**T**he death of Aleksander Litvinenko shocked many in the intelligence world. The former FSB officer, who was granted British citizenship just weeks earlier, had made many enemies in his former country. His death is being investigated by Scotland Yard, though I suspect the culprits will never be brought to justice, unless of course, those who carried out the killing turn out to be a rogue element in Russia trying to cause trouble for Mr Putin. If that's the case, the Kremlin will help.

Litvinenko was the victim of an elaborate plan that could only have been formulated in the intelligence world (see closing notes page 66) and started long before 1 November 2006 - the date everyone presumes he was poisoned. To get to Litvinenko, his killers used the 'daisy chain' technique. First they shot dead his friend and fellow critic Anna Politkovskaya on 7 October in Moscow. It's likely the same people then sent his Italian colleague Mario Scaramella an e-mail containing details of her killers - some of whom reportedly work for the FSB - an agency that Litvinenko had publicly claimed was corrupt and dirty.

A number of meetings took place in London thereafter. First with a former Russian intelligence associate, and then with Scaramella. During this period Litvinenko ingested Polonium 210 - a hard-to-get substance here in the West, but available via the Russian underworld. Litvinenko's fate had been sealed. The finger of blame has been pointed at the FSB, but I would urge patience. There is huge turmoil in the Kremlin at the moment as factions plan for life beyond Putin.

# Elite UK Intel Corp Officer Killed in Iraq

**BASRA:** A British Army Intelligence officer was one of four soldiers killed as a result of injuries sustained following the detonation of an Improvised Explosive Device (IED) mounted on a bridge on the Shatt Al Arab River on the eastern edge of Basra City. The incident occurred just hours after 11 November - the day the UK mourns its war dead.

All were onboard a Rigid Raiding Craft (RRC) which was part of a routine boat patrol travelling north towards the Shatt Al Arab Hotel, a British Army base on the river. Three other UK service personnel sustained serious injuries in the attack.

The elite Intelligence Corp officer was named as Staff Sergeant Sharron Elliott (above left). Her colleagues (R-L), Warrant Officer Class 2 Lee Hopkins, Marine Jason Hylton and Corporal Ben Nowak are thought to have died immediately.

# INTELLIGENCE

## Al-Qaida's Grand Nuclear Bomb Plot Intelligence officials warn of nuclear terrorist attack against UK

**F**ollowing closely on the heels of dire warnings from MI5 Director-General, Dame Eliza Mannigham-Buller, Prime Minister Blair and Foreign Secretary, Margaret Beckett, a senior Foreign Office official told reporters that al-Qaida is as "determined as ever" to strike Britain with a nuclear weapon.

The warning, from the government department which oversees MI6, comes after intense 'chatter' on al-Qaida web sites and the interception

of numerous communications from the terror group's supporters. One reporter asked the Foreign Office counter-terrorism official if the terror group *really* was seeking a nuclear weapon, she responded: "No doubt at all. There are people for whom it would be a triumph for the cause."

The official explained: "We know the aspiration is there, we know the attempt to get material is there, we know the attempt to get technology is there."

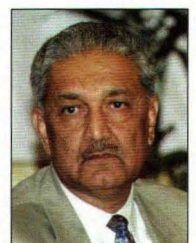

An intelligence source close to MI6 told Eye Spy: "The desire for many of al-Qaida's supporters is to use chemical, biological, radiological or nuclear weapons against targets in the UK."

MI6 has long been tracking a number of individuals and groups associated with al-Qaida. These entities are trawling the globe actively seeking to acquire the technology needed to manufacture a nuclear bomb.

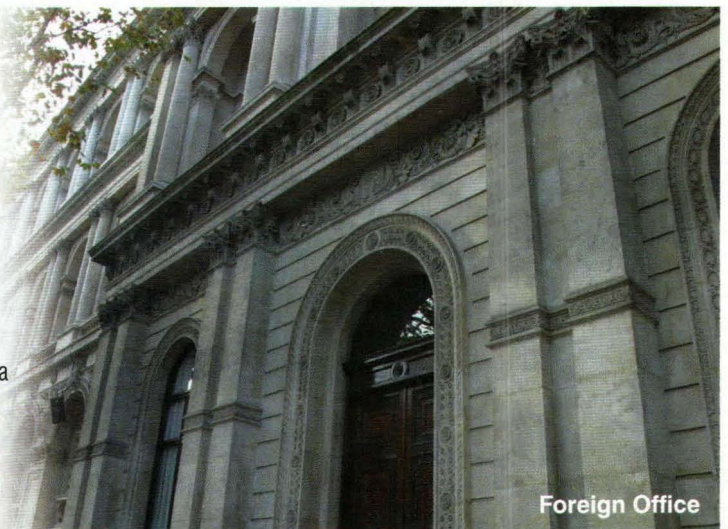

Officials believe al-Qaida operatives may be trying to make contact with former associates of Abdul Qadeer

Khan (far right), the rogue Pakistani scientist who peddled nuclear secrets across the globe. Khan has been under virtual 'house arrest' since his network was exposed some three years ago, and has not been interviewed by any Western intelligence agency. Many analysts believe his nuclear plans may have been sold to countries besides Libya, Iran and North Korea. As many as twelve sets of plans for building a bomb are believed to have been purchased by unknown buyers.

MI6 analysts have warned if Iran does acquire the nuclear bomb, al-Qaida would be one step closer to achieving its goal. However, Foreign Office officials believe the most imminent threat is that of a chemical or biological attack, noting materials are easier to acquire.

# SELLING SECRETS

## B2 Stealth Bomber designer faces more charges of espionage

**N**oshir Gowadia, regarded as one of the leading figures behind the B2 Stealth Bomber project, has been charged with additional counts of spying.

Gowadia, who has already been accused of selling B2 secrets to China in 2005, faces more charges

of trying to sell additional secrets to individuals in Israel, Germany, and Switzerland.

The FBI believe Gowadia formulated a marketing campaign via e-mail essentially "selling information about sensors and the stealth propulsion system to several countries," including China.

"The defendant in this case attempted to profit from his know-how and his knowledge of sensitive military technology," said Ken Wainstein, assistant attorney general for the Justice Department's National Security Division.

It's not yet clear who the Israeli recipient was, but the indictment does not refer to the Israeli government as being involved in the matter.

An 18-count indictment alleges that Gowadia designed and helped test for China a hard-to-detect US cruise missile nozzle and that he analysed for his Chinese clients how the modified cruise missile would lock on to US air-to-air missiles.

Gowadia, a naturalised US citizen originally from India, allegedly received \$110,000 (£57,000) for the information that he passed to China.

Gowadia's son called the charges "ridiculous," noting that for 40 years he had worked "behind the scenes" for the United States often with an armed guard and carrying "suicide

**Noshir Gowadia**

pill" in the event he was ever captured.

His father's trial is due to start in July 2007.

- The new charges follow another US-China espionage affair. A few months ago, Ronald N. Montaperto, a former Defense Intelligence Agency (DIA) analyst pleaded guilty to "illegally holding classified documents" and admitted in a plea agreement to passing 'top secret' information to Chinese intelligence officials.

Mr Montaperto was sentenced to three months house arrest and five years probation.

# MI5 WARNING

**MI5 DIRECTOR-GENERAL ISSUES  
STARK WARNING OF AL-QAIDA'S  
MASSIVE PRESENCE IN THE UK**

**Dame Eliza Manningham-Buller -  
MI5 Director-General**

**S**peaking in London to a small invited academic circle in East London known as the Mile End Group, at Queen Mary College, Dame Eliza Manningham-Buller revealed the full extent of MI5's battle with al-Qaida. More worryingly, she also said the terror group was recruiting British youngsters to carry out suicide bombing missions in British cities and beyond.

**Sir Ian Blair**

It is recognised by intelligence watchers that al-Qaida has been training British citizens for UK-based operations for several years. The 7/7 London outrage was evidence of that. However, the scale of the threat, though known to be serious, was never fully recognised. Dame Eliza's comments end all doubt that al-Qaida's presence in Britain is immense and growing. The new warning eclipsed recent statements issued by Sir Ian Blair, the Metropolitan Police Commissioner who warned that al-Qaida was a major threat to democracy in the UK.

A few months ago the Security Service released tenuous details of 20 known al-Qaida operations and said some 1,000 people are under observance. In November, MI5's

Director General said they are tracking 200 sleeper cells and 1,600 al-Qaida-linked operatives or supporters. Closing down just one sleeper cell is a huge and time consuming task... 200 is simply impossible. What's more important and disturbing is that these cells have been identified, just how many more have thus far avoided detection? Dame Eliza said she was not seeking to be alarmist or deliberately stirring up fear, and even though MI5's ranks have been swelled by more than 1,000 officers since 2001, it simply does not have sufficient specialist surveillance officers to cope. This means it was having to prioritise its inquiries on an almost daily basis.

As previously revealed in Eye Spy, MI5 examines each threat (or in this case - terrorist operation) by placing them on a sliding scale or ladder. As the threat reaches a specific point, MI5 react immediately, hopefully before an operation is activated. Dame Eliza chillingly revealed that her Service is currently countering 30 high-level plots forming in the UK.

She left very little to the imagination by announcing her Service is tracking the al-Qaida trainers and recruiters who are grooming young impressionable British Muslims to carry out suicide attacks. She was adamant the

operatives will also use chemical, biological or nuclear weapons if they get the chance. "Today we see the use of home-made improvised explosive devices," she said. "Tomorrow's threat may - and I suggest will - include the use of chemicals, bacteriological agents, radioactive materials and even nuclear technology."

The rise in the number of sleeper cells is evidenced by an 80 per cent rise in MI5's casework since January 2006. The 'networks' consisting of 1,600 individuals "are actively engaged in plotting or facilitating, terrorist acts here and overseas," said Ms Buller. Youngsters, some still at school, are prepared to join al-Qaida as suicide bombers, she noted. The UK now faces a sustained and growing threat that would last a generation.

"We are aware of numerous plots to kill people and to damage our economy," she said. "What do I mean by numerous? Five? Ten? No, nearer 30 - that we know of. These plots often have links back to al-Qaida in Pakistan,

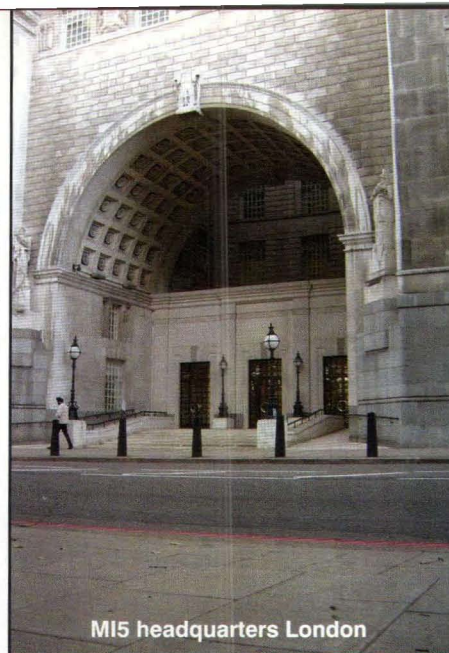

and through those links al-Qaida gives guidance and training to its largely British foot soldiers here on an extensive and growing scale. And it is not just the UK, of course. Other countries also face a new terrorist threat, from Spain to France to Canada and Germany."

Dame Eliza said that according to recent polls, more than 100,000 British Muslims consider the July 2005 terrorist attacks in London, which killed 52 people, justified. "More and more people are moving from passive sympathy towards active terrorism through being radicalised or indoctrinated by friends, families, in organised training events here and overseas, by images on television, through chat rooms and websites on the Internet," she said.

Trying to waterdown the conception of MI5 - that it is capable of winning every dual with its enemies - Dame Eliza said: "Hunting the terrorists was not as simple as it appeared on the BBC TV series *Spooks* where everything was (a) knowable and (b) solvable by six people. Because of the sheer scale of what we face, the task is daunting. We shan't always make the right choices and we recognise that we shall have scarce sympathy if we are unable to prevent one of our targets committing an atrocity."

The head of MI5 since 2002, Dame Eliza also revealed that since the 2005 London terrorist attacks, the Security Service has "thwarted a further five major conspiracies in the UK, saving many hundreds, possibly even thousands, of lives." One of those plots was centred in Birmingham.

Dame Eliza negated critics' accusations that the UK's support of the United States in Iraq and Afghanistan had made Britain a target for

MI5 headquarters London

terrorist attack. "Let there be no doubt about this," she said, "the international terrorist threat to this country is not new. It began before Iraq, before Afghanistan and before 9/11."

Prime Minister Blair later agreed with the Director-General: "I've been saying, as you know, for several years that this terrorist threat is very real," he said. "This is a threat that has grown up over a generation."

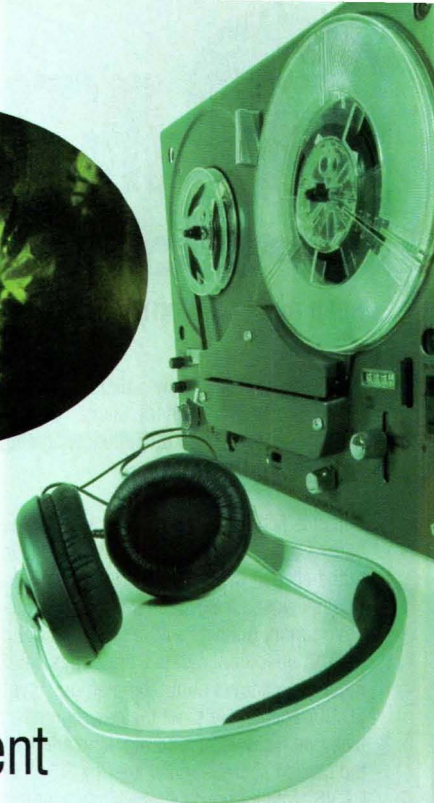

The manner in which her speech was delivered and the message contained within surprised many seasoned journalists - including senior news executives from the BBC. Up until 2004 journalists at Britain's premier news organisation still insisted al-Qaida didn't exist.

**MI5 does not have the resources to investigate 200 sleeper cells spread throughout the United Kingdom**

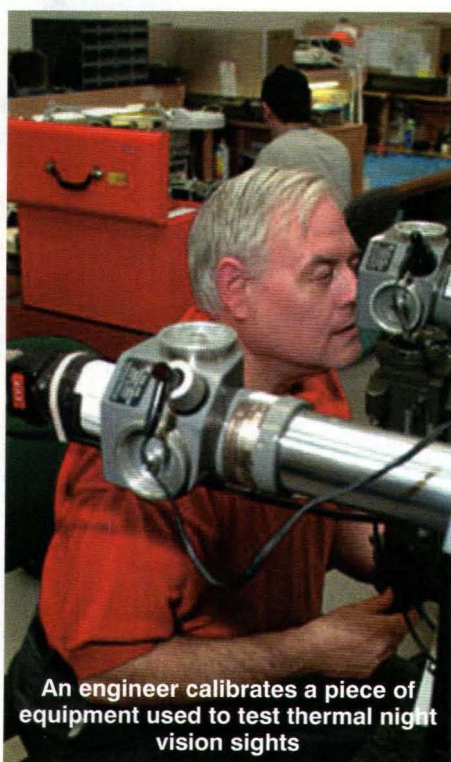

# AGENT PROVOCATEURS

## US agents allegedly trap Iranian equipment dealer in London hotel sting operation

**Q**uestions about a number of undercover operations involving US Department of Homeland Security agents in London have been raised, particularly about their legality. According to intelligence sources, the agents staged a number of 'sting' operations in the capital against terrorist suspects wanted for questioning in the United States. What's not known, is if the agents acted independently and without the approval or knowledge of MI5 or MI6. However, intelligence watchers feel that this is highly unlikely.

An engineer calibrates a piece of equipment used to test thermal night vision sights

Reports suggest that DHS agents flew to London posing as arms dealers. They arranged to meet an Iranian 'liaison' man wanting to acquire high-performance night-vision goggles. The meetings took place in 'primed' hotel rooms and the exchanges were secretly filmed. Some reporters say that it is the first time a US "hotel sting", a tactic mastered by the FBI, has been exposed on UK soil.

UK-USA intelligence operations are not restricted to each country, evidenced four years ago when it was alleged MI6 bugged several offices in the United Nations headquarters in New York. Similarly, it seems inconceivable that an operation to trap a British arms dealer in an FBI sting three years ago in New Jersey, could have taken place without collaboration from the UK's security service.

What's more than unusual in the London case, is the fact that reports suggest the agents were from the Department of Homeland Security. Most overseas operations of this nature would be conducted by the CIA or, in certain cases, the FBI.

The primary target seems to be Iranian-born businessman - Nosratollah Tajik, 52. He is the former Iranian ambassador to Jordan. UK police arrested Tajik before the deal went through.

Sources say the US agents told Tajik they wanted to sell night-vision goggles worth £50,000. However, export to Iran is forbidden.

Mr Tajik's legal team, according to reports, will state he has no terrorist connections and

COURTESY TOM TROWER/NASA

that the DHS agents "acted illegally" as 'agent provocateurs'. Tarik is due to appear at an extradition hearing at City of Westminster magistrates court on 4 December.

Intelligence sources monitoring Mr Tajik allege he is an Iranian recruiter for Palestinian terror cells.

The incident follows reports that dozens of night-vision goggles marked 'Made in Britain' were discovered in Lebanon following the recent fighting between Israeli forces and Hezbollah terrorists. In this case, it appears the devices were sold to Iran (under a UN mandate) in 2003 for use by Iran's border patrols against drug smugglers. The goggles were then secretly sent to Hezbollah outposts and used by its fighters to target IDF troops.

Continued on page 28

# INTEL EXTRA

## SPY CHIEF DEPARTS

HEAD OF ITALIAN INTELLIGENCE REPLACED AFTER CIA SPY FLIGHTS AFFAIR

**N**icola Pollari, Italy's director of the military intelligence agency Sismi, has been removed from office following a special Cabinet meeting.

Pollari is just one of several senior intelligence figures at the centre of a major investigation relating to the alleged CIA abduction of Osama Moustafa Hassan Nasr, an Egyptian cleric in Milan in 2003, government officials said. Pollari has not discussed the CIA operation in detail, but critics say Sismi must have known about the plan that involved over 20 CIA agents. He's not the only figure to have fallen on his sword, also replaced are the heads of the civilian secret service agency SISDE and the CESIS, which coordinates all Italy's intelligence and security services, though these organisations were not involved with the Milan saga.

Nicola Pollari

In November, prosecutors in Milan again requested that Washington extradite the 26 Americans they say acted illegally. Nasr was allegedly abducted as he walked down a Milan street and taken to Egypt via the USAF base at Aviano in northern Italy. The secret US programme dubbed 'extraordinary rendition' has

been attacked by civil liberty groups and politicians because a number of suspects are allegedly subjected to torture.

Prosecutors alleged that Pollari and other top officials of Sismi collaborated with the Americans to abduct the cleric. It's a charge vigorously rejected by Pollari who has defended his service before parliamentary committees.

Last year Pollari testified to Italian MPs about claims Sismi passed bogus documents showing Saddam Hussein had tried to buy uranium from Niger. The papers were used in the debate that resulted in the invasion of Iraq. At the time, the Italian daily *La Repubblica* alleged that Sismi had circulated the dossier, knowing it to be fake. "Sismi had no role in the fabrication of the dossier," Pollari said.

Interestingly, details of Pollari's demise were leaked to the media just hours before Premier Romano Prodi departed for Egypt on a long-scheduled visit to the country.

Admiral Bruno Branciforte (above) replaces Pollari.

## GERMAN AIR PLOT

MORE ARRESTS EXPECTED AS GERMAN INTELLIGENCE UNCOVER AIRLINE PLOT

**G**ermany's security services have thwarted an al-Qaida sponsored operation to blow-up an airliner. Few details have been released by the authorities but the plot involved smuggling explosives inside luggage using an airport employee. It is believed the group had targeted an Israeli El Al aircraft.

The federal prosecutor's office said: "During the summer, several suspects made contact with an individual who had access to the security-restricted zone of an airport." The airport was not identified.

The airport employee agreed to help smuggle the bomb in a case or a bag onto a plane in return for payment. However, the group sponsoring the atrocity and the 'bomb delivery man' could not agree on a fee. In November, six suspects were

arrested in connection with the plot, but five were released the following day. A sixth person was kept in custody in connection with a different matter. Under German law suspects can only be held 48-hours without charge. All six suspects are being investigated for allegedly belonging to a terrorist organisation.

"This case is encouraging in that our security authorities are clearly very observant, got very close to a possible [terrorist] structure and, at least so far, have succeeded in intervening early enough," said Stefan Kaller, an Interior Ministry spokesman.

Investigators searched nine apartments in the southern region of Rhineland-Palatinate and Hesse in central Germany looking for evidence.

TARGET - EL AL AIRLINER

**T**he case of Dhiren Barot, 35, is well known. His is the central figure behind the so-called Gas Limos Project. In recent months a court has heard how he conspired to cause huge loss of life in the UK by packing

limousines with gas cylinders, explosives and detonate them underground. Other information reveals he also wanted to use a dirty bomb, bring down skyscrapers in Manhattan, and attack financial areas, including Wall Street. However, during his trial at Woolwich Crown

## THE GAS LIMOS

# DIE H VENG

New York was in Barot's sights long before 9/11

Court in London, other evidence has been presented that is of interest and value to MI5 and the intelligence community at large.

Barot has already admitted conspiracy to murder between January 2000 and 2004.

Edmund Lawson QC, for the prosecution, said Barot had recorded footage of buildings he planned to blow up on a reconnaissance trip to the United States. One of those trips was allegedly made in April 2001 - a full five months prior to 9/11.

During a complex anti-terrorist operation that resulted in the arrest of Barot and several other men, MI5 discovered computers, reference books and other

material focusing on biological warfare and interestingly, architecture.

Mr Lawson said: "Examination of the deleted material on one of the hard drives revealed literally hundreds of files containing research into topics such as gas explosions, home made explosives, information relevant to arson attacks and fire protection systems and other research which was plainly relevant to the terrorist plans."

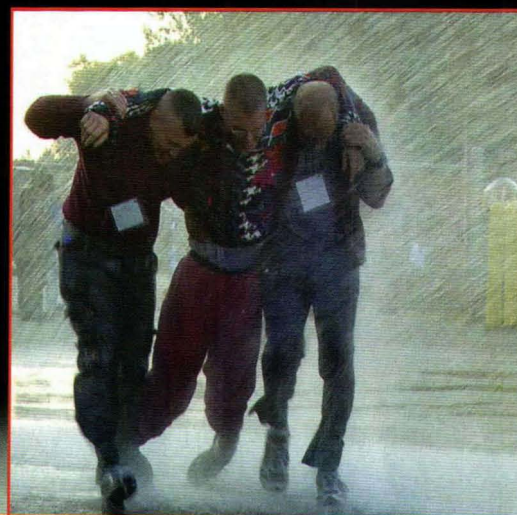

#### HEATHROW EXPRESS

Besides the known targets, Barot, who is just one member of an alleged al-Qaida sleeper cell (several other men are due to stand trial in 2007), also targeted the Heathrow Express and planned to destroy a train as it travelled under the River Thames in London. Mr Lawson said he wanted to cause "the loss of innocent human life on a massive scale." He continued: "Barot included the Heathrow Express as a possible target or an explosion on a Tube train whilst in a tunnel under the river. As to the last he [Barot] wrote: 'Imagine the chaos that would be caused if a powerful

explosion were to rip through here and actually rupture the river itself. This would cause pandemonium, what with the explosions, flooding, drowning etc. that would occur or result'."

#### DIE HARD WITH A VENGEANCE

Other police raids followed in London and elsewhere. In a garage MI5 officers found a video tape of the movie *'Die Hard With a Vengeance'*. However, at the end of the tape, analysts watched with interest eighty minutes

OS PROJECT

# DIE HARD WITH A VENGEANCE

More details emerge on the sinister plot to kill thousands

# ANALYSING 'DIRTY BOMB DEBRIS'

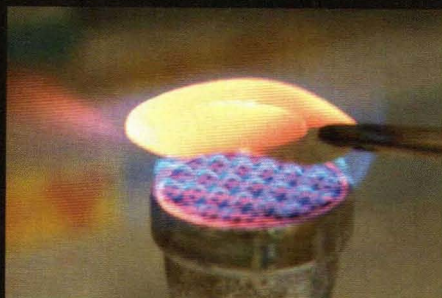

*One nightmare scenario: a terrorist dirty bomb is detonated in a major metropolitan area. Everyone's first question is "Who did it?"*

One piece of the puzzle that would give law enforcement officials a head start in their search for potential suspects would be an accurate description of what radioactive materials are contained in the bomb debris. Standard isotope identification technology is relatively slow; the process can take 24 hours or more. Three years ago a research team at Los Alamos National Laboratory developed a quick screening methodology to identify isotopes in dirty bomb debris, a procedure that can yield initial data in as few as six hours.

Utilising standard chemical analysis the scientists came up with a unique combination of procedures that extract and identify radionuclides from fused soils and rock, likely the most common constituents in bomb debris. Other ingredients might include concrete and asphalt residues, metal fragments, plastics and glass - anything present in a populated urban setting.

In one possible scenario, the bomb debris would be initially gathered and delivered to a rapidly dispatched mobile laboratory. At the outset of analysis the sample is pulverized into a powder in a micro-mill, the radionuclides are leached and later dissolved in nitric acid. The separation takes place in the liquid-liquid phase of the procedure using iso-octyl acid phosphate (IOAP) or di-2-ethyl hexyl phosphoric acid (D2EHPA), which is basically a kind of oil and water separation technique where the two chemicals are mixed with the nitric acid solution, along with the bomb debris in a gyrorotary shaker then left motionless. As the chemicals separate from the nitric acid solution the radionuclide constituents remain with the IOAP or D2EHPA and the rest of the bomb debris remains in the nitric acid solution.

The radionuclides in the solution are then stippled - tiny dots of the solution are placed on a platinum disk - and flamed over a Bunsen burner to evaporate out the liquids. The disk is then placed in an alpha spectrometer where the radionuclides are finally identified.

Bennie Martinez, who worked on the project said: "We have achieved a result with fair to good resolution using very few chemicals in a quick turnaround time with a minimum of steps required in the process. This procedure appears to be faster and simpler than the standard ion exchange/electrodeposition method. There are shortcomings in this screening methodology as compared to ion exchange, but what we were looking for was fast results that are reasonably accurate and relatively easy to obtain, and we did that."

Initial experiments used 'cold' or non-radioactive vitrified, glass-like soils spiked with known quantities of radionuclides and low-level vitrified volcanic tuff containing picocurie levels of radionuclides as stand-ins for the bomb debris. Utilising both materials, the new screening methodology was able to identify and characterize Plutonium-239, Uranium-238, Americium-241, Curium-244 and Neptunium-237.

"It's clear the method can identify a variety of radionuclides that might be present in dirty bomb debris," said Martinez. "Since the method is fairly simple and uses a minimum of equipment, we believe it could be forward deployed and could provide early data to law enforcement and others following a terrorist event. We want to help officials close in on the culprits as fast as possible."

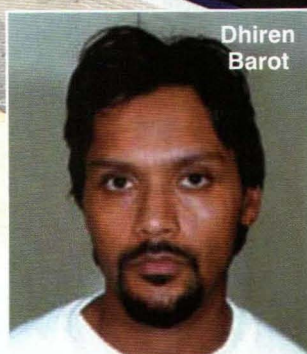

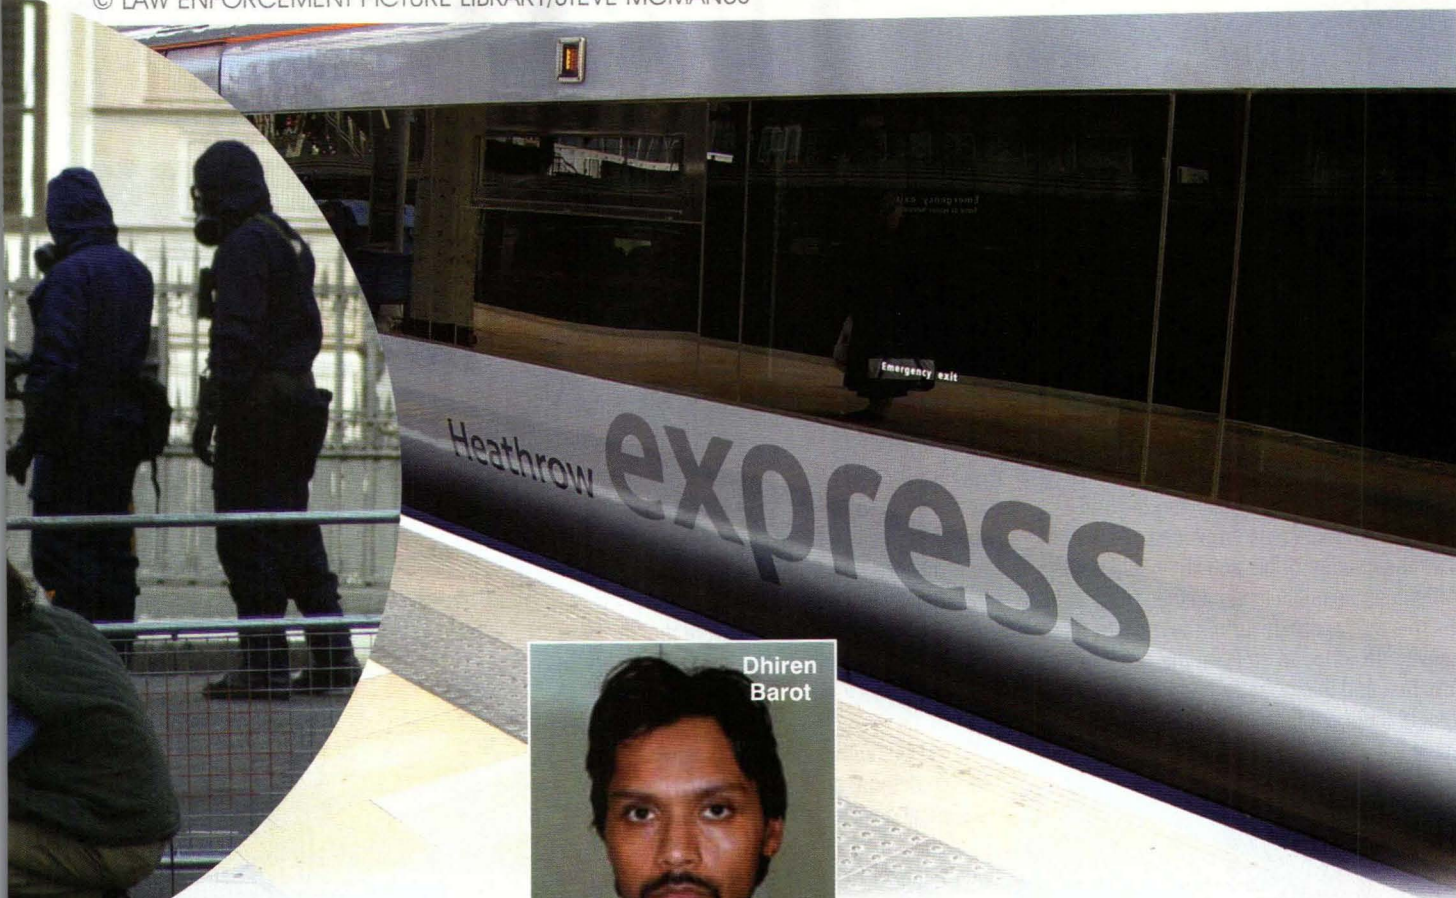

of a home movie featuring well known buildings and areas of New York. Mr Lawson said: "The footage is of various buildings in Broad Street, Wall Street, the New York Stock Exchange and the like with focus on the entrances, security cameras, barriers, side streets etc."

"There is also footage of Jewish buildings and a synagogue. We know now that this video

A scene from a movie, a sketch from Spooks? Sadly this is London 2004 as the security services play out Operation Osiris - a 'dirty bomb' has been detonated in the London Tube

Dhiren Barot

was made over a weekend of the 7/8th of April 2001."

Five extracts were shown in court, including a segment from a hand-held camera. This section had been edited after 9/11. Wording scrolled across the tape: *'This video footage was recorded during a weekend hence it does not accurately reflect a mid-week working day which is significantly busier.'*

*since the collapse of the WTC security is greatly increased'.*

Another clip showed a figure outside the New York Stock Exchange. Mr Lawson said that comparisons taken by analysts reveal "a number of similarities in the shape and distribution of the facial features and no significant differences." Barot denied the person was him.

Other material showed London hotels and mainline railway stations.

#### COUNTERMEASURES AND CODES

Mr Lawson mentioned sophisticated anti-surveillance techniques used by the group.

"The care he [Barot] took in terms of his meetings with his co-defendants,

Phrases such as 'sleeper cell' and 'Big Brother' helped MI5 understand the significance of the Gas Limos Project. Huge amounts of data was recovered from computers - even though many files had been deleted

**Barot hoped to kill many civilians by breaching the walls of London's Tube under the River Thames**

the use of coded messages and the anti-surveillance tactics he employed to ensure that observation of his activity would be as difficult as possible lends further support to his role as the organiser of major terrorist activity designed to strike at the heart of both America and this country and to cause the loss of innocent human life on a massive scale."

**Scotland Yard - al-Qaida codename 'Big Brother'**

Barot had no fixed address in London, and used several vehicles in order to meet with his "sleeper cell." He never used his cell phone and on one occasion drove to Wales and used an Internet cafe. According to intelligence sources, members of the cell communicated using code words such as 'kewl n kinki', 'nightwithkylie' and 'bridget-jonesdiaries'. MI5 has yet to decode a plethora of e-mails. Mr Lawson said: "These e-mails are written in the style of teenagers discussing music, television and using language and employing sexual

references which would not normally be considered appropriate to devout Muslims."

One code that has certainly been broken refers to the television show 'Big Brother' [MI5 or Scotland Yard]. The e-mail ends... 'Don't bring your friend'; almost certainly a warning to use countermeasures.

As for the 'Gas Limos Project' itself, Mr Lawson said that in early 2004, Barot, "travelled to Pakistan to get approval from al-Qaida for a series of coordinated attacks." He also mentioned that his actions were those of someone forming a business plan:

"He set out within a proposal plans for the detonation of a radiation dispersal device, more commonly known as a 'dirty bomb', the use of a petrol tanker to cause an explosion and attacks on the London rail or underground network."

According to Mr Lawson, only "an outstanding counter-terrorism operation" thwarted Barot. "Various possible methods of attack were raised for consideration including parking limousines packed with explosives next to or under the target, arson, by means of hijacked petrol tankers, or igniting gas cylinders or possibly the use of an aeroplane.

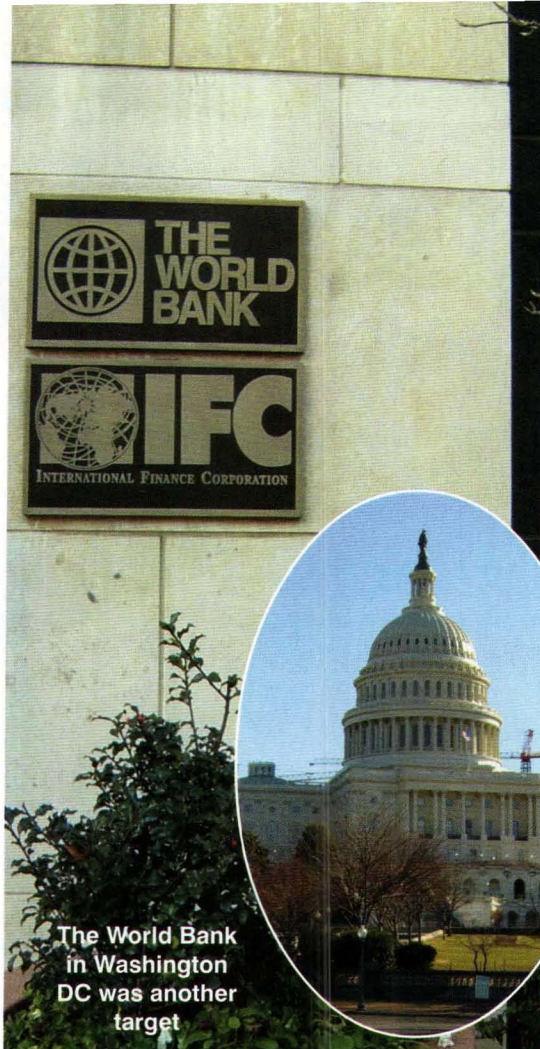

"The plans involved the giving of no warnings and were designed to kill as many innocent civilians as was possible."

#### **SLEEPER CELL**

Barot formulated his plans well before 9/11 but in the years that followed, and with intense

security measures being introduced in the United States, he turned his attention to London. However, the USA plans were not forgotten. At some stage Barot allegedly recruited his sleeper cell. MI5 found a deleted message which read: 'Small unit that is operating around the clock'. In another message relating to the Gas Limos Project Barot refers to his group as a 'sleeper cell'.

As for Barot himself, the evidence suggests he travelled to New York on a least two occasions to surveil locations. However, it is still not known if any of his co-defendants did the same.

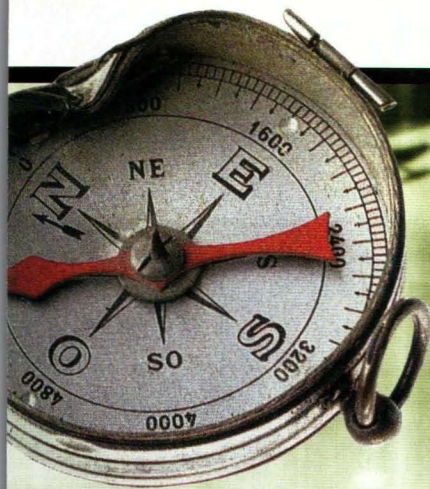

**The World Bank in Washington DC was another target**

**Barot planned to use a petrol tanker to attack prominent locations**

# ARREST OF AN SVR Jackal

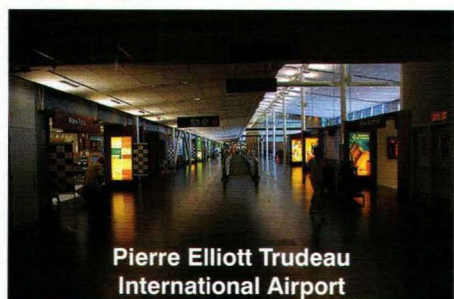

Prize ticket - a Canadian passport

Canadian security services have arrested a suspected sleeper agent working for Russia's Foreign Intelligence Service (Sluzhba Vneshney Razvedki-SVR). The man, living under the assumed name of Paul William Hampel, had entered Canada illegally several years earlier. Few details have been released by the authorities, but the case has been described as "significant".

CSIS (Canadian Security Intelligence Service) court documents note: "To Russian audiences, the SVR makes no secret of its continued high-level espionage and frequently boasts of its theft of financial and industrial secrets to aid the failing Russian economy."

"To international audiences, however, the SVR prefers to speak of co-operation with the United States, Canada and other countries in the common fight against terrorism, organised crime and nuclear trafficking."

Hampel worked undercover as an 'SVR illegal', and would have likely reported directly to his control office in Moscow. CSIS states: "They are Russian espionage elites, among their nation's

Pierre Elliott Trudeau International Airport

## Russian Spy Suspect Held in Canadian Airport Operation

costliest and longest-term undercover agents, who will go to great lengths to spy on their target countries."

### TOOLS OF THE TRADE

The security service say he was carrying \$7,800 in five currencies, several bank and credit cards, three cellphones, encrypted SIM cards (prepaid cellphone cards), two digital cameras and a short-wave radio. He was also carrying a fake Ontario birth certificate in a travel pouch under his shirt.

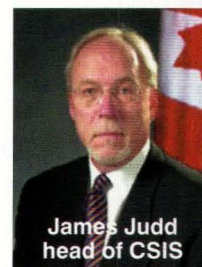

His real identity is reportedly not yet known and probably never will be. Hampel is facing a quick deportation back to Russia.

### THE JACKALS

His birth certificate related to his Canadian passport in the allegedly fictitious Hampel name. A summary of information compiled by CSIS and filed in Federal Court says he was born on 11 December 1965. Records show it was the third Canadian passport issued in the name of Hampel since 1995, and according to copies of the suspect's previous passport applications he lived in Montreal and worked as a lifeguard and travel consultant.

Hampel was detained as he prepared to board an airliner from Montreal's Pierre Elliott Trudeau International Airport to Moscow in mid-November. This followed a lengthy covert surveillance operation by counter-intelligence from CSIS and the signing of a security certificate by government ministers declaring him a danger to Canada for espionage.

The SVR's Directorate S has had much success in planting 'co-ordinators' in foreign countries - sometimes remaining dormant for years. By remaining in situ for years, SVR agents can carefully embellish their new identity and obtain a Canadian passport - a valuable item for operatives journeying abroad - and of course, the perfect cover.

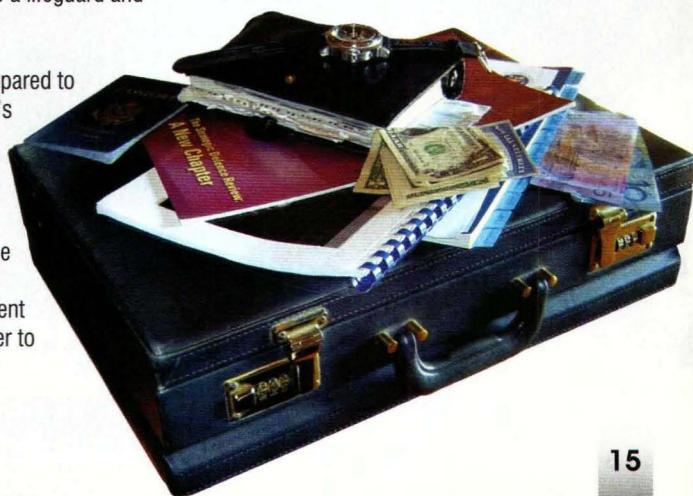

James Judd  
head of CSIS

The case is being compared to a 1996 Russian spy operation. In this case, a Toronto-based couple called Ian Mackenzie Lambert and Laurie Brodie turned out to have been sent to Canada by the SVR. A CSIS investigation discovered they were actually SVR spies named Dmitriy Vladimirovich Olshevskiy and Yelena Borisovna Olshevskaya. It later transpired they had stolen the identities of two dead Canadian children.

Hampel may or may not be deported, but officials believe Canadian military, economic and technology secrets were at risk.

During the Cold War, the Soviet KGB had an extensive spy programme in Canada and the United States. If Hampel turns out to be an SVR agent, the likelihood of other spies embedded in Canada will increase. While forwarding secrets is still a primary task, obtaining a Canadian identity and passport is of equal importance.

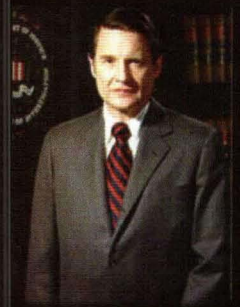

# The Famous Stasi Spy Chief Markus Wolf Dies

One of the world's most famous spy chiefs - Markus Wolf - has died at the age of 83. Ironically he passed away peacefully in his sleep on the 17th anniversary of the fall of the Berlin wall. Known as the 'Man Without A Face', Wolf headed East Germany's foreign intelligence service for three decades starting in 1950. For years the Stasi chief managed to keep such a low profile, that the West did not even have a recognisable photograph of him. It was not until 1978, when he was photographed during a visit to Sweden, did his face become known to the intelligence world. Werner Stiller, who had earlier defected to the West saw the photo and identified Wolf.

Wolf headed a thoroughly clandestine service in charge of thousands of spies and even more 'watchers' - it's estimated 1 in 50 people in the communist country spied on behalf of the state. Wolf's 4,000 agents were also spread across much of Europe, but were particularly successful in infiltrating the West German Government. Dubbed 'Romeo' agents, many of the spies were brilliantly seductive and succeeded in gleaning secrets from vulnerable or lonely government officials.

However, since the collapse of the Warsaw Pact, Wolf has revealed plenty about his life in the shadows. But it could have been so very different. In 1989-90, with German reunification approaching and the Berlin Wall crumbling, CIA director William Webster (right) sent two officials to make contact and tried to get him to defect... the offer of a lovely house in California and a huge salary failed to secure his services. "I couldn't betray my agents," he said. Ultimately, with the Stasi in turmoil and the real possibility of millions of intelligence files falling into the hands of Western

# Man W

security services, Wolf fled to Moscow. Like the theme from a good spy book, Wolf eventually gave himself up at a remote border crossing in Bavaria. In 1993, he was given a six-year prison sentence - overturned in 1995 by an appeals court because it was felt that his activities had been legal in communist East Germany.

He eventually returned to Germany in 1997 and was charged with treason and four kidnappings carried out by his agents during the Cold War. In this case, he was sentenced to two-years in prison... suspended.

When the Cold War ended, Wolf wrote his memoirs - *The Man Without A Face*, after his CIA-MI6 nickname. He told the BBC in a later interview that he was "inspired" by the creation of 'Karla', a master spy in John le Carré's Cold War thrillers. There were other reports that John le Carré took Wolf as the inspiration for the character of Karla. It's a charge the bestselling author strongly denies. "The only Wolf I was familiar with, when I wrote the books in which he apparently claimed to have appeared, was a lawnmower. I repeatedly refused to appear on public platforms with him, and I have no admiration

for his achievements." Perhaps his biggest success was the planting of Stasi agent, Günter Guillaume, as a top aide to West Germany's chancellor, Willy Brandt (above left). When the spy was discovered, it led to Mr Brandt's resignation in 1974. Nevertheless, it was an achievement Wolf later called an "own goal," as Brandt emerged as the architect of rapprochement.

For years Wolf was a constant thorn in the side of NATO. His spies were many in number and the West's intelligence services were menaced by their presence in civilian, military and intelligence arenas. "He will go down in history for being one of the most successful espionage chiefs of the cold war," said Jochen Staadt, a professor at the Otto-Suhr-Institut, in Berlin, who specialises in the history of the Stasi. "But the negative side of his work won't

be forgotten either - for instance, his department for disinformation about West Germany, which manufactured gossip and lies to defame western politicians."

In later years Wolf discovered he had Jewish roots and later visited Israel. Born 19 January 1923 to a Jewish father and a non-Jewish mother, he fled with his family to Moscow in 1934 via France following the Nazis rise to power. During the latter part of WWII he worked at German People's Radio in Moscow from 1943 to 1945. Following the Nuremberg trials, Wolf became a committed Communist, and returned to East Germany with a group of people that included Walter Ulbricht, who would become East Germany's longtime leader.

In an interview with the Israeli publication, *Haaretz*, two years ago, Wolf said he considered seeking asylum in Israel under the Law of Return, but Jewish friends counselled him - Israel would not accept him nor would they extradite him. This was probably because of the Stasi's contact with leaders of Palestinian terror organisations. Officials say he must have had knowledge of the liaison.

Without A Face

# LITVINENKO

## Former Russian spy who defected to Britain poisoned by underworld in London

**T**he KGB were past masters in eliminating targets in bizarre ways, therefore when one of President Putin's most vociferous opponents was poisoned in London, suspicion immediately fell upon its successors - the FSB (Federal Security Service). However, senior intelligence officials privately believe that Putin would not have sanctioned an act that left former FSB officer - Lieutenant-Colonel Aleksander Litvinenko - with no hope of survival. But it's not the first time the finger of suspicion has been pointed at the Kremlin.

Former FSB Lieutenant-Colonel Aleksander Litvinenko

In 1978, Bulgarian dissident Georgi Markov was killed by a poison dart filled with ricin and fired from an umbrella in

London. It's successor, the FSB has also been accused of using similar 'dirty skills'. Two years ago Viktor Yushchenko, while running for the presidency of the Ukraine, was disfigured after he digested a mysterious poison. Other lesser known people have died after somehow coming into contact with poisons. In the conflict with Chechnya, a number of terrorist leaders died shortly after opening letters addressed to them.

However, the case of Litvinenko, 43, who defected to Britain in 2000, was played out in front of the full glare of the media. He fled Russia via Turkey with his wife Marina and

Boris Berezovsky

their children after 'drummed up' charges were filed against him. He had by then, become somewhat of a renegade after he accused the Russian Government of plotting to kill Boris Berezovsky, a billionaire friend of President, Boris Yeltsin.

Crest of the FSB

Litvinenko also gave Berezovsky information on two bombings in Moscow and Volgograd in 1999. Three hundred civilians died. Litvinenko said the motive in this case, was to "whip up" support for a war against Chechnya. The files he passed on implicated Russian agents. Berezovsky would later produce a documentary 'Attack on Russia' which further infuriated the Kremlin.

Litvinenko met Mario - an investigative contact in Piccadilly Circus, but not before meeting two Russians in the Millennium Hotel

# Thallium

AN ASSASSIN'S BEST FRIEND USED ACROSS THE WORLD

**T**hallium is a highly-toxic heavy metal once used in large quantities in rat poisons and insecticides. However, use of thallium today is highly regulated in most countries. The salts of thallium are colourless, odourless, tasteless and soluble in water. Once inside the body (it can be absorbed) it attacks the nervous system and internal organs. Hair loss, vomiting, and diarrhoea will also occur.

Marina Litvinenko told police she thought her husband had a virus, but the early symptoms of thallium poisoning are often

confused with many viral diseases including influenza, delaying its detection.

## OTHER TARGETS

Thallium was used as an effective murder weapon before its effects became understood and an antidote discovered.

During its quest to kill Fidel Castro, the CIA allegedly conspired to place thallium

salts in the shoes of the Cuban leader as he placed them outside his hotel for night porters to clean. The poison would slowly have been absorbed into his skin. The plan was never implemented.

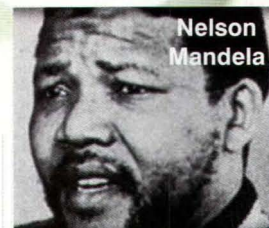

It's also claimed that South African agents once plotted to use it against Nelson Mandela while he was in prison on Robben Island. Following the demise of the government, South Africa's Truth Commission heard how agents established plans to add doses of the chemical to his medication.

And in 2004, at least 25 Russian soldiers were treated for thallium poisoning after finding a powdery substance in a can at a dump near their base in

Khabarovsk. The troops, unaware of the danger, added it to the tobacco they smoked and used it as talcum powder on their feet.

## TREATING THALLIUM POISONING

Prussian Blue is a dark blue pigment used in paints and formerly in blueprints. Discovered by accident by the painter Diesbach in Berlin, as he attempted to create a paint with a red hue. It has several different chemical names, these being iron(III) ferrocyanide, ferric ferrocyanide, iron(III) hexacyanoferrate(II), and ferric hexacyanoferrate. Commonly and conveniently

it is simply called PB. Its chemical fabric makes it useful as a sequestering agent for certain heavy metals ions, in particular, for patients who have ingested radioactive caesium or thallium (also non-radioactive thallium). According to the IAEA an adult man can eat 10 grams of Prussian Blue per day without serious harm. It is also occasionally used in cosmetic products.

Prussian Blue

Litvinenko was eventually jailed for nine months. In 1999 he was arrested again for allegedly abducting a man by the name of Odinokov; putting him in the boot of his car and then beating him up. He was also charged with drink driving. By a bizarre coincidence the incident was "filmed" and shown on Russian television. An intelligence contact arranged for an Eye Spy associate editor to meet Litvinenko on a train. The Russian denied the man shown

in the film footage was him. These were serious charges and he was advised by a friend to leave the country.

The former FSB officer has been a constant thorn in the side of Moscow after he defected to the UK. Here he launched a number of media campaigns against Putin's government accusing them of corruption and criminality. His writings and speeches were brushed aside

**Anna Politkovskaya - her outspoken views on the war in Chechnya were well known**

by Moscow. Nevertheless, he was placed under the protection of Britain's security services.

In October 2006, from a secret address in London, he began researching the murder of fellow journalist and friend Anna Politkovskaya, a determined Russian investigative reporter who was shot dead in a lift in her apartment block. Litvinenko supported Politkovskaya - herself a fierce critic of Putin and his political team. Her death on 7 October shocked journalists and those politically aligned against Putin.

**Thallium in its raw state. Experts initially believed Litvinenko had ingested a small quantity of radioactive thallium.**

The Itsu sushi restaurant in Piccadilly where Litvinenko met Mario Scaramella before falling ill. Forensic specialists later discovered traces of the deadly substance Polonium 210 inside the establishment.

During Litvinenko's researches he liaised with colleagues who were also working on Politzkovskaya's case. And when he fell desperately ill following a number of meetings in London on 1 November, his associates suspected he had been attacked by agents attached directly to the FSB.

Litvinenko's wife requested medical assistance for her husband - exactly six years to the day he had been granted asylum by the British authorities. For several days, Marina 44, had been concerned about his health, but she thought it was simply a virus. Then he began vomiting... "but it was not normal vomiting," said Marina.

Scotland Yard began an investigation after doctors discovered he had been poisoned. Specialists at Guy's Hospital in London confirmed that they had found significant

M15 watchers were unable to monitor Litvinenko 24-hours-a-day

quantities of thallium, a particularly nasty metal toxin once used in rat poison that is both tasteless and odourless. Toxicologist Professor John Henry said he had "no doubt" that Litvinenko had been poisoned with a potentially lethal dose of thallium. However, Professor Henry said Litvinenko was suffering from additional symptoms: "Something other than thallium is involved. There are several possibilities as to what this something is. One is that he was given thallium plus a second cytotoxic drug, the second is that he was given thallium plus a different radioactive compound, the third is that he was given radioactive thallium. At this stage radioactive thallium seems the most likely cause," he said. If Litvinenko had ingested a radioactive

form of thallium, it would be difficult to trace. Perhaps the suggestion of thallium being the primary cause of his illness, was fuelled by the knowledge that this substance was a known assassins' weapon.

Dr Andrea Sella, lecturer in chemistry at University College London said: "My gut feeling at the moment is that whoever did this wanted not only to do him harm, but also to send a spectacular message to others - mess with us and we make you die a lingering death. And to add radioactivity into the brew is an additional way of fuelling people's fears."

Litvinenko before his poisoning

Litvinenko was taken to a North London hospital under an assumed name to protect his identity and given an armed guard. As his condition deteriorated, he was secretly moved to University College Hospital. Doubts

A lone policeman guards the back of Litvinenko's London home

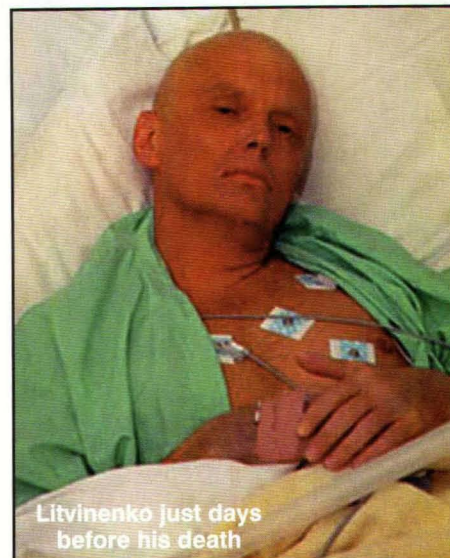

then surfaced amongst medical staff about the thallium.

Speaking from his hospital bed, Litvinenko told David Leppard of *The Sunday Times*: "They probably thought I would be dead from heart failure by the third day. I do feel very bad. I've never felt like this before - like my whole life is hanging on a thread. Litvinenko has suffered damage to other organs, his hair dropped out and his white blood cells virtually disappeared.

How the lethal mix was administered is still unknown, though it was ingested.

Senior officials at Scotland Yard began retracing the days and weeks leading up to the poisoning. Officials also analysed several threatening e-mails sent to Litvinenko before the incident.

In October Litvinenko was contacted by an Italian colleague - academic Mario Scaramella. Scaramella is an expert on the KGB and the Cold War. For several years he helped the

Litvinenko just days before his death

LITVINENKO FAMILY

Italian government with an investigation into Russian spying activities in Italy.

Scaramella told Litvinenko he had some interesting information relating to the death of Anna Politkovskaya and that he received an e-mail with a list of names, or more accurately - assassination targets. The Italian was insistent

Scotland Yard anti-terrorist police, MI5 officers and forensic specialists outside Litvinenko's home

that they meet face to face so he could personally hand over the material. After travelling from Italy the two men met in Piccadilly Circus. Litvinenko took Scaramella to the Japanese Itsu sushi restaurant. He ate while Marco showed him an e-mail print out containing a list of people, including FSB agents who were allegedly responsible for the death of Politkovskaya. It's also possible one e-mail contained a personal threatening message. "Why he couldn't simply send me the e-mail is a mystery," said Litvinenko. After 35 minutes Scaramella departed, though Litvinenko was adamant that no evidence exists to link his illness with the Italian. Litvinenko's friends initially believed it was at the sushi bar the poison was mixed with his food or drink. A gramme of thallium would have been sufficient to kill.

Tatiane Assis, the manager of Itsu, said detectives visited the restaurant. "They asked if we

had CCTV. We said we didn't and they left without explaining why they had called." There is no suggestion that the restaurant, or its staff, had anything to do with the poisoning.

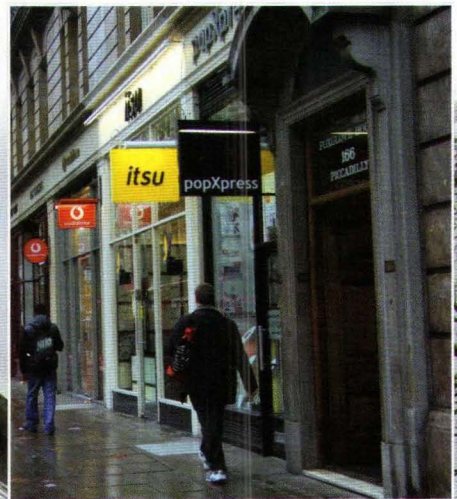

As enquiries continued, it emerged that Litvinenko met with two Russians prior to his discussion with Scaramella at the Millennium Hotel in London. At least one of the men was a former KGB officer.

A Scotland Yard spokesman said: "We can confirm that officers from the Specialist Crime Directorate are investigating a suspicious poisoning. There are no arrests and inquiries continue. His condition is serious but stable." But as Litvinenko's condition worsened, doctors dropped a bombshell "we can confirm that a substance called Polonium 210 has been found in Mr Litvinenko system," said a spokesman. With this news in hand, Litvinenko drew up a deathbed statement and launched a ferocious attack on Moscow, and in particular President Putin. He accused the spy agency of "killing him."

MI5 specialists and forensic experts searched the sushi restaurant, the Millennium Hotel and Litvinenko's home. At all three locations they discovered traces of Polonium 210, a substance used in the chain reaction to detonate a nuclear bomb. Polonium 210 is deadly if it enters the body via mouth or a cut. Furthermore, huge enquiries are now underway to establish how it found its way into the hands of an assassin. It's a rare commodity and could only have come from a nuclear developed nation... or the black market. One expert told Eye Spy a grain of Polonium 210 is enough to kill.

As Scotland Yard probed, it emerged that one of the Russians who met Litvinenko in the Millennium Hotel was former KGB agent Andrei Lugovoy. Lugovoy and Litvinenko both worked at a television station formerly owned by Boris Berezovsky, now exiled in Britain. Litvinenko's friend, Alex Goldfarb, said: "Anyone who met him on that day is suspicious. The police have said that they are pursuing both the Italian and Mr Lugovoy. I would not describe Mr Lugovoy as his friend." As for Lugovoy, he appeared on

The Itsu cafe remained open until the Polonium 210 was discovered. The threat to users and staff is virtually nonexistent

Britain's Foreign Office requested Moscow "hand over" any information that might be of use in the investigation

University College Hospital where Litvinenko tragically died

© P THOMPSON

EYE SPY ISSUE 45, 2006

Police search the Millennium Hotel where Litvinenko met with a former KGB officer. Traces of Polonium 210 were also discovered here, suggesting the deadly substance had been 'delivered' before Litvinenko arrived at the Istu cafe

television saying he would gladly cooperate with any investigation.

Litvinenko died some 20 days after falling ill. His supporters are in little doubt as to who ordered the assassination, but Moscow publicly denied any involvement. The Russian media also rejected suggestions of Putin's involvement. "This chain of events plays right into the hands of those who would wish to compromise Russia in the world arena," wrote the mass-circulation daily *Komsomolskaya Pravda*.

While the Western media have been quick to accuse the Kremlin, intelligence officials in the UK remained silent. MI5 and MI6 recognise that Putin's term ends in less than two years and he has many enemies in Moscow who are opposed to the president. "These are well-orchestrated plans to discredit the Russian state and its leadership," said a Kremlin spokesman. When invited to make a suggestion as to who might be responsible, the official said: "It could be senior security service and military people who believe Putin is dangerous for Russia because the country is collapsing and Russia is losing control of parts of its territory like the Caucasus." The theory being that if Putin is internationally vilified, the pressure to step-down would grow.

Britain's Foreign Office requested Moscow "hand over" any information that might be of use in the investigation.

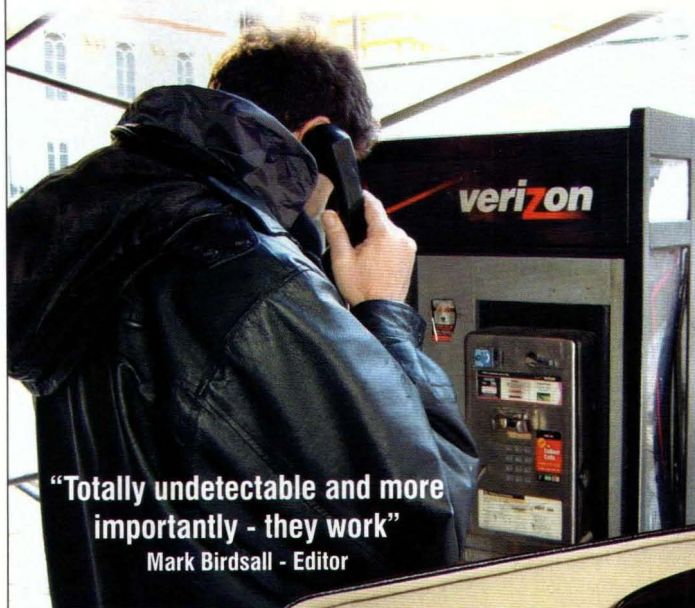

*Editor's Note: The death of Aleksander Litvinenko has all the hallmarks of a professional operation. Litvinenko may have been outspoken and had many enemies in Russia, but it does seem rather peculiar for Moscow to sanction his death, especially in this manner. However, even President Putin recognises that he has rogue elements in his government. The investigation into his death will be complex and British Police will tread warily; this is no ordinary crime, in fact it is quite chilling. Nevertheless, regardless of political views and an obvious "history" between Litvinenko, his dissident friends and Moscow, such an action was callous. But there is far more to this case than meets the eye.*

# BEST-SELLERS SURVEILLANCE

EYE SPY'S  
HIGH-QUALITY REAR VISION  
SURVEILLANCE SUNGLASSES

Don't confuse these sunglasses with cheap toy models - interestingly, some may even bear the name 'Eye Spy'. Others still use plastic lenses and have mirrors attached to an extended (wide) frame. They are easily spotted. Our glasses have invisible and see-through reflective areas within the actual lens.

Eye Spy Intelligence Magazine rear-vision surveillance sunglasses have a black-metal designer frame, rubber-backed ear drop-over (for comfort) and superb glass lenses. They also come in a tough smart black carry case.

# Kindergarten Spies

Eye Spy examines the recent Internet surge to inform and attract youngsters to the world of intelligence and espionage...

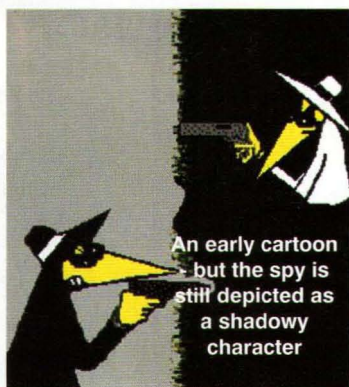

It's an old adage that's applicable to hundreds of subjects and professions, but one that's becoming increasingly relevant to the intelligence world - "get them interested at an early age." Senior government officials recognise the importance of children to understand the mechanism of intelligence and security. So what better way of informing and attracting youngsters than to use the world's most popular method of delivering information - the Internet?

In 1997 President Bill Clinton mandated that all US Government agencies set aside virtual space on their websites for child-friendly material. Initially, agencies provided basic information that was poorly managed and far from satisfactory - how things have changed. Today, these websites are more interesting, energetic, thought provoking and educational. The special sections deliver information in text, audio, video, photographs and graphics. Many have interactive games and prompts to sidebars explaining "how great it is" to join the intelligence world. The websites are designed to interest students from all backgrounds aged between four to sixteen-years-old. And it's not just American agencies with dedicated child Internet areas.

Organisations like MI5 believe that by providing an insight into the complex

world of intelligence - in a manner that can be understood by those of an early age - it will help demystify the subject. More importantly, senior officials note that a child's first contact with espionage and 'secret agents' is via the television or picture house. Cartoon characters, dashing agents, incredible plots, spectacular gadgetry, fast cars, stunning graphics and the odd explosion or two, is far more enjoyable to a child than a 1960s Cold War thriller starring Michael Caine and a freezing Berlin apartment. Technology has allowed the movie and television industry to create exciting scenarios that are bound to ignite and stimulate the minds of children. Coupled with the huge rise in number of 'secret agent' video games, children believe the intelligence world is a fantasy land - a battleground between good and evil and those inside taken on mind-boggling adventures.

## BALANCING ACT

To counter this make believe, officials realise that to educate students properly they must portray them-

selves in a realistic fashion - without totally removing the myths developed in Hollywood. It's a combination that can be analysed by the literature and graphics often seen on intelligence service websites. However, it's no longer unusual to see prominent intelligence figures visiting schools and universities to deliver their 'message' either. It's a subtle recruitment tool.

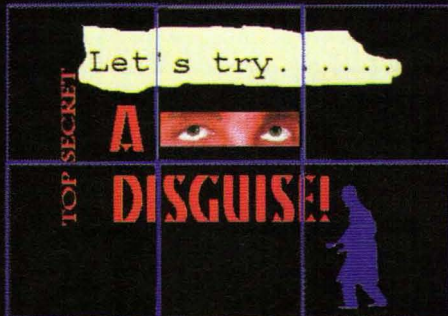

The CIA kids page explains its mission: "When people think of the CIA, they think of people lurking around in trenchcoats, sending messages in code, and using cool tools to do their job. Well, to some extent that's true, but it's not the whole story. The Central Intelligence Agency's job is to help the President, the National Security Council, and all other government officials who make and carry out US national security policy."

The agency then explains how this is achieved. Note the phrase 'special activities', it's a subtle term for espionage:

1. We give accurate and timely intelligence (or information) on foreign threats to our security.
2. We conduct counterintelligence or other special activities relating to foreign intelligence

## FIVE AND UNDER

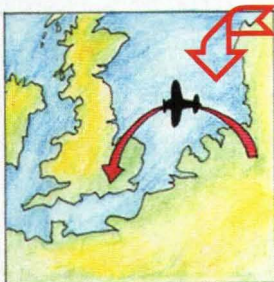

The CIA's 'Dr Disguise' allows the child to dress these two agents in a variety of clothes, hairpieces etc. We're not too sure about their wardrobe, however! But it's good fun and the dog is an interesting addition

Blockbusting movies such as *Mission Impossible* have sparked the imagination of children and led to a massive interest in espionage

The enemy sends new instructions back to the double agent

The double agent passes the enemy's instructions back to his original controller

The double agent's "controller" gives him information to send to the enemy

## MI5's explanation of a double agent

and national security when the President asks us to.

"OK, that's the mission, but how do we do it?"

Well, first let's look at how we are asked to do a job. We call it "tasked". Just like anything in life, there is a way or procedure for how things are done; we call this the intelligence cycle.

When we get tasked, we have to follow this cycle to do the job right. There are also checks and balances in place, and the Agency is subject to congressional oversight.

All US-based government

websites (child areas) carry an advisory note to parents. The sites present themselves as essentially fun and educational and that

## MI5 KIDS FEATURE: COURTNEY DE RYSBACH THE INVISIBLE INK SPY

Spies have used invisible ink for many years to send secret messages. In this section, we'll show you how it's been used and tell you how you can make your own invisible ink.

Courtney de Rysbach was a popular entertainer who performed in shows all over Britain during the First World War (1914-1918). But he had a dark secret - he was a German spy!

Rysbach travelled around the country, giving performances in towns and cities all over Britain. At the same time he was finding out secret information to send back to Germany. In July 1915, he was caught by MI5 and sent to jail for the rest of the war.

It was very difficult for spies to send messages to Germany during the war. Telephone cables to Germany were cut, so they couldn't just phone home. Radios in those days were very big and difficult to hide. Letters sent to foreign countries were opened and read to make sure that they weren't from spies. So they had to find other ways of passing on secrets

Rysbach had a clever answer. He sent messages written in invisible ink on sheets of music. The messages were concealed between the lines of music. If you looked at the sheets, all you would see would be the musical notes. But if you treated the sheets in a special way you would see the invisible writing.

information on visitors (adults alike) is not gathered.

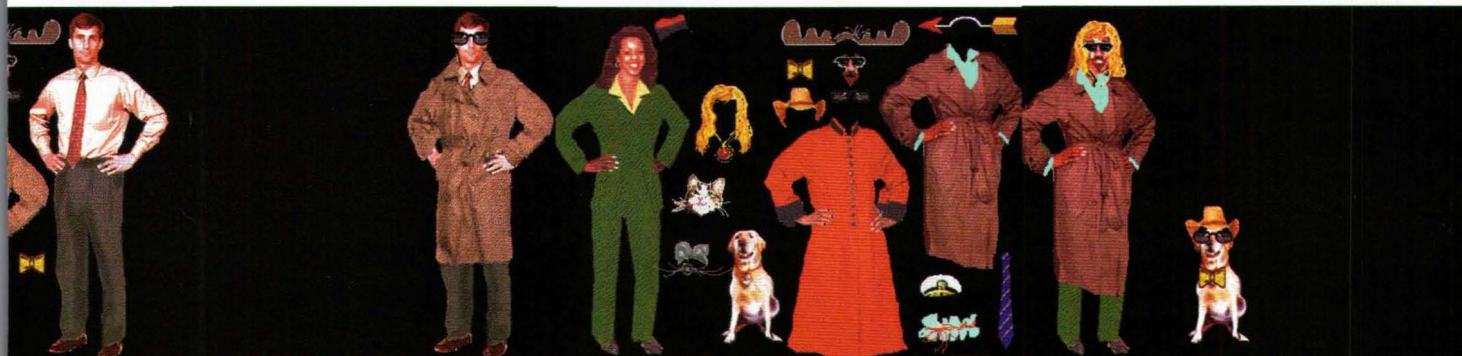

Youngsters logging on to the CIA site can find an array of challenges (varying difficulties) coupled with the important ingredient of fun. There is a basic disguise game (probably intended for children under five) where the user can change the appearance of two agents... and their dog. It's not lost on officials that children love animals. For older students codebreaking is a particular favourite. The CIA engage with a historical note, a challenge, and then prompt the student to have a look at a book listing featuring some top titles. The code breaking challenge is intended to make the child think and use pen and paper to help calculate the answer. Once the formula has been worked out - the rest should be easy. The CIA explain:

"Codes have been used throughout history whenever people wanted to keep messages private. In American history, George Washington sent coded messages to his agents, and the Culper Spy ring used codes to communicate with each other. Members of the Continental Congress also encoded their documents. Read about the Enigma decoding machine and the

role it played in World War II. If you're up to the challenge, try to decode the following messages. Read the directions carefully and bust those codes! After decoding each message, click on the 'Verify Code' button to see if you were successful. If you enjoy the codes, you may want to read more about them. There are several books about codes, codewriting, and decoding messages on our booklist."

Geography trivia takes the child across the globe, after all, the CIA is predominantly an international agency. A word search puzzle allows the child to find 'Central Intelligence Agency' and other US intelligence agency names. The youngster soon learns that the CIA is but one of a whole host of agencies delivering and receiving information. It's a subtle way to impress that the intelligence world is made up of many 'gogs' not just the CIA. A listing of the names features below the graphic and once a word has been found, 'FBI', for example, it can be clicked and the youngster is taken to the respective site enabling them to continue exploring the world of intelligence.

CONTINUED NEXT ISSUE: Eye Spy examines some surprising intel web sites that youngsters can further their education.

# EYE SPY

## PRODUCT REVIEW ★★★★★ **THE INTERCEPTOR**

**S**py cell phones have existed for years, most have been hardware modified and are reasonably effective. Because of the cell phones popularity, engineers and designers working in the intelligence field have come up with all manner of ways to change the device into something more covert, be it a video camera or a listening device.

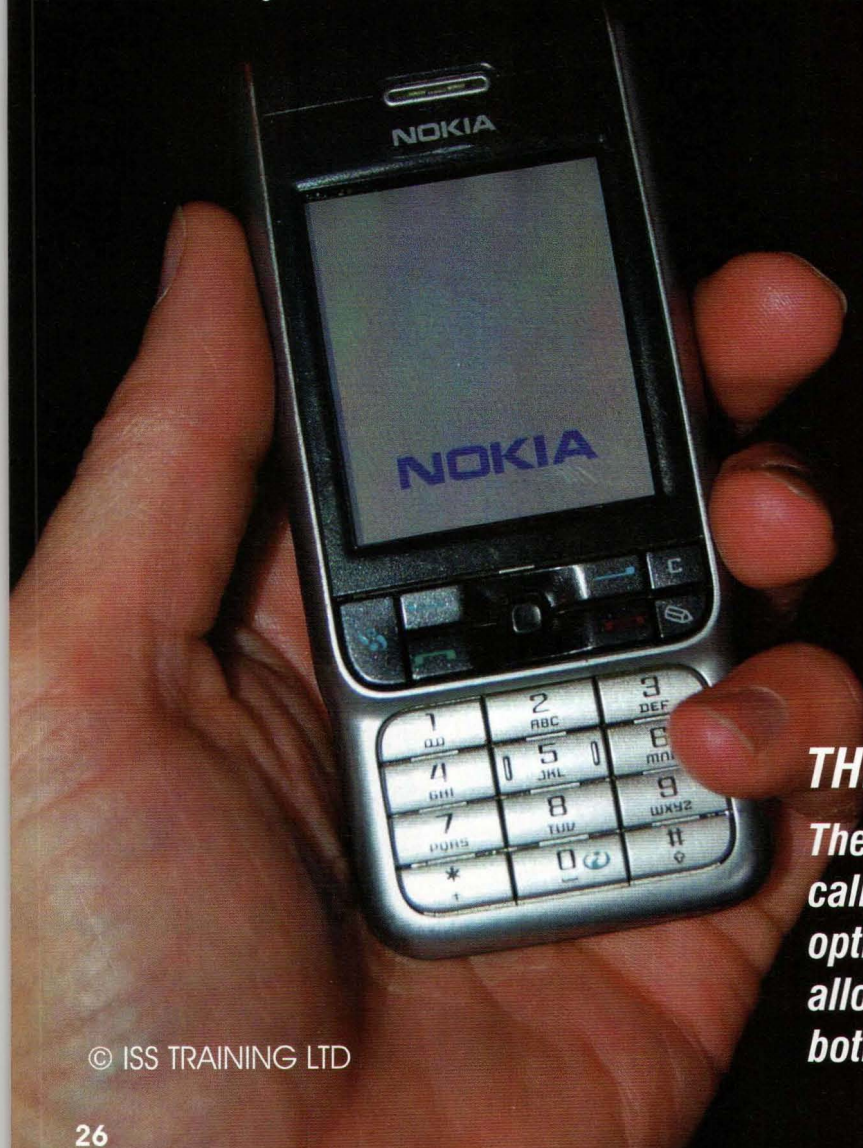

The most popular device is the modified cell phone which is left in a target area. By dialling the spy phone's number, it automatically opens up the internal microphone so that you can listen into the conversation taking place within the phone's vicinity. When called the phone does not ring, light-up or vibrate. Distances are of no consequence because the signal is transmitted via the mobile phone network. If an inquisitive person spots the spy phone on a

table or shelf and tries to use it, they will find it impossible to turn on - it simply gives the impression the battery is flat.

Spy phones can also be used in vehicles. A connection to the car's battery means they are constantly available for use and there's no need to worry about a failing battery. The phone is usually tucked away behind the dashboard.

Eye Spy tested new technology that promised a great deal more than ordinary spy phones. What makes this system unique is that it's 100% software based and will turn an ordinary cell phone into something rather unusual.

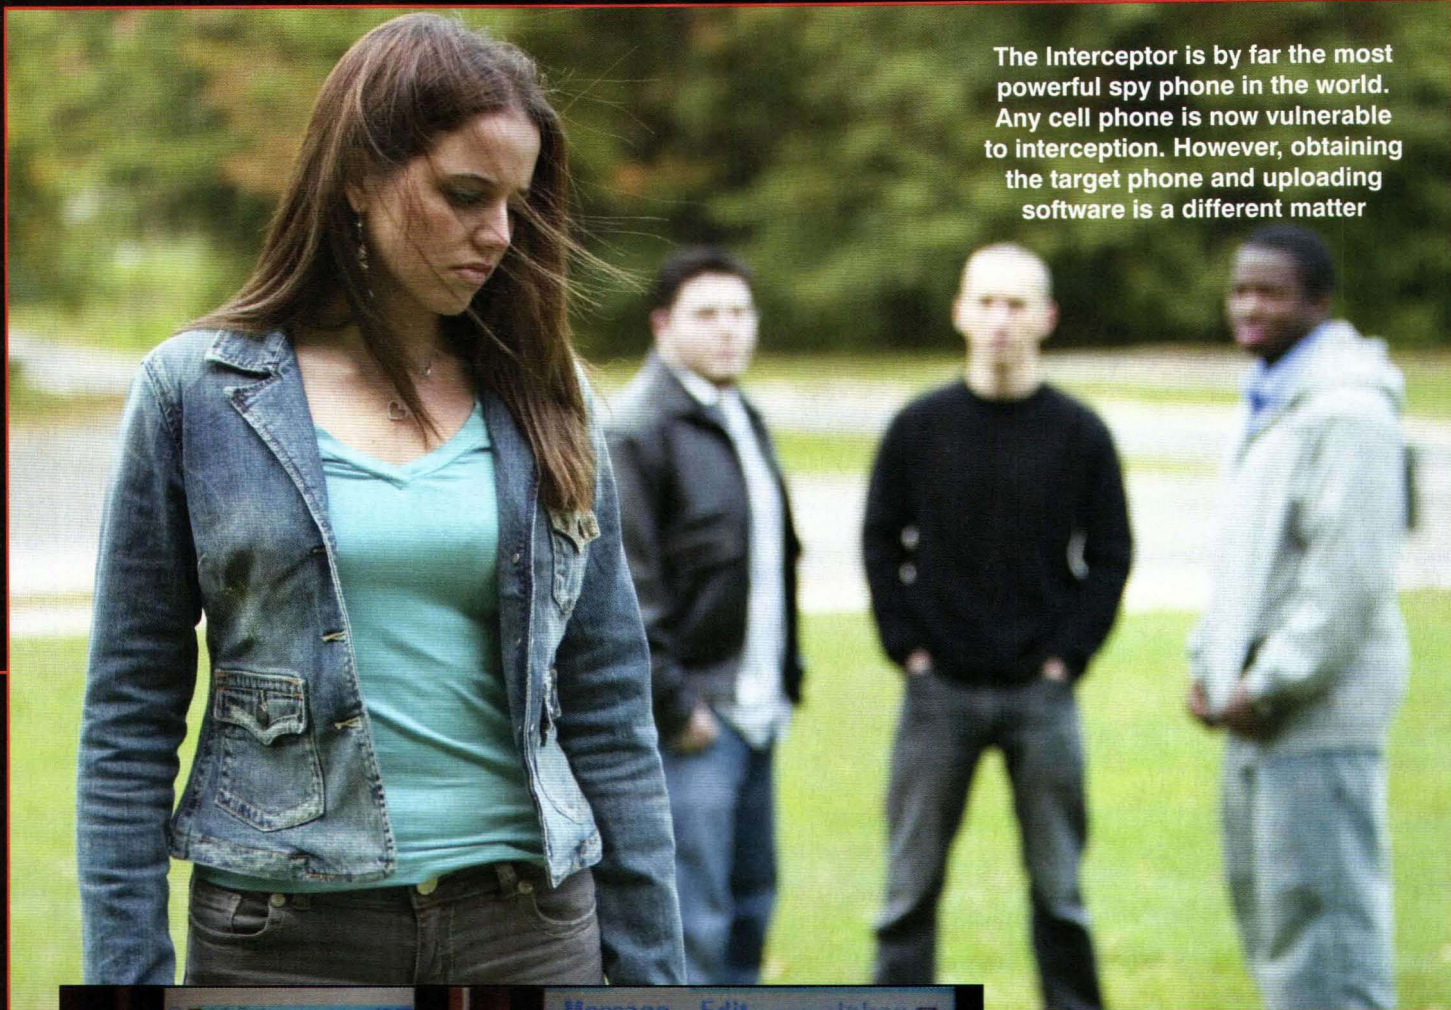

The target mobile phone is not reconfigured through the phone's menu settings but a clever piece of software that is transferred directly to the phone. The file size is no bigger than 64kb and is generated specifically for the handset you wish to monitor. This means you cannot install the software on multiple handsets as the software will only work dependant on the individual IMEI number of the phone. All that's required at this stage, is acquiring the actual target phone and a computer with an infrared port or Bluetooth dongle. The phone automatically re-boots and self installs the software. It will now transmit data to any pre-defined

### **THE ULTIMATE SPY PHONE?**

*The primary and unique feature is the call interception which gives you the option to dial into the target phone allowing you to intercept and listen to both sides of the conversation*

The Interceptor is by far the most powerful spy phone in the world. Any cell phone is now vulnerable to interception. However, obtaining the target phone and uploading software is a different matter

**Eye Spy intercepted text messages and was able to locate the area of the user via the cell phone mast**

mobile phone. So what's this new breed of spy phone capable of?

We tested the Full Interceptor Suite that has all the features including Text Forwarding, Text Alert, Spyphone (listening in), Location, Boot/SIM change notifications, and Call Interception. The target phone continues to function normally but activity (calls and text) are secretly duplicated and forwarded to your own mobile phone without the user knowing. You can also call the phone and listen into conversations or sounds in the vicinity. Should the user make or receive a phone call, you will also receive a text message detailing any of the outgoing or incoming telephone numbers. Whenever the user changes the SIM card you will receive a notification that the SIM has been changed along with the new number.

The primary and unique feature is the Call Interception which gives you the option to dial

into the target phone allowing you to intercept and listen to both sides of the conversation. There is no indication the mobile phone activities are being monitored. No number logging in any folders and no call number will be registered even though you have called the phone.

In addition, if the phone is switched off, it will automatically send you a text to say when the phone is switched back on again. You can also programme the phone to provide you with its location, albeit, it provides you with a code of the area locating the nearest cell phone mast. That's quite precise and a method already used in the intelligence world to identify user locations.

All the features can be switched on or off at your discretion including changing the pre-defined number by simply sending a text message with the unique seven-digit code to

the target phone which the software will recognise and act accordingly. These programming texts are not visible on the target phone and this is a super little feature which doesn't arouse suspicion to the end user.

There are other combinations of features available that can be purchased independently depending on the application needed. You might only need the Text Forwarding or Text Alert for example, or you might only want the listen in feature. Best of all, these new generation spyphones are WORKING mobile phones, unlike the predecessors which were 'dead' or non working as a cellular phones.

The benefits of using this kind of spy phone means you can give the phone as a gift if you suspect something out of the ordinary, or perhaps monitor the activities of your children against mobile intimidation. If for example your phone is stolen, the thief wouldn't get far if you are able to receive all his activities including phone numbers, texts and to overhear any conversations.

Conclusion: The full 'suite' of options is fairly pricey, but overall this is a very powerful intelligence gathering device which has many applications for mobile telephone surveillance.

# AGENT PROVOCATEURS

Continued From page 9

## ENABLING A STING

The most recent high-profile sting operation relates to Hemant Lakhani - a British weapons dealer who tried to sell ground-to-air missiles to a 'terrorist group' based on the eastern seaboard of the United States. Unfortunately for him, the sleeper cell buying the powerful weapon was actually an undercover FBI unit and the seller a Russian firm liaising with the FSB.

To enable the sting, intelligence officials from MI5, MI6 and Russia's FSB were involved at every level. The FBI learned of a man who had praised the attacks of 9/11 and wanted to sell weapons to terrorists. He also had contacts with a known extremist wanted for bomb blasts in India.

Lakhani got the name of a potential buyer claiming to represent a Somalian terrorist group. He then travelled all over Russia, the Ukraine, and Cyprus to find and order 50 shoulder-fired missiles for extremists to use in attacks against aeroplanes. After meeting the 'buyer' several times in New Jersey to seal the deal, he then asked for payment to be wired to bank accounts in Hong Kong and Switzerland.

An FBI official said: "Welcome to the world of twenty-first century global crime and terror."

The FBI also recognised that to conclude the anti-terrorist operation, they would need to liaise with other law enforcement and security partners across the globe.

The missile buyer was actually a US government informant who contacted the FBI after hearing from the dealer. He agreed to help the police in an undercover sting.

Intelligence revealed that Lakhani planned to export the surface-to-air missiles from Russia. Bureau agents flew to Moscow and met with representatives of the Russian Federal Security Service. The FSB explained Lakhani was already under investigation and a joint operation was forged.

SA-18 Igla

COURTESY: POLISH ARMED FORCES

Lakhani travelled to Moscow and then to St. Petersburg to meet with missile suppliers. FBI and FSB agents already had him under surveillance. An arms factory helped in the ruse and provided a Russian-made shoulder-launched SA-18 Igla missile - a move approved by the US. However, the weapon had already been rendered safe and its explosive charge removed.

At the first meeting, two undercover FSB officers posed as the suppliers and showed

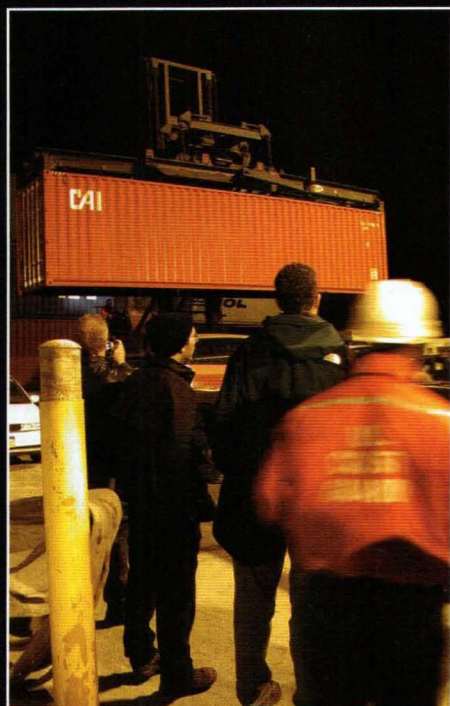

Real-time covert FBI film footage (frames) of Hemant Lakhani in the hotel with undercover FBI agents posing as terrorist weapons' buyers

The harmless missile was offloaded in the port of Baltimore and later transferred up the coast to Newark

the dealer the surface-to-air missile. As FBI agents listened in, Lakhani bought the missile and ordered 50 more. The first transaction was worth about \$85,000 (£45,000).

Lakhani sent the fake missile to the United States where it was stored at a warehouse in Baltimore, allegedly disguised as medical equipment.

He then met with the undercover informant four times near Newark, New Jersey, to finalise the sale. In the last meeting, on 12 August 2003, he recommended the undercover 'buyer' use the missiles in simultaneous strikes. "It will shake them," he said. "They will run. They will think the war has started." FSB agents were listening in the next room.

The Russians were also present when Lakhani was arrested at a 'primed' hotel in Newark,

New Jersey after collecting the crate, said to contain the missile, from the Baltimore warehouse. Shortly after, two more men were arrested at a New York gems dealership on Fifth Avenue and charged with helping to finance the deal.

During the trial, representatives of New Scotland Yard and the FSB testified - the first time FSB officers had ever offered testimony in a US Federal Court. Lakhani was convicted by jury and sentenced to 47 years in prison.

The sting operation began around the same time al-Qaida terrorists used shoulder-launched missiles and narrowly missed an Israeli charter flight taking off from Mombasa, Kenya. Months earlier, another missile missed a US military jet taking off from Prince Sultan Air Base in Saudi Arabia.

The sting operation involved security forces from Russia, India, Great Britain and the United States. Though the actual end game was played out in Newark, much research was conducted in several countries

The new technology can be used safely in any area where a threat may arise... including military check-points or mass transit systems

# REMOVING THE W

Eye Spy recently learned of a powerful new system set to revolutionise the security industry. Distributed by DefenderTech International Solutions (DefenderTech), the overall product will make journeying abroad, protecting installations, buildings and people, and thwarting the terrorist, criminal or drug smuggler easier. More importantly, it is designed to stop the threat at source...

It's small, compact, edging on the boundaries of 'attractive', but its real cunning lies in the technology inside... the DefenderTech-distributed Passive Millimeter Wave Camera will change the way people are checked when boarding airliners, entering mass transit areas, buildings and going through check-points. However, wherever there is a need for security, or to protect people or property, this system is suitable. Besides its impressive ability to locate concealed objects, the device has one major advantage over its competitors - the camera does not radiate the screening area

with x-rays, microwaves or infrared beams - it's passive. Impressive technology, and probably sufficient to end concerns from certain sections of the medical profession who contend beaming x-rays at people is a health threat.

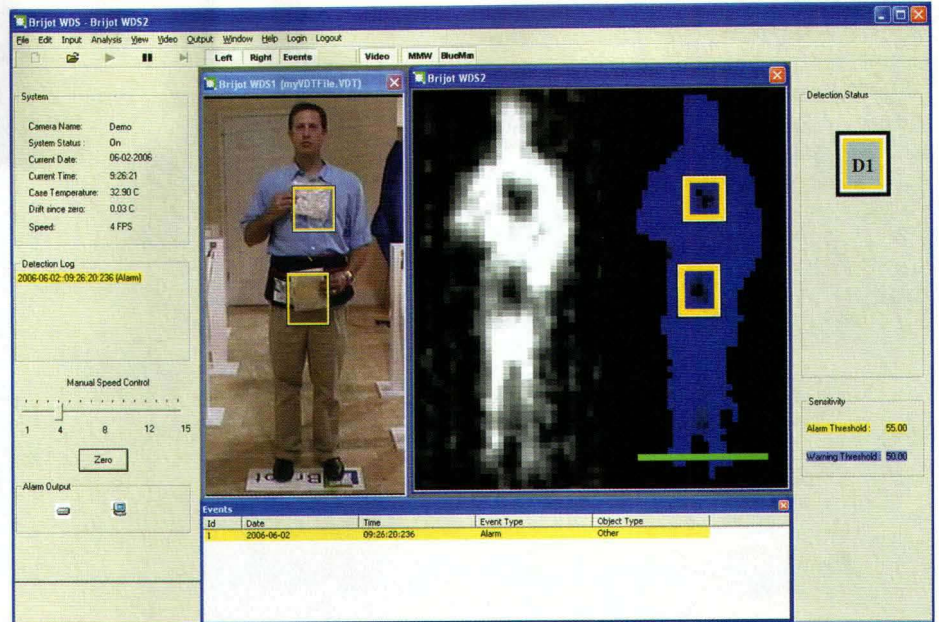

Other security systems have been accused of being "too revealing", in that they can graphically display a person's anatomy or reveal too much of an "outline". The technology used in this system cannot provide detailed body imagery, but rather focuses on items that will interest security operators.

## APPLICATIONS

A few months ago the world learned of a devastating plot that involved the secreting of liquid explosives onto transatlantic airliners. British intelligence discovered that as many as a dozen aircraft would be targeted by multiple bombers. The plot was as cunning as it was lethal - the bombers intended to carry the fluids on board inside ordinary cartons and bottles and then mix them inside the aircraft toilet. At airports across the world, security officials asked travellers to remove water bottles, tins, aftershave and most containers

# Technology born in the 1930s set to outfox the terrorists

An example graphic of user interface from DefenderTech-distributed concealed threat detection system. Here the subject is holding plastic explosives

designed to carry fluids. However, some people still decided to try and beat the measures by carrying bottles inside jackets and hand luggage.

DefenderTech's system will undoubtedly provide another layer of security to existing security measures to help beat the terrorist, or indeed, the traveller not wanting to comply with regulations. But interestingly, its genesis and ability to "see" owes as much to astronomy as it does to current day technology.

The system will augment other airport security measures

extremely complex device that is typically larger than an average two-storey house, and effectively transformed it into the smallest radio telescope in the world. Improved levels of detection, and more user-friendly features and software were developed by Brijot Imaging Systems and the camera became available for active service in areas like Iraq in 2005.

Since then, Brijot Imaging Systems has created a bedside table sized device that can be obtained via distributor DefenderTech, for professionals operating in the public and private sector alike. The system dramatically raises the potential for 'real time', concealed threat detection. It's already being hailed as one of the most sophisticated systems in the world.

Its mobility and small size coupled with advanced technology enables operators to detect bombs, assault weapons and other items. Because it uses passive millimeter wave technology, it can also 'see' objects

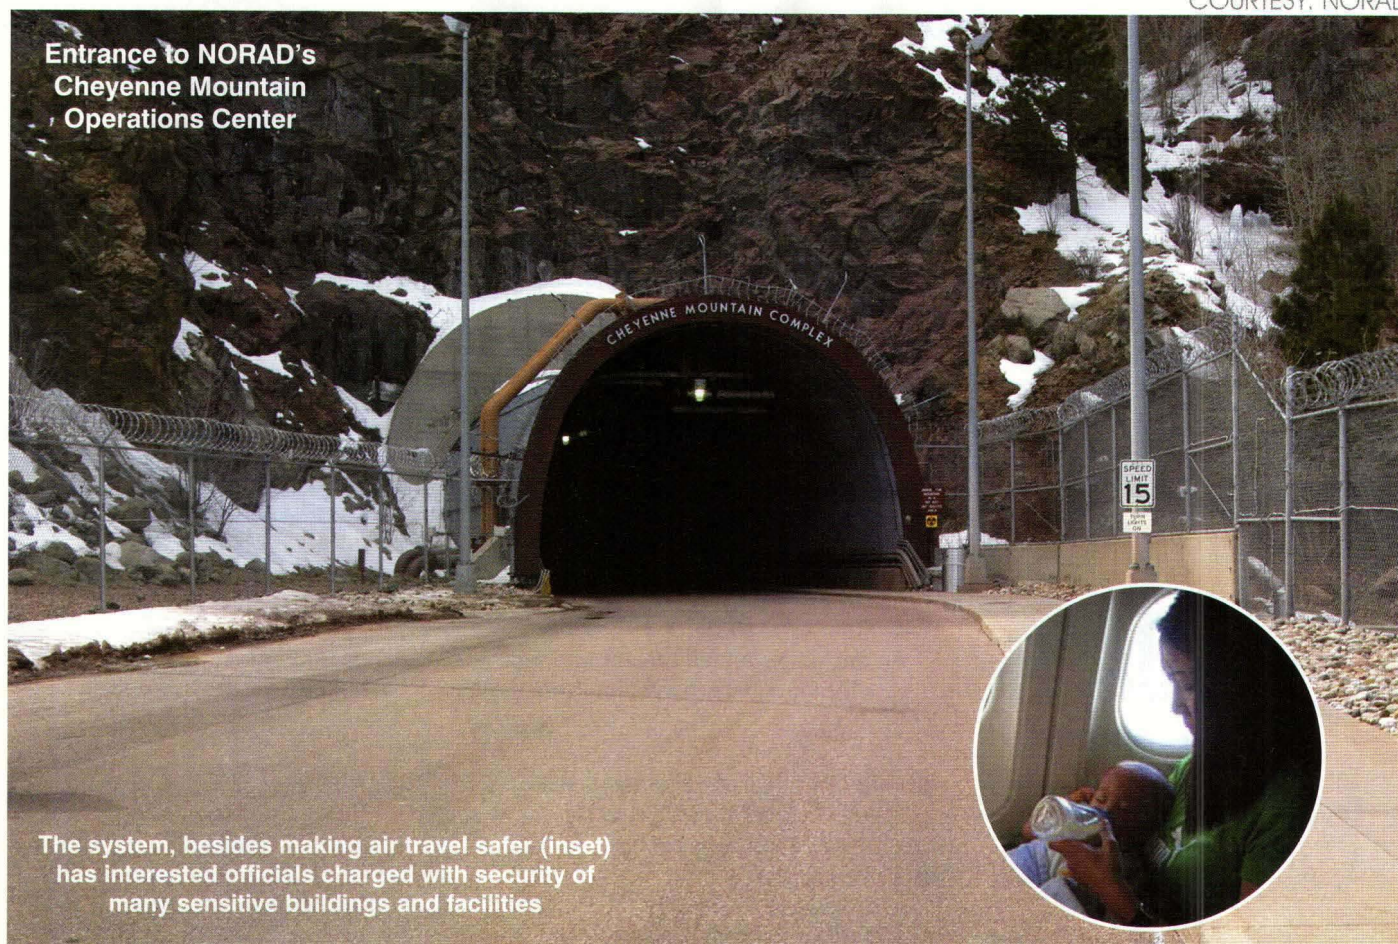

NASA engineers inspect a passive millimeter wave camera

In the 1930s, radio astronomers collected information from the heavens by using large dishes that absorbed millimeter waves. This enabled them to locate and 'listen' to remote objects in the night sky. By focusing on radio waves emanating from distant galaxies, astronomers could pinpoint anomalies or satellites in our solar system and beyond. They could also identify so-called 'black holes'. It revolutionised the way we looked at space - and how data was gathered. Scientists soon discovered that millimeter waves naturally emanate from human beings. If the technology could be harnessed into a small working model, then its potential for the intelligence world would be significant.

In 1998, the US National Institute of Justice sought to further develop this technology for security screening purposes. Lockheed Martin rose to the challenge and took the traditional millimeter wave reading dish, which is an

## Entrance to NORAD's Cheyenne Mountain Operations Center

The system, besides making air travel safer (inset) has interested officials charged with security of many sensitive buildings and facilities

made of plastic, ceramics and other composite materials... even bulky paper. What it can't do is "see through" people, thus it's likely two units will be necessary - just in case the suspect decides to conceal something behind him. However, an option for a single camera is to invite the person to turn full circle.

For security screeners monitoring people on an airport concourse or similar it's perfect, because the technology negates the use of x-

rays - thus avoiding a confrontation by any person contending such rays are harmful.

One major problem for the security services has been the constant threat of on-board 'bomb-assembly'. In the UK-USA airline plot, it was suggested the bombers would breakdown the device into small pieces, hide them in innocent-looking objects, and then deposit items one by one in the toilet for the next operative to assemble. The DefenderTech system can be deployed covertly, behind materials like drywall, fabric or papers. This type of covert deployment could isolate persons carrying or re-assembling objects in unusual places, enabling officials to act. It's a superb system that combined with other intelligence gathering, affords a further layer of security. And that's not lost on DefenderTech.

Stopping a suicide bomber, for example, before he or she reaches their destination is crucial. In both Iraq and Afghanistan, casualties are mounting because border patrol and check-point officers are being approached by persons concealing devices under clothing. By establishing a check-point away from a location, camera users can examine the individual and identify any threat before the person approaches. There is no need for an operator to be in the vicinity of the camera as a fully on-board computer allows the visual monitoring output, alarm notifications and

other integrated systems to occur far away from the vicinity of the camera. DefenderTech, in fact, provides a full suite of such coordinating products and systems as a fully-contained unit through which persons can be passed and screened, intelligent video systems that can track persons of suspicion, and network operations centres to enable the monitoring of

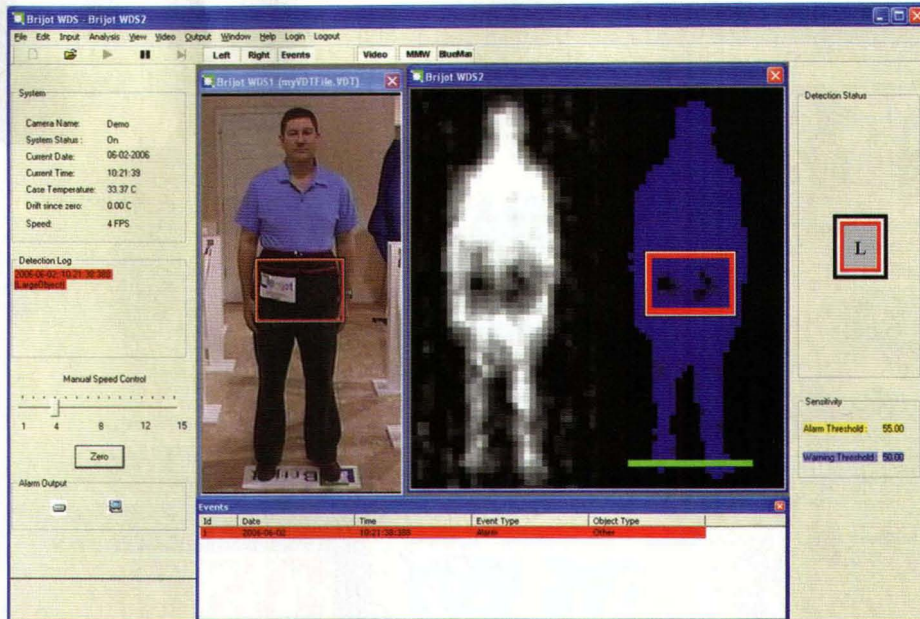

The system will make it even more difficult to smuggle arms through security - even inland transit points such as railways

multiple weapons detection systems at once. The camera's unique networking capabilities mean more types of locations and applications can use the system effectively.

Currently ready for interior use, and measuring just 27 x 13 x 19 inches, each camera costs less than \$100,000 with volume pricing

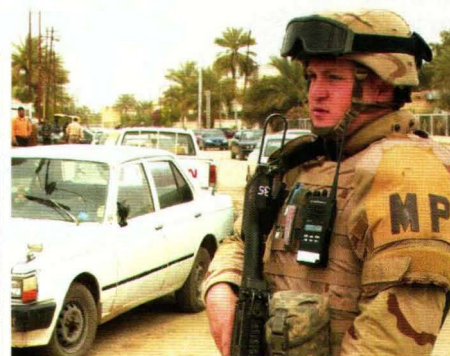

available, and that includes the fully on-board computer, graphical user interface and high illumination software as well as an assessment of potential integration opportunities, installation, service and standard warranty. Of further interest, because it uses millimeter waves it can operate from behind walls making it an ideal 'first contact security layer'. The fact that the system is portable means that if a threat occurs elsewhere, or added security is necessary at a certain location, the camera can be relocated swiftly. Other systems tend to be permanently located and require a huge amount of work and preparation if the system needs moving.

With the camera's real-time video output, DefenderTech-trained screeners can ascertain potential targets quickly and take action to eliminate the danger.

#### AFTERMATH

The millimeter wave camera is also the core unit of DefenderTech's trademarked process known as Protadas™ which is a clue to revealing that as a stand-alone device it can be augmented by intelligence, advanced supplemental technologies and lessons learned in years gone by.

Once a suspicious item has been identified, what takes place thereafter is of equal importance. This is where DefenderTech's Protadas™ process - proactive threat assessment, detection and suppression - comes into play. The camera and resulting data is intended to help security personnel make the best informed decisions on policies and procedures and managing detected threats. Furthermore, the camera can integrate and engage with access control, biometric readers, CCTV, identity and visitor management systems and intelligent video. Using

Security checks can be made well away from vulnerable locations - and personnel

such systems can only augment the 'watchers' who mingle with passengers and monitor with their eyes and ears.

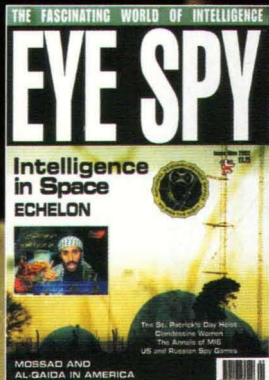

The new camera is literally 'making waves' in the intelligence world and demonstrations are taking place in several major cities, including New York, Washington DC, Detroit, Las Vegas, London and the Middle East. Several major security agencies have also attended demonstrations and have expressed a keen interest, including NORAD and New Scotland Yard. Bruce Campbell of DefenderTech's New York division told Eye Spy: "The camera has already impressed public sector security services from Great Britain and the United States. Private-sector security organisations delegated to monitor high-profile buildings and facilities are also keen to research the system's potential."

Eye Spy was granted permission to examine DefenderTech's potential, and are confident that in future years, travellers will see many of the 'little boxes' appearing in places that require additional security. For those of ill intent, the work of radio astronomers decades ago may come back to haunt them. For billions of people simply wanting to journey safely, the system is truly a white knight.

# TRANSMITTERS

**SUPERIOR TRANSMITTERS PROVIDING  
USERS WITH A GREATER RANGE, LIFE  
AND PENETRATING POWER THROUGH  
OBSTACLES**

**ALL OUR UHF TRANSMITTERS  
REQUIRE A RECEIVER**

You will need a receiver to pick up the signal from these bugs. All Eye Spy receivers and transmitters are pre-programmed.

## UHF KEY RING TRANSMITTER

Ready to use in one second - Eye Spy's new key ring UHF transmitter requires the use of just one 3V lithium battery (included). Simply open the case, pop the battery in, and it starts transmitting immediately.

**Order Code:**  
**LSSKR**  
**£180.00**  
**\$330.00**

With a range of 650 metres, this remarkable bug can be left in offices, vehicles or just about anywhere! Use with any of our UHF receivers. Sound pick-up - excellent.

## UHF CREDIT CARD TRANSMITTER

This remarkable UHF transmitter is only 3mm thick and can be slipped in the side of a wallet, file, folder or pocket. It also has the advantage of voice activated transmission. Battery operated (included). Stunning quality. Range 850ft. Use with any of our UHF receivers

**Order Code:**  
**LS-CCT**  
**£195.00**  
**\$350.00**

## UHF BODY WORN TRANSMITTER

Bodyworn or for a room this battery-operated UHF miniature transmitter is superb. The 6mm diameter microphone can even be pushed under door gaps to listen to sounds in another room.

Range 850ft

*Built by specialists  
and used across  
the world*

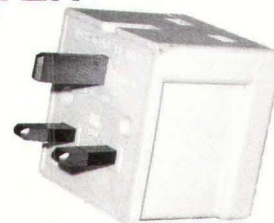

**Order code: L-IR1 £125.00 \$230.00**

## UK AND USA PORTABLE MAINS-DOUBLE PLUG ADAPTOR UHF TRANSMITTER

United States model

A conventional fully mains-working double plug adaptor. Inside is a tiny UHF transmitter which becomes active and powered when plugged in. 24-hour-a-day transmission. No batteries needed just plug into any socket. Range 850ft.

UK model

**Order code: LH-1**  
**£195.00 \$350.00**

*please state which model you require*

## UHF CALCULATOR TRANSMITTER

Fully working desk calculator conceals a tiny UHF transmitter. The unit can be left in an office or room environment without raising any suspicion. Range 850ft. Battery life of 15 hours. Use with any Eye Spy UHF receiver.

**Order code: LS-TX-6 £195.00 \$350.00**

*calculator model may be different to that displayed - but of equal quality!*

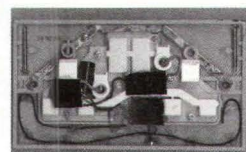

## MAINS-DOUBLE SOCKET UHF TRANSMITTER

Using the identical UHF transmitter as the LH-1 (above - top), but inside is a fully working mains socket. This unit is ideal for permanent applications - easy to install. Continuous 24-hour-operation. Range 850ft

**Order code: LS-TX-4 £195.00**

Only UK model available

## UHF MAINS MODULE BUG

Powerful and reliable mains' electricity powered transmitter. Once connected this device transmits 24-hours-a-day, as long as power is supplied to the point of connection. Easily concealed. Range approximately 850ft

Only available to UK readers

**Order code: LS-MMT**  
**£195**

## HIGH QUALITY METAL-CASED ROOM BUG

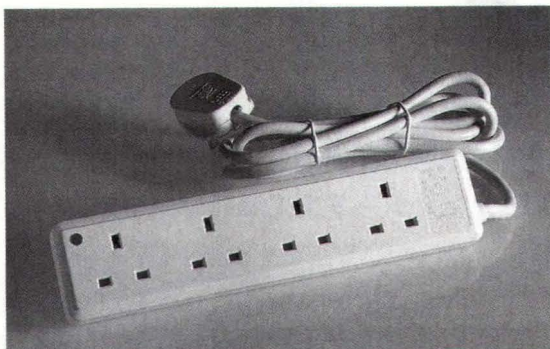

Sleek and ultra professional room UHF transmitter. This tiny bug is ideal for 'quick return' operations and can be concealed easily. Battery powered, the device contains an ultra-sensitive microphone. Range 300 metres. Note: This device is part of Eye Spy's transmitter and room bug set.

**Order code: L-HA1**  
**£195.00 \$399.00**

## WORKING MAINS EXTENSION TRANSMITTER

Eye Spy's extension socket bug is ideal for any environment, but especially those where there is a need for multiple sockets. Powered by mains electricity this UHF transmitter has a sensitive microphone and a 100-120 metre range.

UK ONLY £285.00 Order code: RV-EEB

## HIGH QUALITY UHF PEN TRANSMITTER

High quality fully functioning ballpoint pen conceals an ultra-miniature UHF transmitter. Capable of detecting voices and sounds within five metres; transmits 80 metres. Ideal for close range surveillance and 'next room' monitoring. Left on a desk for example, the pen will transmit continuously for up to 6 hours. Supplied with battery.

Power: Two silver oxide batteries. Built-in antenna.

Weighs just 300gm.

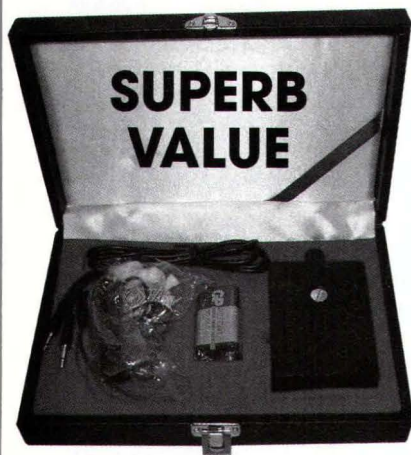

Order code: LH-PENUHF £250.00 \$390.00

## TRANSMITTER AND RECEIVER KIT

### PROFESSIONAL 10 OR 3 CHANNEL UHF RECEIVER AND TRANSMITTER KIT

This transmitter and receiver (both metal cased) kit is ready to use in seconds. Our tiny room transmitter (see room bug - opposite page) the size of a matchbox is extremely sensitive to sound and can be concealed absolutely anywhere. It will pick up voices up to 40 feet away and transmit with amazing clarity to the receiver. With the 10 channel receiver you are able to add different transmitters in different locations, and simply flick through one at a time.

Powered by one 9V battery. Range approx. 1,000ft. Comes complete with quality earphones and accessories. Battery included.

Order code:  
HL-10  
£290.00  
\$575.00

## POWER MONKEY THE ULTIMATE EMERGENCY CHARGER

We've all been there. Away from home, nowhere near the car, on a train or coach and you haven't got the mains powered charger with you (which is fine because you don't have access to a wall socket anyway) and your cell phone or laptop computer has just run out of battery power. Or maybe your surveillance camera battery has just died and the target is getting away or your radio is out of range

and you find it necessary to revert to a cell phone... but the battery has just failed. Well, there is a new product on the market which will help you avoid such situations - it's called The 'PowerMonkey'.

Supplies over 90 hours standby on cell phones, 22 hours on two-way radios, 40 hours on an iPod, 6 hours on a Sony PSP, two full charges on a PDA plus it's original charge and up to 1600 hi-res pictures on a digital camera. The unit comes complete with:

- Nokia & Mini Nokia, Motorola V series, Samsung A288,

Siemens C25 and Sony Erickson wide connectors.

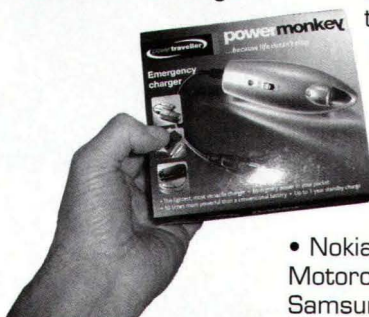

- 1 mini USB for Motorola Raza V series, Blackberry and Bluetooth headsets.

- USB for iPod, smart phones, PDA and other devices.

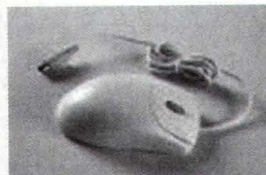

- Connector for Sony PSP and most digital cameras.

- Black felt travel pouch

Order code:  
PT-PWRMNK3  
£35.00 \$70.00

## COMPUTER MOUSE TRANSMITTER

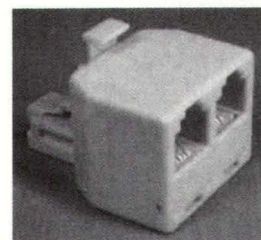

Once connected to a computer this smart transmitter mouse immediately becomes active. Unit will work on any computer.

Simply replace existing mouse. Ideal for covert recording in office or home. 100-120 metre range. Requires no additional wiring.

UK £299.00 USA \$550.00 ROW: £315.00  
Order code: RV-MT

## UHF USA TELEPHONE ADAPTOR TRANSMITTER

This telephone transmitter is concealed under an RJ-11 double telephone adaptor. The powerful unit transmits conversations from any telephone plugged into it. No batteries required. To record conversations simply attach a recorder to the receiver.

Order code: LH-USATRANS  
\$275.00

*WARNING: Some of the products advertised in this catalogue may be illegal to operate in your country. Please familiarise yourself with the law as it effects you.*

# RECEIVERS

**HIGH QUALITY RECEIVERS  
FOR USE WITH ALL EYE SPY  
UHF TRANSMITTERS**

## MORE RECEIVERS

Eye Spy has a large selection of receivers including models available for transmitters using FM and VHF - see [www.eyespymag.com](http://www.eyespymag.com)

### HIGH-PERFORMANCE METAL-CASED UHF RECEIVERS

Eye Spy's UHF metal-cased receivers can be used to pick up transmissions from any of the transmitters listed. The units can pick up transmissions from different UHF listening devices placed in several locations, simply by changing channels.

Powered by a 9V battery, the receiver has a range of 400 metres - comes with jack-plug so you can record transmissions and luxury earphones for privacy - all contained in a smart solid carry case.

#### 3-CHANNEL RECEIVER

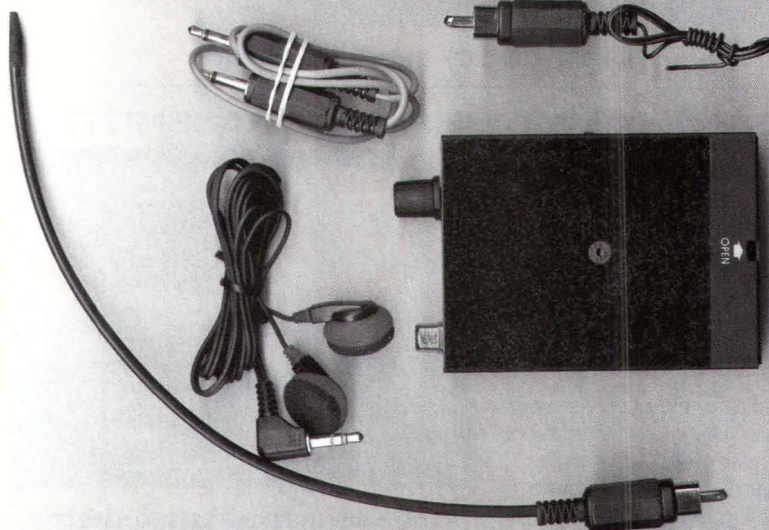

Order code: L-SS-3CR £145.00 \$290.00

## WIRED NIGHT VISION PIN- HOLE VIDEO CAMERA

The world's smallest wireless colour pinhole camera. New generation CMOS spy camera measuring less than 2 x 2 x 2cm. 35gm weight. Ideal for covert operations. If properly placed, the wide field of view angle enables you to view a whole standard size room. Can be used as a surveillance camera, or as a body worn solution.

Picture Element  
PAL: 628X582  
NTSC: 510X492  
Power DC6-12V

(Manufacturer price  
£130.00 \$195.00)  
**EYE SPY PRICE!**

Order Code:  
£65.00 \$100.00

## LOW LIGHT PINHOLE VIDEO CAM

High resolution mini pinhole offers automatic switching to B&W in low light conditions. Features 400 LOR DSP colour picture, Auto White Balance, and 3.6mm (93 degree view) pinhole lens. Operates on 12V DC. Includes free mount.

Order Code: TX-LLPVC  
£153.00 \$250.00

## CALCULATOR WIRELESS VIDEO CAMERA

Full colour wireless video camera plus receiver! Tiny camera incorporated into calculator provides stunning images that are sent to a receiver. Can be used in many environments. Range 350ft. DC 9V adaptor included.

Order code: L-CWVC  
£295.00 \$450.00

## THE PENCAM

Top of the range - the latest technology. The PenCam is a covert wireless colour video camera neatly disguised as a pen. Ideal for serious undercover surveillance, the PenCam cleverly conceals a quality video camera and microphone inside a working pen. With 100 metres transmission range and minimum illumination, undercover assignments can now be carried out with ease. Used by law enforcement across the globe.

Order code: MS133  
£499.00 \$799.00

## PAN-TILT- ZOOM CAMERA

WITH REMOTE CONTROL

High end pan and tilt dome camera with remote control. Weather proof and vandal proof video camera that will scan by panning and tilting with remote control.

Specifications: Sony  
Colour CCD  
480 TVL Heat and  
blow housing  
64 presets  
Built-in decoder  
24V AC

Order code: TX-PTZC

## CIGARETTE PACK VIDEO CAMERA

Actual cigarette pack with hidden colour 380 L.O.R. CMOS camera and transmitter. Three hundred feet LOS (line of sight) range. Single 9V battery operates camera/transmitter for 8 hours. To turn unit on, simply open the top and push the red button. A green LED confirms the unit is operating. Camera/Transmitter module can be easily removed to replace battery or insert into a new cigarette pack.

Kit includes cigarette pack camera, hard carry case, receiver, AC adaptor for receiver, 9V battery, and 12 hour AA battery Pak for receiver. Receiver included

Order code: TX-WCPC £350.00 \$423.00

## THE SNAKE CAMERA

A WIRELESS COVERT VIDEO CAMERA THAT  
WILL BEND AND "LOOK" ALMOST ANYWHERE

Family of products (black/white) based on the most advanced CMOS mixed signal technology. It integrates image array, signal processing, timing and control circuitry, all on a single chip. Applying a simple circuit and enclosed in a stylish design casing, it becomes a complete camera. It is suitable for low cost application. The fibre optic snakecam will bend to look around corners, go inside places you can not go and give you the video flexibility you need in covert video applications. Comes complete with everything you require, including transmitter, receiver, cables etc.

**Everything you require to examine the darkest of corners!**

**COVERT BLACK - Law Enforcement Grade  
Covert Button Camera with Digital Recorder**

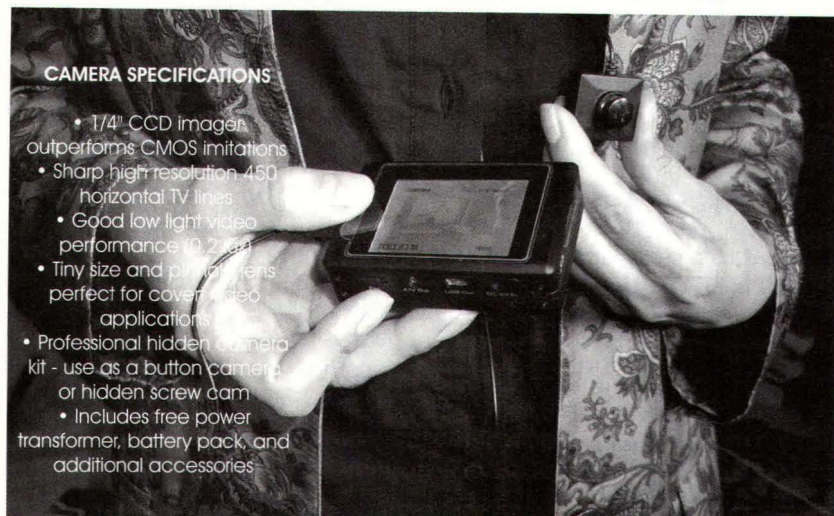

**Ideal for law enforcement, surveillance operatives, private investigators,  
radio and television journalists and all professionals**

Battery or card  
change-over takes  
about five seconds

## CAMERA SPECIFICATIONS

- 1/4" CCD image outperforms CMOS imitations
- Sharp high resolution 450 horizontal TV lines
- Good low light video performance (0.2 lux)
- Tiny size and pinpoints perfect for covert video applications
- Professional hidden camera kit - use as a button camera or hidden screw cam
- Includes free power transformer, battery pack, and additional accessories

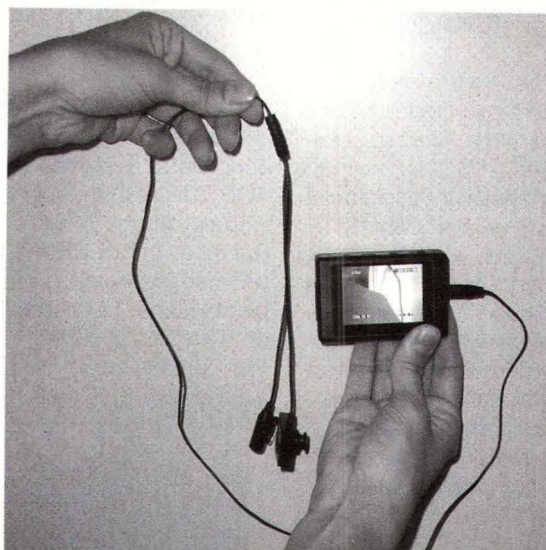

The quality of this colour covert button camera set is unmatched by any other system we have seen in this category. Manufactured in Japan it has a high resolution colour CCD camera module and a 4.3mm wide angle pinhole lens. This camera is 'plug and play' compatible with Eye Spy's superb PI Black portable digital video recorder (DVR) and is unsurpassed for set-up and ease of use. It's also compatible with all consumer VCR and DVD recorder units as well as most television sets. The DVR is small, lightweight with various options that make it the most flexible unit on the market - together they are known as COVERT BLACK.

## THE CAMERA

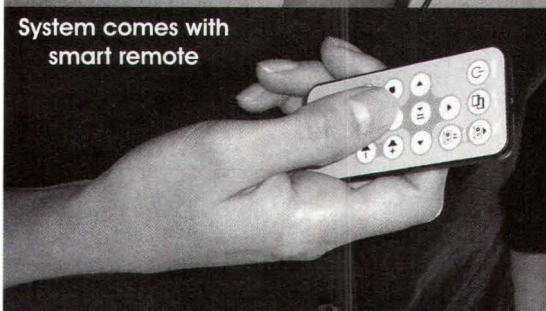

The camera is suitable for a wide spectrum of placements both bodyworn and stationary. The set is ultra lightweight and very low in profile - which makes it a very modular camera that can be used beyond just shirt placements, such as in a purse, backpack, tie, hat etc. Of added advantage, it has just one tough, but very slender lead that separates into two leading to the camera and microphone (audio version). The other end of the wire fits snugly and securely into the DVR which is internally powered. It's just one reason why we were impressed.

The 450 TV lines/ 0.2 lux in this camera provides sensational footage. It performs well in low light and adjusts well to lighting changes. The set is available in either PAL or NTSC format; with or without audio. The microphone on the audio version is easy to conceal and is of the highest sensitivity, so much so it is currently being used by law enforcement undercover surveillance officers throughout the United States.

Eye Spy's COVERT BLACK comes with a new advanced DVR, and four complete sets of matching buttons for the camera: two different sized buttons and two different types of screw heads (Phillips and Hex). The screw heads allow the user to fix the camera in a static position - thus only a "screw" would be visible. It also includes a 9V battery connector case. Finally, extra care must be taken when handling or wearing any covert facade-type

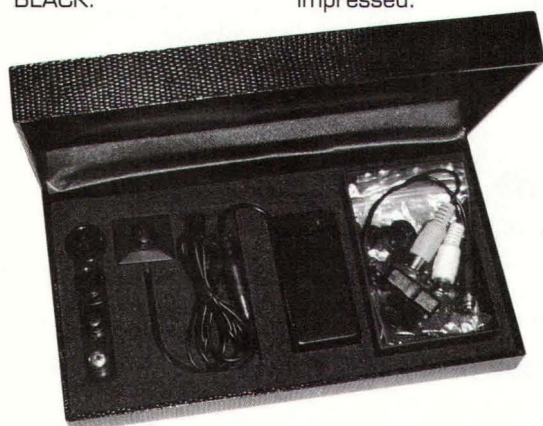

System comes with  
smart remote

device. Like most cameras in this range, this one is not rainproof so must be treated with care and never left outdoors or exposed to

the elements without the proper protective housings. It took our operative about two minutes to assemble and wear.

# NIGHT VISION

IDEAL FOR NIGHT-TIME SURVEILLANCE

## DIGITAL NIGHT VISION VIEWER CAMERA

State-of-the-art digital night vision viewing system. Advanced solid state circuitry provides 24 hour operation in any lighting condition. Using its "fast" f1.2 lens and the latest in high resolution image processing, NiteMax produces a bright and clear picture in the darkest environment and displays it on its built-in 2.5 LCD screen. The RCA video output jack allows easy connection to a VCR or camcorder for image recording. Uses a rechargeable Li-Ion battery (included), or optional AC/DC (120V) power supply for extended use (not included).

Many accessories available: Battery charger, Pouch case and strap. Optional NM-3X power lens Available (shown above). Digital night vision viewer/camera. Write for details or see [www.eyespyr.com](http://www.eyespyr.com)

Order code: TX-DNVVC £550.00 \$815.00

## CONDOR NIGHT VISION

Patented lever activated power supply substitutes expensive electronics, and the reduced manufacturing cost is passed to the customers. Ideal for camping, hiking and all outdoor activities. The fast lens, coupled with a good image intensifier, provide a sharp image which is as good or better than competing products at 2-3 times the cost.

NUMEROUS FEATURES

Order code: TX-CNV £225.00 \$295.00

## NIGHTFOX COMPACT NIGHT VISION SCOPE

NightFox is feather-light, compact, has excellent resolution, and high light gain. Built-in IR illuminator provides bright image even in absolute darkness. Taking night vision one step further, the NightFox is a pocket-sized power scope. Unlike other less advanced models on the market, NightFox gives you all the controls at your fingertips. With the

push of a button, the greyest night becomes green daylight. NightFox also has a built-in infrared. Just five inches long.

Order code: TX-NFOX £250.00 \$395.00

## DN-200 CAMERA/RIFLE NIGHT VISION SCOPE

In the early 1990s, the Soviet SpetsNas (special forces) procured a new rifle scope. The DN-200 was chosen from more expensive second or third generation devices because of the exceptional high resolution and compact size. The scope was successfully tested in Chechnya and approved.

### FEATURES:

# SAFETY

PERSONAL SAFETY PRODUCTS  
(MORE ITEMS ON PAGE 23)

## KEYCHAIN ALARM

This key chain alarm is small, compact, and easy to carry. Just press the panic button and the key chain alarm will emit an ear piercing, 118 decibel alarm that is guaranteed to attract attention. The alarm has two functioning modes: 1) By slightly pressing the alarm button, you can sound a warning chirp; 2) Depress the button completely, and you will sound a continuous alarm. The key chain also has a built in light to aid in finding the keyhole on your car or entry door in the dark. Battery included.

Order code: TX-KCA £18.95 \$18.95

## THE PRO TECH PLUS PERSONAL BODY ALARM

Here is the ultimate in personal alarm protection. It's been described as the Rolls Royce of personal portable alarms. The sleek, slim design of the ProTech personal alarm with flashlight fits easily into small hands, purses and even a pocket. The activation pin is connected to a wrist strap and when the pin is removed the alarm sounds at an ear piercing 130db. The alarm is also equipped with a flashlight, useful for dark parking lots or when entering a dark

*Doubles as a bright micro flash light*

building. Perfect for real estate agents, night-shift employees and even children. Uses 2 AAA batteries (included) Nothing compares to the top quality found in this high tech advanced alarm system. Dimensions: 3.5" x 2.5" x 0.5"

Order code: TX-PTPA £30.00 \$35.00

## ULTRA SONIC DOG REPELLER

Using the latest ultra-sonic technology, this dog repeller produces a discomforting but not harmful, high frequency sound, audible to dogs but not to humans. Help stop the approach of unwanted dogs at up to 15 feet. Also a useful aid in training dogs. Features a belt clip and low battery indicator.

Order code: TX-USDR  
£40.00 \$58.00

## UV THEFT DETECTION KIT PROTECT YOUR VALUABLES AND THWART THIEVES

This ultraviolet detection powder is designed for the detection and identification of stolen and altered items. An article can be marked so that it is invisible to the eye, but under ultraviolet light the item and anyone who touched it can be identified. Simply add a small amount of the powder to any surface. When touched, it is immediately transferred to the hand, clothing, etc. Excellent for large or small objects. Ideal for currency, paper, clothing, and any other surface. Since it

can not be seen by the naked eye, ultraviolet detection powder can be used in many other ways. It can be placed on vehicles for surveillance and night surveillance and then viewed under IR light sources for easy identification.

It can be used in other investigative and surveillance operations for example to identify people leaving a building who have touched

marked items within the building. It has even been used to determine if someone has touched another person. Non-toxic. 2 ounce bottle. Long lasting.

The kit comes with a high grade UV light and marking pen.

Order code:  
UV-SDK  
£75.00 \$75.00

## COMBINATION STUN GUN FLASHLIGHT AND PERSONAL ALARM

Two models to choose from - USA only

This handy little flashlight is also a 130 db alarm and an **80,000** volt stun baton. The body is made of fibre glass reinforced plastic, and uses one 9V alkaline battery. Eight inches long with carrying case.

Order code: TX-CSTUN  
\$81.95

This heavy duty, strong beamed flashlight is also a 130 db alarm and a **200,000** volt stun baton. Comes with attachable red cone for signalling or danger warning, the body made of fibre glass reinforced plastic. Uses three 9V alkaline batteries. 16.5 inches long.

Order code: TX-CSTUN2 \$100.95

## LIPSTICK PEPPER DEFENCE SPRAY

It looks exactly like a lipstick. It contains a 10% concentration of 1MM SHU pepper spray and provides 20 (half-second) sprays with a range of 10 feet. The spray contains UV marking dye used to identify an attacker. Effective on intoxicated individuals, vicious dogs (i.e. pit bulls). It causes eyes to shut, coughing, gagging, makes breathing painful and difficult and designed to immobi-

lize an attacker without being lethal. The intense effects wear off in about 30-45 minutes.

Order code: TX-LPS \$25.95 - USA only

## AIR PRESSURE ALARM

A smart product that recognizes the smallest changes in air pressure created by opening or closing a door or window within a closed space of up to 1,000 square feet. When the device is set to fine recognition mode, a simple touch on your door handle will trigger the 105 decibel alarm. Keep-I has three alarm modes including a silent mode for privacy and also user selectable sensitivity settings. Palm-size for easy handling. Essential safety product.

Order code: TX-PTPA £38.00 \$49.99

Order code: **L-HF48 (48 Hour Recorder)**  
**£200.00 \$350.00**

## THE PI RECORDER

### AUTOMATICALLY RECORD CALLS ON YOUR PC

Investigative digital telephone recorder. Turn your computer or laptop into a digital audio recorder. Instant caller ID to name and address data. Instant dialled number to name and address data. Can be used with Instant truth detection option. Now you can use your personal computer or notebook computer to record every telephone call and not be limited by digital recording time. The computer hard drive becomes your audio storage unit. Keep a permanent recording of all of your important telephone calls and telephone interviews. Hook the unit up between your telephone and mic jack on your computer, install the software and you are ready to digitally record in crystal clear sound files. Capture caller ID information as well as obtain a time and data stamp.

Order code: TX-PIRED £119.95 \$168.95

Order code: TX-PIRED-TS (With Truth Software) £185.95 \$289.95

## SPECIAL FORCES BULLET PROOF VEST

Used by special forces around the world, these are the highest quality ballistic (bullet proof) vests available. Lightweight and comfortable to wear, they are designed to be easily concealed under an ordinary clothing. Three threat levels are available, and all come with full side protection. Weight is only 900gms for a level II vest. Thickness is 4mm to 6mm dependant on protection level.

Please contact Eye Spy for a measurement guide and level of protection required

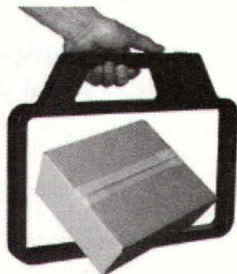

## DETECTORS

TRADE STANDARD DETECTORS FOR  
VARIOUS APPLICATIONS -  
MAIL, BOMB, METAL ETC...

### WIZARD MAIL AND PACKAGE SCANNER

Powerful coils and state of the art electronics allow the unit to be used in high security applications where precise detection is critical. The detector's powerful long range coil and unique design allows the unit to be used in any office, mail processing or home environment. The deep scanning loop allows for deep penetration of envelopes, boxes, bags, containers - be they paper, cardboard, plastic, wood or other materials - where dangerous or suspicious weapons or metals might be concealed.

Handheld or desktop metal detecting mail scanner

Responds equally well to all types of metal, steel, stainless steel, zinc, magnesium, and aluminium.

Operates on 9V battery (80 hours). Length: 14 inches - height 8 inches. Weight: 14oz

Order code: TX-WMPS £150.00 \$165.00

### THE LITTLE WIZARD

The Little Wizard is a precision hand-held metal detector that accurately indicates metal by emitting a high pitch beep tone and illuminating an array of LED's. Its small size and unique detection strength allow it to be used in tight spaces where small metal objects may exist. The Little Wizard's adjustable sensitivity makes pinpointing easy and accurate. Perfect for finding concealed weapons and dangerous metal objects.

Order code: TX-LW£45.00 \$48.00

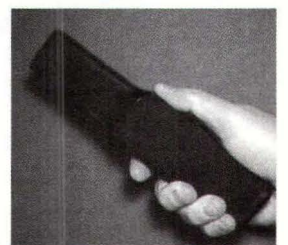

### METAL-TEC 1400

Silently alerts by vibration to detect weapons, razor blades, handcuff keys or drugs in metal foil.

Works inches away giving a tactical advantage during searches, pat downs and security scans. METAL-TEC includes a heavy duty Nylon belt holster with a Velcro vehicle mounting

kit. Water resistant housing made of high impact ABS plastic can withstand 6,800 pounds per square inch.

Silent non-alerting vibration detection detects all metals. Simple operation, no adjustment needed, push on/off button concealed in grip. Approximately 2,000

searches with one 9V battery (included).

Order code:  
TX-MT1400  
\$210.00 \$297.00

### THE SECURITY WIZARD ADVANCED DETECTOR

The Security Wizard is the most advanced and most powerful security wand available. Its powerful coils and state of the art electronics allow the unit to be used in high security applications where precise detection is critical. Its powerful long range

coils and unique vibration capability allows the unit to be used without alarming patrons and suspects. The powerful scanning head allows for deep penetration of clothes, containers, and surfaces where dangerous or suspicious weapons or metals are

concealed. Responds equally well to all types of metals, operates with an automatic tuning transmit/receive circuit. Provides precision detection pattern which helps prevent false alarms from rebar in floors and other surrounding metal. The detectors' sensitivity is fully adjustable through

an access hole in the handle to prevent tampering - while providing convenient and easy adjustment.

Piezo tone beeper and LED red light indicator are used to indicate the presence of metal. Sensitivity: at maximum setting the unit will detect a medium pistol

at 12", small pistol at 9", razor blade at 5", hat pin at 1".

Order code: TX-SECWIZ  
\$155.00 \$178.00

## EAR-2000 WALL PROBE

Professional grade contact microphone designed as a bomb detector. Locates the sound of ticking inside walls; countermeasures unit to locate the sound of hidden running tape recorders; or used as a hostage location unit.

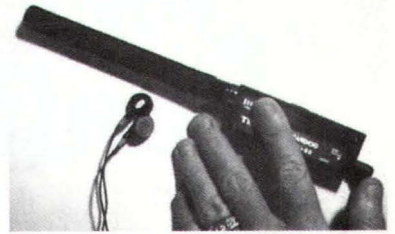

The probe works on an electro-acoustic principle in which it converts vibrations to voice band audio and output to the user's headphones. It will listen to, inside of and through virtually any surface. Can be used as a listen-through-the-wall audio mic under one party consent.

Order code:  
TX-EAR2000  
£210.00 \$320.00

## MICRO SMALL SHOTGUN MIC THE WORLD'S SMALLEST ULTRA-POWERFUL SHOTGUN MIC SYSTEM

The unit is a highly directional sound-locating microphone with an internal high quality amplifier and earphone monitor. High quality miniature 'electret' condenser microphone Supercardiod pick-up pattern. Isolate and pick-up distant sounds. Small, lightweight and compact; power supply uses a standard UM-4 battery with easy replacement. Sound levels adjustable by volume knob. Mounting hardware for use with binoculars or video cameras. The unit comes with the Micro Supercardiod Mic with built-in Amplifier, wind shield, inner-ear phones and battery.

Order code: TX-SSMIC £145.00 \$195.00

## SONIC SUPER EAR

This state-of-the-art product is a technological breakthrough in amplified sound quality, size and price. The product contains a high tech multi-element microphone that is covered by a protective foam windscreen and mounted in an acoustically engineered sound boom that swivels 180 degrees for maximum directionality.

Accessories include a binocular mounting clip and Velcro strips for attaching the unit to binoculars, and a stainless steel pocket/belt clip for indoor and outdoor use.

Order code: TX-SSE £69.99 \$75.95

# SOUND AMPLIFICATION

PARABOLIC MICS AND ACCESSORIES

## SOUND PRO II SUPER AMPLIFIED SHOTGUN MIC

Broadcast quality clear and crisp results

The SoundPro II features double amplified sound enhancement and noise filtering for the very best results in sound amplification.

The 10" microphone actually is two microphones in one. One high power microphone element faces forward to capture sounds that are 'aimed' at and the second microphone 'cancels' noises coming in from the sides, creating the 'extended range' effect. The Sound Pro II features a background noise filter switch and output jack for tape recorder. This unit comes complete with microphone handle, camera mount, 1 Watt

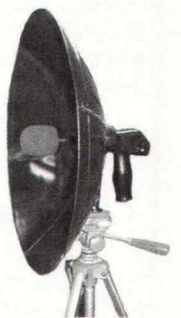

RMS amplifier (+120Db Gain), Sony digital quality folding headset, 6" tape recorder connector cable, AA battery for microphone, 9V battery for amplifier, and slide lock hard carry case.

Order code:  
TX-PRO2  
£200.00 \$320.00

## DETECTEAR NEW GENERATION PARABOLIC MIC SYSTEM

Hear faint sounds with pinpoint accuracy at 300 yards with the DetectEar. This powerful sound enhancement tool incorporates a 20-inch diameter snap-together parabolic dish combined with the most advanced audio circuitry available. The DetectEar is also equipped with a 3-band equalizer to adjust for specific sound frequencies, recording jack, and communications input jack for outstanding sound enhancing capabilities. The DetectEar can be mounted to a tripod for extended use and comes with a hard carrying case for transportation. Powered by only 2 AAA batteries, the DetectEar is your ultimate professional listening device.

Order code: TX-DETE £400.00 \$725.00

## PARABOLIC EAR SOUND SYSTEM

The Parabolic Ear Sound System is an exceptionally portable and rugged parabolic microphone. The detachable cone is only 12 inches in diameter and is constructed of waterproof, shock proof material. This product increases sound 37 times and has a range of 400 yards. Our Parabolic Ear uses a very sensitive microphone with intricate circuitry to amplify sound. The sounds are transmitted to an extremely high grade amp and then to a high grade headphones which include an automatic safety shut-off preventing harmful loud sounds from reaching the user's ears. The dish helps pinpoint and directionalize sound and reduce noise background. Unit has tape recorder patch cord for tape recording.

Order code: TX-PESS £150.00 \$195.00

# ENIGMA AND SPY PHONES

POWERFUL DEVICES FOR SECURITY AND COVERT OPERATIONS

## THE MATRIX

One of the world's most powerful espionage tools. The Matrix allows you to listen-in to a pre-defined telephone from anywhere in the world.

Simply connect into the land line you wish to monitor and then programme the Matrix with the phone number (land, or mobile) you wish it to call. Whenever any phone on that line makes or receives a call the Matrix will automatically phone you allowing you to listen into that conversation. The Matrix is unblocked and comes with a sim card (UK). Overseas customers simply purchase a SIM card

## EYE SPY'S ENIGMA BUG WORLD FAMOUS LISTENING DEVICE

This is a very serious and powerful surveillance device that allows the operator to listen in to a conversation from anywhere in the world. The phone looks like any ordinary mobile-phone and comes with a SIM card, however, by dialling its number you can monitor any conversation or sound that is within range of its highly impressive and ad-

vanced internal microphone.

When the Enigma is called it does not ring or light up, instead it opens a special microphone that can detect the quietest of whispers. The unit can be taken into meetings or any environment, allowing colleagues thousands of miles away to listen in. Similarly, simply leave

the phone at a location and dial up whenever you need to listen. A superb bug used by professionals only.

Order Code: LS-ENIGMA  
£295.00 \$599.00

### SUBSCRIBER DISCOUNT

Order Code:  
LS-ENIGMA/SUB  
£275.00 \$545.00

## ENIGMA VEHICLE BUG 24-HOURS-A-DAY SURVEILLANCE

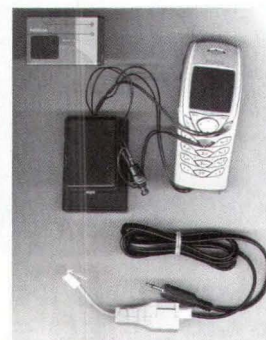

The Enigma Car cell phone bug comes with a simple attachment that connects to any car battery. This means that it is functioning 24 hours a day, unlike the standard device that will continue to work only as long as the battery is still alive.

Enigma slots behind the dashboard and a tiny seed microphone is hidden in any opening. When you call the Enigma you can monitor any sound within range of its highly impressive and advanced internal microphone. Like the ordinary Enigma, it does not ring when called. Driver and passengers are unaware that the device is in fact operating like any high-powered listening device. The range of the Enigma is infinite as long as there is a signal. These devices are in operation with security services and private investigators throughout the world. The Enigma Car cell phone bug is easily installed in minutes and its potential obvious. UK and European Enigma's come with SIM card - USA readers can purchase SIM cards at any local phone shop!

Now available for all countries

£325.00 \$650.00

Order Code: LS-MATRIX  
£550.00 \$1000.00

## EYE SPY'S ULTIMATE SPY PHONE INTERCEPTOR

SPYPHONE AND TEXT FORWARDING WITH REMOTE CONTROL

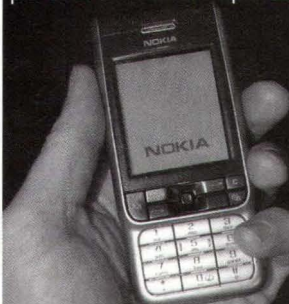

Install the intelligent software and you will be able to dial in and listen to the surrounding sounds and conversations coming from around the target phone from ANYWHERE in the world without any indication of connection. Every time the target makes or receives a text message on this phone you will instantly be sent a copy. There will not be a log and the copy will include the number of person who sent or received the text. There are various options available to purchase, for example, if you require only the interception of text messages. The price quoted below is for the entire Interceptor suite. A very powerful espionage device. Product review available [www.eyespymag.com](http://www.eyespymag.com)

Order code: OL-OLS UK £850.00 USA \$1500.00

## DELETED TEXT MESSAGE READER

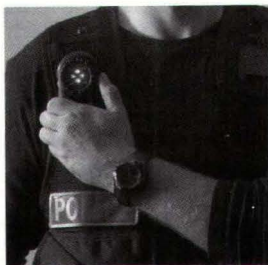

This clever device allows you to read the deleted messages stored in a mobile telephone SIM card. Simply connect the device to your USB port on your PC/Laptop then insert the target SIM card into the reader and using the software provided you can retrieve deleted text messages. Package comes complete with software and reader. Ideal for private investigators, concerned parents or worried spouses!

£240.00 \$500.00

# SPECIALIST TORCHES

USED BY THE PROFESSIONALS

## NITEPALM PC8 POLICE ONE TORCH - SEVEN RESPONSES

Designed specifically for police use and in accordance with force requirements, the Nitepalm PC8 is an exceptionally versatile lighting device. Strong, compact and lightweight, the eight intensely bright LEDs in white, red and blue deliver a total of seven lighting functions. The PC8 is an incredibly powerful lighting resource suitable for any emergency situation.

With up to 160 hours of continuous light output powered by only three AA batteries the PC8 is extremely economical, very affordable and will pay dividends both functionally and financially over other lighting devices currently in use.

Order Code: ES-PC8P  
£40.00 \$85.00

## NITEPALM PC8 OUTDOOR

Same specification as the PC8 Police but with a different LED configuration. The Nitepalm PC8 Outdoor is an exceptionally useful and versatile lighting device. Strong, compact and lightweight with eight intensely bright LEDs in white, red and green providing a total of seven different lighting functions. Four white LEDs give either a low light output, for general close up work, a powerful flood of super bright light, or an emergency strobe that can be seen from well over a mile away making it an ideal emergency device. The PC8 Outdoor is constructed to withstand many years of use with a virtually unbreakable and water resistant polycarbonate case for use in any weather.

Order Code: ES-PC8O £40.00 \$85.00

## NITEPALM PALM4

The Nitepalm Palm4 multifunctional torch (flash-light) is an impressive and invaluable tool. The device is small enough to fit into any handbag or pocket, and uses a super intensity, white LED, which throws a beam of light almost 100ft through a 'fish-eye' lens and protective translucent, rubber lens cap. The Palm4 is easily attached to a belt or pocket or most items, so it can cast its impressive light on to any object or work area. Palm4 comes complete with a magnetic belt clip that rotates through 360 degrees.

Order Code: ES-NPALM4 £15.45 \$30.00

## THE ICE LIGHT

MULTI-FUNCTION TORCH  
LAW-ENFORCEMENT GRADE

Three user selectable modes: 1st mode: dual flashing colors, 2nd and 3rd modes: each colour is selected individually for "constant on". Operates continuously on a standard 9V alkaline battery for up to 24 hours.

- LED's have an expected life of more than 100,000 hours
- High intensity LED's at the tip can be used when demanding the attention of individual drivers
- Length: 7.9 inches long
- Weight: 6.6 ounces
- Visual indicator for low battery
- High impact ABS case is water tight to depth of 35 feet
- The ICE Light floats with the LED section protruding out of the water
- Includes: Lanyard, belt holster, 9V alkaline battery and vehicle mounting Kit plus 3 year manufacturer's warranty.

PLEASE SELECT YOUR COLOUR.  
(NOTE): All ICE Lights with BLUE LED's are restricted to Law Enforcement Personnel Only.  
[Red/White]; [Red/Green];  
[Green/White]; [Amber/White]

[Red/Blue\* - proof of position is necessary]

Order Code: DTICE £80.00 \$100.00

## DIVERSION SAFES

WITH SECRET COMPARTMENTS

A burglar spends an average of 8 minutes in a victims home. Put the odds in your favour and hide your valuables in plain sight. We offer a wide variety of personal care, household products and food containers with removable tops and bottoms. Valuables can be discreetly stored inside these safes and kept in their seemingly rightful places. Each is indistinguishable from the genuine product and is even weighted to feel full. See [www.eyespyimag.com](http://www.eyespyimag.com) to view all twenty six varieties.

# SPECIALIST PRODUCTS

## HOME DRUG TESTS KITS FOR MARIJUANA AND COCAINE/CRACK

The perfect test for parents worried about their teens, for employers to use for pre-employment testing or cause and reasonable suspicion situations. The **Detect Now Marijuana**, and **Detect Now Cocaine** test kits are easy to use, cost effective, easy to dispose of and is backed by laboratory proven results.

### FEATURES:

Simple spray provides an immediate drug test answer. The Detect Now drug test can be performed on any surface that has come into contact with the drug. Confidential non-invasive test kit works anytime, anyplace. It is the same test kit used by law enforcement agencies across the world. Very accurate, no lab work required. Test with or without the knowledge of the person being tested. Contains more than 10 test units per box. Complete illustrated directions, FAQ, "What to Do" and resource list included.

Order code: TX-MCTK £60.00 \$65.00

(please specify which kit you require)

## COMBO UV PEN AND LIGHT HIGH-QUALITY AND PROFESSIONAL

When conducting countermeasure sweeps, as soon as you check and clear an electrical outlet, phone jack or electrical light switch, you can mark the screw heads with an invisible UV pen. Once done, all you have to do is check the screw head with a UV light source to know in an instant if the outlet has been opened. The UV mark shows that when the cover was cleared, the screw head had a

vertical line. The screw head now has almost a horizontal line which means that the screw head has been turned.

The countermeasures security pen has a UV marker on one end and a UV light on the other end which works with small watch batteries. Easy and simple to use, the countermeasures pen can be used to mark electrical outlets, the screw heads on phones, phone jacks, computers and anything else including clocks. Once security marked, you know in an instant if the target item has been tampered with and opened by simply checking the location of the screw heads with the UV light source.

## CID 100: TV CALLER ID

The Caller ID on TV utilises the television to display telephone caller ID information. Are you tired of unwanted phone calls interrupting the football game or your favourite movie? With this TV Set Call Display unit there's no need to get up to find out who's on the phone. When the phone rings, the unit will display incoming callers name and number in the upper left corner of your TV screen without interrupting the programme.

Order code: TX-CID100 £75.00 \$75.00

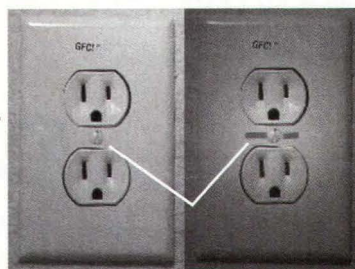

## X-RAY SPRAY

Turns opaque paper temporarily translucent, allowing the user to view the contents of an envelope without ever opening it. Thirty seconds after the application, the envelope will return to its original state, leaving absolutely no markings, discoloration, or other indications of use. Each unit can treat several hundred square inches. Non-flammable, non-conductive, and non-photo chemically reactive. Environmentally-friendly (contains no Freon or ozone-depleting compounds). Net weight: 9oz.

Order code: TX-MCTK  
USA ONLY \$53.00

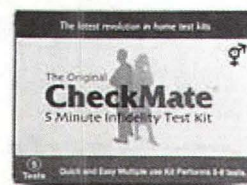

You can also use the Countermeasures Security Pen to mark money, place invisible serial numbers on products and invisibly mark anything. It will mark most surfaces and is a great detection tool.

Order code: TX-CUV  
£45.00 \$45.00

## CHECKMATE

5 MINUTE INFIDELITY TEST KIT

Quick and easy multiple use kit performs 5-6 tests

Do you suffer from the nightmare of suspicion and doubt caused by the infidelity of a cheating spouse? Find out what's really going on.

CheckMate can actually monitor your spouse's sexual activity outside of the home by detecting traces of semen left in undergarments after sex. CheckMate works on any type or colour of material including panties, auto upholstery, furniture, sheets and more... Leaves no trace and will not damage or stain the material being tested. Tests for both male and female infidelity. Confidential results known only to you and your client.

The CheckMate Semen Detection Test Kit is probably one of the most powerful products ever created and it really works.

Order code: TX-CSD  
£75.00 \$80.00

## MARIJUANA IDENTIFICATION SPRAY

Detect Now Marijuana Test is an aerosol-based drug test for detection and identification of marijuana. Using special drug wipes, simply wipe or touch the suspected surface or substance, then spray the drug wipes. Very accurate results in seconds.

Order code: TX-MIS  
£32.00 \$47.00

## PROFESSIONAL BREATH ALCOHOL TESTER

Features digital readout, quick response, visible and audio warning beyond pre-set limit. WARNING - The Alco Nose Breath tester should be used only to give an indication of the possible presence of alcohol in the breath/blood. You should not rely upon it as the sole basis to determine intoxication or whether it is safe to drive a vehicle, operate equipment, or engage in dangerous activities.

Order code: TX-BAT £50.00 \$70.00

## REVERSE PEEPHOLE VIEWER USED BY LAW ENFORCEMENT

The 'Reverse Peep-Hole Viewer' was developed with the help of the law enforcement industry to help them assess potential hazards behind doors. The unit is simple to use. The officer places it over the peephole in the door and can look into the dwelling without alerting anyone inside. They can assess any potential threats or activity before proceeding with their mission.

The unit fits 99% of most common peepholes used in apartments, condominiums and houses in the USA and most other countries.

Made of high quality lightweight materials, its housing is a strong, lightweight composite with an all-weather coating. The lenses are high-quality precision ground glass and custom designed for Reverse Peep-Hole Viewer.

Order code: TX-RPV £90.00 \$130.50

## SIX MILE SURVEILLANCE ZOOM BINOCULARS

The unique SuperZoom' compact binocular allows you to view at 20 x magnification and then zoom-in for pinpoint accuracy at 80 x power, without ever losing sight of your object. High performance prisms and fully coated lenses provide exceptionally sharp, high-contrast images.

Complete with case, neck strap, lens cap and tripod adapter. Less than 13 ounces and are small and durable enough for long-lasting use anywhere. Manual zoom lever puts you in control, letting you zoom in or out with the slightest touch of your finger. Fitted with rubber eye cups designed to exclude extraneous external light. If you wear glasses, simply roll down the eye cups to bring your eyes closer to the lens for improved field of vision.

Order code: TX-SZB £120.00 \$215.00

## MICRO FOLD-UP BINOCULARS

Superb compact 8 x 21 mm binoculars provide an amazing 5.8 degree field of view. Light weight design, great for outdoor sporting events and concerts.

Order code: TX-FUB  
£38.00.00 \$45.00

## PRIVATE INVESTIGATOR IDENTITY THEFT CASE KIT

Identity theft is the world's fastest growing crime. This training pack and certification gives the professional private investigator a knowledge base and toolbox to help solve their identity theft cases. This kit and certification consists of three training manuals a CD and a DVD.

**NAIS CERTIFICATION IN IDENTITY CASE SOLVING AND PREVENTION**

Kit includes: Study material for open book test. Once you successfully pass the test, the National Association of Investigative Specialists will issue a certification certificate in your name in Identity Theft Case Resolution And Prevention.

Featuring Mari Frank, an attorney specializing in identify theft matters and John Mays an expert security consultant on identity theft matters.

Order code: TX-IITC  
£199.00 \$325.00

## PORTABLE LIE DETECTOR AND DECEPTION INDICATOR

Compact unit that enables operator to analyse speech in-situ conversations, audio recordings, audio statements from television, and even audio of recorded video. Tested to be 82 per cent accurate. US technology incorporates voice recognition, stress analysis and revolutionary mathematical algorithms. The detector works in any language because it detects and measures tension in the voice instead of the spoken words.

Order code: TX-PLD £135.00 \$160.00

## DISAPPEARING INVISIBLE INK PEN

Here is a state-of-the-art ink pen that will magically disappear after about 48 hours, without leaving a trace of what you wrote. Sensitive notes can be taken today and you can be assured that the sensitive and confidential material will be gone in a couple of days.

Order code: TX-DIP £11.50 \$22.00

## CAT EYE BINOCULARS

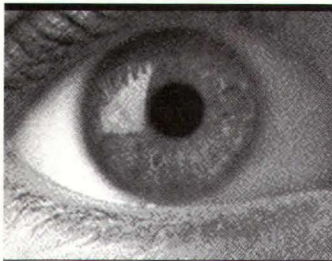

Compact binoculars features fully-coated lenses and BK-7 roof prisms that reduce internal glare, reflection, and produce crisp, bright images. The CatEye has a centre focus knob with an independent right diopter to adjust maximum focusing flexibility for all types of vision. This professional-grade binocular features

10 x magnification, as well as an objective lens rated at 25mm and a 278ft field of view.

Order code: TX-CATBIN £85.00 \$115.00

# COVERT MICROPHONES

AND SPECIALIST LISTENING DEVICES

## AMPLIFIED PROFESSIONAL PAGER MICROPHONE

For covert recording with tape recorder (not included)

Custom 'power' pager microphone highly sensitive, pre-amplified, electret condenser microphone. Voice filtering circuit helps eliminate background noise, omni-directional with 12 x amplification, picks up sound 50 feet away. Powered by one

AAA battery (included) for up to 200 hours.

Order code: WBMC

When a sound transmission needs to be recorded use our convenient plug and play wireless microphone set with recording device. Unit includes various accessories including transmitter and receiver. Fantastic value.

Order code: TX-WMS £118.95.00 \$175.95

## EXECUTIVE LEATHER RECORDING BRIEFCASE

A high-quality leather briefcase that can record your meetings without anyone knowing. Inside the case we have concealed a miniature mic and amplifier will pick up conversations even when locked. Excellent voice pick-up and does away with wearing or carrying separate body worn recorders.

Order code: L-BCASE £275.00 \$450.00

## CELL PHONE MICROPHONE TWO-WAY PHONE RECORDER

This new microphone/earphone allows you to record conversations from your cell phone when connected to most standard recorders.

Simply insert the plug of the cell microphone into the mic jack of your tape recorder and insert the mic pickup (with foam

pad) into your ear. Set your tape recorder in the "record" mode and the voices of the call as well as your own will be clearly recorded.

The compact design of this earphone microphone allows you to record a call from cell phones, pay phones and cordless telephones.

Specifications 3.5mm input jack - 2.5mm input jack (included)

Weight 12gm.

Order code: TX-CPM  
£50.00 \$83.00

## SPECIALIST SOFTWARE AND EQUIPMENT

### WISEC HOME & OFFICE SECURITY PROGRAMME

Turn your computer into a video monitoring station - have the system call or email you - view video over the web from anywhere in the world

NASA programmers have developed the next generation computer programme called VISEC. View from any location in the world via the Internet. Use your computer's IP address to log on and immediately view live or past video. Record all video activity, or just when motion is detected. In motion detection mode you can be alerted by email, cell phone or PDA when motion is detected. Can also be used as a stealth surveillance system allowing the programme to operate secretly on your computer. Suspect an abusive nanny or cheating spouse? Simply set VISEC on 'secret' mode and record everything for possible evidence.

Easy to use. Installation and configuration takes 5 minutes. Record up to four cameras at once using your existing computer and any webcam, wireless or hidden camera. You can use your own webcam, but if you don't have one, we highly recommend the DigiGR8 webcam. Will work with hidden or wireless camera with the GraBee II.

Order code: VISEC (Software) £75.00 \$100.00  
Order code: DIGIGRAB (USB Video Cam) £50.00 \$58.00

Order code: VISEC-COMPLETE (VISEC Software and DIGIGRAB USB Video Cam) £120.00 \$148.00

Order code: GRAB (GRABEE II) £80.00 \$97.00

## TRUTH VERIFICATION SOFTWARE

Truster is a desktop computer lie detector that can analyse the voice through in person live conversation, recorded conversation (both digital and analog recordings), a live over the telephone conversation or an over the phone recorded conversation (both digital and analog recordings).

Truster technology was originally developed for military use, but now the same technology is available for computerized voice stress analysis.

System Requirements: Pentium-based PC running Windows 95, Windows 98, Windows 2000, NT or Windows XP.

16 or 32-bit sound card, CD Drive, 16MB or more memory.

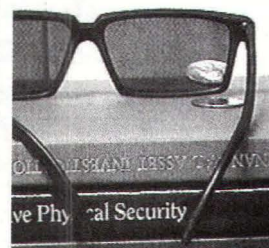

A sound-card compatible microphone (If analysis of live talk is desired).

Order code: TX-TRUST £199.00 \$325.00

## EYE SPY'S FAMOUS REAR VISION SUNGLASSES

### IDEAL FOR OVERT, COVERT AND COUNTERMEASURES

These high quality sunglasses look like regular sunglasses with one unique exception. They are a little wider on the ends and have mirrored edges on the inside so you can actually see behind you while you are looking forward. Don't confuse these sunglasses with cheap toy models. This model is used by professional law enforcement agencies throughout the United States and elsewhere.

Order code: TX-RVS £30.00 \$31.00

## THE JO MOUNT

Eliminate  
**SHAKE**  
Photos and Video

This window mounted tripod enables the private investigator to produce professional video and still photography in a less stressful environment. Whether stationary or in motion, the quickly-deployed, compact tripod provides the photographer an ease-of-use method of eliminating camera shake when conducting surveillance from a vehicle. The applications for the Jo Mount are not limited to the private investigation industry.

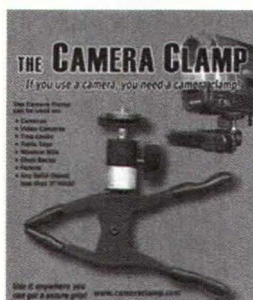

*Jo Mount can be fitted quickly and easily to any vehicle*

Order code: TX-JOM £170.00 \$178.00

## THE CAMERA CLAMP

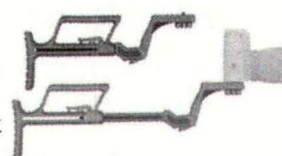

For cameras, spotter scopes, video cameras, high powered binoculars, night vision scopes and other surveillance optics. Clamps to almost anything. Developed for use where tripods are not practical, the Camera Clamp will attach to anything 2 inches or less in thickness. Solid, very portable, and allows the user to tilt, swivel and pan, just like a tripod.

Order code: TX-CCC £70.00 \$75.00

## OPTIC STOCK FOR CAMERA/CAMCORDER

The camera/camcorder optics stock was designed to give the user a light weight, portable, quick deployment means of steadying a camera, video camera, or optics such as a telescope or spotting scope. Although not as stable as a tripod, this device will greatly enhance the ease, use, and stability of your optical and camera equipment. The stock can collapse to just 10" in length and weighs only about

9oz. It can extend to three different positions to match varying body sizes or clothing thickness. It uses a universal screw for mounting, and is compatible with any equipment designed to interface with a tripod. Constructed of black polymer with stainless steel hardware.

Order code: TX-OSCC £150.00 \$190.00

## KEY KATCHER

KeyKatcher is the world's primary device for capturing all key strokes made on a keyboard. Measuring about one inch in length, KeyKatcher fits on the end of the mouse cable directly into the PC. It is designated a 'dead bug' as it does not emit any transmissions and can hold weeks of typed data. KeyKatcher can only be located through a visual search at the back of a PC, and is difficult to detect amongst the wires and cables. The device is hugely popular in the security and corporate world, for it can gather data that would otherwise be impossible to obtain. However, it is also welcomed by worried parents who are concerned about their children's use of the Internet. To retrieve the information, the user simply attaches the device to another computer and the typed data, codewords, messages and commands are instantly displayed.

It is the ultimate spying device that comes at a very affordable price. The bigger the memory capacity, the more data can be stored. Three sizes to choose from.

Order code: ES/KK2 (mini size)  
32K memory £68.00 \$69.00

Order Code: ES/KK4 (mini size)  
64K memory £75.00 \$89.00

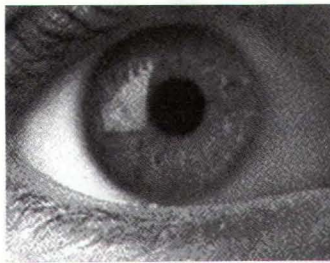

Order code: ES/KK5 (standard size)  
128K memory £78.00 \$99.00

## SELF DESTRUCTING PAPER

Looks like ordinary paper, but dissolves in seconds when in contact with liquid, resulting in a useless, non-reconstructible mulch. Far more secure than the output of any standard shredder. You can write on this paper normally, but any liquid, even saliva, transforms it into a secure mulch. It's ideal for those confidential notes that may have to "disappear" quickly with little advance notice. It comes in one pad of 32 sheets, each sheet is 2.75 x 4.25 inches in a sealable storage bag. **KEEP DRY!**

Order code: TX-SDP £12.50 \$15.00

# ALARMS & WARNINGS

SAFETY, HOME AND WORK SECURITY

## WIDE ANGLE DOOR VIEWER

A remarkable, high tech optical instrument, door viewer allows you to stand up to seven feet away from your door and get a camera's eye view of the outside. Door viewer works like a miniature video monitor, with a super wide angle and no distortion. Makes it easy to see and identify all visitors.

*see who's there up to seven feet away*

Order code: TX-WADV £35.00 \$42.95

## CAMERA DETERRENT

The slightest movement in the vicinity of this camera will trigger an infrared sensor. The camera then moves from side to side giving the impression it is actually recording. The unit also reacts to sudden changes in light. An ideal low-cost deterrent. Screws included for optional fixing to wall. Works with 2 AA batteries.

Order code: MS-113 £15.00 \$30.00  
Buy two for £20.00 \$40.00

## MOTION ALARM

Projects an invisible beam across a doorway, hallway or window, and sounds an alarm when an intruder crosses the line. Adjust the beam from long and narrow or short and wide. Red LEDs provide a visual alert that the unit is armed and functioning. 20ft range maximum.

Requires 2 AA batteries (sold separately).

Order code: TX MADOR £18.00 \$18.95

## ELECTRONIC WATCHDOG\*

*Protection with none of the problems of owning a real dog*

Police say a barking dog is an excellent way to deter burglars and this one never needs food, water or to be taken for a walk. The Electronic Watch Dog is the ideal watchdog because he does what even the best living, breathing watchdog can't do. With its electronic radar eyes, the Electronic Watch

Dog can "see" through thick doors, walls and glass. And once his cord is plugged in (120V), he'll stay on duty around the clock, indefinitely. The watch dog can protect homes and a variety of premises.

- Very realistic - barking gets louder and more

frequent as intruder gets closer.

- Switches from the watchdog to the tranquil sounds of nature with the simple switch of a button.
- Variable distance sensitivity (up to 30') as well as volume control.
- Senses movement

through walls, doors, and glass to alert you of a visitor's arrival.

- Maintenance free. Reliable 24-hour protection. No installation required.

Order code: TX-EBD  
\$90.00 \$125.00

## ENTRANCE ALERT

Entrance Alert is a 95 decibel magnetic alarm that can be attached to a door or window. Alarm sounds when contact is broken. Automatically resets after 45 seconds. On/off switch allows for use only when necessary. Battery included. Excellent low-cost security product.

Order code: TX-MAA £30.00 \$32.95

## WINDOW ALERT

Window Alert is a 95 decibel glass breakage alarm that attaches to windows and set off by vibrations

caused if someone tries to break through. Installs easily on any window. Solid, state of the art design. Battery included.

Order code: TX-PTPA £35.00 \$25.95

## MOTION ALERT

Mace brand security products are highly innovative and known throughout the world for top quality. Motion Alert is a passive infrared system that detects motion in any selected area. Compact and attractive, it mounts easily (vertically or horizontally) near any entry area and is battery operated, eliminating any need for wiring. Unit can be coded with a personal

security code and can be set to utilize a two-tone entry chime instead of the alarm sound. Mounting screws included. 9V battery not included.

Order code: TX-MAA £45.00 \$64.00

## DOOR STOP ALARM

Use this alarm to block a door from being opened. If anyone tries to open the door, a 125 decibel alarm will sound. There is also a movement sensor with adjustable sensitivity to activate the alarm if tampered with. An on/off switch allows the alarm to be turned off so that it doesn't sound when transported. Requires one 9V battery. This is a new and improved version of an older alarm that has sold by the tens of thousands for many years simply because it's so effective.

Order code: TX-DSAA  
£30.00 \$28.95

## LUGGAGE GUARD

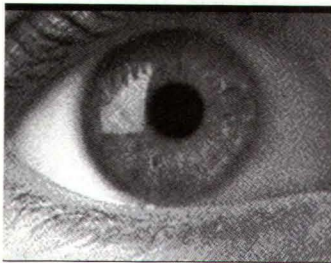

This luggage alarm helps catch thieves red-handed. This unique device actually looks like a simple luggage tag and fits on any attaché case, suit case, laptop computer handle or any other luggage or carry-on piece. When activated, the touch sensitive Luggage Guard will sound a piercing, shrill alarm.

Order code: TX-LUG  
\$24.99.00 \$24.99

\* Editor's note: The box may differ from the one shown above but the device is identical

# TELEPHONE EQUIPMENT

AUGMENTING ALL OPERATIONS

## LINEMAN'S TELEPHONE

This lineman's telephone lets you connect to a telephone line anywhere you have access to the wires. Connect it to the red and green wires of a telephone line and monitor the line as well as dial outgoing calls. Features include integrated circuit design, line-powered for talk, monitor or dialling functions, DTMF (tone)/pulse switchable dialling for compatibility with all telephone systems, redial and mute buttons, audible electronic ringer, polarity check, and talk/monitor switch. It meets the telephone industry standard and

is equipped with a standard five-foot nylon patch cord with alligator clips.

**WARNING:** to be used only in a legal and lawful manner in full accordance with all applicable laws and FCC regulations.

Order code: TX-LINE  
£145.00 \$225.00

## TRACE AND PROBE LINE TRACER KIT

*Trace and isolate telephone lines quickly and easily for testing*

If you need to isolate telephone lines and other wiring for testing, the Progressive Tone and Probe Line Tracer gives you just what you need. Simply connect the tone generator to any modular telephone jack or use the clips for

other wires. Turn the tone generator on and use the tone probe to trace the wire or isolate the wire at the junction box. This is a professional set that will trace any wire or identify any telephone line.

Order code: TX-TPLTK  
£145.00 \$185.00

## TELESPY SPYPHONE

MOTION ACTIVATED  
INTRUSION  
NOTIFICATION (USA)

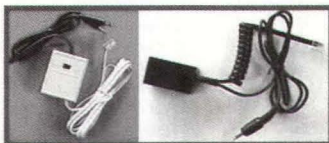

This standard trim line type telephone features a built-in PIR motion sensor. If an intruder is detected within a 30ft range, TeleSpy calls a preset telephone number and allows you to listen in to the premises. Great for protection of homes, businesses, vacation homes and warehouses.

Order code: TX-TELSPY  
\$215.00

*UK please email an enquiry*

## AUTOMATIC TELEPHONE TAPE RECORDER CONTROLS

Plugs into modular telephone wall jack. For use on any tape

recorder with a microphone jack. FCC approved. Unit will start and stop any tape recorder as the headset is picked up and placed back on the hook. The unit plugs into the wall jack with line for tape recorder plug-in and telephone plug-in. Will work on almost all telephone line systems including single line and multi-line telephones as well as digital phones.

Order code: TX-ATT £39.99 \$39.95

## CCT500 UHF TELEPHONE SYSTEM

Easy to use, simply fit the small transmitter either in the socket on the wall or fit anywhere on the line, then switch the recorder into auto record mode and it will record both sides of the conversation in your absence with clarity. The receiver/recorder has twin speed facility allowing you to record for either one or three hours of total conversation. Range 200 metres.

Order code: LS-CCT £350.00 \$500.00

## COMSEC C3I-II

Patented product constantly checks your phone line for central station (exchange!) wiretapping

While many products perform an efficient job of checking for "on

premise" telephone recording devices, the patented Comsec C3I-II

is the only unit designed specifically for detection of central station or "down line" taps. Line powered and easy to use, the Comsec C3I-II's rugged heavy duty metal case and long life LED assures years of product life. Comes

with complete instructions and molded polyurethane carry case.

**NOTE:** This product alerts user to "down line" taps only.

Order code:  
TX-COMSEC

Order code: LSST  
£99.00 \$150.00  
(per phone)

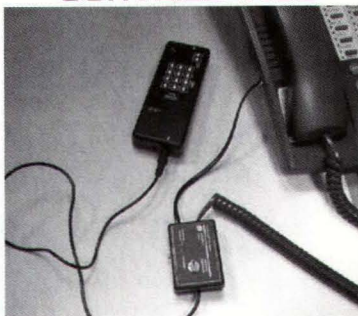

## PORTABLE TELEPHONE SCRAMBLER KIT

FOR BOTH CELL PHONES AND LAND LINE PHONES

This telephone scrambler attaches onto most cellular or land line telephone handsets. It is designed to scramble your conversations over the telephone line by using a unit on each end. This tactical device will protect your conversation from various methods of eavesdropping from wiretaps to electronic bugs. The unit is totally portable and can be used around the world on most telephones. This advanced security system uses a digital encryption algorithm based on DSA that is applied to the user code in order to create secure communication. By programming a code up to sixteen digits, an

**POWERFUL  
ANTI-  
SURVEILLANCE**

algorithm is created that rolls the scrambling code up to 65536 times. This provides over seventeen

hours of continued use before the pattern repeats. The phone scrambler comes with an interconnect cable that will connect with Motorola, Samsung, LG and other models of cellular telephones that have a 2.5mm headset jack. Adapters are available to attach the cable to other models of cellular phones. A cable is also available to connect the unit to a conventional land-line telephone.

The deluxe kit includes two high security scramblers with interfaces for both land-line and cell phones. Packages and adaptors are available separately for land line or cell phone.

Order code: PTS-CL  
(land-line & cell phone)

## CCT700 UHF TELEPHONE RECORDING SYSTEM

Miniature telephone recording and transmitter system. A small UHF telephone transmitter is connected on the line or socket - when activated it transmits both sides of the conversation upto 300 metres away. Receiver - Sony twin speed, Walkman size, two channel receiver, one or three hours of conversation. Can also be used with any Eye Spy UHF transmitter.

**THE ULTIMATE  
TELEPHONE  
TRANSMITTER**

Order code: LS-CCT700 £375.00 \$600.00

**WARNING:** Some of the products advertised in this catalogue may be illegal to operate in your country. Please familiarise yourself with the law as it effects you.

## ADVANCED TELEPHONE ANALYZER-SWEEPER

SWEEPS TELEPHONE LINES  
AND ELECTRICAL LINES FOR  
EAVESDROPPING

USED BY THE SECURITY SERVICES

This state-of-the-art unit is a high gain audio amplifier used to detect and identify certain types of surveillance devices attached to building wiring such as telephone wiring, LAN and server systems, AC power, alarm wire etc.

Order code: PTS-CL  
£1200.00 \$1825.00

Please write for  
technical details and  
full specifications, or  
see

[www.eyespy.com](http://www.eyespy.com)

## DIALED NUMBER DECODER

The remarkable tool devised by the security services, decodes and displays telephone numbers from tape recorded calls. This is the most accurate DTMF (tone) decoder available today. No connection is required from the actual source. Simply play your pre-

recorded tape and the unit will decode and instantly display on the DIGITMASTER'S 16-digit LCD display. Works well with long-play tape recorders and noisy scanners.

Absolutely ideal for covert surveillance when you need to monitor what numbers are being called by a specific phone. Can be used with recordings made from any of our transmitters or even our parabolic mic!

Order code: TX-DND £199.00 \$225.00

## TLC-7 DIGITAL TELEPHONE RECORDER

This tiny digital recorder will record for an amazing nine hours, has voice activation (vox) and records up to 100 conversations. It is easy to hide (under a carpet for example) or you can use it as a normal recorder or to plug into a receiver. A great surveillance aid. 2 AAA batteries.

Order code: LS-TLC7  
£170.00 \$300.00

## TELEPHONE EQUIPMENT + Continued

### SUPERTAP BUSTER

The SuperTap Buster has been designed to automatically detect and disable most forms of wire tapping and telephone bugging. It has an LCD voltage meter to allow the user to monitor the phone line conditions. A red LED will flash if there is the possibility of wire tapping on your line. At the same time, your telephone conversation will automatically cut off to prevent your voice from being heard or recorded. When a switch is set a continuous warning "beep" will be transmitted to the person on the other end indicating that the conversation has been cut off due to wire tapping or telephone bugging.

The SuperTap Buster is housed in an attractive, ivory cabinet and is powered by 9V DC. (120V power supply and 6ft of telephone cable included). A voltage regulator is built into the rear panel for adjustability of dial tones worldwide.

Order code: TX-STB £250.00 US \$350.00

### SECURE PHONE 2005

The Secure Phone defeats telephone bugging and tapping attempts. Automatic telephone recording devices, line transmitters, or any other voltage-activated devices will not function. The Secure Phone has the appearance of a normal telephone; its counter-measure circuitry is discreetly hidden inside.

Simply install the Secure Phone into any

modular phone jack. The green LED will light up when picking up the handset, indicating the "line guard" mode is on. To determine whether your phone is clear of taps or recording devices, simply lift the headset and listen for a dial tone. If a dial tone is present, your conversation will be secure. If there is no dial tone and the green

LED on the Secure Phone is off, there may be some type of listening device or low to medium impedance tap on your line.

Order code: TX-SP2005  
£225.00 US \$335.95

### TELEPHONE/FAX TAP DEFEAT PROFESSIONAL COUNTERMEASURES

This telephone/fax tap defeat is very clever and will defeat wiretaps or bugs that could be wired to your phone line. Set-up takes a matter of a few minutes. Now you can plug the TD1 into any socket on your line, (it doesn't necessarily have to be the one you're using). This means you can hide the unit discretely in another room.

The unit will defeat any voice activated phone recorder by sending constant pulses of noise to fill up the recorder on the other end. The TD1 has an LCD line condition display and LED's to indicate the mode setting. Offers the following features: turn on or off any wiretap or bug, any phone recorder controlled by line voltage, any phone recorder controlled by voice activation. The unit can be controlled to pass on misleading information to the wire tap by simply using an on-off button.

Order code: L-TD1 £195.00 \$380.00

## TELEPHONE/MODEM LOCKOUT SENTRY

This privacy unit is a very simple and inexpensive device. Invented for diplomatic private government conversations in which there are extensions on the same phone line. This device locks down your phone or modem so another extension or eavesdropping connection can not pick up the call. With use on a modem line or fax line, you will not have to worry about eavesdroppers or disconnections. The Lockout Sentry gives you total privacy protection. Each package comes with two units for instant privacy protection for two phones, modems or fax lines. (Price includes set of two 'sentry's')

Order code: TX-TMLS £45.00 US \$39.50

### TAP DEACTIVATOR WITH ANTI-VOX SYSTEM

The Professional Safe Line Telephone Analyser and Tap Deactivator was designed by an Israeli government intelligence engineer to secure his own phone lines. Safe Line offers more levels of protection than any other device of its kind. Six levels of protection deactivate, neutralize, monitor and alert you to eavesdropping attempts. Both "on hook" and "off hook" line voltages are constantly displayed, alerting you to any type of equipment or "bug" that has been added to your phone line.

Digital display will reflect any change in your phone line. Automatically deactivates all known wire-tapping devices including parasitic, crystal controlled and VOX. Creates shift of frequencies in crystal line transmitters. Voice "simulation" causes VOX equipment to record noise when line is not in use-filling up any type of recording media.

- Turns off voltage sensing recording/transmitting devices.
- Instantly alerts user to extension eavesdropping attempts.
- 100% state-of-the-art digital surface mount technology never needs batteries or bulky AC adaptors, as it gets all the power it needs from the phone line itself. Installed in seconds with modular connector cable (included). In addition, to use on audio phone lines, this state-of-the-art privacy assuor can also provide secure fax lines.

Order code: TPVOX £265.00 \$395.00

**WARNING: These products can only be used in a legal and lawful manner. Some of the devices may be illegal to operate in your state or country. Please familiarise yourself with the law and applicable regulations**

## EYE SPY'S HOLD INVADER LISTENING DEVICE

The Hold Invader is a unique and unusual telephone surveillance device. The party on the telephone call think they are on "hold", but in fact it's a "phantom hold". The phone has been effectively turned into a supersensitive room bug. An investigator might ask a leading or provocative statement regarding a desired subject, then ask the party to "hold" for a minute. The Hold Invader replicates the "call waiting" sound and the unit's "hold" switch is activated.

The device's sophisticated amplification electronics have effectively turned their phone into a supersensitive room bug. They may be conversing freely; very likely about the topic just "planted". The Hold Invader captures all the audio in the room while the party believes they are on "hold". A fantastic surveillance device.

Powered by one 9V alkaline battery (not included). Installs in seconds between the phone and the handset

(not compatible with phones with dials in the handset portion).

Order code: TX-HIL  
£200.00 US \$279.00

## TELEPHONE TAP NULLIFIER

Will defeat all telephone taps. The nullifier utilizes technology that jams any listening device which use the telephone line to listen to room conversations. For use on any telephone or fax line anywhere in the world.

- Normal and secure calling modes
  - Monitors exact line voltage in on hook and off hook condition
  - Stops automatic recorder activators
  - Alerts to extension pick ups and lineman test
  - Deactivates automatic parallel line transmitters
  - Infinity transmitter and line tampering alerts
  - Fine tuning capability
  - Sturdy metal case
  - AC adapter 12V with 500mA
  - Telephone cord
- Order code: TX-TTN £450.00 US \$825.00

## VOICE CHANGERS

PROFESSIONAL STANDARD UNITS

### HIGH QUALITY VOICE CHANGER

You can change your voice from male to female at will or simply disguise your voice beyond recognition. Even your own spouse will not recognize you. The high quality acoustic coupler attaches to the headset and you simply talk into the mic on the unit. Runs on one 9 volt battery. Comes with handsome carrying case and detailed instruction manual.

Order code: TX-HQVC £200.00 US \$325.00

### EYE SPY VOICE CHANGER PHONE

A stylish, fully-working telephone with a voice changer built-in. The voicechanger can be switched on and off and comes complete with eight different settings. It's an excellent low-cost product that requires no external power. More importantly, the user can be confident his/her voice will be changed. The unit is also available in black.

Order code: RV-VCP £160.00 \$350.00

### EXECUTIVE PRO VOICE TRANSFORMER INDUSTRY STANDARD

This unit is an entirely new generation of advanced voice disguise and transformation technology. The Voice Transformer gives you total and unparalleled control of timbre, tone, format, reverberation, and pitch. No other unit on the market offers these exclusive features.

User friendly design, 20-second installation, quality engineered and manufactured. Unit comes complete with a quality hands free microphone/ear piece, Size: 7 x 6.5 x 2in. (Not compatible with cellular phones, cordless phones, or dial-in-handset phones.)

Order code: TX-VCPVT £499.00 \$795.00

### ECONOMY VOICE CHANGER

A small box that you place over the mouth piece of the phone - you can change the pitch of your voice in stages - down low or high. Comes with earphones so you can

hear your own voice to create the desired pitch. 1 9V pp3 battery.

Order code: LS-EVC £80.00 \$150.00

available by post or

[www.eyespyimg.com](http://www.eyespyimg.com)

## VCD-43 ADVANCED VIDEO CAMERA DETECTOR

This unit features a five-step solid state meter that can help you zero in on those hidden video cameras. The sensitive external antenna is designed to pick up the horizontal oscillator frequency radiated by video cameras. Once the video camera is detected, its location can be quickly determined by using the five-step LED meter and sensitivity control. Tests with various cameras show a detection range of 2 to 15 feet, depending on the type of camera. The unit can be factory tuned to frequencies other than the NTSC standard; such as PAL and SECAM. For special tuning, please specify when ordering.

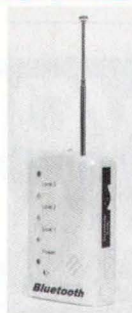

The VCD-43 has a rugged aluminium housing, measures 4.25 x 2.25 x 1.25in, weighs 10oz., and is furnished with two 9V batteries, plug-in antenna and illustrated instructions.

Order code: TX-VCD43 £210.00 \$300.00

## BLUE TOOTH BUG TRACER

Pocket sized detector, sweeps from 10MW up to 6GHZ. The Blue Tooth bug detector will sweep for Bluetooth, WLAN, WI-FI, cellular phone, and digital spread spectrum wireless products. This detector also checks for wireless video signals. Most bug and video detectors now can check up to 3GHZ, but they are missing the new 5.8 hz cameras. With the new BLUE TOOTH detector, you won't miss a thing.

Order code: TX-BTBT £210.00 \$323.00

## VIDEOTEK CAMERA FINDER *Locate and view any secret camera*

Wireless camera hunter that locks onto any wireless video camera and displays the transmission on its built-in screen. Automatically scans all the commonly used video frequencies in less than five seconds and locks-in on any video camera transmitter. Besides displaying what the covert camera sees, it

also sounds an audible alert tone. Selectable antenna sensitivity allows lock-in on sources up to 500 feet away (depending on power of source transmitter). Durable all-metal case. Eye Spy recommended.

£399.00 \$695.00 Order code: TX-VIDTEK

## THE BUG HUNTER

A popular bug detector that will locate any transmitters in the room or on the telephone. When sweeping a room a bar of LED lights warn of the presence of a bug. To detect on the phone line - simply plug the lead (supplied) into the detector. 1 9V battery.

Order code: LS-BH £180.00 \$320.00

## ARM BAND BUG DETECTOR 3000

*Dual purpose vibrating bug  
detector in micro size*

The new micro arm band bug detector is a tiny but powerful RF vibrating detector small enough to be worn on your body without being noticed. This tiny micro unit measures less than 2.5in. It can be used as a covert body worn detector with the included arm band or as a conventional bug detector to sweep a room or office. The range is amazing and features full spectrum coverage from 1 MHz to 3 GHz with no holes or gaps. On/off switch and sensitivity adjustment. The unit runs on one 1.5V battery which will last up to 500 hours on standby.

Order code: TX-BD3000 £220.00 \$323.00

## NEW GENERATION PERSONAL RFD DETECTOR & SWEEPER

Sweeps up to 6GZh. The all new pocket size personal radio frequency detector locates transmitters or bugging devices in a room or automobile. This personal RF detector excels at silent detection of RF signals for RF security and counter-surveillance applications.

Internal NiCD battery pack, vibration motor and earphone for private detection, AC wall charger, 2.4GHz antenna and earphones.

Order code: TX-PRFDS £199.00 \$278.00

## VCD-42 STANDARD VIDEO CAMERA DETECTOR

Because video surveillance is becoming more common, you need to be able to detect privacy invasion. The VCD-42 can help you quickly determine if hidden surveillance cameras are being used in any room.

Video cameras radiate a signal that can be picked up by the VCD-42's internal directional antenna. When a video camera is detected, the red LED on the VCD-42 glows brightly. By using the sensitivity control along with the directional antenna, you can quickly pinpoint the camera's location. Our tests with various cameras have shown a

detection range that varies from 3-12ft, depending on the type of camera.

The VCD-42 measures 4 x 2.5 x 1.5in, weighs 6oz. and is furnished complete with 9V battery and illustrated instructions.

Order code: TX-VCD42  
£125.00 \$195.00

## DP-19 RF/IR DETECTOR

For those who need a very sensitive radio frequency (RF) detector plus an infrared (IR) detector, we recommend the DP-19. With its bandwidth of 1 MHz to 2500 MHz and its extra sensitive circuitry, it will pick up signals that other detectors may miss. It is designed to pick up subminiature radio and infrared transmitters wherever they are located - in your home, office or car. The DP-19, which weighs 8oz. and is furnished in a high-impact case that measures 5.3 x 3.3 x 1.5in. The telescoping whip antenna can be extended 33". The unit comes complete with 9V battery, antenna and instructions.

Order code: TX-DP-19 £185.00 \$269.00

## MD-12 MICROWAVE DETECTOR

Detects 2.4 GHz video and audio RF links. The MD-12 detects RF in the 900MHz to 3.2 GHz range and displays the relative signal strength on the sensitive front panel meter. Even low power 2.4GHz video links can be detected from 4 to 12 feet away. By using the sensitivity control along with the signal strength meter, you can quickly zero in on the location of hidden microwave transmitters, while special built-in filtering lets the unit ignore out-of-band signals. The MD-12 measures 5.3 x 3.3 x 1.5in. High-impact black case. Weighs 7oz and comes complete with 9V battery and illustrated instructions.

Order code: TX-MBT £180.00 \$224.00

## MINI BUG TRACER

SCAN RANGE FROM  
1 MHZ TO 3 GHZ

The amazing Mini Bug Tracer RF detector is great for finding those hidden 2.4GHz wireless cameras as well as audio eavesdropping devices. Outstanding performance in a small package. Keychain sized detector with telescopic antenna locates hidden wireless cameras fast, assuring your privacy. Red light flashes faster as you get closer to the hidden camera. HI/LO buttons allow you to check out the entire room, then "home-in" on the bug.

Order code: TX-MBT £85.00 \$108.00

## SPY FINDER VIDEO CAMERA DETECTOR

The SpyFinder hidden camera detector/locator is the most reliable and easy to use technology on the market. Its function is based on the principle of optical augmentation. This refers to the phenomenon where light reflected from a focused optical system, such as a video camera, is reflected along the same path as the incident light. This means that if a hidden camera is illuminated and viewed with the SpyFinder technology,

then a strong reflection from the target camera will reveal its position to the user. Detects wired or wireless cameras, dead or alive at 30ft.

Order code: LS-SPYFIN  
£125.00 \$199.00

### SUBSCRIBER DISCOUNT

Order Code:  
LS-SPYFINSUB  
£100.00 \$175.00

## WIRELESS CAMERA AND CELLULAR PHONE DETECTOR

This economy wireless camera and cellular phone detector is designed for user friendly operation in detecting all hidden cameras. Its compact size makes it easy to conceal and carry to protect privacy and information.

• Detects cellular phones up to 4ft

Specifications

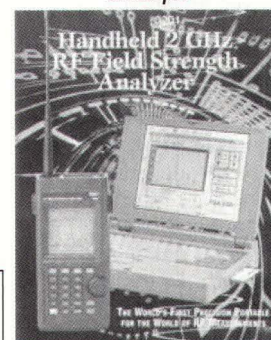

• Detects wireless cameras up to 10ft.

6V DC power (uses two CR2032 lithium batteries, included)  
50MHz to 3.0GHz  
detecting frequency  
Sound and LED warning

Order code: TX-WCCPD £54.95 \$69.95

## TE-3201 SPECTRUM/ FIELD ANALYSER

With computer  
interface state-of-the  
art countermeasures  
sweeps

The World's first handheld field strength analyser/spectrum monitor with wide band reception ranging from 100 KHz to 2.060GHz, includes RS-232 cable for interface with computer or printer. The TE-3201 has been designed from the ground up with features only found in analysers costing up to 10 times the price. The TE-3201 is ideal for counter-measure applications, testing, installing and maintenance of mobile telecommunications systems, cellular phones, cordless phones, CB radios, paging, cable TV and satellite receiving equipment as well as installing and measuring antennas.

Order code: TX-TE3201  
£1800.00 \$3350.00

Full specifications

# SURVEILLANCE COUNTERMEASURES

Continued

## ZAP CHECKER ONE

Measures radiation from cell phones, microwave ovens, 'bugs', two-way radios... etc. range: 10MHz to 4.5GHz, meter and led displays. Detects and displays RF (Radio Frequency) signal levels with uniquely high sensitivity, similar to a broadband receiver. It provides linear and logarithmic measurements of RF signals over a broad span of frequencies. The ZAP One allows the user to detect and measure signal strength and to distinguish between analogue and digital transmissions. Detect cellular phones and

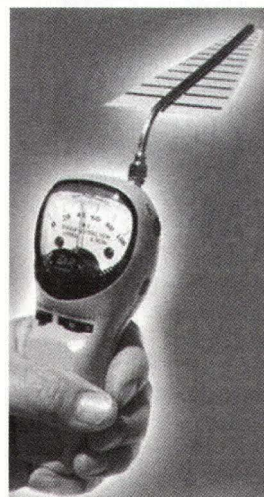

covert 'bugs' at more than 50+ feet, transmissions from 'sealed' microwave ovens at 40+ feet, from walkie-talkies at 100+ feet, and from amateur radio transceivers at hundreds of feet.

Order code: TX-ZCO-19 £199.00 \$207.00

## ZAP CHECKER ADVANCED

The ZapChecker Advanced can detect and locate even the tiniest of transmitters. Its high sensitivity and wide bandwidths are achieved by utilizing new integrated circuits developed for use in cell phones and wireless devices. These new components enable the ZapChecker to detect even the weakest signals down to baseline ambient levels of radio frequencies.

All RF signals within the bandwidth are detected - analogue, digital, pulsed, hopping, spread spectrum, and trunking. The ZapChecker is hundreds of times more sensitive than standard field strength meters, and more sensitive than most spectrum analyzers. It is particularly suitable for the detection of RF signals from

transmitting bugs and covert cameras.

Operates on 2 AA batteries (not included) for over 60 hours.

Frequency range: 10MHz to 4.5GHz. Weight: 5oz. Size: 2.1 x 5 x 1.25in.

Order code: TX-ZCA  
£350.00 \$395.00

## PNG 200 PORTABLE NOISE GENERATOR

### DEFEATS EAVESDROPPERS

Designed as a portable acoustic noise generating unit. The circuitry has been optimized for voice band noise masking against listening devices and is designed to reduce the effectiveness of eavesdropping devices such as microphones and tape recorders. When multiple units are used in concert, a complete environment masking system can be easily installed in any environment. The PNG-200 can be

mounted to smooth surfaces using suction cups or simply placed in an area that potential eavesdropping devices may be present.

Power: Two 9V alkaline batteries or AC transformer (120 or 240 VAC). Includes: Carrying case, AC transformer, and suction cup window/wall mounting kit.

Order code: TX-PNG200 £239.00 \$277.00

## PERSONAL RF DETECTOR AND BUG SWEEPER

NEW GENERATION - NOW SWEEPS UP TO 6 GHZ

The all new pocket size personal radio frequency detector locates stuck transmitters or bugging devices in a room or automobile. This personal RF detector excels at silent detecting of RF signals for RF security and counter-surveillance applications.

Vibration mode and earphones for private detection. 1MHz - 6GHz frequency range.

Order code: TX-RFDBS £200.00 \$275.00

## INTERCEPTOR

This detector has range finding properties between 10MHz and 3GHz and will alert you to the presence of a bug with an inbuilt row of LED lights.

Detect telephone transmitters by touching aerial to the phone line. Unit comes with headphones so you can listen in real-time. 9V battery.

Order code: LS-INTCP £199.00 \$350.00

## COVERT PEN BUG DETECTOR

The covert pen bug detector can protect you from hidden cameras, bugs and wiretaps. Push button design saves valuable battery life. The red flashing frequency will increase while approaching the signal and is detectable up to 10 feet. This excellent bug hunter has been constructed in a handsome fully-functioning ball point pen, thus sweeps are easy to perform without attracting attention. Detects hidden cameras and transmitters 500MHz to 3GHz. PDA stylus for touch screen devices.

Order code: TX-CPBD £99.00 \$125.00

## MDS 4001 SECURITY STANDARD

This professional multi detector system is top of the range in bug detectors, detects all transmissions between 3.5MHz to 5GHz. Comes complete with built-in charger, earphones, hand held interface which detects microwave, camera, frequency hoppers, infrared, mains carriers, vehicle trackers.

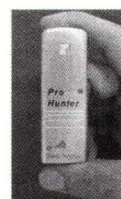

Order code: LS-MDS4001  
£3550.00 \$6000.00

Full specifications available only by post

## PRO HUNTER

Lipstick size wireless camera and RF detector. Scan range from 5MHz to 3GHz.

Simply switch the unit on and move around room. Unit will beep and the LED will flash upon approaching anything emitting an RF signal. Great for use in places where privacy is expected.

Order code: TX-PROHUN  
£80.00 \$108.00

## TELE-DATA GUARD

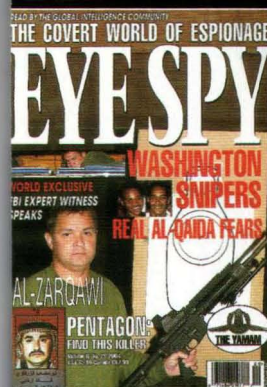

Alerts the user if someone has picked up an extension. When the Tele-Data Guard is installed on all extensions, the extension you pick up automatically disconnects the others. Green LED alert light signals whether line is in use.

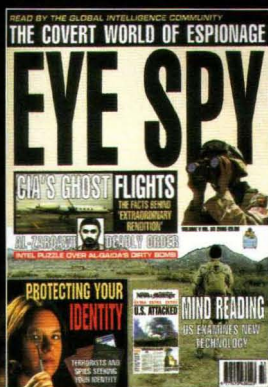

Protect faxes and modems from interruption.

# MI6

## ADVENTUROUS WORK?

MI6 on the Airwaves: Two officers describe their work in an unprecedented BBC broadcast

**F**inding a job with the world's most secret intelligence organisation has never been easy, but on the other hand, some would argue it's never been easier. Two years ago MI6 surprised many intelligence watchers when it launched its own website - publicly admitting its existence after 95 years. In April 2006 the service took out a half-page advertisement in *The Times* inviting people to apply for jobs as 'operational officers', technology experts and 'thoroughly efficient administrators'. In November, its web site carried a scrolling banner stating 'SIS (Secret Intelligence Service) is recruiting operational officers'... a candid word for field or case officers - *spies* in ordinary lingo.

In the past it was impossible for MI6 to issue public statements or discuss matters of

national security, quite simply because the service "didn't exist". Any sort of statement or disguised response was usually the domain of a Foreign Office spokesman.

Retired officers have been interviewed (though official clearance is still required), and a few 'out-reach' attempts were made by liaison officials tenuously linked to the service. How things have changed - besides trying to attract adults, MI6 is now reaching out to youngsters to explain its role, demystify the world of intelligence, and provide a clear vision of its future. More than that, it's also giving youngsters an opportunity to decide if intelligence is a career worth pursuing.

Eye Spy recently commissioned two features (see *Kindergarten Spies* and *The Recruiters*). These examine how the intelligence world is

presenting itself to students and children via the Internet and also recruiting. Imagine our surprise therefore, when two serving MI6 officers featured on BBC Radio discussing the service to younger listeners. It was an unprecedented move by senior officials to encourage people to take an interest in its work, and inform. Suffice to say, serving MI6 officers have given interviews before, but their identity has always been carefully guarded.

Two officers identified as 'A' and 'B' discussed intelligence gathering and recruitment. It was acknowledged that since the MI6 website was launched, "traditional recruitment methods have been changing." But one officer admits: "It certainly wasn't like that when I came to it. My shoulder was well and truly tapped." A clear reference to the shadowy work of MI6's roaming recruiters. "We identify individuals

**MI6's technical facility is situated in Buckinghamshire**

who can provide the intelligence that we need and our job is to establish a relationship with them at the point when they are motivated to work with us," officer 'B' states. Officer 'A' interjected and said: "Agents have to go out and do the recruiting of sources."

It's not surprising the interviews, broadcast on Colin Murray's BBC Radio 1 show (Britain's premier radio station for pop music) coincided

***The release of Casino Royale provided MI6 with a rare opportunity to engage the public, in particular youngsters***

with the release of the new Bond film *Casino Royale*. In fact, it was a calculated decision.

But what of the subjects that really interest the younger generation? There was an admission that the officers use code-names, and that a character made popular in the Bond films - 'M' doesn't exist - though there is a 'C' of course - head of MI6.

A 'Q' does exist and helps design some of the spy equipment used by operatives.

As intelligence watchers know, the technical and development wing of MI6 is based in southern England well away from its home on the River Thames. One officer states: "Q's responsible for innovative technology and gimmicks and gadgets and things like that. They have a great time in taking things apart and putting them back together again."

As for the more shadowy side of the silver screen character, the officers say the "idea of 'a licence to kill' is a myth." Nevertheless, the men concede certain aspects of their job are "adventurous." Officer 'B': "It is also quite glamorous - you might find yourself on one day in the middle of a tent talking to a whole load of tribal leaders in the middle of nowhere and 24 hours later be in a different country talking to a high-powered financier. Our message is now if you're interested in working for the service then come and have a go."

The officers' voices were electronically disguised to protect their identity.

*Editor's note: The full interviews can be accessed on Colin Murray's show on Radio 1's website.*

Though a DGSE intel  
file reporting on  
Bin-Laden's death is  
authentic, most  
researchers doubt its  
accuracy...

but not everyone...

The NATO presence in Afghanistan makes it impossible for Osama bin-Laden to communicate in person

# No Smoke Without

Authentic French DGSE intelligence report  
notes 'death of Bin-Laden' after ill health

**A** DGSE (General Directorate for External Security) intelligence document dated 21 September leaked to a regional French newspaper (L'Est Republicain), and published on 23 September 2006, suggested Osama bin-Laden had died from typhoid. Senior intelligence officials immediately distanced themselves from the report. Though the file is authentic, most researchers doubt its accuracy... but not all.

The confidential intelligence report was also presented to President Jacques Chirac. He played down its content but was furious the file managed to get into the hands of the media.

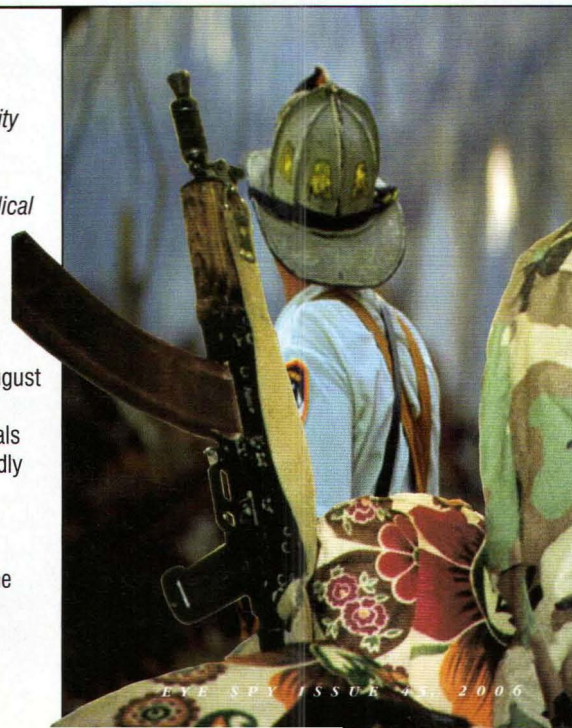

The report suggested bin-Laden died before medical assistance arrived in the remote mountains between Afghanistan and Pakistan.

The French report claimed:

*"According to a reliable source, Saudi security services are now convinced that Osama bin Laden is dead. His isolated geographical position meant it was impossible to get medical assistance to him. On September 4, 2006 the Saudi secret service received the first information making clear that he had died."*

Saudi intelligence received a memo advising the al-Qaida leader had fallen ill on the 23 August 2006. His condition left a number of internal organs partially paralysed. Intelligence officials waited for news of his 'death' which reportedly occurred on the 3 or 4 September.

Despite a \$25 million bounty, bin-Laden has avoided capture since he disappeared into the hills in December 2001. His last recorded

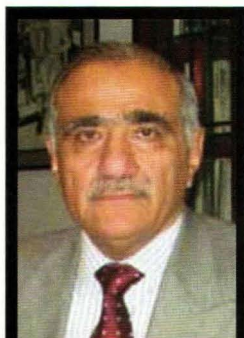

videotape was released almost two years ago, though audio recordings have been fairly frequent and proven authentic by CIA voice comparison analysts.

Saudi officials dismissed the French newspaper report, but refused to comment on suggestions that it supplied the original intelligence to the DGSE. A Saudi government spokesman said: "There is no evidence about French newspaper reports on the alleged death of al-Qaida leader Osama bin Laden... the information is speculative and cannot be independently verified."

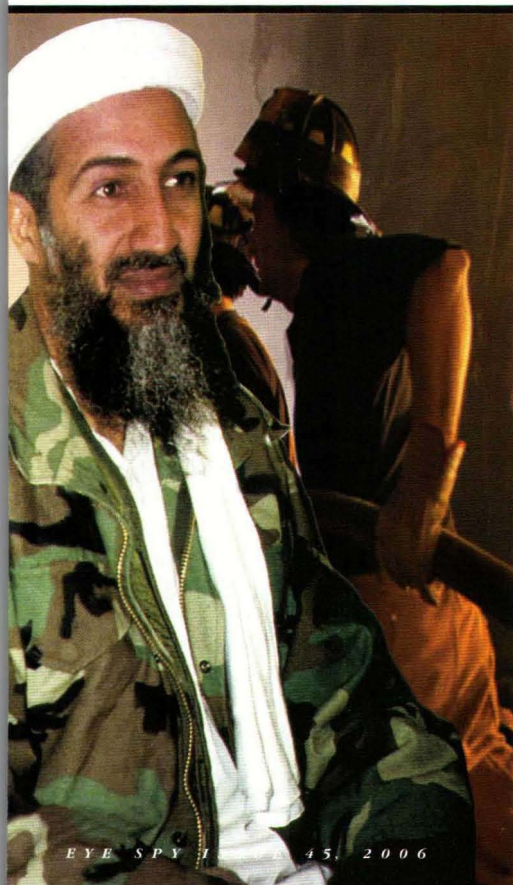

Pakistan's Ambassador to the United States

**Mahmud Ali Durrani**

Mahmud Ali Durrani also doubted the validity of the report. "Actually bin-Laden has become a hot potato. Afghanistan says he is in Pakistan, Pakistan say he is in Afghanistan and now we have the latest twist in the story that he is dead.

# Fire?

EYE SPY 45 2006

COURTESY: WO2 FIONA STAPLEY, CHIEF PHOTOGRAPHER, HQ ISAF

**Afghanistan National Army soldiers stand shoulder to shoulder with other nations which together form part of the NATO/ISAF force**

"I think it would be very nice if we could confirm that he is dead. Pakistan, Afghanistan, New York wherever, but I think it is an unsubstantiated story. I don't think there is much truth in it," said Durrani.

US Secretary of State Condoleezza Rice said: "No comment, and no knowledge."

**Condoleezza Rice**

## THE REALITY OF BIN-LADEN'S HEALTH

There have been several reports of bin-Laden's death in recent years - but none turned out to be true. However, a senior India intelligence analyst has charted reports of bin-Laden's health for years - his studious efforts in collecting reliable intelligence make for interesting reading.

"Bin-Laden suffered from a kidney infection while he was living in Khartoum before 1996. This ultimately affected the performance of his kidneys after he relocated to Afghanistan in 1996. Though it was not life-threatening, he had to undergo periodic dialysis in a Pakistani military hospital at Peshawar.

"During the fierce fighting at Tora Bora in Afghanistan, bin-Laden suffered a splinter injury. This affected his speech and partially paralysed one of his limbs. In the beginning of 2002, after he had escaped into Pakistan from Afghanistan, the late Mufti Nizamuddin Shamzai of the Binori madrasa of Karachi, who was very close to bin-Laden and Pakistan's Inter-Services Intelligence (ISI), had him moved to the Binori complex with

the permission of the ISI. He was being treated there until August 2002. He recovered his speech and the paralysis caused by the splinter was reportedly cured.

"When bin-Laden was in the Binori complex, Khalid Sheikh Mohammad (KSM), who had orchestrated the 9/11 terrorist strikes in the US, and Ramzi Binalshibh of al-Qaida were also living clandestinely in Karachi, but at different places. US intelligence, which apparently came to know about the presence of Ramzi and KSM in Karachi, stepped up its search for them. This led to the capture of Ramzi, but KSM managed to escape to Quetta and from there he went to Rawalpindi where he was finally arrested in March 2003.

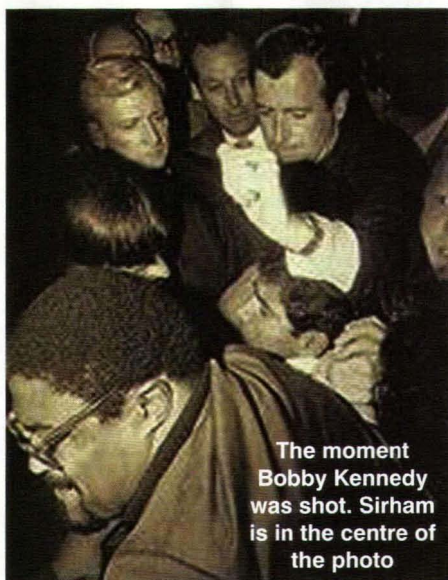

"There were reports of a deterioration in his health due to the kidney condition in 2005. This gave rise to strong speculation that bin-Laden had died of a multiple organ failure arising from his renal problem."

Bin-Laden's audio messages started surfacing again in January 2006, but there were no video messages. Thus, his voice became the only indicator of his being alive. Analysts note pre-July bin-Laden messages continue to circulate. Cut and paste versions of his pre-November 2004 video messages can also be found in 'new' al-Qaida propaganda tapes.

How the Saudi's first obtained 'news' of bin-Laden's 'death' is unknown. However, some intelligence watchers believe it could have come from bin-Laden's relatives or fighters returning from Saudi Arabia. It's also highly likely the Saudi intelligence services would have notified or alerted MI6 and the CIA to news about the report. Trying to confirm the validity of the report's content will be lengthy process, unless bin-Laden opts to produce a new video or tape. Perhaps of greater significance, intelligence sources in Saudi Arabia note that dozens of fighters are returning from Afghanistan after seemingly "losing all sense of direction and leadership."

**F**ilmmaker and researcher Shane O'Sullivan has revealed details of his investigation into the assassination of Robert Kennedy on 5 June 1968. For three years O'Sullivan sought film footage relating to the incident. Some material appears to place three senior CIA officers and four "unidentified associates" at the scene of the fatal shooting in the Ambassador Hotel, Los Angeles. Some of the officers were supposedly based in South-East Asia. Conspiracy theorists ask what were they doing in California - particularly as the CIA at that time, had no domestic jurisdiction?

The moment Bobby Kennedy was shot. Sirham is in the centre of the photo

specialist at Columbia University, believes Sirhan could have been a "hypnotically programmed decoy" enabling the real assassin to strike.

O'Sullivan states three men have been "positively identified" as senior CIA officers who worked together in 1963 at JMWAVE, the CIA's Miami base for its secret war on Castro. Dozens of plots were manufactured by the CIA to kill Castro. O'Sullivan then delved into assassination reports and discovered the name of David Sanchez Morales (below). He was synonymous with CIA covert operations and feared by his adversaries. He was also at the

# Three Wise Men?

## THE 'COMPANY' AND BOBBY KENNEDY

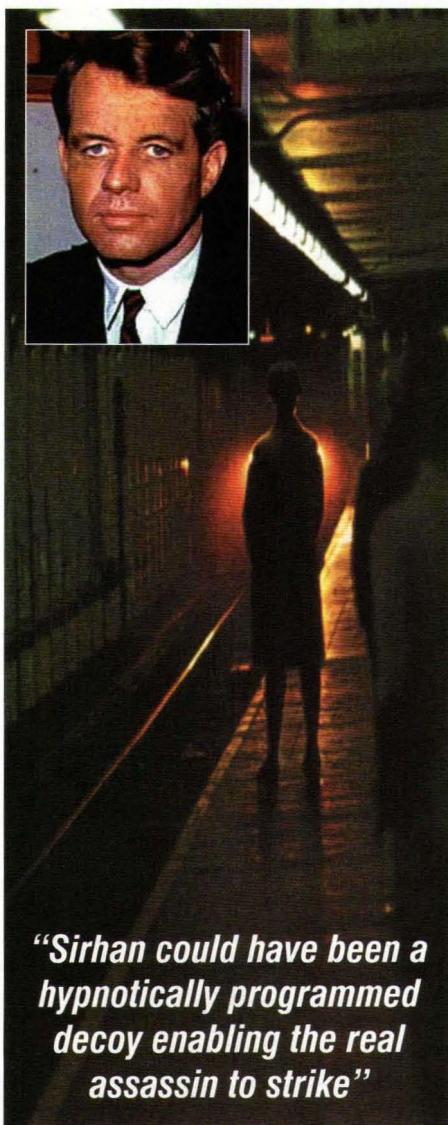

Kennedy was on the point of challenging Nixon for the presidency when he was shot after greeting kitchen staff in the hotel's basement pantry. Twenty-four-year-old Palestinian, Sirhan Sirhan, was arrested as the lone assassin. Police found a newsclipping in his pocket concerning a US-Israeli weapons deal. Documentation was also discovered in his home and used as additional evidence to incriminate him. One letter read: *"RFK must die RFK must be killed - Robert F Kennedy must be assassinated before 5 June 68."*

Those who support the view the CIA actually ran a number of 'Manchurian Candidates' believe Sirham was part of that very stable.

Medical professionals for the defence said he was in a "trance at the time". Those who support the theory that the CIA was behind the shooting note that Sirhan's gun was in front of Kennedy, but the shot which killed him came from behind. Autopsy findings state that Kennedy was shot from a weapon fired from between only inches away, whereas Sirhan (left), according to witnesses, was at least six feet away.

Dr Herbert Spiegel, a leading hypnosis

*"Sirhan could have been a hypnotically programmed decoy enabling the real assassin to strike"*

helf of attempts to destabilise the Castro government. The researcher notes: "When the subject of the Kennedys came up in a late-night session with friends in 1973, Morales launched into a tirade that finished: 'I was in Dallas when we got the son of a bitch and I was in Los Angeles when we got the little bastard.' From this line grew my odyssey into the spook world of the 60s and the secrets behind the death of Bobby Kennedy."

O'Sullivan obtained a photograph of Morales taken in 1959 and examined the film footage of the Kennedy assassination. "I viewed news coverage of the assassination to see if I could spot the man the Cubans called 'El Gordo - The Fat One'," said O'Sullivan. "Fifteen minutes in, there he was, standing at the back of the ballroom, in the moments between the end of Kennedy's speech and the shooting. Thirty minutes later, there he was again, casually floating around the darkened ballroom while an associate with a pencil moustache took notes."

A contact then identified Gordon Campbell - Chief of Maritime Operations and George Joannides - Chief of Psychological Warfare Operations.

Ed Lopez, a former Congressional investigator who worked with Joannides, in 1978, said: "I think the key people at the CIA need to go back to anybody who might have been around back then, bring them in and interview them, and ask - is this Gordon Campbell? Is this George Joannides?"

# THE SPYING GAME

## *PERSONS OF INTEREST*

---

***The first rule of espionage?... There are no rules. If you have what they want, they will use any means to get it...***

***Eye Spy examines the unseen dangers for business people travelling abroad and provides a few tips essential for defeating espionage*** ➤

# FOREIGN INTEL TARGETING PERSONS OF INTEREST

'friendly' European countries have been accused of trying to "pick the technology pocket" of the UK and America.

The dangers may be obvious to those who work in the security industry, but they are sublime and invisible to ordinary travellers who believe it simply can't happen to them.

Less than two years ago, MI5 embarked upon a programme advising overseas travellers that they might become a target for unscrupulous agencies intent on espionage. The warning was also aimed at diplomats, military personnel, politicians, civil servants, scientists, employees of high-tech companies, academics and businessmen and women. Carrying trade secrets abroad is never a good idea, but many people are blasé about the risks, or are simply unaware they are being spied upon.

## THE TARGETS

For journalists embarking on an overseas assignment, especially to areas of conflict or public unrest, their presence is sometimes regarded as annoying or inconvenient. However, some nations consider reporters or investigators as 'tools' of foreign intelligence services intent on acquiring valuable data that could cause even further unrest. Eye Spy knows of a number of UK reporters who have inadvertently come across problems, but in the main, animosity is usually politically inspired. Nevertheless, every year sees a number of journalists accused of spying for the CIA or MI6. It's really an excuse to remove the individual. For

# THE SPYING GAME

**D**uring the height of the Cold War, Western businessmen travelling to Warsaw Pact countries were often briefed by intelligence officials on what to expect... and not just on the local culture, currency or language. Fearful of espionage or that the Soviets would try and secure their services, MI6 for example, under the guise of the Foreign Office, provided a few tips. Of course they also asked that eyes and ears were kept open for any nugget of intelligence. It wasn't unusual to find large firms trading with Eastern Europe providing the Foreign Office with information. In time, these businessmen had more than a passive relationship with MI6. But the Soviets were not stupid either, and many persistent travellers were surveilled. In East Germany alone, the

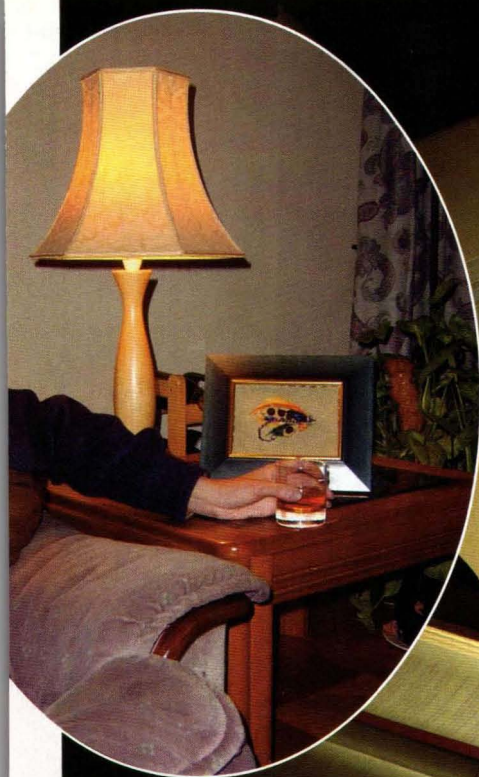

feared Stasi had an estimated 25,000 dedicated 'watchers' who would monitor and bug visiting businessmen... besides keeping an eye on their own citizens.

Though the political climate in many countries has changed and the locals more friendly, espionage has not gone away. With travel much easier and hotels more accommodating, companies are sending employees far and wide in pursuit of contracts and business deals. This has provided rogues and spies with even more opportunities than ever before. It's because of this, and the ignorance of many travellers, that the subject of espionage is again on the agenda in London, with officials warning of a recent upsurge in attempts to gather information from British company representatives. China and Russia are the biggest villains, but even

**If you're carrying trade secrets - the chances of your room being bugged increase dramatically**

professional tradesmen or representatives of technology or defence contract companies, the situation is very different. However, far too often do such persons ignore the warning signs or are oblivious to the dangers.

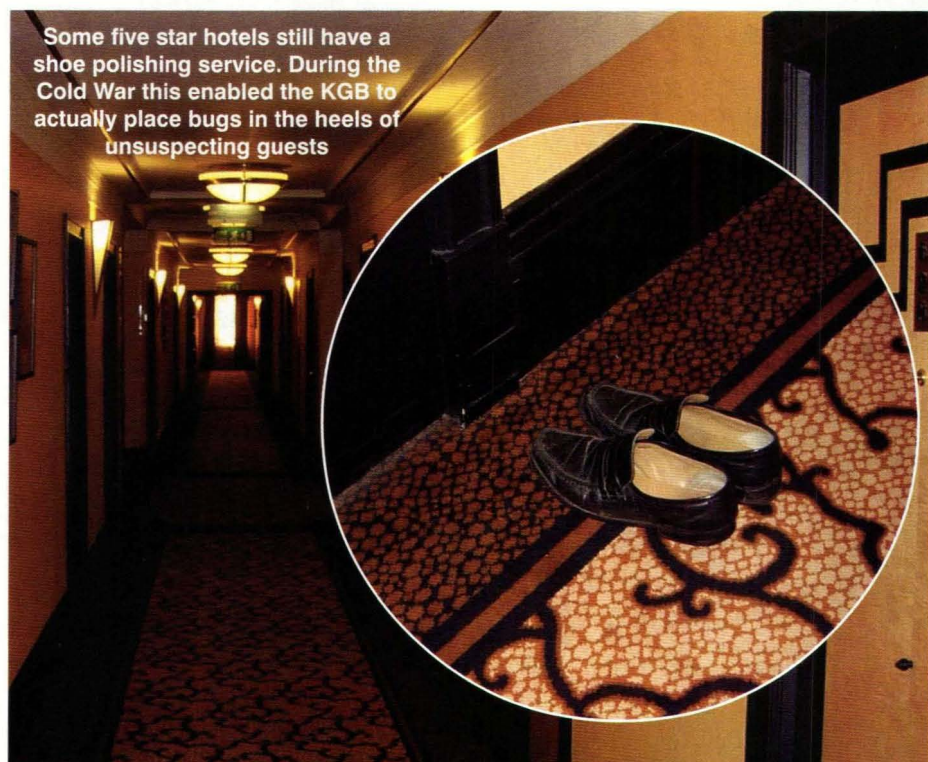

If you are sent abroad as a company representative armed with sensitive contracts or other important material, it's not impossible you will become a 'person of interest'. MI5 and other security services offer guidance and advice on what to carry in terms of documentation, telephone numbers, letterheads and electronic data, i.e. CD-Roms, laptops or similar. That's absolutely fine, but in most cases it's not practical to journey to a foreign land without your 'tools' - after all, if you're sent to Moscow to deliver a lecture or a presentation, these items are essential.

**Government representatives even journeying to friendly countries are equally at risk from adversaries**

Venturing to foreign shores as a company representative, in most cases, means you will already be booked into a hotel. The reservation may or may not have been made directly by your employer. Most firms with ties to overseas countries use specialist booking firms, or increasingly, the Internet. However, in some countries, that information is forwarded immediately to the security services for analysis - henceforth, if you have been given the label of a 'person of interest', it's likely you will be monitored from the moment you arrive.

That's not fantasy... it's a reality, especially in Russia, China, Iran and other nations. Hundreds of leading hotels have an "arrangement" with the security services - usually via a senior manager or head of security. A few hotels are actually in the pocket of intelligence gatherers, but organisations like MI6 are aware of their shadowy role.

You may find yourself in a splendid room complete with an array of listening or monitoring devices. It's highly likely your telephone will

**Some five star hotels still have a shoe polishing service. During the Cold War this enabled the KGB to actually place bugs in the heels of unsuspecting guests**

**Convivial atmosphere, peace and quiet but more importantly for those intent on espionage, a place for you to lay out your papers and work. For government workers and executives alike, one careless security lapse could be disastrous**

# WARNING SIGNS

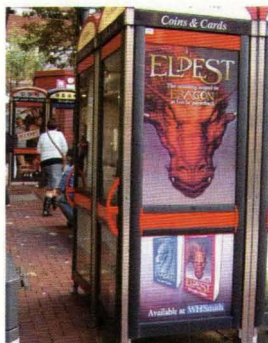

Avoid giving any details of your travel arrangements to a hotel employee... and that includes a reservation in the restaurant

Be wary of rooms with adjoining balconies and note any unusual activities - such as the 'telephone engineer' supposedly carrying out maintenance

***if you have been given the label of a 'person of interest', it's likely you will be monitored from the moment you arrive...***

be monitored thus using a satellite phone rather than a land line or cell phone is essential. If a secure phone is not available, and you need to make an important call, do so outside the hotel complex or use a public phone box. It may not be convenient, but it lessens the chance of interception. And never leave your cell phone unattended for one moment. The phone carries a unique code - in a few minutes it can be turned into a spy phone enabling an adversary to listen to every incoming or outgoing call and text message. And it will still be active when you return home compromising your firm even more.

Taking any sophisticated countermeasures' equipment to a foreign land is risky. If discovered it sends 'red flags' flying and you run the risk of intense questioning and even being deported. However, there

are one or two small discreet items that will probably be ignored. Many businessmen and women now carry a device called SpyFinder. If questioned the person can simply say it's a safety tool for uncovering unscrupulous hoteliers or, more accurately - pervers. Simple to use - they will detect most hidden transmitting cameras.

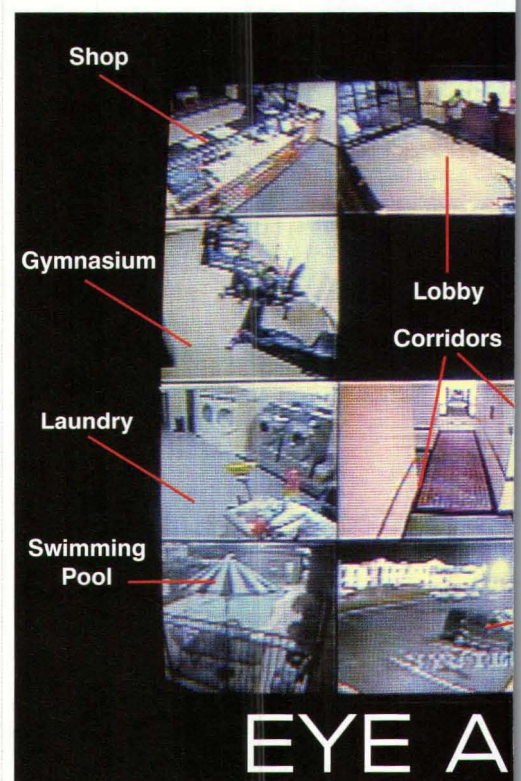

## DANGER SIGNS

M16 advise officers and representatives to be wary of any situation whereby the receptionist or manager explains that the room is either "double booked," the hotel has made an error... but can delegate a "similar room", or that the booking "was not made but 'we' can recommended another hotel." You simply don't know where you will be going and in any event, it shouldn't happen with quality hotels. Of more serious concern, you could be moved to a 'primed room'.

## ROOM SERVICE

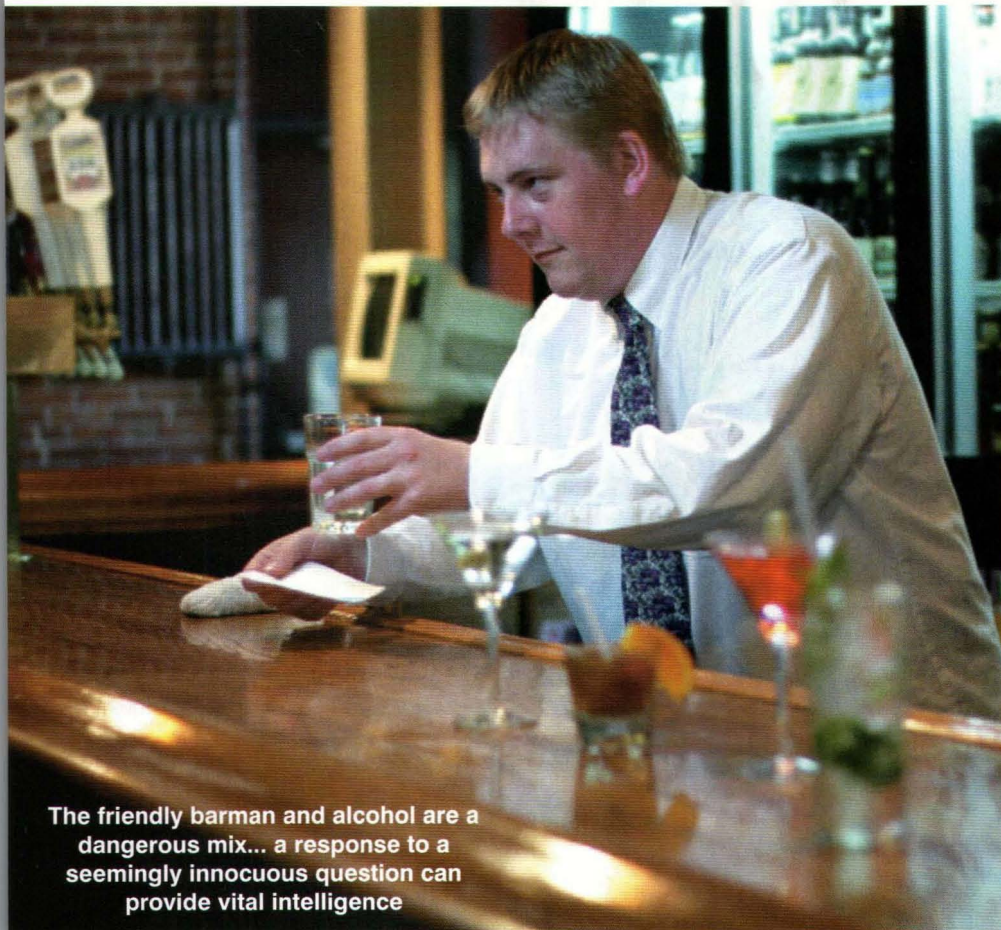

Some overseas guests (and even holidaymakers) booking into four of five star hotels are still invited to leave their shoes outside their door. In the morning, they will find them cleaned, polished and ready for that all important meeting. During the Cold War, the CIA and KGB often 'acquired' these shoes via agents posing as night porters or room service waiters. Within an hour or so the heel of one shoe had been replaced with one of similar wear - there was a slight difference, a small transmitter had been inserted into the heel. How often do you ever check your heel? Once the meeting had ended, the heel would be replaced. Today, of course, the

technology is such that even tracking devices can be inserted into a heel allowing an adversary to monitor every location visited. Indeed, since the mid-1960s, CIA officers have been advised not to embark on any journey with more than one pair of shoes, and never leave them outside a hotel door for cleaning. Take a pair of slippers. However, if a second pair is essential, these can be purchased at a local shop. Be wary, however, if the shop owner says "we will have your exact size in tomorrow." Never send shoes for repair -

EYE A

The friendly barman and alcohol are a dangerous mix... a response to a seemingly innocuous question can provide vital intelligence

via a hall porter or similar - take them personally to a repair shop and wait until they are ready. Similarly, check any garment or coat cleaned via the hotel's internal dry cleaning service. Any manner of transmitter could be inserted.

#### THE PRIMED ROOM

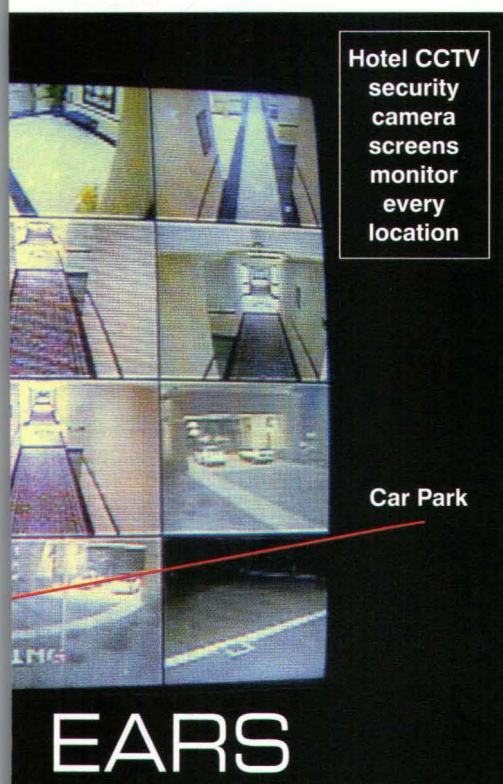

A common trick often played out by hoteliers in the 'grasp' of many undesirable security services (or criminals) is the age-old - 'do not disturb'

sign or 'room being attended'. Few guests re-enter rooms in the knowledge that everything is being 'set right', but such a situation affords those of ill intent with a genuine reason for being in your room for more than a few minutes. The Hoover will probably be turned on and the door locked - just in case you attempt to get in. If challenged, the maid will shrug her shoulders and make a quick exit... mumbling something as she departs... it's all part of the ruse.

Another trick for those wanting to search your personal belongings, or move you to another room (complete with an array of listening and monitoring devices - the primed room) is that of the faulty heater or air conditioning, jarred window, missing remote control for the television, dodgy plumbing etc. In genuine cases, the hotel will attend to these problems within minutes, but beware of the receptionist who states "it's too late - the engineer or technician is off duty - but we will sort the problem out as soon as we can." This means that if you have booked for more than one night you might be relocated to a 'primed room'. Even if you insist on staying, access can be made legitimately to fix the 'fault' when you exit the room next day. If this is the case, never leave any materials of interest in the room. Passports, credit cards, personal details and any important document (including laptop computers), should be carried on your person and not left in the hotel room safe or with reception. Beware also of the receptionist who asks if you would like to pre-book your dinner in the restaurant. This gives the snooper time to plan his entry, and it's unlikely you will take all your business papers and

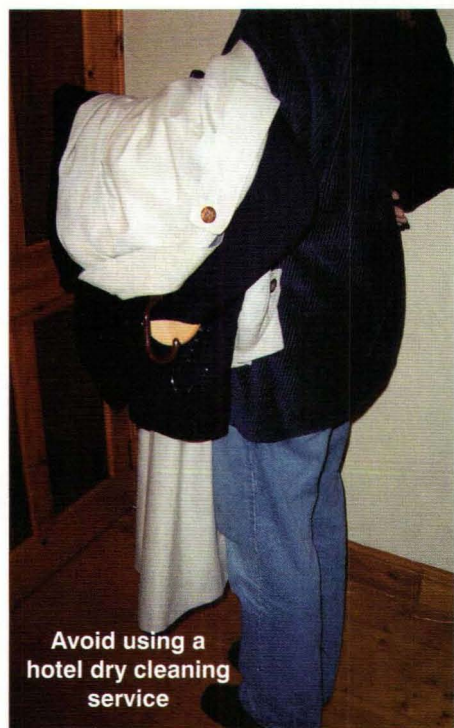

A hotel may use a specific taxi company. Any details about your destination can be provided for by the driver

Hotel CCTV security camera screens monitor every location

Car Park

# EARS

Avoid using a hotel dry cleaning service

materials to dinner. Depart at your convenience and take time to remove anything of importance.

Most hotels have Internet access. It's more than likely that connectors in a primed room will enable your messages to be intercepted and read. Wireless laptop-forwarded e-mails are just as susceptible to interception from a determined adversary. Some hotels have a dedicated area for guests to use the Internet. Like your room, it will undoubtedly be primed.

Never order breakfast in your room - it truly is a 'recipe for disaster'. An English breakfast, for example, may be served on a trolley. It's far too easy to adapt any such object to incorporate a listening device - just in case the recipient decides to make an early phone call from a cell phone. Your destination, contacts, travel arrangements etc. are all important bits of intelligence. The same rule applies to any room service and is mandatory to MI6 and CIA officers.

It should be standard procedure to make sure notes or recordings made at business meetings be kept secure. If they have to be stored seek out a location that is less vulnerable. Better still, always carry them on your person. It's one reason why the miniature tape recorder is popular with executives travelling abroad. Some recording tapes allow for several hours of recording. Better still, use an EDIC or MicroDot. These high-quality recorders can't be accessed easily and dedicated software stored on your office computer is

required to listen to the recording. Moreover, they fit into a matchbox and have the technology that allows hundreds of hours of recording. Russia's FSB are the brains behind these devices and they are frighteningly good.

### SETTING TRAPS

There are 'traps' any person can set that will reveal if someone is riffling through your suitcase or pockets or entering your room. If there is a carpet or rug in the room, place it behind the door and pop a few corn flakes underneath. If

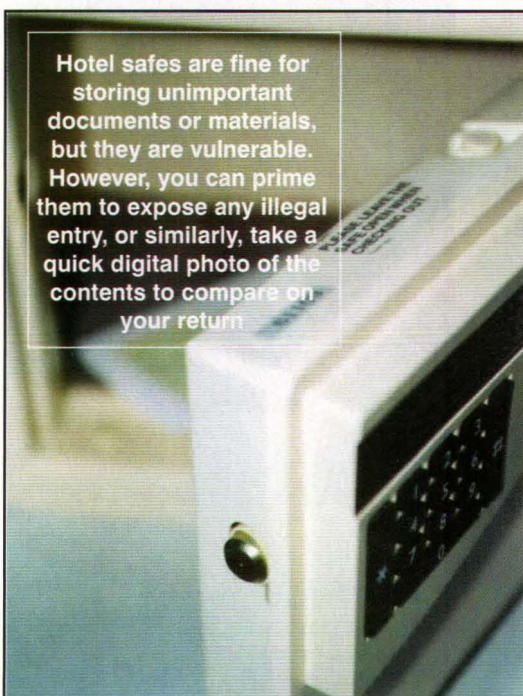

someone stands on them, they will be silently crushed. A matchstick lent against the bottom of a door will fall if moved. Inside your suitcase carefully place a tiny piece of paper on top of your clothing or contents. If the suitcase is opened an air cushion will cause the paper to move - just remember where you placed the paper - and open the case slowly. Similarly, a tiny black plastic strip placed in a suitcase zipper will fall away if opened.

Hairspray is an essential 'tool' on overseas trips and won't attract any attention. But it can act like a glue - a human hair fixed across a door opening, drawer or similar won't be visible, but it will fall off or move if the door is opened. Plasticine and putty perform equally as well. And don't forget the hotel room safe... it's usually the first port of call for a snooper - especially one with the combination or safe key already on his person. Another useful method is to take a digital photo of your open case or drawer. Even low-cost

cameras have displays and zoom capability so you can compare the scene 'before and after'.

If more than one of the traps work, it probably means you are under observation - either that or the maid or porter is simply inquisitive or a thief.

Another countermeasure (employed by MI6) is to leave totally meaningless papers or documents associated with your trip in the room. It's nuisance value really, but they must be copied, read and analysed by the unwanted visitor - and that takes valuable time and may cause

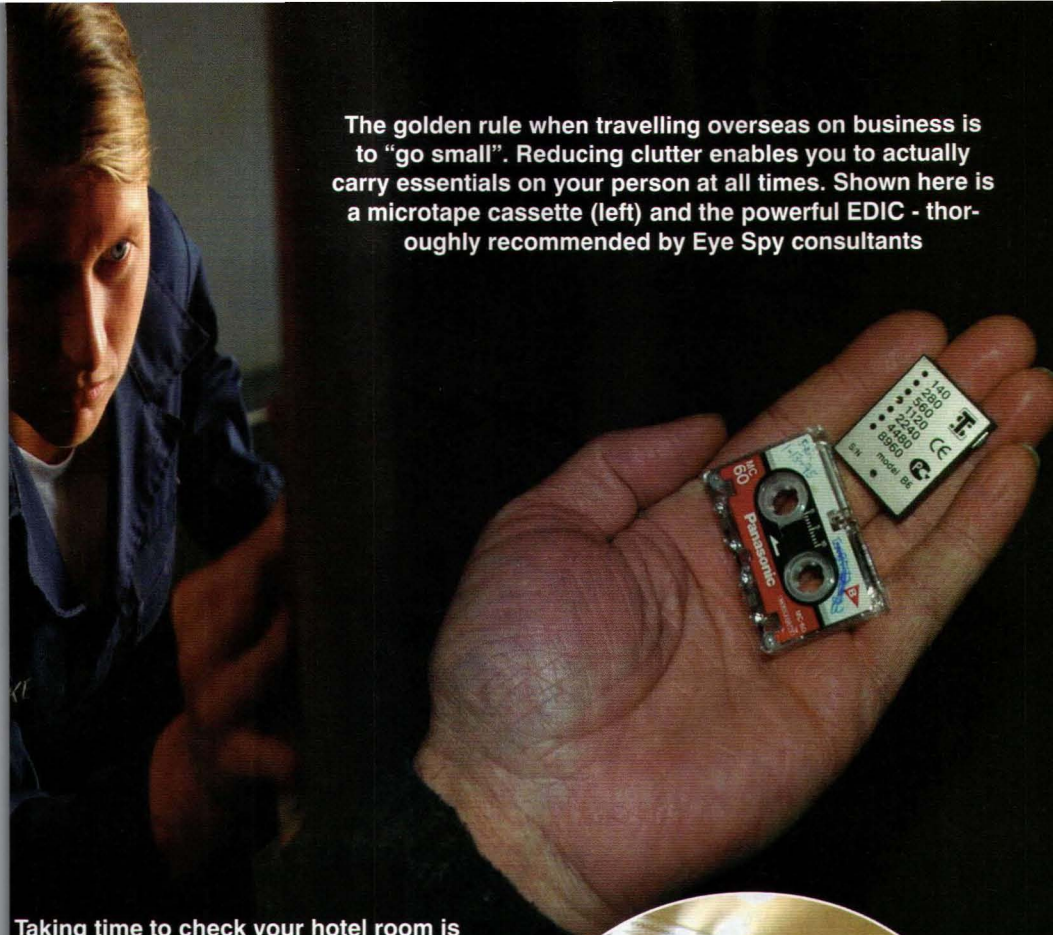

Hotel safes are fine for storing unimportant documents or materials, but they are vulnerable. However, you can prime them to expose any illegal entry, or similarly, take a quick digital photo of the contents to compare on your return.

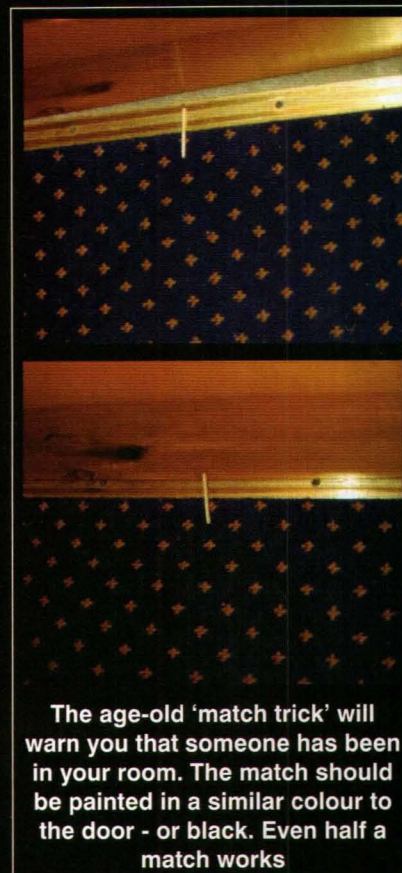

A little dab of hair spray acts like glue and will stick a human hair on any surface in seconds

The golden rule when travelling overseas on business is to "go small". Reducing clutter enables you to actually carry essentials on your person at all times. Shown here is a microtape cassette (left) and the powerful EDIC - thoroughly recommended by Eye Spy consultants

Taking time to check your hotel room is essential, but don't bother looking for hiding places, professional watchers will know every single one

The age-old 'match trick' will warn you that someone has been in your room. The match should be painted in a similar colour to the door - or black. Even half a match works

confusion. These should not be left simply on the dresser, but in a draw or room safe to augment the deception.

### SOFTENING

Visiting a bar leaves a subject vulnerable to what's known in the trade as "softening". You're thousands of miles from home, it's a quiet night and a pretty girl or boy makes advances. Beware, it could leave you penniless, drunk, thus talkative, but more than that, a decidedly dodgy relationship might emerge that could lead to secrets being revealed, and worse... blackmail. The Russian and Chinese intelligence services are past masters at this type of activity. Similarly, beware of the hotel manager affording lavish hospitality, it could be genuine, or a ruse to gain your confidence and friendship. The same rules apply to taxi drivers. A number of hotel chains are in league with foreign intelligence services and are quick to designate or call taxis driven by agents. Few people ever question taxi drivers who ask personal questions. Indeed, be wary about giving exact details about your intended destination. CIA officers en-route to pre-designated meetings or locations will take time to digest a map and walk that extra mile - it's the advice given to many overseas travellers on 'intelligence business'.

Most travellers who hire vehicles pre-book weeks in advance. Price differential is often a consideration, but it's not always the best option. All foreign driver details all logged in central

Once on the street, don't look like a tourist and avoid telling any hotel employee your schedule

computers, thus your vehicle and whereabouts are easily trackable. Few car hire firms in Russia, for example, would refuse an approach by the FSB to install a tracker or listening device. Getting advice on reputable hire companies is essential, lest the vehicle is primed weeks before your visit. Better still, hire one on your arrival.

Industrial espionage is huge and an amazingly fast growing industry for the sleuth out to make a small fortune. It's not just taking place in third world countries or former Soviet satellites, but absolutely everywhere. And it's not just foreign intelligence services or criminals who ply their trade in hotels - rival competitors actually hire shadowy firms to try and access your secrets, and this takes place on 'home soil' as well. Once away from a secure environment or office, any person carrying information is more vulnerable. Getting advice on travelling abroad is easy, but what happens thereafter is down to you. In most cases where important information is transported, it's useful to set aside time to check every eventuality - even if this means arranging a meeting on 'neutral territory'. Some high-profile companies about to engage with a foreign firm for the first time, actually keep the destination secret or change the location at the very last moment. It's a routine mastered by those in the intelligence world and can prevent espionage planning.

It's impossible to stop snooping, but inexpensive countermeasures and commonsense are the biggest enemy of those charged to steal secrets.

## SPYCRAFT

The second in our DIY series. Here is an ingenious way to adapt an old baby monitor unit to create a very sensitive room transmitter and receiver with excellent range. Cost? About the price of a drink

## Room Transmitter and Receiver

DEGREE OF DIFFICULTY

EASY

CONCENTRATE

TOUGH

**B**ecause baby monitors are normally left running at all times; have very sensitive microphones to pick-up the faintest breathing and come with a decent range, their internal components can quickly be adapted and turned into a room bug. Once removed from its original case, the transmitter can be made more powerful (so too can the receiver), and be incorporated into various objects or hidden in a variety of places.

Baby monitors are precious bits of equipment and in most cases very well built - less the cries from a new born youngster go unheard. What's more, they are inexpensive and range from anywhere between £15.00 - £20.00 (\$25-\$35), though more expensive units are available with additional features. However, for this experiment, even a second-hand set will do. We purchased a unit at a car boot sale for just £2.00.

Domestic or low-cost sets normally have just two frequency channels (A and B) so a sophisticated radio scanner isn't necessary - you only need the receiver that comes with the set.

All sets include a base station (transmitter) that plugs into the wall via a DC adapter, and a portable unit (receiver) that runs from batteries or off the mains - this allows the parents to go about their business in the home - the receiver unit can be clipped to a belt, for example. The receiver has a volume control and both units have a channel switch to change the frequency in case of interference. Don't worry about frequencies - any will work as long as the base unit and receiver are from the same set.

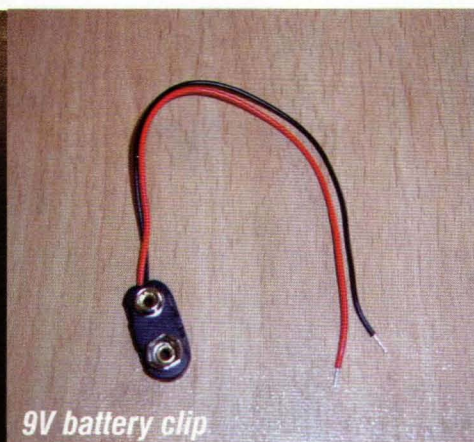

The object of this lesson is to reduce the transmitter to the smallest possible size and to power it from a battery. 'Freeing' the transmitter from the plastic case and mains electric

instantly turns the device into a covert bug which can be monitored from other locations using the receiver. Once away from the mains electric, the transmitter will require a 9-volt battery. Thus a 9-volt clip must be joined to a component inside the transmitter. These are available for a few pence at any hardware or electrical shops, or on-line - we bought a pack of 10 for £1.50.

### REQUIREMENTS

Baby monitor set

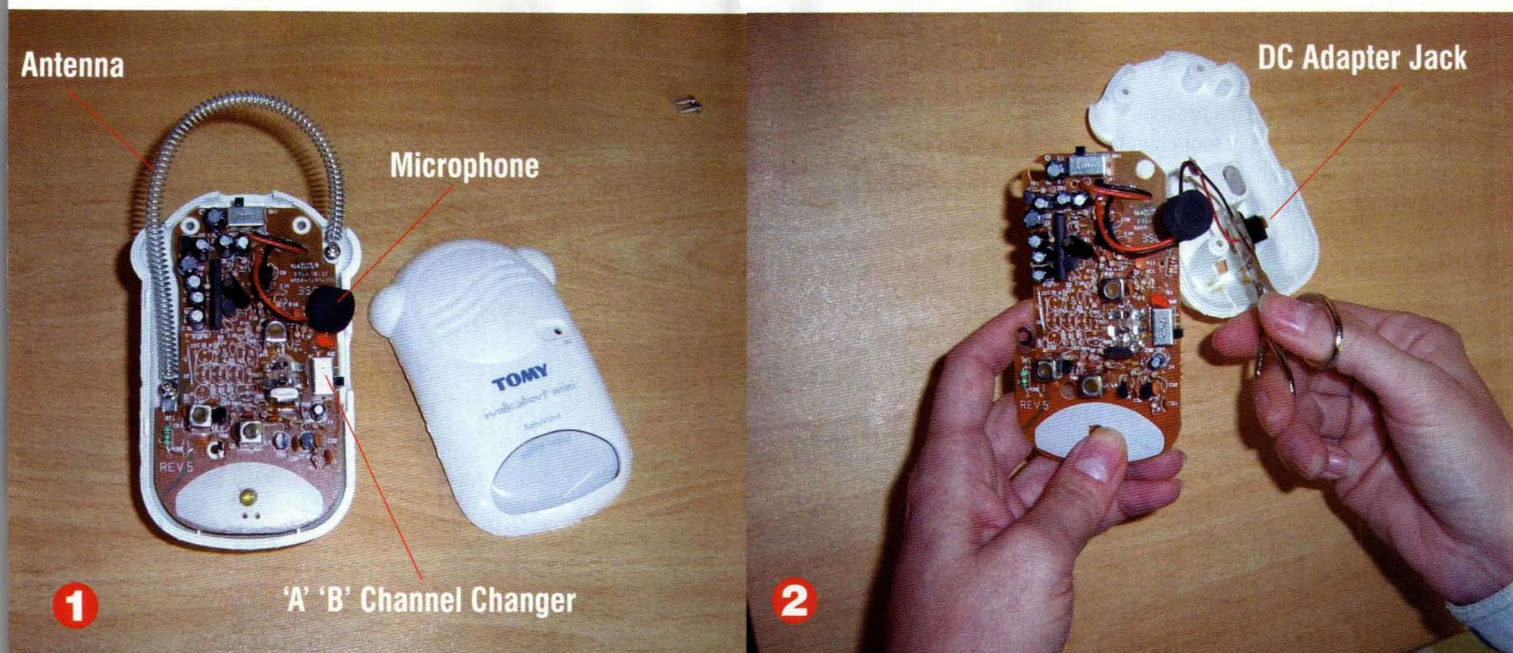

9V battery clip

Drinks can and straw

Begin by gutting the base unit (transmitting set) and removing the plastic case - be careful not to damage the two small microphone wires connecting the microphone to the circuit board. The microphone is probably glued to the front of the casing, so carefully pry it off with a small screwdriver or knife. Work the blade across the joint. If the DC adapter jack is glued, also remove it with a knife or screwdriver. The key is gaining access to the unit. (Fig.1)

Remove the antenna wire from its connection point and any plastic casing. When you have the circuit board removed from the casing, cut or unsolder the DC adapter jack - this is behind the circuit board - again, we just snipped the wires and peeled back 1/8 inch coating from the wires much like you would do for stereo speakers or wiring a plug. (Fig 2.)

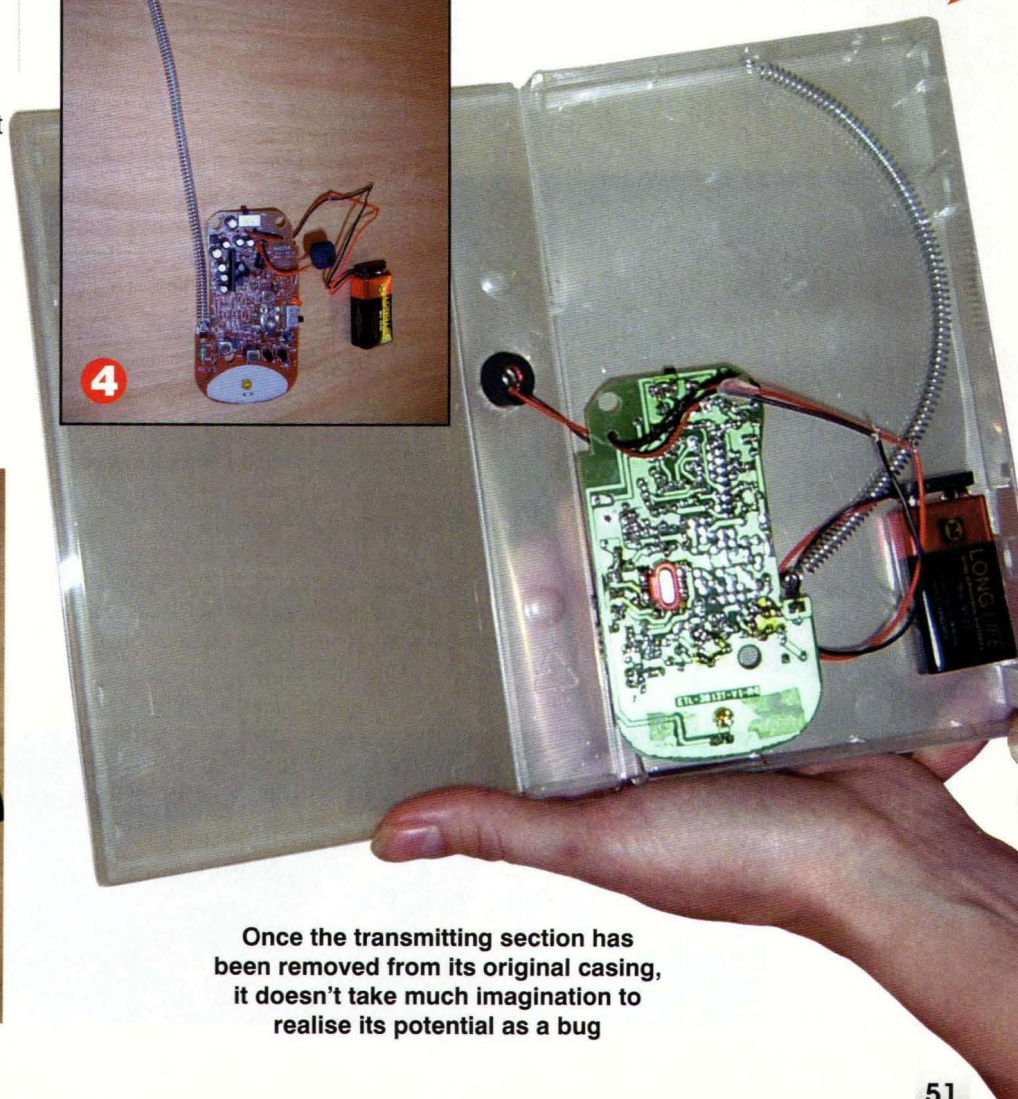

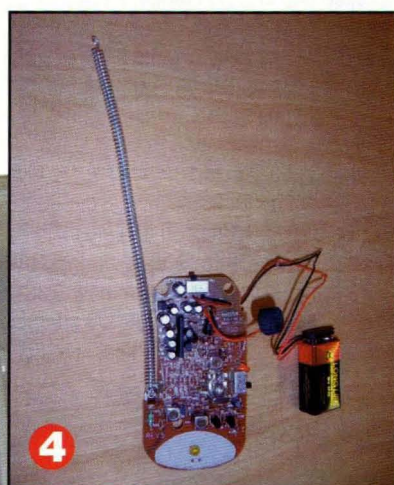

Next, simply join the 9-volt battery clip to the red and black wires making note of the polarity - attach red to red, black to black. If you don't use solder, simply twist the wires

together and wrap the connection points with electrical tape, but we found it wasn't necessary to use tape. (Fig 3.) If your set didn't come with a long antenna, you can solder or join a length of solid copper wire in place of the original short aerial or lead so that it can be held in place and adjusted for best results. (Fig 4.) That's it.

In the model we used, the in-built antenna was actually a length of twisted wire carefully moulded inside what could be considered a carrying handle. Once straightened, we found the range of the unit increased dramatically.

#### EXPENDABLE

The interior of the transmitter is sensitive and fragile. This should be a consideration when

Once the transmitting section has been removed from its original casing, it doesn't take much imagination to realise its potential as a bug

hiding the device. The microphone is also important. Like any room bug the mic should not be covered. However, it doesn't take too much imagination to start planning where the device could be placed.

Because the bug is so inexpensive to manufacture - the price of a large coffee or pint of beer - it is expendable - and that's one primary advantage over professional bugs. Few people would purchase a device, use it once and walk away... unless money and leaving evidence is of no consideration. For example, if it's necessary to listen into a conversation in a cafe or pub, leave the transmitter nearby, walk away and listen. However, concealing the transmitter is vital. Professional bugs are tiny and easily hidden, thus the challenge here is to adapt everyday objects large enough to hide the transmitter. The principle is identical.

We used an ordinary softdrink can to hide our bug. Make absolutely certain no moisture or fluids remain in the can. Firstly, remove the bottom of the can using a steak knife or sharp tool and place the circuit board, battery and antenna inside - secure with some duct tape to cover the hole. Position the microphone near

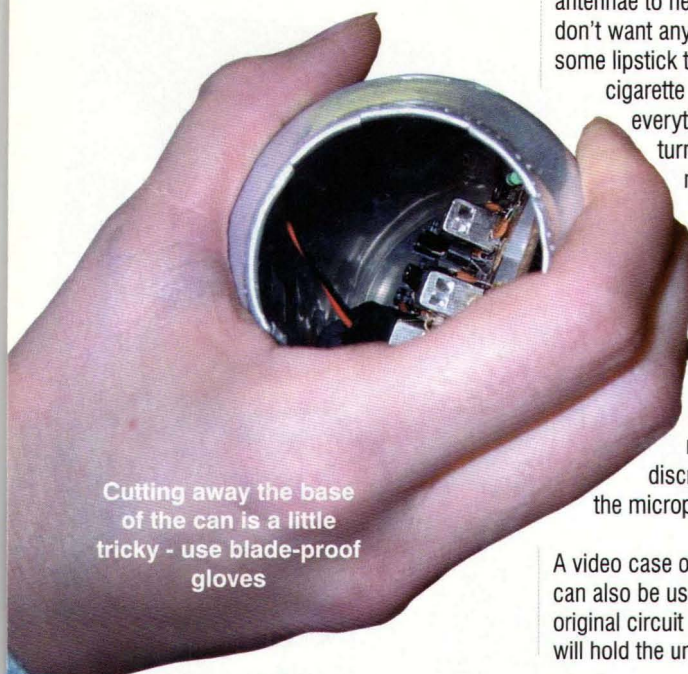

A box of tissues is an excellent object to hide the transmitter

#### ADVANCED PROJECT

To improve the range of the receiver, you can add a long telescoping antenna in place of the fake rubber one that comes with the units. Also, by removing the built-in speaker and feeding the audio into a 1/8 stereo headphones jack, this will allow you to use headphones which will improve sound quality. This opens up recording possibilities.

The project takes about 15-20 minutes to complete. We found the hardest part was actually opening the transmitting set. Because baby monitors use the FM frequency, you can also use an air band radio to listen in. Like any FM transmitter, it is very vulnerable to interception. In respect of range - we found our finished unit capable of transmitting well over 150ft. However, like hand-held telephones that allow you to take calls in your garden (well away from the base unit), the range of baby monitors varies. But for one-off operations, or if you require an instant transmitter, it's a superb device that can be assembled in any environment.

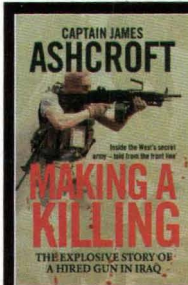

Cutting away the base of the can is a little tricky - use blade-proof gloves

the can opening on top. We found the microphone is sensitive enough to pick up sounds in the room, but if you find it muffled, simply cut (or pierce) a few holes in whatever casing you've used. They won't be noticed.

To increase transmission range, the antennae can be pushed through the drinking hole vertically. Simply thread a wide straw over the antennae to help conceal it. Furthermore, if you don't want anyone taking a sneaky drink, add some lipstick to the straw or place a dead cigarette butt on top of the can... works everytime. Before placing your bug, turn both units on and check to make sure they are on the same channel - you are now ready to monitor or record. Another ideal concealment object is a box of tissues.

The transmitter is placed in the middle of the tissues and a small discreet hole cut in the end to enable the microphone to pick up sounds.

A video case or a large cigarette/cigar packet can also be used depending on the size of the original circuit board. Blue tack or electrical tape will hold the unit firmly in place.

of intelligence  
recruitment

# RECRUITERS

**S**ince 2002, it's estimated that Western security and intelligence services have recruited an additional 50,000 personnel to predominately counter al-Qaida's global terrorism. However, for those wishing to join organisations like MI6 or the NSA, the road is not easy or initially rewarding, but without doubt the work can be unusual and absorbing. It can also be dangerous for field operatives. For career personnel, length of service is beneficial. But just how difficult it is finding employment in an industry that still insists on absolute secrecy and loyalty?

Many decades ago Britain's foreign intelligence recruiters were regarded as a highly educated and sophisticated group that covertly plied their trade in the corridors and lecture halls of elite universities, colleges and private schools. They

also ventured to businesses with a reputation for excellence and overseas ties. Identifying students with an eye for brilliance, knowledge of foreign languages, cunning, disguise, or simply via his or her family background opened doors for many people who would eventually work in the intelligence world. It resulted in an almost mystical environment that was simply out of bounds for many people... including the media

The ghosts of Maclean, Burgess and Philby will always haunt Britain's buildings of learning, but MI5, MI6 and other agencies are now seeking the employment of recruits to counter a new threat

Donald Maclean

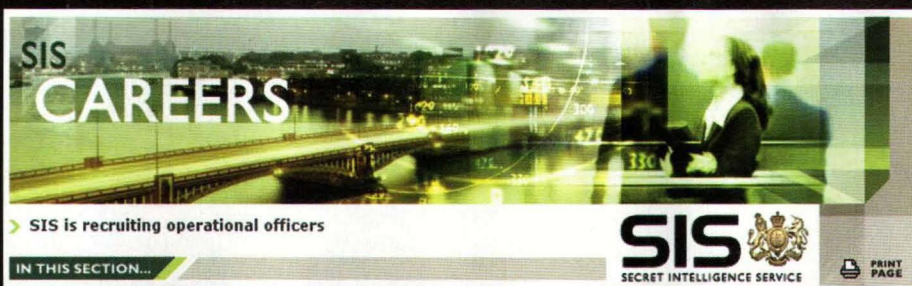

from these very seats of learning to infiltrate and expose the most dangerous phenomenon since Hitler's Nazis attempted to dominate the world - al-Qaida. Though security concerns are different, intelligence gathering is still the most vital function of any agency.

What has changed is the manner in which persons are employed - this occasionally means engaging people with little or no education, but with guile and toughness to infiltrate and help defend nations.

## THE RECRUITERS

Most intelligence services have a number of specialist recruitment officers who will actually ply their trade on the road. Searching for the ideal undercover agent or analyst with a unique eye for interpretation is still an endeavour worth pursuing. Often leads come from the prospective

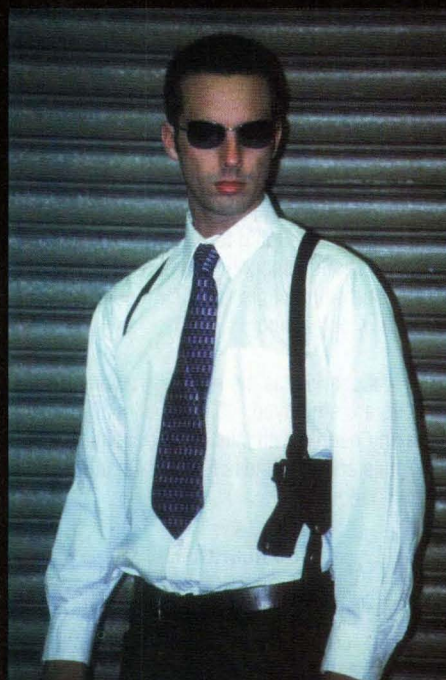

**MI6 recruiting banner - 13 November 2006 - note the ticker stating the organisation is 'recruiting operational officers'. Such an advert would have been unheard of five years ago**

recruits themselves - a letter, e-mail, a recommendation or telephone call might alert a security agency. It could also come via a chance meeting, a conversation at a security tradeshow, or by a report in a local newspaper describing a new innovative invention. A subject, new patent, statement or thesis that is relevant to the world of intelligence is bound to gain a recruiter's attention.

Recruitment officers are unique in themselves, in that they are respected for their ability to identify people with an inherent skill to see beyond the conventional, or provide an exceptional opinion on affairs or situations. If you think it a little fanciful, think again, agencies will often surveil and track the progress of people with 'talent' or persons in a position to assist by providing intelligence. Many agencies also have 'liaison officers' who will be advised if a student with "exceptional ability" is spotted, be they in a university, premier technology company, have access to street 'secrets' or the media. The recruiters have an 'eye' for talent and will quickly discard those who simply won't be enticed, fall short

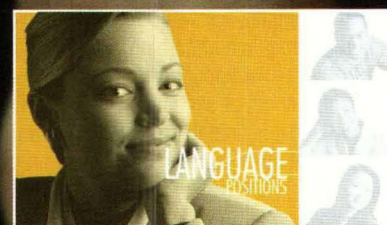

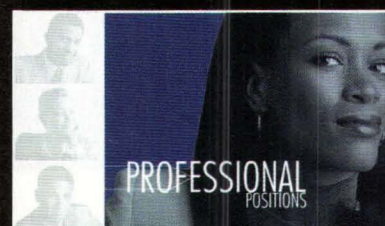

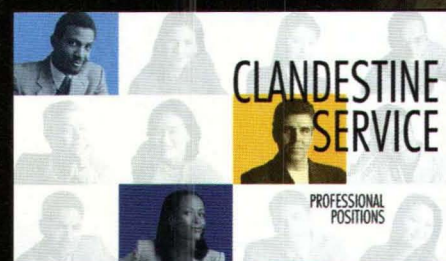

**The archetypal spy - the reality is very different**

of an acceptable level, or may turn out to be a security liability. Beyond that, if a person can be of assistance in intelligence gathering, surveillance may ensue, engagement may take place and eventually their cooperation will be obtained. As many intelligence commentators note, "it can be a dirty business."

Long gone are the days when recruiters would join a foreign language class in Oxford University to seek out potential talent - but they may get a call from a teacher.

Today's intelligence and security services recognise that respectable universities and colleges will not necessarily bear fruit. Primarily, this is because of a very changing technological world and international terrorism. Another major change in recruitment is the intense security checks relating to background, criminal records, nationality and overall persona. However, there are times when even the strictest criteria may be 'bent' in exceptional cases. Further emphasis will clearly be given to the type of area which the 'subject' may specialise in, be this advanced technology, photo analysis or even acting. For those occupying a position of 'importance' or 'opportunity' recruiters won't be too far away. Intelligence gatherers may make a direct approach - even if it wasn't called for. The shock of being enticed is an unknown quantity, thus before any 'direct move', an assessment will be made. For businessmen or women venturing afar or those with an insight into politics or technology, any material may be of use to those given the responsibility of acquiring intelligence.

Once contact is made recruiters will disengage any fantasist or person believing the world of intelligence is akin to the silver screen of Hollywood - it is not. For the few that make it past the recruiter's evaluation, other subliminal tests ensue. Eventually it's a personal meeting with 'management' and more interviews. Background checks inevitably ensue and can take as long as 12 months, but if the subject is deemed 'valuable', it's likely an assessment will be made much sooner.

## RULES OF ENGAGEMENT

Other operatives and employees are engaged by interrogators following recommendations by serving personnel, family members, or friends, or people tenuously linked to the security services. It's not unusual for an intelligence service to have more than one member of a particular family in its employment. Serving members of an intelligence or security institute may also seek guidance for their brother, sister or spouse, this too can lead to recruitment. Yet this pales beyond significance to the requirements of the evolving modern-day intelligence service. Clearly brilliant minds are required to sift through mountains of laborious paperwork to evaluate the speech of a foreign secretary visiting Libya, for example, but what of the intelligence gatherers themselves? Persons in a position to help or provide information to agencies such as the CIA will always interest senior officials. Most will be beyond the reach of recruiters, but not all. When an opportunity arises many intelligence services have special rules of engagement that might help 'turn' individuals. If the target is of huge significance or importance, then specialist teams that lean towards 'dirty tricks' might be enabled. *That's a subject for another day.*

## LETTER OF APPLICATION

However, the vast majority of new recruits to the intelligence world come via ordinary contact. Long gone are the days when intelligence organisations rarely provided an address or point of contact.

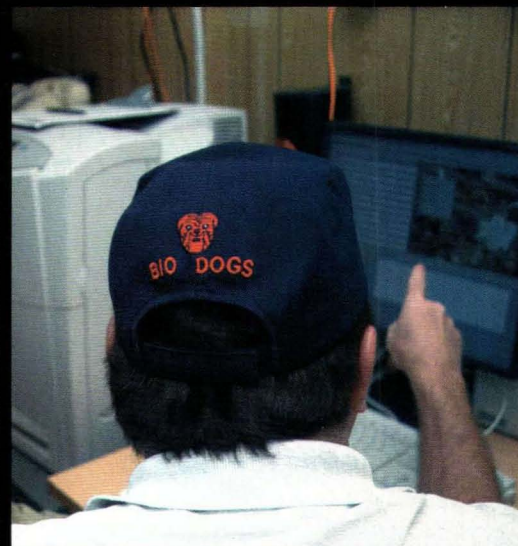

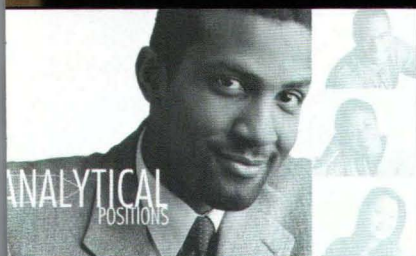

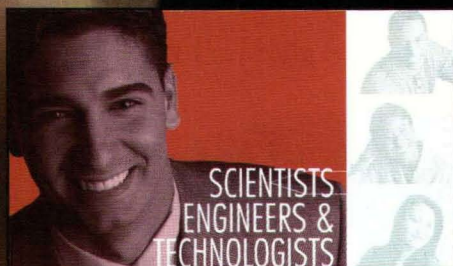

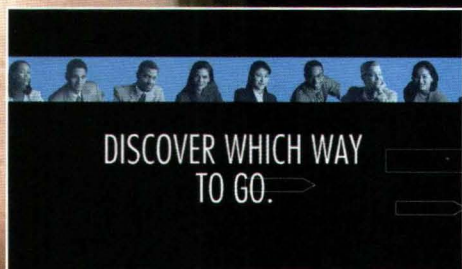

The CIA, for example, receives 2000 e-mail applications every week, but actively sends representatives to talk to students about a career in the agency. Recruits are subjected to physical, psychological and polygraph tests, undergo an intensive background check, and must be drug-free for at least 12 months before even applying for a position, have no history of bankruptcy or financial irresponsibility, and no criminal record. Michael J. Mau, regional recruiter for the Central Intelligence Agency, recently addressed students at the Monterey Institute of International Studies, one of a number of business, govern-

ment and nongovernment agencies that pass through the graduate school in search of talent. He told the students: "It's a good time to apply. A lot of agents in the 'baby boomer' generation are retiring at a time when the CIA has stepped up recruiting. If a recruit passes the screening process, there's better than a 60 percent chance he or she will be hired."

So, if you've got a criminal record - forget it, though even the CIA and MI6 would not rule you out because you broke a neighbour's window when you were ten years old or smoked a cigarette in the playground. Take a look at MI6's and the CIA's recruitment pages on their respective websites. MI6's is thread-

bare with a few prompts on what criteria the candidate should meet, while the CIA's opts to use a concise book-like model including charts, job opportunities and future prospects. There's even a section on what could happen if you fall foul of the rule book. Both recruitment channels work for the agencies concerned, and even though MI6 and the CIA are regarded as 'cousins', their respective employment methods, at least electronically, are different.

For those considering a future in the world of intelligence beware, the selection process is tough and the chances of gaining employment are slim, especially in those areas that are deemed secret. This is tempered somewhat in that a number of organisations do take on 'general staff', and internal notice boards exist, even within MI6, so promotion to other areas is always

# 10 OFFICIAL MI6 MYTH BUSTERS

**MYTH:** *SIS officers must be single and have no meaningful private lives.*

**REALITY:** Of course some SIS officers are single, but many are married or in long term relationships. We want to encourage our staff to have a healthy work/life balance. And we will not let you take your work home with you.

**MYTH:** *"I wouldn't be able to have a family while working for SIS"*

**REALITY:** SIS is a family friendly organisation and it is possible to combine the demands of producing intelligence with the challenges of raising a family. Female staff who have been in the Service for more than 12 months may receive six months maternity leave on full pay. Male staff may take two weeks paternity leave at full pay. SIS offers flexible working arrangements including part-time work and job sharing. With a few exceptions, partners and children may accompany officers on postings.

**MYTH:** *"I would have to lie to all my friends and family about what I do every day."*

**REALITY:** For security reasons SIS officers are not able to discuss the details of their work with people outside the organisation. But this obligation is no different from the duty of confidentiality which exists in many other professions. All our staff receive training and advice on what they are and are not allowed to say to friends and family.

**MYTH:** *Working for SIS is dangerous.*

**REALITY:** SIS has a global reach in order to provide government with intelligence on current foreign policy concerns. This invariably means some of our staff working in areas of the world where the security environment is difficult. SIS takes the safety of its staff very seriously. All staff who are posted abroad receive security training and advice. Additional training and equipment is given when required. The majority of our staff are either based in London or in stable areas of the world.

**MYTH:** *SIS only recruits white, male Oxbridge graduates.*

**REALITY:** SIS seeks to reflect the society it serves and is therefore committed to ensuring that its workforce is drawn from the widest possible range of backgrounds and experiences. Successful candidates come from a variety of social and ethnic backgrounds and educational establishments. SIS is an equal opportunities employer and welcomes applications from men and women of talent from all parts of the community.

**MYTH:** *"I would have to break the law if I worked for SIS."*

**REALITY:** Integrity is an essential quality in potential recruits to SIS. No member of the Service is allowed to break UK law. Like the other British intelligence and security agencies, SIS is subject to parliamentary, ministerial, judicial and financial oversight. Oversight is based on two key pieces of UK legislation, the Intelligence Services Act 1994 (ISA) and the Regulation of Investigatory Powers Act 2000 (RIPA).

**MYTH:** *"I need to speak several languages."*

**REALITY:** Apart from linguists, candidates do not need to speak foreign languages. SIS provides language training to members of staff as required. Staff can also take advantage of our in-house language classes. However, we welcome applications from candidates who do have foreign languages, especially Arabic, Chinese and Urdu.

**MYTH:** *"I'll be stuck in the same job for the rest of my career."*

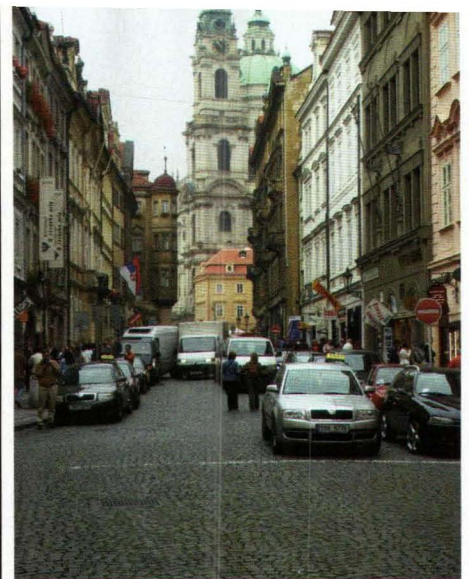

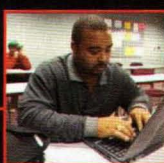

**REALITY:** SIS staff have varied and interesting careers, changing departments every few years. Moving jobs within the organisation enables staff to learn new skills, tackle fresh challenges and bring their previous experience along to their new team. Some staff also have the opportunity to serve abroad.

**MYTH:** *"If I join SIS I will never be able to leave."*

**REALITY:** SIS is proud of its staff retention rates, but for a variety of reasons some staff do decide to leave the organisation. In these instances SIS can provide advice on seeking alternative employment and references to future employers.

**MYTH:** *"I applied to SIS three years ago, but was unsuccessful. There is no point in reapplying."*

**REALITY:** The application process for SIS is extremely competitive and many candidates fail. Sometimes this is because candidates lack the relevant experience. We welcome reapplications from candidates who have gained additional qualifications or experience since their last application. Usually candidates should wait for at least two years before reapplying.

**Employment with any intelligence collection agency could take operatives abroad**

possible, if not remote. A written application to MI6 will take anywhere between six to twelve months to process, unless you hold the codes to Russia's nuclear arsenal or the whereabouts of a hidden Iranian heavy water plant. During this 'waiting period' applicants may be forgiven for thinking their e-mails or letters have been lost, but that's not usually the case. Every response, statement and previous job or post will be checked, if you are a person of interest. Assessors and analysts will reject 95 out of every 100 who apply - and very quickly. The 95% will almost certainly not receive a response due to confidentiality. For the lucky few even more checks will ensue - some dating back to school years. If by chance a

**Intelligence field recruiters have a well established network and dozens of contacts or 'liaisons' throughout the country**

letter or phone call is received from agencies like MI6, then a location for an initial meeting will follow - this is generally regarded as the 'first interview'. Don't expect any response to include more than a few lines. It's possible you will be contacted in person, though this is highly irregular. MI6, however, are quick to point out on its website that applicants should not get too disheartened by rejection: *"The application process for SIS is extremely competitive and many candidates fail. Sometimes this is because candidates lack the relevant experience. We welcome reapplications from candidates who have gained additional qualifications or experience since their last application. Usually candidates should wait for at least two years before reapplying."*

Some applicants track the subliminal adverts sometimes posted by the likes of GCHQ or the

**Left: Intelligence agencies such as MI6 and the CIA regularly interact with their respective armed forces. Additional training is often supplied by specialist military trainers**

NSA in newspapers. It's an unusual talent to 'read' hidden messages, but one not lost on those involved with attracting talent.

When applying via e-mail, to the CIA, for example, the applicant is faced with a series of general questions and some that may contain hidden traps. Dependent upon which position or section might be available, education is still regarded as a priority and qualifications do still mean something in today's intelligence world. And despite many agencies saying age is not a concern, it most certainly is. Nevertheless, recruiters may sense something unique, unusual or advantageous in your application, so it's not altogether unusual to find interest from some shadowy outfit. Be that as it may, one false or daft response will mean instant removal from the next level. Indeed, most applicants fall at the first hurdle due to the sheer number of people submitting applications. Unfair? Perhaps, but claiming a past career in security, a military background, or attending any number of courses will not necessarily make you more eligible than the person who writes "not applicable" or 'don't

**Major intelligence agencies have a dedicated science wing providing technical support... and a few highly rated spy products**

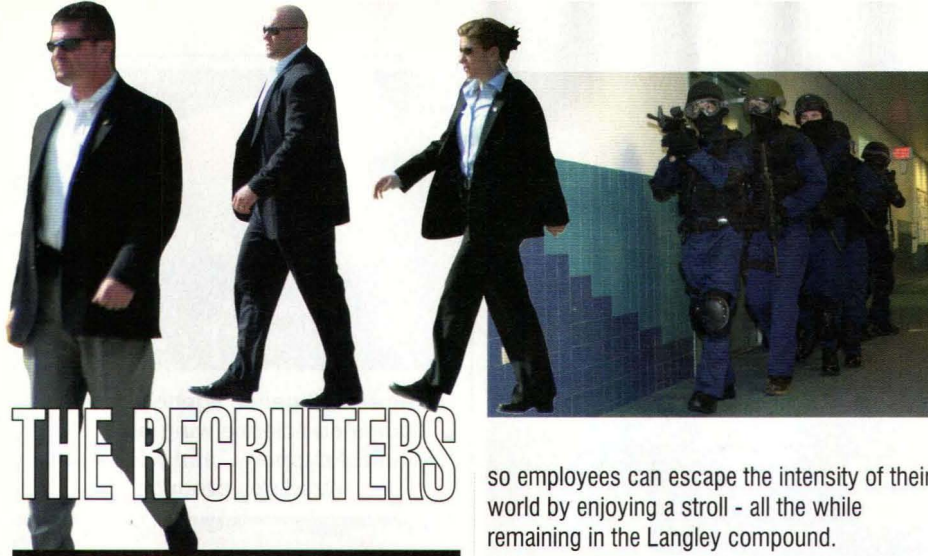

know'. Quite often recruiters seek employees who have not been exposed to corporate or other agency training methods, lest they be entrapped in certain work procedures. Similarly, no good will come in saying you read the Times or are an ardent follower of 'Jane's Defence Weekly' - it's not what the security services are looking for.

Honesty is always the best policy and for those lucky enough to edge nearer a second interview, then be prepared for a huge disappointment. Of the five out of one hundred selected for the second stage it's likely only one or two people will proceed. A personal interview combined with rigorous assessments by specially trained observers is a difficult pole to hurdle. However, you may be exactly what the security services are looking for, so a wrong answer here or a hesitation there may not go against you. You may also be pointed towards other services or opportunities. At this point the job of the recruiter has ended.

The world of intelligence is enormous, complex, tiring, mundane and multifaceted, thus finding work in the 'industry' be it as a telephone operator, a spy or 'working informant' is not impossible, but it is unlike any other job in the civilian world. It also requires you to be discreet and responsible. It's difficult not to say to your spouse or friend what type of day you have had at the office, and that rule applies nearly all the time for those engaged in

## THE RECRUITERS

security matters. With this in mind, the likes of the CIA have endeavoured to make life in the service more enjoyable, even creating managed foot paths around its headquarters

so employees can escape the intensity of their world by enjoying a stroll - all the while remaining in the Langley compound.

Few people who apply for an intelligence-gathering position will ever make it. For those who do cross into the world of case officers and undercover agents the initial training period is intense, laborious and at times

frustrating. This is not the world depicted on the 'silver screen' or entered into by the popular BBC series on MI5 - 'Spooks'. Indeed, Eye Spy has learned of many a real case officer from the Security Service casting a glance of bemusement at the popular television show. It's simply an unreal world presented by directors intent on providing the public with entertainment and a world away from the everyday work carried out by most MI5 employees at Thames House. Communication skills, an ability to learn, cooperate, respond, sift through volumes of data and make singular assessments are absolutely vital - these are areas that cannot necessarily be taught or managed - they have to be part of the applicants original skill factor. Understanding tradecraft or using equipment can be taught, but other areas of brilliance are sought after by recruiters and determined in interviews... so too are environments frequented by individuals or a unique awareness of current happenings.

Despite the lows that a possible rejection may bring, 99% of applicants are respected for their endeavour in wanting to help their country. For the few hundred (in the UK) who do find themselves carrying a 'security ticket', it's a new world full of responsibility and challenges, but beware, it can be time consuming and for most, it's certainly not '9 to 5', one fact the creators of 'Spooks' have certainly got right.

## ISS TRAINING LIMITED

### THE SURVEILLANCE TRAINING SPECIALISTS

Established in 1990, ISS Training Ltd has been conducting surveillance training since 1996. The company is well respected within the security industry as surveillance providers. We currently provide training for:

- UK ENFORCEMENT AGENCIES • PRIVATE INVESTIGATORS
- CLOSE PROTECTION OFFICERS • ALLIED MILITARY UNITS
- SECURITY CONSULTANTS • CORPORATE SECURITY TEAMS

# Letter from Fort Meade by David Hamer

**...being an irregularly occasional, or an occasionally irregular, communication from the American cryptological community: particularly those things associated with the National Cryptologic Museum [NCM] and its parent, the National Security Agency [NSA]**

David Hamer, associate editor reports on the important 'Spies, Lies and Intelligence' Conference held recently at Christ Church Oxford

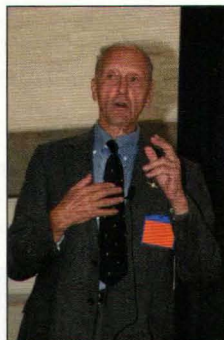

**F**rom 3-8 September, 2006 a conference was held in the ancient and prestigious surroundings of Christ Church, Oxford. The event, the fifth in the series to be held - the first, 'Enigma and the Intelligence War' - brought together, in 2002, an eclectic group of scholars and over two hundred and fifty delegates from countries across the globe. Eye Spy Intelligence Magazine was a major sponsor of this year's conference.

The first item on this year's well thought out agenda was offered to a limited number of early arrivals on Sunday, 3 September and

was held, not in Oxford but in London's Churchill War Rooms and the co-located Churchill Museum... both facilities operated by Britain's Imperial War Museum. On returning to Oxford that evening the group joined the newly arrived delegates and speakers to hear a welcoming address and conference overview from John Harris, Steward of Christ Church and by intelligence historian, author and former Member of Parliament, Nigel West who was to act as Master of Ceremonies for the conference as a whole. This last role was originally to be that of historian, Robin Neillands, whose death earlier in the year leaves a void in the crypto-historical community that is yet to be filled.

An outdoor reception in Tom Quad was followed by dinner served in the Great Hall of Christ Church, made famous... some might say infamous... by the Harry Potter movies. Following dinner, delegates made their way back to the lecture hall where they were entertained by a showing of *The Spy Who Came in From the Cold* - based on John le Carré's best seller and starring the late Richard Burton.

On Monday, following breakfast, those assembled were welcomed and addressed by Professor Sir Michael Howard who was followed at the podium by Dr Stephen J Weiss, Senior Visiting Research Fellow, Department of War studies, King's College, University of London whose subject was 'US Intelligence Since

**Dr Stephen Weiss**

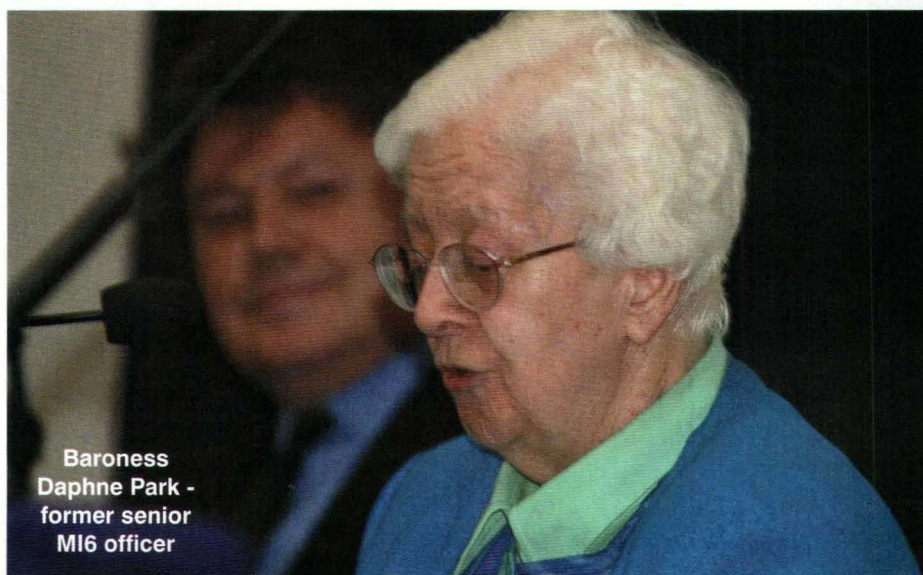

1945: OSS to CIA'. Dr Weiss, credentials include having served in World War II behind enemy lines during the Liberation of France.

The morning's events ended with a presentation by Baroness Daphne Park, now a member of the House of Lords, formerly a senior officer of MI6. She ran agents in Moscow during the Cold War, infiltrated Hanoi during the Vietnam War and smuggled men out of post-independence Congo. Her career began in World War II when she volunteered to train Resistance fighters and Anglo-US Jedburgh teams parachuted into France. "Secret Intelligence work," says Daphne Park, "is not as portrayed in spy novels or on film"... and she should know..!

The afternoon speakers included Amir Taheri, Iranian-born and educated in Tehran, London and Paris who addressed the audience on the

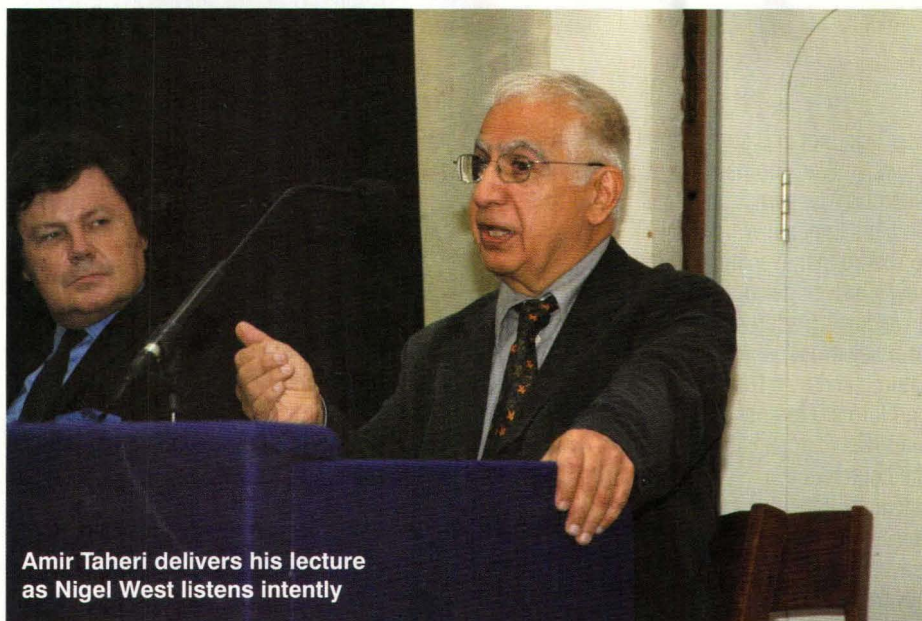

**Mark Seaman**

**Baroness Daphne Park - former senior MI6 officer**

Amir Taheri delivers his lecture as Nigel West listens intently

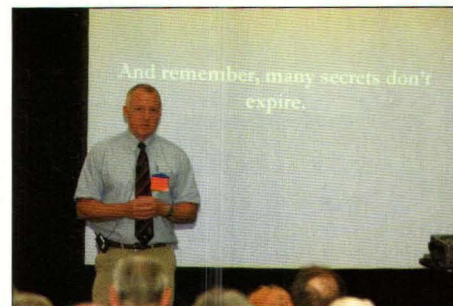

subject of 'Islamic Terrorism: Defining a Problem'. Following afternoon tea the podium was handed over to Mark Seaman, an historian and specialist in intelligence and special operations. Mr Seaman, who was also the speaker during Sunday's Churchill Rooms visit, spoke on the subject of 'Secret Intelligence in the Cold War: 1945-1989'. After dinner in hall conference moderator Nigel West spoke on 'Counter Espionage: VENONA'.

Tuesday dawned bright and early - five coaches departing between 7.45am and 8.45am for visits to the British Military establishment at Chicksands, home of the British Army's Intelligence Corps. Highlights of this visit were the Intelligence Museum and

Chicksands Priory, whose origins can be traced back to 1086. Following this, the participants, coaches carried them to the newly re-designed museum at Bletchley Park, centre of Allied codebreaking efforts during WWII. Coaches returned to Oxford in time for refreshments and dinner in the Great Hall.

Chris Pocock, a full-time writer, specialising in defence aerospace and air logistics is the Defence Editor of *Aviation International News*. He spoke following dinner on '50 Years of the U-2 Spyplane'.

Wednesday's agenda included Bill Duff who served with the Special Branch of the Royal Ulster Constabulary during the recent sector-

"And remember, many secrets don't expire" - Bill Duff

ian violence in that country. Mr Duff is a gifted speaker whose presentation, 'The Gathering, Processing and Exploitation of Intelligence', entranced his audience. He was followed at the podium by a group of speakers moderated by Nigel West... the subject was an 'Intelligence Brains Trust: Cold War Intelligence - What Difference did it Make'. Dr Michael Goodman (right), 'Intelligence and Nuclear Proliferation' from the Department of War Studies, King's College, University of London spoke next. He was followed by the final presenter of the day, Dr David Kahn, the well-known author and cryptologic historian, whose subject was 'Codes, Codebreakers and the new Cryptography'.

On Thursday, Professor Christopher Bellamy, Director of the Security Studies Institute at Cranfield University spoke first on 'Human

## 'Edge of Space'

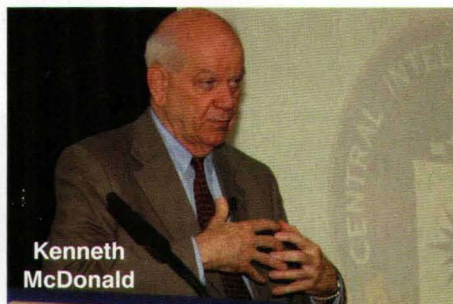

Still a menace after decades of flying! The U2 spyplane

Intelligence versus Technical Intelligence'. He was followed by former CIA officer Dr. J. Kenneth McDonald whose topic was 'CIA: An Insider's View'.

After lunch in hall Professor Richard Aldrich whose subject, 'Terror or Globalisation? Secret Intelligence and the Challenges of the 21st Century' kept delegates in their seats, hanging on every word.

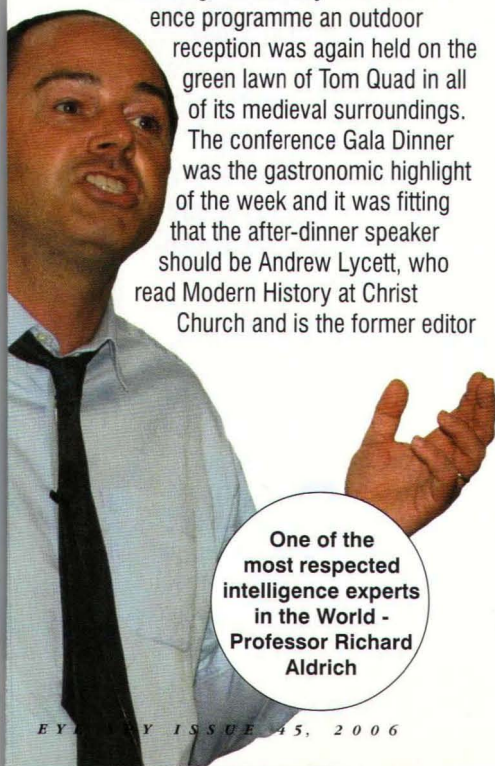

Next was a real crypto-historical treat. Our speaker, Oleg Gordievsky, spoke on 'Soviet Espionage Against Britain after 1938'. Who

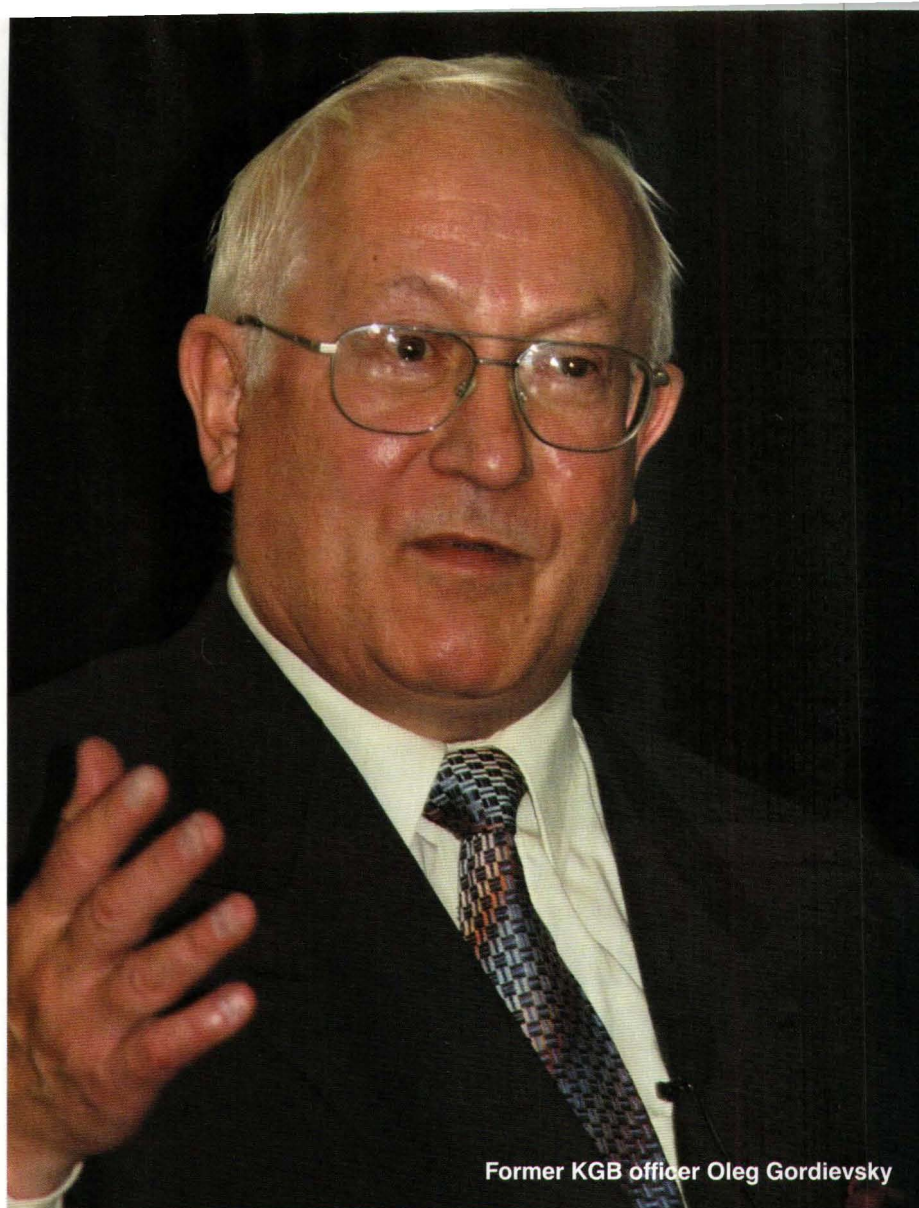

**Kenneth McDonald**

better to do this than the man who, for eleven years until 1985 was the West's most important agent, working secretly at the heart of the Soviet system? The value of Gordievsky's information to the West, and particularly to the British who ran him, cannot be overstated. He became aware of KGB suspicions in 1985 and it was apparent that his life was in extreme danger. He was successfully exfiltrated in July 1985, under the very noses of his KGB surveillance team. Offered, as an alternative to Mr Gordievsky's talk in this time slot was a tour of Christ Church itself... but most remained in the lecture hall, held spellbound by our speaker.

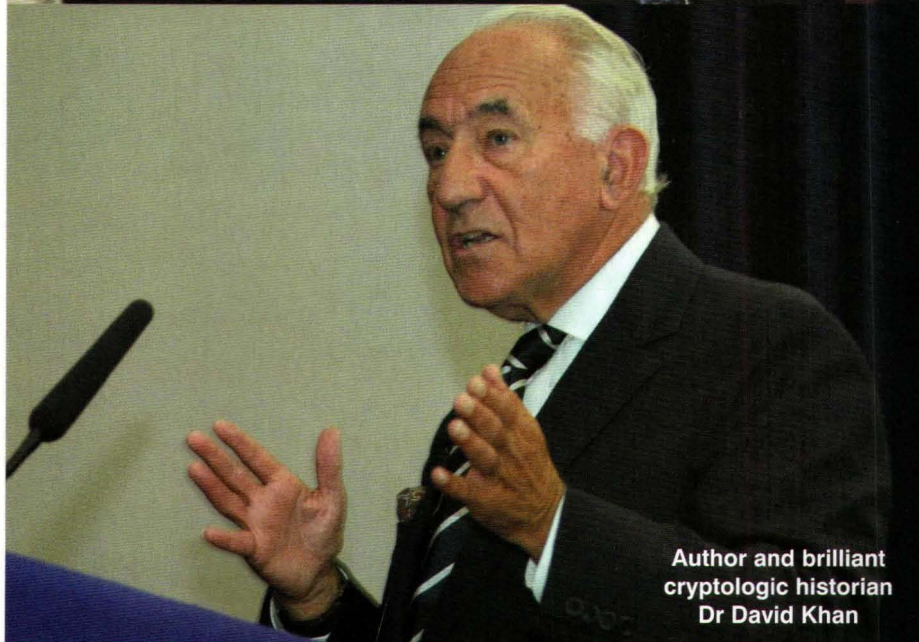

This being the last day of the conference programme an outdoor reception was again held on the green lawn of Tom Quad in all of its medieval surroundings. The conference Gala Dinner was the gastronomic highlight of the week and it was fitting that the after-dinner speaker should be Andrew Lycett, who read Modern History at Christ Church and is the former editor

**One of the most respected intelligence experts in the World - Professor Richard Aldrich**

**Former KGB officer Oleg Gordievsky**

**Author and brilliant cryptologic historian Dr David Khan**

of the Oxford University newspaper, 'The Cherwell'. The conference summing-up and farewell by the Steward, John Harris, thanked the members of the conference staff and bade farewell to the attendees, many of whom are already planning for 2007's event in this 'Conflict' series of conferences.

For details of upcoming events in the Christ Church calendar, read Eye Spy and watch the Christ Church website at: <[www.chch.ox.ac.uk](http://www.chch.ox.ac.uk)> or write to:

# EYE SPY AREAS OF

In Eye Spy 44 we invited readers to analyse the above image to see how many areas or objects were available for hiding covert recording devices. When specialist officers are engaged in such a task, their primary concerns focus on concealment and the end product. Perhaps the most difficult problem is accessing the building when it is empty. However, that involves deception techniques.

Once inside, officers will seek power lines, check if devices are visible from any vantage points, analyse lighting conditions, note areas of observation, and determine any problems faced (in this example) by music, rotating fans (the air vent) and if gaming or cigarette machines (when opened) can accommodate equipment... In this case a camera or audio device.

# 

would recognise a 'foreign object' hidden amongst the wires and components.

Eye Spy's surveillance consultants identified the following areas and objects which would afford an opportunity to gather intelligence covertly using cameras and audio equipment. Of interest, they also concluded that the best location to place any covert device was behind the

wood panels, and that the easiest method involves utilising the coat hangers.

**PIR:** Replace with dummy audio and covert camera. Easily recoverable

**SPEAKERS:** Soft covering would enable quick access to place camera. Little point in using audio here

**COAT HANGERS:** Utilise by hanging coat concealing audio and covert camera. The primary concern is making sure the camera is facing in the right direction, or that it could be moved accidentally by someone placing or removing their coat. Recoverable

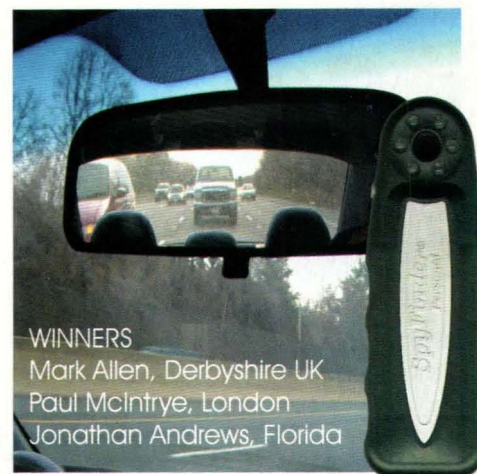

**AIR VENT:** Removable covering enabling placement of camera. Probably retrievable from outside the building. Concerns relate around fan noise or if movement occurs nudging camera from original position

**TRANSMITTING CAMERA:** A moderately priced camera detector could intercept pictures probably from outside the building

**CLOCK:** Ideal for inserting pinhole camera through face or hiding audio recorder behind face

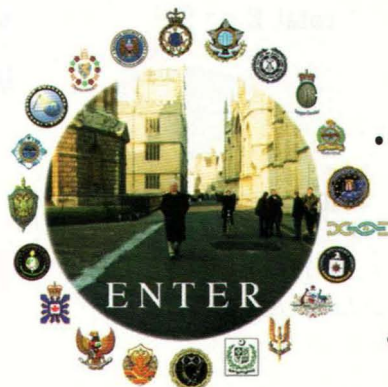

**WOOD PANELLING:** Cavity behind panels in wall and ceiling would provide ideal locations to place audio and camera device. These could be powered 24 hours a day via mains electric

**GAMING AND CIGARETTE MACHINE:** Easily accessible for audio and camera placement. Recoverable by posing as refill engineer.

**The operation to reach Litvinenko was complex and began with the murder of a Russian journalist in Moscow just weeks earlier**

**T**he question on everyone's mind is "who killed Litvinenko?" It's highly unlikely that a serving FSB officer could have got so close to the writer unless he was masquerading as someone else. It's probable the contract was given to one of hundreds of underworld characters operating in London and major cities in Europe. What is interesting is the complex nature of the plot - a plot that has all the hallmarks of an intelligence sting. From the creation of fictitious characters, to e-mails landing on a desk in Italy, and ultimately the use of Polonium 210.

Eye Spy analysts believe the conspiracy against Litvinenko actually started with the murder of Anna Politkovskaya on 7 October. Her politics were the same as Litvinenko and those attempting to get near the London-based writer were confident he would investigate. The plan was to use other writers and colleagues to feed intelligence to Litvinenko

**Litvinenko (right)**

**Happier days. Tony Blair greets the Putins at 10 Downing Street. Inset: Just one of Anna Politkovskaya's critical books and works on Putin**

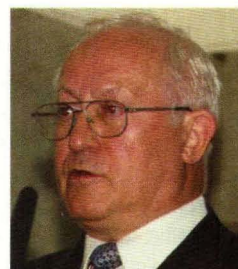

and create a 'daisy chain' - enter Italian Mario Scaramella. He was sent a number of anonymous e-mails about the Politkovskaya case, allegedly including some prime suspects from the FSB. Litvinenko sensed a real opportunity to finally acquire solid evidence against the shadowy elements which had allegedly conspired against him for years. Scotland Yard have the e-mails which we believe also contain a few threatening or warning jibes. It was part of the illusion to make Litvinenko believe the material was authentic.

Once the bait was taken Litvinenko was in serious trouble. Meetings started to be arranged and bits of information passed on. On 1 November he met two Russians at the Millennium Hotel. This afforded his assassin the first opportunity to deliver the deadly Polonium. A few hours later he journeyed to Piccadilly Circus and discussed the Politkovskaya case with Scaramella in the Istu cafe. By this time the deadly substance had already been ingested by Litvinenko. Some writers have speculated it was slipped into his

tea or food, while one analyst noted it could have been delivered using an aerosol spray or dart. What is apparent is an appalling attempt to kill the Russian in a slow dreadful manner. Back in Moscow the media, politicians and the FSB have refuted the allegations. One commentator said "Litvinenko should stay off the dodgy vodka." But without question this was a very professional contract killing - a terrorist act.

One man who is in a position to give a considered opinion is Oleg Gordievsky, a former senior KGB officer living in exile in London. He told *The Times*: "Of course it is state-sponsored. He was such an obvious enemy. Only the KGB is able to do this."

Mr Gordievsky (right) said one of the Russians who met Litvinenko in London had recently been freed from prison in Moscow.
