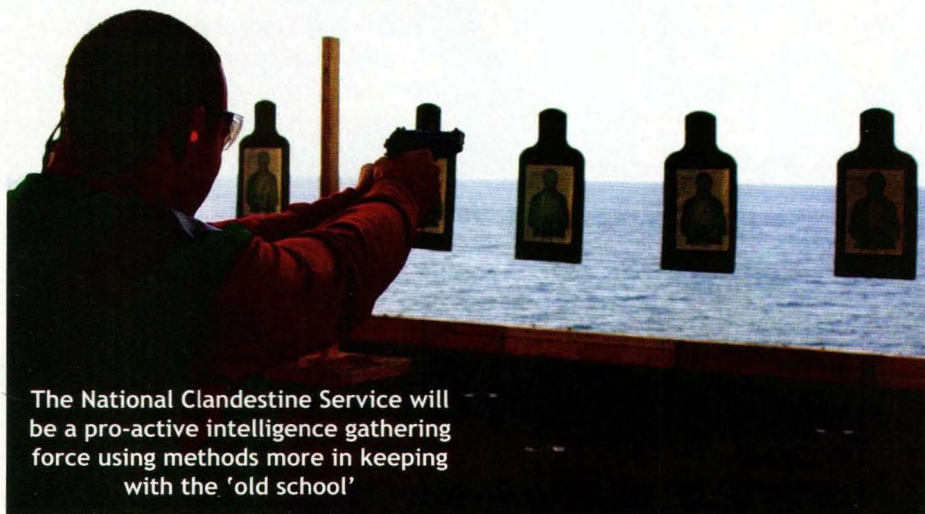

One official said the DNI's plan is to bring together collectors and analysts from all intelligence agencies concerned to work out the best way to tackle specific problems. Each agency - the CIA, the Pentagon, the FBI, the State Department Intelligence and Research Bureau and others - can contribute to such prioritizing. Then it will be up to Goss and the NCS director to coordinate the operations.

The new NCS director will have two deputies. One will coordinate clandestine operations and intelligence gathering in foreign countries, the other will train operatives and staff on the 'art of tradecraft'. This official will also oversee which person is suitable to work in the field of espionage, and train coordinators on being able to select "good sources of information."

The CIA station chief in foreign countries will be fully briefed on all proposed operations, and any disagreements are to be worked out primarily at the local level.

"Deconfliction," the process of making certain there is no overlapping or conflict among clandestine operators, "is best handled in the field," one of the officials said.

The director of the NCS will have two deputies, one to run CIA clandestine operations and the other to coordinate activities of other overseas operators. The second deputy will also set standards for training by all agencies involved in intelligence, including tradecraft and the vetting or validation of foreign agents or sources being recruited.

UAV

ScanEagle

A *ScanEagle* Unmanned Aerial Vehicle. *ScanEagle* is an affordable, runway-independent, long-endurance, autonomous, unmanned vehicle designed to provide persistent intelligence, surveillance and reconnaissance data, and battlefield damage assessment and/or communications relay. Its standard payload

THE NEXT

NAVY SPIES

The United States Navy recently rolled out its next generation of Unmanned Aerial Vehicles - UAVs. Eye Spy takes a brief look at some of these remarkable un-piloted intelligence gatherers

X-45C

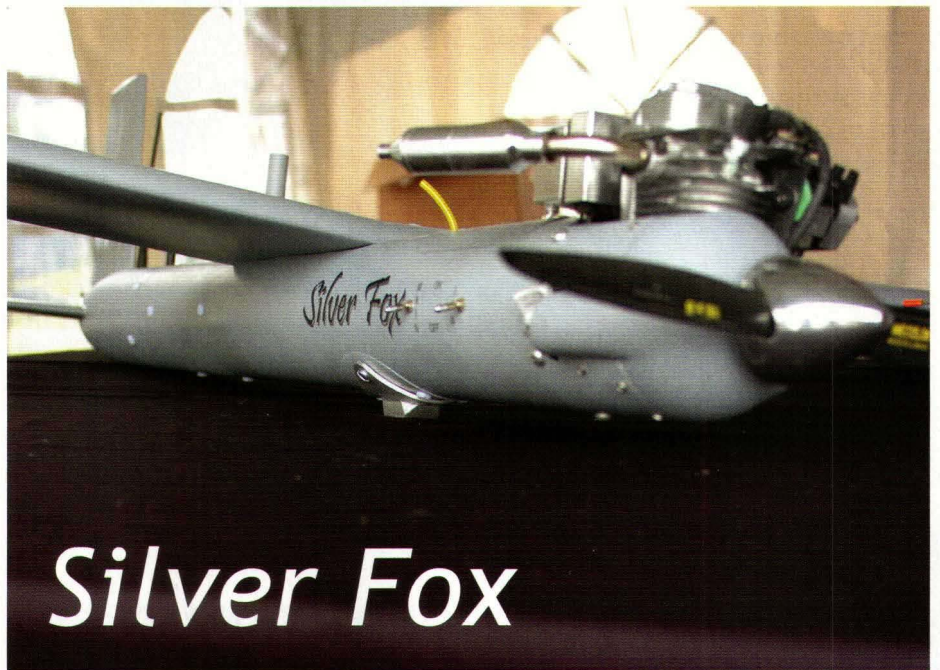

A full scale Joint Unmanned Combat Air Systems (J-UCAS) X-45C. Operational missions for the X-45C may include suppression of enemy air defences, strike and electronic attack, intelligence, surveillance and reconnaissance. A recent day-long UAV demonstration highlighted unmanned technology and capabilities from the military and private industry and offered a unique opportunity to display and demonstrate full-scale systems and hardware.

is either an inertial stabilized electro-optical camera, or an infrared camera. The gimballed camera allows the operator to easily track both stationary and moving targets. Currently in use by US Marine Corps in Iraq, ScanEagle UAVs have surpassed over 3000 combat flight hours in ten months.

GENERATION

Skylark is a man-pack system for close range, over the hill surveillance and reconnaissance. The UAV, designed for perimeter security, border surveillance and law enforcement, has a wingspan of 2.4 meters and has a mission endurance of two hours. Its payload can include a colour television camera and a forward-looking infrared sensor.

Silver Fox

The *Silver Fox* UAV is designed to provide low cost aerial surveillance imaging and carry sensor payload packages weighing up to four pounds. Video images are transmitted from Silver Fox to a ground station for quick reference. One ground station can simultaneously operate ten units. US Marine Corps units are currently operating the Silver Fox UAVs in Iraq for reconnaissance missions.

PROFESSIONAL

BODYGUARDS

**Part
CONTINUED**

JIM SHORTT continues his in-depth look at professional bodyguards and close protection officers. In this feature, Shortt looks at IED's - Improvised Explosive Devices

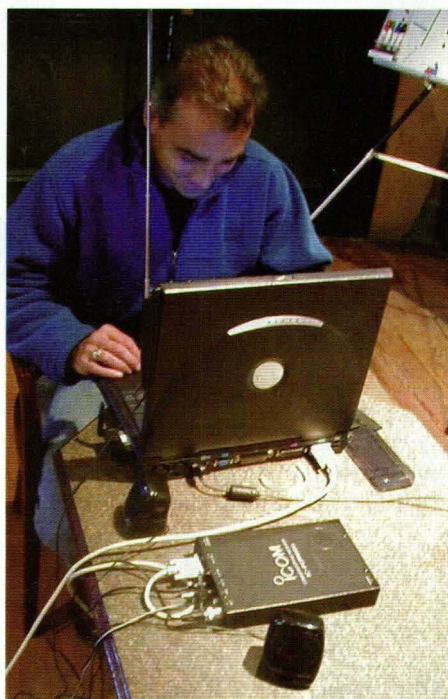

IEDs - DEFEATING YOUR ADVERSARY

Obtaining so called 'IED countermeasure kits' is relatively easy. If you visit a reputable specialist security supply shop you will find search devices in aluminium boxes with a neat sticker saying 'IED search Kit'. Such items retail for around £2,000 (\$3,800). Alternatively you can call at your local DIY store and produce the same thing for about £100. That's an expensive sticker! Beware, assembling any sort of professional IED countermeasures instruments requires thought and sometimes inventiveness.

Armed with a search kit you can proceed - but not on your own. A competent room search team, for example, comprises of 2-4 persons from a security section.

The US method is as follows:

1. Enter target room. Stop, look, listen, smell.
2. Divide room into segments by height:
a) Floor to hip. b) Hip to chin. c) Chin to ceiling. d) Any false ceiling.
3. Split each segment in half, with two groups moving along the walls from a

common point (e.g. the door) and meeting at another common point. Then clear the central areas, ensuring that any item that overlaps is searched by both groups.

The European method is similar, but items are tackled in a different order, as follows:

1. Ceiling
2. Walls
3. Floor
4. Furnishings
5. Fittings
6. Utilities (water, gas, electricity, etc.)

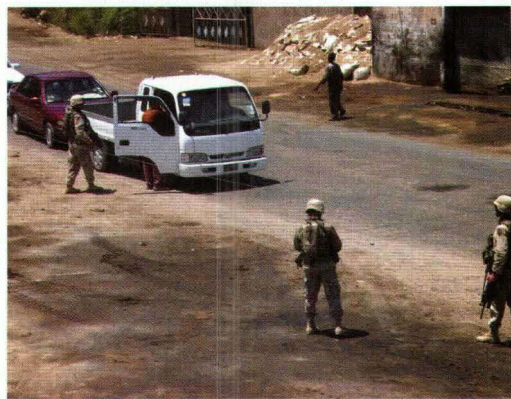

The International Bodyguard Association Method:

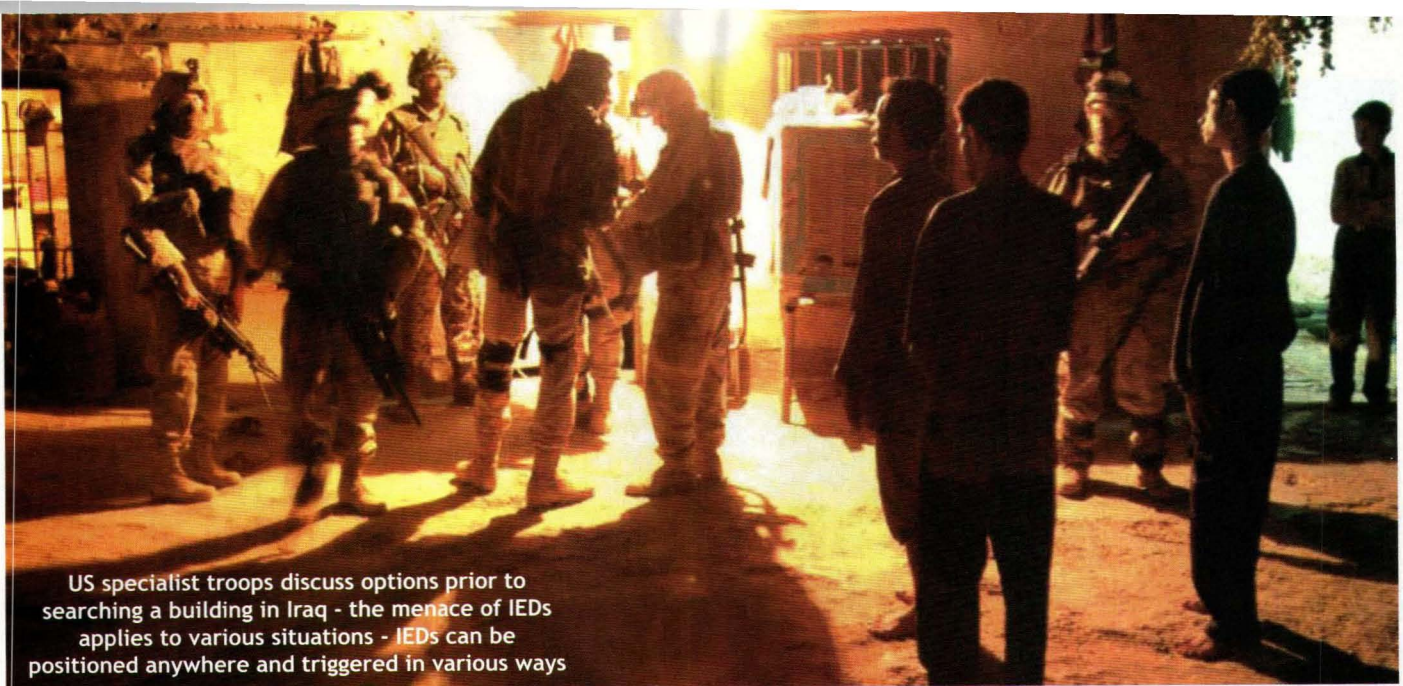

STOP (at room entrance)
SENSES (can you see, smell or hearing anything that might connected to an IED)
SECTION (divide the room in to sections, depending upon room size)
SEARCH (use 1-6 above)
SECURE

The physical search is not only for IEDs but also ESDs (Electronic Surveillance Devices). Electronic search for ESDs was

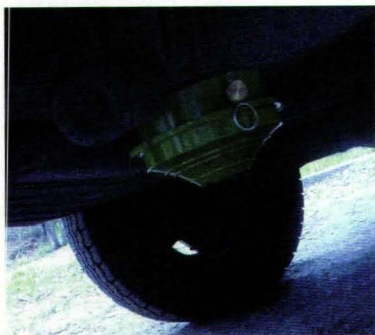

Improvised Explosive Devices

US specialist troops discuss options prior to searching a building in Iraq - the menace of IEDs applies to various situations - IEDs can be positioned anywhere and triggered in various ways

A few seconds' search could reveal devices such as this

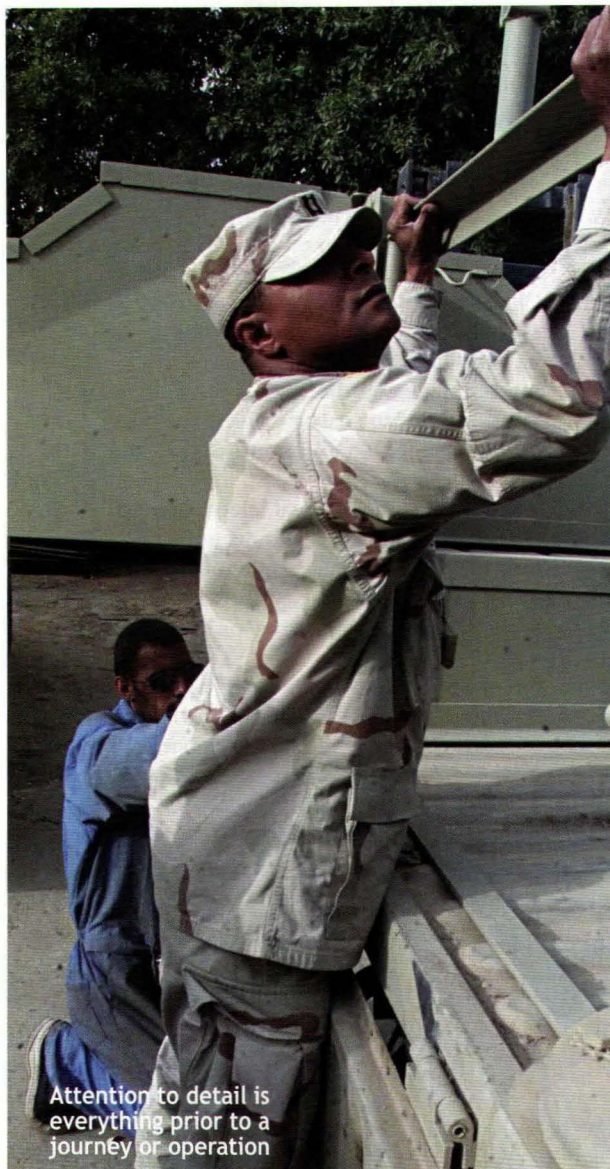

covered under Communications and ECS in issue 35 Eye Spy.

Once cleared, the area must be secured, preferably by a physical presence rather than locks and monitoring. Remember also to clear window ledges and, if accessible, rooms on either side, above and below.

A negative dog search is no guarantee that there are no explosives present, since terrorists may use vacuum sealed devices, or wrap them in cling film to prevent the tell tale odours being picked up by a specialist search dog.

The same is true for a variety of commercial 'sniffers'. These need ambient air samples to detect an abnormal increase in levels of nitrates, ammonia and other chemicals present in the air.

Agencies such as the US Secret Service equip their technical branch specialists with fluoroscopes and X-ray equipment to check everything from *Louis 14th chaise longue* to the Italian porcelain

Attention to detail is everything prior to a journey or operation

bidet in the presidential suite, but these is no substitute for a proper physical search. Remember - equipment enhances a physical search - it does not replace it.

VEHICLE SEARCH

Vehicles and aircraft will require the presence of a specialist airframe technician or engineer to guide you through. Boats require the addition of a qualified diving team to carry out a hull search intermittently.

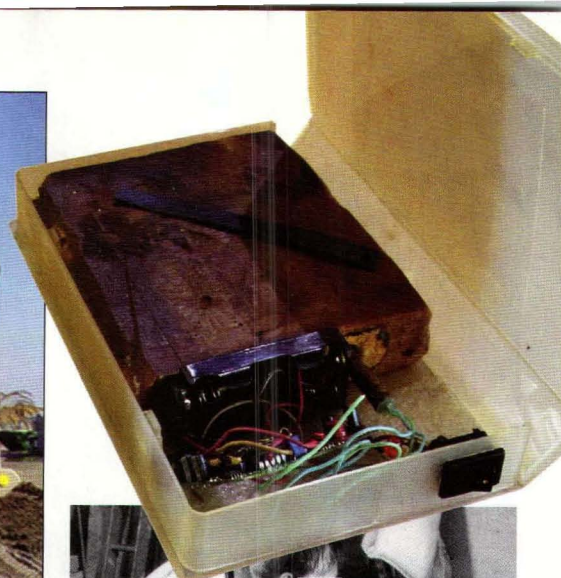

Once searched, vehicles should never be left unattended. This is where the security chauffeur or driver/bodyguard without an escort bodyguard is revealed for the scam it is. No one can be in two places at once. If the VIP needs protection, it's because there is a threat. You are not a mystic, and cannot honestly define the threat - sniper, bomb, knifeman, pistol or poison. So do you guard the VIP or the vehicle? Either way you can lose your VIP, and maybe your life.

IBA VEHICLE SEARCH

The IBA search is divided into an external and internal search. The vehicle should be housed in a secure area overnight, under lock and key and monitored. Everything that is removable from the vehicle - radio/CD/tape, headrests, mats, manuals, maps, tissues, toolkits, spare wheels, first aid kit, etc. - is removed and locked away the night before in secure storage. It will take 5-10 minutes to replace them after the search, but they could add an hour to the search if they are left in place.

A recently-deployed IED-clearer in Iraq. Many explosive devices are planted next to the road during night-time

Beware concealed eyes and bombs. Those charged with learning of your countermeasure intentions will conduct surveillance and gather intelligence. This video case related to the subject of IEDs was recently discovered - it contains a covert camera

Sunshades are left down at 45 degrees so they can be inspected on both sides. So too are all arm rests, and all compartments such as the glove box are left open and empty. The front wheels are turned to one side, allowing access to both sides of the wheel. Finally the battery cut off is employed before the vehicle is left on a cleaned and brushed surface. This means that anything left by someone planting a device - pieces of tape, electric wire, tools, torch, etc. - will be obvious.

Search by two-man team from vehicle section:

EXTERNAL

1. Approach the vehicle
2. Bodywork (look through glass)
3. Underside (check exhaust, wheel arches, drive shaft and under engine)

INTERNAL

1. Saloon (Start on front passenger side, and work through to the driver's side, then rear seats. Check under dashboard, and clear interior)
2. Engine (Battery, wiring, carburettor, pulleys, fan, air conditioning, power steering etc., manifold and front lights)
3. Trunk (and rear lights, and check inlet to fuel tank)

Hinged structures such as lids and doors should be opened gradually by two persons, one opening and one moving around it to look until hinges are seen clear. Cavities (e.g. doors) should be checked with endoscopes and if available "sniffers".

All vehicles in a convoy should be checked, not just the VIP vehicle (an IED on the escort vehicle cuts the protection by a third on a four-man escort section). Checks should also be made for signs of sabotage, as your access control may have precluded getting an IED on site, but sabotage could reduce the escort by knocking out the escort vehicle, or cause the VIP not to use his armoured vehicle.

The vehicle's mechanical, electrical and chemical systems also require investigation. A comprehensive evaluation could take four operatives sixty minutes, but it is vital prior to any journey or mission.

Finally, remember that a search regime operated by the vehicle and security sections of a professional bodyguard team is primarily a deterrent, as it alerts

the terrorist (via surveillance) that the thorough search by bodyguards precludes the opportunity of the VIP being brought into the presence of the IED.

The measures discussed in this feature could prevent many IED attacks against operational vehicles. Clearly additional measures must be enabled when vehicles embark upon their journey.

© James Shortt 2005

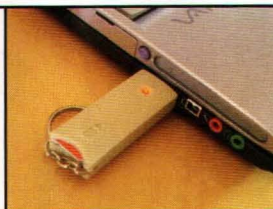

EYE SPY

PRODUCT REVIEW

SIMSPY

Peter Jenkins reviews Simspy, a SIM card reading device that can recover deleted data from a mobile phone SIM card including erased text messages

When I first saw this device I was quite sceptical about its simplicity, but after using it a few times, realised that it is an effective investigative tool.

Simspy is a small device about the same size as a USB memory stick and in fact looks like one, although it has a narrow slot where you can insert a mobile telephone SIM card.

Prior to using the device you have to load the reading software onto a computer or laptop which only takes a few minutes and then input the activation code. This code is provided by the supplier and will give you the ability to read up to three SIM cards before

another activation code is required.

The data obtained from the card can be telephone numbers or text messages that have been automatically stored in the inbox. This information can also be obtained by using the actual phone, but Simspy's unique feature is its ability to recover and read received text messages that have been deleted.

As with any file on a computer or storage device, if deleted it still remains on the hard drive but it is only the file name and address that is erased until it is over written. What the Simspy software does is finds the erased file and brings it "back to life".

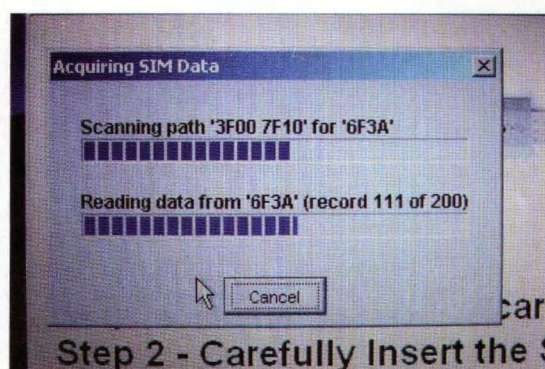

This is a useful tool for the private investigator or person who wants to know the content of text messages that have been received and can list up to the last 20 messages received and erased. Simspy, however, will not display messages that are sent from the phone, as once they are typed and sent they are gone into the stratosphere. Being able to recover text messages can be quite revealing as part of an investigation.

The biggest drawback for the system, is each activation code costs £50.00 (\$88.00) which gives you three readings. Having to telephone for the code can be time consuming but the system does work and for the security world, having the ability to recover information can be vital in any investigation. I do not think £50.00 is too expensive for what the device provides, especially if the user is an investigator providing a service for a client. Each search costs £16.00.

The Simspy system costs £299.99 for the set which includes three free activation codes. Personally I would prefer

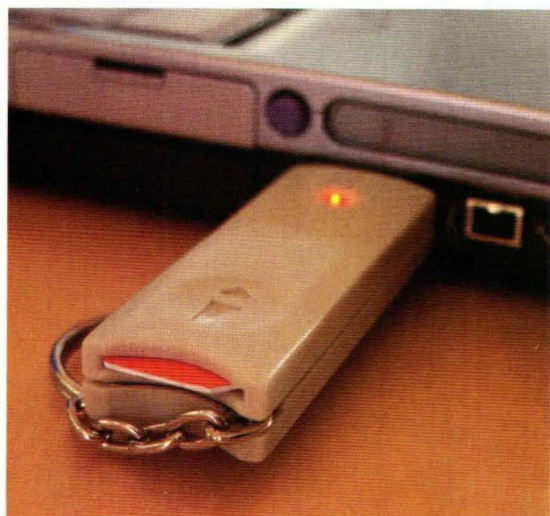

to pay £500.00 for the entire system and have unlimited readings to avoid the hassle that goes with it.

Verdict. A unique and useful little tool that does exactly what it says on the packet

on 6 - Deleted text messages

TRAINING SERVICES

FUTURE GLOBAL Plc

Future offers the most comprehensive and specialist package of training programmes.

From dispatching overseas training teams, instructing specialist police and prison service personnel in defensive tactics, or delivering security awareness programmes to company executives and staff, our Directors and senior consultants have a distinguished history of leadership and service with over 60 years experience in military, police and civil security.

The following outlines some of our standard training programmes;

Personnel

- Anti-Kidnap & Anti-Surveillance for Senior Executives • Employee Security Awareness • Specialist Driving Courses
- Conflict Management & Self Defence • Hostage Behaviour • Travel Security Awareness.

Specialist - Executive Protection (Bodyguarding)

- Security Driving - Tactical & Evasive • Police Defensive Tactics • Weapon Retention & Disarm • Control & Restraint
- Close Quarter Combat.

If you are interested in Close Protection Licensing and Training, please either telephone, write or e-mail for advice or information. Our Training Director - Peter Consterdine is a recognised industry leader in the field of Close Protection & Defensive Tactics.

Future has been a consultant to National Police Training (now CENTREX) supplying both instruction on defensive tactics and consultancy during construction of the current Police Personal Safety Manual. We work for H.M Prison Service, numerous police forces (including firearms and support groups), the Environment Agency, magistrate courts (guardforce training) and many corporate bodies.

Continued from page 35

GOING GREY

THE BIG LIE

Skilled operators will rarely face a situation where lying is necessary, however, it does happen. If intelligence officers or agents are invited to discuss a particular situation, it is beneficial that

the excuse offered is simple and not complex. If a situation becomes awkward, do as a politician often does, answer a question with a question. This will result in the deflection of even the most probing enquiry. Reply instantly if possible, once an interrogator senses he is in control, he will continue his offensive. Smile at 'odd'

questions, don't grimace or be clever. And more crucially, if you are caught out, have a back-up story. Claim you are a journalist working for a recognised international newspaper on an undercover story. Most intelligence services have the mechanism in place to support such a claim. Indeed, believe in the scenario yourself, after all, you are simply trying to gather information!

There are numerous ways in which spies are exposed. Counter surveillance, tips from double agents, mistakes in preparation of operations, betrayal, greed, honey traps, electronic counter-measures and by chance, just to name but a few. In the game of espionage, success is dependent on so many factors, including luck. However, by 'going grey' the spy has a slight advantage over his adversary...

Editor's note: The situations discussed in this edition of tradecraft are known to the security services. The article is a general overview of just a number of factors involved with the gathering of intelligence, and a few scenarios that may present themselves to operational officers and their agents.

Eye Spy, therefore, has removed several sections due to security concerns.
