OPTELECTRONICS GoldStar EXETER BY PRECISION LEADER Protek WAVETEK HAMEG

## The Most Practical, Compact, Inexpensive DMMs Available B&K Precision Tool Kit Series

**Digital Multimeters**  
Measure voltage, resistance, current and lots more! 0.5% DC accuracy.

New Tool Kit™ DMMs from B&K PRECISION are the industry's best values for performance, features and dependability. Compare these ruggedized testers with all comers—at up to twice the price. You'll be sold on the Tool Kit.

All four Tool Kit™ DMMs measure DC current to 10 Amps, have large 3 1/2 digit LCD readouts, and a continuity beeper. The Model 2704A adds AC current, capacitance and transistor tests. The Model 2706 adds temperature measurement. The Model 2707 is like a 2704A with frequency counting and logic probe functions.

## Free UHF Probe "T" Connector

20 Hz to 700 MHz, 300 VAC  
**Hickok 1605M  
Electronic Multimeter**

**\$169**

- Measures a wide range of AC voltage, DC voltage, current and resistance
- AC voltage can be measured from 0.5 to 300 V rms from 20 Hz to 700 MHz
- DC voltmeter range is from 0 to  $\pm 1500$  V, accuracy:  $\pm 2\%$  of full scale value at any point on the scale
- DC current range 0 to 150 mA with special ranges of  $\pm 1.5$ , 5 and 15 nA (using the DC voltmeter probe)
- Resistance measurements can be made from  $<1 \Omega$  to  $>500 \text{ M}\Omega$
- Similar to HP 410C
- For a limited time, receive a free UHF Probe "T" Connector which allows AC probe to be connected to signal path

## AC or Battery Operation Hewlett Packard 204C 5 Hz-12 MHz Oscillator ..... \$249

The HP 204C is a small, lightweight capacitive-tuned oscillator. AC line or rechargeable battery operation makes this instrument ideal for both field and laboratory use. The HP 204C provides frequency from 5 Hz to 1.2 MHz in 6 overlapping ranges with a flatness of  $\pm 0.5\%$  (from 100 Hz to 300 kHz). Delivers an output voltage of  $>2.5$  V rms (10 mW or  $+10 \text{ dBm}$ ) into  $600 \Omega$ . Includes Sync Output:  $>100 \text{ mV rms}$  into  $<100 \text{ pF}$  over entire range.

## An Incredible Deal... A Complete System, A New CRT, and A New Low Price!

### Hewlett Packard 141T/8552B Plus RF Plug-In of Your Choice!

#### Spectrum Analyzer System

We've reduced the price on these fully calibrated, solid-state Spectrum Analyzer Systems and we're including BRAND NEW CRTs...all for about what a new CRT alone would cost! It's not just a great price with a new CRT, it's a great system too. It offers Variable Persistence Storage capabilities while providing absolute calibration of frequency and amplitude, high resolution and sensitivity, plus a wide dynamic range. Your system will include a Brand New CRT installed in an HP 141T Display Unit along with an 8552B IF section and your choice of either an 8553B or 8555A RF section. Many other plug-ins are available so when your requirements change, your Spectrum Analyzer can too! Call today while supplies last.

**Tucker  
PRE-OWNED  
Quality**

**Brand  
New CRT &  
1 Year Warranty!**

### With 8555A RF Section...\$2495

- Frequency Range: 0.01-18.0 GHz (w/internal mixer), 12.4-40.0 GHz (w/external mixer)
- Scan Width: 16 calibrated scan widths from 2 kHz/div to 200 MHz/div in a 2, 5, 10 sequence
- Bandwidth Range: selectable 3 dB bandwidths from 100 Hz to 300 kHz in a 1, 3, 10 sequence
- Measurement Range:  $-60 \text{ dBm}$  to  $+10 \text{ dBm}$  (Log ref. level);  $0.1 \mu\text{V/div}$  to  $100 \text{ mV/div}$  (Linear sensitivity)

### With 8553B RF Section...\$1995

- Frequency Range: 1 kHz to 110 MHz
- Scan Width: 18 calibrated scan widths from 20 Hz/div to 10 MHz/div in a 1, 2, 5 sequence
- Bandwidth Range: selectable 3 dB bandwidths from 10 Hz to 300 kHz in a 1, 3, 10 sequence
- Measurement Range:  $-130 \text{ dBm}$  to  $+10 \text{ dBm}$  (Log ref. level);  $0.1 \mu\text{V/div}$  to  $100 \text{ mV/div}$  (Linear sensitivity)

## Protective Front Covers Available Only \$25!

### Tektronix 465M 100 MHz Portable Oscilloscope \$695

Why Pay Over \$1200 For A New 50 MHz Or 60 MHz Dual Trace Oscilloscope, When You Can Own A Tektronix 100 MHz Scope For Only \$695?

Here's your chance to own a version of one of the most popular oscilloscopes Tektronix ever made and at a price that everyone can afford! Tektronix built these instruments rugged, with ease of serviceability in mind. The 465M is a solid-state, dual channel, 100 MHz, delayed sweep, general purpose oscilloscope. Each of the two channels have a vertical range from 5 mV/div to 5 V/div (10 calibrated steps). The horizontal system ranges from  $0.05 \mu\text{s/div}$  to  $0.5 \text{ s/div}$  (22 calibrated steps) and delayed sweeps rates of  $0.05 \mu\text{s/div}$  to  $50 \text{ ms/div}$  (19 calibrated steps). An X10 magnifier expands each horizontal sweep rate to a maximum of  $5 \text{ ns/div}$ . An X-Y display mode is provided through vertical mode and horizontal sweep speed selection. Includes probes and manual. Ease-of-use, functionality, reliability, and ruggedness, this scope will provide years of service, so order your 465M today!

## Universal TPI P600S

### X1/X10 Switchable Probe...\$19<sup>95</sup>

Brand new with accessories and data sheet.

Durable and comfortable in your hand. Very reliable.

X10 Position X1 Position

Bandwidth:.....60 MHz.....6 MHz

Rise time:.....5.5 nS.....50 nS

Compensation range:.....15 to 35 pF

Input resistance:.....10 M $\Omega$ .....1 M $\Omega$

Input capacitance:.....18 pF.....100 pF

Max. input voltage:.....600 VDC.....200 VDC

## 10 to 480 MHz

### Hewlett Packard 608E

#### Signal Generator \$279

The HP 608E provides high-quality, versatile performance with distinctive ease of operation. Offers an adjustable, calibrated output of  $0.1 \mu\text{V}$  to  $1 \text{ V rms}$  from 10 to 480 MHz. 0 to 95% AM, +CW or Pulse modulation. Basic accuracy of  $\pm 0.5\%$ . Includes a built-in crystal calibrator which provides frequency check points; jack provided for audio frequency output; crystal accuracy better than 0.01%.

# HSC Electronic Supply

Serving  
Silicon Valley  
since 1964!

...brings you a potpourri of high-tech goodies for the techno-tinkerer!  
For thirty years we have been your source for Silicon Valley exotica!

## Connect with LapLink!

- ◆ LapLink Release III by Traveling Software
- ◆ Links two computers via Serial or Parallel Ports
- ◆ Transfer Data at 200K to 500KBPS
- ◆ Complete Universal SIO/PIO Cable Set included
- ◆ Full Documentation
- ◆ 3.5" & 5.25" Versions Included

HSC# 15361

**\$19.95**

## Handy Power Supplies

- A) Switching power supply rated at 5VDC, 3A, Measures 2.75 x 3.25 x 5.25", IEC receptacle for universal (100 - 250VAC, 47 - 63 Hz) input, IEC cord not included, 6" Output cord with DIN plug  
New in box. HSC#14996 **\$5.95**
- B) Linear supply rated at 12VDC @ 1200 mA. Input is strapped for 240 VAC input, use as is with 110VAC for lower voltage output, or re-strap it for 110VAC use at 12VDC. Measures 2.5 x 4 x 6.5", IEC cord not included.  
HSC# 14980 **\$5.95**
- C) Standard 6" IEC power cord for use with above supplies, misc. colors & styles, used. HSC# 80119 **\$9.99**
- D) Multi-output linear supply rated at 5VDC @ 600mA, +12VDC @ 250mA, -12VDC @ 250mA, 110VAC input, measures 2.5" x 3" x 4.75", generous 4" AC input cord, 5-pin DIN output cord, HSC# 15137 **\$14.95**
- E) Same as "D" above, only 5VDC @ 500mA, +12VDC @ 1A  
HSC# 15139 **\$9.95**

## SCSI Disk Drive Case

- ◆ Low-profile case for 5.25" drives
- ◆ Perfect for lower-power drives
- ◆ 9.5" x 2.5" x 10.5" overall size
- ◆ 50-pin SCSI daisy-chain connectors
- ◆ Internal audio cable, RCA jacks on back, SCSI ID switch
- ◆ Uses External 15-16VDC, 1-2A Supply (Not Included)
- ◆ Internal Regulator board can deliver +5, +12 @ 1.5A

HSC# 15245 Low-Profile 5.25" Drive Case **\$17.95**

## Computer Parts Specials!

- A. Western Digital WD1003V-MM1 MFM Disk Controller  
◆ New in box with inst. 16-Bit, No Floppy controller.  
HSC# 15362 **\$9.95**
- B. Miniscribe 8425 Hard Disk -- MFM 21 MB 5.25" HH  
◆ Four Heads, 615 Cyls, 17 Sectors, New, 90-days  
HSC#15354 **\$17.50**
- C. 3.5" Floppy Drive Adapter Bracket for 5.25" bay  
◆ Includes hardware, faceplate, connector adapters  
HSC# 15124 **\$1.95**

## Arcade Game Controls

- ◆ Heavy-duty switch-type joysticks, made by Wico
- ◆ New in box, 10A Microswitch contacts
- ◆ Mounting flange 3" x 3.5", stick with knob is 3.25" high
- ◆ Choice of red or black teardrop or red ball knobs

HSC# 15227 Red Teardrop HSC# 15228 Black Teardrop  
HSC# 15230 Red Ball Knob Your choice **\$6.95**

- ◆ Heavy-duty "fire" buttons, made by Wico
- ◆ New, 10A Microswitch contacts
- ◆ Mounting flange 1.25" dia., mounts in 1.125" hole
- ◆ Nicely dished button, choose from several colors:

HSC# 15218 Yellow, HSC# 15219 White  
HSC# 15221 Green, HSC# 15222 Red  
Your Choice **\$1.95 ea.**

## IDE Docking Bay

- ◆ Makes 3.5" IDE Drives removable
- ◆ Fits in 5.25" half-height slot
- ◆ Plastic construction
- ◆ Remove drive for security
- ◆ New in box, New Low Price!
- ◆ Power interlock protects drive
- ◆ Includes data & power connections

HSC# 15304

**\$29.95**

## Multimedia Speakers

- ◆ Two styles to choose from, both new in OEM box
- ◆ White plastic enclosures, grey grilles
- ◆ MSS-1000 has Volume control, Bass boost switch, uses 3 C-cells per side, measures 3.5" x 3.5" x 5"
- ◆ MSS-2000 has Volume control, Bass & Treble boost switches, uses 2 C-cells / side, measures 3.75" x 4" x 6"

MSS-1000 HSC# 15127 Pair/ **\$6.95**

MSS-2000 HSC# 15126 Pair/ **\$8.95**

## Network Cable Special

- ◆ Dual Workstation Installation Kit
- ◆ Two high-quality 10' RG-58 coax BNC cables
- ◆ Two BNC tee's
- ◆ Two BNC 50Ω terminators
- ◆ One BNC coupler
- ◆ Enough to cable two Thin-net workstations to the wall-plate distribution point

HSC# 14967

**\$9.95**

## Network Card Bargain!

- ◆ Racial Interlan 16-Bit Ethernet Cards
- ◆ High Quality Dual Interface, 10-Base-T or Coax
- ◆ Manual, Software, BNC tee included
- ◆ NE2100 Compatible, NI6510 Compatible
- ◆ Handy 5-pack contains 5 cards, 1 Manual and 2-disk software pack)

HSC# 15364

**\$149.95 / 5pk.**

◆ Other Network Cards Avail. -- Call for details

## Tektronix Test Equip.

- ◆ Previously-owned, tested Tektronix Scopes & Plug-ins
- ◆ In-stock items as of press time, call for current selection
- ◆ Mainframes:
 

7603	100MHz 3-bay	\$195
7704A	200MHz 4-Bay	\$325
7834	400MHz Storage 4-Bay	\$800
7844	400MHz Dual Beam 4-bay	\$695
- ◆ Vertical Amplifier Plug-ins:
 

7A13	150MHz Differential Comp.	\$400
7A16A	225MHz 5mV-5V Single Trace	\$100
7A24	350MHz 5mV-1V Dual Trace	\$400
7A26	200MHz 5mV-5V Dual Trace	\$175
7A29	1GHz 10mV-1V Single Trace	\$625
- ◆ Timebase Plug-ins:
 

7B10	2ns-2S 1GHz Triggering	\$325
7B15	2ns-2S Delaying, Delta-T	\$350
7B71	2ns-5S Delaying, x1, x10	\$125
7B85	1ns-5S Delaying, x1, x10	\$250
7B92A	.5ns-2S Dual, Delay	\$300
- ◆ Miscellaneous Plug-ins:
 

7D11	100ns-1S Digital Delay	\$195
7D13A	3.5 Digit DMM, CRT R/O	\$125
7D15	225MHz Universal Counter, R/O	\$275
7T11	OpS-5mS Sampling Sweep Unit	\$750

## CD-ROM Specials!

- ◆ Tested Good CD-ROM Drives removed from systems
- ◆ 90-Day Warranty ◆ 2x and 3x Speeds available
- ◆ NEC Drives are standard SCSI 50-pin interface
- ◆ Phillips drives are proprietary 16-pin interface

Phillips CM-206 2X-Drive HSC#15366 **\$49.95**

NEC CDR-55JD 2X-Drive HSC# 15386 **\$99.00**

NEC CDR-510 3X-Drive HSC# 15327 **\$139.95**

## Computer Case Close-out!

- ◆ Mini Tower Case (no power supply) 16.25" x 6.75" x 13.25"
- ◆ Hardware kit, stand, One 5.25" bay, two 3.5" bays -or-
- ◆ Baby-AT style Desktop Case, 16.5" x 17" x 6.75"
- ◆ Hardware kit, 200W Power Supply, three 5.25 bays, two 3.5" bays. Both cases are new with 90 day warranty.

Mini-Tower Case HSC# 15356

**\$19.95**

Baby-AT Style Case HSC# 15355

**\$34.95**

## Trackball for Mac!

- ◆ Mouse Systems A7 Trackball for ADB-type Mac's
- ◆ "Three-button Power Control Panel" Software
- ◆ High Resolution (680 dpi) for smooth, fingertip operation
- ◆ 100% A/UX, MacX, X Window and Mac OS compatible
- ◆ Multi-mode operation: Standard or 3-Button Power
- ◆ Reassignable buttons for left- or right-handed use
- ◆ New in box with software, 90-day warranty

HSC# 15432

**\$27.50**

## 386 Motherboard, CPU's

- ◆ "Baby AT" Size 386DX-33 Motherboard, no CPU
- ◆ 64K Cache included, SIMM Sockets for 8 modules
- ◆ On-board SIO, PIO ports, with Cables
- ◆ Chips & Technology Chipset, Co-processor Socket
- ◆ New in Box, with Book, 90-day Warranty
- ◆ Two speeds of CPU chips available

HSC# 15359

386DX Motherboard **\$24.95**

HSC# 15375

386DX-25 CPU w/ 50MHz Osc. **\$19.95**

HSC# 80357

386DX-33 CPU (Limited Avail.) **\$29.95**

## HiFi Speaker Special!

- ◆ 40W Max, 20W RMS Woofer, 4Ω
- ◆ 5.5" dia. mounting, 1.7 lb. overall weight
- ◆ Black Injection-molded Graphite Cone
- ◆ Foam Suspension, Plastic Trim Ring
- ◆ Two-way Crossover Network with connection panel from same speaker system, freq. unknown

5.5" Woofer, new HSC# 15295 **\$9.95**

Crossover, new HSC# 15296 **\$3.95**

## Digital Bathroom Scale

- ◆ General Electric Model EDS1B3 Digital Bathroom Scale
- ◆ Weighs from 25 to 299 lbs.
- ◆ LED Readout, attractive beige case
- ◆ Requires 9V Battery (Not Included)
- ◆ Strain-gauge transducer and readout unit should be useful for many electronic "Hacker" applications
- ◆ Easily adjustable offset for calibration

HSC# 15336

**\$12.50**

## Tiny Trackball for DOS!

- ◆ Mouse Systems NewPoint Trackball for DOS/Windows
- ◆ Portable Trackball for the Laptop on the go!
- ◆ High Resolution in a small package
- ◆ 100% DOS and Windows compatible
- ◆ Mini-trackball with two buttons, ergonomic shape
- ◆ Clamps to keyboard, comes with padded carrying case
- ◆ New in box with software, 90-day warranty

HSC# 15433

**\$19.95**

## Remote Control for your Computer!

- ◆ Infrared Remote operates your computer from 50 feet
- ◆ Perfect for sales presentations, training, demonstrations
- ◆ Serial Interface (IBM version) or ADB (Mac version)
- ◆ Handheld remote is 7" x 2.5" x .5"
- ◆ Included software provides screen pointer for emphasis
- ◆ Keystroke mapping table can be customized, saved
- ◆ Roam the room, make eye contact with your audience
- ◆ Like using a TV set remote control (easy to set-up, use)

HSC# 15240

IBM Remote Keyboard **\$29.95**

HSC# 15241

Mac Remote Keyboard **\$39.95**

## Laser Diode

- ◆ Toshiba TOLD-9200
- ◆ 3 to 4 mW at only 75 - 100mA of current!
- ◆ 670nm wavelength (visible red)
- ◆ Brand new prime
- ◆ Uncolimated, needs current regulation
- ◆ Application sheet with suggested circuit supplied

HSC# 15163

**\$17.95**

## Easy File Transfers!

- ◆ SmartSync Software by Nomadic Systems
- ◆ Provides easy way to keep multiple computers in synch
- ◆ Fast and efficient, transfers only the changes
- ◆ Works with modems, cables or diskettes
- ◆ Automatically updates multiple files, single and multi-user
- ◆ Prevents accidental overwrites, can remotely copy

HSC# 15305

**\$19.95**

## Total Communication!

- ◆ National Semi Ty-IN 2000 Voice / Fax / Data Modem
- ◆ Internal Card for PC's Creates a Communication Center
- ◆ CCITT Group III Fax @ 9600bps, 2400bps data modem
- ◆ Digital VoiceMail, Voice Compression, Unlimited Mailboxes
- ◆ Touchtone Controlled Remote Playback & Messaging
- ◆ Software Upgradeable, New in Box, 90-day Warranty
- ◆ Record and play back Voice, Music & Sound effects

HSC# 97428

**\$45.00**

# You Won't Miss a Thing With SCOUT™ Reaction Tune

## The SCOUT™ Has Taken Tuning Your Receiver To a New Dimension

Featuring Automatic Tuning of your AR8000 and AR2700 with the Optoelectronics Exclusive, Reaction Tune (Pat.Pend). Any frequency captured by the Scout will instantly tune the receiver. Imagine the possibilities! End the frustration of seeing two-way communications without being able to pick up the frequency on your portable scanner. Attach the Scout and AR8000/2700 to your belt and capture up to 400 frequencies and 255 hits per frequency. Or mount the Scout and AR8000/2700 in your car and cruise your way into the future of scanning. A simple interface cable will connect you to a whole new dimension of scanning.

The Scout's unique Memory Tune (Pat.Pend.) feature allows you to capture frequencies, log into memory and tune your AR8000/2700 at a later time. A distinctive double beep will inform you when the Scout has captured a new frequency, while a single beep indicates a frequency that has already been recorded. For discreet monitoring, a pager style vibrator will inform you of any hits the Scout captures.

The Scout will also Reaction Tune and Memory Tune Icom CI-V receivers: (R7000, R7100, and R9000) and (Pro 2005/6 equipped with OS456, Pro 2035 equipped with OS535). Download the Scout frequencies to a PC with the Scout Utility Disk and CX-12AR (optional), then compare them to the Spectrum CD-ROM/PerCon FCC Database (optional).

**Act Now!! Let the Scout Reaction Tune  
you into The World of Scanning**

**SCOUT™ \$449**

\*Scanner not included

### Features

- Automatically tunes these receivers with Reaction Tune (Pat.Pend.) CI-V receivers (ICOM's R7000, R7100, and R9000), (Pro 2005/2006 equipped with OS456, Pro 2035 equipped with OS535) or AOR models (AR2700 and AR8000).
- Records and saves 400 unique frequencies
- Records 255 hits on each frequency in memory
- Digital Filter and AutoCapture (Pat.Pend.)
- 10MHz-1.4GHz single frequency range
- View frequencies in RECALL mode
- 10 digit LCD with EL Backlight
- 16 Segment RF signal strength bargraph
- CX-12AR Computer Interface (optional)
- PC Utility Disk for downloading memory to PC
- Rapid charge NiCads with 10 hour discharge time
- Scout Spectrum CD-ROM/PerCon FCC database (optional)
- AC Adaptor/Charger
- DB 32 VHF/UHF mini-antenna shown with Scout (optional)
- Distinctive Beeper/Vibrator indicate frequency hits

At right: Scout shown with CLIPMATE™.  
A handy windshield mount for Scout,  
for quick access and visibility.

Advertisers and their agencies agree to indemnify and protect the publisher from any and all claims, action or expense arising from advertising placed in Nuts & Volts.

Please send all subscription orders, correspondence, UPS, overnight mail and artwork to: 430 Princeland Court, Corona, CA 91719.

The closing date for each issue is the 10th of the prior month, e.g., the closing date for the June issue is May 10th. Ad copy to be typeset by Nuts & Volts should be received one week prior to the closing date. Call or write for current advertising rates.

# CONTENTS

VOLUME 16 NO. 7 JULY 1995

## ARTICLES

- GOODYEAR'S SUPER SKYTACULAR NIGHT SIGN** *Fred Blechman*.....17  
A programmed assembly of more than 7,500 colored lights provides a nocturnal procession of messages, cartoons, and animated designs for all the world to see.
- ELECTRIC CAR TIRES** *Shari Prange*.....49  
Tires are one of the most important factors in an electric car's daily performance.
- NO-CODE HAMS GET SKIP FREQUENCIES** *Gordon West*.....54  
In July, when no-code technicians get their "Es," they too can enjoy the excitement of skywave skip communications.
- CONQUERING DATA SHEET BLOCK:  
IT'S AS EASY AS ABC** *Ronald Reis*.....61  
There's great stuff in those sheets! Learn step-by-step how to interpret the wealth of information contained in component data sheets.
- INTRODUCTION TO STEPPER MOTORS** *John Iovine*.....69  
Build a simple stepper motor interface to a PC parallel port to examine the operating principles of stepper motors.
- SERVO SPINAL TAP MAKES YOUR PROJECTS MOVE** *Scott Edwards*.....79  
Build an eight-channel servo controller for \$29.00 and turn your projects from static to startling!
- FREQUENCY STANDARDS!** *Corby Dawson*.....92  
No matter what your need may be — calibration, design, testing, or just plain fooling around — a precision frequency standard can enhance your lab.
- INSIDE WIRE MAINTENANCE - PART 4** *Daniel B. Levels*.....98  
Review procedures for testing and correcting telephone line signalling problems.
- ATMOSPHERIC RADIO REFRACTION -  
FROM HEADACHES TO WORLD RECORDS** *Gordon West*.....131  
Radio dispatchers may hate it, amateur radio operators may love it, but tropospheric ducting time is here!

## COLUMNS

- AMATEUR ROBOTICS** *Karl Lunt*.....29  
Getting the Practical Peripherals 14.4 KBAud ProClass external modem robot-ready.
- OPEN CHANNEL** *Joseph J. Carr K4IPV*.....9  
Radio science observing.
- RESOURCE BIN** *Don Lancaster*.....121  
Alternate desktop publishing opportunities.
- SOFTWARE WIZARDRY** *Harry Helms*.....114  
Understanding file formats.
- STAMP APPLICATIONS** *Scott Edwards*.....34  
Checking battery condition, adding I/O lines, and a contest for a free LCD Serial Backpack!
- THE LASER EXPERIMENTER** *Anthony Charlton*.....40  
Single heterostructure pulsed laser diodes continued.
- THE SOLDERLESS BREADBOX** *Don Wilcher*.....110  
Experimenting with the TMP01 electronic sensor IC.

## DEPARTMENTS

## EDITORIAL CONTRIBUTIONS

Nuts & Volts Magazine encourages article submissions and queries. Send a SASE for a copy of our writer's guidelines.

All submissions should be on 5-1/4 or 3-1/2 inch diskettes and include hard copy as well. If return of materials is requested, include a SASE with your submission.

Deadlines should be discussed in advance with the editor, but generally all material should be submitted by the 1st of the month for the next month's issue.

## CHANGE OF ADDRESS

If you are moving, notify us AS SOON AS POSSIBLE so we can continue your subscription without interruption.

Your magazine WILL NOT automatically be forwarded to you by the post office, so it's important to submit your change of address directly to Nuts & Volts.

We will not be able to replace missed issues of the magazine due to unreported address changes.

When you send in your new address, include a current mailing label from the magazine with your account number on it. If you do not have a mailing label, be sure to include your old address and the name(s) under which the subscription was submitted.

# reader FeedBack

Dear Don Lancaster:

My colleagues and I were very pleased to read your May 1995 *Nuts & Volts* Resource Bin "New Opportunities in Home Automation." We've been following the trends in home automation for the better part of the last decade and have encouraged the hobbyist and amateur electronic engineer to experiment and create projects for computer control of home electronics. We're pleased that your fine magazine is taking a greater interest in the field as it is a great resource for anyone interested in electronic applications.

Thank you for making mention of **CompCo Engineering, Inc.**, in the article. This type of exposure is most welcome. Through my oversight, our zip code was incorrect. To update your records, our true address is **611 Parkway Suite D-4, Gatlinburg, TN 37738**.

I'd like to address some of your comments from the article.

**Noise and filters interfering with X-10.** It is true that some devices and appliances create noise in the powerline's command frequencies, interfering with normal operation. Those devices with noise filters built in do tend to shut out control, as well. Now the good news. Noisy devices *whether they have a filter of their own or not* can be plugged through an X-10 filter to the powerline to quench their noise without interfering with normal X-10 operation. The X-10 filter is manufactured by Advanced Control Technologies (ACT) and the model number is AF100. It retails for about \$29.00.

**Phase legs, distance problems, and user conflicts.** To transmit X-10 signals down long powerline distances or across 110 volt legs, two options are available to help.

The more economical booster module strengthens the X-10 signals and bridges 110 volt legs. Both Leviton and ACT manufacture a passive bridge. The Leviton model number is 6299 and runs about \$40.00 retail. For about the same cost, ACT's model number is CP000. For better performance, ACT manufactures an active bridge which not only bridges the 110 volt legs, but also boosts and repeats X-10 signals from one circuit to the next. The ACT model number is CR230 and retails for about \$200.00 retail.

To isolate your X-10 signals from the neighbors, use a different house code. While this does limit the total number of house/unit code combinations available (maximum of 256 to begin with) it's the easy way to avoid conflicts.

In all truth, we've never experienced conflicts with other X-10 users. Some areas just don't have many X-10 users close by or in rural/suburban areas the houses are far enough apart so that the signals don't make it that far anyway. (Is that something good about the X-10 distance limit?) The only conflict problems arise within the same building, like an apartment complex, and indi-

vidual house codes can be set. Even in the X-10 saturated environment at Habitech 95, different companies found ways to get along and still have their demonstrations work without conflicts. If more protection is needed or all 16 house codes must remain available, a circuit isolator is available. The isolator prevents X-10 signals from leaving a circuit and prevents outside signals from entering. It is installed in the circuit breaker box, is manufactured by ACT (model number CP303) and retails for about \$95.00.

**Two-way communication.** We agree with you that the new spread-spectrum carrier technology will revolutionize the industry, especially with its promised two-way communication, but there is no reason to throw the baby out with the bath water. X-10 is very widely spread and no one wants to throw away their investment for the "latest and greatest." At last report CEBus and X-10 can get along and work on the same powerline, so upgrades can be gradual and affordable rather than all-or-nothing.

CompCo's R&D is researching a CEBus add-on for our modules to prepare for the eventual revolution, however, our main area of research is pushing the limits of X-10 back much, much further. After over a decade of BSR, there is still an uncharted frontier to be explored and CompCo is leading the way with **two-way closed-loop X-10** communication with **command verification** through **acknowledgment response** and **polling/reporting**. While our R&D policies prohibit me from being more specific, expect a line of affordable X-10 compatible products which combine the "control from anywhere" power of X-10 with the "many commands available" ability of IR and use the above two-way protocols.

In all fairness to X-10, some two-way ability exists right now and can be used in a limited fashion. The TW-523 Two-Way Powerline Module (the standard black-box gateway to X-10) has an extended command set including a **request status** command which instructs certain modules to send a **status report**, transmitting whether they are on or off. The only modules we know of which will respond and transmit their status are the wireless transceivers (you can identify these because they have a telescoping antenna on the side). The Radio Shack catalog numbers are 61-2675 and 61-2663R. The reason that these modules can report is because they have a powerline transmitter built-in, which is necessary for them to send X-10 commands in response to the wireless RF commands they receive from a pendant or remote. Since these modules transmit anyway, X-10 activated their reporting commands, as well. If anyone knows of other modules or products which support the two-way protocols, we'd be pleased to hear about them.

## HAM GEAR FOR SALE

10

**CLAROSTAT 240C** 0-999,999 ohm decade box. \$125. 818-989-3848.

**TERRIFIC TIMEPIECES!** Binary Clock, several LED clocks, "Time Beacon." KITS and assembled! **FREE CATALOG!** Whitbrook Products, 309 South Brookshire, Ventura, CA 93003-4413. 805-339-0702.

**HOW-TO** conversion books land mobile to ham, packet and repeater conversions. Most GE and Motorola radios some converted units available. VHF microconversion kit. John Lansdell, 424 E. Shamrock, Rialto, CA 92376.

**LOW COST COLOR SSTV FOR PC/CLONES.** A robot compatible color slow scan television system for the PC. With our hardware and KA2PYJ's ViewPort VGA software, you can be on the air transmitting and receiving high quality pictures in most of the popular modes at a fraction of the cost of a commercial scan converter. Pictures are received and sent using 32 thousand colors. They are displayed real time with 256 colors. Hardware consists of a Main SSTV board and 110VAC triple output power supply. Order #189-KIT for \$159.95, assembly \$189.95, with tuning indicator \$229.95. Add \$5 S/H per order. Visa & MC accepted. A free copy of ViewPort is included. Compatible with JV FAX 7.0. For more information, send LSASE (55¢) to: A&A Engineering, 2521 W. La Palma #K, Anaheim, CA 92801. To order call, 714-952-2114.

**HEWLETT PACKARD 180A** oscilloscope. 50MHz, dual trace, delayed sweep. Commercial version \$300. Military version \$250. 818-989-3848.

**DAS 9200** system: 92A16 Data acquisition board; 92S16 Pattern generator; 2 megabyte memory board; 400K floppy drive; 21 megabyte hard drive; Serial Number is B011380. \$4,500. 818-989-3848.

**PACKET FOR** Commodore 64 users. Digicom modem wired, tested. Software and documents. \$49. Crawford Amateur Radio Society, PO Box 653, Meadville, PA 16335.

**COLLINS REPAIR.** Keep that real radio working in top order. We've worked on Collins gear for over 30 years and have the resources to keep your gear in good shape. We will consider buying old hulks of S line style gear, too. Contact: MARTRONICS, 4820 Deer Creek Way, Paso Robles, CA 93446. 805-239-1932.

**WANTED: ROCKWELL**-Collins HF-8021 3KW Amp. Jim Stitzinger, 805-259-2011, fax 805-259-3830.

**MANUALS FOR AMATEUR, AUDIO AND RADIO-RELATED EQUIPMENT.** Lafayette, Drake, National, Hammarlund, Hallicrafters, Eico, etc. Quality is always our Number 1 customer priority. Catalog available. Send two \$.32 stamps to: Pete Markavage, The Manual Man, 27 Walling St., Sayreville, NJ 08872-1818. 908-238-8964.

**ELECTROMETRICS EMC-10E** interference analyzer. \$1,500. 818-989-3848.

**FREE HAM and IBM Shareware Catalog.** Morse Code IBM Computer Interfaces use COM1 Serial Port \$49.95. Add \$3 shipping. IBM License Study Programs \$10. Over 700 IBM Shareware Collections (No Adults) \$2.95 each. Quantity discounts. No minimum order or shipping charges on shareware orders. ## Get A New Image

### PC HF Facsimile \$99

PC HF Facsimile is a simple, yet comprehensive short-wave fax system for the IBM PC and compatibles. It includes an FSK demodulator, advanced signal processing software, tutorial audio cassette, and complete reference manual. Just plug the demodulator into a serial port, install the software and getting FAX is a snap.

### PC SSTV \$149.95

PC Slow Scan Television is a complete system for sending and receiving full color amateur SSTV. The package includes an SSTV FSK modem, SSTV software, image capture utilities and reference manual. All popular formats are supported including Robot, Scottie, Martin and AVT. The system requires a 286, 386 or faster PC with VGA or super VGA display.

### Have It All For Only \$199.95

For a limited time we are offering both software packages with a single FSK modem for under \$200. This combination offer will let you send and receive all the popular HF image transmission modes.

Call or write for our free catalog. Visa and Mastercard welcomed.

**TEKTRONIX 492 PORTABLE SOLID-STATE SPECTRUM ANALYZER**  
Frequency range: 50KHz to 21GHz to 220 GHz with external mixers (not supplied). Built-in Digital Display Storage (Options 2). Built-in RF Preselection (Option 1). Built-in Frequency stabilization and 100Hz accuracy. Sensitivity: -95dBm to -115dBm (Option 3) depending on option and frequency, at 1KHz resolution. CRT readout of display parameters. Dynamic range (on screen) 80dB. CRT Size: 8x10 cm. Resolution Bandwidth: 1MHz to 1KHz (100Hz, Option 3). Power: 210 watts, 115V/60Hz. Weight: 44 lbs. Size: 6.9"x12.9"x19.7". Prices: \$7,650.00 Option 1, 2, 3; \$6,500.00 Option 1, 2; \$6,000.00, Option 2, \$5,000.00 Option 8.

### BRUNTON COMPASS

The Brunton Company has been building compasses since 1896 and has a reputation for perfection in directional instrumentation. This compass is the very best compass that can be purchased. It is a rugged, durable instrument that will withstand the rigor associated with outdoor use by sportsmen and professionals. The instrument is not just a compass, but combines the principles of a surveyor's compass, a prismatic compass, a clinometer, a hand level, and a plumb. It is used to determine azimuth angles or compass bearings (and thus to determine horizontal angles) to measure vertical angles, percent of grade or slope, to run levels, and to measure the inclination of objects. May also be used for prospecting (staking a claim), hunting, and fishing. **PRICE: \$69.95 NEW.**

Write in 58 on Reader Service Card.

**MILITARY RADIOS:** Easily made battery adapters for military radios & other electronics. Get "Power Up," big new 96 page manual of instructions, diagrams. Use readily available commercial batteries in PRC-6, -8, -9, -10, -28, -25, -47, -74, -77, TRC-77, AN/PRR-9, AN/PRT-4, RT-77, URC-68, more, also mine detectors, night scopes, radiacs, field telephones, etc. Only \$14.95, plus \$5 S/H (\$6 Canada). NYS residents add \$1.70 tax. CRB Research, Box 56-NVV, Commack, NY 11725. Visa/MasterCard welcome. Phone: 516-543-9169.

**AN/GRC-142C** Radio Teletype sets shelters incomplete sets, fit on pick-up truck beds, many available. Call or write Dave Martin WA6TYJ, 805-239-1932, 4820 Deer Creek Way, Paso Robles, CA 93446.

**SPECIAL ON CONNECTORS.** Mike chassis mounts: 2, 3, 4 pins for \$1.75 each; 5, 6, 7 pins \$2; 8 pins \$2.25. Mike plugs 2, 3, 4 pins \$2 each; 6, 7, 8 pins \$2.75 each. Minimum order \$10. All orders FOB. Visa, MC, Discover and Amex cards accepted. Write to: Shalom Electronics, PO Box 1450, Loganville, GA 30249.

**THERMOTRON PRODUCT Saver.** Protect -125 to +375 degrees F. \$150. 818-989-3848.

**UNHOLZ DICKIE D11** Charge amplifier. 4 available. \$100 ea. More Unholz available. 818-989-3848.

**RCI-2950/2970 Modification Manual.** Tune-up, audio, receiver, noise-blanker & clarifier modifications. Microphone wiring & more. \$20 ppd w/money order, \$25.50 COD. Scott, PO Box 510408, St. Louis, MO 63151-0408. 314-846-0252.

**THE WORLD of Ham Radio CD-ROM** May 1995 edition. The best choice in CD-ROM callbooks. The fastest retrieval call-sign system in publication. The nicest ham software collection available. (Reviewed 11/94 N&V) \$39 direct from AmSoft with Visa or MasterCard call: 717-938-8249 or FAX 717-938-6767.

**FLUKE 540B** Thermal transfer standard with A54-2 voltage plug-in unit. \$875. Fluke ET0020 standard cell, air bath. 4 cells thermally controlled. \$150. 818-989-3848.

**THE ALC245M AUTOMATIC VOLUME CONTROLLER** will keep your transceiver or scanner volume constant from a whisper to a scream. \$29.95. Other models are also available. **FREE BROCHURE.** C&S Electronics, PO Box 2142, Norwalk, CT 06852-2142. Phone/FAX 203-866-3208.

**HEWLETT PACKARD 1740A** oscilloscope 100MHz, dual trace delayed sweep, calibrated \$400. 818-989-3848.

**MICROWAVE X-BAND 10GHz** Gunn xceivers, 2 for \$25. Horn ant. kits, \$15. For wide-band FM voice, video, or 2MB/sec data. SASE for info. Gary Krancher, WB1AUA, 1502 Old North Colony Road, Meriden, CT 06450. 203-634-3006.

**MILITARY COMPONENTS** wanted. Capacitors, resistors, diodes, transistors, semiconductors, ICs. Electronic Material Industries, 818-842-5953, FAX: 818-845-3613.

**FOR SALE,** make offer, 10-11M linear 200 watt output, 11M TVI filter 600 watt rating. Call Al, eves., 712-362-4119.

**RADIO REPAIR:** Commercial and amateur two-way. Portables a specialty. Reasonable rates. Call Mike N9VWW at REYNOLDS RADIO, 219-482-5630.

# Radio Science Observing

# Open Channel

by Joseph J. Carr  
K4IPV

In the first installment of the newly revised Open Channel column, I covered amateur radio astronomy; the response was quite satisfying — a number of very positive letters were received. This month, we are going to look at additional ways that you can use your radio receiver, or one that you build, to do natural science observations.

It seems that Nature makes its own radio "transmissions" and you can easily observe most of them using receiving equipment that you already own (especially if your general coverage or ham radio receiver tunes down into the VLF region). Most modern receivers will tune down to 30 KHz or 50 KHz, even if the performance in those bands is not as good as it is in the high-frequency (HF) shortwave bands.

Alternatively, you can also build very simple radio very low-frequency (VLF) radio receivers — not big, honkin' superheterodynes, but simple tuned radio frequency jobs with but a few transistor or IC stages. Anyone who can build an audio amplifier on Radio Shack hobby printed circuit boards can easily build one of these VLF receivers. But more on that later.

## Background

When World War I erupted in Europe telephone technology was already quite mature, even though it was primitive by our modern standards. Long distance networks existed in both North America and Europe, although trans-Atlantic service was still in the future. (Trivia question: When was the first trans-Atlantic telephone cable laid? See end of article.) When the war broke out, both sides made extensive use of telephone communications on the battlefield. For the first time in

the two-wire version shown in Figure 1B. Neither side of either telephone is grounded; the return circuit is carried in a second conductor. The wire was usually a "twisted pair" — a form of communications wire that's still used in some cases.

Any electronic advance in warfare is met with an electronic counter measure (ECM). During World War I, German physicist Heinrich Barkhausen, who later worked out the principles of oscillator operation, theorized that he could pick up Allied field telephones by detecting leakage and induced currents from the telephones in the ground. Vacuum tubes were available by then, so he used a high gain vacuum tube audio amplifier connected through long wires to ground stakes driven into the earth, and spaced a very wide distance apart. This method also worked today, but there are easier ways to detect whistlers and related phenomena.

Barkhausen was successful in detecting Allied telephone conversations, and continuous monitoring was initiated. At times, however, the operators reported strange whistles, howls, and other sounds that interrupted spying on the enemy's conversations. Initially, Barkhausen thought it was an amplifier defect, but he could not duplicate it in the laboratory. One of the most common sounds was the

"whistler" (i.e., an audio pitch) that starts at about 10 KHz and then descends to frequencies down to about 1 KHz.

The time required may be a few hundred milliseconds to several seconds.

Although the whistler is in the "audio" range where humans can hear, you cannot hear a whistler without a radio receiver tuned to those frequencies. The reason is that your ear responds to acoustical waves, i.e., vibrations in the air, while whistlers and related phenomena are electromagnetic, i.e., radio waves.

Similar sounds had been heard as early as the 1880s. When long telephone lines began to web the

cities together, operators and users would occasionally report descending pitch howls similar to those that Barkhausen later observed. Unfortunately, nothing was done about it at the time.

Barkhausen theorized that the whistler phenomenon was atmospheric. Researchers in the 1920s and 1930s recognized that many whistlers were preceded by a click. If, as theorized, the whistler was due to

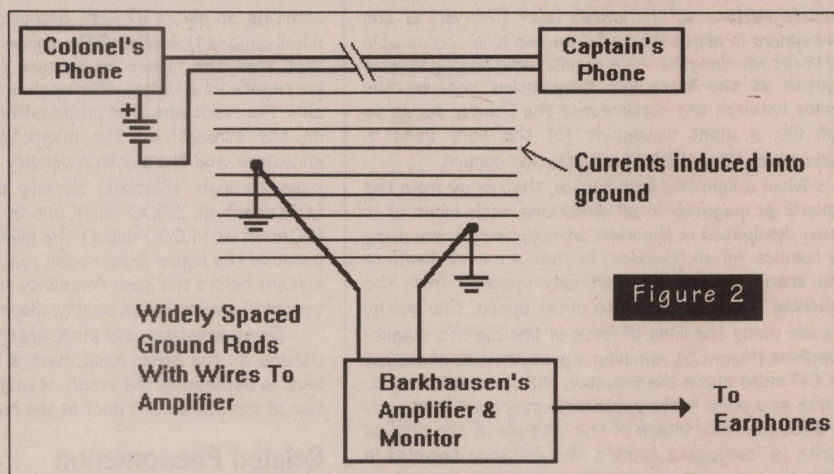

Figure 2

Single-Conductor Wire Across Battlefield

Figure 1A

Two-Conductor Wire Across Battlefield

Figure 1B

history, a field commander could be in voice communication with subordinates, even as the battle raged.

Two basic forms of telephone circuit were tried. The simplest (Figure 1A) required laying a single conductor wire from one point to another. Large reels of wire were carried by two soldiers, dodging sniper fire, shell explosions, and the rest of the tender mercies that the enemy could visit on them (it must have been a dicey job!). The return circuit was the ground. One side of each telephone (and its power supply) was connected to a ground rod shoved into the earth.

The second, and probably most common, form was

lightning bolts, as suggested by T.L. Eckersley in 1935, then there was a "wee little problem" as my Scottish ancestors might say. The time differential between the click and the whistler suggested distances up to 15,000 miles, even when the lightning could be correlated to local storms. If the click indeed resulted from a lightning bolt (i.e., "static"), then it couldn't be so far away because the energy would be absorbed in the lower atmosphere, and would therefore be so attenuated by a 15,000 mile trip that it would be too far down in the noise to be detected.

Another phenomenon noted by L.R.O. Storey in the 1950s was that storms less than 600 miles from his monitoring site usually made whistlers, and with storms in the 600 to 1,200 mile range the whistlers became steadily weaker. To discover how these are related, let's look at the RF nature of lightning.

## Lightning

Lightning results when differences in electrical potential in the atmosphere become high enough to overcome the dielectric strength of the atmosphere. Although normally associated with thunderstorms, lightning without thunderstorms also exists. These magnificent bolts of lightning are basically a natural electrical arc with potentials on the order of 250,000,000 volts, and currents up to 250,000 amperes. Lightning is not one bolt from A to B, but rather it oscillates back and forth between A and B.

As with all electrical arcs, the bolt of lightning produces a huge amount of radio frequency (RF) energy that can interfere with radio reception. That RF ranges from 1 Hz to the upper VHF or lower UHF region, but most of it is concentrated in the 1 to 30 KHz region

# Open Channel

(with peaks between 2 and 7 KHz). RF events resulting from lightning strikes are called "atmospherics" or just plain "spherics."

You can hear this lightning generated RF energy on radio receivers. Nearly all of us have heard lightning crashes on AM broadcast band receivers. If you have an LF or VLF receiver, then the crashes are even louder, but on the HF bands they drop off in intensity as the frequency gets higher.

But still, the mystery of the 15,000 mile propagation, which had good evidence in support of it, still remained. The answer comes from noting the nature of spherics and their propagation.

In the VLF region, wavelengths are long. For example, at 30 KHz, the wavelength (300,000/30 KHz) is 10,000 meters, or 10 kilometers. At 1 KHz, that wavelength is on the order of 300,000 meters, or 300 km. Radio signals with wavelengths ranging from 10 to 300 km behave very differently from the shorter wavelengths of higher frequencies. The distance from the Earth's surface to the lowest layer (D-layer) of the ionosphere is about 45 to 85 km, so it is comparable to these wavelengths. As a result, radio propagation is ducted at the lower VLF frequencies because the space between the surface and the D-layer tends to act like a giant waveguide (of the sort used in microwave). Very efficient propagation occurs.

When a lightning bolt occurs, the energy from the spheric propagates in all directions, with most of it being dissipated in the lower atmosphere. A discovery by Hannes Alfvén (Sweden) is that a narrow beam of the energy propagates vertically upwards from the lightning bolt, and then into outer space. This energy travels along the lines of force of the Earth's magnetosphere (Figure 3), reaching a peak altitude of around 7,000 miles above the Equator, and then returning to Earth at a point in the opposite hemisphere. That spot is a rough mirror image of the latitude of the original strike (a "conjugate point"). The distance traveled in both the atmosphere and the magnetosphere is — hold your hat — about 15,000 miles. During this trip, the higher frequencies travel faster than the lower frequencies; an important point it turns out.

Recall that some whistlers are observed with a

click preceding the characteristic descending tone, while some are not. It is believed that the "clickless" whistlers traverse the magnetosphere in only one direction. The original click was the bolt of RF energy produced by the lightning (i.e., a "static" click), but it was absorbed in the lower atmosphere so did not propagate all the way to the opposite hemisphere.

The whistlers preceded by a click, on the other hand, made a two-way trip. They originated in the same hemisphere where they were observed, and then traversed the magnetosphere to the approximate conjugate point in the opposite hemisphere. The wave was then reflected back along the same magnetic line of force, and traveled back to a point within about 1,200 miles of its point of origin. Some whistlers produce multiple "trains" of echos, indicating multiple bounces.

## What Causes the Sliding Tone?

The whistler sound is a descending sliding tone starting at about 10 KHz, dropping to about 1 KHz. What causes this effect? The answer is apparently the fact that the higher frequencies (close to 10 KHz) propagate at a higher velocity than the lower frequencies. The exact speed of propagation depends, in part, on the strength of the magnetic field that they encounter and the electron density of the region they pass through. (Electron density is typically about 1,000/cm<sup>3</sup> at 3,500 miles out in space, and about 100/cm<sup>3</sup> at 14,000 miles.) The sliding tone is caused because the higher frequencies reach your receiver an instant before the lower frequency tones. This is called *temporal dispersion* or, simply, *dispersion*.

Some whistlers are pure, nearly sinewave, tones. Others, on the other hand, have a "swish-like" sound that is apparently the result of whistler-mode excitation of more than one duct in the magnetosphere.

## Related Phenomenon

Whistlers are not the only phenomenon found in the VLF radio bands; others include hiss, discrete emissions ("fallers," "risers"), periodic emissions, chorus, quasi-periodic emissions, and triggered emissions.

Static is the bursts and pops that you hear in the speaker of an AM radio when a thunderstorm approaches. It propagates in the atmosphere, and has RF energy in a wide band from 1 Hz to the lower end of the UHF region. The "click" nature of static crashes results from the fact that no dis-

persion of the frequencies takes place.

The hiss phenomenon is pretty much like it sounds from the phonetics: it is a hiss like that on the FM band between stations. Unlike Gaussian noise, the VLF hiss is bandwidth limited. The appearance of hiss is occasional, and it may be either unstable and fluctuating, or appear to be stable for periods up to several hours.

*Tweaks* are spherics in the atmosphere below the ionosphere. They are subjected to dispersive distortion, producing a descending tone on the order of 25 to 150 milliseconds (as opposed to hundreds of milliseconds to several seconds for whistlers). Tweaks are generally best heard during the winter and early spring at night.

*Hooks* are whistler-like sounds that descend in frequency, and then do a reversal and begin to rise a short distance to a higher frequency. Risers increase in tone, not decrease.

The Dawn Chorus can consist of risers, hooks, hiss, and other phenomena, usually prior to sun-up. The Dawn Chorus is most likely to occur following geomagnetic storms.

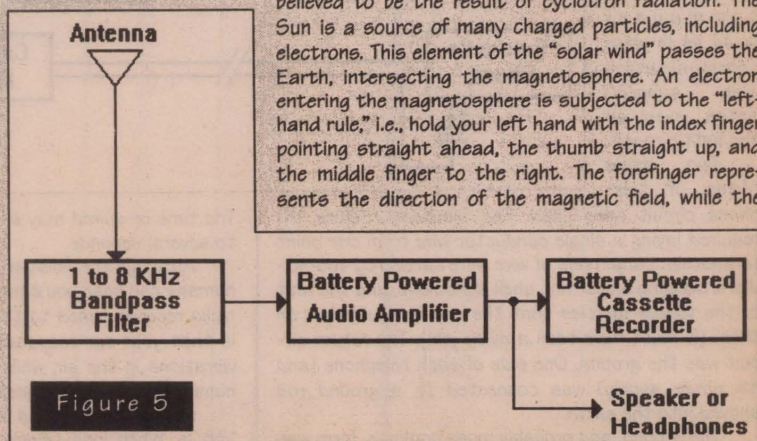

The triggered emissions include the natural versions (whistlers triggered by lightning), and Artificially Stimulated Emissions (ASE). Nuclear explosions can trigger such events, but they can also be triggered by less drastic things. For example, in the 1950s, high powered military and naval VLF radio stations were found to be stimulating emissions.

An ASE research project in the 1970s and 1980s studied the effect. A powerful VLF transmitter was placed at Siple Station in Antarctica, and a monitoring station was placed at a magnetic conjugate point near Roverval, Quebec, in Canada. They also had satellite monitors operating within the Earth's magnetosphere.

There has even been school and amateur monitoring of both natural and ASE phenomenon. In early 1992, the NASA launched the Atmospheric Laboratory for Applications and Science (ATLAS II). It deployed a VLF modulated (50 Hz to 7 KHz) electronic beam called the Space Experiments with Particle Accelerators (SEPAC).

A high school project called the Interactive Space Physics Ionospheric Radio Experiments, or INSPIRE (c/o Bill Pine, Science Department, Chaffey High School, 1245 N. Euclid Avenue, Ontario, CA 91762). Project INSPIRE is still active, and publishes an occasional newsletter. They ask for a donation for the newsletter in order to defray expenses (\$10.00 is about right, although they asked for a bit less in their last newsletter). By the way, Project INSPIRE can sell you a kit for a whistler hunting receiver for a small amount.

Some of the other whistler-related phenomena are believed to be the result of cyclotron radiation. The Sun is a source of many charged particles, including electrons. This element of the "solar wind" passes the Earth, intersecting the magnetosphere. An electron entering the magnetosphere is subjected to the "left-hand rule," i.e., hold your left hand with the index finger pointing straight ahead, the thumb straight up, and the middle finger to the right. The forefinger represents the direction of the magnetic field, while the

# Open Channel

middle finger represents the original direction of the electron travel. The electron entering the magnetic field feels a force pushing it in the direction of the thumb. The particle thus pushed, thus spins around the magnetic line of force in a helical motion (Figure 4) that may be the source of some of the strange VLF emissions.

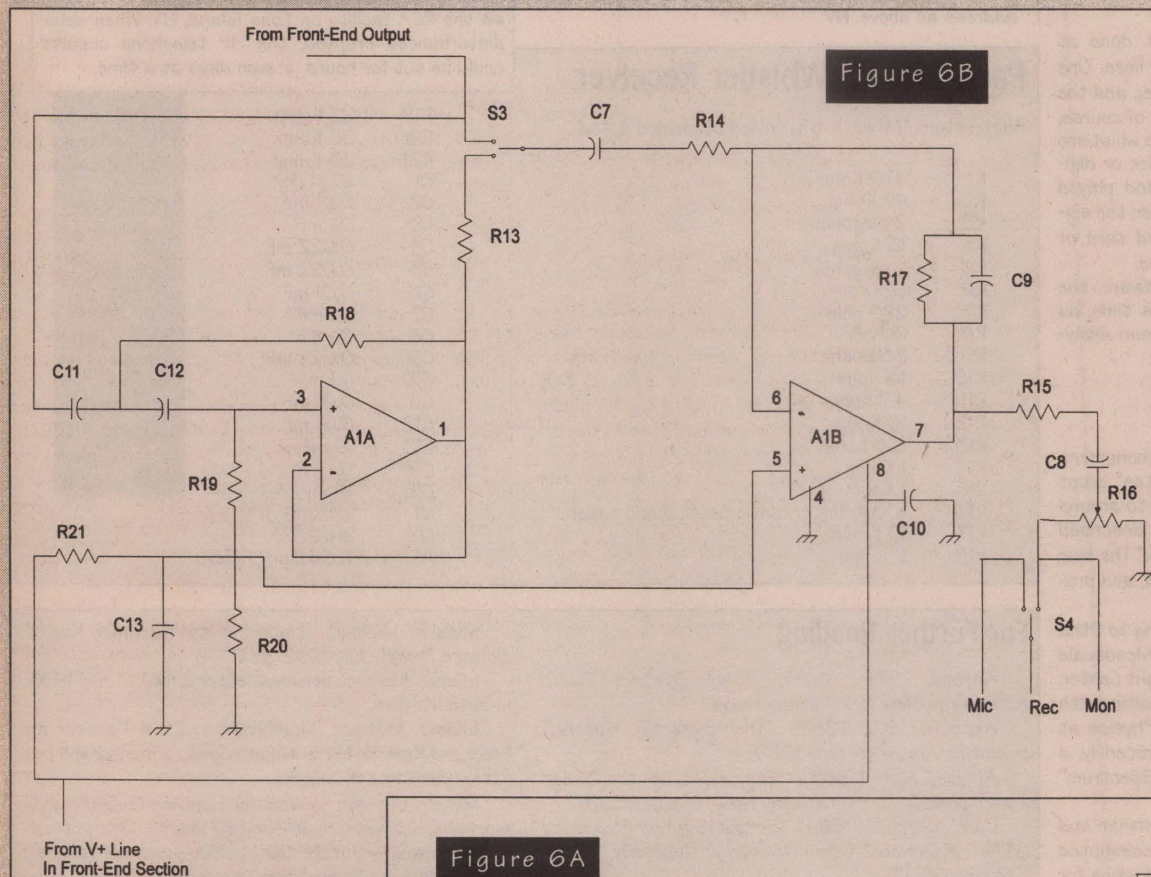

sinewave, but is distorted. That means lots of harmonics way up into the VLF region of the radio spectrum. Although some experimentation has been done to use comb filters to notch out the harmonics of 60 Hz, the best solution seems to be using a high-pass filter with a 1 KHz cut-off frequency, and a low-pass filter with a 7-8 KHz cut-off frequency ahead of the

amplifier (Figure 5). The low-pass filter is required to eliminate interference from OMEGA navigation stations operating in the 10 to 14 KHz region.

Another reason for the high-pass filter is to eliminate interference from local AM broadcasting stations. When a high powered AM signal is nearby, RF enters the audio amplifier input via the antenna and, through the process of autrectification, the AM signal is demodulated; you hear the radio station in your whistler receiver, not the VLF stuff you want to hear.

Various receiver circuits have been published, and among the most popular are the various versions of the RS-4 receiver that appear in Mike Mideke's *A Whistler Hunter's Guide*, and in the literature of Project INSPIRE. The two sections of the RS-4 receiver are shown in Figures 6A and 6B. The front-end section (Figure 6A) consists of a filtered amplifier connected to the antenna. A switch and resistor in the amplifier input (S2) serves to desensitize the receiver when strong signals or interference are received; otherwise these might overload the receiver.

The output section of the receiver consists of a pair of operational amplifiers (on the same chip). Switch S3 selects whether or not the high-pass filter (A1A) is in or out. Switch S4 selects whether the input of the cassette tape recorder is connected to a microphone (MIC) for voice annotation of your observations, or the output of the front-end section of the receiver. A separate battery powered audio amplifier, with loudspeaker or earphones, can be connected

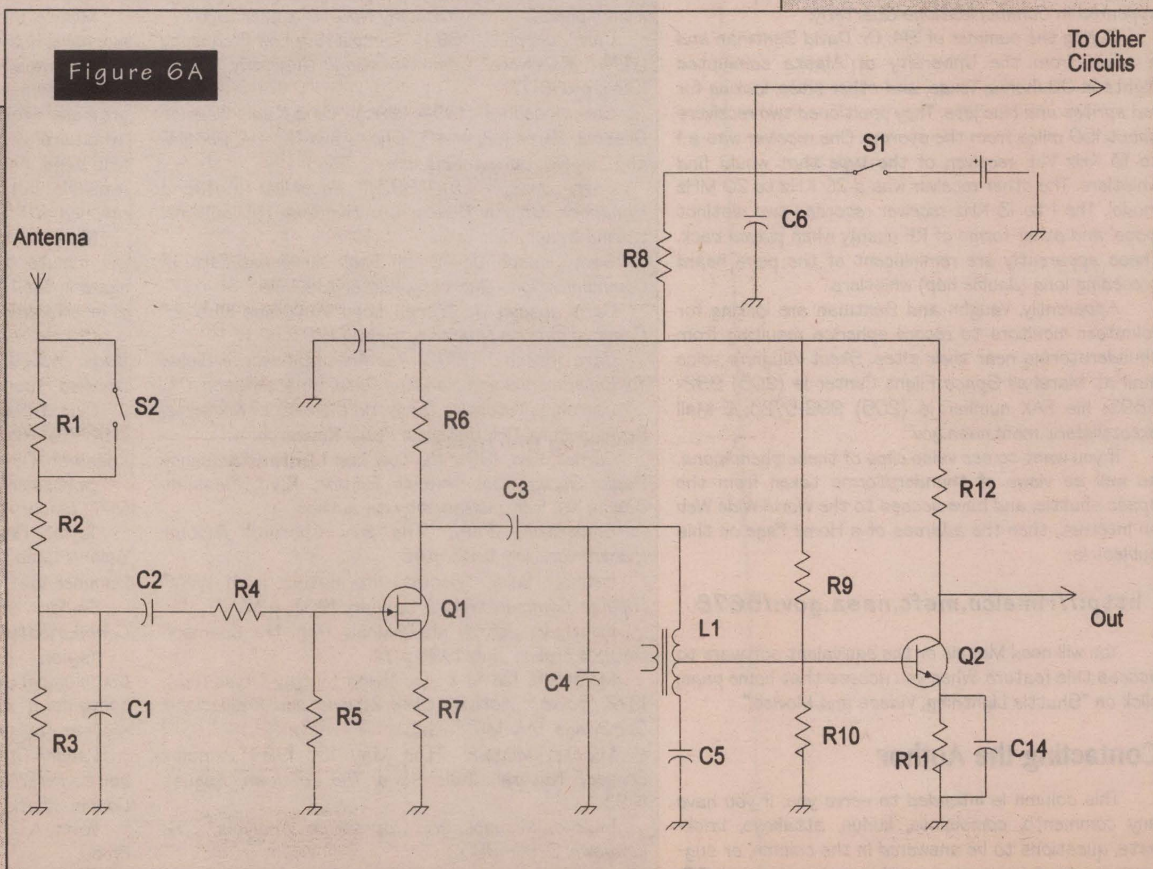

## Wideband VLF Receiver for Detecting Whistlers and Other Phenomenon

Whistlers and many of the other phenomena discussed in this article are electromagnetic (radio) waves occurring in the 1 to 10 KHz frequency band, a region of the very low frequency (VLF) band. Although it's possible to build tunable receivers for this region, they don't do a very good job of picking up a whistler, which descends through the entire frequency range. So how do you make a broadband VLF receiver covering 1 to 10 KHz? Would you believe that an audio amplifier will do the trick? If an antenna is connected to the input of an audio amplifier, then it's technically possible to receive whistlers.

But, then again, you might not. If you are anywhere within a kilometer or so of a power line, connecting an antenna to the input of an audio amplifier will more likely produce only a loud 60 Hz hum.

So put a 60 Hz notch filter at the input to be rid of the 60 Hz hum, you say? Nope! That trick won't work because the 60 Hz "sinewave" produced flowing in the power line is not a pure

# Open Channel

to the MON terminal. See the box for parts values.

At last word, a receiver very much like this one can be purchased from Project INSPIRE for a nominal sum. A number of people, however, have built these receivers on Radio Shack hobby board printed circuit stock.

## Whistler Hunting

Whistler hunting expeditions are best done at sites selected to be far away from power lines. One authority recommends at least one kilometer, and the more distance the better. That requirement, of course, means battery power for the equipment. The whistlers can be recorded on a cassette tape recorder, or digitized by a laptop computer sound card and played back later. If you opt for the cassette recorder, the signals can be digitized by a computer sound card or other form of A/D converter later, back home.

If you have the correct computer software, the whistlers can be diagramed for frequency vs. time, as well as intensity, by using the proper spectrum analysis program.

## Red Sprites and Blue Jets

Researchers have discovered some phenomena associated with thunderstorms. "Red sprites" erupt from the tops of storms, and shoot upward to around 95 km, and as low as 65 km. They have been described as "large [red] jellyfish with trailing tendrils." The blue jets move outward from the top of the cloud, and proceed upwards for about 33 km.

I learned about these phenomenon talking to Otha H. "Skeet" Vaughn, principal investigator, Mesoscale Lightning Experiment, at Marshall Space Flight Center. Previously, I had heard of the phenomena in talking with Dr. Charles Geilker, of the Department of Physics at William Jewell College in Liberty, MO. More recently, a sidebar to Peter Taylor's column "The Solar Spectrum" appeared in *Communications Quarterly*.

During the summer of '94, Dr. David Sentman and a team from the University of Alaska conducted flights in Oklahoma, Texas, and other sites, looking for red sprites and blue jets. They positioned two receivers about 150 miles from the storms. One receiver was a 1 to 13 KHz VLF receiver, of the type that would find whistlers. The other receiver was a 20 KHz to 20 MHz model. The 1 to 13 KHz receiver recorded two distinct 'pops' and other forms of RF energy when played back. These apparently are reminiscent of the pops heard preceding long (double hop) whistlers.

Apparently, Vaughn and Sentman are looking for volunteer monitors to record spherics resulting from thunderstorms near their sites. Skeet Vaughn's voice mail at Marshall Space Flight Center is (205) 992-5893; his FAX number is (205) 992-5723; E-Mail [skeet@sferic.msfc.nasa.gov](mailto:skeet@sferic.msfc.nasa.gov)

If you want to see video clips of these phenomena, as well as views of thunderstorms taken from the space shuttle, and have access to the World Wide Web on Internet, then the address of a Home Page on this subject is:

<http://rimeice.msfc.nasa.gov/5678>

You will need Mosaic or the equivalent software to access this feature. When you access that home page, click on "Shuttle Lightning, Videos and Movies."

## Contacting the Author

This column is intended to serve you. If you have any comments, complaints, kudos, attaboys, brickbats, questions to be answered in the column, or suggestions for future columns, then contact me at P.O.

Box 1099, Falls Church, VA 22041.

Note: My wife, Bonnie Carr, is a musical composer. She digitized some recorded whistlers and some pulsars recorded at a radio astronomy laboratory, and used them in a pair of musical compositions called "Whistlers" and "Pulsars." If you want an audio tape of these numbers, then send her \$10.00 at the same address as above. NV

## Answer to Trivia Question

The first trans-Atlantic telephone cable was laid in 1955. The underwater cables prior to that time were telegraphic circuits, and were laid a century earlier. Prior to 1955, trans-Atlantic telephone circuits were carried over HF shortwave links, such as the RCA facility on Long Island, NY. When solar disturbances erupted, the HF telephone circuits could be out for hours or even days at a time.

# #10 HAM GEAR FOR SALE *cont.*

**YAGI ANTENNAS** for 100MHz to 1GHz, custom made up to 12 elements. For prices and information call or write Dave Martin WA6TYJ, 805-239-1932, 4820 Deer Creek Way, Paso Robles, CA 93446.

**TWO-WAY RADIO REPAIR** Factory Authorized repair of pagers, portables, and dash-mount mobiles only \$20 flat rate, plus parts, free return shipping. **R & R Communications**, 526 Old Homestead Highway, Swanzey Center, NH 03431. 603-352-1825.

**LOW COST WSHFAX WEATHER FAX FOR PC/CLONES.** Dr. Ralph Taggart, WB8DQT, has just released his Weather Satellite Handbook software (WSHFAX) and A&A Engineering has worked with Dr. Taggart to create a compatible interface hardware package. The interface is our product #200 and is available in kit form or assembled and tested. This unit is featured in Chapter 5 of the Fifth Edition of the WEATHER SATELLITE HANDBOOK. It will process both HF and Satellite Weather FAX. For KIT order #200-KIT for \$159.95. For assembled unit order #200-ASY for \$189.95. Add \$6.50 S/H per order. Software is included. Tuning indicator available for \$40, compatible with JV FAX 7.0. Visa & MC accepted. For more information, send LSASE (55¢) to: A&A Engineering, 2521 W. La Palma #K, Anaheim, CA 92801. To order call, 714-952-2114.

**EIGHT STANDARD** model 867 VHF transceivers, 30 watts output crystal controlled on 155.265 megacycle. Complete, A1 condition. One Force AM200, same condition & frequency. \$125 each or all for \$1,000. Nelson R. Lueking, 1601 Rock Road, De Soto, MO 63020. 314-586-2329.

**POWER INVERTERS** 10, 5 to 16.5 VDC in, 115VAC True RMS  $\pm 5\%$  out @ 60Hz, modified sinewave, 90% efficiency, 2 yr. warranty. 100 watt (800W surge) \$89, 400 watt (3000W surge) \$289, 700 watt (3000W surge) \$369, 1,300 watt (6000W surge) \$569. Dexis Corp., 612-944-7670.

**COLLINS 51S-1F** \$650, Hewlett Packard Power meter, 435B with cable & 8478B Head \$850, 432A cable & 478A \$300, others available call Psitech Plus, 707-745-4804, FAX 707-747-5277.

**TEXSCAN BLOODHOUND** Receiver FDM-2 and Transmitter FDM-1. Both pieces \$400. 818-989-3848.

**800MHZ TRUNKED** trunked radio system. 3 Johnson 35 watt radios, base power supply and touchtone microphones. Multi-channel, excellent condition. Originally \$5,000. Now \$1,400. Call Irv at 203-877-0150 for full details.

**KITS & ASSEMBLIES** for SSTV, QRP Transceivers, Wefax, Battery Chargers, Frequency Counters, Packet, Iambic Keyer and more. For catalog, send a legal size SASE w/55¢ postage to: A&A Engineering, 2521 W. La Palma, Unit K, Anaheim, CA 92801.

**HEWLETT PACKARD 3437A** System volt-meter. \$225. HP 5005A Signature Multimeter \$300. 818-989-3848.

**REPEATER CONTROLLERS** complete wired, tested, \$80. Crawford Amateur Radio Society, PO Box 653, Meadville, PA 16335.

**HC-10 KENWOOD** clock \$60, MC-85 \$100, DX-60 \$60, SX25, S-40B, Robot Model 70. All items plus shipping. 513-547-1575.

**COLLINS MECHANICAL** fitters F455FAZ1 plug-in for 75S3 B/C rec. \$40 each ppd. KB5PC. 504-899-4777.

**HEWLETT PACKARD 3551A** Transmission Set, rack mount. \$400. HP 3581 Wave Analyzer. \$400. 818-989-3848.

**JVFAX HAMCOM** Interface xmit and rec includes shareware software JVFX 7.0 HAMCOM 3.0 Pakmon 1.0 Wefax, color ham fax, SSTV, CW, RTTY, Amtor, (Packet rec only). \$24.95, \$4.50 S&H in plastic case. Send #10 SASE for catalog. A&L Engineering, 741 E. Benton St., Aurora, IL 60505.

**HEWLETT PACKARD 8016A** Word generator. \$550. HP 334A distortion analyzer. \$450. 818-989-3848.

**TEKTRONIX TM504** 4-slot module power supply \$150. TEK TM501 1 slot. \$125. 818-989-3848.

## INTRODUCING THE UNIVERSAL M-400

A totally new concept in data / tone readers!

- A RTTY-reader and tone-decoder in one!
- Easy to read two-line 40 character LCD.
- No computer or monitor required.

- Baudot
- Sitor A/B
- ASCII
- Swed-ARQ
- FEC-A
- FAX
- POCSAG
- GOLAY
- ACARS
- DTMF
- CTCSS (PL)
- DCS (DPL)

Forget the limitations you have come to expect from most "readers". The self-contained Universal M-400 is a sophisticated decoder and tone reader offering an exceptional range of capabilities. The SWL will be able to decode Baudot, SITOR A & B, FEC-A, ASCII and SWED-ARQ. Weather FAX can also be decoded to the printer port. The VHF-UHF listener will be able to copy the ACARS VHF aviation teletype mode plus GOLAY and POCSAG digital pager modes. Off-the-air decoding of DTMF, CTCSS (PL) and DCS is also supported. The M-400 can even be programmed to pass only the audio you want to hear based on CTCSS, DCS or DTMF codes of your choosing. The M-400 runs from 12 VDC or with supplied adapter. The American-made Universal M-400 is the affordable accessory for every shortwave or scanner enthusiast.

Only \$399.95 (+\$6 UPS).

# Goodyear's Super Skytacular Night Sign

by Fred Blechman

If you see a procession of colorful messages, cartoons, and animated designs floating across the night sky, don't start tidying up for extraterrestrial visitors. Chances are the nocturnal show is being provided by "Super Skytacular," a programmed assembly of more than 7,500 colored lights on one of Goodyear's three blimps operating in the United States and Canada. With the blimp flying 1,000 feet above the local terrain, the night sign can be read by people on the ground from one mile on either side of the airship.

## Messages in the Sky

Goodyear put its first flying billboard into the skies more than 60 years ago when one of the early blimps was emblazoned with Goodyear's company name and winged-foot trademark painted on its side. The next step in the evolution of today's night sign was having the blimps tow advertising banners up to 200 feet long. For a short time in the 1930s, loudspeakers were attached to the airships to permit voice contact with persons on the ground. The practice was short-lived, however, because people didn't like "the voice in the sky."

The late 1930s saw the installation of the first illuminated signs on Goodyear airships. Specially designed, lightweight frames carrying white neon tubing were strapped to the sides of the blimps. Known as "Neon-O-Gram," each sign consisted of 10 individual panels with neon tubing shaped to permit the formation of any number or letter. The Neon-O-Gram saw service with the Goodyear airship fleet until the beginning of World War II, when the blimps were drafted into the service of the U.S. Navy for coastal reconnaissance and convoy escort duties.

Following the war, Goodyear

engineers developed a new sign using incandescent lamps instead of neon. This sign also had 10 panels, with 182 individual lamps on each panel, arranged in the same pattern as the Neon-O-Gram to form any letter or number.

For a period in the late 1940s, one Goodyear airship was outfitted with a type of running-copy illuminated sign, but without color or animation. This was the "Trans-Lux" sign, an aerial copy of the familiar Times Square scrolling sign in New York City. However, the weight of the equipment necessary to run it required a large airship with sufficient lift. Goodyear used it on a 250-foot long K-type blimp which it had pur-

chased from the Navy after World War II. The cost of operating the K-ship was a big factor in the eventual decision to discontinue the Trans-Lux sign.

In 1964, Goodyear began developing the first airborne illuminated sign employing both color and animation. The result was "Skytacular," first installed on the airship Mayflower in 1966. That sign was 105 feet long, the same as the present Super Skytacular, but only 14.5 feet high, 10 feet less than the current signs. There were a total of 3,080 lamps on both sides of the blimp. Although the initial version of Skytacular proved highly successful, Goodyear engineers continued to work on an even more ver-

satile sign system, and in 1969, Super Skytacular was introduced.

## Super Skytacular

The present Super Skytacular night sign system is a marvel of electronic engineering. Messages to be run on the sign are born on exotic electronic equipment in a special lab in Akron, OH. A technician "draws" each animation and copy on a cathode ray tube with a special "light beam" pencil. From there a computer takes over. The process results in a programmed disk file. A typical six-minute program file consists of 40 million bits of on-off information which, when run through a computer to inter-

Shortly after Fred Blechman wrote this story for *Nuts & Volts*, the same Goodyear Blimp, the Eagle, crashed into a fence on landing, due to a sudden wind reversal. The Blimp envelope was NOT repairable. A new "Eagle," probably with a new night sign design, should be flying around September of this year.

## LOS ANGELES DAILY NEWS SUNDAY MAY 28, 1995

### Goodyear blimp crashes into fence

CARSON — A severe shift in the wind sent a blimp swaying 100 yards into a fence Saturday, leaving it with a 9-foot tear and scattering golfers nearby.

None of the five passengers on Goodyear's Airship Eagle nor pilot Joel Chamberlain was injured, said authorities and Nick Nicolary, pilot-in-charge.

The blimp was landing when the wind shifted at about 2:30 p.m. It hovered just above the ground when the wind changed 180 degrees within a second or two, Nicolary said.

"It doesn't look too pretty but nobody got hurt," Nicolary said.

The blimp can hold six passengers and a pilot.

Associated Press

**FIGURE 1.** Goodyear's "Super Skytacular" night sign is 105 feet long and 24.5 feet high. It has 1,890 light "cells," each with four different colored lights.

face lamp drivers aboard the airship, controls lamp and color selection, and the speed at which messages are run.

Up until recently, a Digital Equipment Corporation (DEC) minicomputer and a dumb terminal were used to control the light patterns on the night signs. An assembly language program, compiled into DEC language, was commanded by the dumb terminal to display entered text, or to run custom display files from the computer's hard disk drive. In the field, the operator could program text — two lines of nine characters each — and run graphic and animation programs provided by the home office at Akron.

By the time you read this, all three blimps should be using a new computer system, although the light matrix and interface will be the same. The new arrangement completely replaces the relatively large and heavy DEC minicomputer, dumb terminal, and color monitor with a small Toshiba Model 4600 486DX2/33MHz laptop!

Not only that, but the new Toshiba laptop contains two proprietary computer programs, written in the "C" language. One is for Windows and one for DOS. Field versions of these programs are about 250K each. The field Windows program is used to CREATE limited night sign designs and effects.

The blimp's gondola is suspended by cables from a curtain inside the top of the envelope. Placement of 25- and 50-pound ballast bags is monitored 24 hours a day when moored to keep the blimp grounded.

The DOS program is used in the field to RUN the complex signs, or to create simple text with limited effects.

The new programs used by Akron now allow fonts that are larger (up to the full sign height!) or smaller than the previous fonts. Over 1,000 pre-designed signs have been created for use anywhere.

Words or messages and animation can run in either direction, as well as up or down. Approximately 50 percent of the messages run on "Super Skytacular" are devoted to public service messages in behalf of non-profit and service organizations. The remainder are devoted to Goodyear marketing and dealer support promotions.

### How It Works

The present Super Skytacular electric sign, essentially identical for all three blimps, is 105 feet long and 24.5 feet high on each side. See Figure 1. Each side is composed of a matrix of 3,780 miniature incandescent bulbs, for a total of 7,560 on both sides.

The bulbs used are General Electric #356 aircraft incandescent lamps designed to produce approximately 3.5 candlepower. They are rated for 170 milliamperes at 28 volts direct current (4.76 watts). Each bulb has a miniature bayonet base and is placed inside an individual reflector socket with a red, blue, green, or yellow plastic cover. The 7,560 bulbs are all connected together in pairs — one

on each side of the blimp — and connected by more than 80 miles of wiring!

The easiest way to describe the sign light matrix is to discuss "cells," which I'll define as consisting of four

lights — one of each color — as shown in Figure 2.

Each cell uses two vertical lines ("columns") and two horizontal lines ("rows"). Since the entire sign uses 126 columns, there are 63 cells in the

## Goodyear Airship Operations .....

She gets plenty of exercise, but it doesn't make one bit of difference in her mammoth measurements, which are 192 feet long, 57.5 feet high, and 46 feet wide, with a maximum gross weight of 12,840 pounds! Her sausage shape is maintained by 202,700 cubic feet of non-inflammable helium gas inside her two-ply neoprene-impregnated polyester fabric envelope.

This rotund lady is the airship "Eagle," typical of the three non-rigid "blimps" owned and operated by The Goodyear Tire and Rubber Company of Akron, OH. Goodyear has constructed more than 300 airships since 1917, including 65 commercial blimps and 250 airships built under contract for the Army or Navy.

The Eagle may be correctly referred to as a blimp, airship, or dirigible. A blimp is "any steerable powered balloon with no internal support or framework, kept in shape by internal gas pressure." A dirigible is defined as "a lighter-than-air craft that is engine-driven and steerable." Only a rigid airship with internal framework can correctly be called a zeppelin — but blimps, dirigibles, and zeppelins can ALL be called airships.

For exercise, the Eagle, and her sister ship, the "Spirit of Akron" and the newer slightly-different "Stars & Stripes," travel more than 100,000 air miles a year as goodwill ambassadors for the company. The Eagle spends six months of the year at its winter base near Los Angeles, CA; the other six months she "barnstorms" throughout the continental U.S. and Canada. The Spirit, based in Akron, OH, and the Stars & Stripes in Pompano Beach, FL, have similar schedules.

Safety is the primary factor in the overall airship operation. Although it is possible to fly in some types of adverse weather (and the pilots are all instrument rated), the Eagle remains moored to her mast when there is rain, fog, and/or wind in excess of 20 miles per hour. Goodyear airships, past and present, have operated for six decades without a single passenger fatality.

Each of the airships carries approximately 8,000 passengers annually, five or six at one time. Because of the heavy demand, rides are by INVITATION ONLY. Guests who have been for a ride on a Goodyear blimp are presidents, congressmen, city and state officials, astronauts, authors, scientists, and key Goodyear customers.

In addition to serving Goodyear's own public relations programs, the airships also are in great demand by the nation's news media, particularly television networks, for use as aerial camera platforms for special events. The Goodyear blimps have carried cameramen over just about every major city in the United States. Exciting and unusual aerial pictures obtained from the blimps have appeared in newspapers and magazines throughout the United States, or have been beamed to television viewers across the country.

Goodyear's GYROCAM 360, a specially designed TV camera and gyro-stabilized platform system, is used for the telecasts. The camera pod is suspended below the cabin and remotely controlled by the cameraman. Camera signals are sent via a microwave transmitter to the ground, where they are picked up by a dish antenna. The cameraman videos the action from the blimp while a crewman on the ground keeps the dish antenna positioned skyward to receive the microwave signals. Both the pilot and the cameraman listen for cues from the control network booth to position the airship for the next "live shot."

Fans have received spectacular blimp-eye views of Rose Bowl and Orange Bowl football games, Indianapolis and Daytona 500-mile auto races, America's Cup yacht races, and baseball's World Series, just to name a very few events covered regularly by Goodyear's blimps.

Maintaining an airship is no simple task. The Eagle is staffed with a crew of 22 — five pilots, a public relations representative, and 16 crewmen that include engine, radio, electronics, and structural experts. With four specially-equipped ground-support vehicles, the Eagle crew is almost self-sustaining in the field as far as maintenance and operation of the blimp.

Moving from city to city, this caravan of vehicles travels by highway, with the blimp flying overhead. A large tractor-trailer rig serves as a mobile maintenance facility. The tractor unit includes a machine shop, night sign, and television equipment lab. The trailer also carries the main mast, spare parts, and supplementary equipment.

A bus, specially designed for this operation, serves as a command center and communications headquarters on tour. It is equipped with a two-way aviation radio, all administrative aids necessary for the operation, and a special mast for mooring the blimp if an alternate landing site should be chosen during a cross-country mission.

Two passenger vans round out the rolling stock and are used for public relations, ground liaison work, and crew transportation. All special vehicles are equipped with two-way radios for contact with each other and the airship.

It should be noted that when the blimp is tied to its mast, it weathervanes in the wind, leading some to call it "The World's Most Expensive Windsock!"

105-foot sign width. Since there are 125 spaces in the 105-foot width, that means the lights are about 10 inches apart. Similarly, there are 30 rows (15 cells) in the sign's 24.5-foot height. With 29 spaces between rows, that means they are about 10.14 inches apart.

One of the standard text fonts uses a 35-cell character space, 5-cells-wide by 7-cells-high, as

**FIGURE 2.** A single cell has four different colors.

**FIGURE 3.** A standard 5x7 text character matrix. Two columns of blank cells follow each character.

shown in Figure 3. With two cells after each character used for spacing, nine characters use all 63 horizontal cells. With one space between text lines, two text lines use all 15 vertical cells.

Of course, graphics and animation get far more complex, and the

the airship. Its primary purpose is to generate up to 500-amperes of 28-volt direct current (14 kilowatts) for the night sign. This is enough to light about 3,000 bulbs at one time; to light all 7,560 bulbs at one time would take 30 kilowatts, and

is not necessary.

Four interface cabinets, one for each color, weigh about 90 pounds each. Each cabinet connects to the night sign through six two-inch diameter cables with a 166-pin connector at the end of each. Since there are a total of 24 cables and connectors, and each connector has 166 pins, a total of 3,984 pins are available to control the 3,780 lights on one side. Since the lights on each side are paired together, the same display appears simultaneously on each side.

The interface cabinets house lamp driver circuitry, which consists primarily of silicon-controlled rectifiers (SCRs). Each SCR is turned on and off by a serial data stream from the computer, so any bulb in any cell can be addressed at any moment in any

sequence. Because there are four colors in each cell, single colors or color combinations can be programmed.

## Animation

Animation possible on Super Skytacular includes a golfer driving his ball toward the green, then putting the final distance to the hole; a game of table tennis; a football player making good on a field goal attempt; a sharp-shooting basketball player sinking a foul shot; and a baseball player rapping a solid-line drive and almost taking off the pitcher's head in the process!

Special animated messages in color have been developed for the holiday seasons. Santa, his sleigh and his reindeer flash across the Yuletide skies; the Magi and their camels follow the Star of Bethlehem; a turkey runs to escape an ax-wielding man intent on securing Thanksgiving dinner; and a youngster lights a giant Fourth of July firecracker which explodes to form an American Flag.

## Coming Up

The new computer system has not required a change — yet — to the present interface circuitry, which was built in 1968. However, word has it that an entire new display currently in development, perhaps using fiber optics, "will make this sign look very, very antique," according to an inside source . . . **NV**

new computer system's various fonts provide a great deal more flexibility in text displays.

Power supplied by the airship's regular generators is not sufficient for the night sign's electrical requirements, so an auxiliary power unit — powered by a jet turbine engine — is mounted on the outside of the blimp's gondola only during night sign flights. Although this unit is, in effect, a small jet engine enclosed in a pod, it is designed to operate without developing any appreciable forward thrust for

# #30 CB - SCANNERS cont.

**BC220XLT BEARCAT** scanner, new in original box with all attachments, never used. Retail \$240, sell \$150. BC200XLT \$125, new unused. George Demaris, 7387 Pershing Ave., Orlando, FL 32822. 407-277-3746.

**CELLULAR RESTORATION** on your 800MHz scanner performed expertly for \$40 including return shipping. Guaranteed. Keith Perry, 607 Osage Dr., PO Box 816, Leander, TX 78641. Phone 512-259-4770.

**BARCODE SCANNERS** from \$225. 1-800-343-7773, FAX 408-425-7888 EGER.

**SALES, SERVICE:** CB equipment, radios, modifications, power mics, echo-reverb boxes, kits, meters, filters, antennas, noise toys, mounts, hard to find items. Partial list \$1, complete list \$4. D&R Electronics, 10 Park St., Thomaston, CT 06787. 203-283-9492.

**SCOPE BOOSTER.** Increase the input frequency of your oscilloscope to 30MHz and beyond. Requires no internal connections. Great for checking transmitters on CB, ham, modulation, etc. Assembled: \$49.95. Kit \$29.95. S&H \$3.50. Creative Technology, PO Box 1401, Torrington, CT 06790-1401.

**CE-232 SCANNER/Computer Interface!** VHF-UHF scanning at its best with cyber-powered AutoProgram; AutoLog; Auto-BirdieReject; Auto Look Up; scripts and more for PRO-2006/5/4 and IBM/compatibles w/512K, MSDOS 3.1/up! Kit, program disk, manual: \$194.95 + \$5 S&H; SASE for info: COMMtronics; Box 262478-N; San Diego, CA 92196. FAX/BBS at 619-578-9247, after 5:30pm & before 1:30pm. Voice only: 1:30pm-5:30pm, PST.

## SELL YOUR USED EQUIPMENT FAST. USE THE CLASSIFIEDS

**THE RCI 2950/2970 Service & Modification** handbook \$37, blueprint sized schematics \$20. Other service & modification handbooks: HR 2510 \$27, AR3300/3500 \$27, Cobra 2000 \$27, 148/Grant XL \$20. Caller ID blocker \$109 Catalog \$3. Amex, check, MO. Maxtech, Box 8086, New York, NY 10150. 718-547-8244.

**SCANNER HACKERS BIBLE** 112 modifications. PRO-2004/5/6, Yaesu, Kenwood, Bearcat, Icom. Frequency fixes, scan rates, interfaces, programmable channels, improving operation, antennas, and MORE!! \$33.45. VOLUME 2 covers ICOM + KENWOOD \$33.45. VISA/MC 602-782-2316. TELECODE, Box 6426-NV, Yuma, AZ 85366-6426.

**ULTIMATE MODIFICATION BIBLE Vol. IV.** Most complete, and greatest modification book in its time. 800 mike wirings CB and ham, 400 CB modulation boost, 200 CB PLL's, 175 ham radios, and 25 scanner modifications. Over 200 pages. KDC Sound, 17294 FM3083, Conroe, TX 77302. Send \$29.95 or to order: 1-800-256-9895 COD (\$4.50 extra for COD fee), MasterCard, Visa, or Discovery. Other calls: 409-231-3753.

**RADAR/JAMMER** This new x and k digital radar jammer works at any distance 100% of the time. We guarantee it! Dealers welcome. Call, 717-671-8650 or 1-800-671-8117 for a brochure. Write, BLUE MOON GADGETS, 6059 Allentown Blvd #608, Harrisburg, PA 17112-0992.

**ANTENNAS! FILTERS! BOOSTERS!** Many unique products including indoor amplified loop antennas, lightning and overload protectors, and modification enhancements that can add 10x signal boosting, extra-narrow AM/FM/SSB filtering, SCA decoding and more to your shortwave radio! For complete catalog, send two 32-cent stamps. Worldcom, Box 3364-N, Fort Pierce, FL 34948. 407-466-4640.

## MUSIC & ACCESSORIES

40

**TURNTABLE/PHONO** parts. Stereo needles/styli, magnetic, ceramic, crystal cartridges. Idlers, Astatic type metallic cartridges rebuilt. Obsolete idlers resurfaced. 78 needle fabrication. New Product News. Econormical 45 RPM stacker (stacks 5) or 78 RPM semi auto player for magnetic or ceramic inputs. Only \$44.95 postpaid. Catalog \$2. West-Tech, Box 1415, Sebring, FL 33871. Phone 813-471-0922.

**THINGS YOU** can't find in music stores. Custom made in the USA. In-line drum machine subminiature lights (Starlights), Blender mufflers, special designer equipment rack. Kits, quartz lights & more. Send SASE to US Tropics, PO Box 5555, Key West, FL 33040. 904-296-7052.

### MICROPROCESSOR/CONTROLLER TRAINING

Now, you can learn and apply computer control on your PC with our low-cost trainers and lead yourself to the advanced 80386, 80486, etc.. Our systems will help you learn BASIC, C, and ASSEMBLY languages programming and debugging, and Microprocessor and Microcontroller based system hardware design and troubleshooting. Experiment guide and example programs are included. Our trainers are widely adopted by technical colleges.

**8088 Trainer \$699.00.** BIC-8088, teach yourself 8088 assembly language programming. Features: Assembly language coding, assembler, disassembler, single step and multi-breakpoint program debugger, display and rewrite registers, download/upload programs from/to external systems, I/O drivers, 56-k large size keyboard, LCD display, RS-232, UART, printer interface, two expansion slots, ±5V, ±12V switching power supply, 20 I/O controls available, e.g. servo and stepping motor control, dot matrix display, D/A, A/D, sensors... **CONTROL APPLICATIONS FOR IBM PC/COMPATIBLE AND BGC-8088 TRAINER:** **EDS-8811 \$289.00** EPROM programmer. Burn your own EPROM in just a minute. **BGC-8052 \$979.00** learn yourself Intel 8051/8052 Embedded Microcontroller controls. **U-DBGR \$1599.00** Debugger/In-Circuit Emulator for Microprocessors and programmer.

**8051/52 In-Circuit Emulator, APEX-IE, \$699.00**  
**CIC-100 \$549.00** I/O control applications, learn Assembly, C, and BASIC programming languages, 800-pin solderless breadboard for circuit design and test.  
**EDS-8802 \$109.00** Dynamic scanning controls.  
**EDS-8803 \$159.00** A/D, thermal sensor controls.  
**EDS-8804 \$89.00** A/D and D/A converter applications.  
**EDS-8805 \$239.00** Servo and stepper motor controls.  
**EDS-8806 \$159.00** Basic I/O application experiments.  
**EDS-8807N \$16 \$119.00** Dot matrix LED controls, 16 pins.  
**EDS-8807N \$419.00** Dot matrix LED controls, 8 pins.  
**EDS-8808 \$269.00** Opto-couple controls.  
**EDS-8809-1 \$589.00** IBM PC/compatible add-on adapter \$99.00 and BIC-8088, stepper motor control, digital clock, speaker control, dot matrix LED control, matrix keyboard, sign lights, electric piano, stop watch... etc. 24 experiments, example programs included.

### PRODUCTS OF THE MONTH

**Grid DIP Meter** DM-4061 \$89.95  
**AC Millivolt Meter** MV-3100A \$159.95  
**TV Color Pat. Gen.** CPG-1366A \$159.95  
**mW RF Power Meter** 340 \$219.00  
1.8-500MHz; RF power: 20mW/200mW/2W, Imp. 50Ω; Accuracy: ±10% full scale, N-type connector, SWR < 1.15  
**341 \$219.00**; 500-800MHz; **342 \$219.00**; 800-1000MHz

### DC POWER SUPPLY

**PS-303 \$159.00** 0-30VDC, 0-3A, 0.02%+2mV line regulation, 0.02%+3mV load regulation; 1mVrms noise & ripple. Short circuit overload protection; constant current constant voltage (CC & CV).  
**PS-303D \$314.95** dual outputs.  
**PS-305 \$219.95** 0-30VDC, 0-5A.

**PS-305D \$399.95** dual outputs.  
**8110 \$289.95** 0-60VDC, 0-3A  
**8112 \$399.95** 0-60VDC, 0-5A  
**8108(8109) \$549.95(\$699.95)** 0-60VDC, 0-3A/5A, dual, independent tracking. Low ripple.  
**8102(8103) \$399.95(\$489.95)** dual 0-30VDC/0-3A/5A, fixed 5VDC/3A, independent tracking operation, constant voltage and constant current. Slave/Master, Serial/Parallel connection.  
**PS-1610S(8107) \$289.00(\$399.95)** 0-16VDC(0-30VDC), 0-10A.  
**PS-2243(2245) \$139.00(\$159.00)** 0-120-24VDC, 3A(5A).  
**8208(8201) \$179.95(\$239.95)** 0-30VDC (digital meter), 0-3A(5A).  
**8210(8211) \$199.95(\$259.95)** 0-30VDC, 3A(5A). 2 digital meters.  
**8202(8203) \$499.95(\$549.95)** 3 outputs, digital display, dual 0-30VDC/0-3A(5A), a fixed 5VDC/3A, independent tracking operation, constant voltage and current.

### AM/FM SWEEMER SCOPE

**SM-6225BC \$1999.95**  
Freq Range: (AM)400KHz, (FM) 10-11.4MHz, Accuracy: ± 0.1%  
Marker: (AM)455KHz, ±5KHz, ±10KHz; (FM)10.7MHz, ±7.5KHz, ±150KHz

**STEREO SCOPE** OS-750SB \$369.00 trigger, 0-10MHz

**ALIGNMENT SCOPE** OS-7001A \$369.00 0-200KHz.

### AM/FM STD SIGNAL GEN.

**SG-4110A \$1799.00**  
Freq: 100KHz-110MHz  
Display: 6-digit LED  
Accuracy: ±(5x10-E5 ±1 count)  
Resolution: 100Hz (100-34.99MHz), 1KHz (35MHz-110MHz).  
Output: -19dBu, -99dBu, 1dB steps. Impedance: 50Ω VSWR 1.2.

### TV COLOR PATTERN GEN.

**CPG-1366A \$159.95**  
VHF NTSC.  
Freq: 45.75, 175.25, 187.25 MHz.  
RF Output: 10mV  
Impedance: 75 Ohm  
Video Output: BNC, 1Vp-p

### SWR/RF POWER METER

**310 \$89.95**  
Freq Range: 1.8-150MHz.  
RF Power: 0.4W/20W/200W  
SWR Measure: 1.0 - ∞, 4W min.  
Accuracy: 5%-10%, SW-239 plugs.  
Insertion Loss: 0.3dB.  
**Input/Output Imp: 50Ω**  
**J30 \$89.95**, 130-520MHz  
**J30 \$119.95**, 1.8-520MHz  
**SWR-3P \$26.95** 1.7-150MHz  
RF Power: 0.5-10W, 0.5W-100W.  
**SWR-2P \$22.95**, 1.7-30MHz, RF Power: 0.5-10W.  
**PM-330 \$136.00** 1.8-500MHz, 0.5W/20W/20W.

### RF SIGNAL GENERATOR

**SG-4160B \$119.00**  
100KHz-150MHz up to 450MHz on 3rd harmonics; 6 ranges, AM modulation.  
RF Output: 100mVrms to 35mHz.  
Modulation: Int. 1KHz AM, Ext. 50Hz-20KHz AM.  
Audio Output: 1KHz, 1Vrms.  
**SG-4162AD \$229.95**, with Freq. Counter 1Hz-150MHz, 6 digits, for internal & external signals. Specification see SG-4160B above.

### AUDIO GENERATOR

**AG-2601A \$119.00**  
10Hz-1MHz, 5 ranges;  
Output Level: sinewave 0-8Vrms, square 10Vp-p.  
Output Impedance: 600 Ohm.  
Distortion: <0.05% 500Hz-50KHz, <0.5% 50KHz-500KHz.  
**AG-2603AD \$229.95**, with Freq. Counter 1Hz-150MHz, 6 digits, for internal & external signals. Specification see AG-2601A above.

### FUNCTION GENERATOR

**FG-2100A \$169.95**  
0.2Hz-2MHz in 7 ranges, Sine, Square, Triangle, Pulse & Ramp.  
Output: 5mVp-p-20Vp-p, 1% distortion.  
VCF: 0-10V control freq. to 1000.1.  
**FG-2102AD \$229.95** generates signals same as FG-2100, 4-digit counter display, TTL & CMOS outputs, 30ppm ±1 count accuracy.  
**FG-2020B \$159.00** 0.5Hz-500KHz; Sine, Square, Triangle.  
**(FG)2103 \$329.95**, Digital sweep generator, 0.5Hz-5MHz in 7 ranges.  
Operating Mode: sweep, AM, gated burst, VCF.  
Freq. Counter: Int. 0.5Hz-5MHz; Ext. 5Hz-10MHz.

### STEREO MODULATOR

**AG-2011A \$549.00**  
RF SECTION:  
Carrier: 98MHz ±2MHz.  
Output: 10mV, 1mV & 0.1mV  
COMPOSITE SIGNALS:  
Pilot: 19KHz ±2Hz, 0.8Vrms  
INT. MODULATION: 400KHz, 1KHz ±1%, 1Vrms, distortion < 5%  
L-R Separation: >50dB.  
EXT. MODULATION: Freq: 50Hz-15KHz, 1KHz ±1%, 1Vrms, distortion < 5%  
L-R Separation: >50dB.  
L-R Separation: >50dB.  
L-R Separation: >50dB.

### AC MILLIVOLT METER

**MV-3100A \$159.95** wide band 5-Hz-1MHz; 3 scales, mV, dB, & dBm, 300μV-100V in 12 ranges, 10μV resolution; -70 to +12 dB in 12 ranges, 0dB=1Vrms, 0dBm=0.775V; ±3% accuracy, input impedance 10MΩ.  
Noise: <2% MV-3201B \$309.95 dual channels, simultaneous measurement.

### OSCILLOSCOPE

**OS-7305B \$249.00** DC-7MHz, Vertical: 10mV/Div, Horizontal: 25mV/Div; 10Hz-100KHz in 4 ranges, 3" CRT, Internal and External Sync; Input: 1MΩ/35pF. Probe included.  
**OS-7010A \$369.00** DC-10MHz, 5" CRT, 10mV/cm-10V/cm, 1MΩ.  
**OS-622B \$344.95** 20MHz, dual trace.  
**OS-653 \$699.95** 50MHz, dual, delay sweep, ALT triggering, TV syn.  
**OS-6100B \$1329.95** 100MHz, 4ch, 8 traces, delayed sweep, best buy.

### GRID DIP METER

**DM-4061 \$89.95** 1.5-250MHz, 6 bands, 6 plug-in coils, 2 transistor, and 1 diode.  
Modulation: = 2KHz Sinewave, Crystal Oscillator: 1-15MHz.  
Wave absorption meter. Using 9VDC power supply.

### AUTO DISTORTION METER

**DM-3104A \$799.95**  
MEASUREMENT:  
Range: 0.01%-30%, 0.1/0.3/1/3/10/30% full scale.  
Freq.: 400Hz±10%, 1000Hz±10% (HPF).  
Input: 3mV-100V, ratio measuring 20dB.  
Auto. Switching Ranges: Fundamental Freq. = (fo)±10%;  
Fund. Rejection: >80dB at (fo)±5%; >70dB at (fo)±10%;  
Harmonic Accuracy: ±0.5dB, 1.8(fo)-20KHz.  
**DM-3204 \$1,599.00** dual channels.

### FREQUENCY COUNTER

**FC-5250C \$119.95**  
Freq. Range: 10Hz-220MHz (HF) 10Hz-20MHz (VHF) 10MHz-200MHz (UHF) 10MHz-200MHz (UHF) 10MHz-200MHz (UHF)  
Gate Time: 0.1 & 1sec.  
Max. Input: 10Vp-p.  
**FC-5260A \$146.00** 10Hz-600MHz  
**FC-5270 \$149.95** 10Hz-20MHz  
**FC-5600B \$321.00** 10Hz-600MHz  
**(FC)5700 \$329.95** 10Hz-1.3GHz

### SIGNAL TRACER/INJECTOR

**SE-6100 \$134.95**  
TRACER: Gain Max. 60dB  
Attenuation: 0.20/40/60dB  
Input Imped: 100K Ohm  
Output Imped: 600 Ohm;  
Speaker: 8 Ohm.  
INJECTOR: Freq: 1KHz S-4.5Vp-p  
quarwave; Output Level: Continuously variable 0-4.5Vp-p

### AUTO. CAPACITANCE METER

**CM3300A \$139.00** 10 ranges, 99pF - 99.9mF, fully automatic.  
Resolution: 0.1pF lowest, 0.1% full scale.  
0.5% of full scale: 1digit to 99.9μF, 1% of full scale: 1digit to 99.9μF.  
Display: 3 digit LED.  
Unit indicator: pF, nF, μF, mF. Overrange indicator.

### WOW-FLUTTER METER

**WF-3103A \$699.95**  
Freq. Range: 3KHz±10%  
JIS/CCT, 3.15KHz±10% DIN.  
Range: 0.03/1/33% full scale.  
Accuracy: ±5%  
**WF-3105A \$799.95**, digital.  
Function: L/N/WOW/Flutter/WT.D.  
Freq. Cntr: 10Hz-9.99MHz.  
Indication: CTR/DIN/JIS.

## COMPUTER HARDWARE

50

**NETWORKING KIT** all the hardware necessary to network your computers. Works with Windows for workgroups 3.11 and then popular. SW (2) systems \$49, (4) systems \$99. Dexis, 612-944-7670.

**DATel MULTIPLEXER DCP5016** \$250. Datel CSU/DSU DCP3080 \$175. 818-989-3848.

**DEC 486DX33** PC pizza box workstation. DEC barebones closeout, special case. PS 2 meg VRAM SVGA, 2S, 1P, & MP, IDE, H&F cont. Token Ring, ext. SCSI-2 P. You supply: CPU 486SX to DX2-66, monitor mag 15" or equal, 1 or 4 meg SIMMs mem., 1.44M FD, notebook HD, keyboard, mouse, for a \$4,999.95 system. New bulk packed with manual, cables & software. Size: 15"x15"x2.5". Use as a portable or workstation. Only \$149. 20" SVGA 1280x1024 monitors for above systems, \$299. Many parts & CPUs available to complete these fantastic systems! Wanted: Memory & CPUs. OEM accounts welcome. Our 31st yr. Call or faxback cat'l, 508-532-2323. BNF, 119 Foster St., Peabody, MA 01960, 508-532-2323.

**NEW MATH Coprocessors**, Intel 80386DX-16/25/33 \$16/\$25/\$33. Cyrix available also. Call Under The Wire Electronics, 818-797-2569 or fax 818-797-0384, 235 E. Colorado Blvd. #211, Pasadena, CA 91101.

**PHONEQUEST PHONECARD** for computer 8 bit card autodial hands free use \$32. Also, FM radio card, TV card, Call for Catalog, GCS, 1-800-386-0577.

**LAPLINK CABLES** plugs in your printer port to allow data transfer at 4 times the speed of serial data transfer. \$9.95 includes shipping anywhere in the USA Call Today! Stewart & Associates. 314-240-6500.

**DEC VT-100** Terminal with keyboard. \$100. DECLA 120 \$200. Lear Siegler ADM12 w/kybd, \$125. 818-989-3848.

**8051 SBCs with Bootstrap Loader**, Economical SBC with 128 byte memory, 24 I/O Ports. Contains preprogrammed Bootstrap software that allows loading of .OBJ files to EEPROM through Serial Port of PC. Run programs without burning EPROMs. IBM DOS compatible Utility Disk included (3.5 or 5.25 in). \$59 plus S/H. Also; Learn Assembly code with the perfect 70691HEX companion; "Assembly Language BASICS". A 64pg booklet devoted to the programming of the 8031/51. Written with the novice programmer in mind. \$15 plus S/H. Suncoast Technologies, Spring Hill, FL. 904-596-7599. VMC Accepted.

# ALL ELECTRONICS CORP.

QUALITY PARTS • DISCOUNT PRICES • FAST SERVICE • HUGE SELECTION

## JUMBO LEDs

Liton # LTL 327C - 8MM  
Ideal for eye-catching indicators and displays. A recent quantity purchase of these BIG, 8mm diameter, red diffused LEDs enables us to provide some very special pricing. The leads on these devices are 0.325" long with plenty of room for soldering.

**5 for \$1.00** CAT# LED-23  
100 for \$15.00  
1000 for \$120.00

## VIDEO SWITCHING CENTER

Gemini # SC1600  
Special purchase of these video signal switching centers allows us to sell them for 65% to 75% less than their original price. Enables five signal input to be switched to your TV or three signal inputs to be switched to your VCR. Watch one channel while recording another. F connectors on input. Use with antenna, CATV, VCR, laser disc, game or computer. 6.37" X 4.7" X 1.58". Brand-new, individually boxed, includes instructions.

**\$8.00 each** CAT# SC-1600

## 6 FOOT VIDEO HOOK-UP CABLE

High quality 6' video patch cables. Belden # 9104 "Duobond" dual shielded RG-59 cable with heavy-duty F connectors hex-cripped onto each end. Large quantity available.

**\$1.00 each** CAT# VHU-6S  
10 for \$7.50 - 100 for \$60.00

## INCREDIBLE SAVINGS! 30' CABLE

Originally made to connect Digital Audio Tape machine to a remote controller, this "snake" cable consists of four separate 9 conductor plus drain wire, foil-shielded cables in one jacket. The conductors are stranded 24 AWG wire. Each end of each smaller cable is terminated with DB-9P connectors. The cable is well-made and quite flexible for its size. Snake cable nominal O.D. is .52". Interior cable O.D. is .15". The outer jacket can be slit and re-moved if only the 9 conductor cable is required. DB-9 connectors include thumbscrew hold-downs. If you are using multiconductor shielded cable this is a great deal.

**\$5.50 each** CAT# CBL-3  
2 for \$10.00

## 7 Vdc MOTOR

Matsushita # MMX-7AC 0 8A  
1.25" diameter x 1.25" high motor. Prepped with 1.61" diameter flywheel, pulley and fiber glass mounting board.

**\$1.00 each** CAT# DCM-54  
10 for \$9.00  
100 for \$80.00

## "HI-8" VIDEO CASSETTE (USED)

8 mm Video Camcorder Users!

SONY Hi-8  
Top quality, metal particle 120 minute video cassettes. Used for a short time, then bulk-erased. Each cassette has its own plastic storage box. Satisfaction Guaranteed.

**\$3.00 each** CAT # VCU-8  
10 for \$28.00  
100 for \$250.00

## 9 VOLT 60 MA SOLAR PANEL

These 6" X 6" glass enclosed photovoltaic panels produce 9 Vdc at 60 mA. Ideal for charging batteries and powering small devices. Put two or more together for more current and voltage. Includes metal connectors and instructions for soldering directly to panel.

**\$5.25 each** CAT # SPL-960

## 640 X 480 LCD PANELS WITH BUILT-IN DIGITIZER

Two sizes available, both originally designed for laptop computer/note pad. Built-in digitizer to be used with a stylus for hand written notations. Onboard drivers operate on 5 vdc (logic) and 18 vdc (LCD). Full documentation on both units.

### SHARP LM64P90

Built-in CCFT backlight. Overall dimensions: 10.19" x 7" x 0.35" Viewing area: 7.88" X 6"

Dot size: 0.27mm X 0.27mm. **\$40.00**  
White dots on black background. CAT # LCD-31

### SHARP LM64194F

Overall dimensions: 8" x 5.75" Viewing area: 6" X 4.5". Dot size: 0.21mm X 0.21mm Black dots on white background. **\$40.00**  
CAT # LCD-32

## News

### JAMPAK PORTABLE PERSONAL MUSIC AMPLIFIER

JAMPAK is small enough to fit in your shirt pocket. It can be used indoors or out, practice and play anywhere, without disturbing others around you.

It's easy to use; a single on-off/volume control and LED indicator shows when the power is on.

JAMPAK has one jack for the instruments another for your headset (Jampak can even drive speakers). The third jack is for optional external power (8-15 volts DC).

JAMPAK operates on a standard inexpensive 9-volt battery, and provides many hours of operation. It provides high volume and clear tones over a wide frequency range.

JAMPAK will operate with all standard Walkman type headsets, but has enough available output power to drive professional type headsets and speakers. The cost is \$39.95 plus \$3.50 S&H.

For more information, contact:

**JAMPAK**  
P.O. BOX 1166, DEPT. NV  
MEAD, WA 99021-1166

### REAL TIME CLOCK

**B**&B Electronics' Model PCRTC is an accurate, temperature stable, real time clock for PCs. Replacing the inaccurate clock found in most PCs with the PCRTC makes your computer a reliable timekeeper. Based on a highly stable oscillator circuit, the PCRTC's clock uses a

software driver to update the DOS clock every minute. This allows the user and all applications to access the correct time without using any special commands or function calls.

The 8-bit (short slot) PCRTC card, which does not require IRQ lines, reduces your computer's clock error to 15 seconds/month, or less than 5 seconds/month if operating in a temperature stable environment. When power is off a 3.6V lithium battery maintains the clock. Features include a battery status function that lets you replace a low battery before time is corrupted, and a register that helps you log and determine the time of last power loss or reset.

The PCRTC is priced at \$129.95 and includes the software driver, a timesetting utility, and a simple command library on a 3.5" floppy disk.

### SMD TAPE SPLICING TOOL

**T**opLine's HRS4 tape splicing tool allows the user to add a fresh reel of SMD components without line shutdown. All you have to do is splice the leader of the new reel to the trailer of the old. The HRS4 is extremely easy to use.

The HRS4 manual tape splicer joins all widths of SMD carrier tape. It fits 8 mm, 12 mm, 16 mm, 24 mm, 32 mm, and 44 mm tape without tooling change. The HRS4 splices plastic or metal carrier tape in seconds. Portable and completely manual, the HRS4 weighs 2.5 lbs. and is 12" x 4" x 3" in size. The HRS4 fits on a table or wagon and no batteries are required.

The complete HRS4 set

includes splicing tape, cutter, and splicing tool. Extra strips of splicing tape, two types of cutting tools, and punch block and punch support are also available. Splicing tape comes in quantities of 1,000 or 10,000 pieces.

For further information and pricing, please call:

### CWID MODULE

**T**he new Hamtronics® CWID-2 Module features small size, ease of assembly and maintenance, versatility, and a thorough manual which describes how to take advantage of all the available options.

The CWID-2 module uses all CMOS logic. It operates on 7-15V at only 3 mA. It is easy to fit into existing enclosures because of its small size, only 1-3/4 x 3-1/8 inches. The factory programmed EPROM saves assembly time and allows longer messages than their earlier diode-matrix type CWID module, enough room for up to 200 characters. The CWID-2 can also be set to repeat a message continuously for beacon operation.

The unit has adjustable output level, tone, speed, and interval timer. Installation is easy; the thorough manual describes how to adapt the CWID-2 for various applications.

### BEBOP TO THE BOOLEAN BOOGIE

**B**ebop to the Boolean Boogie is not your ordinary technical book. Engineers, electronics and computer engineers in particular, have always maintained a somewhat off-grid sense of the world seldom reflected in their technical literature.

Bebop is an exception. The title alone provides some hint of what the reader can expect, namely, the unexpected. The author, Clive ("call me Max") Maxfield, an Intergraph engineer, has managed to compile a comprehensive, informative, and thoroughly engaging reference to the world of modern electronics.

Starting with analog versus digital, Maxfield wends his way through Boolean algebra, alternative numbering systems, Karnaugh mapping, state diagrams, integrated circuits, hybrids, programmable ICs, ASICs, circuit boards, multichip modules, and the very latest technologies, such as optical memories and protein switches. In fact, there's not much that isn't covered in this 500-page tome, it even includes a recipe for seafood gumbo! Over 350 figures and tables illustrate every concept clearly and simply, and an extensive glossary provides additional insight into even the most esoteric of terms. Seven appendices cover a variety of topics in more detail.

This book is a perfect introduction for anyone interested in electronics, even those without a technical background, although this is definitely a technical book. It's an indispensable reference for anyone in the electronics industry: practicing engineers, students, technical writers, technicians, and sales/market personnel.

### LAWN II

**O**CI announces the introduction of LAWN II. The pioneer of spread spectrum radio modem for wireless RS-232 connection — LAWN finally retires after six years of service. LAWN provides a transparent RS-232 link for any equipment like, computer, printer, plotter, modem, industrial controller, robot, and instrument.

LAWN II supports all the functions of LAWN with 100% improvements in both the coverage range and speed. LAWN II's typical indoor range is 300 feet and the throughput is 38.4 Kbaud. With all these improvements, LAWN II's price remains the same as LAWN which has a list price of \$275.00.

OCI had sold more than 25,000 LAWN to customers in the US and Canada. Using advanced spread spectrum and packet radio technologies, LAWN II provides a secure and transparent link for any RS-232

## DATA ACQUISITION

**B&B Electronics Manufacturing** Company introduces the 232SDA10 module, part of their new low-cost serial data acquisition line. Your choice of a 10-bit or 12-bit A/D converter, offering 11 channels of 0 to 5 VDC input, is available. Additionally, three digital inputs with a range of -30 VDC to +30 VDC, and three digital outputs with a range of 0 to 5 VDC are provided. The I/O lines are available through a female DB-25 connector.

RS-485 modules are also offered in 10-bit and 12-bit A/D formats. Both RS-232 modules can be port-powered. Only three commands are required to operate these modules, and all have automatic baud rate detection (from 1200 to 9600 baud). Each module includes demonstration programs in Quick Basic, and a data logging utility that lets you import data into other programs.

## CAMCORDER PLUS

**Maxell Corporation of America** announces its new Camcorder Plus battery line, including units with built-in self-charging plugs that allow

convenient recharging anywhere there's an outlet, regardless of whether or not the camcorder's charging unit is present.

Other new units in the Camcorder Plus line include the Fuel Gauge battery, with a built-in LED indicator to tell the user how much power the battery has remaining. The Combination battery pack, which combines the built-in charger and fuel gauge features with high-capacity (200 mAh) cells, delivers two hours of running time, instead of the standard 1.5 hours.

The Camcorder Plus line units are universal batteries that fit most 8 mm and VHS-C format camcorders, including Sony, Sharp, and JVC.

All batteries in the Camcorder Plus line are covered by Maxell's warranty. Suggested retail pricing for this line is as follows: Fuel Gauge (M-6033/1) \$59.00, Self-Charging (M-6033/2) \$69.00, and Combination (M-6033/3) \$99.00.

## SBC-8K MICROCONTROLLER

**LDG Electronics** has expanded its line of single board computers with the low-cost SBC-8K. The microcontroller, intended for embedded control, data logging, and educational applications, is one of the first 68HC11 based development systems available with the Xicor X68C75, 8K EEPROM, and Port Replacement device.

The board comes with a DB-9 RS-232 port, eight 8-bit A to Ds, 16 programmable and eight fixed I/O lines, 8704 bytes of EEPROM, 272 bytes of RAM, and socket for optional 8K Serial EEPROM. Operation is from a single 5-volt source and current consumption is less than 60 mA.

Through the new CodeLoad+ 2.0 development software, users can program the internal, external, or serial EEPROM with S19 records via RS-232. The Memory Dump command can display internal, external, or serial memory contents and store to a PC file. Program code

can also be commanded to execute via RS-232. The terminal emulator allows users to send ASCII codes to SBC-8K and log received RS-232 data to a file.

The software development package included with the SBC-8K contains CodeLoad+ 2.0, source files for all sample programs and complete documentation. The SBC-8K sells for \$79.95 in single quantities and the 8K Serial EEPROM option sells for \$10.00.

## RFF-1442 SERIES RIGHT ANGLE PCB MOUNT

The RFF-1442 series is a cost effective OEM answer to applications involving the flow of video signal from point to point. For applications requiring 75 ohm impedance matched video circuitry, the RFF-1442 series of connectors delivers high performance while maintaining cost effectiveness.

The RFF-1442 series is currently available in two lengths. Both connectors are comprised of nickel plated bodies, Delrin dielectric, tin plated contacts.

## R120 VHF AIRCRAFT BAND RECEIVER

The new **Hamtronix® R120** consists of two PC board modules: an IF board and a VHF converter board. It has a sensitivity of 0.2 µV. The modules are easy to build and align if you prefer to build your own

kits.

The kit price is only \$99.00. Assembly is relatively simple if you have built any kits before, but a signal generator is required for alignment. It is also available wired and tested for \$219.00. A channel crystal is only \$12.00.

## SYSTO-TEK™

**Practical Enhanced Logic, Corp.**, announces the release of phase one of a new product line designed for the detection of CPU fan failure on Pentium and 486DX systems. This warning device, Systo-Tek™, will emit a piercing sound should the CPU miniature cooling fan fail.

Most of today's high-speed, high-power microprocessors such as Pentium and 486DX incorporate the miniature fan technique. Failure of this fan can overheat the CPU thus causing erroneous data, processor damage, thermal damage, or even motherboard damage.

Since the system is enclosed, there is no visible detection of this problem. The piercing sound emitted from Systo-Tek will alert the operator that the CPU fan has failed. Should this occur, the operator can simply power down the system and replace the fan.

Additionally, an exterior warning label is supplied to reduce confusion of the sound alert, as well as to supply information and instruction on how to resolve this matter.

Systo-Tek installs simply between the existing fan and its current power source. No additional tools or hardware are required.

Systo-Tek is offered at a suggested retail price of \$19.95.

# AMATEUR ROBOTICS

This month, I'll take you well down the path to getting the Practical Peripherals 14.4 Kbaud ProClass external modem (PP144Pro) robot-ready. Be warned, this requires some very delicate work, so make sure you have a fine-tipped soldering iron, an Exacto knife, and a magnifying glass.

As mentioned in previous columns, Practical Peripherals makes two versions of an external modem. The regular class uses an embedded 8051 variant, and provides an excellent set of resources for robot hackers looking to develop with that chip.

The ProClass modems, however, use an embedded Motorola 68302 MCU. Working with this chip is normally beyond the reach of hobbyists, due to the extremely fine leads and close pin spacing.

But the PP144Pro modem design offers a unique opportunity to bolt a powerful MCU, loaded with high-speed I/O, into your robot. You just have to buy the modem, make some cuts and jumpers, and write your own robot code. This article will take care of the second item, and get you started on the third.

## The tool set

This project calls for some unusual tools. The list starts with an EPROM programmer that supports the 32-pin 27c1001 EPROMs. I have been using the Needham's PB10 programmer, available from Digi-Key and other mail order houses.

The PB10 consists of a PCB that plugs into a slot inside your PC, and a 40-pin ZIF socket on a frame, which sits outside your PC and connects to the card via a supplied ribbon cable.

The PB10 comes with software that provides a crucial function in 68302 development. The PP144Pro uses two EPROMs, one containing the odd bytes of the executable program, the other containing the even bytes. To successfully develop code for the 68302, you must have some means of splitting your executable files into these two halves.

For the PB10, the O-option lets you split an object file into two or more sections, then program selected sections into each EPROM. Note that this splitting only occurs during EPROM programming. The PB10 does not generate separate, split files.

I have mixed feelings about the B10. It certainly does everything I need to do regarding EPROM programming, it is very fast, and it handles some large devices.

But I find the standard display colors awful, and the mouse cursor is a large blinking block that annoys me to no end. I wouldn't mind a block that doesn't blink, but the flashing cursor is too much. Unfortunately, Needham's couldn't provide me with a way to turn off the cursor or stop its blinking.

The PB10 supports macros, and you can customize the initialization file, if necessary. You can also buy separate adapters to go with your PB10, so it can handle programmable MCUs and other

devices.

And the price, about \$140.00 from Digi-Key, is quite reasonable. In all, this is a solid tool for any development requiring EPROM support.

You will also need a 68000 assembler or compiler. The 68302 uses a 68000 as its core CPU, so you can use nearly anything that generates 68000 executable files. I found a few public-domain 68000 assemblers on the Internet, and for now have settled on ASM.

If you use a C (or other) compiler for your development work, you must be able to insert a run-time initialization file, so your code can set up the 68302 before running your main program. I'll get to the reasons for this shortly.

You will also need an EPROM eraser and a supply of 27c1001 EPROMs. I use the Walling MOD-D II UV eraser, available from Digi-Key for about \$40.00. Walling makes two models: one with an adjustable timer and one without the timer.

I strongly prefer the unit that lacks the timer. Invariably, the timer, even at its maximum setting,

serial communications controllers (SCCs), which provide serial I/O. Though vaguely related to the 68hc11's serial communications interface (SCI), the SCCs provide far more complex features, and are naturally far more difficult to set up.

The 68302 SCC contains hardware (actually, RISC microcode) support for serial formats such as HDLC, BiSync, DDCMP, and V.110 protocols. Each of the three separate SCCs can handle up to eight transmit and eight receive DMA buffers, and can use either internal or external clocks. Clock rates using the 68302's internal clock generator can hit 5.56 MHz, which translates into 347 Kbaud.

With some work, you can even set up an SCC to act as a 9600 baud UART.

I will never again complain that the 68hc11 SCI is complicated or hard to use. Not after struggling through the ritual needed to set up one of the 68302's SCCs.

I started with code contained in the Motorola MC68302 Integrated Multiprotocol Processor User's Manual, available from the Motorola literature

center or through your local Motorola field office. The literature number for this book is MC68302UM/AD.

Don't even think about using the 68302 without a copy of this book. If you want to hack the 68302, but don't have a copy already, stop reading this article right now and go order one.

The sample code contained in the User's Manual sets up SCC3 as a plain-vanilla UART, using two DMA buffers for both transmit and receive. All buffers are only one-byte long, so this code creates a double-buffered UART.

The code was designed to run on some type of commercial 68302 development platform, so by the time this code actually started run-

ning, the 68302 would have already been fully initialized. Unfortunately, I needed to add custom code to initialize the PP144Pro before I could run the UART code.

The PP144Pro, like most 68000 systems, uses a two-step configuration process immediately following power-up. Initially, the EPROM resides at address \$0, where the 68000 expects to find its reset and interrupt vectors.

Eventually, however, the application program will want RAM in the \$0 address space. This lets the program modify the interrupt vectors in low memory.

Thus, the start-up code must begin running in the \$0 area, then somehow move itself to a higher address range and move RAM down into the \$0 area.

The 68302 makes this process fairly easy, as it has four software-configurable chip select lines and

Diagram of PP144 board layout

doesn't completely erase whatever EPROM I'm using. Then, the timer goes off and shuts down the eraser. So besides having the irritating timer sound, I still have to run the eraser one more time.

So I just use the cheaper model and let it go. Sometimes, I forget and erase the EPROMs for a couple of hours, but haven't damaged anything that way, at least not yet.

As to the EPROMs, I bought six chips from Prime Electronic Components, who advertise regularly in *Nuts & Volts*. They shipped quickly, sent confirming paperwork, and took plastic over the phone. They have good prices, too.

## Last month . . .

I started this hack last month; please review that column for background details.

The 68302 contains three very sophisticated

1152 bytes of on-chip RAM.

The upper half of this RAM is assigned to support the SCCs; these 576 bytes are called parameter RAM. The lower 576 bytes can be used for any purpose, such as stack space or data storage. Motorola calls this section of on-chip memory system RAM.

The technique for shifting memory devices then becomes straightforward. The application program

If, however, you intend to use the PP144Pro as the heart of a robot, you will eventually have to perform the last two mods.

Note that the CHECKOUT program will work with all mods.

First, a comment about orientation. Whenever I describe the location of landmarks on the PP144Pro PCB, I am viewing the board with the DB-25 connector to the left and the LEDs in the upper-right corner. Refer to the accompanying layout diagram.

Mod #1 is straightforward. You must unsolder and lift pins U3-3 and U3-6 from their respective pads. Finally, you need to run a wire from the lifted pin 6 of U3 to pin 3 of the DB-25 connector.

This is easy to say, but can be difficult to do. Begin by locating U3, a surface-mount (SMT) chip mounted just to the right of the DB-25 connector. This is a 1488 level shifter, though the chip on my board is numbered 5788.

Use a fine-tipped soldering iron and a piece of high-grade copper braid to wick the solder from pins 3 and 6 of this device. Using the soldering iron and an Exacto blade, carefully heat one of these leads and pry it up far enough to clear the board. Do the same on the other lead.

Next, cut a piece of 30 AWG wire-wrap wire about two inches long, and trim 1/16th inch of insulation from one end. Carefully solder this trimmed end to the lifted pin 6. Use a magnifying lens to check your work. Make sure you don't accidentally create a solder bridge between the lifted pin and the pad beneath it.

Trim insulation from the other end of this wire, route it around the right edge of the board, and solder it to pin 3 of the DB-25 connector on the underside of the board.

This completes mod #1. You can now burn CHECKOUT into two EPROMs and install them in the sockets. Note that the EPROM holding the even addresses goes into socket B (U16).

With CHECKOUT installed, connect a serial cable to the PP144Pro board and start a comm package such as ProComm. Set the connection for 9600 baud, eight data bits, no parity, and one stop bit.

Plug the PP144Pro wall-wart into the power connector and turn on the board's switch. Three LEDs should light on the front panel; the green LED nearest the board's center will blink. If you press a key on the PC, you should see the character echoed on the screen.

Congratulations! You now have access to an extremely powerful robot brain. Now would be a good time to look through the 68302 User's Manual, to get a feel for all the other resources on this chip besides what I've discussed here.

To give you an idea of the processor's speed, the blinking LED changes state after running through a polling loop \$ffff times. Those of you used to the 68hc11's speed are in for a pleasant surprise.

Mod #2 configures the PP144Pro board to use my standard serial connector. This mod is more involved than mod #1, and requires some careful trace cutting.

Begin by cutting four pieces of 30 AWG wire-

wrap wire, each about 2.5 inches long. Solder one end of each wire to a pin on a four-pin MTA male connector. Refer to the accompanying diagram for pin identification.

The next step requires clearing some space on the PCB for mounting the MTA connector. Since I no longer need this board to work as a modem, pulling off all the modem components makes sense.

If you hold the PCB up in front of a strong light, you will clearly see where the opaque ground plane ends and the translucent modem area begins.

I sat down at my work bench and begin removing components from the modem area of the PP144Pro board. The first items I removed were the two phone jacks, J3 and J4, located just below the DB-25 connector. This clears the space for mounting the MTA serial connector later.

I also pulled off C22, C23, and U5. This frees up some important solder pads that you will use in a moment. Do not remove any components, other than C22, C23, and U5, that are not mounted wholly within this modem area! I ended up leaving the small SMT parts in place, because it was too much hassle to try and remove them.

Now you can finish wiring up the MTA serial connector. Solder the wire from MTA pin 1 to the upper pad of C23. This is the ground connection for the serial port.

Solder the wire from MTA pin 2 to pad 5 of U5. This is the +5 connection for the serial port.

Solder the wire from MTA pin 3 to the via (plated-through hole) between pads 10 and 11 of U3. This via is located just above the "R4" silk-screened legend, and is barely large enough to take a 30 AWG wire. Note that you will probably not be able to force the wire completely through the via. Simply hold it in place, then add a touch of solder.

Now carefully cut the trace that runs diagonally from this via to the underside of U3. Be sure you make your cut on the diagonal length of the trace, to the left of the via. Do not damage any of the adjacent traces or connections, and verify that you cut completely through the trace.

Locate the trace running to the via that is inside the "C" of the silkscreen for C19. You must connect the wire from MTA pin 4 to this trace. You can try inserting the wire into the via and soldering it.

Mount MTA connectors to board with locking tab away from board

Diagram showing wiring and mounting of MTA connectors

writes a few bytes of executable code into an area of system RAM, then jumps to the code. This code shifts the memory devices as needed, then jumps back to the correct address in the newly-moved ROM.

Note that your code must first position this block of on-chip RAM somewhere in memory. Since it can reside anywhere in the 68302's 24-bit address space, my code puts it in the same place the sample code did, at \$700000.

When your code fixes the on-chip RAM in place, it also sets the addresses of the 68302's I/O registers. These registers sit just above the on-chip RAM, and serve functions similar to the 68hc11's I/O registers.

I won't go into any more detail on initializing the 68302. Instead, I'll refer you to the file CHECKOUT.Z00, available from my Internet FTP site on cherupakha. The URL for this site is:

[ftp://cherupakha.media.mit.edu/pub/incoming/karl\\_lunt](ftp://cherupakha.media.mit.edu/pub/incoming/karl_lunt)

Note that this is a ZIPped file; the extension is Z-zero-zero. If I update the file for some reason, I will change the last two digits in the file extension, so you can tell the file has changed.

The code in CHECKOUT.Z00 not only initializes the 68302 on the PP144Pro board, it also sets up SCC3 to echo any characters it receives via the board's RS-232 connector.

Unfortunately, the stock PP144Pro modem board isn't wired properly to do this. Therefore, you will have to modify the board before you can use its serial port for your own programs.

## Hardware mods

I'm going to describe three different mods, the first two involving the RS-232 serial connector. The first mod lets you use the original RS-232 connector for your serial hookup. The second mod disables the original connector, replacing it with my standard four-pin MTA male connector.

The third mod makes your PP144Pro modem board completely battery powered, ready for installation in a robot frame.

If you want, you can perform just the first mod, and continue to use the RS-232 connector for communication. You can always perform the second and third mods later, if necessary.

Port assignments for PP144-PRO panel LEDs

You can also do what I did, which was to carefully scrape some of the solder mask off of this trace, immediately to the right of the "C19" legend, then solder the wire to the exposed copper.

Now, turn the PP144Pro PCB over, and orient it so the DB-25 connector lies to the right and the modem area to the lower right. Locate the trace that comes from the via labeled T131 and runs to the right, passing just below resistor R60.

This via is electrically connected to the trace now wired to MTA pin 4. You can verify this with an ohmmeter.

Cut this trace, using an Exacto knife or other sharp blade.

This completes mod #2. The DB-25 connector is no longer available; all serial communications must now go through the MTA serial connector.

Remember that the MTA serial connection is digital, not RS-232. You must provide some external means of translating the digital signals at the MTA connector to the RS-232 levels needed by your PC. I suggest you use one of my MAX232 adapters, described in previous columns.

You should be able to run the CHECKOUT program as before, now using the MTA connector.

The CHECKOUT program serves as a good verification tool. If you make other mods to the PP144Pro PCB, you can always plug the CHECKOUT EPROMs into the board and verify that everything still works. If the board no longer echos characters, stop and figure out what you changed, and fix it before continuing.

## Robot-ready

Unfortunately, you cannot use the PP144Pro PCB on a robot in its present state. The 1488 and 1489 RS-232 drivers require +12 volts and the +12 VDC power supply circuitry is still on-board.

The following mod fixes that. Note that you cannot proceed until you have installed and tested the second mod described above.

The first step towards making the PP144Pro robot-ready involves removing the 1488 and 1489 drivers. This is a simple, though brutal, task.

Using a pair of sharp, fine-tipped diagonal cutters, carefully cut each lead on the right-hand side of U3, U2, and U1. Cut each lead as close to the body of the chip as you can. Make sure you don't accidentally damage any of the nearby traces or components.

After these leads have been cut, carefully lift the right-side edge of one chip, hinging it up on the left-side leads. Work the chip body up and down through about a 45-degree arc, fatiguing the left-side leads until they all break.

Do NOT try to pull the chip free of the left-side traces; you will destroy the board. Simply hinge the chip back and forth until the leads all break from fatigue.

Repeat this procedure on the other two chips.

Now use a fine-tipped soldering iron to carefully clean all of the IC pads of metal chips and solder. Make sure you don't accidentally leave a solder bridge between pads or to adjacent traces.

This removes nearly all of the on-board ICs that use +12 VDC. I say "nearly," because the LM386 amplifier chip (U4), used to drive the speaker, remains. I decided for now to leave the chip in place. I may later add enough voltage to power the LM386 back up, and it would be fun to have an amplifier already available.

Next up, you need to remove the on-board power supply so you can run your 68302 system from batteries. Begin by removing the power jack, located between the power switch and the DB-25 connector.

Next, lift only the lower lead of ferrite bead inductor L1, mounted next to the power switch. This isolates one of the switch leads, which we will later use as a power supply point.

Now clip all three leads from the 7805 voltage regulator. This is the flat three-pin device riveted to the PCB, about midway across the top of the board. I don't recommend trying to drill out the rivet; just cut all the leads off and unsolder the clipped leads from the board.

Clip the cathode lead of a 1n4001 diode to about one inch long, then solder this lead to the

center lug of the power switch.

Twist a pair of wires, one red and one black, into a two-conductor cable about three inches long. Be sure to use stranded wire; 28 to 22 AWG should be fine.

Strip about 3/8-inch insulation from all ends of the wires.

Slide a short length of thin heat-shrink over one end of the red wire. Solder this wire to the anode end of the 1n4001, then shrink the insulation in place using the tip of your soldering iron.

Solder the matching end of the black wire to the negative terminal of the large electrolytic capacitor, located near the now-defunct 7805 voltage regulator.

Solder a two-pin male MTA connector to the other ends of this power cable. Watch the polarity of the hookup; use the accompanying diagram for reference.

Finally, cut a piece of stranded wire about three inches long. Solder one end to the free lead of ferrite bead inductor L1. Dress this connection so it does not contact any other circuitry. If you like, you can slide a piece of heat-shrink over the connection and shrink it down.

Solder the remaining end of this wire to the lowest of the three cleared pads to the left of the 7805 regulator. This connection provides power to the board when the power switch is closed.

This finishes the power supply circuitry. The board will work just fine with a power supply made of four alkaline C-cells. The diode provides polarity protection, so you don't burn up your board by accidentally installing the batteries backwards.

The diode also provides about 0.7 VDC drop. The board contains a couple of 74ls parts, which require a power supply more nearly +5 VDC than the 'hc parts.

Note that four alkalines provide roughly +6 VDC, but four NiCds only give about +4.8 VDC. If you know you will only use NiCds in your battery pack, you can try using a Schottky diode, such as the 1n5817, in place of the 1n4001.

A Schottky diode only gives about 0.2 VDC drop, which could leave enough juice for the board. I haven't tried this, though, so check your voltage measurements before actually turning on the board.

All that remains is a little cleanup. Use some five-minute epoxy or hot-glue to glue the four-pin MTA serial connector to the board, in the same location previously used by the phone jack nearest the DB-25 connector. Similarly, glue the two-pin power connector in place, in the same location previously used by the power jack.

While the glue sets, find the plastic case originally used to house the modem board. (You did save the case, didn't you?)

Using a small file, rough out the power jack hole in the case until it is large enough to provide access to your power connector through the case wall.

When the glue has cured completely, carefully slide the PCB back into its case. Bolt the board into place using the original 4-40 hardware.

Put two four-inch strips of double-sided foam tape on the top of the case, over the slots originally used as a speaker baffle. Press a plastic four-cell C-size battery holder onto the foam tape strips. Add a suitable power connector, hook up your power cable, and throw the switch. If you made all of your mods correctly, the LEDs should blink in their familiar pattern.

## Wrapping up

This completes the major effort in turning a PP144Pro modem into a robot brain. You can now begin the job of writing your robot code, using the

CHECKOUT program as a starting point.

Next month, I will show you how to convert the now-defunct DB-25 connector into an I/O port for experimentation. This conversion will let you hook a ribbon cable, terminated in a DB-25 pin connector, into the modem's electronics. The cable, in turn, brings selected I/O pins out to a header for easy access.

For now, feel free to hack away. Refer to the accompanying chart of LED connections for details on a few of the I/O lines. You can tie into these lines temporarily, to try some quick experiments. Remember that the LEDs are active low; you must write a 0 to the I/O port pin in order to turn on the LED.

## Brain exercise

I often worry that my creativity doesn't get enough workout. Yes, I design robots and robot subsystems, but that just exercises the same brain areas that I usually exercise. What about those brain cells that I don't use so often? How do I keep them in shape?

A couple we know recently introduced Linda and me to Tangles. Those of you with small children probably already know about these little plastic geometric puzzles.

For the rest of you, Tangles consists of seven flat shapes, usually made of brightly colored plastic. You can arrange the plastic pieces in seemingly endless patterns, creating everything from geometric designs to stylized pictures of animals or other objects.

To provide both challenge and instruction, you can buy separate decks of Tangles cards. Each card contains two large (usually black) designs for you to try duplicating, one design on each side of the card. Each side also contains the solution to the design pictured opposite, with the proper arrangement outlined in white.

Note that you can get Tangles card decks in three different difficulty levels. Linda and I started with level two.

My first attempt was pretty discouraging. It was as if my brain simply lacked some key element, as if I had a sponge where there should have been neurons. I spent several minutes just pushing the pieces around on the table, hoping that my efforts would create a solution out of simple Brownian motion.

Eventually, though, I began to "see" differently. The pictured shapes I was trying to make would take on internal lines that matched the available Tangles pieces. After enough practice, I could imagine the Tangles pieces moving about on the design, rearranging themselves, until the solution appeared.

Those of you accustomed to working and thinking in graphics images may find this pretty small potatoes. But I've always been a text-based life form, and graphics has never held much fascination for me. Consequently, I've let that section of my brain grow dormant; at least that's how it seems to me.

Doing the Tangles puzzle forces me to exercise that little-used section of my brain, and I could "feel" those neurons rousing themselves from their long naps, stretching themselves, and starting to move about.

And who knows; perhaps this creative stimulation will result later in a cool robot design or mondo hack that I might have missed otherwise.

Regardless, I'll continue to work the Tangles. If you want to try your hand at this ancient Chinese puzzle, hit a nearby toy store. Four sets of pieces and a deck of cards will only set you back about \$12.00. Consider it an investment in your brain's good health. NV

As always, you can reach me at:  
Karl Lunt

Bothell, WA 98012  
E-Mail: karl@mav.com

**DEALERS, TECHNICIANS:** Do you throw away bad power computer switching power supplies? I can show you how to fix 9 out of 10 in less than a half for under \$10. I'm selling a schematic, extensive theory of operation, and a complete troubleshooting guide. The price? \$40, the cost of one supply. It will pay for itself with the first repair. Jim, 520-623-8994. PO Box 5123, Tucson, AZ 85703.

**SIMM MEMORY** \$37+/meg 256K to 16 Meg, 20" Mitsubishi 3905 \$875 notebook 386SX. 4MB 80MB HD \$775. SIMM adapter 30 pin to 72 pin \$49. IBM 486SLC60 motherboards w/CPU \$189. 404-590-9550.

**XT OWNERS,** looking for those hard to find cards? Check this out! High Density floppy controller, \$39.95, IDE hard drive controller \$39.95, Multi I/O with Clock \$19.95, Memory expansion cards \$29.95, plus a large selection of used cards, hard drives, and other goodies in stock. All used parts are tested and carry a money back guarantee. Stewart & Associates, 244 Mid Rivers Centre, St. Peters, MO 63376. 314-240-6500.

**TOWER CASES!** Baby AT desktop cases! New mid-tower with 3 5-1/4 bays, 2 3-1/2 inch bays, digital display 200 watt, \$40, \$375/10. Baby AT case, 230 watt, only \$35 each! Call Under The Wire Electronics, 818-797-2569 or fax 818-797-0384.

**SIMM 1,2,4,16,32 Meg:** Brand New 1 Meg 30pin 70ns/60ns \$39/\$41. 4 Meg 30 pin 70ns/60ns \$125/\$130. 4 Meg 72 pin 70ns/60ns \$130/\$140. 8 Meg 72 pin 70ns/60ns \$265/\$280. 16 Meg 72 pin 70ns/60ns \$490/\$520. 32 Meg 72 pin 70ns/60ns \$950/\$1,100. All SIMM modules available. 1 yr. warranty. Call Yub Sung, 603-893-5866. Salem, NH for current price/availability.

**MOTOROLA M68HC11EVB** microcontroller/ICE evaluation board system. Includes reference, user's, and technical manuals, programming reference, schematic, PC software (monitor and compiler). Communicates by RS-232 port with host. Has 8-channel, 8-bit A/D and three 8-bit I/O ports. \$80. 520-795-3641 (eves).

**TRANSFER FILES** between computers using RS-232 ports! Kit of cables and software diskettes fit most PCs. Send \$25 to: Pioneer Enterprises, Box 429, Kittredge, CO 80457.

**TAPE BACKUP** Cipher #525 new in box, full height (internal) 50MB uses DC600 tapes. Buy one for \$25, take all 250+ units. Please offer. For details call ATCO Corp. at 617-933-9909, FAX: 617-938-1299.

**GNT 4604** paper tape punch. \$200. Paper tape readers, \$100. 818-989-3848.

**8-EIGHT BIT 3 COM** Ethernet cards \$20 each. Hewlett Packard font cartridges #s, 22706A, 22707L, 22707E, 22707K \$20 each. New Okidata tractor feed fit Microline 321 & 391 \$20. Consignment Computer, 117 Sycamore, Elizabethton, TN 37643. 615-543-3666.

**WANTED: MEMORY** for IBM 5140 convertible, has 256K need 256K more. IBM P/N 7396928 or equivalent. Please advise of price. W.E. Powden, Sr., R 1 Box 364, Bridgeport, IL 62417.

**PCs CUSTOM** designed and built, special features incorporated to your requirements. We can build them small, wall mount, anti-vibration, sealed, super cooled, or whatever your needs. Quantities as low as 10. Fax requirements to Fujimi Ltd., Hong Kong, +852-2834-0463.

**MACINTOSH MONITORS** Sony 21" color 0.25 pitch \$500, Panasonic 19" color 0.26 pitch \$300, 30-day MBG, 90 day warranty. TelePresence™. 205-533-0369, ask for Steve. Huntsville, AL.

**BUILD YOUR OWN IBM COMPATIBLE COMPUTER** from parts for as little as \$399 with the help of an easy to view 63 Minute Video Tape that shows you how. This easy to view award winning Tape will show you how to save money by assembling any compatible 286, 386, 486 or Pentium Computer in a step by step easy to follow procedure. It also shows the common pitfalls that you might run into if you try to assemble a computer by yourself and gives you secrets on how to overcome problems that might occur during assembly. When complete, you will have gained the confidence and experience to maintain your very own computer for years to come and even service it if necessary. Don't let this opportunity pass you by, order your Video Tape today while supplies last for only \$29 (reg. \$59.95) plus \$2.95 P&H. Send check to: EVP, PO Box 2201, Northlake, IL 60164-0201 or call: 1-800-754-5096 Now!

**USED 14.4KBPS** Zoom v.32bis external modem \$50 OBO. Dwain Coufal, 3201 Rosewood, Temple, TX 76502-1328 or coufal@vvm.com.

**SBC-8K MICROCONTROLLER.** Complete 68HC11 development package. 8704 bytes EEPROM. 272 bytes RAM. Programs via RS-232 port from PC. \$79.95 plus \$5.00 shipping. MC/Visa. Phone/FAX 410-586-2177. LDG Electronics, 1445 Parran Road, St. Leonard, MD 20685.

**LAPTOP LOSING POWER?** Have your power pack rebuilt with NEW cells at a 50% savings over the cost of a new pack! Increase your usage time with HIGH CAPACITY CELLS! Fully Guaranteed! The NiCad Lady, PO Box 654, Wildomar, CA 92595. 909-698-1901.

## ALFA ELECTRONICS

HIGH QUALITY TEST EQUIPMENT  
BEST PRICE

### DMM 89 \$199.95 Most Advanced DMM

All Purpose & Communication  
-80.7 to 81.4 dBm with 40-1200Ω  
20 reference impedances  
True RMS  
Frequency counter: 0.01Hz-10MHz  
Capacitance: 1pF-50,000μF  
Measure AC volt to 20kHz  
5000 counts, 0.1% accuracy  
Auto/manual range, fast bar graph  
Min/Max/Ave/DH/Relative/Zoom  
Auto power off  
Input warning  
Splash proof  
Volt, amp, ohm, logic, diode, continuity  
Ruggedized case  
Rubber holster included

### DMM 2360 \$119.95 DMM+LCR Meter

Very Versatile DMM  
Inductance: 1μH-40H  
Capacitance: 1pF-40μF  
Frequency: 1Hz-4MHz  
Temperature: -40-302°F  
TTL Logic Test: 20MHz  
Diode, Continuity  
Volt, Amp, Ohm  
3999 count display  
Peak Hold  
Auto power off  
Ruggedized case  
Rubber Holster \$8.00  
Temperature probe \$7.00

### DMM 21 \$74.95

Inductance: 1μH-40H  
Capacitance: 1pF-200μF  
Frequency: 1Hz-1MHz  
Volt, amp, ohm, diode, continuity  
3999 count display  
TTL logic, HFE  
Peak hold  
Ruggedized case  
Rubber holster \$8.00  
Full line of DMMs, economy, compact, ruggedized, solar cell, automotive, heavy duty, industrial starts from \$15.95

**Fluke Multimeter**  
Fluke 12 \$84.95  
Holster C-10 \$10  
Fluke 70 II \$67.5  
Fluke 73 II \$94  
Fluke 75 II \$129  
Holster C-70 \$16  
Fluke 77 II \$149  
Fluke 79 II \$169  
Fluke 29 II \$169  
Fluke 83 \$225  
Fluke 85 \$259  
Fluke 87 \$287  
Fluke 97 Scope Meter \$1785

### LCR Meter 131D \$229.95

Most Advanced LCR  
Dual display: L/Q or C/D  
Inductance: 0.1μH-1000H  
Capacitance: 0.1pF-10,000μF  
Impedance: 1mΩ-10MΩ  
0.7% basic accuracy  
Dissipation factor & Q factor  
Serial & parallel mode  
Relative mode for comparison and to remove parasitics  
Statistics, tolerance, Best for design, incoming testing & production  
SMD and chip component test probe \$25.00

### LCR Meter 814 \$189.95

Best Resolution LCR  
Inductance: 0.1μH-200H  
Capacitance: 0.1pF-20,000μF  
Resistance: 1mΩ-20MΩ  
1% basic accuracy  
Dissipation factor indicates leakage in capacitor and Q factor in inductor  
Zero adjustment to reduce parasitics from test fixture  
Best for high frequency RF and surface mount components.  
SMD and chip component test probe \$25.00, Deluxe carrying case \$5.00

### Frequency Counter FC-1200 \$129.95

Frequency: 0.1Hz-1.25GHz  
Display: 8 digit LCD  
Period: 0.1μs-0.1s  
Records Max/Min/Average  
Data hold, relative mode  
Telescoping antenna \$8.00  
Deluxe case \$5.00  
Also Available:  
AC/DC clamp meter, Light meter, Thermometer, pH meter, High voltage probe, Digital caliper, Anemometer, Electronic scale, Force gauge, Tachometer, Stroboscope, Humidity & EMF adapter, Sound level meter, Frequency counter, SWR/field strength/power meter, Dip meter

### 20 MHz Oscilloscope with Delay Sweep PS-205 \$429.95

Dual Trace, Component test, 6" CRT, X-Y Operation, TV Sync, Z-Modulation, CH2 Output, Graticule Illum, 2 probes each has x1, x10 switch. Best price with delay sweep.  
PS-200 20 MHz DUAL TRACE \$339.95  
PS-400 40 MHz DUAL TRACE \$494.95  
PS-405 40 MHz DELAY SWEEP \$589.95  
PS-605 60 MHz DELAY SWEEP \$789.95  
Scope Probe: 60MHz x1, x10 \$13, 100MHz x1, x10 \$22

### 20 MHz Digital Storage Oscilloscope DS-203 \$729.95

Switchable between digital and analog modes  
2 K word per channel storage  
Sampling rate: 10 M sample/sec  
8 bit vertical resolution (25 Level/div)  
Expanded Timebase 10ms/div - 0.5 s/div  
Refresh, Roll, Save all, Save CH2, Pre-Trig  
Plotter Control  
250MHz x1, x10 \$29, 250MHz x100 \$39

### DC Power Supply PS-303 \$159.00

0-30 VDC, 0-3A output  
Constant voltage & constant current mode  
0.02% + 2mV line regulation  
0.02% + 3mV load regulation  
1 mVrms noise and ripple  
Short circuit and overload protected  
PS-8200 with digital voltmeter \$179.00  
Also available: 30V/5A, 60V/3A, 60V/5A  
16V/10A, 30V/10A

### DC Power Supply Triple Output PS-8202 \$499.95

Two 0-30 VDC, 0-3A outputs  
One fixed 5VDC, 3A output  
Capable of independent or tracking operation  
Constant voltage and constant current mode  
Four digital meters - volt and current display  
Excellent regulation and low ripple  
Short circuit and overload protected  
Also available: 30V/5A, 60V/3A, 60V/5A  
Dual tracking 30V/3A, 30V/5A, 60V/3A, 60V/5A

### RF SIGNAL GENERATOR SG-4160B \$119.00

100 kHz-150MHz sinewave in 6 ranges  
RF Output 100mVrms to 35 MHz  
Internal 1kHz, External 50Hz-20kHz  
AM modulation  
Audio output 1 kHz, 1 Vrms

### AUDIO GENERATOR AG-2601A \$119.00

10Hz - 1MHz in 5 ranges  
Output: 0-8Vrms sinewave  
0-10Vp-p squarewave  
Synchronization: +3% of oscillation frequency per Vrms  
Output distortion:  
0.05% 500Hz - 50kHz  
0.5% 50Hz - 500kHz  
Output impedance: 600 ohm

### FUNCTION GENERATOR FG-2100A \$169.95

0.2 Hz - 2 MHz in 7 ranges  
Sine, square, triangle, pulse and ramp  
Output: 5mV-20Vp-p  
1% distortion, DC offset ± 10V  
VCF: 0-10V control frequency to 1000:1

### RF SIGNAL GEN./COUNTER SG-4162AD \$229.95

Generates RF signal same as SG-4160B  
Frequency counter 1Hz - 150 MHz for internal and external source  
Sensitivity <50mV

### AUDIO GEN./COUNTER AG-2603AD \$229.95

Generates audio signal same as AG-2601A  
Frequency counter 1Hz-150MHz for internal and external sources  
Sensitivity <50mV

### FUNCTION GEN./COUNTER FG-2102AD \$229.95

Generates signal same as FG-2100A  
Frequency counter 4 digits  
Feature TTL and CMOS output  
**SWEEP FUNCTION GEN./COUNTER \$329.95**  
0.5Hz to 5 MHz in 7 ranges  
Sweep: Linear 10:1/Log 10:1 20ms to 2s  
AM Modulation  
Gated Burst, Voltage Control Generator  
Generator Control Voltage & 6 digit counter  
1Hz-10MHz for internal & external sources

## LINUX Operating System on CD-ROM

A UNIX System with extra features for a lot less!!

### Slackware Professional Linux 2.3

\$61.95

4 CD-ROM set \* 640 page Manual \* Ready to run from CD-ROM \* X Window C/C++ compiler \* Emacs \* Internet Tools \* Complete Source Code

### OSF/Motif v2.0

\$139.95

A 100% OSF/Motif compatible graphical user interface X Window Manager for PC's running Linux. Includes a 100+ page user's manual and sample source code

### The Linux Bible New Edition!

\$34.95

1300+ pages of Linux documentation \* Includes Installation and Getting Started guides.

A Wide Variety of Products Available from Yggdrasil, Walnut Creek, InfoMagic, O'Reilly & Associates, and others...

Just Computers! (800) 800-1648 Int'l (707) 586-5600 FAX (707) 586-5606

# Stamp Applications:

## Putting the Spotlight on BASIC Stamp Projects, Hints, and Tips

by Scott Edwards

This month's first application was contributed by Guy Marsden of ART TEC, Oakland, CA. Guy, a former visual effects specialist for the movies (*Star Trek the Motion Picture*, *Ghostbusters*, 2010) makes his living helping artists incorporate electronics into their work.

### Checking Battery Condition, Adding I/O Lines, And a Contest for a Free LCD Serial Backpack!

One such work was powered by a 12-volt lead-acid battery, and Guy devised a simple, effective way for the Stamp to monitor the battery and sound an alarm at charging time.

Figure 1 and Listing 1 show Guy's method. He's using the brightness of the LED as a relative indication of battery voltage. The Stamp reads this brightness as a variable resistance across the photocell. When the photocell resistance exceeds a preset limit, the Stamp sounds an alarm.

Although Guy used a commercially-made optoisolator, you should get similar results with a roll-your-own version. Just mount an LED facing a photocell and cover the assembly to block outside light.

This approach can be used more generally to convert a variable voltage into a form that can be read with the Pot command. Just keep a couple of LED characteristics in mind:

> LEDs have a relatively high forward voltage of approximately 1.5 to 2.1 volts. They don't light at all if the input voltage is below their forward voltage. They require a series resistor to make sure that the current through them is reasonable (usually up to 25 mA continuous). To calculate the

value of this resistor, use the following formula:

$$\text{Series Resistor} = (\text{Input Voltage} - \text{LED Forward Voltage}) / \text{LED current}$$

For example, suppose your input is 9 volts. Just guessing, you figure the LED forward voltage at 1.9 volts. And you decide that 10 milliamperes is a safe bet for current. (Remember that most electronic formulas involving current want the value in amperes; 10 mA = 0.01 amperes.) The series resistor should be  $(9 - 1.9) / 0.01 = 710$  ohms. Pick the closest standard value (or the closest value that you have on hand) and you're done.

> An LED's forward voltage decreases with temperature, increasing the current that will pass through it with a given series resistance. More current usually means more light output, but brightness decreases with temperature. To make matters worse, data isn't available for most common LEDs. Even when data is available, it doesn't usually provide much detail on these effects.

So I'm wondering: Is Guy's circuit usable across a wide range of temperatures, or is it restricted to the great indoors? I started to set up an experiment to find out, then decided that a contest would be more fun.

Here's the deal: Design and construct a Stamp project to test the output of Guy's circuit over a range of at least 32 to 90 degrees F with a steady input voltage. (Temperature control can be as simple as an ice bucket in which the ice is allowed to melt.) Send me a drawing of the circuit, the BASIC program listing, a brief description of your procedure, and a copy of the data generated by it. I'll accept entries until October 31, 1995.

The reader who submits the best entry (my call) will receive the newest version of the LCD Serial Backpack display with 16x1 LCD. This latest model features switchable 2400- or 9600-baud operation, low-voltage reset circuit, improved contrast control, and an easy-to-read 16-character display. All runners-up will receive a coupon good for 10 percent off anything I sell; see the Sources box.

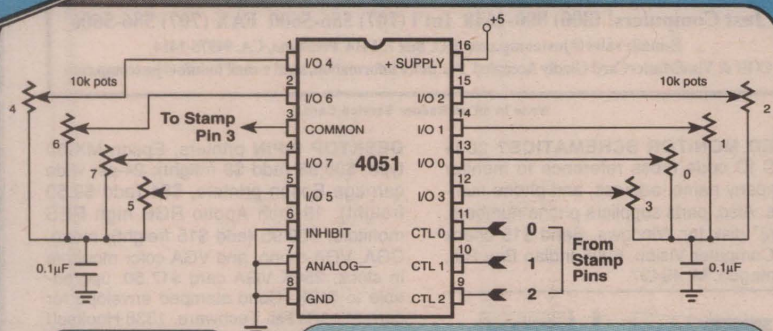

Figure 2

Four Stamp pins read eight pots through a 4051 analog multiplexer.

### Double Your I/O

The next application is for those of you who can never have enough input/output (I/O) lines. Although I'm demonstrating it with the Pot command, the same method will work with almost any Stamp input or output statement.

Take a look at Figure 2 and Listing 2. It's based around a 4051 multiplexer/demultiplexer chip. This device works like a digitally controlled rotary switch, shown conceptually in Figure 3. Depending on the binary number on its control bits, the chip connects one of eight I/Os to a single common pin. This connection is analog and bi-directional, so you can use it for input, output, or both. The Pot command is a good example of both, since it switches back and forth between input and output as it measures the time required to discharge a capacitor through an unknown resistance.

For an investment of four pins — three control bits and one common — you receive a dividend of eight I/Os. Better than Wall Street most days.

There are a few limitations to this trick. The first is evident if you try the pot demonstration. You can never quite get a reading of zero; the lowest readings will go is about eight. This is because the 4051's electronic rotary switch isn't perfect — it has a resistance of approximately

Figure 3

The 4051 multiplexer works like a digitally controlled rotary switch. The three control bits select I/O 0 (000 binary through 7 (111 binary).

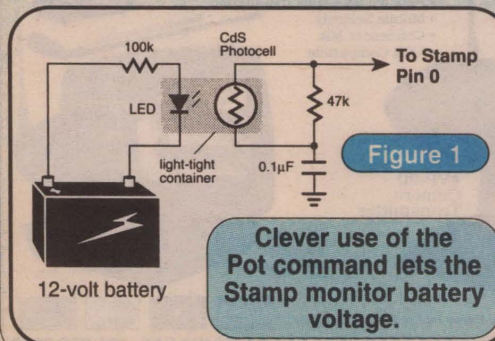

Figure 1

Clever use of the Pot command lets the Stamp monitor battery voltage.

# Stamp Applications:

## Listing 1. BASIC Stamp Battery Monitor

' CHEAP AND SIMPLE LOW BATTERY WARNING  
' Guy Marsden, March 1995. tekart@well.com

' Uses a Cds opto coupler with LED input such as: CLM6000.  
' Put a 33 or 47K resistor across cell and a .1uF cap to gnd.  
' Use a high value resistor in series with the LED wired directly  
' to the battery. I used 100K for a 12 volt system. This value is  
' enough to produce a resistance of 20K at nominal battery voltage.

' When the voltage drops, the Cds resistance increases. By setting  
' the SCALE of the POT function under a low battery condition, you  
' will then have a range to work with. Determine your setpoint  
' using a variable bench supply and a DVM.

symbol Batt = b2  
symbol LoBatt = 220

CheckBatt:  
    pot 0.76,Batt                   ' check battery voltage  
    if Batt > LoBatt Alarm       ' if less than established value  
goto CheckBatt

Alarm:  
    sound 1,100,100               ' beep piezo alarm  
    pause 100  
goto Alarm

120 ohms.

A second limitation is that inputs to the 4051 must never exceed 0.5 volts above the supply voltage or below ground. This means that the 4051 can't be used to directly receive RS-232 serial signals through a series resistor as the Stamp's I/O pins can.

The last restriction is common to both the 4051 and the Stamp, so it really isn't much

of a limitation: Current through the 4051 should never exceed 25 mA.

If you like the 4051, but still need more I/O, try the 4067. It can provide 16 I/Os at a cost of five Stamp pins. Check your favorite

## Listing 2. Multiplexing Stamp I/O Lines

' Program: MULTIPOT.BAS (Multiple pots using a 4051 multiplexer)  
' This program demonstrates how to connect and measure multiple  
' pots using a 4051 multiplexer chip. The 4051's control inputs  
' (11,10,9) connect to Stamp pins 0, 1, and 2, respectively.  
' The common I/O pin (3) of the 4051 goes to Stamp pin 3.  
' By writing a value between 0 and 7 to its pins, the Stamp can  
' select one of eight variable-resistance inputs through the  
' 4051. See the schematic for details.

SYMBOL pot\_sel = b2   ' Pot number 0-7 selected through 4051.  
SYMBOL pot\_val = b3   ' Result of the pot measurement.

Let dirs = %0111       ' Make the lower 3 pins outputs to drive 4051.  
Again:  
    for pot\_sel = 0 to 7   ' For each of the eight pots:  
        let pins = pot\_sel   ' Write pot number to the 4051.  
        pot 3,150,pot\_val   ' Perform pot measurement on selected pot.  
        debug "pot #",#pot\_sel," ",#pot\_val,cr   ' Display result.  
        next pot\_sel       ' Read the next pot.  
        pause 2000       ' Wait two seconds.  
        debug cr           ' Insert a carriage return on screen.  
    goto Again           ' Do it again (endless loop).

# RAINBOW KITS

## The 10GHz transmitter is back...

## The "ZAPPER II"

### Rainbow's new amateur radio transmitter.

With it's new and improved design it will not only test your radar detector...BUT it's tuned to the amateur radio band.

- While your out on American highways personally test yours and your fellow travelers radar detectors.

The "ZAPPER II" is a 10.450 GHz to 10.550 CW oscillator. It has a code key jack installed for those who want to send Morse code.

BUILT **\$49<sup>95</sup>**

KIT **\$39<sup>95</sup>**

### A stand alone D.T.M.F decoder display unit

Connects to any phone, scanner, or amateur radio.

DECODES ANY DTMF SIGNALS

- Decodes digits 0 thru 9, \*, A, B, C on a 2 line 16 character LCD display.
- Use the scroll switch to display all 490 digits last stored in its memory bank
- See what numbers people are calling on your phone?
- Is someone hiding the numbers they are calling by using another credit card?
- See the hidden phone numbers in your software.
- Great for telephone installers
- Who's using secret codes on the air waves. The DTMF DECODER can grab them from the air. Power requirement 9v DC. SIZE: 3.5" x 4" x 1"
- Decode the thousand of secret numbers sent over your scanner daily,

COMPLETE WITH BLACK ANODIZED CABINET

DTMF-DIS KIT **\$119<sup>95</sup>** BUILT **\$159<sup>95</sup>**

### WIRELESS FM MICROPHONE

Small but mighty this little jewel will out perform most units many times its price. It really stomps out a signal. The WM-1 kit is a buffered wireless mike that operates from 80MHz to 120MHz FM, the frequency of any broadcast FM radio. Includes a mini-electret mike. 6 to 12v DC. SIZE: 1.25" x 1"

WM-1

KIT **\$14.95**

Please add sufficient postage First lb \$5.00 Canada \$7.00 Additional LB. Add \$1.00 US FUNDS ONLY We will accept telephone orders for Visa or Mastercard

5G

### PHONE TRANSMITTER

Small but mighty, it fits anywhere. Phone line powered, never needs batteries. Transmits conversation loud and clear, wireless, to any FM radio at great distances. Variable tunes from 70MHz to 130MHz FM. You can also use it as a speaker phone. SIZE: 1.25" x .6".

TEL-B1 KIT **\$12.95** BUILT **\$29.95**

### FM STEREO TRANSMITTER

Own your own FM radio station. Any stereo signal you plug into the FMST-100 will be transmitted to any FM radio tuneable from 76

to 108MHz FM. Transmit a wireless link through an auditorium, from your car to your camper, listen to your CD's while mowing the lawn, Play music on one channel sing on the other. Clarity is excellent, approx. 40dB stereo separation. Length of antenna determines the distance of transmission. Complete with stereo input level controls & crystal for stereo separation. 9v battery operation. SIZE: 1.5" x 2.5" x 3" FMST-100 KIT **\$29.95** / Cabinet **\$8.95**

### TV NOTCH

FOR CHANNELS 2 thru 22 ONLY

### FILTERS

Our TV filters eliminate unwanted TV channels or interference that alters both sound and video with a beep beep beep. Works on cable channels 2 thru 22) only.

NOTE: All TV Filter Kits are sold for educational purposes only. You must obtain permission from your local cable company before using these filters on your cable system.

DF-222

KIT **\$14.95**

This Manual contains schematics, parts lists & P.C. board layouts for many of the Rainbow Kits. Use your own parts to construct our kits.

### KIT BOOK

**\$14.95** \$9.95 with the purchase of any kit.

### SUPER SNOOPER BIG EAR

Listen through walls, hear conversations across the room. Add a parabolic reflector and hear blocks away. The BIG EAR can be hidden about anywhere. Makes an ultra sensitive intercom. Can be used as a 1.5W AMP. We supply a mini-electret mike in the kit. Power requirement 6 to 12v DC. SIZE: 1" x 7.5"

AA-1 KIT **\$10.95** BUILT **\$29.95**

### HAND-HELD SCANNER

New units with PC-compatible "Interpreter" OCR software with imaging capability, 100-400 DPI resolution, LED and audible scanning speed indicators. 8-bit I/O card included. Requires Windows. (SC04-1) **\$59.95 each**

### ALLEGRO STEPPER MOTOR DRIVER IC

UCN5804. Single-step, two-phase and half-step modes. 1.25A rating. New. (931002)

**\$4.50 each**

• Packaged with 5V stepper motor (92M010) and schematics. (931003) **\$9.95 each**

### SIZE "D" NICAD BATTERIES

Strapped in pairs with welded contacts. May be separated with care. (94E009)

**\$4.95 pair**

### AUDIO TO LIGHT MODULATOR KIT

Designed around an opto-triac coupler and a power triac. 1.2-1.5V music signal drives the circuit. Triac rated 4A max @ 250VAC. Operates from 110 or 240VAC mains. Terminal strip for Load and AC. 3.5mm mini phone jack for audio input. 2.125" x 1.75" x 1". (Kit 12)

**\$12.95 each**

**24 VDC FAN**  
3-9/16" sq. by 1" thick.  
(95FC04)  
**\$7.95 each**

**LOUD SIREN**  
12V DC, 120 dB.  
(95U001)  
**\$9.95 each**

### SLIDE SWITCH

DPDT 12A, 125 VAC contact rating. Solder eye terminals, black plastic housing. (95B008)

**25¢ each - 5 for \$1.00**

### PELTIER JUNCTIONS

**SMALL** - Thermoelectric heat pump. Use to cool that '486, build a drink cooler, etc. Up to 65°C temperature differential. Size 1.1875" sq. x 0.125". With spec sheet. (93U004)

**\$24.95 each**

**LARGE** - 1.56" square, as used in drink coolers, coffee warmers, and other neat stuff that wants to be heated or cooled. (94U001)

**\$34.95 each**

### ANTISTATIC CARRYING CASE

Lined top and bottom with antistat foam. Measures 13" x 10" x 2" OD, with locking tabs and snap for ground wire. Good for storing and carrying all kinds of valuable goodies. (95Z007)

**\$4.95 each**

### 12 VOLT BUZZER

Loud and annoying. 2" dia., 7/8" thick. (95U008)

**\$1.49 each**

### 470µF 50V AXIAL CAPACITOR

1" L x 1/2" D. (95P014) **100 for \$39.95**

### 3300µF 16V RADIAL CAPACITOR

1.375" L x 0.625" D. (95P012) **50 for \$19.95**

### STEPPER MOTOR

12V, 1A, 0.9°/step. 1-5/8" square x 3/4" deep. 3/16" x 1/2" shaft. Made by Japan Servo. (95M006)

**\$4.95 each**

### 40-CHANNEL CB TRANSCEIVER MODULE

These are new units with book and schematics. They have been tested to be fully functional. The microphones are missing. All the controls and channel readout were in the mike. Build a remote base or use for parts. (95A001)

**\$10.00 each**

### MULTI-VOLTAGE POWER BRICK

+5VDC @ 500mA, +12V or -12V DC @ 415mA. (95E023) **\$9.95 each**

### NAVEL LINT EXTRACTOR

Tapered round brush with soft bristles. Work surface about 1" long, overall length about 4". Also good for combing cookie crumbs from facial fur, cleaning keyboards, dashboards and small surfboards. Get into tight places in delicate electronic equipment without damaging it. Keep several handy. Get a couple for the missus. Great gag gift. (95Z006)

**2 for 99¢**

### VHF RF PREAMP AND SPLITTER

Contains two transistors with FT of 4GHz 10dB gain, 3dB NF. Soup up that VHF receiver, scanner, FM tuner, VHF-TV reception or whatever. Actually has two preamps in one case. Runs on 12VDC. Schematics included and hints for broadband use. (92A026)

**\$7.95 each**

### 14-DAY PROGRAMMABLE TIMER

Originally used to control a satellite receiver through its IR port at a distance of up to 23 ft. Time on/off for eight distinct events. Modify it for your needs or dismantle it for its parts. Programmable with a 2732 EPROM in a removable "personality" module, the unit may be modified to control any IR device through its IR port. Contains Z80 CPU, clock display and associated parts. Operates from 9VDC 500 mA wall transformer which is included. Brand new! (92V014) **\$9.95 each**

Book!

### THE ARRL HANDBOOK FOR RADIO AMATEURS

1995 Edition. (95X004) **\$29.95 each**

### '486 CPU COOLER

Fan and heatsink with a state-of-the-art peltier junction attached to keep your '486 CPU ice cold. (95C007) **\$44.95 each**

### HARD DRIVES (Recycled)

Quantum Q540 - 36Meg MFM 5 1/4" full-height. (94C025) **\$29.95 each**

Seagate ST4053 - 44 Meg MFM 5 1/4" full-height. (94C026) **\$39.95 each**

Seagate ST-225 - 20MB MFM 5 1/4" half height. (94C033) **\$19.95 each**

### IR REMOTE

Hand-held infrared controller. Encoded pulse train is DIP switch selectable. (95L005) **\$1.95 each**

### MINI ISOLATION TRANSFORMER

Use for control circuits and other small-load equipment drawing 25 Watts or less. Step 240V down to 120V or 120V up to 240V, or use for 120V to 120V or 240V to 240V isolation. Split primary and secondary for versatility. 2" x 2.25" x 2.375". Wt. 1.5 lb. (95N004) **\$4.95 each**

### ACTIVE TRACKING LINE FILTER

120VAC @ 7.5A. Isolator I-107. Spec sheets included. (94P024) **\$19.95 each**

### USED TUBES - \$1.00 EACH

Your choice. Pulls, tested good.

1G3	6AW8	14B6
3A3	6J6	15BD11
6AK5	8FQ7	17BE3
	9GH8	

Prices good until Aug. 31, 1995

### KOSS MULTIMEDIA SPEAKERS

Requires 9VDC power supply such as our 95E016 wall transformer. Uses RCA cables for hookup and interconnection. (95V008) **\$12.95/set**

**JOYSTICKS**  
Two 150K pots.  
(93P005)  
**\$3.95 each**

### SERIAL INTERFACE CABLE

Three-wire, 12 feet long, very flexible. Single-ended cable has DB-9 male connector attached. Color: black. (95W012) **Two for \$1.00**

### HAMLIN DIP RELAY

SPST, 24V coil. (95B009) **\$1.00 each**

### ATARI 2600 TRACKBALL

Also works with C-64 and C-128 computers. Smooth ball bearing action. Cable with DB-9F connector included. Try your hand at modifying this unit for your PC. (Dealer pricing available.) (92C069) **\$9.95 each**

### SWITCHCRAFT INLINE JACK

3/16" mono. All metal. (95J006) **\$1.00 each**

### FOUR TWEezer SET

These tweezers are coated black to reduce interfering glare when working under strong light. Ideal for all sorts of hobby and light industrial work (except surgery). The set includes: 5" serrated jaw blunt tip; 5" serrated jaw pointed tip; 4" serrated jaw semi-pointed tip; and 4 1/2" smooth jaw super pointed tip (for digging out splinters!). (TW2404B) **\$9.80/set**

### TOROID CORE ASSORTMENT

Wow! May contain tape wound, powdered metal, ferrite material cores, different sizes. (92N016) **20 for \$4.95**

# THE LASER

## EXPERIMENTER

Conducted by  
Anthony Charlton

**W**elcome! This installment we continue with our discussion of Single Heterostructure (SH) pulsed laser diodes that operate in the infrared region at 904 nM. And we shall build a 9-volt portable power supply for them.

The photograph shows the 120-volt supply discussed in the last column, and the 9-volt supply talked about here. Both these power supplies comply to the parameters required by this kind of diode. Two of those parameters are: that the pulse width for driving the diodes must not exceed 200 nanoseconds; and that the maximum duty cycle not exceed 0.1%. Both parameters are required to prevent the overheating of the SH laser's semiconductor junction. However, it is an interesting trade-off that the power available from these diodes averages over 10 watts.

### Pulse Width Modulated Power Supply

The Pulse Width Modulated (PWM) type of power supply is the most efficient I've worked with so far for high-voltage inverting-type power supply circuits. With

electrolytic capacitor and current regulated by a multi-turn potentiometer to operate the SH driver section of the circuit.

Consulting Figure #1, we can trace how the circuit works. Nine volts DC from a battery or regulated power supply is input to the circuit. D1 protects the circuit from destruction in case of accidental polarity reversal of the battery. Gate A of a Schmitt Trigger, which has a total of six inverting gates, forms an oscillator along with the frequency-determining components R1 and C1. This oscillator runs at approximately 25 KHz, although this frequency will change depending upon who manufactured IC1, because it's a fact that the Schmitt Trigger parameters will vary from batch-to-batch and manufacturer to manufacturer. If need be, you can substitute a potentiometer for R1 to adjust the frequency for maximum efficiency.

Gate B squares up the output from the oscillator. Along with it are components C2, VR1, R2, R3, D2, and C3. They form the PWM part of the circuit. When VR1, the SYSTEM POWER ADJUSTMENT control, is set to maximum, the minimum width of the PWM pulse will occur. This is inverted by four Schmitt gates so that the maximum pulse width — when VR1 is set to its maximum adjustment position —

load conditions. So, you can use this circuit for other high-voltage DC projects that require low-current consumption, if you wish.

I1, a common NE-2 neon indicator light, shows the presence of the high voltage. When I1 is on, you should consider the SH laser operating. Be careful! Wear oxy-acetylene welder's goggles or an approved pair of laser safety goggles if you intend to work close to the laser, or around a collimated beam especially. Output may be detected by the means discussed in last month's previous column, or by the amplifier parts of the circuit we'll see in the last section of this column.

### This Circuit Can Shock You!

Although not dangerous, you can still receive a jolt from the circuit, even if it has been sitting unplugged for awhile. This is due to the storage ability of C5, and the fact I1 cuts off before zero voltage is reached, leaving a residual charge on C5. That charge tends to slowly creep upward, to a 40 or so volt level, possibly due to the ambient 60 Hz electrical field in our houses (?). I don't know, but I would like to hear your theories if you'll write me at the Laser Experimenter's P.O. Box listed elsewhere in this column. In fact, while preparing this work, I picked up the prototype and got enough of

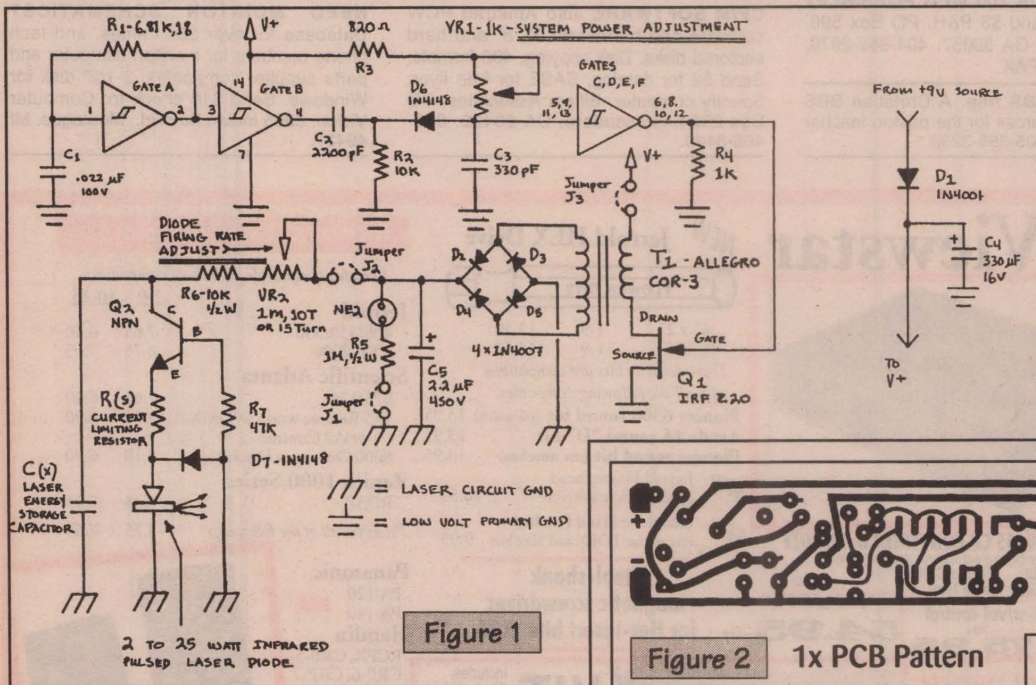

Figure 1

Figure 2 1x PCB Pattern

a PWM supply — which we've discussed in this forum before — the driving waveform at the primary side of the transformer is varied in width, but stable in fundamental frequency. This results in adjustable power and voltage under load at the secondary. It also means you can peak the efficiency of the inverting circuit by finding the best combination of frequency vs. pulse width.

The tiny transformer used in this project is capable of developing over 300 volts from a 9-volt battery. We need a high-voltage, in order to cause the driver transistor, Q1, to operate in an AVALANCHE MODE, as discussed in the previous column. In our case, the transformer is not operated at its full capacity, but will still produce several hundred volts, and that is stored in an

is seen at the gate of Q1. The inverting gates C-F also increase the current available to drive Q1, and as said, they flip over the pulse width for us from narrow to wide. One may ask why Q1 is a Hexfet, and not an ordinary transistor. It is used because its ON resistance is so low it will drive the primary of T1 at the most efficient switching rate. That increases the power available over a normal transistor for the same input power. The ON resistance for this particular part is typically only 0.1 ohms.

T1's output current from its secondary is rectified by the four rectifiers D2-D5 and stored in C5 as a high-voltage, smoothed DC current.

This voltage may range up to 450 VDC under no

Figure 3

a shock to drop it, even though the power had been unplugged for several days. An interesting fact is: Large capacitors, such as used in industrial-sized pulsed-laser power supplies, always include a bleed resistor in the circuit to avoid a possibly lethal charge accumulating on them from this "memory" effect. If you are more comfortable with this idea, include a 22 megohm bleed resistor across C5. I'll even send you one FREE if you write the Laser Experimenter's P.O. Box.

The next part of the circuit consists of the SH laser diode (LD) driver. VR2 and R6 control the amount of power being fed to this circuit. It is important to remember that the SH laser diode will always receive exactly the same amount of power per pulse from transistor Q2, the only difference being due to ambient temperature affecting the avalanche point of Q2. VR2 is set to its minimum value for the maximum rate of pulsing from the SH laser diode. The Laser Energy Storage Capacitor, C(x), will determine the pulse width of the SH laser. Again: Width is NOT to exceed 200 nS with this type of laser! (nS = nanoseconds: One nanosecond is equal to 1/1000th of a microsecond — and at the speed of light which is 186,292 miles per second — light will travel only 11.8 inches in that time period. So you get the idea that a nanosecond is rather a short time interval, eh?)

Chart 1 shows the recommended values for R(s) and C(x) for different sized diodes. If you have access to sophisticated instrumentation (which I don't), you can fill in the blanks where the DRIVE CURRENT and PULSE WIDTH are calculated and/or observed under real-life conditions. Basically, the circuit is an  $R * C$  time constant, and the diode will operate for about one C time constant period (63% of the charge on the capacitor) before cutting off its laser mode, and falling back to non-laser operating mode.

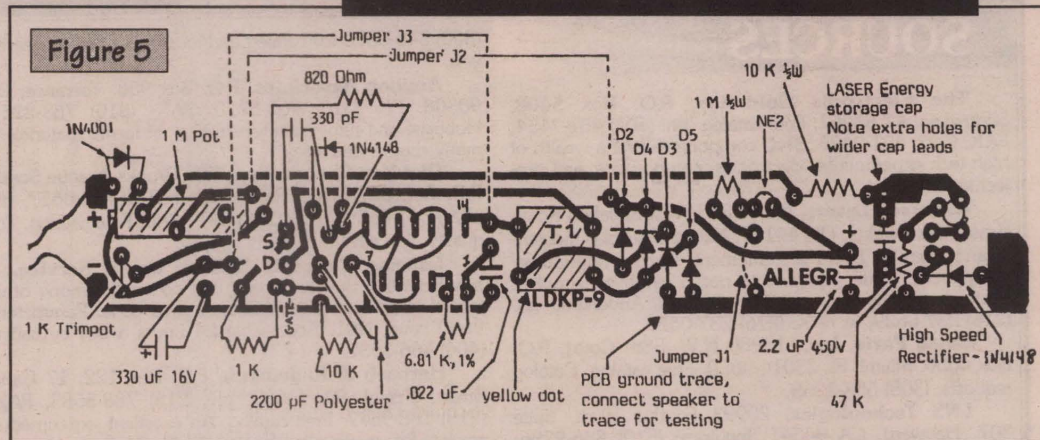

Then its output becomes incoherent and the laser acts simply like a high-power LED. You should find it easy to calculate the values for various R and C sizes, given this information.

## Tested Printed Circuit Board Pattern

Figure 2 shows a full-sized PCB pattern for the 9-volt driver circuit. We have made these traces short in the SH laser section to minimize inductance, and also heavy for the

**Chart 1**

C(x) uF	Drive Current, Amps		Pulse Width, ns.	Rec. Diode, watts	Resistor R(s)
	(Calc)	(Obsv)	(Calc)		
.0047				2-5	5.1Ω
.0068	"	"	"	5-8	3.9
.01	"	"	"	8-12	3.0
.015	"	"	"	12-16	2.0
.022	"	"	"	16-20	1.5
.033	"	"	"	20-25	1.0Ω

same reason. This pattern is the FOIL side, so your components are mounted to the back of the board. I might suggest once again checking out DynaArt Designs for their PCB fabbing equipment; we have been hearing a lot about these folks in print lately, due to the fact they take all the trouble out of fabbing PC boards in small to medium quantities. See the "Sources" section for info on how to contact them. Watch that the small traces don't get dissolved in the fabrication process. Those traces interconnect IC1. Also, the holes for the rectifiers, T1 and Q1, will be slightly larger than the standard 1/32" drill size commonly used for ICs

and most other components. Size these larger holes at 3/64" and that should fit the parts nicely.

Figure 3 shows the pinout for both the versions of Q2, the 2N2222 transistor, and for Q1, the Hexfet transistor. Again, let's be sure we keep Q2's leads short, so as to minimize inductance.

Figure 4 shows the lead placement of Q2 in close-up detail.

Figure 5 depicts the parts placement guide for all the on-board components. Only the 9V battery is not shown here. This guide portrays components like you had X-Ray vision; in other words, like one was looking THROUGH the PCB from the FOIL side.

Figure 6 shows the detail of mounting the Hexfet to its location on the PCB. Use static-protective techniques for this component if your assembly location or set-up is subject to same. Although the next figure shows how to install the laser diode, hold up on soldering it in until the circuit can be tested.

Figure 7 is a re-iteration of a sketch presented in last month's column. In case anyone missed that column, we stressed the importance of mounting the SH laser diode in the manner presented, because we want to minimize lead length, eliminate sharp lead bending so as to minimize inductance effects, and also to reduce the stress on the laser diode itself. It may become damaged if there is too much of a sharp bend in its lead, and that would manifest itself after the soldering process. At several dollars per diode, one does not want to destroy them by accident!

Construction proceeds normally with this circuit, the exception being that some of the parts are rather tight-fitting, and you may want to dry-fit them in place before you solder. Use a small iron, and keep the tip good and clean. Resistors want to be installed standing up, to minimize crowding. Pay attention to the orienta-

Be sure and mention Nuts & Volts when you contact the above suppliers so your request goes to the right department.

usually occur with reversed components or soldering troubles. You can use a small speaker connected across the points where the laser diode will be soldered to detect the operation of the SH driver part of the circuit. Both potentiometers should vary the frequency of the clicks coming from the speaker. Note that VR1 is the overall "Power" adjustment pot, and that VR2 will control the SH laser's firing rate. That may be varied down to a few clicks per second to about 2,000 or so Hz, depending upon battery freshness and the setting of the two potentiometers. Once you are satisfied the circuit is operating normally, unplug it, and attach a jumper across C5. Then, you can solder in the laser diode. Make sure that you don't solder the case itself. The #8-32 nut is soldered to the PCB, a #8 lockwasher used to anchor the diode, and the laser diode is screwed firmly, but not forcibly, into these, and finally, the diode's wire lead is soldered as shown in Figure 7.

## Diode Laser Collimation

Laser diodes of this type have an extremely divergent angle on the horizontal plane, typically 20-40 degrees. This results in rapid attenuation of the beam's power over distances. One way to correct this problem is through a specially designed lens called an ASPHERE, but the problem here is they are not readily available at a cheap price. But a reasonable solution is to use a standard plano-convex glass lens as shown in Figure 8. A 1" nominal lens has worked fine for my experimental setups, although you can use other diameters if you follow the formula given in that figure for SH laser placement and lens focal length dimensions.

## Experiments

Figure 9 is a fun experiment, especially if you have purchased the inexpensive IR-sensitive CCD camera from Lionel (in "Sources" and mentioned in detail in the previous column). The purpose of this experiment is to demonstrate the dual wave/particle nature of light. If light was just a particle, there would be little or no diffraction from the slit. But since it contains both properties, we get the lines of interference characteristic of wavelike nature, where the waves re-inforce and cancel each other out through their interactions.

A slit is formed from two new razor blades evenly separated by about 0.005-0.010 inches. The SH laser is positioned about 1/2" away from the assembly. The laser does not have to be collimated, but that does improve the desired effect. The CCD camera is positioned at a point along the beam center wherever the effect wants to be observed at. I would suggest about two feet for an uncollimated beam. The room lights are extinguished, and at that point, you will notice the appearance of the slit diffraction effect on your camera's TV monitor. Black and white televisions work the best for this model of camera, as logically enough, its video output is in black and white format. By varying the width of the slit, and the distance of the laser/slit/CCD camera set-up, you can get some very interesting results from this experiment.

Figure 10 shows how to make the slit, although you can always position the two blades satisfactorily by anchoring them in a substance such as clay. Note the diffraction photograph. I wish this picture was better, but it won't come across as well after being copied and then printed in a magazine as nicely as viewing it in real life on your TV.

## Fire a Strobe At Will!

The SH laser, with its high power, enables a COLLIMATED beam to fire off a strobe at a substantial remote distance. You can construct a simple peripheral circuit to trigger the laser as your camera is triggered, to respond to wildlife tripping an electronic fence at night, burglars (?), etc. The idea is the laser is invisible, so whatever trips it and correspondingly activates the

tion of the polarized components, so that none of them are accidentally installed backwards.

## Testing

Check for solder bridges and "cold" solder joints,

and repair them where necessary. Remove excess solder flux using a product designed specifically for this, or by using a toothbrush and isopropyl (rubbing) alcohol. Set potentiometer VR1 to midpoint, and power up the circuit using a 9-volt source. You should see the neon indicator lamp come on almost immediately. Problems

Diffraction pattern from a single slit

Figure 10

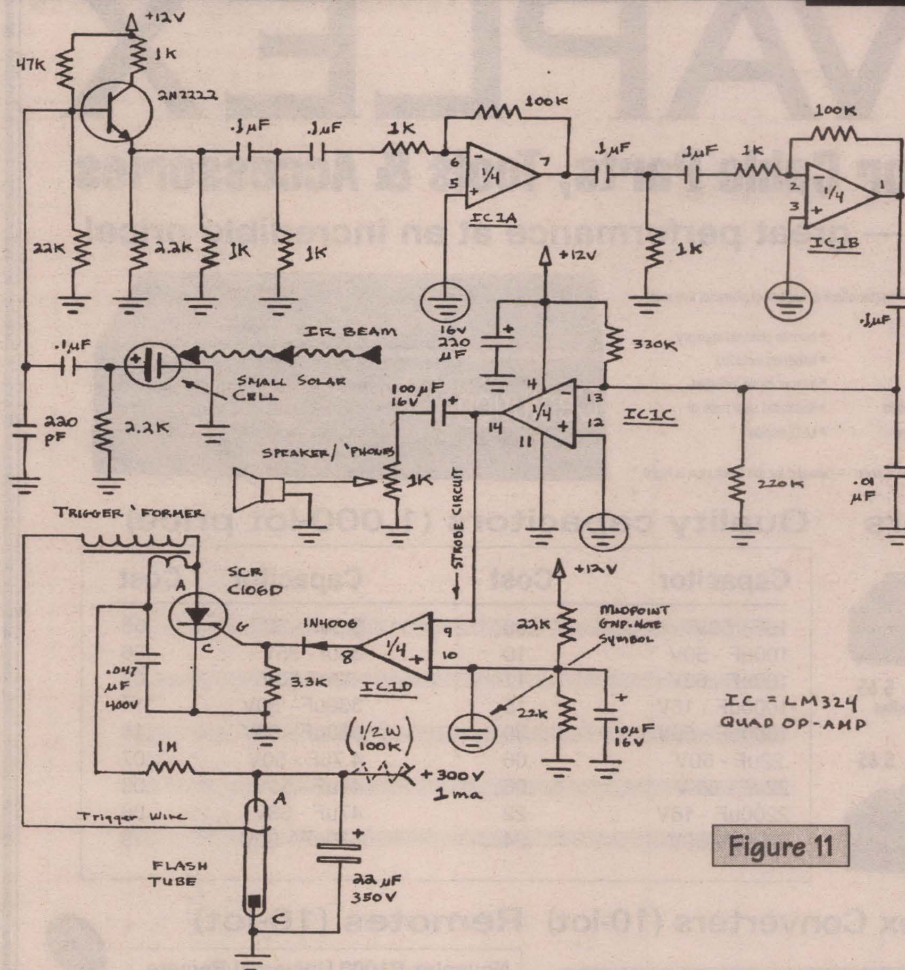

Figure 11

remote strobe, won't know it until the strobe is fired.

Figure 11 shows a simple circuit designed to amplify the narrow laser pulses and trigger the strobe when they are received. A small solar cell is used as the sensing mechanism. A small cell is required because a large one will have too much capacitance, and that will prevent it from sensing the narrow laser pulses fast enough to activate the circuit.

IC1 is the popular LM324 quad op-amp. This circuit operates best from a +12-volt battery, however, you can operate it from a 9-volt with lessened sensitivity. Sections A and B of IC1 form a high gain amplifier with the resistive and capacitive components arranged so that they form a high-pass filter, eliminating almost all the interference from low to medium frequency sources. The laser pulses, at 200 nS down to 100 nS, correspond to a frequency of 5-10 MHz, respectively. IC1-C is an audio amp, which enables you to hear the pulses as they are picked up by the solar cell.

IC1-D is an inverter that fires the gate of an SCR when the circuit detects a "hit" by an IR laser pulse. The trigger transformer generates a pulse of several KV to ignite the Xenon flashlamp. The charge on the capacitor connected across the flashlamp determines its light output. With the values shown, it generates about a 1 watt/second flash. You can operate this circuit from a second power supply of the same type as presented in this column, omitting the components to fire the SH laser. About a minute is required between flashes to charge up the large capacitor to firing level.

Use a 100K resistor of 1/2-watt or more (as required) in series with the power supply if it generates a high current. Note the voltage divider for IC1 which generates a pseudo-split power supply for it. That is required for this kind of amplifier circuit.

There is nothing critical about this circuit, but be sure and keep the high-voltage components separated from the low-voltage ones, especially the 4 KV+ output from the secondary of the trigger transformer. It may be very low current, but still has the potential for destroying other components despite that fact. Also, if you place the solar cell inside a paper towel tube that has been painted black inside, you'll greatly increase the sensitivity of the circuit (especially if you use a lens to focus the infrared laser pulses directly on the solar cell).

Enjoy, and we shall see you again in the next installment of *The Laser Experimenter* with a brand new and fun project! **NV**

## Parts List

- T1 — Micro-sized step-up transformer, Allegro stock no. COR-3 or equiv.  
(See below)
- IC1 — #74C14-ND hex Schmitt Trigger integrated circuit
- Q1 — #IRF-Z20-ND Hexfet
- Q2 — PN2222 or 2N2222 NPN silicon transistor
- D1 — 1-A, 100 PIV rectifier, 1N4001 or equiv.
- D2-D4 — 1-A, 1000 PIV rectifier, 1N4007 or equiv.
- D7 — #1N4148CT-ND switching diode
- R1 — 6,800-ohm (or value to suit) metal film resistor
- R2 — 10,000-ohm, 1/4 watt carbon film resistor
- R3 — 820-ohm, 1/4 watt carbon film resistor
- R4 — 1,000-ohm, 1/4 watt carbon film resistor
- R5 — 1-megohm, 1/2 watt carbon film resistor
- R6 — 10,000-ohm, 1/4 watt carbon film resistor
- R7 — 47,000-ohm, 1/4 watt carbon film resistor
- R(s) — Current limiting resistor, 1/2 watt carbon film
- VR1 — 1,000-ohm trimmer potentiometer
- VR2 — #3600P-105-ND, 1-megohm, 15-turn, 3/4 watt cermet potentiometer
- C1 — .022 uF, 100 volt (nominal) polyester or Mylar capacitor
- C2 — 2200 pF, polyester or Mylar capacitor
- C3 — 330 pF, NPO type ceramic disc capacitor
- C4 — 330 uF, 25 WVDC electrolytic capacitor
- C5 — 2.2 uF, 450 WVDC electrolytic capacitor
- C(x) — Laser energy storage capacitor, low inductance type. See text
- I1 — NE-2 neon indicator lamp
- Laser — Single Heterostructure pulsed infrared laser diode, 2-25 watts. Only this
- Misc. — 9-volt alkaline battery, battery snap, enclosure, etc.

**Note:** The following part is available from Allegro Electronic Systems (see "Sources") for \$4.00 postpaid: T1, stock no. COR-3, with instructions and an additional application schematic and data. Parts prefaced with a pound (#) sign are Digi-Key part numbers and substitutions are not recommended.

### Strobe Experiment Circuit

These parts are obtainable through almost any electronic supply house, Radio Shack, Digi-Key, Electronic Goldmine, or Mouser. See "Sources."

### CLOSING QUOTE:

**"Nothing has such power to broaden the mind as the ability to investigate systematically and truly all that comes under thy observation in life."**

— Marcus Aurelius, Roman Emperor/Philosopher (A.D. 121-180)

Anthony Charlton is an active electronics and science "do-it-yourself" project designer, does custom R & D, and writes technical articles. Previous work experiences include design of hardware and software for microprocessor-based process control systems and electronic design. His hobbies include lasers, gardening, target shooting, and model rocketry.

The Laser Experimenter is a reader-interactive column. We like to hear from the readers, and in many cases the best projects have come directly from your suggestions. If there is some particular facet of laser science that interests you, we would welcome hearing from you at: The Laser Experimenter, P.O. Box 74, Cornwall Bridge, CT 06754. Questions, comments, suggestions, and material relating to lasers are all welcome. We would like to publish letters in Reader Feedback occasionally. Indicate whether using your name and address is okay. We can now respond to your letters personally on an "as time permits" basis. Your FAX number, which will be kept confidential, will speed replies.

## The One-Stop Source for Cable Parts, Tools & Accessories

Announcing the Centurion — great performance at an incredible price!

### Centurion

Introductory Offer! For a limited time only, 10-lot price is only:

**\$65**

The New Centurion converter offers a number of powerful features:

- parental control
- switched AC outlet
- sleep timer
- remote control included
- auto/manual fine-tune
- favorite channel memory
- batteries included
- jumper cable included
- illustrated user manual
- LED display

please place your orders soon — demand for the Centurion is high!

### Panasonic & SA Converters

#### Panasonic TZPC 145 Converter SA 8511-300 Converter

Units sold with wireless remote control & batteries  
Features include: parental control (Panasonic only), last channel recall, favorite channel memory, sleep timer, channel 2 or 3 available.

In quantities of 10 or more, **\$65**

Also: Panasonic TZ - PC 175 Series Converter w/volume.  
Topcases for Panasonic, SA and Jerrold (all models) also available. Call for pricing and availability.

Panasonic TZPC 145 \$65  
channel 2 or 3; 10-lot prices

SA 8511 channel 3 \$65

## Quality Reconditioned Test Equipment

**Hewlett-Packard 6289A  
DC Power Supply**  
0 to 40 Vdc, 0 to 5 Adc, 115 V input.  
**\$375.00 New**

**Hewlett-Packard 8601A Generator/  
Sweeper Opt 008**  
0.1 to 11 MHz low range, 1 to 110 MHz high range,  $\pm 1\%$  accuracy, power output +20 to -110 dBm; 10 dB steps and 13 dB vernier provide continuous settings over entire range. Opt 008, 75 $\Omega$  BNC input.

**\$400.00 Special**

**Hewlett-Packard 3585A  
Spectrum Analyzer**

20 Hz to 40.1 MHz, 80 dB dynamic range, 3 Hz resolution bw, amplitude range -137 to +30 dBm, GPIB controlled and CRT readout.

**\$6700.00**

**Wandel & Goltermann TSA-1  
Transmission System Analyzer**

Frequency range 100 Hz to 180 MHz, spectrum analysis, selective level, demodulation and phase jitter.

**\$2250.00**

Above unit with Network Analyzer.

**\$2750.00**

**Hewlett-Packard 11720A**

Pulse Modulator, 2 to 18 GHz, on/off ratio >80 dB.

**\$500.00**

**Hewlett-Packard 3336B  
Synthesizer/Level Generator**

This level generator is an excellent precision source from 10 Hz to 20.9 MHz, frequency resolution of .001 Hz, level accuracy within .15 dB over full range, AM and phase modulation. Fully programmable over HP-IB, harmonics down more than 5 dB.

**\$650.00**

**Hewlett-Packard 3586B  
Selective Level Meter**

Makes carrier measurements to 32.5 MHz, voice channel measurements from 50 Hz to 100 kHz, can use the 3336B Level Generator as an automatic tracking generator. Includes options 001, 003, & 004.

**\$850.00**

**Buy both together as a set for \$1300.00**

**Tektronix 7603/ 715 Opt 25/ L3  
Mainframe with Spectrum Analyzer**

Spectrum Analyzer plug-in measures 20 Hz to 5 MHz bw, digital storage. Opt 25 tracking generator provides a selectable 50, 75 or 600 $\Omega$  impedance source. 7603 100 MHz Oscilloscope mainframe is included.

**\$3250.00**

**Tektronix 492  
Spectrum Analyzer**

50 kHz to 21 GHz, 80 dB dynamic range, amplitude comparison in 0.25dB steps. Options 01, 02 & 03.

**\$8850.00**

**Tektronix 475A DM44  
Oscilloscope**

250 MHz bw, dual channel, 5 mV/div sensitivity, 1 nS/div sweep rate. Has differential-time/DMM option Includes 2 probes.

**\$975.00**

**Tektronix 7603/ 7814**

Oscilloscope mainframe with dual trace delayed sweep sampler, two-dot measurements, DC to 1 GHz, dual trace, 2 mV sensitivity, CRT readout.

**\$850.00 Special**

**Please call for our Free 1995 Catalog**

**THE ULTIMATE LINUX DISTRIBUTION. SLACKWARE PROFESSIONAL LINUX 2.3.** Linux, a UNIX operating system, now available on this 4 CD-ROM set includes GNU C/C++ compiler, X Windows, TCP/IP, sound card support and much, much more. A wide selection of CD-ROM drives supported. Complete with 640 page manual and 30 days free technical support. **Only \$61.95.** ALSO available **LINUX STARTER BUNDLE** which includes Slackware Professional Linux 2.3, UNIX in a Nutshell handbook, and the Essential System Administration handbook. **All for only \$85.95.** To receive Slackware Professional or the Linux Starter Bundle call and order with your charge card or send \$61.95 plus \$8 S/H for the Slackware Professional or \$85.95 plus \$10 S/H for the Linux Starter Bundle (CA residents add 7.5% tax) to: **JUST COMPUTERS!**, PO Box 751414, Petaluma, CA 94975-1414. **Visa/MC.** Ph. 1-800-800-1648.

**REPAIR SOLUTIONS — more than 17,200 VALUABLE, TIME SAVING, MONEY MAKING REPAIRS** for servicing TVs, VCRs, CAMCORDERS & other electronics, organized in an easy to use computer program — **The TIP REPAIR Program. PROFESSIONAL BOARD/COMPONENT LEVEL REPAIRS** with Part numbers, Component locations/values & test voltages (when available). **ADD your own tips. PRINT tips.** Owners of our **COMPUTERIZED TIP PROGRAM** say this is the **BEST** technical tip program on the market today. Works on **ANY IBM** compatible computer with a hard drive & 16 Megabytes free space. **NEW VERSION — works in DOS and WINDOWS.** Only \$200. **FREE Shipping** for prepaid orders (USA). **FREE Demo!** Have your own tips? Ask about our **TIP EXCHANGE** policy with **FREE Updates!** **CALL 1-800-215-5081/516-643-7740. HIGHER INTELLIGENCE SOFTWARE, 60 Farmington Lane, Melville, NY 11747.**

**SERVICE MANAGEMENT Software** at an affordable price! **ServWare Service Management Software - Stage 1** for the service business that wants to keep track of their customers and their repairs on computer **AND** print invoices. Look up customers by **NAME** and **PHONE NUMBER.** **Print INVOICES** with **YOUR** business name, address & phone number at the top of **EVERY** invoice. Print invoices with your printer on inexpensive, plain paper. If the repair is taxable, **ServWare — Stage 1** will also calculate the tax on the repair & **Total** the sale. Finally, software to help run your service business that is both simple to use and affordable to every business. No lengthy manuals to read. Even if you are new to computers, you can start using **ServWare — Stage 1** right away. This is it! **ServWare** is here. The **Service Management Software** you've been waiting for. **Only \$200. CALL 1-800-215-5081/516-643-7740. HIGHER INTELLIGENCE SOFTWARE, 60 Farmington Lane, Melville, NY 11747.**

**PC DOS 6.1 New!** Complete with factory shrink wrap with hologram \$15, 5 for \$60 **Star Trek Judgement Rites** (the computer game) \$15 **Generic CADD 6.0, 5 User** pack \$150. Other titles: **Productivity, Games, etc.** So many, so stupid cheap! Quantity discounts! Call, 818-797-2569 or fax 818-797-0384.

**OVER 600** preformatted business letters, drafts, contracts, etc. Send only \$3.95 to: **ASICircuits, 3201 Rosewood, Temple, TX 76502-1328.**

**C64/128 HUNDREDS** of public domain shareware programs, ham radio, utilities, games. Send SASE for catalog. **RJR, 94 Hancock St., Malden, MA 02148.**

**SELECTED SHAREWARE** catalog on disk. Many unique programs. All good. No duds. Only \$1 per disk. Free copy of the **Black Bag Trivia Quiz** included (over 21 only). Send \$1 for 5.25, \$1.50 for 3.5, to: **Mentor Publications, Box 1549-N, Asbury Park, NJ 07712.**

## ORDER NOW 1-800 4 HOBBY KITS

### AIRCRAFT RECEIVER

Hear exciting air-craft communications—pick up planes up to 100 miles away! Receives 110-136

MHz AM air band, smooth varactor tuning superhet with AGC, ceramic filter, adjustable squelch, excellent sensitivity and lots of speaker volume. Runs on 9V battery. Great for air shows or just hanging around the airport! New 30-page manual details pilot talk, too. Add case for "pro" look.

AR-1 kit.....\$29.95 Matching case set, CAR.....\$14.95

### FM RECEIVERS & TRANSMITTER

Keep an ear on the local repeater, police, weather or just tune around. These sensitive superhet receivers are fun to build and use. Tunes any 5 MHz portion of the band and have smooth varactor tuning with AFC, dual conversion, ceramic filtering, squelch and plenty of speaker volume. Complete manual details how the rigs work and applications. 2M FM transmitter has SW RF out, crystal control (146.52 included), pro-specs and data/mike inputs. Add our case sets for a nice finish.

FM Receiver kit Specify band: FR-146 (2M), FR-6 (6M), FR-10 (10M), FR-220 (220MHz).....\$34.95  
CFR Matching case set.....\$14.95  
FR-146 2M Meter FM transmitter kit.....\$99.95

### MICRO-MIKE

World's smallest FM wireless mike. Smaller than a sugar cube - including battery and mike. Two sets of SMT parts supplied in case you are clumsy! Terrific audio pick-up (pin drop at 5 ft) and transmit range of 300 ft. We include the battery (watch style), electret mike and even a tuning tool! Be a James Bond and learn SMT too! FM-5 Micro mike kit.....\$19.95

### FM WIRELESS MIKES

Pick the unit that's right for you. All units transmit a stable signal in the 88-108 MHz FM band up to 300' except for High power FM-4 and PB-1 Phone bug that go up to 1/2 mile.

FM-1 Basic Kit.....\$5.95  
FM-2, as above.....\$7.95  
but with added mike pre amp.....\$14.95  
FM-4, long range with very sensitive audio pickup.....\$14.95  
PB-1, Phone bug needs no battery, hooks to phone line.....\$14.95  
MC-1, Micro size sensitive mike cartridge for FM-1,2,4.....\$2.95

### SURROUND-SOUND/REVERB

Add concert hall realism to your stereo, TV or even 2-way radio! Easily synthesize a stereo effect from mono sources or richly intense regular music. Add a big-volume reverb to your radio voice that others will envy! Our reverb/surround sound kit uses a Bucket Brigade IC Device for reliable solid-state performance. Adjustable reverb, delay and mix controls to customize your sound. Easily connected to radios, stereos, CB's and TVs. Plenty of audio to drive a small speaker for stand-alone operation. Experience the fun and realism that surround sound provides - without spending hundreds! Add our case set for a neat, pro look.

RV-1 Surround Sound/Reverb kit.....\$59.95  
RV-1WT Assembled RV-1 and case.....\$99.95

### TOUCH-TONE REMOTE CONTROL

Control virtually anything by Touch-Tone remote control. The URC-1 has 16 switched outputs, 4 adjustable voltage outputs (20 mV steps, 0 to 5 VDC), two 10K digital pots (for volume, squelch, etc.) and 3 timers adjustable from 10 ms to 40 hours! Two level password control allows secure control and multi-level access. Six digit LED display shows currently entered codes and a crystal controlled touch-tone decoder provides reliable operation. There's nothing else like this unit, be in complete control of remote radios, thermostats, hi-fi's, homes or even factories with the URC-1. Add our matching case set for a handsome finish.

URC-1 Remote control kit.....\$129.95  
URC-1WT Fully assembled URC-1 and case.....\$189.95

### FM SUBCARRIER DECODER

Tap into the world of commercial-free music and data that is carried over many standard FM broadcast radio stations. Decoder hooks to the demodulator of FM radio and tunes the 50-100 KHz SCA subcarrier band. Many radios have a demod output, but if your radio doesn't, it's easy to locate, or use our FR-1 FM receiver kit which is a complete FM radio with a demod jack built-in. These "hidden" subcarriers carry lots of neat programming - from stock quotes to news to music, from rock to easy listening - all commercial free. Hear what you've been missing with the SCA-1.

SCA-1 Decoder kit.....\$27.95  
FR-1 FM receiver kit.....\$24.95  
CFR Matching case for FR-1.....\$14.95

### L-C METER

Measure inductors from 10 uH-10mH and capacitors from 2 pF-2uF with high accuracy by connecting the LC-1 to any digital multimeter. Two pushbutton ranges for high resolution readings and we even give you calibration components to assure proper accuracy of your kit! Active filters and switching supplies require critical values, no one should be without an accurate LC meter. For a pro look, add our matching case set.

LC-1 LC meter kit.....\$34.95  
CLC case set.....\$14.95

### MOTOR CONTROLLER

Control the speed and direction of any motor. Use our SMD-1 for those nice steppers you see surplus, and our MSC-1 for DC motors. The stepper driver features variable speed, half step rotation, direction and power down mode, can drive most any stepper motor. Our DC driver features pulse width modulation control allowing full motor torque even at low speeds and can drive motors up to 50 VDC @ 10 Amps! Add our case set for a professional assembly.

SMD-1 Stepper kit.....\$24.95  
MSC-1 DC motor kit.....\$24.95  
CSMD SMD-1 case.....\$14.95  
CMSC MSC-1 case.....\$14.95

## COMPUTER EQUIPMENT WANTED

70

**\$100 GOLD!** There is a circuit chip made by IBM that contains more than \$100 each in scrap gold, and another worth \$20. Almost nobody knows this. They are just starting to show up in resale outlets and junk yards. You can score big with this knowledge. Complete info with photo \$35 to: **Jim Sciuto, Box 128, Methuen, MA 01844.**

**WANTED: TELEVIDEO** terminal. Model 905, 924, 955, 9550 or 970. **Alen Gordon MD, 160 NW 176th St., Miami, FL 33169. 305-653-8000.**

**WANTED: USED** Commodore hardware and software for C64, VIC20, PET4032 and PET8032. Want 80 column cards, IEEE disk drives, EPROM programmers, small business software, more. Will consider systems. Good working condition only, please, with manuals. Send description and price including shipping to **Computers, PO Box 512, Walled Lake, MI 48390.**

### STEREO FM TRANSMITTER

Run your own Stereo FM radio station! Transmits a stable signal in the 88-108 MHz FM broadcast band up to 1 mile. Detailed manuals provides helpful info on FCC regs, antenna ideas and range to expect. Latest design features adjustable level inputs, pre-emphasis and crystal controlled subcarrier. Connects to any CD or Tape player, mike mixer or radio. Includes free tuning tool too! For a pro look add our matching case set with on-board whip antenna.

FM-10A Stereo transmitter kit.....\$34.95  
CFM Case, whip ant set.....\$14.95

### DR. NI-CAD CONDITIONER/FAST CHARGER

Quit spending big bucks for replacement battery packs, rejuvenate and condition your batteries for peak capacity. Advanced circuitry has optimized discharge before charge to eliminate memory effect and to condition batteries that have been poorly cared for in the past. Quick charge rapidly brings battery to full charge in less than an hour-just 15 minutes for some types! And "top-off" charge mode squeezes every last bit of energy into each cell for the absolute most capacity. Switch-mode regulator controls constant current charge while being monitored by a negative delta-V system that cuts off the fast charge at the exact point of full-charge-batteries are charged, not cooked! Charges NiCads or NiMH packs from 2 to 10 cells (easily expanded) and current capacities up to 10 Amp-hours. Runs on 12 to 15 VDC. (Cordlessly your batteries, buying new packs, waiting hours for recharge, get a Dr. Ni-Cad today! Available in money saving kit form or wired and tested with case at a special price. Kit builders: add our matching case set for a snazzy finish.

DN-1 Dr. Ni-Cad conditioner/fast charger kit.....\$49.95  
CDN Matching case set.....\$14.95  
DN-1WT Fully assembled Dr. Ni-Cad with case.....\$89.95

### SPEED RADAR

New low-cost microwave Doppler radar kit "clocks" cars, planes, boats, horses, bikes or any large moving object. Operates at 2.6 GHz with up to 1/4 mile range. LED digital readout displays speed in miles per hour, kilometers per hour or feet per second! Earphone output allows for listening to actual Doppler shift. Uses two 1-bb coffee cans for antenna (not included) and runs on 12 VDC. Easy to build—all microwave circuitry is PC stripline. ABS plastic case with speedy graphics for a professional look. A very useful and full-of-fun kit.

SG-7 Complete kit.....\$99.95

### STEREO PEAK HOLD BARGRAPH

Finally a dual LED bargraph with a peak hold display! Bargraph displays are neat and eye catching but their speed is their downfall - they just can't capture the peaks. Our kit is like two units in one, a fast display to show the signal and a long persistence display to capture peaks, similar units you go for hundreds of bucks! We offer 3 models: Linear for general use, Semi-Log for audio VU meters, and Log for power displays. Log - for stereo! - 10 segment multi-colored LED display for snazzy, eye grabbing display and easily set ranges for virtually any signals, from voltmeters to audio VU meters to audio power amps to SWR meters. Complete instructions for easy hook-up to most any device. Add our matching case set for a sharp looking unit.

PH-14 Dual Linear bargraph kit.....\$39.95  
PH-15 Dual Log bargraph kit.....\$39.95  
PH-16 Dual Semi-Log bargraph kit.....\$39.95  
CPH Matching case set.....\$14.95

### SPEECH SCRAMBLER

Describeable most scramble systems heard on your scanner radio or set up your own scrambled communication system over the phone or radio. Latest 3rd generation IC is used for fantastic audio quality - equivalent to over 30 professional line scramblers! Crystal controlled for crystal clear sound with a built-in 2 watt audio amp for direct radio hook-up. For scramble systems, each user has a unit for full duplex operation. Communicate in privacy with the SS-70. Add our case set for a line professional line.

SS-70 Scrambler/descrambler kit.....\$39.95  
SSSD matching case set.....\$14.95  
SS-70WT Assembled.....\$79.95  
SS-70 and case set.....\$79.95

### CRYSTAL RADIO

Relive the radio past with a crystal set like your grandfather built. Uses genuine Galena crystal and catwhisker. Several different types of radios are built, including standard AM broadcast, shortwave and even WW II foxhole style. To compare modern semiconductor detectors, we include a diode for comparison. No soldering required and we even give antenna ideas. Radio for free, get it now before Clinton taxes it!

CS-1 Crystal set kit.....\$19.95

### TOUCH-TONE DECODER

Grab Touch-Tone numbers right off the air, phone or tape. A simple hook-up to any radio speaker or phone line is all that is required to instantly decipher touch-tone phone numbers or codes. A 256 digit memory stores decoded numbers and keeps its memory even in the event of power loss. An 8 digit LED display allows you to scroll through the memory bank to examine numbers. To make it easy to pick out number groups or codes, a "dash" is inserted between sets of digits that were decoded more than 2 seconds apart. A "central-office" quality crystal controlled decoder is used allowing rapid and reliable detection of numbers at up to 20 digits per second! For a professionally finished look, add our matching case set. Start cracking those secret codes tomorrow with the Tone Grabber!

TG-1 Tone Grabber kit.....\$99.95  
CTG Matching case set.....\$14.95  
TG-1WT Fully assembled TG-1 and case.....\$149.95

### DIGITAL VOICE RECORDER

Chatterbox digital voice storage unit will record your message of up to 20 seconds. Time is split up into four 5 second blocks which can be played separately or cascaded for longer messages. An LED display shows message location and current mode for easy operation. Nifty built-in interlocks allow simple connection to transmitters for automatic keying when the PTT is initially closed or after it is released. You can even loop your rig's mike through the Chatterbox. For contest or fun use, the CB-1 can drive an external speaker. Includes a built-in electret mike. For that finishing touch, add our matching case set.

CB-1 Voice recorder kit.....\$59.95  
CCB Matching case set.....\$14.95

**FLUKE 2240C** Data logger \$1,200. Dexis, 612-944-7670.

**TEKTRONIX PLUG-INS: AA501** DISTORTION ANALYZER \$1,250. **DA 4084** distortion analyzer (like AA 5001) \$1,250. **AM 503 & A6302** current probe & amplifier (to 5A/div; DC to 50MHz) \$890. **DM 502A** auto-ranging multimeter \$215. **PG 508** 50MHz pulse generator (variable rise, fall times) \$325. **PS 503A** power supply \$250. **TR 503** .1-1800MHz tracking generator \$1,400. **5D10** Waveform digitizer with readout, for 5000-series \$475. Excellent condition! With warranty. Many others available; mainframes available. Pepper Systems, 214-353-0257.

# Electric Car Tires

by Shari Prange

**Y**ou're probably thinking, "Aw, come on, how much is there to say about tires?" Actually, tires are one of the most important factors in an electric car's daily performance.

## Friction

Part of a tire's job is to provide friction between the car and the road. Friction is what allows the tires to "grab," to propel the car forward, to steer it through the corners, and to bring it to a stop. When you don't have friction — on a sheet of ice, for example — you don't have control of the car.

However, friction causes heat. Heat represents lost energy, energy that is being consumed out of your fuel, but is not being used to move the car down the road. Excess heat will stress and damage components.

Finding the optimum amount of friction is a delicate balance.

## Rolling Resistance

The portion of the equation relevant to an electric car is called rolling resistance. This is measured by the amount of energy it takes to over-

Goodyear's Momentum tire, with a 40% reduction in rolling resistance over standard original equipment tires, helped a Solectria battery-powered pickup truck log a world's record for distance in a 24-hour period.

## TIRE COMPONENTS CONTRIBUTING TO ROLLING RESISTANCE

come the resistance and move the car. Part of the rolling resistance comes from things like wheel bearings and transmission fluid, but a significant part of it comes from the tires, and can be minimized.

The first requirement for electric car tires is that they are radials. Bias ply tires will not stand up to the demands of a heavy electric vehicle, and they will not give efficient performance.

With that said, it would seem that the trick to low-rolling

resistance is a small contact patch with the ground. You should buy really skinny tires, and pump them up as hard as possible, right?

Wrong.

The size of the contact patch is part of that delicate balance we were talking about. Too little contact, and you won't have safe control of the car for steering or braking.

## Air Pressure

Also, the relationship between tire pressure and rolling resistance is not linear. It reaches a plateau, after which handling decreases while rolling resistance does not.

It's easy to experiment with tire pressure to demonstrate this for yourself. On a straight, flat, empty stretch of road, drive your electric car at a constant speed and check the ammeter. Now vary the air pressure up or down and repeat the test. You can see the difference in energy used, and you can feel the difference in ride and handling. If you have a safe location, try braking and steering at different

Fuel-efficient tires are tested by Goodyear designers using customized computer software.

Michelin have produced low-rolling resistance tires, as well.

*Consumer Reports* magazine is a good source for tire information. They test tires about once a year, and list rolling resistance.

## Tire Size

Two tires of identical construction, but different sizes will have different rolling resistances. In general terms, the larger diameter tire will have a lower rolling resistance.

This is not due directly to the diameter, but to the aspect ratio. The aspect ratio is the ratio of the sidewall (from the bead to the tread) to the width of the tire in cross section. For example, a tire with an aspect ratio of 70 would have a sidewall height that is 70% of the tire's width.

A larger diameter tire probably has a higher aspect ratio — but not if it is also a very fat tire, or fits on a larger diameter wheel.

The aspect ratio is printed in code on the sidewall of the tire. On a typical tire, the code might read, "P185/70R14." The "P" indicates it is a passenger car tire. The "185" is the width of the tire's cross section, measured in millimeters. The "70" is the aspect ratio. The "R" means the tire is a

radial. The "14" means the tire was designed to fit on a 14" wheel. (Don't ask why the width is in millimeters and the wheel size is in inches!)

You may not be able to find the

low-rolling resistance tires you want in the exact same size that is currently on your car. If the new tires are taller or wider, you should check carefully with a tape measure to be sure they will fit in the wheel well. Be sure there is no interference, even when the spring is fully compressed going over a bump, or the car is making a hard turn to the right or left.

You may also discover that the tires you want aren't available for the size wheels you have. It can be a bit of a search to find a different size wheel that fits your lug pattern. However, if it makes it possible to get the low-rolling resistance tires, it's worth it. The difference in performance is readily apparent. After driving with the low-rolling resistance tires, your old tires will feel like driving with the handbrake on.

## Balance & Alignment

When you get your new tires, have them spin balanced as they are being installed. This will give you their optimum efficiency, as well as a smooth ride.

At the same time, take the car in for an alignment. A poor alignment will wear out your new tires unevenly and prematurely, and it may wear them on the inside edges where it isn't easily visible. The energy that's going into wearing out the tires isn't going into moving the car down the road. A bad alignment will make your car inefficient, with a higher current draw and shorter range.

You should choose an alignment shop based on a recommendation from someone you trust. Some cars have alignment adjustments in the rear, as well as the front. If this applies to your car, have both ends aligned.

**There is nothing electronic — or even electric — about tires. However, they can make the difference between a good electric car and a great one. NV**

**Graphics courtesy of Goodyear Tire & Rubber**

pressures.

Generally, you will want to run the tires close to the rated limit, which is around 35 psi. With a little experimentation, you can find a pressure that gives good performance while maintaining a comfortable level of safety and control. You can't just set the tire pressure and forget it, either. You should monitor it regularly to be sure you don't have a slow leak.

## Internal Construction

Sixty percent of the rolling resistance in tires comes from factors other than the tread. These factors can be manipulated independent of the size of the contact patch.

The tires flex as they move down the road, and the different parts of the tire move and pull against each other. This generates heat, which indicates rolling resistance and wasted energy.

Rolling resistance can be diminished by making the tires out of a compound that runs cooler, while still

providing adequate "stickiness" to the tread. Other areas that can be manipulated include the belt material, the size and shape of the tire, and the internal architecture of the tire.

Tire companies have been putting more emphasis on low-rolling resistance in recent years, due to demands for better fuel economy. Some of these tires now come as standard equipment on new cars. The same tires that provide good gas mileage will be high-efficiency tires for an electric car.

GM worked with Goodyear to pioneer low-rolling resistance tires for the Impact. Goodyear's research in this area also produced their Invicta GAL and GLR low-rolling resistance tires, which are on the market in sizes for many cars. Other companies such as Firestone, Bridgestone, Goodrich, and

Goodyear Invicta low-rolling resistance tires make a significant improvement in electric car performance.

## THE BEST 8085 MICRO-PROCESSOR TRAINING SYSTEM

### JUST GOT BETTER!

No other training system we know of comes close to matching the PRIMER's features at this low price. The PRIMER teaches more and is easier to use than other comparably priced trainers. The over 100 page Self Instruction manual takes you from binary number systems, to processing interrupts. At the end of the manual are working examples of using a photocell, a temperature sensor, making a wave form generator, a timer with alarm, and a motor speed controller using back EMF. The PRIMER comes with everything you need to start programming the 8085 in machine language. Continue on to program in Assembler, Forth, and BASIC with optional upgrade and software. Upgrade includes: RS232 serial port, cable, and 32k of battery backed RAM. Picture shown with upgrade option and optional heavy-duty keypad installed. The PRIMER is \$119.95 in kit form. The PRIMER assembled & tested by EMAC is \$169.95. Order now and receive one free power supply. Please add \$5.00 for shipping in USA.

## ULTIMATE GAME POWER

The best Video Game Saver (Never Die) with unlimited fun and no code needed. Start at anywhere and middle of your games with instant save.

Games Partners expands your SNES into a computer system.

**Feature:** 16 Megabit RAM, 24M and 32M (expandable to 128 Megabit), 256K SRAM, 3.5" high density disk drive and built-in utility including DOS for reading and writing games, data and programs, MEMORY MANAGER for multi-games-in-one, up to 16 games to play.

BACKUP for loading cartridges into internal memory and saving onto diskettes.

**Enhancement:** 4 times Inter-active slow-motion.

Instant Save Screen ISS and Restore; virtually, you never "die". Start or Practice at your desired screen.

**File Handling:** Game data, ISS data, creation from Modify Game and records can be saved on 3.5" diskette. Game cartridges can be backup to protect your investment. Format is compatible with PC and Mac.

**Money back guarantee.**

Maria Lopez, KC6ABM,  
tunes into six-meter DX from  
the Kenwood Club base  
station.

# NO-CODE HAMMS GET SKIP FREQUENCIES

by Gordon West

**T**he amateur radio no-code Technician class license has exceeded the popularity contest beyond anyone's wildest dreams. The amateur radio service is growing by leaps and bounds, and the quality of the new "no-coders" is superb.

"I figured the no-code license would open up the floodgates to CBER mentality," comments a ham from the Pacific Northwest. "But I was wrong — the no-code license has brought in engineers, airline pilots, lawyers, electronic technicians, and computer hobbyists with terrific talent."

CB radio operators who no longer need a license did not flood the ham radio ranks of no-code Technician class because they already enjoy a license-free communications service at 27 MHz. The "pirate" CB radio operators who transmit between 27.405 to 28.000 MHz have no reason to look toward ham radio as something to do because they already have their own illegal radio service between the top end of CB Channel 40 and the bottom end of the amateur radio 10-meter band. Occasionally they get caught, but the FCC's lack of enforcement has given them free reign to do their thing, and they can talk just about around the world on their illegal frequencies and extraordinary amounts of power output. But they are constantly looking over their shoulder...

The no-code amateur radio license, called Technician no-code, is pretty much considered a local-only type of radio service using repeaters,

point-to-point, mobile-to-mobile, and short-range packet radio. However, Technician no-code operators have zero restraints to confine their communications to just a few miles or line-of-sight distances.

Through packet radio networks and gateway systems, the no-code Technician can intercommunicate throughout the world easily on their home or lap-top computers. It's not uncommon for no-code Technician class operators to work into a packet system where a General class (or higher) ham offers high-frequency gateway communications for real-time communications to the other side of the world via packet radio.

The no-code Technicians can also enjoy working the OSCAR satellites. This, too, will lead to intercontinental communications in real time. And voice, too. Even slow-scan television, too.

The no-code Technician can also talk literally "out of this world" by communicating directly with the orbiting space shuttle. On almost every space shuttle mission, licensed hams aboard the shuttle will take time out of their busy schedule and stay in touch with hams back down on earth.

The amateur radio two-meter band is the big collection point for new no-code Technician class operators. On two meters they can hook up with the space shuttle, they can tie into digital networks, and they can even try some long-range tropospheric ducting which we talked about a

few issues ago.

## BUT WE WANT SKIP COMMUNICATIONS

Many times you might hear no-code Technician class amateur radio operators discussing their plans to upgrade to General class to gain skywave "skip" conditions on the worldwide bands. Even learning the code at 5 wpm gets them onto a portion of the 10-meter band for skywave skip communications using voice from 28.300 to 28.500 MHz. They can also "skip" digital signals between 28.100 to 28.300. They can also play CW (Morse Code) skywaves from 28.1 to 28.5. But they must learn the code at a minimum rate of 5 wpm to add a "plus" to their license class, Technician-plus — plus the code at 5 wpm.

Becoming a Technician-plus also allows code privileges on 15 meters, 40 meters, and 80 meters, in addition to the code and voice privileges on a portion of the 10-meter band.

But what about the amateur operator who plans to NEVER EVER learn the code at 5 wpm, but still wishes to experiment with skip communications. Is there any band that supports skip within the no-code Technician privileges? Are the skip communications going to be predictable, reliable, and worldwide?

A big YES for the no-code Technician class operator.

- No-code Technician skip band: 6 meters, 50 MHz-54 MHz
- Allowable power output: 1,500 watts
- Skywave range:

A small six meter FM set like this can easily work six-meter sporadic-E DX.

Listening to how close in 10 meter skip is will be an indicator of six-meter band openings.

1,500 miles-3,000 miles typical  
— Morse Code test requirements:  
Absolutely none

Technician no-code operators have full access to the amateur radio six-meter band. This band is regularly effected by a summertime condition called "sporadic-E," abbreviated "Es." It's this ionospheric phenomena that gives no-code Technician class operators all of the excitement of skywave skip communications that are enjoyed by higher class operators on the worldwide bands.

July is the peak period for sporadic six-meter band. The conditions begin around June 22nd, and they become less frequent around August 25th. But in July, it's an almost everyday occurrence out there on the airwaves.

## WHAT IS SPORADIC-E?

During daylight hours, the sun "super-charges" the four ionospheric layers to stratify and become the D-layer, the E-layer, the F1-layer, and the F2-layer. We are at the very bottom of solar cycle 22, and this means that sunspot activity is at a minimum. This means don't count on the higher F-layer for reliable six-meter contacts. In fact, you probably won't get any F-layer "bounces" off of the ionosphere for the next four years on six meters.

But the solar cycle has nothing to do with the highly ionized dense patches within the E-layer called "sporadic-E" clouds. These are not clouds that you can see. These are invisible blobs of intense ionization triggered by high altitude wind shears that become so reflective to radio signals that they reflect and refract them back to earth on frequencies in the VHF spectrum, including six meters, sometimes two meters, and every now and then the 222 MHz band. 222 MHz and two meter "skip" communications are rare — but on six meters, summertime skywave conditions are a common occurrence, peaking in July.

The E-layer of the ionosphere is up approximately 60 to 120 miles. It's present only during daylight hours, and a few hours after sunset. The E-layer itself is relatively predictable — it will normally support maximum usable frequencies up to 20 MHz for skywave communications during daylight hours. But within the E-layer are densely ionized patches that are so intense with electron activity, they cause VHF six meter signals and higher VHF radio waves to bounce off of them and come back down to earth thousands of miles away.

Some experts feel the "bounce back" is caused by reflections. Others feel it's a combination of reflection and refraction within the cloud that gives six-meter signals a terrific kick back to earth. It's probably a combination of both, and you can even get cloud-to-cloud bounces that will sometimes produce coast-to-coast sporadic-E contacts on the six-meter band.

You can calculate VHF radio line-of-sight (LOS) range to the horizon by taking the height of the signal and doubling it in feet, and then taking the square root of that to come out in miles. Since the height of our signal is off of the sporadic-E cloud at approximately 100 miles up, here are the calculations:

- 100 miles = 528,000 feet
- $2 \times 528,000 = 1,056,000$  feet
- The square root of 1,056,000 = 1,027 miles

For a six-meter station in the middle of the United States, an E-cloud just coming up from the west will be approximately 1,000 miles away. For a station on the West Coast, that same E-cloud getting ready to go over the horizon to the east will be 1,000 miles away. If both stations have a line-of-sight range to the same E-cloud just above the horizon, 2,000 miles of six-meter range is indeed possible.

The E-clouds normally travel from west to east, and their velocity is usually much greater than the lower

jet stream, and is said to be approximately 500 miles per hour. Depending on how many sporadic-E patches are associated with this ionospheric phenomena, six-meter skywave communications over 1,000 miles to 3,000 miles may last from a few minutes to an hour or so.

The sporadic-E cloud is considered invisible and made up solely of highly ionized electrons from the ultraviolet radiation from the sun. Yet some six-meter enthusiasts say they can spot a sky formation that spawns sporadic-E skip. They say to

look for ultra-high cirrus clouds, and these are usually

associated with sporadic-E propagation. I have never seen this phenomena myself, and most folks feel that sporadic-E is absolutely independent of the weather conditions that might cause other radio phenomena, such as tropospheric ducting, static crashes, and high noise levels.

However, sporadic-E has been documented as a result of major thunderheads containing lightning that rise above 60,000 feet. Ham operators watching storm fronts will aim their six meter antennas at a distant storm cloud, and many times hook up with other hams on the other side of the storm front (usually equidistant) for up to 800 miles communications. As the storm cloud moves from west to east, so do the communication possibilities with different stations with the cloud in between!

Sporadic-E peaks in July, so there's no question that ultraviolet radiation from the sun at its highest point above the United States plays an important factor in creating E-skip. There are also the theories of high altitude wind shears creating E-skip, and all of this combined with the very predictable increase in E-skip activity during the summer months makes working the six-meter ham band, for the no-code Technician, just as much a kick as working 20 meters on the worldwide bands with a General class or higher license.

"I work both six-meters FM as well as SSB, and in the SSB mode, I can hear little ZZZIIIPPPSSS about

30 minutes before the band actually opens up for some short-skip DX," comments Margaret Foster WA6BWH. "I also listen to WWV at 18 minutes past the hour for tips on six-meter activity, too," adds Foster. She speaks of monitoring the WWV 5, 10, and 15 MHz signals at 18 minutes past the hour and noting the A and K indices where higher numbers along with "disturbed" ionospheric propagation reports mean sporadic-E activity might be in the making.

Another way to anticipate a sporadic-E opening on the amateur radio six-meter and even the two-meter band is to monitor skywave activity on 10 meters. You would never have a sporadic-E six-meter opening unless the 10-meter band was also active with skywave communications. While some experts claim that six meters has been open, and 10 meters with no skywave activity, I am convinced that they must have had their 10-meter antenna buried in the ground. I have always found 10 meters full of activity when the six meter and two meter band open up for skywave E-skip.

As 10-meter stations begin to skip in closer and closer, the chances of six-meter band openings get greater. When you begin to hear 10-meter skywave stations coming in within 500 miles of your location, switch up to six meters and see what's happening. When six-meter contacts begin to close into 500 miles, then switch up to two meters and see what happens. A couple of years ago, two-meter contacts closed in as close as 500 miles, and there was a brief three-minute opening up on 222 MHz!

The intensity of a skywave signal

Even radar range is extended when tropo ducting takes place up to 10,000 MHz.

from sporadic-E short-skip will knock your socks off. Your headphones, too. Skywave signals from sporadic-E are normally "full tilt," signal strength 9+.. Sporadic-E clouds cause little attenuation of the signal, and free-space loss over a couple of thousand miles path from a 50-watt signal still gives you ample copy with a relatively simple antenna system. Like ocean waves, the 10-meter, six-meter, and two-meter skywaves will build and then recede, build and then recede, and keep repeating this pattern over and over again building and receding several times a minute. You can always count on the distant station giving its QSL address just when the signals take a nosedive for a few seconds. But a few seconds later, they will build back again, loud and clear. And just as quickly as they came, they leave. They take about three nosedives, and that's it. However, your ham buddies a few miles away may still be in the reflection zone, and they'll get a few more minutes of contacts before the contact zone continues to scoot across the United States.

Simple vertical antennas for 10 meters, six meters, and two meters can work strong sporadic-E openings. Beam antennas will work the opening

first, and hold it a lot longer after it disappears from the simple omnidirectional vertical antenna. Polarization to a sporadic-E opening doesn't seem to make much difference. Most everyone agrees the up-and-down fading action of sporadic-E is caused by the tumbling of the polarization of the incoming waves. Maybe. I have both horizontal and vertical antennas; and when the signal takes a nosedive, it gets weak with both polarizations — so I'm not convinced that polarization fading is the culprit.

If you have an old television set hooked up to an outside antenna — not on cable — you can many times spot a sporadic-E short skip opening by the big black horizontal bars that will slowly drift from the bottom of the screen to the top of the screen over a five second period of time. This is co-channel interference from another TV station hundreds of miles away. Switch to another TV channel below Channel 7, and see what you can pick up. Channels 2, 3, and 4 are your best TV channels for spotting sporadic-E co-channel interference. But you must have some sort of an outside TV antenna, or a set of really good rabbit ears.

If you're into FM band DXing, a sporadic-E opening will trigger unused FM channels in your area to become alive with stereo sounds. Many FM receivers have mute circuits, so select some popular channels that are not active in your area — popular in other areas about 500 miles away — turn up the volume, and wait until they start coming in loud and clear to alert you that a sporadic-E opening is taking place.

The best time for listening for a sporadic-E opening is in the early evening hours. They say that sporadic-E also peaks right after sunrise, but I have always found more openings at sunset. Maybe more people are at home listening to their radios.

Looking over statistical data gathered by enterprising hams, July 15th through the 26th are the most common daily openings for short skip. You could expect a band opening almost every other day for a few hours. From June 22nd to August 24th, band openings will occur at least every three or four days, with that big peak at the end of July.

While there's much conjecture on how these invisible sporadic-E clouds form, there's no question that the maximum usable frequency for sky-

wave propagation easily rises to, and above, the amateur radio Technician class band where no-code operators have full access to frequencies 50 to 54 MHz. If all you have is an FM transceiver, program in a whole bunch of repeaters, plus program the 52.525 MHz Simplex calling frequency, set the squelch, and get set for activity. If you have a multi-mode, six-meter, SSB transceiver, such as the new Kenwood, Yaesu, ICOM, and Alinco HF sets with six-meter capabilities, listen around 50.125 MHz for SSB activity.

And when conditions really get hot, you might also take a listen up at 144.200 MHz SSB on the two-meter band, too. All single sideband emissions are upper sideband.

So get set for skip that's coming in right now. If you're not a ham, listen to it on an FM broadcast radio, or see it in action on your television any hot summer evening. Although the skywaves are independent of local weather conditions — other than major thunderstorms — that warm summer evening is bound to give you some real excitement thanks to the E-layer and those invisible sporadic-E clouds.

Enjoy! NV

#### #80 TEST EQUIPMENT cont.

**ACME P5** 2L-1000 electronic load \$675/offer. Dexis 612-944-7670.

30 to 72-pin adapter !

Use your 30 pin SIMMs in your new computer!  
Holds 4 or 8 30 pin SIMMs  
8 socket model shown - only \$60 each

ALSO AVAILABLE: 4 socket model, DIP-SIMM, SIP-SIMM, SIMM-SIP, ZIP-SIMM, 2 into 1 for 72 pin.

Memory Conversion Products

428 NW 9th Street  
Corvallis, Oregon 97330-6133  
503 753-7918

Fax & Fax-back: 503 758-5331 Modem: 503 757-2679

Dealer & Distributor inquiries welcome.

SimTree model 110 30-PIN to 72-PIN ADAPTER.

The SimTree is intended for use with all 30 pin SIMMs. SIMMs must be installed in groups of 4. All installed SIMMs must be of the same memory capacity, however they may be of mixed speeds and brands. A special version of the SimTree for SIPs is available and custom versions for combinations of SIPs and SIMMs may be ordered.

Both a "front" (F) and "back" (B) model of the adapter are produced. The "front" model has the 30-pin SIMM sockets mounted on the front of the board. This is the side where the chips are normally mounted on a single-sided SIMM. The "back" version has the 30-pin sockets mounted on the back of the board.

If you intend to place two SimTree units in the same computer in adjacent vertical sockets you should have one front and one back model.

The SimTree can coexist with standard SIMMs on either side because of the 1.3 inches of clearance designed into the lower portion below the 30-pin sockets.

Your computer will "see" the SimTree just as it would a normal SIMM. For example if you have 8 of the 1 meg SIMMs installed in the SimTree your computer will "see" it as a normal 8 meg 72-pin SIMM. Note that a few computers will not accept 8 meg SIMMs.

Satisfaction Guaranteed!

### TO 100 MHz

TEK 465B 100 MHz Dual Trace Oscilloscope	\$650.00
TEK 5440 50 MHz 4-Trace Oscilloscope System, w/(2)5A48, 5B42	\$650.00
TEK 5A13N Differential Comparator	\$300.00
TEK 5A18N 2 MHz Dual Trace Amplifier	\$125.00
TEK 5A19N 2 MHz Differential Amplifier	\$175.00
TEK 5B10N 2 MHz Time Base / Amplifier	\$100.00
TEK 7A13 100 MHz Differential Comparator Amp., LED display	\$400.00
TEK 7A18 75 MHz Dual Trace Amplifier	\$100.00
TEK 7A22 1 MHz High CMRR Differential Amplifier	\$400.00
TEK 7B53A 100 MHz Dual Time Base	\$200.00

### ABOVE 100 MHz

TEK 475 200 MHz Dual Trace Oscilloscope	\$850.00
TEK 475A 250 MHz Dual Trace Oscilloscope	\$950.00
TEK 485 350 MHz Dual Channel Oscilloscope	\$1,100.00
TEK 7904 500 MHz 4-slot frame	\$500.00
TEK 7904 500 MHz System, with 7A24, 7A26, 7B92A	\$1,100.00
TEK 7904 500 MHz System, with 7A24, 7A26, 7B80, 7B85	\$1,100.00
TEK 7A16A 225 MHz Single Trace Amplifier	\$150.00
TEK 7A24 400 MHz Dual Trace Amplifier	\$450.00
TEK 7A26 200 MHz Dual Trace Amplifier	\$250.00
TEK 7A29 1 GHz Single Channel Amplifier	\$850.00
TEK 7B10 1 GHz Time Base	\$500.00
TEK 7B15 1 GHz Delaying Time Base	\$600.00
TEK 7B80 400 MHz Delayed Time Base	\$200.00
TEK 7B85 400 MHz Delta Delaying Time Base	\$250.00
TEK 7B92A 500 MHz Dual Time Base	\$450.00

### STORAGE

TEK 5441 50 MHz 4-Trace Storage System, w/(2)5A48, 5B42	\$850.00
TEK 7633 100 MHz 4-Trace Storage System, w/(2)A26, 7B53A	\$1,000.00
TEK SC503 10 MHz Dual Trace Storage Oscilloscope, TM500 series	\$700.00

### DIGITAL

TEK 2201 20 MHz Analog & Digital Oscilloscope, 20 MS/s	\$1,250.00
--	------------

### SAMPLING

TEK 7854 400 MHz Waveform Processing frame, GPIB	\$1,500.00
TEK 7S11 Sampling Unit	\$450.00
TEK 7S14 1 GHz Dual Channel Sampling Unit	\$700.00
TEK 7T11 Sampling Sweep Unit	\$950.00
TEK R7603 1 GHz Dual Trace Sampling system, w/7S14	\$750.00
TEK 1101 Accessory Power Supply, for FET probes	\$250.00

### PROBES

TEK P6201 900 MHz 1X/10X/100X FET Probe	\$500.00
---	----------

### CALIBRATION

TEK CG551AP/TM506A Oscilloscope Calibrator, with pulse head & power module	\$3,500.00
--	------------

## WAVEFORM GENERATORS

### FUNCTION

HP3310A 5 MHz Function Generator	\$325.00
HP3310B 5 MHz Function Generator, monocyte & burst operation	\$425.00
HP3312A 13 MHz Function Generator, sweep, AM, FM	\$850.00
HP8015A 50 MHz Dual Output Pulse Generator	\$650.00
HP8015A-002 50 MHz Dual Output Pulse Generator, burst mode option	\$750.00
TEK DD501 Digital Delay & Burst Gen., for function & pulse gen's	\$375.00
TEK FG502 11 MHz Function Generator, TM500 series	\$325.00
TEK FG504 40 MHz Function Generator, TM500 series	\$875.00
TEK RG501 Ramp Generator, TM500 series	\$225.00
WAVETEK 132 2 MHz VCG / Noise Generator	\$600.00
WAVETEK 135 2 MHz Lin/Log Sweep/Function Generator, tone burst	\$275.00
WAVETEK 142 10 MHz Function Generator	\$275.00
WAVETEK 148 20 MHz Function Generator, AM/FM/PM modulation	\$700.00
WAVETEK 166 50 MHz Pulse/Function Generator	\$1,250.00
WAVETEK 188 4 MHz Sweep/Function Generator, 20 Vp-p	\$275.00

### PULSE

HP214B 10 MHz Pulse Generator, 50 V/50 Ohms, auto duty cycle	\$2,250.00
HP8004A 10 MHz Pulse Generator, double pulse & offset	\$250.00
HP8005B 20 MHz Dual Output Pulse Generator	\$450.00
HP8007B 100 MHz Pulse Generator	\$650.00
HP8080A/81A/82A/83A 300 MHz Word Generator	\$900.00
HP8080A/81A/82A/83A 1 GHz Dual Channel Pulse Generator	\$1,650.00
HP8080A/81A/82A/83A 1 GHz Single Channel Pulse Generator	\$1,400.00
HP8082A 250 MHz Dual Output Pulse Generator	\$1,400.00
PHILIPS PM5785B 125 MHz Dual Output Pulse Gen., burst mode, 1 nS Tr	\$1,100.00
TEK PG501 50 MHz Pulse Generator, TM500 series	\$300.00
TEK PG502 250 MHz Pulse Generator, 8V, 1 nS, TM500 series	\$700.00
TEK PG505 100 kHz Pulse Generator, 8V, TM500 series	\$275.00
WAVETEK 801 50 MHz Pulse Generator	\$550.00

## PROGRAMMABLE

HP3325A Synthesizer / Function Generator, 1 uHz-21 MHz	\$2,500.00
HP8165A Programmable Signal Source, 1 mHz-50 MHz	\$2,600.00
TEK AWG5102 Arb. Waveform Gen., 20 MS/s, 12 bits, 50ppm synthesis <1MHz	\$1,800.00
TEK AWG5105 Arbitrary Waveform Generator, 50 MS/s, 12 bits	\$2,200.00
TEK AWG5105-opt.02 Arbitrary Waveform Generator, dual channel option	\$3,000.00
TEK PFG5505 Programmable 12 MHz Pulse/Function Generator	\$1,275.00
WAVETEK 275-opt.02 12 MHz Arbitrary Function Gen., GPIB	\$1,250.00

## VOLTAGE & CURRENT

### VOLTMETERS

HP3456A 6-1/2 digit Voltmeter	\$850.00
SOLARTRON 7150 5-1/2 / 6-1/2 digit Multimeter, GPIB	\$550.00

### CALIBRATION

FLUKE 332B/AF DC Voltage Calibrator, 0-1111 V, 0-50 mA, 7 decades	\$675.00
FLUKE 343A DC Voltage Calibrator, 0-1100 V, 7 decades, 20 ppm acc.	\$1,375.00
FLUKE 510A AC Reference Standard, 10 VRMS, 19.2 kHz, <0.1% acc.	\$450.00
FLUKE 752A DC Reference Divider	\$2,500.00

### VOLTAGE SOURCES

HP6114A Precision Dual Range Power Supply, 20 V 2 A / 40 V 1 A	\$875.00
HP6115A Precision Dual Range Power Supply, 50V 0.8A / 100V 0.4A	\$875.00

### CURRENT METERS & SOURCES

DRANETZ 656A (3)TR2019A Current Demand Analyzer, w/(3) current probes 300A max.	\$5,000.00
HP6177C DC Current Source, to 50V, 500mA	\$600.00
HP6181C DC Current Source, to 100 V, 250 mA	\$675.00
HP6186B DC Current Source, to 300V, 100mA	\$750.00
KEITHLEY 225 Current Source, 1 nA-99.9 mA, 10-100 V compliance	\$450.00
KEITHLEY 480 Picoammeter, 1 nA-1 mA f.s., 3 digit	\$3,900.00
LEEDS & NORTHROP 4360 Precision Current Shunts, 15-500 Amp	\$650.00
TEK CT-5 High Current Transformer for P6021/A6302, to 1000A	\$650.00

## IMPEDANCE & COMPONENT TEST

### LCR

BOONTON 62AD 1 MHz Inductance Meter, 2-2000 uH	\$700.00
BOONTON 72BD 1 MHz Digital Capacitance Meter, 2-2000 pF	\$700.00
E.S.I. 296V 4-1/2 Digit LCR Bridge, 120 Hz & 1 kHz	\$850.00
HP4281A 3-1/2 digit LCR Meter, 120 Hz/1 kHz	\$1,100.00
HP4282A-101 3-1/2 digit LCR Meter, 120 Hz/1 kHz/10 kHz, HP1B	\$2,100.00
HP4275A Multi-Frequency LCR Meter, 10 kHz-10 MHz	\$6,250.00
HP4342A Q Meter, 22 kHz-70 MHz, Q=5-1000	\$2,250.00
MEGURO MQ-171 VHF Q Meter, 20-230 MHz, Q=10-500, freq. readout 10 Hz	\$1,100.00

### STANDARDS

E.S.I. RS-925 9-Decade Resistor, 0.01 ohm-1.2 Megohm	\$2,000.00
E.S.I. SR1010 Resistance Transfer Standards, 1 ohm-100 K/step	\$800.00
FLUKE 5450A Programmable Resistance Standard, 2 & 4 wire	\$2,750.00
GR 1409-SERIES Standard Mica Capacitors, 0.05% accuracy	\$150.00
GR 14135-Decade Precision Capacitor, 0-1.1110 uF, 1 pF res.	\$1,675.00
GR 1432-N 5-Decade Resistor, to 11,111 ohms, 0.1 ohm res.	\$275.00
GR 1432-U 4-Decade Resistor, 0-111.10 ohms, 0.01 ohm resolution	\$175.00
GR 1433-X 6-Decade Resistor, to 111,111.0 ohms, 0.1 ohm res.	\$550.00
GR 1434-G 7-Decade Resistor, 0-1,111,111.0 ohms, 0.1 ohm res.	\$500.00
GR 1434-N 5-Decade Resistor, 0-11,110 kilohms, 0.1 ohm res.	\$300.00
GR 1491-G 5-Decade Inductor, 0-11.110 H, 100 uH res.	\$1,250.00

### HI & LO RESISTANCE

GR 1668 DC Resistance Bridge, 1 micro-ohm - 100 kilohms	\$1,000.00
HP4328A-001 Milliohmeter, 0.001-100 ohms f.s., battery option	\$1,350.00
HP4329A High Resistance Meter, 500K ohm-2x10E16 ohm, 10-1000V	\$1,350.00

### CURVE TRACERS

TEK 577D1/177 Storage Curve Tracer, with standard test fixture	\$2,250.00
TEK 577D2/177 Curve Tracer, with standard test fixture	\$1,950.00
TEK 7CT1N Curve Tracer, to 0.5W, 7000 series	\$500.00

### T.D.R.

TEK 1502-opt.04 Time Domain Reflectometer, 0-2,000 feet, chart recorder	\$2,250.00
---	------------

TEK 1503-opt.04 Time Domain Reflectometer, 0-50,000 feet, chart recorder	\$2,000.00
--	------------

## POWER SUPPLIES

### SINGLE OUTPUT

GLASSMAN PS/EG-05R06 5kV CV/CL Power Supply, to 6mA	\$500.00
HP6002A-001 Programmable Power Supply, 0-50 V / 0-10 A / 200 Watts	\$875.00
HP6023A Autotransforming Power Supply, to 20 V / 30 A / 240 Watts	\$1,000.00
HP6207B 160 V at 200 mA CV/CC Power Supply	\$300.00
HP6208B-027 10V at 100A CV/CC Power Supply	\$675.00
HP6261B-027 20 V at 50 A CV/CC Power Supply	\$675.00
HP6263B 20 V at 10 A CV/CC Power Supply	\$400.00
HP6267B 40 V at 10 A CV/CC Power Supply	\$550.00
HP6268B 40 V at 30 A CV/CC Power Supply	\$850.00
HP6299A 100 V at 750 mA CV/CC Power Supply	\$250.00
HP6384A 4.0-5.5 V at 8 A CV/CL Power Supply	\$175.00
HP6438B 60V at 5A CV/CC Power Supply	\$375.00
SORENSEN DCR 110-45T 110 V at 45 A CV/CC Power Supply	\$2,200.00
HP6227B Dual 25 V at 2 A CV/CC Power Supply	\$650.00
HP6253A Dual Output 20 V 3 A CV/CC Power Supply	\$500.00
HP6255A Dual Output 40 V 1.5 A CV/CC Power Supply	\$500.00
ACME PS2L-1000 Programmable Load, 0-75 V / 0-150 A / 1000 Watts max.	\$450.00
HP59501A HP1B Isolated DAC/Power Supply Programmer	\$175.00
HP6824A Bipolar Power Supply/Amplifier, to 50 V, 1 A	\$400.00
HP6827A Bipolar Power Supply/Amplifier, to 100 V, 500 mA	\$800.00
KEPCO BOP-100-4M 100 V, 4 A Four Quadrant Bipolar Supply / Amplifier	\$1,000.00
KEPCO BOP-15-20M Bipolar Amplifier / Power Supply, to 15 V, 20 A	\$875.00
KEPCO BOP-36-5M Bipolar Op Amp/Power Supply, to 36 V, 5 A	\$550.00

## TIME & FREQUENCY

### UNIVERSAL COUNTERS

HP5314A 100 MHz/100 nS Universal Counter	\$225.00
HP5315A 100 MHz/100 nS Reciprocal Counter, high res. audio	\$550.00
HP5315A-001 100 MHz/100 nS Universal Counter, TCXO reference	\$650.00
HP5316A 100 MHz/100 nS Universal Counter, HP1B, 1.0 GHz C-chan, OCXO	\$750.00
HP5316A-003 100 MHz/100 nS Universal Counter, HP1B, 1.0 GHz C-chan.	\$1,000.00
HP5335A 200 MHz Universal / Statistical Counter	\$1,500.00
HP5370B-001 100 MHz Univ. Time Int. Counter, 20 pS single shot, OCXO	\$2,250.00
HP5142A-010, 030 VXI card 200 MHz/2 nS Univ. Counter, TCXO & 2.5 GHz C-ch	\$1,500.00
PHILIPS PM665A/056 120 MHz/2 nS OCXO, GPIB Programmable High Res. Counter	\$950.00
RACAL-DANA 1992-opt.04A 100 MHz/6.25 nS Universal Counter, 1.3 GHz C-chan, OCXO	\$800.00
TEK 7D15 225 MHz Universal Counter/Timer, 7000 series	\$275.00
TEK DC5004 Programmable 100 MHz/100ns Counter/Timer, TM5000 series	\$475.00
TEK DC5009-opt.01 Programmable 135 MHz Univ. Counter/Timer, TCXO, TM5000	\$750.00
TEK DC5010 350 MHz/3.125 nS Univ. Counter, TM5000 series	\$1,200.00
TEK DC503A 125 MHz Universal Counter/Timer, TM500 series	\$500.00
TEK DC509 135 MHz High Resolution Universal Counter/Timer, TM500	\$700.00
TEK DC510 350 MHz/3.125 nS Universal Counter, TM500 series	\$900.00

### FREQUENCY COUNTERS

EIP 545-opt.05, 08 18 GHz Frequency Counter, OCXO and GPIB	\$1,875.00
FLUKE 7220A-opt.111 1.3 GHz Communications Counter, TCXO option	\$650.00
HP5305B/5300B-001 1.3 GHz Counter Package w/TCXO ref., high res. audio	\$450.00
HP5340A-001, 011 18 GHz Frequency Counter, OCXO reference, HP1B	\$1,900.00
HP5342A-01, 04, 05, 11 24 GHz Frequency Counter, OCXO, DAC, and HP1B	\$3,900.00
HP5345/5355/5356A-006 Pulsed/CW Frequency Counter, pulse 0.4-18.0 GHz, 75 nS	\$3,500.00
HP5361A-006 20 GHz Pulsed/CW Frequency Counter, 10 Watt protection	\$6,750.00
SYSTRON-DONNER 6054B 24 GHz Frequency Counter	\$1,875.00
SYSTRON-DONNER 6054B-opt.05, 26.26.5 GHz Frequency Counter, GPIB	\$2,400.00
TEK 7D14 525 MHz Frequency Counter, 7000 series	\$175.00
TEK DC504 80 MHz Frequency Counter	\$125.00

### STANDARDS

HP5087A-031 Distribution Amp., h 0.1/1.0/5.0 MHz x 4 channels eac	\$1,800.00
HP5359A Time Synthesizer, pulse width 5 nS-160 mS, jitter <200 pS	\$2,000.00

## AUDIO & BASEBAND

### SPECTRUM ANALYZERS

HP3580A-002 Spectrum Analyzer, 5 Hz-50 kHz, 1 Hz res., bal. input	\$1,850.00
---	------------

# 90 DAY WARRANTY PARTS AND LABOR • 10 DAY INSPECTION TEST EQUIPMENT WANTED CALL OR FAX LIST • OPEN ACCOUNTS

HP3581A Wave Analyzer, 15 Hz-50 kHz	\$1,000.00
HP3582A FFT Spectrum An., 25.6 kHz max. dual channels, HP1B	\$2,500.00
HP3585A Spectrum Analyzer, 20 Hz-40 MHz, 3 Hz res., HP1B	\$6,000.00
HP3586C Selective Level Meter, 50 Hz-32.5 MHz, 50 & 75 ohms	\$1,750.00
HP8556A LF Section, 20 Hz-300 kHz	\$500.00

<b>DISTORTION ANALYZERS</b>	
HP334A Distortion Analyzer, 5 Hz-600 kHz, -60 dB, auto nulling	\$550.00
HP339A Distortion Analyzer, built-in low distortion osc.	\$2,400.00
TEK DA4084 Programmable Distortion Analyzer, 0.0025% THD, w/frame	\$1,500.00

<b>RMS VOLTMETERS</b>	
FLUKE 8920A True RMS Voltmeter, 180 uV-700 V, 10 Hz-20 MHz	\$700.00
HP3400A RMS Voltmeter, 10 Hz-10 MHz	\$250.00
HP400FLAC Voltmeter, 100 uV-300 V f.s., 20 Hz-4 MHz	\$200.00

<b>OSCILLATORS</b>	
FLUKE 6011A Synthesized Signal Gen., 10 Hz-11 MHz, 10 Hz res	\$1,200.00
HP204C Oscillator, 5 Hz-1.2 MHz, 5 VRMS	\$150.00
HP204D Oscillator, 5 Hz-1.2 MHz, 5 VRMS, 80 dB step attenuator	\$200.00
HP209A Sine/Square Wave Generator, 4 Hz-2 MHz, 5 VRMS max.	\$225.00
HP4204A Synthesizer, 10 Hz-1 MHz, 1 mV-30 V/1600 Ohms	\$350.00
HP652A Test Oscillator, 10 Hz-10 MHz	\$300.00
ROCKLAND 5100 Synthesizer, 1 mHz-1.999999999 MHz	\$400.00

<b>FILTERS, MISCELLANEOUS</b>	
HP3575A-002 Phase-Gain Meter, 1 Hz-13 MHz, dual display	\$900.00
KROHN-HITE 3202 Dual High-Pass/Low-Pass Filter, 20 Hz-2 MHz, 24 dB/oct	\$600.00
KROHN-HITE 3342 Dual HP/LP Filter, 0.001 Hz-99.9 kHz, 48 dB/octave	\$1,100.00
KROHN-HITE 3343 Dual HP/LP Filter, 0.01 Hz-99.9 kHz, 48 dB/octave	\$950.00
TEK AM502 Differential Amplifier, 0.1 Hz-1 MHz, TM500 series	\$575.00

## RF & MICROWAVE

<b>SPECTRUM ANALYZERS</b>	
HP11970A WR28 Harmonic Mixer, 26.5-40 GHz	\$1,100.00
HP11970Q WR28 Harmonic Mixer, 33-50 GHz	\$1,400.00
HP11970U WR18 Harmonic Mixer, 40-60 GHz	\$1,400.00
HP5371A Modulation Domain Analyzer, 125 mHz-500 MHz	\$5,900.00
HP8406A Comb Generator, 1/10/100 MHz increments, to 5 GHz	\$450.00
HP8443A Tracking Generator, 0.1-110 MHz, LED display	\$700.00
HP8444A Tracking Generator, 0.1-1300 MHz, for 8554B	\$800.00
HP8444A-059 Tracking Generator, 0.5-1500 MHz, for 8554, 8558, etc.	\$1,500.00
HP8445B Preselector, 1.8-18.0 GHz, for HP 8555A	\$800.00
HP8552B IF Section, 1 kHz-110 MHz	\$750.00
HP8553B RF Section, 1 kHz-110 MHz	\$500.00
HP8554B RF Section, 0.1-1250 MHz	\$800.00
HP8554B/8552B/141T Spectrum Analyzer, 100 kHz-1250 MHz, 100 Hz resolution	\$2,000.00
HP8555A RF Section, 0.01-18 GHz	\$950.00
HP8555A/8552B/141T Spectrum Analyzer System, 10 MHz-18 GHz, 100 Hz res.	\$2,250.00
HP8555A/8552B/8445/141 As above, w/1.8-18 GHz Preselector, opt.003 freq. display	\$3,000.00
HP8558B/181TR Spectrum Analyzer, 0.1-1500 MHz, 1 kHz res., w/display	\$2,250.00
HP8559A/181TR Spectrum Analyzer, 0.01-21 GHz, 1 kHz res., w/display	\$4,500.00
TEK 496P Spectrum Analyzer, 10 kHz-1.8 GHz, 30 Hz res., GPIB	\$5,500.00
TEK 7187/603 Spectrum Analyzer, 1.5-18.0 GHz, 30 Hz res., w/display	\$3,400.00
TEK TR503 Tracking Generator, 0.1-1800 MHz, for 4924/5/6	\$1,750.00

<b>NETWORK ANALYZERS</b>	
HP11665B Modulator, 0.15-18.0 GHz, for use with 8755/6/7	\$375.00
HP8405A Vector Voltmeter, 1-1000 MHz	\$700.00
HP8407A/8412A/8601A Network Analyzer, 100 kHz-110 MHz, with sweep generator	\$1,250.00
HP85020A Directional Bridge, 0.01-4.3 GHz, N(f), for 8755/6/7	\$750.00
HP85021A Directional Bridge, 0.01-18.0 GHz, APC7, for 8755/6/7	\$1,200.00
HP85021C Directional Bridge, 10 MHz-18 GHz, N(f), for 8755/6/7	\$1,200.00
HP85050D APC7 Calibration Kit, for 8510 series	\$1,100.00
HP8754A-H26/8748A-H26 Vector Network An., 4-2600 MHz, w/S-Parameter Test Set	\$7,000.00
HP8755C/11666A-02/181T Scalar Network An. w/dir. bridge, 10 MHz-18 GHz & frame	\$1,750.00
HP8756A Scalar Network Analyzer	\$3,000.00
NARDA 7000A/7202/7206 Microwave Multimeter System: scalar analysis, 0.1-18 GHz	\$1,950.00
WILTRON 560 3X-750 Scalar Network Analyzer, w/3 detectors, 0.01-18.5 GHz	\$2,000.00
WILTRON 560 50-98K50 Scalar Network Analyzer, w/VSWR Autotester, 0.01-40 GHz	\$2,950.00
WILTRON 640/G50/E(2)/7B50(2) Network An. w/1-1500 MHz source, (2) log amp, (2) det.	\$1,675.00

<b>SIGNAL GENERATORS</b>	
BOONTON 1020 Synthesized Signal Gen., 0.15-540 MHz, GPIB	\$1,850.00
BOONTON 102C Signal Generator, 0.45-520 MHz, AM, FM	\$850.00
FLUKE 8080A-488 Synth. Signal Gen., 100 kHz-1040 MHz, 100 Hz res., GPIB	\$3,500.00
FLUKE 8080A/AN Synthesized Signal Gen., 10 kHz-520 MHz, 10 Hz res, GPIB	\$2,000.00
GIGATRONICS 605/01-0.8, opt.3 Synthesized Source, 10 MHz-8 GHz, 1 kHz res.	\$3,000.00
GIGATRONICS 605/10-18, opt.3 Synthesized Source, 10-18 GHz, 1 kHz res.	\$3,000.00
GIGATRONICS 605/6-12, opt.3 Synthesized Source, 6-12 GHz, 1 kHz res.	\$3,000.00
GIGATRONICS 875/50 Levelled Multiplier, x4, 50.0-75.0 GHz output, -3 dBm	\$3,500.00

GIGATRONICS 875/86 Levelled Multiplier, 26.5-40.0 & 50.0-75.0 GHz outputs	\$7,000.00
GIGATRONICS 905/05-18, opt.10 Synthesized Source, 50 MHz-18 GHz, 1 MHz res., +10 dBm	\$4,250.00
GIGATRONICS 905/10-20, opt.10 Synthesized Source, 2-18 GHz, 1 MHz res., +10 dBm out	\$3,750.00
HP85100V Frequency Mult., 10-15 GHz in/70-75 GHz out >0 dBm	\$4,250.00
HP8656A Synthesized Signal Gen., 0.1-990 MHz, 100 Hz res., HP1B	\$3,250.00
HP86601A RF Plug-in, 10 kHz-110 MHz, for 8660 series	\$650.00
HP8660C/86602B/86633B Synthesized Signal Generator, 1-1300 MHz, AM, FM, HP1B	\$2,750.00
HP8660C/86603A-002/34A Synthesized Sig. Gen., 1-2600 MHz, phase mod. to 10 MHz	\$4,500.00
HP8683B Signal Generator, 2.3-6.5 GHz, AM, WBFM, Pulse	\$5,000.00
HP8684B Signal Generator, 5.4-12.5 GHz, AM, WBFM, Pulse	\$5,000.00
ROHDE & SCHWARTZ SMK Signal Gen., 10 Hz-140 MHz, -130 dBc/20 kHz phase noise	\$1,750.00
WILTRON 6742A Synthesizer/Sweep Generator, 18.0-26.5 & 26.5-40.0 GHz	\$9,000.00

<b>SWEEP GENERATORS</b>	
EIP 928-opt.9201 Sweep Gen., 1.0-18.6 GHz, step atten., power sweep, GPIB	\$4,000.00
GIGATRONICS 900/05-12, opt.3 Synthesized Sweep/Sig. Gen., 50 MHz-12 GHz, 1 kHz res.	\$4,500.00
HP8350A/86290B-H08 Programmable Sweep System, 2.0-22.0 GHz, +4 dBm lvd	\$5,500.00
HP8601A Generator/Sweeper, 0.1-110 MHz, +20 dBm levelled	\$500.00
HP8620C Sweep Oscillator Frame	\$550.00
HP8620C-011 Sweep Oscillator Frame, HP1B programmable	\$675.00
HP86210A RF Plug-In, 3-350 MHz, +13 dBm levelled	\$450.00
HP86222A-002 RF Plug-In, 10-2400 MHz, 70 dB step attenuator	\$1,750.00
HP86222B-002 RF Plug-In, 10-2400 MHz, crystal markers, 0-70 dB atten	\$1,950.00
HP86240B RF Plug-In, 2.0-8.4 GHz, +13 dBm levelled	\$1,000.00
HP86240C RF Plug-In, 3.6-8.6 GHz, +16 dBm levelled	\$1,200.00
HP86241A-001 RF Plug-In, 3.2-6.5 GHz, +8 dBm levelled	\$500.00
HP86242D-004, 008 RF Plug-In, 5.9-9.0 GHz, +10 dBm levelled	\$500.00
HP86260A RF Plug-In, 12.0-18.0 GHz, +10 dBm levelled	\$1,000.00
HP86290A RF Plug-In, 2.0-18.0 GHz, +7 dBm levelled	\$1,750.00
HP86290B RF Plug-In, 2.0-18.6 GHz, +10 dBm levelled	\$2,000.00
WAVETEK 1001A Sweep Generator, 0.5-300 MHz	\$350.00
WAVETEK 1067 Sweep Generator, 1-4000 MHz, +10 dBm, 75 ohms	\$500.00
WAVETEK 2002 Sweep Gen., 1-2500 MHz in 4 bands, +10 dBm levelled	\$1,500.00
WAVETEK 954 Signal/Sweep Generator, 3.7-7.6 GHz, +7 dBm levelled	\$2,000.00
WAVETEK 962 Sweep Generator, 1.0-4.0 GHz, markers, +12 dBm unlvld	\$2,500.00

<b>POWER METERS</b>	
BOONTON 42B/41-4E Analog Power Meter, with 1 MHz-18 GHz sensor	\$650.00
BOONTON 42B/42A-S3 Analog Power Meter, with 1 MHz-8.4 GHz N(f) sensor	\$375.00
GENERAL MICROWAVE 476/4240A Power Meter & Sensor, 0.01-18 GHz, -35 to +10 dBm	\$375.00
HP11683A Range Calibrator, for HP 435/6/7/8	\$750.00
HP432A/478A Power Meter, 0.01-10 GHz, -20 dBm to +10 dBm f.s.	\$375.00
HP432A/478B Power Meter, 0.01-18 GHz, -20 to +10 dBm f.s.	\$500.00
HP432C Autoranging Digital Power Meter, 10 uW-10 mW f.s.	\$425.00
HP435A/481A Power Meter, 10 MHz-18 GHz, -30 to +20 dBm	\$1,000.00
HP435A/482A Power Meter, 0.1-4200 MHz, -30 to +20 dBm	\$1,000.00
HP435A/482H Power Meter, 0.1-4200 MHz, -15 to +34 dBm	\$1,150.00
HP435A/484A Power Meter, 10 MHz-18 GHz, -70 to -20 dBm	\$1,000.00
HPK486A WR42 Thermistor Mount, 18.0-26.5 GHz, for 432 series	\$400.00
HPK486A Power Sensor, 33.0-50.0 GHz, WR22 waveguide	\$1,500.00
HPK486A WR28 Thermistor Mount, 26.5-40.0 GHz, for 432 series	\$400.00
WAVETEK 1034A Portable Analog Power Meter, 1 MHz-18 GHz	\$375.00

<b>RF MILLIVOLTMETERS</b>	
MILLIVAC MV-723BBS RF Millivoltmeter, 10 kHz-1.2 GHz, 1 mV-30 V	\$375.00
RACAL 9303 TRMS Level Meter, 10 kHz-2 GHz, -77 to +23 dBm, GPIB	\$875.00

<b>AMPLIFIERS, MISCELLANEOUS</b>	
ALITECH 7616 Noise Source, 1.0-12.4 GHz, N(m), 15 dB ENR	\$375.00
ALITECH 7618E Noise Source, 10 MHz-18 GHz, SMA(m), 15 dB ENR	\$500.00
AMPLIFIER RESEARCH IW1000 Amplifier, 30 dB gain, 1-1000 MHz, 1 Watt output	\$650.00
BOONTON 82AD FMAM Modulation Meter, 10-1300 MHz	\$1,000.00
ENI 240L Amplifier, 50 dB, 20-100 MHz, 40 Watts	\$1,250.00
ENI 403LA Amplifier, 37 dB gain, 150 kHz-300 MHz, 3 Watts	\$700.00
ENI 600L Amplifier, 24 dB, 0.8-1020 MHz, 150 mW	\$450.00
ENI A150 Amplifier, 55 dB, 0.3-35.0 MHz, 150 Watts	\$2,000.00
ENI A300 Amplifier, 55 dB, 0.3-35.0 MHz, 300 Watts	\$3,500.00
M.P.D. LAB2-1020-2A Amplifier, 34 dB, 1.0-2.0 GHz, 2 Watts	\$1,000.00
M.P.D. LAB2-110-1E Amplifier, 30 dB, 100-1000 MHz, 1 Watt	\$700.00
M.P.D. LAB2-714-3A Amplifier, 34 dB, 0.7-1.4 GHz, 3 Watts	\$1,000.00
MICROWAVE SEMI.CORP. MCS112 Noise Source, 25.5 dB ENR, 1.0-12.4 GHz, N(m), +28 VDC	\$325.00

## COAXIAL & WAVEGUIDE

ANZAC MDC-171 Mixer, RF/L0-4-18 GHz, LO +7 dBm, IF=DC-4 GHz, SMA	\$135.00
AVANTECH Y083-4037 YIG Tuned Osc., 5.4-10 GHz, +15/-5 V, TUNE & FM coils, NEW	\$100.00
EM SYSTEMS A6110 Dual Polarized Horn, 0.5-2.0 GHz, 0-10 dB gain, N(f)	\$750.00
GR 874-LTL Constant Impedance Trombone Line, 0-44 cm, DC-2 GHz	\$450.00
GR 900-LB Precision Slotted Line, 0.3-8.5 GHz, 50 Ohms 0.1% tol.	\$450.00

GR 900-Q GR900 14mm Interseries Adapters	\$125.00
HP11691D Directional Coupler, 22 dB, 2-18 GHz	\$500.00
HP11692D Dual Directional Coupler, 22 dB, 2-18 GHz	\$900.00
HP3330D Detector, 0.01-33.0 GHz, APC3.5(m)/SMA(f)	\$275.00
HP778D-01 Dual Directional Coupler, 20 dB, 100-2000 MHz	\$400.00
HP779D Directional Coupler, 20 dB, 1.7-12.4 GHz	\$375.00
HP8472A Crystal Detector, 10 MHz-18 GHz, neg. pol., SMA(m)	\$150.00
HPK532A WR42 Frequency Meter, 18.0-26.5 GHz	\$500.00
HPK752A WR42 Directional Coupler, 3 dB, 18.0-26.5 GHz	\$425.00
HPK752C WR42 Directional Coupler, 10 dB, 18.0-26.5 GHz	\$425.00
HPK752D WR42 Directional Coupler, 20 dB, 18.0-26.5 GHz	\$425.00
HPQ752D WR22 Directional Coupler, 20 dB, 33-50 GHz	\$650.00
HPR375A WR28 Variable Attenuator, 0-20 dB, 26.5-40.0 GHz	\$375.00
HPR532A WR28 Frequency Meter, 26.5-40.0 GHz	\$500.00
KRYTAR 202020016 Directional Det., 2-20 GHz, SMA(f)/m)/SMA(f), 10 uV/uW	\$200.00
M/A-COM 3-19-300/10 WR19 Directional Coupler, 10 dB, 40-60 GHz	\$450.00
MAURY MW J320-series WR22 33-50 GHz Calibrated Mismatches	\$375.00
MILLIWAVE S90-1060 Amp., 8 dB, 18-26.5 GHz, +19 dBm Po, 5V 500mA, SMA(f)	\$475.00
MILLIWAVE S91-1777B Amp., 8 dB, 18-26.5 GHz, +16.5 dBm Po, 12V 600mA, SMA(f)	\$325.00
MILLIWAVE S91-1777B Amp., 2.75 dB, 18.0-26.5 GHz, +19 dBm Po, 12V 200mA, SMA(f)	\$150.00
MINI-CIRCUITS ZHL-2.8 Amplifier, 27 dB, 10-1000 MHz, +29 dBm Po, 24V 0.6mA	\$225.00
MITEQ AMP-1269 Amplifier, 30 dB gain, 700-1200 MHz, 1 Watt, 24V 500mA	\$175.00
NARDA 26298 20 dB Attenuator, 150 Watts, DC-1 GHz, N(f)	\$200.00
NARDA 3000-SERIES Directional Couplers	\$150.00
NARDA 3090-SERIES Precision High Directivity Couplers	\$225.00
NARDA 4000-SERIES SMA Miniature Directional Couplers	\$75.00
NARDA 4203-6 Directional Coupler, 6 dB, 2-18 GHz, SMA(f)/m)	\$225.00
NARDA 5070-SERIES Precision Reflectometer Couplers	\$300.00
NARDA 792FF Variable Attenuator, 0-20 dB, 2.0-12.4 GHz	\$375.00
OMNI-SPECTRA 2082-5810-02 Adj. Phase Trimmer, 8-18 GHz, 10 deg./GHz range, SMA(m/f)	\$50.00
PASSIVE MW RHG-1003 WR28 Isolator, 20 dB, 26.5-40.0 GHz, loss <1 dB	\$250.00
PRDN233A/232 Slotted Line, 3-12 GHz, N(m/f), w/cARRIER & detector	\$175.00
RLC AV-70124-R Level Set Attenuator, 0-20 dB, 7.0-12.4 GHz, SMA(f)	\$75.00
SPACE LABS DC-1 WR22 Flat Broadband Detector, 33-50 GHz	\$550.00
SPACE LABS Q-3X 33-50 GHz Tripler, >+3 dBm out for 11-17 GHz +20 dBm in	\$875.00
SPACE LABS U-3X40-60 GHz Tripler, >0 dBm out for 13-20 GHz +20 dBm in	\$875.00
TRGB510 WR22 Precision Rotary Vane Atten., 0-50 dB, 33-50 GHz	\$1,000.00

**SCPIO16****128 Channel I/O Board**

- FREE I/O Tester board when you buy SCPIO16
- Directly drive many popular Solid State Relays.
- Directly drive sensitive mechanical relays.
- Control many different types of devices.
- Monitor wide range of sensors & events.
- Interface to TTL, LS, HCT, ALS, AS, FCT, etc...
- Blows away performance of 8255 I/O boards.
- Outputs source & sink more current than 8255s.
- Powerful yet very inexpensive. With software.
- 16 Byte wide ports. 8 In + 8 Out. 1/2 card size.
- Sustained I/O > 500 K Bytes / Second.
- High noise immunity low load CMOS inputs.
- With power, ground, read & write strobes.
- Cards can share same space via extended I/O.
- Machine pin sockets make field repairs a snap.
- Silk screened, solder masked, & gold plated.
- See SCREWTERM, TERMRACK, SCRELAY8

**SCRELAY64****64 Channel Relay Board**

- 64 SPST 10VA 100 VDC 70 VAC 0.5 AMP relays.
- Use to drive solenoids, valves, relays, contactors.
- 16 Relays per 64 line gold plated header.
- 2 pins per relay line reduces resistance
- Independent A & B lines on all relays
- High density board reduces computer slots used.
- Sensitive relays minimize power consumption.
- Only 1.0 milliseconds to turn on/off relays.
- Long life relays (10,000,000 operations).
- Cards can share same space via extended I/O.
- Power on reset leaves relays open on power up.
- Uses 16 Byte wide ports. 8 Input + 8 Output.
- Full length PC AT form factor card for 8 bit slot.
- Input ports can read back state of any relay.
- Gold plated 64 line headers support 16 relays ea.
- Silk screened, solder masked, & gold plated.
- Includes manual and software.

**SCPROBE****240 Channel Stimulus/Response**

- Ideal to test cables, wire harnesses, PCBs
- Use for ATE, testing switch matrices & boxes.
- 240 Output paired with 240 Input channels.
- Use to stimulate any line
- Then monitoring all other lines for responses.
- Set port 0 to stimulate any 1 of 240 channels
- Set port 1 to monitor selected channel.
- Read port 0 to determine response.
- Then scan 1 to 240 channels for response.
- Multiple boards may be used in system.
- Open collector outputs with 5.1K pullups.
- Every output paired with an input channel
- Uses only 4 ports in PC I/O space.
- Full size fuse protected PC/AT form factor card.
- Gold plated 50 line headers. 48 signal+power/gnd.
- Machine pin sockets make field repairs a snap.
- Silk screened, solder masked, & gold plated.

**SCREWTERM****16 Channel Screw Terminal Board**

- Directly interfaces to any port on SCPIO16.
- Supports 8 Input + 8 Output channels.
- LED Bargraph Displays monitor inputs & outputs.
- Screw terminals for all I/O, control & power lines.
- Termination resistors increase noise immunity.
- Fuse protected power lines.
- Screw terminal blocks socketed for quick release.
- Minimize your setup time.
- Reduce maintenance and repair costs.
- Saves many hours of building & wire wrapping.
- Shrouded Gold plated header with ejectors.
- Boards are Solder Masked & Silk Screened.
- I/O, Pwr, Gnd, Cntrl identified with legends.
- 3"x3" board with mounting holes & hardware.

**TERMRACK****128 Channel Termination Board**

- Directly interfaces to SCPIO16
- Supports full set of 8 SCPIO16 cables.
- Supports 128 channels. 64 Input / 64 Output.
- 2 solder pads for ea. signal, control, & power line
- Provides simple interface to Solid State Relays.
- Easy interface to many other devices.
- Simple interface to wide range of sensors.
- Saves many hours of building & wire wrapping.
- Shrouded Gold plated headers with ejectors.
- Boards are Solder Masked & Silk Screened.
- I/O, Pwr, Gnd, Cntrl identified with legends.
- Large solder pads with plated through holes.
- Wide dual signal traces increase reliability.
- Plenty of well spaced mounting holes.

**Order 7 Days A Week 24 Hours A Day****SCPIO16**

Sink/Source	Price
Standard	7.50 / 7.50 ma

**Quantity Discounts Available**

• We send FAX data sheets & love FAX orders.

**SCRELAY8****8 Optoisolators + 8 Relays**

- Drive solenoids, valves, relays, & contactors.
- Monitor external events & power sources.
- Directly interface to any port on SCPIO16 board.
- 1500 V optically isolated inputs.
- SPST 10VA 100VDC 70VAC 0.5Amp relays.
- Sensitive relays minimize power consumption.
- LED Bargraphs display input & output status.
- Opto inputs monitor AC/DC 0..32 volt lines.
- Independent A & B lines on all relays
- Power on reset leaves relays open on power up.
- Fuse protected power lines.
- Supports use of optional external power supply.
- I/O, Pwr, Gnd, Cntrl identified with legends.
- 5"x5" board with mounting holes & hardware.

**MIDI****SCMIDI16****MIDI****128 Line MIDI Digital I/O Board**

- Control real world devices from MIDI systems.
- Turn 64 digital devices on/off as music plays.
- Accept commands from up to 64 digital inputs.
- FREE I/O Tester board when you buy SCMIDI16
- Accepts MIDI commands from MIDI controllers
- Programmable MIDI Channel number 1..16
- On board computer converts notes to Outputs
- On board computer converts inputs to Notes
- MIDI IN/OUT/THRU on 5 pin DIN connectors.
- Will drive any SCPIO16 accessory
- Uses same cables as SCPIO16
- Drives SCREWTERM, TERMRACK, SCRELAY8
- Will drive upcoming light dimmer board.

**CASH-IN ON GOVERNMENT INDUSTRIAL SURPLUS**

"SSI's Guide to Selling and Buying Government Surplus" provides details on how to Profit from Government Surplus. The author, a former Naval Supply Officer (11 years), Government Contracting Officer and now President of Surplus & Supply International Corp. passes years of technical knowledge to you.

**Knowledge is power... and it can make you Lots of Money.**

**Find out about:**

- Product Identification;
- Extracting vital information from Government coding;
- Locating buyers and markets for surplus, who to call and what to say;
- Preparing winning bid strategies;
- How to exploit free information and what products are commercially available to enhance your sales and research efforts;
- How to maximize profits and minimize risk...and much, much more.

# Conquering Data Sheet Block: It's as Easy as ABC

by Ronald Reis

Yet, all who engage in electronics beyond simple assembly should at least give it a try. Mining the wealth of information contained in component data sheets is essential to amplifying one's understanding of electronic components and circuits.

There's great stuff in those sheets. Component features and description, pin configurations, logic symbols, logic diagrams, function tables, operating parameters, and application notes are the bedrock of every component data sheet. Best of all, these sheets are often free, just for the asking.

In this article, we'll dig step-by-step through key elements of an electronic component data sheet. We will show you what is important to know and what can safely be ignored. When you're through, you'll not only know how to interpret data sheets, you will be eager to do so.

## Data Sheets and Data Handbooks

Data sheets are published by component manufacturers. They are available as separate sheets for each component or, more often, compiled into a data handbook, with a given handbook for a particular component family or subfamily.

ily. The data sheet we will be using for analysis (actually five sheets of paper) is for the FAST TTL 74F85, 4-Bit Magnitude Comparator. Permission to reprint the sheets is granted by Philips Semiconductors.

Two quick points before we begin. First, this article is not about the 74F85; it is about data sheets. We use the 74F85 to illustrate how data sheets in general are structured and how information is presented.

Second, semiconductor manufacturers will, for the most part, classify their handbooks into two series: Integrated Circuits and Discrete Devices. The material presented here pertains primarily to the former, though it is certainly applicable to the latter.

## The Data Sheet — What to Look For

Figure 1

Most integrated circuit data sheets can be broken down into three discernible parts. Part A, *basic product specifications*, tells you what you need to know to select and work with a given component. Part B, *application diagrams (notes)*, shows how to use the component and, in some cases, contains complete project schematics. Part C, *chip characteristics*, provides the design parameters every engineer, and many technicians, must be familiar with. We'll examine each part. While doing so, you will want to refer to Figures 1-5.

## Part A: Basic Product Specifications

This part usually contains six distinct elements, although some manufacturers will combine various elements.

1) *Identification Number and Functional Description*. Under identification number the series, function, and subfamily (if required) are given. The functional description is the complete device name.

Looking at Figure 1, the identification number is 74F85. The 74 is the *series*, in this case TTL commercial. The 85 represents the *function*, comparator. The F designates the *subfamily*, FAST, a high-speed version of the basic TTL series.

The functional description is for a 4-Bit Magnitude Comparator.

2) *Features*. Here are presented the chip's "selling" points, its capabilities. In Figure 1, we see that, among other features, with enough 74F85s, binary words of any size can be compared without extra gating.

3) *Description*. With this element we get down to detail: basic operating characteristics, what pins do what, and whether they are active-LOW or active-HIGH.

As we see in Figure 1, the description (which includes the Input and Output Loading and Fan Out Table) will often refer to other elements, such as the logic symbols and function table.

4) *General Parameters*. Here is provided a quick overview of basic guidelines — typical supply current and typical propagation delay, for instance.

Our 74F85 (as shown in Figure 1, right) operates with a typical propagation delay of 7.0 ns and a total supply current of 40 mA.

5) *Ordering Information*. These specifications are usually limited to packaging styles and supply voltage range.

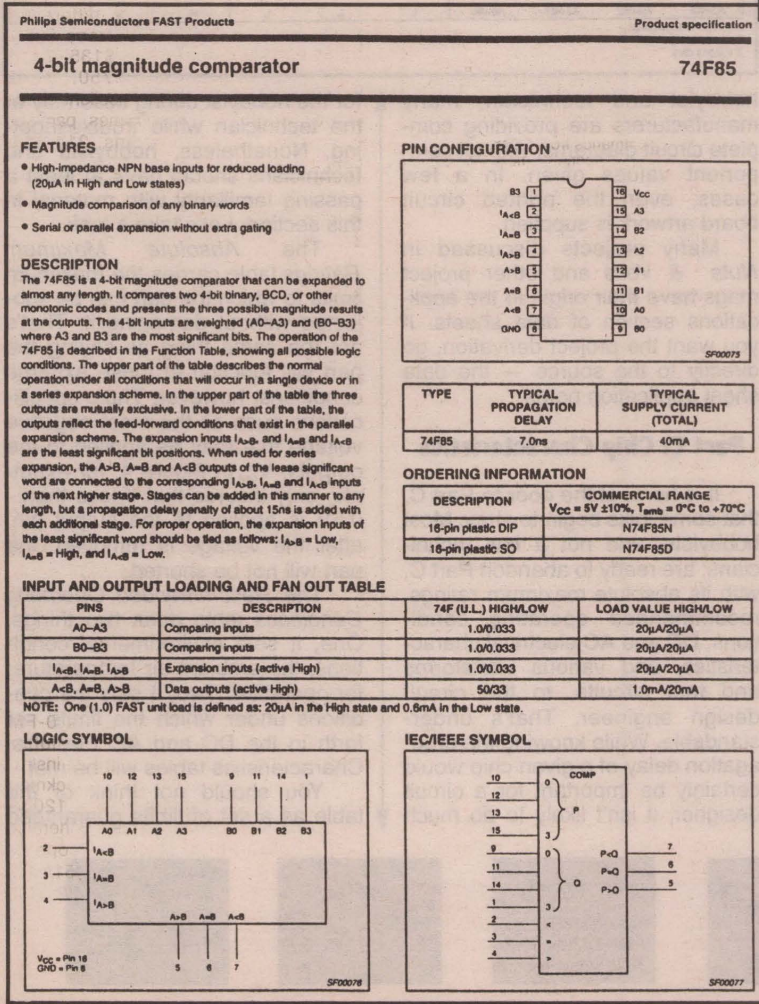

The 74F85 comes in a DIP (dual-in-line package), through-hole version and an SO (small outline) surface mount configuration (Figure 1). Supply voltage is typical for commercial TTL: 5V with a tolerance of plus and minus 10%.

6) *Pin Configuration, Logic Symbols, Logic Diagram, and Function Table (Truth Table)*.

The *pin configuration* shows the top view of the component (IC) with pin 1 in the upper left corner and the last pin in the upper right corner. The configuration identifies input, output, and supply voltage pins.

The *logic symbols* depict, in simplified form, the relationship of each input of a digital logic circuit to each output.

There are two types of logic symbols. The conventional symbol explicitly shows the internal logic (except for complex logic). The other is the ANSI/IEEE logic symbol. The latter has two advantages over the former. One, it is much simpler, since no internal logic is depicted. Two, many circuit characteristics for which there were no previous symbolic representation can now be portrayed — open-collector, open-emitter, and three-state outputs, to name just a few.

The logic diagram is often, but not always, included (Figure 2). It shows the internal logic of a digital IC, gate-for-gate. While the user has no control over what's inside, having the diagram to peruse often relieves the claustrophobic "black box" feeling one gets when working with such chips.

Finally, there is the *function table*, or *truth table*, one of the most important elements in a digital IC data sheet. The table lists all input and output possibilities.

Examining the function table for the 74F85, Figure 2, we see that there are four pairs of inputs and three outputs. There are also three expansion inputs. The description element details what is taking place in the function table. However, with experience, you should be able to read a function table with little or no accompanying written explanation.

If you're a hobbyist, or even a technician, you'll probably get more from Part A than either Parts B or C. It is in Part A, with its six elements, that the main features of a given component are illustrated and explained.

## Part B: Application Diagrams (Notes)

Part B doesn't always exist; when it does, consider it a bonus from the manufacturer.

In some cases, with small-scale integration (SSI), for instance, there isn't much to say with regard to applications. Discrete gates, such as are found in a 74F00 Quad 2-Input NAND Gate or a 74F04 Hex Inverter have uses, of course, yet they are rarely seen by themselves. But as we move to medium-scale integration (MSI) and beyond, application notes become invaluable.

Often the note will simply illustrate and explain how a chip can be cascaded or otherwise expanded. In Figure 3, we see a parallel expansion scheme that demonstrates the most efficient way to increase word length by using a number of 74F85s. In the illustration, two 24-bit words are compared.

The final outputs will tell us whether word B is greater than word A ( $A < B$  output goes HIGH), whether word B is less than word A ( $A > B$  output goes HIGH), or whether word B is equal to word A ( $A = B$  output goes HIGH). As the table in the figure indicates, the parallel technique can be expanded to any number of bits.

The application in Figure 3 is given in block diagram form. To build the actual circuit, you have to turn the block into a complete, working schematic.

Luckily for the

4-bit magnitude comparator

74F85

### APPLICATION

The parallel expansion scheme shown in Figure 1 demonstrates the most efficient general use of these comparators. The expansion inputs can be used as a fifth input bit position except on the least significant device, which must be connected as in the serial scheme. The expansion inputs used by labeling Ia>b as an "A" input, Ia=b as a "B" input and setting Ia<b = Low. The 74F85 can be used as a 5-bit comparator only when the outputs are used to drive the (A0-A3) and (B0-B3) inputs of another 74F85 device. The parallel technique can be expanded to any number of bits as shown in Table 1.

Table 1.

WORD LENGTH	NUMBER OF PACKAGES	TYPICAL SPEEDS 74F
1-4 bits	1	12ns
5-24 bits	2-6	22ns
25-120 bits	8-31	34ns

hobbyist and technician, many manufacturers are providing complete circuit diagrams, with all component values given. In a few cases, even the printed circuit board artwork is supplied.

Many projects discussed in *Nuts & Volts* and other project mags have their origin in the applications section of data sheets. If you want the project derivation, go directly to the source — the data sheet application notes.

## Part C: Chip Characteristics

It is here, at the door to Part C, that some folks begin to stray. Most hobbyists, and not a few technicians, are ready to abandon Part C, with its absolute maximum ratings, recommended operating conditions, DC and AC electrical characteristics, and various waveforms and test circuits, to the circuit design engineer. That's understandable. While knowing the propagation delay of a given chip would certainly be important for a circuit designer, it isn't likely to do much

for the hobbyist during assembly or the technician while troubleshooting. Nonetheless, hobbyists and technicians should have at least a passing familiarity with material in this section. Let's take a look.

The *Absolute Maximum Ratings* table carries the maximum limits to which the part can be subjected without damaging it. That's not the same thing as saying the part will function at these extreme conditions, however. Thus, specifications such as the most negative voltage that may be applied to the outputs,  $V_{out}$  in Figure 4, for example, only insures that if less than -0.5V is applied to the output pin, after the voltage is removed, the part will not be shorted.

The *Recommended Operating Conditions* table does two things. One, it sets environmental conditions, the ambient air temperature, for operation. Two, it sets the conditions under which the limits set forth in the DC and AC Electrical Characteristics tables will be met.

You should not think of the table as a set of limits guaranteed

## 4-bit magnitude comparator

74F85

## ABSOLUTE MAXIMUM RATINGS

(Operation beyond the limits set forth in this table may impair the useful life of the device. Unless otherwise noted these limits are over the operating free-air temperature range.)

SYMBOL	PARAMETER	RATING	UNIT
$V_{CC}$	Supply voltage	-0.5 to +7.0	V
$V_{IH}$	Input voltage	-0.5 to +7.0	V
$I_{IH}$	Input current	-30 to +5	mA
$V_{OH}$	Voltage applied to output in High output state	-0.5 to $V_{CC}$	V
$I_{OH}$	Current applied to output in Low output state	40	mA
$T_{amb}$	Operating free-air temperature range	0 to +70	°C
$T_{stg}$	Storage temperature range	-65 to +150	°C

## RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER	LIMITS			UNIT
		MIN	NOM	MAX	
$V_{CC}$	Supply voltage	4.5	5.0	5.5	V
$V_{IH}$	High-level input voltage	2.0			V
$V_{IL}$	Low-level input voltage			0.8	V
$I_{IK}$	Input clamp current			-18	mA
$I_{OH}$	High-level output current			-1	mA
$I_{OL}$	Low-level output current			20	mA
$T_{amb}$	Operating free-air temperature range	0		+70	°C

## DC ELECTRICAL CHARACTERISTICS

(Over recommended operating free-air temperature range unless otherwise noted.)

SYMBOL	PARAMETER	TEST CONDITIONS <sup>1</sup>	LIMITS		UNIT
			MIN	TYP <sup>2</sup>	
$V_{OH}$	High-level output voltage	$V_{CC} = \text{MIN}, V_{IL} = \text{MAX}$ $V_{IH} = \text{MIN}, I_{OH} = \text{MAX}$	$\pm 10\% V_{CC}$	2.5	V
$V_{OL}$	Low-level output voltage	$V_{CC} = \text{MIN}, V_{IL} = \text{MAX}$ $V_{IH} = \text{MIN}, I_{OL} = \text{MAX}$	$\pm 10\% V_{CC}$	0.30	V
$V_{IK}$	Input clamp voltage	$V_{CC} = \text{MIN}, I_{IK} = I_{IK}$	-0.73	-1.2	V
$I_{IH}$	Input current at maximum input voltage	$V_{CC} = 0.0V, V_I = 7.0V$		100	$\mu A$
$I_{IH}$	High-level input current	$V_{CC} = \text{MAX}, V_I = 2.7V$		20	$\mu A$
$I_{IL}$	Low-level input current	$V_{CC} = \text{MAX}, V_I = 0.5V$		-20	$\mu A$
$I_{OS}$	Short-circuit output current <sup>3</sup>	$V_{CC} = \text{MAX}$	-80	-150	mA
$I_{CC}$	Supply current (total)	$V_{CC} = \text{MAX}$ $V_{IN} = \text{GND}$ $A_0 = B_0 = I_{A0B} = \text{GND},$ $I_{A0B} = I_{A0B} = 4.5V$	36	50	mA

NOTES:  
1. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions for the applicable type.  
2. All typical values are at  $V_{CC} = 5V, T_{amb} = 25^\circ C$ .  
3. Not more than one output should be shorted at a time. For testing  $I_{OS}$ , the use of high-speed test apparatus and/or sample-and-hold techniques are preferable in order to minimize internal heating and more accurately reflect operational values. Otherwise, prolonged shorting of a High output may raise the chip temperature well above normal and thereby cause invalid readings in other parameter tests. In any sequence of parameter tests,  $I_{OS}$  tests should be performed last.

by a manufacturer. Rather, see it as the conditions the company (in our example, Philips Semiconductors) uses to test the parts and guarantees that they will then meet the limits set forth in the DC and AC Electrical Characteristics tables. Thus, in Figure 4, if  $V_{CC}$  is between 4.5 and 5.5 volts; if  $V_{IH}$  stays above 2.0 volts; if  $V_{IL}$  is held to a maximum of 0.8 volts; and if  $I_{IK}, I_{OH}$ , and  $I_{OL}$  do not exceed -18mA, -1mA, and 20mA, respectively, Philips Semiconductors guarantees the data in the DC and AC Electrical Characteristics tables, Figures 4 and 5. Of course, the operating free-air (ambient) temperature range must remain between 0 and +70 degrees Centigrade.

The DC Electrical Characteristics table reflects the DC limits used by the manufacturer during their testing operations conducted under the conditions set forth in the Recommended Operating Conditions table. If we compare both tables in Figure 4, we see  $V_{OH}$  is guaranteed to be no less than 2.7V when tested with  $V_{CC} = 4.5V, V_{IH} = 0.8V$  across the

temperature range of 0 to 70 degrees Centigrade, and with an output current of  $I_{OH} = 1.0mA$ .

Finally, the AC Electrical Characteristics table contains the guaranteed limits when tested under the conditions set forth in the AC Test Circuits and Waveforms section (Figure 5). The latter shows a test circuit and accompanying input pulse waveforms.

Don't let data sheet letter symbols, with their various subscripts, intimidate you. Remember, the subscript simply limits, or narrows, the main term. Take the symbol  $V_{IH}$ , for example. The V indicates voltage. The two subscripts, I and H, clarify what voltage: minimum input voltage (I) when the gate is HIGH (H).

All data handbooks provide symbol definitions, usually in the front of the manual. It is a good idea to look over this, and other introductory material, before attempting to analyze individual component information. Thus equipped, you'll be ready to chop away at any data sheet you encounter.

Figure 4

## Building Your Own Data-Sheet Library

You don't have to be a working engineer to acquire data sheets. As a hobbyist or technician, you can develop your own reference library of data handbooks and sheets. Here is the what, how, and where of ordering.

1) *What to Order.* If you have a particular component in mind, then order the data sheet for that component. In some cases, however, you may be sent the entire handbook. If the latter is what you want in the first place, specify the type of handbook by family or subfamily — for example, with ICs, *TTL Data Handbook* or *High-Speed CMOS Data Handbook*.

2) *How to Order.* Just ask, by phone, fax, or mail. Don't feel intimidated just because you may be a hobbyist. Remember, data handbooks advertise a company's product line; the company will willingly give them away to anyone who can use them.

3) *Where to Order.* Most of the larger semiconductor companies are listed in various manufacturers' indexes. If you can't find such an index, simply look for the company's name in the phone book. You may get the local distributor who will then turn you over to the company's Technical Literature and Documentation Department.

Remember, keep your requests modest. Don't just say, "Send me everything you have." A specific request will ensure a prompt and satisfactory response.

Hopefully, with this introduction, you feel a bit more at ease about data sheets and handbooks. Although you will encounter more complex data sheets than the one examined here, most will contain the three parts and various elements discussed.

Identify the parts and elements first. You might even clock them out with a pencil or highlighter. Then begin your analysis. Any data block you may have had should erode with every new sheet you attack.

## 3M STATIC CONTROL PRODUCTS

8200 SERIES STATIC CONTROL FLOOR AND TABLE MATS

8200

BRAND NEW  
BROWN 2 FT. X 5 FT. MATS  
LIST PRICE \$70.00  
BRIGAR SALE PRICE \$20.00

Static control mats have three layer construction. The top layer is semi-conductive vinyl, with a resistivity sufficiently low to discharge static-laden conductors yet prevent the shorting of PC boards laid on the mat. The second layer is a highly conductive scrim, which provides the main discharge path to ground. The third layer is non-conductive foam backing, which prevents the bypassing of the protective conductive layers.

### #80 TEST EQUIPMENT cont.

**ANALYZER SALE** Spectrum Analyzer HP 141T/8552A/8553B, \$1,245. Others available. All excellent with warranty. Call for FAX list of surplus test equipment. Psitech Plus, 707-745-4804. FAX 707-747-5277.

**THIS LOW circuit loading SCOPE PROBE** produces a 60dB SPECTRUM ANALYZER display on your inexpensive scope. Excellent EMI/compliance tool. Request Technical Tips for line conduction, field strength, and current probe. 255 Spectrum Probe 30KHz to 2.5MHz \$279. 107 Probe 1 to 100 MHz \$249 (\$279 extra shielding). Accessory Current Adapters: IA5 \$19, IA7 \$29. **SMITH DESIGN**, 215-661-9107, 207 E. Prospect Ave., N. Wales, PA 19454.

**HP 3580A** Audio spectrum analyzer \$850, noise figure meter Rohde Schwarz SKTU 1 to 1,000MHz range \$275. Tektronix 1,000MHz sampling storage oscilloscope model 564/3S1/3T77A \$350, 110MHz spectrum analyzer with tracking generator HP141T system complete \$1,000. 513-658-4951.

**WANTED: SERVICE** monitors-IFR, Motorola, Marconi, HP, Hewlett Packard signal generators, etc. 716-661-9964 or FAX 716-763-0371.

**RF EQUIPMENT:** HP 5342A/1 18GHz microwave counter (oven time base) \$2,220. Tek TR 503 .1 to 1800MHz tracking generator, calibrated \$1,400. HP 3403C/3.6 true RMS digital voltmeter (DC-100MHz, autoranging, remote control, dB display) \$375. HP 8660C/005, 100 synthesized signal generator mainframe \$1,700. HP 86222B .01 to 2.4GHz sweep oscillator plug-in \$1,600. HP 8505A RF network analyzer .5 to 1300MHz, 100dB dynamic range, with phase-lock option 005 and HP 8501A storage normalizer. Bright CRT. \$3,700. Tek P6201 900MHz active probe \$350. Excellent condition, with warranty. Pepper System, 214-353-0257.

**WANTED: MEASURING & Test** equipment, microwave components, RF connectors, etc. **Top price paid!** Write or FAX you list to: **Steigerwald GmbH**, Ungererstrasse 180, D-80805 Munich, Germany. FAX 011-49-89-3615899.

**LOW-COST AUTOMATIC** wire & tubing measure/cut machine, the Model PMC-110 by Red Line Mfg., Co. 314-831-3014. FAX 314-831-3927.

**WANTED DOLCH** model ALP44 active logic probes (and possibly other 4850A compatible accessories) 708-358-3275.

**TEKTRONIC D/A. 4041/03/30**, IEEE488 system controller, 2 RS232C ser. ports, SCSI port, program development ROMs \$999. Two M15010, Programmable multi-function interface with 3 50M10 programmable A/D converters each, 12 bit, 32 usec. MX5010 Extender with 1 50M10 \$1,999. TM5006 6 wide mainframe \$249. AM501 Op. amp. \$169, TSS41-01 (new) QTY 3 20 channel low level scan card <1uV offset \$249 each. TSS42 30 channel scan card \$149. TSS44 coax scanner module \$149. ERAC Co., 619-679-8360, FAX 619-679-6670.

**RADIO REPAIR:** Commercial and amateur two-way. Portables a specialty. Reasonable rates. Call Mike N9VWW at REYNOLDS RADIO, 219-482-5630.

**SPECTRUM ANALYZERS FOR AUDIO, BROADCAST, VIDEO:** Tek 7L5/L3 spectrum analyzer, 20Hz-5MHz, digital storage \$1,500; with tracking generator \$2,000. HP 3580A spectrum analyzer, 5Hz through 50KHz, 1Hz resolution bandwidth, digital storage, adaptive sweep, tracking generator \$1,195 to \$1,695. Anritsu MS420B powerful spectrum/network analyzer, 10Hz through 30MHz, 3Hz resolution bandwidth, digital storage, tracking generator \$2,700. All in excellent condition. All with warranty. Pepper Systems, 214-353-0257.

**GENERAL RADIO 1650-B** impedance bridge \$325, Dexis 612-944-7670.

**TEKTRONIX TEST EQUIPMENT FOR AUDIO, BROADCAST, VIDEO:** AM 503 & A6302 current probe & amplifier (to 5 A/div; DC to 50MHz) \$890. FG 502 audio to 11MHz function generator \$275. FG 504 audio to 40MHz function generator, lin/log sweep \$750. PG 508 50MHz pulse generator (variable rise, fall times) \$325. DM 502A auto-ranging multimeter \$215. AA 501 distortion analyzer \$1,250. DA 4084 distortion analyzer (like AA 5001) \$1,250. 466 100MHz portable storage oscilloscope \$845. 485 350MHz portable oscilloscope \$795. 7633 100MHz storage mainframe \$475. 7A22 high-sensitivity differential vertical amplifier \$375. AM 502 high-sensitivity differential amplifier \$375. 7854 400MHz oscilloscope mainframe: digital storage, waveform processing, GPIB \$975. 7D20 digital storage plug-in: cursor measurements, min/max enveloping, signal averaging \$825. 149A NTSC generator \$775. Excellent condition, with warranty. Pepper Systems, 214-353-0257.

**TEST EQUIPMENT Manuals**, mostly Hewlett Packard and Tektronix. Buy, sell, trade. Send us your want list. **Ed Matsuda**, PO Box 390613 San Diego, CA 92149. 619-479-0225, FAX: 619-479-1670.

**HP 3964A** Instrumentation recorder. \$2,200/offer. Dexis, 612-944-7670.

**HP 1747A** 275MHz storage oscilloscope excellent condition \$700, obo, comes with time interval multimeter. 415-383-4705.

# Introduction to Stepper Motors

by John Iovine

**S**tepper motors have widespread applications in robotics, automation, and positioning control. These motors are an integrated component in many commercial and industrial type equipment. For home PC users, stepper motors can be found in disk drives and printers.

Stepper motors are unique in that they are easily controlled by digital circuits and capable of precise positioning. We will build a simple stepper motor interface to the PC parallel port to examine the operating principles of stepper motors.

Stepper motors differ from typical electric motors. When power is applied to a standard electric motor, the rotor begins turning smoothly. Speed and position of the motor's rotor are a function of voltage, load on the motor, and power on time. Precise positioning of the rotor is not possible.

A stepper motor, however, runs on a sequence of electric pulses to

range of rotation per step can vary from a fraction of a degree (i.e., 72 degrees) to many degrees (i.e., 22.5 degrees).

## Basic Operations

Stepper motors are constructed using strong permanent magnets and electromagnets. The permanent magnets are located on the rotating shaft; called the rotor. The electromagnets or windings are located on the stationary portion of the motor called the stator. Figure 1 illustrates a stepper motor stepping through one complete rotation. The stator surrounds the

rotor.

In Figure 1 position A, we start with the rotor facing the upper electromagnet that is on. Moving in a CW (clockwise) rotation, the upper electromagnet is switched off, as the electromagnet on the right is switched on. This moves the rotor 90 degrees in a CW rotation, shown in position B. Continuing in the same manner, the rotor is stepped through a full rotation until we end up in the same position we started in.

## Resolution

The degree of rotation per pulse is the resolution of the stepper motor. In the illustrated example of Figure 1, the rotor turned 90 degrees per pulse, not a very practical motor. A practical stepper motor has a greater resolution, for instance, one that rotates its shaft one degree per pulse (or step). This motor requires 360 pulses (or steps) to complete one revolution.

When a stepper motor is used for positioning in a linear motion table, it becomes apparent that each step of the motor defines a precise increment of linear movement.

In comparing two potential stepper motors, the ability to locate and position more precisely on the table would be the stepper motor with the higher resolution. (One that requires the most steps per revolution.)

Figure 1

Figure 2

Figure 3

the windings of the motor. Each pulse to a winding turns the rotor by a precise predetermined amount. The incremental movement of the rotor are often called steps. Hence the name, stepper motors.

Not all stepper motors rotate the rotor by the same amount per step. Stepper motors are manufactured with different degrees of rotation per step (or pulse). The optimum degrees per step a stepper motor should have will depend upon the application. Stepper motor specifications clearly state the degree of rotation per step. You can find a variety of stepper motors whose

Table One  
Full-Step Parallel Port Output (decimal)

Q1	Q2	Q3	Q4	
on	-	-	-	1
-	on	-	-	2
-	-	on	-	4
-	-	-	on	8

Table Two  
Half-Step Parallel Port Output (decimal)

Q1	Q2	Q3	Q4	
on	on	-	-	1

-	-	on	on	12
-	-	-	on	8
on	-	-	on	9

Figure 4

Assume that one revolution of the motor is equal to one inch of linear travel on the table. A stepper motor that rotates 3.75 degrees per step, the increment of linear movement is approximately .01 inch per step. If a greater resolution is required, a one degree per step motor would give approximately .0027 inch per step. The increment of movement is in proportion to the degrees per step.

## Half-Step

It is possible to double the resolution of some stepper motors by a process known as *half-stepping*. The process is illustrated in Figure 2. In position A, the motor starts with the upper electromagnet switched on, as before. In position B, the electromagnet to the right is switched on while keeping power to the upper coil on. Since both coils are on, the rotor is equally attracted to both electromagnets and positions itself in between both positions (a half step). In position C, the upper electromagnet is switched off and the rotor completes one step. Although I am only showing one half-step, the motor can be half-stepped through the entire rotation.

## Other Types of Stepper Motors

There are four wire stepper motors. These stepper motors have two coils, with a pair of leads to each coil. Although the circuitry of this stepper motor is simpler than the one we are using, it requires a more complex driving circuit. The circuit must be able to reverse the current flow in the coils after it steps.

## Real World

The stepper motor illustrated rotated 90 degrees per step. Real world stepper motors employ a series of mini-poles on the stator and rotor.

The mini-poles reduce the degrees per step and improves the resolution of the stepper motor. Although Figure 3 appears more complex, its operation is identical to the previous illustrations.

The rotor in Figure 3 is turning in a counter clockwise (CCW) rotation. In position A the north

excellent tool to use if you're checking out a different stepper motor from the one used in this article.

Look at Figure 5. The output lines from the parallel port are buffered using two 4049 hex inverter chips. Since each inverter inverts the signal from the line, each output line is connected to two inverters to make the output signal the same as the input signal.

Each buffered signal line is connected to an NPN transistor. The TIP 120 transistor is actually a NPN Darlington. In the schematic, it is shown as a standard NPN. The TIP

vides a safe return path for the reverse current. Without the diodes, the transistor will be more prone to failure and/or shorter life.

## Stepper Motors

Figure 6 is an electric equivalent circuit of the stepper motor we are using. The stepper motor has six wires coming out from the casing. We can see from Figure 6 that three leads go to each half of the coil windings, and that the coil windings are connected in pairs. If you just picked this stepper motor and didn't know any-

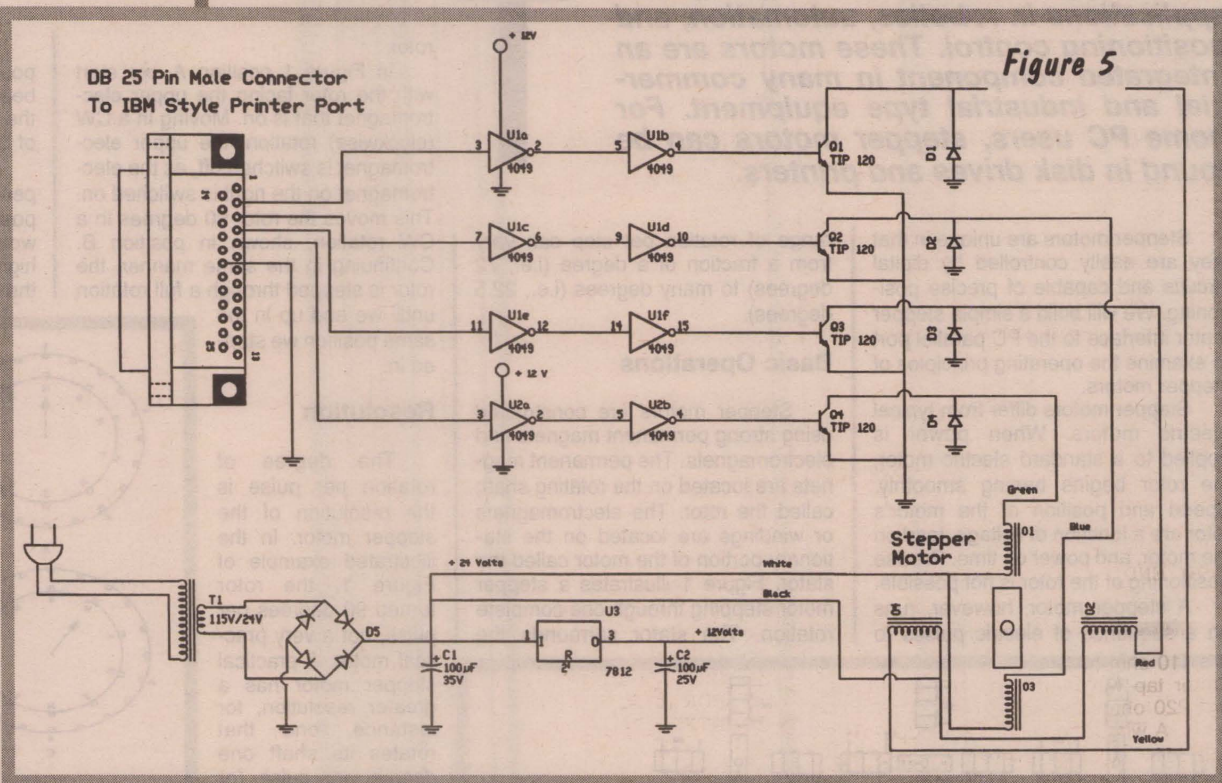

Figure 5

pole of the permanent magnet on the rotor is aligned with the south pole of the electromagnet on the stator. Notice that there are multiple positions that are all lined up. In position B the electromagnet is switched off and the coil to its immediate left is switched on. This causes the rotor to rotate CCW by a precise amount. It continues in this same manner for all the steps. Examine the pole relationship between IV and V. The rotor is still moving CCW, and in position V the stator poles are in the same orientation as position I. This is where the sequence of electric pulses would begin to repeat themselves and keep the rotor turning CCW.

Figure 4 illustrates the half-step with the multi-pole position. It is identical to the half-step described before.

## Test Circuit

Although we are going to connect the stepper motor to a dedicated IC, I feel it would be a good idea to build a basic parallel port interface controller first. With this manual circuit, you can check and verify your wiring of the stepper motor. In addition it's an

120 transistors act like switches, turning on one stepper motor coil at a time.

The diodes placed across each transistor protect the transistor from the inductive surge created when switching current on and off in the stepper motor coils. The diode pro-

thing about it, the simplest way to analyze it is to check the electrical resistance between the leads. By making a table of the resistances measured between the leads, you'll quickly find which wires are connected to which coils.

On the motor we are using, there

## Parts List

is a 110-ohm resistance between the center tap wire and each end lead, and 220 ohms between the two end leads. A wire from each of the separate coils will show an infinitely high resistance (no connection) between them.

Armed with this information, you can just about tackle any six wire-stepper motor you came across. The stepper motor we are using rotates 1.8 degrees per step.

### Test Circuit Demo

After you have finished the test

circuit, run the Step1.bas program. You can use Table 1 and Table 2 to follow the logic for the two stepper motor programs.

When you reach the end of the table the sequence repeats, starting back at the top of the table.

### One Rotation

Using whole steps, the stepper motor requires 200 pulses to complete one rotation (360 degrees 1.8 degrees per step). Controlling the positioning and rotation of the stepper motor is determined by the amount of pulses the program feeds the stepper motor. By controlling the pulses, you control the stepper motor.

In the program I have written, the program stops when any key is pressed. Just before the program ends, it throws out a 0 (zero) to the parallel port. This turns off all the transistors and stops any current drain through the stepper motor coils.

In some instances, you may want to keep some coils energized. When the coils are energized, it is much harder to rotate the shaft. Therefore, if one has a need to lock the stepper in position, this is a technique that will do so. Prepare for the current drain and the subsequent heating of the components.

table the sequence repeats, starting back at the top of the table.

### Reversing Direction

To reverse the rotation of the stepper motor, reverse the sequence of the table. Start at the bottom of the table and work up, repeating the sequence as long as needed.

### Troubleshooting

If you use the stepper motor listed in the parts list, I don't think you'll run across any problems. If you should, the first thing to check is the diodes. Make sure you have them in properly, facing in the direction shown in the schematic.

If the stepper motor moves slightly and quivers back and forth, you may need to check the following items:

1) If you are using batteries, the batteries may be too weak or worn out to power the motor.

*Solution:* Replace them with fresh batteries. Note: Batteries wear out quickly.

2) If you substituted the TIP NPN transistor for another one of lower quality.

The transistor may not be switching properly or the current load of the stepper motor may be too great.

*Solution:* Use TIP 120 transistors.

3) You have the stepper motor improperly wired into the circuit.

*Solution:* Check the coils using an ohmmeter and rewire, if necessary.

### Going Further

Next month, we will incorporate dedicated

integrated circuits, powering, and controlling stepper motors. This will allow the parallel port to control a multiple amount of stepper motors easily. In addition, we will use our stepper motor circuit to create a linear motion table. Till next time... NV

### Half-Stepping

Half-stepping the motor effectively doubles the resolution. In this instance, it requires 400 pulses to complete one rotation.

When you reach the end of the

**XANDI ELECTRONICS, INC.**

1270 E Broadway # 113, Tempe AZ 85282

**Electronic KITS!**

BUY WITH CONFIDENCE

• 30-DAY REFUND POLICY  
• TECH SUPPORT NUMBER  
(602-894-0992)

• Miniature photo battery mounts right on circuit board. (Included with kit)  
• Tunes 88-108 MHz.  
• Up to 1/2 mile range.  
• Sensitive 2 stage audio amplifier, picks up sounds at the level of a whisper.

### MICRO-MINIATURE FM TRANSMITTER

Including the battery, this is the Worlds smallest FM transmitter. Use with any FM broadcast receiver. Easy to assemble, uses pre-assembled circuit board.

**XWB1000 E-Z KIT** ..... \$49.95

• Smallest FM transmitter anywhere!  
• Tunes 88-108 MHz.  
• Powerful 2 stage audio amplifier.  
• Sensitive, picks up sounds at the level of a whisper.  
• Up to 1 mile range.

### SUPER-MINIATURE FM TRANSMITTER

Worlds smallest FM transmitter. Use with any FM broadcast receiver. Easy to assemble, all chip components are pre-assembled to the circuit board.

**XST500 (E-Z) Kit** ..... \$44.95

• Digital voice changing: male to female, female to male, adult to child, child to adult.  
• 16 levels of voice masking.  
• Button for normal operation.  
• Complete anonymity on all calls.  
• Not a kit, fully assembled.

### VOICE CHANGING TELEPHONE

STOP THOSE ANNOYING TELEPHONE CALLS! Sound older and tougher when you want to. Not a kit. Fully assembled. Single phone operation only.

**TRANSITION 2000** ..... \$89.95

• Uninterrupted coverage of 800 to 950 MHz.  
• Works with any scanner that can receive 400 to 550 MHz.

### 800-950 MHz SCANNER CONVERTER

If your scanner can receive 400-550 MHz, just add the XLC900 for uninterrupted 800-950 MHz coverage. It converts all 800-950 MHz signals down to 400-550 MHz so your scanner can receive them! Add our custom case and knob kit for that "Professional" look.

**XLC900 KIT** ..... \$49.95

**XLC-MATCHING CASE SET** ..... \$13.95

• Transmits at 143 MHz.  
• Up to 1/2 mile range.  
• Miniature photo battery mounts right on circuit board. (Included with kit)  
• Amazing audio sensitivity, picks up sounds at the level of a whisper.

### CRYSTAL CONTROLLED TRANSMITTER

This is the Worlds smallest crystal controlled FM transmitter. Transmits to any scanner type receiver. Easy to assemble, uses pre-assembled circuit board.

**XTL1000 E-Z KIT** ..... \$69.95

• Smallest Phone transmitter anywhere!  
• Tunes 88-108 MHz.  
• No batteries required, powered by phone line.  
• Up to 1/4 mile range.  
• Attach to phone line anywhere in house.

### SUPER-MINIATURE PHONE TRANSMITTER

Worlds smallest FM phone transmitter. Use with any FM broadcast receiver. Easy to assemble, all chip components are pre-assembled to the circuit board.

**XSP250 (E-Z) Kit** ..... \$34.95

• Digital voice changing: male to female, female to male, adult to child, child to adult.  
• Use with any modular phone.  
• 16 levels of voice masking.  
• Connects between handset and phone.  
• Not a kit, fully assembled.

### VOICE CHANGING ACCESSORY

STOP THOSE ANNOYING TELEPHONE CALLS! Sound older and tougher when you want to. Not a kit. Fully assembled. Use with single or multi-line phones.

**TRANSITION 2001** ..... \$59.95

• Transmit high quality stereo to any FM stereo receiver.  
• Built in output level monitor for quick and easy tuning.  
• Ideal for use with personal CD player.

### FM STEREO TRANSMITTER

Transmit full bodied Hi Fi stereo to any FM stereo receiver. Separate left and right inputs and gain controls. Includes an output booster stage for greater range.

**XFS108 KIT** ..... \$41.95

**XFS-MATCHING CASE SET** ..... \$13.95

• Uses sensitive microwave transistor amplifier.  
• Covers 1 to 2,000 MHz.  
• Compact hand held unit.  
• Includes miniature loud speaker for audio indication of detected signals.

### SUPER SENSITIVE BUG DETECTOR

When the XBD200 intercepts a signal in the 1 to 2,000 MHz range, it emits a growl that increases to a high pitched squeal as the signal strength increases.

**XBD200 (C) Kit** ..... \$49.95

• Powerful 2 stage audio amplifier.  
• Up to 1 mile range.  
• Use with any FM broadcast receiver.  
• Hear every sound in an entire house!

### MINIATURE FM TRANSMITTER

The XFM100 has a super sensitive microphone and is capable of picking up sounds at the level of a whisper and transmitting them to any FM broadcast receiver.

**XFM100 (C) Kit** ..... \$32.95

• Transmits a continuous beeping tone.  
• Adjustable from 88 to 108 MHz.  
• Up to 1 mile range.  
• Works with any FM broadcast receiver.  
• Operates from battery voltages of 3 to 18 volts.

### TRACKING TRANSMITTER

Measuring 0.7 by 2.4 inches, the XTR100 is ideal for use in locating lost model rockets, bicycles, automobiles, games of hide and seek, and costumes.

**XTR100 (C) Kit** ..... \$33.95

• Dial your phone from anywhere and listen to the sounds inside your home.  
• Two digit Touch Tone code for secure operation.

### TELEPHONE SNOOP

The latest in home or office security. Dial home from any other telephone, enter a two digit security code, and listen to all the sounds in your home. Automatically turns on without ringing the bell, waits for code, then remains activated for one and a half minutes.

**XPS1000 KIT** ..... \$49.95

**XPS-MATCHING CASE SET** ..... \$13.95

- 0.1% DCV accy
- Analog bar graph
- Auto/manual ranging
- 4,000 count LCD display
- Capacitance meas.
- Temperature probe

**Digital Multimeter Kit with Training Course**  
By Elenco  
M-2665K  
\$49.95

- Full function 34 Ranges
- Extra large display • Ideal school project
- M-2661 (Assembled) \$55.00

**Frequency Counter**  
F-1225  
\$225.00

- 8 Digit LED display
- Wide measuring range
- High sensitivity
- Data hold function
- Input impedance 1MΩ or 50Ω
- 10:1 Input attenuation function

### FLUKE MULTIMETERS

(All Models Available Call)

**Scopemeters**  
Model 93 \$1,225.00  
Model 95 \$1,549.00  
Model 97 \$1,795.00  
**10 Series**  
Model 10 \$62.95  
Model 12 \$84.95  
**70 Series**  
Model 70II \$69.95  
Model 77II \$149.00  
Model 79II \$175.00  
**80 Series**  
Model 87 \$289.00

**Triple Power Supply**  
XP-620  
By Elenco  
\$75.00

3 fully regulated supplies; 1.5-15V @ 1A, -1.5 to -15V @ 1A or (3-30V @ 1A) and 5V @ 3A Kit XP-620K \$49.95

**Quad Power Supply**  
XP-581  
By Elenco  
\$79.95

Four supplies in one unit; 2-20V @ 2.5A, 5V @ 3A, -5V @ .5A and 12V @ 1A. All regulated and short protected

**High Current DC Power Supply**  
BK-1686  
\$169.95

- 3 to 14 VDC Output
- 12A @ 13.8V (less current at lower voltages)
- For servicing high power car stereos, camcorders, ham radios, etc.
- Connect 2 or more in parallel or series

**Wide Band Signal Generators**  
SG-9000  
\$119.95

RF Frequency 100K-450MHz AM modulation of 1KHz Variable RF output SG-9500 150MHz built-in counter \$235

**Telephone Kit**  
PT-223K  
\$14.95  
Available Assembled PT-223 \$15.95

**Function Generator Blox**  
#9600  
By Elenco  
\$29.95  
Kit \$26.95  
Sine, Triangle, Square wave

### Learn to Build and Program Computers with this Kit

**MM-8000**  
By Elenco  
\$129.00

From scratch you build a complete system. Our Micro-Master trainer teaches you to write into RAMs, ROMs and run a 8085 microprocessor, which uses similar machine language as IBM PC.

**Electronic Tool Kit**  
TK-1000  
\$39.95

A professional organizer tool kit at affordable prices. Includes 25 high quality tools in a high impact carrying case which includes a pocket for meter.

### Digital/Analog Trainer

Complete Mini-Lab For Building, Testing, Prototyping Analog and Digital Circuits

**XK-525**  
\$159.95  
Kit XK-525K \$129.95

Elenco's trainer is designed for school projects, with 5 built-in power supplies. Includes a function generator with continuously variable, sine, triangular, square wave forms. All power supplies are regulated and protected against shorts. The case can include a full line of tools and meter of your choice.

# #80 TEST EQUIPMENT cont.

**CESIUM & RUBIDIUM** standards available for sale, FTS, HP, Efratom, and Tracor, please inquire. Prompt repairs and free estimates on repairs. Corby Dawson, 805-736-0288.

**SELECTIVE VOLTMETER**, HP 3581C clean, guaranteed \$495. Gould Brush 220 2 ch oscillograph with alum. case and acc. \$475. **Technologies West**, 503-267-0604.

**WANTED! TEST** equipment. We pay top dollar for used, scopes, generators, analyzers from HP, Tektronix and others. Call Charles at **Metrix** for immediate quotation. 1-800-432-3424.

**SPECTRUM ANALYZERS FOR AUDIO, BROADCAST, VIDEO:** Tek 7L5/L3 spectrum analyzer, 20Hz-5MHz, digital storage \$1,500; with tracking generator \$2,000. **HP 3580A** spectrum analyzer, 5Hz through 50KHz, 1Hz resolution bandwidth, digital storage, adaptive sweep, tracking generator \$1,195 to \$1,695. **Anritsu MS420B** powerful spectrum/network analyzer, 10Hz through 30MHz, 3Hz resolution bandwidth, digital storage, tracking generator, \$2,700. All in excellent condition. All with warranty. **Pepper Systems**, 214-353-0257.

**WANTED: CESIUM** and rubidium standards, any condition. Want manuals (no copies) for HP 5061A or B, and FTS 4050. Corby Dawson, 805-736-0288.

**HEWLETT PACKARD 5245L** counters are all gone, but **PRETESTED REPAIR PARTS ARE STILL AVAILABLE:** Readout with Nixie, \$14.95. A17 card, \$14.95. Other cards, \$9.95. Nixies, \$7.50. Xtal oven assy, \$39. Add \$5 shipping. Send stamped addressed envelope for quote on any other part. Check/MO plus part number/description to: **TURCOTRON-IX**, 1000 E. 14th, Suite 429A, Plano, TX 75074.

**SCOPEBOOSTER INCREASE** the input frequency of your scope to 110MHz. It converts the high frequency down to 1MHz for viewing on the screen and provides an exact replica of the original signal. It requires no internal connections. It simply plugs into vertical input terminals. Its great for testing CB, ham and FM broadcast transmitters for modulation and distortion. Assembled: \$79.95. Kit \$59.95. S&H \$3.50. **Creative Technology**, PO Box 1401, Torrington, CT 06790-1401.

**BIRD 4308** Thru line wattmeter, cellular emulators, Motorola, Triplet, IFR, Wavetek, Marconi, Etc., Used. Call Les, 702-642-0325.

**WANTED: TEST** equipment in working condition. TEK, HP, FLUKE and others! **DEXIS**. Fax list to 612-942-9712 or voice at 612-944-7670.

**TEST EQUIPMENT** for sale. All major brands including HP, TEK, FLUKE, Keithley and others. Savings up to 90% off list price. We also buy test equipment. Call **ValueTronics**, John, at 1-800-552-8258 for free catalog, or with your "For Sale" list.

**TEK DAS9220** mainframes. 92A16 acquisition cards. P6460, P6461 probes. 92S16 pattern generation cards. P6464, P6465 probes. 92A90, 80386 adapter and S/W. **DAS9200 LAN** cards. 508-634-3806.

**FLUKE 332B** DC voltage STD and 760A - meter calib. \$800 ea/offer. **Dexis**, 612-944-7670.

## NEW FBASIC Tickit™

- **FAMILIAR TECHNOLOGY:** Based on the popular PIC16C57 micro controller.
- **LOTS OF MEMORY:** 48 bytes internal RAM and 2k or 8k byte eeprom for program storage.
- **EASY TO PROGRAM:** Uses FBASIC, a structured Basic dialect that does compile time error checking.
- **EASY TO DEBUG:** Source level Debugger single steps through program. Memory variable peeking and poking.
- **EASY TO INTERFACE:** Library routines for external 8bit and 4bit busses. Pulse routines, RC measurement, RS232, 16 I/O lines, Square wave generator, etc.
- **EASY TO AFFORD:** TICKits from \$49 each. Development systems are only \$45. IBM compatible with a serial port works as compiler and downloader.

CALL FOR INFORMATION, TICKits ARE AVAILABLE NOW!

### Digital Ready 20K LNB's \$119.00

**California Amplifier**

California Amplifier has created a new product which is superior to any other LNB....Anywhere! Utilizing new technology which enhances the performance of your standard systems through "Low Phase Noise" & limited frequency drift. Digi-Ready low phase noise technology features high stability and helps limit the drift associated with typical DRO "free running" oscillators. By limiting

drift, narrow band signals including SCPC and other digital formats which require

high stability over temperature ranges are more easily tracked. **Further, the burden on the receivers AFC circuits to track the signal is minimized.**

These LNB'S feature three year full replacement warranties, a power alert led, a gold plated connector and 65 db of gain. Our customers are taking their professional LNB's and phase locked loop LNB'S off their systems and seeing dramatic improvement with the new California Amplifier Mini Mag Plus Digi Ready LNB. Call us and see how crisp your reception can be!

# Servo Spinal Tap Makes Your Projects Move

**B**y now, you probably know about servos — the mechanical muscles used in radio-controlled models — and their fantastic applications in automation, animatronics, and especially robotics. Today, you'll learn about an easy, cheap way to control servos from your desktop PC, controller, or BASIC Stamp computer — the Mini Serial Servo Controller (Mini SSC).

The Mini SSC is a single-chip controller that accepts commands from a serial port at 2400 or 9600 baud and continuously controls eight servos. Up to 32 Mini SSCs can share a single serial port to control a total of 256 servos. The Mini SSC's serial receiver is compatible with RS-232, RS-422, and logic-level signals. And thanks to optical isolation, servo motor noise need never crash your system again!

## Build an eight-channel Servo Controller for \$29.00: Turn Your Projects from Static to Startling!

At \$29.00 (kit), the Mini SSC is an exceptional bargain. Let's see . . . 29 bucks divided by eight servos . . . that's only \$3.63 per servo. With careful shopping for the servos, you could save enough to call the Mini SSC free! Building your own servo control system and don't want to start from scratch? Mini SSC chips are available for \$10.00, with deep discounts for quantity purchases.

### What Servos Are and How They Work

I've presented a couple of servo-control projects here before (Serial Servo Controller, Feb. '94; Motion Memory II, Mar. '95) so

many of you are already familiar with servo-control basics. For the rest, here's a quick recap:

A servo is a plastic box with three wires going in, and a mechanical lever or wheel coming out. Hook the red and black wires to +5 volts and ground. Connect the remaining wire to a source of positioning pulses (1 to 2 milliseconds long, repeating 30 to 100+ times per second). Turn the power on, and the lever rapidly swings to a position, then holds steady. Change the width of the pulses, and the lever moves to a new position. Figure 1 shows pulse width versus servo position.

Radio-controlled models use servos to operate the steering, throttle, landing gear, sails, and a host of accessories. These models range from tiny (under a foot) to gigantic (12-foot wingspans aren't uncommon).

Servos are available in a similar range of sizes and capabilities.

In direct wired- or wireless-control applications, the pulses that control the servos are usually generated with a timer circuit.

Figure 2 is based on an example from the 1976 Signetics (now Phillips) data book. While the simplicity of this circuit is wonderful, it doesn't offer an easy route for the computer control we're after.

Computers and controllers with precision-timing capabilities can control servos themselves, but at the expense of processing power. Everyone's favorite tiny computer, the BASIC Stamp, is a prime example. A servo-control program can be as simple as this:

Servo:	
Pulsout 0,150	'Send a 1.5-ms
	'pulse to pin 0.
Pause 15	'Wait 15 ms.
Goto Servo	'Do it again.

The trouble here is that in a real application, everything other than

A train of positive pulses, repeated at a 30- to 100-Hz rate, controls servo position.

Figure 1. Quick review of servo-control principles.

Figure 2. This circuit positions a servo in response to pot setting, but, alas, no computer control.

generating the servo pulse must happen during a span of 15 ms. That's approximately 30 Stamp instructions. And that's controlling just one servo. Each additional servo steals an additional 2 ms (four instructions). So it takes some heroic programming to control multiple servos with the Stamp.

Fancier controllers have it a bit easier. They're equipped with timers that can be set to interrupt the program in progress at a precise time interval. Using this capability, it's possible to generate servo sig-

nals as a background task that takes place more-or-less independent of the main program. This still saps processing power, but the consequences are less drastic.

Enter the Mini SSC (Figure 3). It's an interrupt-equipped controller that has only two jobs: receiving serial instructions from its boss, and generating servo-control signals for its outputs. By limiting its role, we end up with a module that's efficient and cheap. And since it accepts serial signals in a variety of flavors, it allows a project to grow indepen-

dent of what kind of computer is in charge. A project might begin tethered to a PC; gain mobility with a BASIC Stamp on board; then grow in sophistication with a Motorola or Intel-based single-board computer. Throughout this evolution, there would be no need to write new low-level, servo-control code.

The idea mimics nature. There's the brain, for high-level control, then there's the autonomic nervous system that generates low-level control signals to regulate breathing, pulse, digestion, temper-

ature, etc. This division of labor gives the brain control over the activity of a creature without becoming overloaded with trivial details.

## The Mini SSC Hardware

The Mini SSC receives commands via a 2400- or 9600-baud serial connection and interprets them to set the widths of eight channels of servo-control pulses. Since the serial connection runs the show, let's start there.

The Mini SSC receives serial

### Listing 1. Assembly Language Demo of Mini SSC PIC Firmware

```
; Program: SSC_DEMO.SRC (Mini SSC educational demo).
; Written in Parallax dialect of PIC assembly language.
; This program is a demo version of the firmware for the Mini SSC,
; a device that controls eight radio-control servos in accordance with
; instructions received over a 2400- or 9600-baud serial hook-up. The
; commercial Mini SSC also recognizes individual board IDs, allowing up
; to 32 controller (256 servos!) on one serial port. This demo version
; is not addressable, works at a fixed rate of 2400 baud, and controls
; just one servo. However, it has the same basic structure as the full-up
; program. It is provided for novice PIC users interested in a method for
; running two time-sensitive processes concurrently.

; Serial data is accepted through ra.3; servo pulses (1 to 2 ms, repeated
; approx. 60 Hz) are output at rb.0. This program runs properly on a
; PIC16C61, 71, or 84 with an 8 MHz clock. At the time this program was
; written, the 16C61 was new, and PASM/PEPX did not recognize it as a
; valid device. Fortunately, the '61 programs just fine from code generated
; for a 71 or 84 (provided you don't use the special features of those
; devices). If you program a 61, be sure that PEPX is set for a 71 — setting
; it for an 84 will cause programming errors.

        device pic16c71, xt_osc, wdt_off, protect_off, pwrst_off
        id 'SVDM'

; Symbols (constants) used in the program.
one_ms      = 6           ; Value to load into RTCC for 1-ms delay.
ser_pin     = ra.3        ; Serial-input pin.
stb24       = 44          ; Start delay for 2400 bps @ 8 MHz.
bit24       = 164         ; Full delay for 2400 bps @ 8 MHz.

; Variable declarations. Variables for this program begin at address
; 0C hex, placing them above the PIC's special-function registers.
        org 0Ch
svo_PC      ds 1           ; Program segment counter for servo ISR.
w_copy      ds 1           ; Copy of w register made by ISR.
st_copy     ds 1           ; Copy of status register made by ISR.

delay_cnt   ds 1           ; Counter for serial delay routines.
bit_cnt     ds 1           ; Number of received bits.
rcv_byte    ds 1           ; The received byte.
temp        ds 1           ; Reusable temporary storage.
position    ds 1           ; Position value.
end_frame   ds 1           ; Counter for end-of-frame delay.

; Upon reset, the PIC first executes the code located at address 0. In this
; case, it jumps to the beginning of the foreground program located at
; "start." When an interrupt occurs, the PIC jumps to address 4. This is
; where the interrupt handler is located.

        org 0
        jmp start          ; The reset vector.
        org 4              ; The interrupt handler.

; The interrupt-service routine (ISR). When RTCC overflows, the resulting
; interrupt sends the program here. This ISR stores the w and status
; registers, then jumps to the program segment stored in svo_PC.
; The segments load RTCC and start and stop the servo pulses
; based on the data found in the variable position. Once finished, they
; store the address of the next segment to be executed, restore the
; registers, and execute the reti (return from interrupt) instruction.

do_servos   clr b         ; Reset timer-interrupt flag.
            mov w_copy,w   ; Save the status and W registers.

```

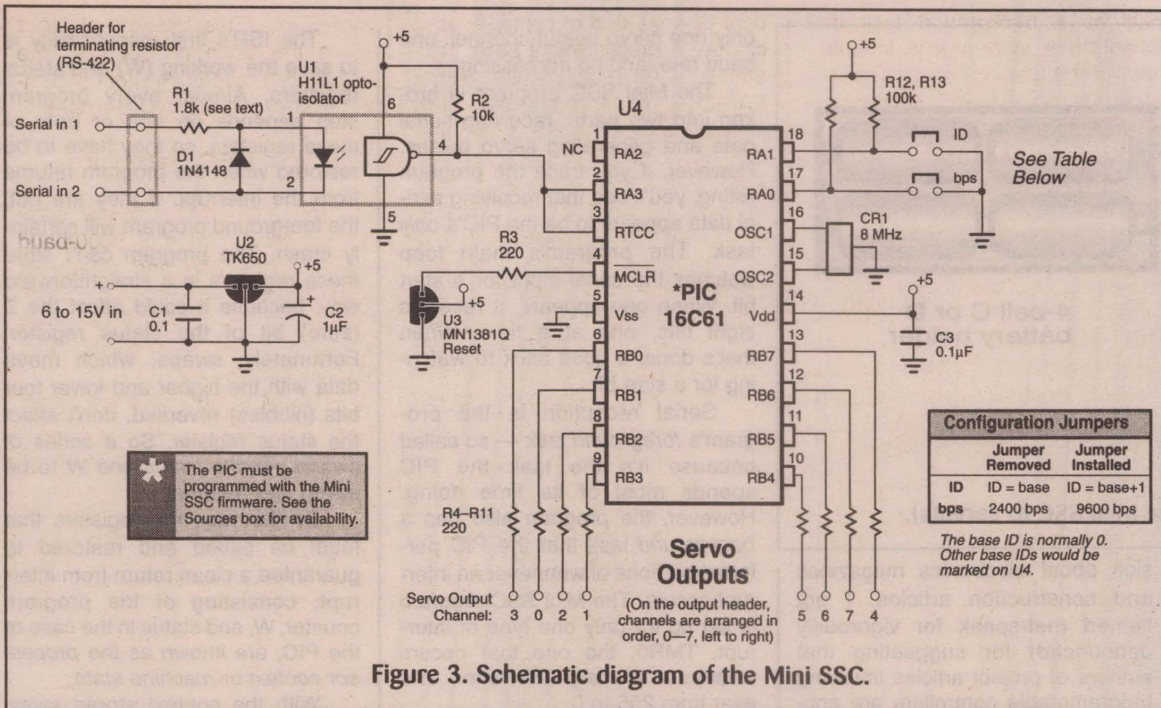

Figure 3. Schematic diagram of the Mini SSC.

data through U1, an H11L1 Schmitt-Trigger optoisolator. This device consists of an LED aimed at a snap-action light detector. The Schmitt-Trigger's snap action (or hysteresis) ensures that even if the LED comes on slowly, the output snaps on at a precise trigger point, and doesn't turn off until the LED brightness falls well below that point. This is an effective way of squaring up the edges of a serial data stream that may have been rounded off by influences like cable capacitance and noise.

The input LED requires 1 mA (1.6 mA max) to reach the Schmitt Trigger's threshold brightness. It will withstand continuous current of up to 60 mA. Its peak reverse voltage, the maximum voltage that can be

applied in the reverse (non-conducting) direction, is 6 volts. To round out the specs, the LED's forward voltage is 1.5 volts (maximum; typically 1 volt or less).

R1 and D1 work together to ensure that the LED gets the proper care and feeding from a wide range of serial inputs. D1 limits reverse voltage across the LED to 0.7 volts. R1 limits forward current into the LED as follows: At 12 volts input, the current is  $(12-1.5)/1800 = 5.83$  mA; at 5 volts,  $(5-1.5)/1800 = 1.94$  mA. In theory, the lowest input voltage that will reliably trigger the optoisolator is 4.2 volts. In practice, since the LED's forward voltage drops to less than 1 volt with reduced input current, it'll work down to 3.7 volts.

If there's some doubt that the signal source can deliver the minimum +3.7-volt signal — with TTL gates, it might be a close call — you can add a pull-up resistor of perhaps 1K to the output. Alternatively, you could substitute a 1K resistor for R1.

Why cut it that close? Well, TTL-level outputs are the exception rather than the rule, and the high value of R1 allows several Mini SSCs to be connected in parallel to a single serial port or Stamp pin. The Stamp can drive nine Mini SSCs; a standard RS-232 port can drive at least two.

Using an optically isolated line receiver has several advantages for the Mini SSC. First, it's compatible with RS-232, RS-422, CMOS, and TTL-level signals without any configuration hassles. Second, it allows reception of true or inverted signals by just reversing the connections to the LED; not recommended with a normal ground-refer-

enced line receiver! But the most important advantage is that it allows the host computer to be completely isolated from the potentially noisy, disruptive servos and their power supply.

Other aspects of the Mini SSC are similarly designed for reliability. Check out the MN1381 low-voltage detector in the schematic. When power is first connected to the circuit, this component holds the PIC controller in reset until the voltage rises to 4 volts. If the supply drops below 4 volts, the MN1381 resets the PIC. This helps prevent the erratic behavior that can result from the PIC operating outside its rated voltage range.

The Mini SSC also features a low-dropout voltage regulator, the TK650. It will supply regulated 5 volts to the circuit until the input voltage falls below 5.2 volts. This allows the circuit to suck every last drop of energy out of a typical 9V battery power source.

Other than the PIC, the remaining circuitry consists of: bypass capacitor C3, which satisfies the sudden current demands of the PIC's fast CMOS switching; R12/13, which hold configuration inputs RA.0 and RA.1 at +5 volts unless a jumper is installed to pull them to ground; and R4 through R11, which

protect the servo outputs from excessive current draw in the event that they're shorted together (or to ground or +5) while the circuit is powered up.

## Mini SSC Firmware and Mini SSC Demo

If you're not interested in PIC assembly language programming, please skip ahead to the sections on building and using the Mini SSC. Non-programmers who read this firmware description may experience dizziness, headaches, and nausea. Programmers may also experience these symptoms, but they're used to it.

The main component of this project is the PIC 16C61 microcontroller. It's a minimal computer-on-a-chip from the same family that I've used in more than a dozen other construction projects. PICs power my BASIC Stamp peripherals (LCD Serial Backpack, Stamp Stretcher; see Sources box), as well as the Stamp itself. I discussed the concept of PICs as homebrew custom ICs in an article that appeared in the Dec. '94 issue of *Nuts & Volts*.

The PIC chip is the product of a big company, Microchip Technology Inc., with manufacturing facilities in the U.S. and Taiwan. The PIC firmware, the program that makes this PIC a Mini SSC controller, is the product of Scott Edwards Electronics, my small business with a single facility in southern Arizona and a merry band of occasional contractors around the country.

As I was working on this article, I participated in an Internet discus-

sion about electronics magazines and construction articles. I got flamed (net-speak for vigorously denounced) for suggesting that authors of project articles involving programmable controllers are entitled to keep their programs to themselves. I asserted that the only way to make a living at this is to be a manufacturer, and manufacturers have to protect trade secrets from other manufacturers. If they don't, unscrupulous competitors run them out of business.

Denizens of the net are not swayed by arguments having to do with anybody making a living, and they made some valid points about the educational value of studying others' source code. They got to my soft spot with this, since I've poured considerable effort into educating people about PIC programming through application notes for Parallax (manufacturer of PIC programming tools) and my *PIC Source Book* (see the Sources box).

So my dilemma became how to serve the cause of education without undermining my business. I've decided on an approach that's common in the software industry: the demo version. With software, a demo lets you use most features except for print and save, or it limits the size of the file you can work with. The Mini SSC demo program in Listing 1 works much like the real thing, but supports

only one servo output channel, one baud rate, and no addressing.

The Mini SSC program is broken into two parts: receiving serial data and generating servo pulses. However, if you trace the program listing, you'll see that receiving serial data appears to be the PIC's *only* task. The program's main loop watches the serial input for a start bit. When one appears, it receives eight bits, one at a time. When that's done, it goes back to watching for a start bit.

Serial reception is the program's *foreground* task — so called because it's the task the PIC spends most of its time doing. However, the program also has a *background* task that the PIC performs portions of whenever an interrupt occurs. The Mini SSC program is set up for only one type of interrupt, TMR0, the one that occurs whenever the eight-bit timer rolls over from 255 to 0.

The PIC responds to this interrupt as though a subroutine call occurred. It stores the program counter on the hardware stack, and jumps to program memory address 4. This address, the interrupt vector, is set by the manufacturer and cannot be changed, so it must contain the beginning of the interrupt service routine (ISR) or a jump to the ISR.

The ISR's first responsibility is to save the working (W) and status registers. Almost every program step depends on one or both of these registers, so they have to be restored when the program returns from the interrupt. If they are not, the foreground program will certainly crash. The program can't store these registers in a straightforward way, because it could affect the Z (zero) bit of the status register. Fortunately, swaps, which move data with the higher and lower four bits (nibbles) reversed, don't affect the status register. So a series of swaps permits status and W to be saved and restored.

By the way, the registers that must be saved and restored to guarantee a clean return from interrupt, consisting of the program counter, W, and status in the case of the PIC, are known as the *processor context* or *machine state*.

With the context stored away, the ISR next has to decide what segment of the background task to perform. In the demo, the segments consist of turning on the output bit to begin the pulse, a 1-ms base delay, an additional 0- to 1-ms delay based on the position data, the end of the pulse, and the delay between pulses. At startup, the program initializes the variable `svo_PC` — the program counter for the servo-dri-

## Listing 3. BASIC Stamp Program Demonstrating Table Look-up of Servo Data

```
' Program: LEGS.BAS
' This program demonstrates servo control using the Mini SSC.
' It commands six servos through a simplified, insectile walking
' sequence. The servo identifiers and positions are stored in a
' pair of tables in the routine Servo_value.

SYMBOL steps = b0      ' Current place in step sequence.
SYMBOL servo = b3      ' Servo being addressed.
SYMBOL position = b4    ' Servo position value.
SYMBOL temp = b5       ' Temporary variable used in table lookup.
SYMBOL delay = w5      ' Delay between leg movements; controls speed.

let delay = 1000        ' 1 second between steps.

again:
  for steps = 0 to 13
    gosub servo_value    ' Get the servo no. and position value.
    serout 0,n2400,(255,servo,position) ' Send to the SSC.
    if bit0 = 0 then skip_delay ' Delay after every 2nd xmission.
    pause delay
  skip_delay:
  next steps
  goto again            ' Endless loop.

' Look up the servo number and position value. Since the same data is
' sent to two different servos, the position table is half the length
' of the servo table. Looking up the correct position entry requires
' dividing the step number by 2.
Servo_value:
  look-up steps,(1,4,0,2,1,4,0,2,3,5,1,4,3,5),servo
  let temp = steps/2
  look-up temp,(80,200,170,50,50,80,200),position
  return
```

(SOLDER SIDE)

Note: The additional connections shown above are loopbacks for the handshaking lines. These deactivate hardware handshaking required by some software.

Figure 8. Mini SSC serial connections for PCs and other compatibles.

ver — with the first segment. After that, each segment stores the next segment address into `svo_pc`.

By dividing the background process into small segments, the program ensures that any disruption to the foreground process of receiving serial data is kept to a minimum. To compensate for time lost to interrupts, the serial routine samples incoming bits earlier than the normal halfway point. That way, even if reception is interrupted several times during an incoming byte, the only effect is to cause the bits to be sampled a little later during their valid time.

By now you may be wondering, why not make the servo pulses the foreground task and receive serial data in the background, like a PC that can print in the background? While serial reception can work just fine with somewhat sloppy timing, servo control cannot. Even a 4-microsecond glitch in the servo pulses could cause a noticeable tremor in the servos.

The rest of the demo program's inner workings are described in the comments to Listing 1.

## Building the Mini SSC

Figure 4 is the two-sided circuit-board artwork for the Mini SSC. Do not adjust your magazine; the top-layer artwork is supposed to look like that. It's a *ground plane*, a mostly solid area of copper that distributes the ground connection where it's needed. Ground planes, as compared to ground traces snaking all over the board, have the virtues of low resistance, high-current capacity, and low inductance. These help make digital circuits less electrically noisy and more reliable. In high-speed systems, circuit board designers often specify planes to carry both ground and the positive supply, resulting in a board

with four or more layers. Not suitable for kitchen-sink construction.

With a little care you can construct the Mini SSC board at home using toner-transfer or photoresist methods. The May '95 issue of *Nuts & Volts* covered the basics of toner transfer. Just remember that when you assemble your homemade board, you must solder components on the top (ground plane) layer wherever there's a pad with a cross through it. The cross is called a thermal relief, and it connects the pad to the ground plane electrically, but isolates it thermally. This prevents the plane from siphoning off soldering heat.

If you purchase the kit, you'll get a commercially made board with solder mask, plated-through holes, and a parts-placement legend.

Figure 5 shows the placement of components on the board. Note that all of the resistors and the diode are mounted on end. Bend them into hairpin shapes and insert them into appropriate holes in the board for soldering. Install the diode as shown with the striped end upward (away from the board).

Once you have soldered the components to the board, you're ready for a preliminary test. Connect a servo as shown in Figure 6 and apply power to the Mini SSC board. The servo should swing to its centered position and stay there. Try to turn the servo output away from this position; it will hold firm.

## Using the Mini SSC

Figure 7 shows how to connect the Mini SSC to a BASIC Stamp or other source of serial data; Figure 8 shows the pinout of standard PC serial port connectors.

Controlling the Mini SSC's servos is a piece of cake. Leave the configuration posts marked B and I open. Connect the Stamp or PC as

## Parts List

### Semiconductors

- U1 — QTC H11L1 Optoisolator (Digi-Key H11L1QT-ND)
- U2 — TK11650 low-dropout 5-volt regulator (Digi-Key TK11650CT-ND)
- U3 — MN1381 reset circuit (Digi-Key MN1381-Q-ND)
- U4 — PIC16C61 microcontroller programmed with Mini SSC firmware. (See Sources.)
- CR1 — three-terminal 8 MHz ceramic resonator (Integrity Tech ZTS 8.00M. See Sources.)
- D1 — 1N4148 diode (Digi-Key 1N4148CT-ND)

### Resistors (all are 1/8 W)

- R1 — 1800 ohms
- R2 — 10,000 ohms
- R3-R11 — 220 ohms
- R12, R13 — 100,000 ohms

### Capacitors

- C1, C3 — 0.1µF 50 WVDC ceramic with 0.1" lead spacing
- C2 — 1µF 16 WVDC tantalum

### Hardware and Miscellaneous

- Header stakes: two 2x2, one 2x8, and one 1x3 header strip; 9V battery and clip; shorting jumpers for baud rate (B) and address/ID (I)

255 (start marker), servo number (0 to 7), position value (0 to 254)

For example, from the Stamp:

Serout 0,N2400,255,4,50  
' Servo 4 to position 50.

Of course, things get really interesting when you use values calculated by a program to run things. Here's a Stamp program fragment to cycle eight servos back and forth in slow motion:

Again:

```
for b3 = 0 to 254
  ' Positions 0 to 254.
for b2 = 0 to 7
  All 8 servos.
Serout 0,N2400,255,b2,b3
  ' Send servo b2 to position b3.
next b2
next b3
Goto Again
' Endless loop.
```

Listing 2 shows how to command the Mini SSC from a PC run-

**High-Tech Direct**, 114 Morrison Drive Suite 200, Ottawa, Ontario, Canada K2H 8S9; phone (613) 596-4845; fax (613) 820-8111. Integrity Technology ceramic resonators such as ZTS 8.00M.

**Tower Hobbies**, P.O. Box 9078, Champaign, IL 61826-9078; phone (800) 637-4989 or (217) 398-3636; fax (800) 637-7303 or (217) 356-6608. Good prices on house-brand servos; huge selection of servo linkages, hardware, and accessories.

**Parallax, Inc.**, 3805 Atherton Road # 102, Rocklin, CA 95765; phone (916) 624-8333; fax (916) 624-8003; BBS (916) 624-7101; Internet parallaxinc.com. Manufacturer of the BASIC Stamp microcomputer and PIC programming tools. Listing 1 (SSC\_DEMO.SRC) is available from their BBS or ftp site on the Internet.

### Scott Edwards Electronics

964 Cactus Wren Lane  
Sierra Vista, AZ 85635

PH (520) 459-4802/FAX (520) 459-0623

E-Mail 72037.2612@compuserve.com

Mini SSC in complete kit form: \$29.00.

Mini SSC assembled: \$44.00.

Mini SSC controller, PIC16C61: \$10.00.

All prices are postpaid (express shipping and CODs extra). Visa, MasterCard, American Express accepted for phone/fax orders. POs accepted on approved credit. Personal checks, money orders welcome for orders by mail. Scott carries other servo-control products, and peripherals for the BASIC Stamp, including a serial LCD display, and 16-channel I/O expanders.

Interested in PIC programming? Ask about *The PIC Source Book*, with more than 35 programming example and cut-and-paste subroutines to use in your own programs.

ning QBASIC; Listing 3 is a Stamp program that generates a walking sequence for the six-servo insectile robot shown in the photos. The current version of this robot is pretty clumsy, but skitters across smooth floors at a respectable clip. It'll serve as a testbed for ideas that will go into the next version, which will use two servos per leg for true all-terrain mobility. See the Sources box for a mail-order hobby dealer who carries inexpensive, respectable quality servos.

## Conclusion

The Mini SSC is an inexpensive way to harness the mechanical power of servos for applications in robotics, automation, and special effects. Special features make it an ideal companion to the BASIC Stamp, BS2, or other computer with serial capabilities. NV

Instruments

Lightweight portable

# SPECTRUM ANALYZERS

- packed with affordable measurement power  
Made in USA

- ☐ **HM5005:** 0.2 - 500MHz Frequency Range
- ☐ **HM5006:** 0.2 - 500MHz, incl. Tracking Generator
- ☐ **HM5010:** 0.15 - 1,050MHz Frequency Range
- ☐ -100 to +13dBm Signal Input Range
- ☐ Numeric Display (100kHz Resolution)
- ☐ On-Screen Frequency Marker Cursor
- ☐ True Analog Display with real time refresh rate
- ☐ Measurement Results Output to PC (optional)

Test your design's EMI performance  
before final compliance testing

- ☐ HZ530 Close Field Sniffer Probe Set (optional)
- ☐ EMI Diagnostics at the prototype level
- ☐ Radiated Emission Testing
- ☐ Conducted Emission Testing
- ☐ Location of Emission "hot spots"

HAMEG - Solutions at the heart of the matter.

## Weather Stations

Now you can be your own weather reporter with the Davis Weather Monitor II. Our top-of-the-line weather station combines the most advanced weather monitoring technologies available into one incredible package. Glance at the display, and see wind direction and wind speed on the compass rose. Check the barometric trend arrow to see if the pressure is rising or falling. Push a button, and read indoor and outdoor temperature, wind chill, humidity and barometric pressure. Our package deal includes the new ultra high resolution 1/100 inch rain collector part #7852-R, and the external temperature/humidity sensor, part #7859-R. The package deal is order #DAVI-R for \$479.95 plus \$15.00 shipping. If you have a personal computer, when you order the optional Weatherlink computer software for \$139.95, you'll have a powerful computerized weather station at an incredible price. For the IBM PC or equivalent order part #7862-R. Apple Mac Plus or higher including PowerBook, order part number 7866-R.

**The Weather Monitor II (7440)** comes complete with anemometer with 40 feet of cable, external temperature sensor with 25 feet of cable, junction box with 8 feet of cable, AC power adapter, detailed instruction booklet and one year limited factory warranty.

## Bearcat® 9000XLT-R Radio Scanner

Mfg. suggested list price \$769.95/CE Special \$374.95  
500 Channels • 20 banks • Alpha numeric display  
Turbo Scan • VFO Control • 10 Priority channels  
Auto Store • Auto Recording • Reception counter  
Frequency step resolution 5, 12.5 & 25 KHz.  
Size: 10-1/2" Wide x 7-1/2" Deep x 3-3/8" High  
Frequency Coverage: 25,000-549.995 MHz., 760,000-823.995 MHz., 849.0125-868.995 MHz., 894.0125-1,300.000 MHz.  
The Bearcat 9000XLT gives you pure scanning satisfaction with amazing features like TurboSearch™ to search VHF channels at 500 steps per second. This base and mobile scanner is ideal for surveillance professionals because it has a selectable attenuator to help eliminate annoying intermodulation from adjacent frequencies in highly populated areas and selectable AM, Wide FM and Narrow FM modes that allow you to change the default receiving mode of the BC9000XLT. Other features include Auto Store - Automatically stores all active frequencies within the specified bank(s). **Auto Recording** - This feature lets you record channel activity from the scanner onto a tape recorder. **Hi-Cut filter** to help eliminate unwanted static noise. You can even get an optional **CTCSS Tone Board** (Continuous Tone Control Squelch System) which allows the squelch to be broken during scanning only when a correct CTCSS tone is received. For maximum scanning enjoyment, order the following optional accessories: **P5001** Cigarette lighter power cord for temporary operation from your vehicle's cigarette lighter \$14.95; **P5002** DC power cord - enables permanent operation from your vehicle's fuse box \$14.95; **MB001** Mobile mounting bracket \$14.95; **BC005** CTCSS Tone Board \$54.95; **EX711** External speaker with mounting bracket & 10 feet of cable with plug attached \$19.95. The BC9000XLT comes with AC adapter, telescopic antenna, owner's manual and one year limited warranty from Uniden.

## CB/GMRS Radios

**Maxon** The Maxon GMRS 210+3 transceiver is a PLL synthesized 10 channel radio on General Mobile Radio Service frequencies. It's the ideal radio for storm chasing activities. Two repeater channels are programmable and one channel (462.675 MHz.) is set aside for emergency and safety communications. The seven remaining interstitial frequencies 462.5625, 462.5875, 462.6125, 462.6375, 462.6625, 462.6875 & 462.7125 MHz are all-purpose GMRS radio channels. 2 watts of RF power for exceptional transmitting range. Up to 5 watts when used with the supplied 12 volt vehicular DC power cord. CTCSS built-in. Includes 450mAh Ni-cd rechargeable battery pack, AC/DC wall battery charger, owner's manual, FCC license application, belt clip, antenna. Call 1-800-USA-SCAN to order.

## VHF Transceiver

### RELM® WHS150-R Transceiver/SPECIAL

Mfg. suggested list price \$481.67/CE price \$299.95  
Police and fire departments depend on the RELM WHS150 transceiver for direct two-way communications with their police, fire department, civil defense agency or ham radio repeater. The WHS150 is our most popular programmable five watt, 16 channel handheld transceiver that has built-in CTCSS, which may be programmed for any 39 standard EIA tones. Frequency range 148.000 to 174.000 MHz. Will also work 144.000-148.000 with slightly reduced performance. The full function, DTMF compatible keypad also allows for DTMF Encode/Decode and programmable ANI. Weighing only 15.5 oz., it features dealer programmable synthesized frequencies either simplex or half duplex in both 5.0 and 6.25 KHz increments. Other features include scan list, priority channel, selectable scan delay, selectable 5 watt/1 watt power levels, liquid crystal display, time-out timer and much more. When you order the WHS150 from Communications Electronics Inc., you'll get a complete package deal including antenna, battery, belt clip and user operating instructions. Other accessories are available. A leather carrying case with swivel belt loop. **part #LCWHS** is \$49.95; rapid charge battery charger, **part #BCWHS** is \$69.95; speaker/microphone, **part #SMWHS** is \$54.95; extra Ni-cd battery pack, **part #BP007** is \$59.95. The radio technician maintaining your radio system must order programming instructions **part #PI150** for \$18.00 to activate this radio. FCC license required for United States operation.

Surplus, unused units (TerraHertz Technologies, Inc. V-250) consist of transmitter, receiver and associated wall mount supplies. \$295. Send SASE for specs. EO Techniques, 16 Slusser Ave., New Hartford, NY 13413-2117, phone 315-736-3642.

**SCIENTIFIC EQUIPMENT**, surplus, misc. electronic and microwave equipment. For list contact T-Minus-7, 45845 Warm Springs Blvd. #F, Fremont, CA 94539. 510-651-9477, FAX 510-651-3657.

**WANTED: EQUIPMENT** to remove various kinds of noise from early tape recordings. Also looking for an old ribbon microphone. Randy Seden, 1272 Harold Ave., Simi Valley, CA 93065.

**NIGHT VISION** Moonlight Products. MPN-60K night scope with ALP-1 IR illuminator handgrip and padded hardcase \$875. Phil. 714-636-4641.

**LASER RANGEFINDER** measures distances up to 1800 meter: 10cm accuracy @ 1Hz update rate, 5mW laser diode, battery operated, w/microcontroller. \$2,000. Plans \$20. 20MHz preamplifier/detector \$160. Send \$1 ea. for data sheets. Laser Sensor Technology, 3873 Easy Circle, Marietta, GA 30066. 404-928-2867.

**CROWN 8000** whole or part out. Super heads. 606-748-6137.

**ETVM-2000 20 SECOND RECORD AND PLAY NATURAL SOUND SYSTEM.** The ETVM-2000 offers and easy, simple and low cost solution for natural voice record and playback on a miniature 1.0" x 2.4" PC board. Using state of the art **CHIP-ON-BOARD** technology (which provides unbeatable sound quality), the ETVM-2000 is ready to integrate into custom prototypes or production runs of thousands. The module has 20 seconds of record time, a superb **microphone**, high quality **speaker**, 4 AA **battery case** and an **LED recording indicator**. Extra through holes for push to record, play, LED indicator locations and a motion sensor are available. **PRICE:** \$25 (Quantities of 2-25), \$15 (Quantities of 1000) Visa or MasterCard accepted, Ohio orders add 6.25%. EDMT Inc. Ask for Jeff or Mark. 419-389-0354. **DISTRIBUTORS WELCOME.**

# TECH FORUM

This is a READER TO READER Column. All questions AND answers will be provided by *Nuts & Volts* readers and are intended to promote the exchange of ideas and provide assistance for solving problems of a technical nature. All questions submitted are subject to editing and will be published on a space available basis if deemed suitable to the publisher. All answers are submitted by readers and **NO GUARANTEES WHATSOEVER** are made by the publisher. The implementation of any answer printed in this column may require varying degrees of technical experience and should only be attempted by qualified individuals. Always use common sense and good judgement!

## QUESTIONS

I have an NEC Radio Pager FCC RX Data #PR-150V2-10A. The pager uses sequential tone activated squelch and operates on 152.0075 MHz. I would like to convert the unit to carrier squelch operation if possible, and re-crystal it for use on the local fire frequency. Any information, such as a schematic diagram, theory of operation, or the crystal frequency formula, would be greatly appreciated.

**7951** **Brian Piler**  
Baxter Springs, KS

I need information, schematics, and sources to build an ultrasonic cleaner. I have the stainless tank, heater, and timer. I would like to be able to adjust the frequency.

**7952** **Chris Morley**  
Redondo Beach, CA

I have an Intermec 9422 portable laser bar code scanner that I would like to interface to my computer to do inventory. However, I do not have a software program that will read the inputs (RS-232) from the scanner and make them available for use in a database program or inventory program. Can anyone recommend an inexpensive inventory control software program that will work with this bar code scanner?

**7953** **Michael E. Young**  
Newville, AL

Recently, the horizontal hold on my Montgomery Ward Signature 2000 Series 25" color TV (Model 12025) went out of sync. Because it is an all electronic set — i.e., there are no external controls available and all adjustments must be made via on-screen menus — I consulted the owner's manual for pertinent information on how to adjust the vertical and horizontal hold on the set. To my surprise, no information is given on how to access what has always been an end user control. Instead, I was told by the vendor that those options have been relegated to the "Service Menus" which are not available to the end user. Can anyone tell me what the keystroke sequence to call up the "service menu" might be? Incidentally, the set appears to be manufactured by Zenith and given the store label.

**7954** **Thomas Fuhler**  
Baltimore, MD

I need a schematic or service manual for a Vidicraft commercial cutter called a CCU-120 (Model CED-100, Serial #D1976). This unit apparently cannot see the video signal. Vidicraft stopped making this unit about five

years ago and could not find any documentation for it. I also need the VCR programming codes which were stickered to the back of the instruction manual, but fell off. I can be reached at Tel 216-368-4086, at address 21610 Miller Avenue, Euclid, OH 44119, or by E-Mail at pts2@po.cwru.edu.

**7955** **Paul Szozdowski**  
Euclid, OH

I need a method to detect out-of-phase speakers in multi-speaker auditoriums. The speakers are usually in a high ceiling and are driven by 70-volt transformers whose polarity leads have been known to be mismarked on occasion. If possible, I would desire a test arrangement that would use only one microphone due to the distance between each speaker.

**7956** **Gary Casper**  
Wichita, KS

I have security lighting around my home manufactured by The Brinkman Corp. of Dallas, TX. My problem is: Every time I keyed a transmitter, the system activates and all the lights turn on. I am a ham, and there are always RF systems on in the house. Police, ambulances, tow trucks, and everything with two-way radios keyed close to my house activate the system.

**7957** **Rafael Acosta**  
Rio Piedras, PR

I need to find a source for a tracking system like LOJAC which can be used with two or four antennas for strength and direction for "Fox and Hounds" and other such purposes.

I also need a PLL crystal controlled, tunable FM (88-108 MHz) transmitter that can be used, hopefully, within FCC type 15 levels.

**7958** **Jonathan Muller**  
Conyers, GA

There is a computer readout unit for Chrysler auto products which is able to read trouble codes and reset (clear) memory of the on-board engine computer. Does anyone have a design or source for a similar Miller Tool DRB II?

**7959** **Bruce Heatley**  
Buffalo, NY

Does anyone have a sample schematic for an IBM-compatible PC switching power supply?

**79510** **Peter Skye**  
Glendale, CA

How does one interface a thermocouple (eight of them) to a microcomputer? Perhaps a domino or a Basic stamp?

**79511** **Paul Skrobarczyk**  
Corpus Christi, TX

I need information on reprogramming a Heath HW24HT to transmit on CAP frequencies.

**79512** **David Schoepf**  
Somerville, AL

Can I program a specific channel via the keypad into my Motorola bag phone and DPC 550, so I can monitor it when not talking?

**79513** **Grant Maxwell**  
British Columbia, Canada

My Commodore C128-1571 will load and run all of my 64/128 programs, but when I try to boot the two CPM+ source disks I have, it boots then locks up and displays (NO SYS FILE). Why?

**79514** **Eldon Wright**  
Norton, KS

I received a used Sharp IQ organizer (AKA The Wizard 8200 Organizer). I'm looking for the IC cards and I can't seem to find them or anything about them anywhere. Sharp has given me names and numbers of places who sell their stuff, but when I call, I'm told they have stopped selling Sharp products.

**79515** **J. Bautista**  
Phoenix, AZ

I had a simple schematic for a video inverter that used a 75W input and output impedance and used only three transistors, such as 2N222, etc. It was from ATV Research, and I don't think they are around any longer. I want to use this to change a simple B&W image (printed text) from a book to white text on a black background for a video enlarger set-up for the visually impaired.

**79516** **Gerald Koske**  
Wonder Lake, IL

Can IC LM555s be utilized to generate audible tones in the 700 to 1700 Hz range for DTMF and CCITT controller circuits? In practice, F=1.44/(R4+2R3) C2 is not stable on high end of frequency range. Schematic of two audible tone generators = 700 Hz + 90 Hz utilizing 555s would be helpful.

**79517** **Charles Dearing**  
Oakdale, LA

I have a KLH 14" VGA monitor; model #MN195-1, made by KLH Computers, a division of Premier Innovations. KLH is no longer in business and I am looking for any documentation on this monitor, especially schematics. The monitor was given to me as it no longer has a sufficiently bright display. The brightness gradually decreased over three to four months; it also began to take longer for the dis-

## ANSWER INFO

- Include the question number that appears directly below the question you are responding to.
- Payment of \$25.00 will be paid within four weeks of publication if your answer is printed.
- Only one answer per question will be printed.
- If you do not want your name, address, or phone number available to the reader please so indicate or it will be assumed that you have no objection.
- In the event that more than one person submits the same solution, the choice will be made at the discretion of the publisher.
- Due to space limitations, we can not reprint the original questions with the answer. The question number and the issue it appeared in are printed above the answer.

## QUESTION INFO TO BE CONSIDERED FOR PUBLICATION

All questions should relate to one or more of the following:  
1) Circuit Design 3) Problem Solving  
2) Electronic Theory 4) Other Similar Topics

## INFORMATION/RESTRICTIONS

- No questions will be accepted that offer equipment for sale or equipment wanted to buy.
- Selected questions will be printed one time on a space available basis.
- Questions may be subject to editing.

## HELPFUL HINTS

- Be brief but include all pertinent information. If no one knows what you're asking, you won't get any response (and we probably won't print it either).
- Write legibly (or type). If we can't read it, we'll throw it away.
- Include your Name, Address and Phone Number. Only your name will be published with the question, but we may need to contact you.

play to warm up when the monitor was powered up.

I would appreciate any suggestions on how to fix the monitor and a copy of any documentation.

**79518** **Clinton Troutman**  
Fort Worth, TX

I need source information on where I can obtain repair parts or even defective OLD junker Mitsubishi MP286L PCs. The computer is: Mitsubishi MP286L Laptop Model #MP-2120.

Specifically, the 3.5", 1.44 MB flop-

py disk (Model #MF355C-399M) has gone bad. I cannot use a normal off-the-shelf floppy drive as this one has its own cable attached with special pin outs. The computer will not get by the initial turn-on self test ("FDD failure") to the hard drive without an operational floppy disk. The bios can only be accessed through an executable program. With NO c:> prompt, I'm stuck.

**79519 Dale R. Kubichek**  
Manitowoc, WI

Where might I find a reference source that would list the precise precious metals composition of all soldering alloys and contact points used by the major manufacturers of ICs and other such electronic components in large photocopying machines, computers, CADD workstations, etc.?

**79520 Gerry LaBorde**  
Gretna, LA

Can someone suggest a universal noise blander circuit that can be added to the 455 KHz IF of small AM and SW radios to eliminate normal household electrical pops? It should run on 6-9 volts. I have tried making a couple from CB schematics without success.

**79521 Steven Garren**  
Winder, GA

I have an I/O board for a PC by Contec #P20-16/16L(PC). I would like any information on this board and/or how to contact Contec.

**79522 John McComic**  
Memphis, TN

I have a Notebook computer that has lost its backlighting. The backlight is a six inch long fluorescent .125" diameter bulb. It appears the ballast DC ( $\pm 12$  VDC) to AC (unknown output) converter circuit (PCB .75" wide x 3" long x .35" high) is what has failed and may have taken the bulb with it. I'm looking for information and sources as to where to obtain a placement bulb and DC-to-AC ballast converter circuit/parts. This particular backlighting uses a 5.5K ohm potentiometer for intensity control.

The USA OEM parts source wants over \$150.00 for replacement parts. I only paid \$125.00 for the entire Ultra 386SX Notebook at a yard sale. I've looked into Electro-Luminescence as a viable substitute. The ONLY problem is the size of the required inverter to power up 47 square inches of EL is over an inch tall. I've got NO room in the Notebook for this large an inverter.

**79523 Dale R. Kubichek**  
Manitowoc, WI

I'm looking for data on GPS selective availability. How is it implemented? My application is frequency calibration using the time interval technique. Ret: HP AW-52-2 bibliographic Ret and or Algorythm to wash it out of the data.

**79524 Brian M. Chesire**  
Tucson, AZ

I would like to construct/design/customize my own "Roger-beep(s)" and use inline with/between the microphone (4-pin) and the CB (PDC-29/Paradynamics). What type of chip(s) would be needed to create an almost perfect digital "Roger-tone." Direct my interest to any reference(s), that would be of any help

at all in designing this piece of equipment.

Also, I hear the RCI 2950/2970 can be modified to operate on the II meter band (CB), and, also split-channels can be programmed. Am I correct on this?

**79525 Sean Ingram**  
Amelia, VA

Need pin out of remote control plug for a Teac A-5500 reel-to-reel recorder. This unit will not operate with this plug in place. Right?

**79526 Robert Eshoo**  
Santa Monica, CA

I am looking for a way to take a 1V P-P video analog signal and convert it to a frequency signal that can be transmitted through any standard audio transmitter such as walkie talkie or CB and then decoded back to a standard video output with only a very limited amount of parts?

**79527 Mark Tadlock**  
Redwood City, CA

Where can I get a driver (software) for the Headstart & HST/PLUS mouse (proprietary)? The system is an XT with a 20 meg. HD and 5-1/4 DSDD floppy drive. I paid \$85.00 for the mouse and no driver. They said we can get you the driver for \$20-\$30!? This was over 1-1/2 years ago. Are there any Headstart & HST/PLUS users groups, or SIGs, or forums?

**79528 A. Canales, Jr.**  
El Paso, TX

I was using a book called *High Frequency Apparatus* when it disappeared. I need to find another copy!

**79529 Tracy Middleton**  
Portland, OR

Several years ago, I purchased a Rainier Technologies voice/data switch Model TB-201. I have lost the owner's manual and the company is apparently out of business. Can anyone help with the programming procedures?

**79530 Dave Hampton**  
Reno, NV

I would like information on how to modify a linear brand garage door opener manufactured by Moore-O-Matic for more RF output power. It is powered by a 9-volt battery, has an eight-position DIP switch, and transmits on 310 MHz using a saw resonator. I estimate the present output power to be 15 milliwatts, and would like to increase it to approximately 100 milliwatts.

**79531 Joe Howard**  
Lansing, KS

I have in the past used T-Shirt transfer ribbons for my computer, but the price is a bit out of line. My question is exactly what is it made of? Is it carbon particles and ink? I am sure, after re-inking my ribbons, there is a way to re-ink a T-Shirt transfer ribbon. If so, and I am sure you can, what materials or chemicals do I need to "Re-ink" my heat transfer ribbon?

**79532 Kevin Cramer**  
White Lake, MI

I am looking for a power supply CRT which will allow 0-5V and 0-20

amps DC to be adjusted independently, or a DC-DC CRT which will take a battery charger input 12V DC and allow me to adjust the voltage and current separately.

**79533 Butch Lowe**

Help! I need service info on old 1986-1989, 19"-21" Greyscale, B/W monitors that are broken. A LaserView LDM-1019B, MEGASCREEN VY-1000 & Apple (Philips) two-page monochrome monitor. Can anyone help with a schematic, service manual, etc.?

**79534 Joseph Wegner, Jr.**  
Glendale, CA

I have found some software that will emulate CP/M, read various 5-1/4" & 8" formats and allow me to transfer all my old stuff into DOS files. I have been told that some of the older floppy controllers were capable of being modified to operate 8" drives. I desire information regarding hardware and software drivers that would allow the installation of 8" DSDD drives onto an ISA/PCI bus machine without the loss of my present floppies.

**79535 Carl Camper**  
Colstrip, MT

#### ANSWER TO #6959 - JUNE 1995

Here is a 700 volt power supply for powering a Geiger tube. The circuit is similar to an answer I gave a few months ago, except that this circuit uses a 1:1 telephone isolation transformer typically used in modems instead of an audio transformer and values have been modified to work with the lower inductance. The voltage is determined by the string of devices including the neon bulbs. Select a combination of neon lamps, varistors, or zeners to achieve the desired voltage. This circuit will not supply 250 uA as you requested, but if your Geiger tube ever draws that much current, you will

## ANSWERS

#### ANSWER TO #6954 - JUNE 1995

The quickest way to secure a multi-entrance garage with a local alarm, is to hook-up a "wall-wart" power module and a small relay in series with the PIR. Connect the X-10 to the normally closed output of the relay. When the PIR trips, it will open the relay contacts and trip the X-10. The relay and power module should be low current as the switched output of PIRs cannot handle a large amount of current.

You may want to check your PIR as some have a relay in the output and it is easy to change them over to a normally-open output.

**Charles Laye**  
Thonotosassa, FL

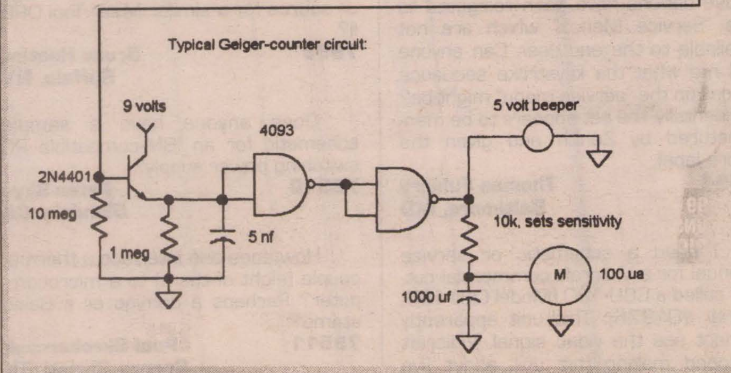

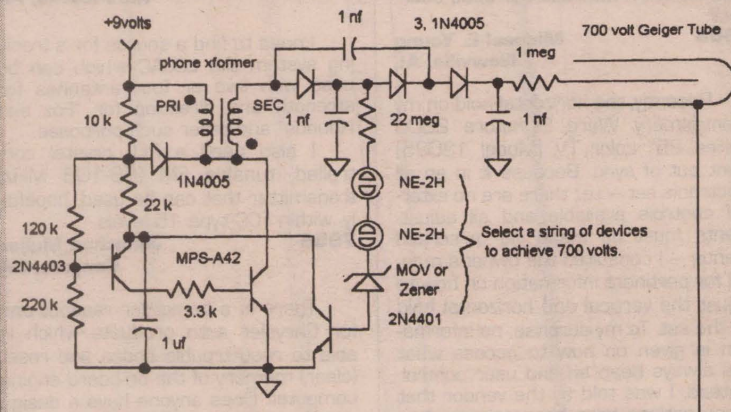

#### ANSWER TO #6951 - JUNE 1995

A cost-effective way to prototype a controller is to use an old PC with off-the-shelf plug-in cards for A/D, D/A, digital I/O, power I/O, mass storage, LCD displays, and just about anything

Continued on page 135

be concerned about more pressing matters! Geiger tubes draw about 100 uA when they pulse, but the pulses are very short and relatively far apart so the supply need only source a few micro-amps to the output capacitor. This circuit is nice because it cuts back current consumption to less than 1 mA when the load current is low. It works well from either 9 or 12 volts, but it will supply more current with higher supply voltages. A typical Geiger-counter circuit is included for reference

# FREQUENCY STANDARDS

by Corby Dawson

## USES

There are a myriad of uses for frequency standards, and as many different fields to use them in. Here is a partial list of uses.

**Calibration** — Counters, synthesizers, signal generators, timing systems, etc.

**Measurement** — Anywhere a precise measure of time or frequency is required. Such as astronomy, seismology, nuclear physics, LASER systems, navigation systems, deep space ranging systems, RADAR, etc.

**Telecommunication** — Stable references for frequency agile and spread spectrum systems.

## TYPES

There are three broad categories of common precision standards: crystal, rubidium, and cesium. The smallest are about 1.5" x 1.5" x 1.5" for crystal, 2" x 3" x 4" for rubidium, and 5" x 7.5" x 15.5" for cesium. All three types can also be found in rack mounted chassis of a much larger size. The crystal and rubidium units are considered "secondary" standards as they must be calibrated and periodically checked against a standard of known accuracy. The cesium unit is a "primary" standard as it can be calibrated against itself to a known high degree of accuracy.

## QUARTZ CRYSTAL

The basic crystal oscillator is not considered "precision" as it is quite temperature sensitive and has a poor accuracy in the neighborhood of 10ppm ( $1 \times 10^{-5}$ ). The next step up is the temperature compensated crystal oscillator or TCXO, again not normally considered precision. It is accurate to maybe .1ppm ( $1 \times 10^{-7}$ ) and is relatively insensitive to changes in temperature. The ovenized crystal oscillator or OXO can be precision or not, depending on the quality of the

So, you've decided to add a frequency standard to your collection. No matter your need — calibration, design, testing, or just plain fooling around — a precision frequency standard can enhance your lab. There are, however, a few misconceptions about such standards. This article is an attempt to answer some of the most commonly asked questions.

crystal and the design of the oven and oven controller.

A typical precision unit has one or two ovens with a proportional controller that limits temperature swings. Typical accuracies are  $1 \times 10^{-10}$  with aging rates between  $\pm 5 \times 10^{-11}$  to  $\pm 5 \times 10^{-10}$  per day. Aging is the amount the frequency will change over time with all other factors — temperature, power supply voltage, loading, etc., remaining constant. It is determined mainly by the quality of the crystal, the type of crystal cut, the crystal drive AGC circuits, and the ability of the oven controller to limit temperature transients. These units are the workhorses of the electronics world. At the heart of both rubidium and cesium standards resides a high-quality precision ovenized quartz VCXO (voltage controlled crystal oscillator).

## ATOMIC STANDARDS

Rubidium and cesium standards are known as "atomic" standards as the frequency determining factor is the interaction of the atoms of rubidium or cesium inside the standard. The particular isotopes (rubidium 85 and 87 or cesium 133) are not, however, radioactive!

## RUBIDIUM STANDARDS

The rubidium standard, as shown, takes the

5 MHz from a precision VCXO and multiplies it up to 60, 90, or 120 MHz depending on the design. This frequency is summed with a synthesized frequency of 5.31510107 MHz. These two signals are applied to a step recovery diode (SRD) inside a microwave cavity tuned to the rubidium resonance frequency. The 6.840 GHz harmonic and the 5.31510107 MHz are mixed in the SRD with the difference frequency of 6.83468489893 GHz falling at the rubidium resonance frequency.

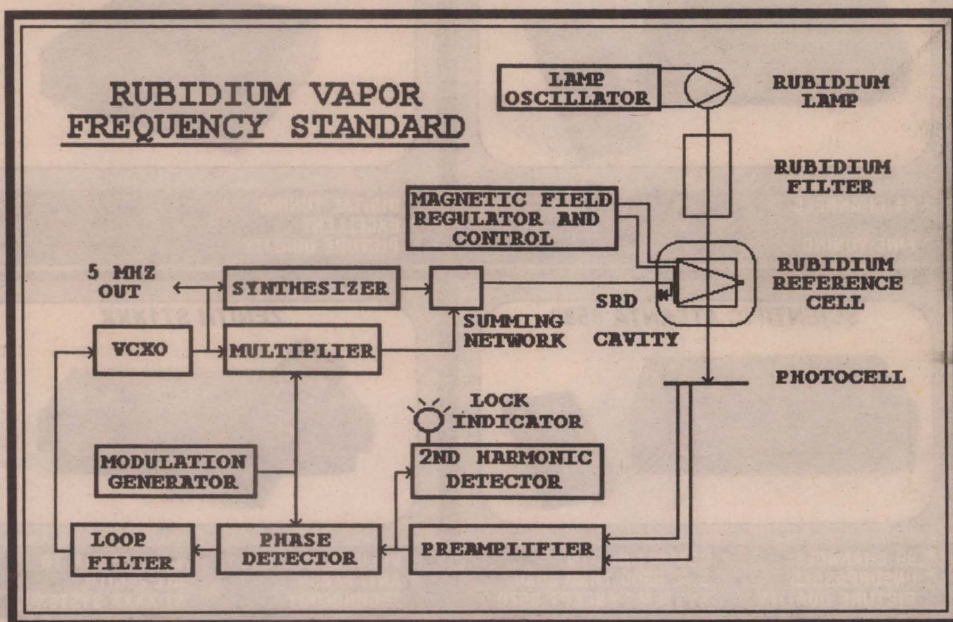

The cavity contains a hermetically sealed glass resonance cell containing a small amount of rubidium metal and some buffer gases. Shining through openings in the cavity is light from an RF discharge excited glow lamp, containing again rubidium metal and a buffer gas.

The light from this lamp is filtered, usually through a separate filter, containing (you guessed it) rubidium metal and a buffer gas.

The light exiting the cavity falls on a silicon photocell.

All rubidium components are heated by controlled ovens to between 60 and 110 degrees centigrade to vaporize the rubidium inside. The filtered light from the lamp "pumps" the atoms in the resonance cell to a specific energy state. This state is highly sensitive to the frequency of the microwave radiation inside the cavity and allows the greatest amount of light through to the photocell.

Inside the multiplier the RF signal is phase modulated by a low-frequency signal lying between 107 and 165 Hz. This causes the microwave signal to vary back and forth across the resonance frequency. When the resonance frequency is matched, the atoms are forced to "fall out" of the pumped state reducing the amount of light impinging on the photocell. Since this action occurs at the modulation rate the

output of the photocell will vary at the same rate.

The amplified photocell signal is synchronously phase detected and filtered. It is then used to drive the 5 MHz VCXO to match the resonance frequency.

Due to the physics of the interaction, when the 5 MHz is precisely on frequency, the modulation component of the photocell output is doubled in frequency. This causes the second harmonic content of the preamplifier output to dominate. The harmonic signal is sent to a level detector which drives the lock indicator.

The resonance frequency of the atoms inside the cavity is sensitive to a "C" or constant magnetic field. Adjusting its strength is the method used for fine frequency adjustments.

The synthesizer and resonance frequencies in this discussion will vary among manufacturers depending upon the design pressure and mix in the resonance cell. Typical accuracies are  $\pm 1 \times 10^{-11}$  with long term aging rates between  $\pm 1 \times 10^{-11}$  to  $\pm 6 \times 10^{-11}$  per month. Some units are specified to age less than  $\pm 5 \times 10^{-11}$  per year.

## CESIUM

The cesium standard as shown should seem familiar now! As you can see the main differences are that the cesium beam tube replaces the rubidium vapor components, and the synthesizer frequency changes to 12.6317716 MHz. The harmonic at 9.180 GHz and the synthesizer frequency are mixed in

the SRD with the sum frequency of 9.1926317716 GHz falling at the cesium resonance frequency.

The cesium tube has a current output in the tens of nanoamps range. As in the rubidium standard, the modulation signal will appear on the output of the tube and control the VCXO via the phase detector and loop filter.

Inside the tube, a cesium reservoir is heated, causing cesium atoms to discharge into the tube proper. These atoms are collimated and then "selected" using fixed state selector magnets at both ends of the microwave drift cavity. The input state selector allows only those atoms to pass that are in a state that will be affected by the microwave signal.

As these atoms "drift" across the cavity, their quantum mechanical state will be changed by the microwave signal at the resonance frequency.

The beam of atoms then passes through the output state selector magnet which directs the state changed atoms onto the hot wire ionizer.

The ionized atoms then traverse a mass spectrometer, which passes only cesium ions, to impact a detector plate. This plate is the input to an electron multiplier chain (EM) that raises the current to a useable level. The EM output current is directly proportional to how close the microwave signal is to the resonance frequency.

One of the interesting features of the cesium tube is its own internal vacuum ion pump. The inside of an operating tube is outgassing

continuously. This action would quickly ruin the high vacuum required inside the tube.

The ion pump ionizes the stray atoms and "buries" them within its electrodes. The ion pump, in conjunction with getter materials to trap the used cesium atoms, thus maintains the vacuum required. Typical accuracies are between  $\pm 5 \times 10^{-12}$  and  $\pm 3 \times 10^{-11}$ . The aging rates are extremely small to nonexistent.

## PROS AND CONS

So that's how they work and how accurate they are. Now, let's talk reliability and maintainability! Precision quartz oscillators are the most reliable, but also need the most frequent calibration. If you have access to an accurate source to calibrate against — WWVB, LORAN-C, GEOS, GPS, cesium standard, etc., then a good quality quartz standard may fit your requirements.

The main failure mode for quartz oscillators is failure or erratic operation of the temperature controller/oven. Also some older units will have aged past the adjustment range of their tuning elements. Rubidium standards are also quite reliable, again needing a source to calibrate against, but at longer intervals than quartz. I've observed some working rubidium units that are over 30 years old!

Weak or noisy lamps or lamp oscillators are the predominant cause of failure. These lamps are model specific and can be replaced if available. Cesium standards are reliable with observed lifetimes of

as the standard, only turning on the cesium portion when high accuracy is needed.)

2 The electron multiplier gain decreases slowly with age until the point is reached where all your adjustments are at maximum, but insufficient output current is available to lock the standard.

3 The hot wire ionizer filament, like all filaments, can burn out causing total failure of the tube.

4 By and large, the most common failure is when the ion pump cannot pump down the tube properly. This can be caused by a leak in the tube, not operating the tube for an extended period of time with the pressure in the tube rising past the ion pump operating region, or failure of the ion pump itself. Replacement tubes are prohibitively expensive, although some sources exist for good used tubes albeit somewhat expensive also!

## FUTURE STANDARDS

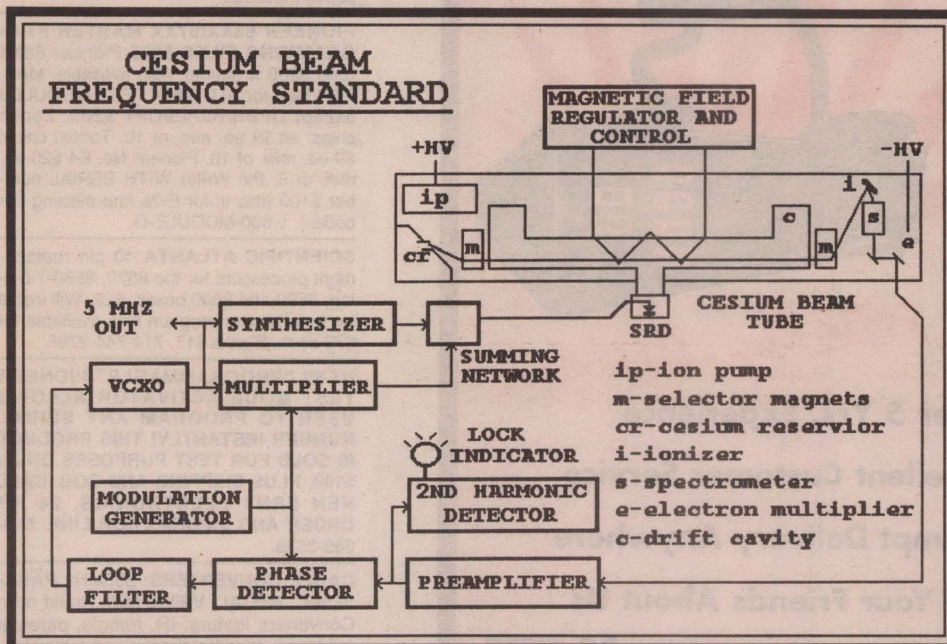

Future standards in the used market will be hydrogen MASER oscillators and atomic mercury standards. Some soviet-built MASERS are appearing, but the mercury standard is not commercially available yet.

## IN CONCLUSION

Remember the cesium standard does not need periodic calibration to maintain its accuracy. The rubidium and quartz do drift with the quartz having 30-100 times more drift than the rubidium, thus requiring more frequent calibration. Good used units are available at reasonable prices. Non-working units are much cheaper, but it's best to avoid them unless you have had some experience in their repair. NV

Corby Dawson has been involved in repair and calibration of frequency standards since the early 70s. He is also employed by LORAL Aerospace at Vandenberg Air Force Base where he is an Automated Remote Tracking Station (ARTS) Controller. This site performs commanding, tracking, and telemetry functions for on-orbit military satellites.

1 Since the cesium reservoir discharges atoms continuously, it can eventually run out of ammunition! (To conserve tube life, some units have cesium off switches that allow you to use the quartz VCXO

**BUYING SCIENTIFIC** Atlanta 8600, 8580, 8550, 8500. Software available. SA, Pioneer. Will program your 8550, 8500 earoms for \$7.50. Cable security key gets past collars \$25. Add \$5 shipping. No TX sales. Send postal money order to: K. Perry, PO Box 816, Leander, TX 78646-0816. Phone: 512-259-4770.

**"BASEBAND VIDEO EXPLAINED."** Discover what a Baseband Signal is and how it's constructed. Learn the advantages of doing things the "Baseband" Way. \$10. Visa/MC. **ELECTROMAN**, Box 24474, New Orleans, LA 70184. 504-482-3017.

**SA COMPATIBLE 40-Pin Processors** kits 70/80/90/8600 **ONLY \$20 Each**. 407-676-2530.

**CABLE TELEVISION** descramblers. Stop over-paying for your equipment. Catalog of over 50 companies that sell descramblers & accessories at below wholesale prices. Send \$15. Money order or certified check only, to: Garvey, Dept. C, PO Box 364, Quincy, MA 02269.

**FREE PAY TV, NEED MONEY?** Learn how to make money descrambling pay TV like the pros. You can make up to \$20,000 a month. Anyone can do it almost anywhere in the U.S. No electronics background needed. Order the **NEW BOOK**, Pay TV-The Inside Scoop. Send \$9.95 to A/V Publishers, 16281 S.F. Mission Blvd. #407-N, Granada Hills, CA 91344.

**ICs DUPLICATED.** We can duplicate your memory devices for \$2 each (a fraction others charge). 11 years experience. We also do 16CXX and other micro's. Call for others! Credit cards OK. **Software City**, Box 23016, Little Rock, AR 72221. FAX 501-223-9406.

**TEST KIT BLOW OUT AND CLEARANCE SALE.** Compatibles: Pioneer \$15, Zenith \$6, SA 40 pin \$20, SA Quick Boards \$18, and others, call 407-952-5064. No minimum purchase, and no Florida sales.

**CABLE EQUIPMENT FOR ALL YOUR TV NEEDS.** ALL BRANDS AVAILABLE. DISCOUNT ON QUANTITIES. WE BEAT EVERYBODY'S PRICES. CALL 713-444-2477. NO TEXAS SALES. VISA, MASTERCARD, DISCOVER.

**"TVT" COMBO \$150.** Test mode devices for BA-51XX, BA-61XX \$40 ea., BA-63XX \$45 ea. Call Ben at 1-800-484-7250 then dial 7525.

**BUYING JERROLD** DPV and DPBB, SA 8550, 8580, 8590, 8600 and Zenith 1600's. Any quantities. Call 201-728-3217. 10am-6pm EST.

**ZENITH COMPATIBLE TEST KITS.** ZL1, ZF1, ZZ chip, your choice \$6 each. 407-676-2530.

**CABLE CONVERTER** diagnostic and test modules for sale. Internal and external. Call John, 1-800-879-9657.

**PIONEER 6310** boxes. This month's special \$250. Also low prices on other cable units and test aids. Magic Communications, 805-944-6865. No CA sales.

**2R/5V/TCF** one wire, HRC/STD switchable Ch. #3/4, fast version. Limited time offer. \$14, min. 10. Call 1-800-831-2050.

**IT'S HERE!** The RFT-2, 2nd Generation RFT-1. Highest Quality, No interference. Stop messing around with cheap garbage. Get the ultimate test aid. Dirs only please. 707-763-7939.

**REVOLUTIONARY NEW PRODUCT!** Don't waste your money on outdated technology! This unit puts your converter(s) into **FULL SERVICE MODE!** Works on most systems! All units come with a 30-day **MONEY BACK GUARANTEE** and 1 year warranty. All units are shipped within 24 hours. Thousands of Satisfied customers! Quantity pricing available. **ABSOLUTELY NO COLORADO SALES!** Warning: Theft of service is a crime. It is not the intent of ALPHA ELECTRONICS to defraud any Cable TV company and will not assist anyone in doing so. Anyone implying theft of service will be denied assistance. Call 303-940-0201.

**STEALTH FSK**, complete auto operation, hook up and forget, no filters, no plugs, no hassles, New Ultra High Quality design. \$145, 707-763-7939.

**BUYING: JERROLD 450**, Trimode test kits. All models. Wanted Jerrold 550, Trimode test kits. Call 301-986-2436. Leave message.

**PIONEER 63XX/67XX MASTER PROGRAMMING FILES \$325** Pioneer 63XX units \$200 w/remote. Also available: MASTER files for ALL other TEST MODULES except DPBB/R2/V5/CFT \$200. Zenith chips: all \$9 ea. min. of 10. Tocom chips: \$9 ea. min. of 10. Pioneer No. E4 \$20 ea. min. of 5. Pio Writer WITH SERIAL number \$100 (this is for E-2s and missing bar codes). 1-800-MODULE-O.

**SCIENTIFIC ATLANTA 40 pin** replacement processors for the 8570, 8580-7 button, 8590 and 8600 boxes, \$22. Will install for free. Master program files available for \$75 each. Blanks \$17. 714-744-2786.

**NEW! "PROGRAMMABLE" PIONEER TEST MODE ACTIVATOR** ALLOWS USER TO PROGRAM ANY SERIAL NUMBER INSTANTLY! THIS PRODUCT IS SOLD FOR TEST PURPOSES ONLY. \$199, PLUS SHIPPING AND COD. CALL KEN ERNY ELECTRONICS, 24 HR ORDER AND INFORMATION LINE. 516-389-3536.

**CABLE CONVERTERS:** 550MHz PANASONIC, REGAL, VIEWSTAR. Brand new. Converters feature: IR, remote, parental guidance, favorite channel programming, mfg. warranties, available in Ch-3 or Ch-2. **SPECIAL 10 LOT PRICING. WHOLESALE ACCOUNTS WELCOME. FOR PRICING AND AVAILABILITY CALL 1-800-757-8186.**

## THE LOWEST COST WEATHER FAX RECEIVER!

A very sensitive fm receiver especially for NOAA APT and Meteor weather facsimile images on the 137 MHz band. Use with any popular demodulator/software.

Excellent 0.2µV sensitivity, special wideband filters for low distortion, and four selectable crystal controlled channels.

Optional Scan Adapter allows you to automatically search for and record signals as satellites pass overhead while you are away from the shack.

- R138 Receiver..... \$129 kit, \$189 w/t
- Channel Crystals.....\$12 ea
- AS138 Scan Adapter..... \$39 kit, \$69 w/t
- LMG-137 Low-noise GaAsFET Preamp..... \$59 w/t
- ARRL Weather Satellite Handbook.....\$20

### WWV RECEIVER

Get time and frequency checks without buying expensive hf rcvr. Very sensitive and selective xtal controlled superhet for

for listening to WWV on 10.000 MHz.  
**RWWV Receiver ....only \$59 kit, \$99 w/t**

### DIGITAL VOICE RECORDER

Records up to 20 sec. of your voice with built-in mic. or external mic. Extensive manual tells how to use multiple messages and adapt to many applications.

**DVR-1 Module..... kit \$59, w&t \$99**

### DTMF REMOTE CONTROLLER

Turn devices on and off over any radio link by four-digit touch tone command.

**TD-4 (one output)..... kit \$49, w&t \$89**  
**TD-2 (five outputs) ..... kit \$79, w&t \$129**

### RECEIVER PREAMPS

Many models of very low noise preamps for vhf and uhf bands from \$29.

We also make a full line of vhf & uhf fm voice & data link xmtrs & rcvrs, repeaters, autopatches, and converters.

## HP 7550A 8-pin Automatic Sheet Feed Plotter (RA00066)

Tested good! Serial and HP-IB interface

- High throughput
- Ideal for high volume, shared environments
- Uses drafting media and pens
- Requires minimum operator supervision
- Accepts A3/B- and A4/A-size paper

**ONLY \$195**

## MacQuil by Nest Software \$10each (RA00057)

A nice little word processor with page layout features for Mac Plus, SE, Classic, LC, Mac II, Notebook or Quadra systems with 6.0.2 or later operating system.

## Genoa Super EGA HiRes+ Adapter... ONLY \$19

New, in the box with manual and software. Up to 800 x 600 on multisync monitors. (RA00042)

## MacVision ONLY \$10 each European PAL ver.3.0 (RA00058)

■ Capture images from video camera, VCR's and other video sources easily ■ Integrate images into databases and personal files ■ Desktop publishing (Not for NTSC systems)

## Sperry 8-Bit CGA Card Only \$10 ea or \$7.50 for 20+ (RA00061)

• New, in the box

F4764 short-port color interface card

## DTC CONTROLLER CARDS NEW - In Box - 30-day Warranty!

Description	Interface	Description	Price
3250AS	SCSI	8-bit Hard/Floppy	\$30
5150XL	MFM	8-bit Hard Drive Only	\$15
5160X	RLL	8-bit Hard Drive Only	\$10
5187	RLL	16-bit 2:1 Hard Drive Only	\$10
5280	MFM	16-bit 2:1 Hard Drive/Floppy	\$15
5287	RLL	16-bit 2:1 Hard Drive/Floppy	\$15
7180	MFM	16-bit 1:1 Hard Drive Only	\$15
7187	RLL	16-bit 1:1 Hard Drive Only	\$10
7287	RLL	16-bit 1:1 Hard Drive/Floppy	\$15
DT3767	IDE	16-bit Hard Drive Only (Not DTC)	\$5
CCI	SCSI	8-bit Hard Drive Only (Not DTC)	\$20

## Digitek DT-3800 (RA00039) Full Range DMM — ONLY \$25

- 5DCV ranges ± 0.5 %
- 5 ACV ranges ± 0.8 %
- 7 DCA ranges ± 0.5 %
- 7 ACA ranges ± 1 %
- 6 Ohms ranges ± 0.8 %

- Diode & Transistor Tester
- Continuity Buzzer
- Leads, manual and battery

**New — In the box!**

## Keyboard Cable KB-10 Only \$2 each (RA00052)

New, in the box

from TheInfo Cable. Ideal for IBM PC XT/AT or other compatible keyboards.

## CMOS Clock Batties (RA00069) NEW! ONLY \$4 each

4.5 Volt alkaline with standard 4-pin keyed connector

## COMPUTER ASSEMBLY KITS (RA00070)

Kit contains:

- Speaker and mounts
- Drive rails
- Rear panel filler plates
- Hardware
- Standoffs
- AA Battery holder fits 4-AAs
- Rubber feet (4)

**ONLY \$5**

## Military Style Tripods (RA00064)

**\$15 each (Volume discounts given)**

This military surplus tripod is new, still in the box. It's ideal for surveyors and general contractors. If you want rugged, this is the one for you. It has a built-in level, and is ready to ship. At this price you should buy several.

## Zircon Electra Level ONLY \$10 (RA00028)

This is a new electronic water level that you can use for any project you have that you need to make sure it's level — even around corners. Ideal for business or at home

## Block and Tackle \$15

This is a new item with maximum capacity of 750 lbs.

These are priced to move quickly.

## GATES Battery Pack ONLY \$5 each or 10 for \$39 (RA00052)

Great buy on a battery pack. 2 volt, 2.5AH, lead acid gel-type. It can be split into single cell configuration

## DOS 6.2 — 1.44 Diskettes (RA00038)

Diskettes only, no manual  
ONLY \$19

## DOS 5.0 — 1.44 Diskettes (RA00072)

NEW! Still in the box with the manual.  
ONLY \$19

## High-Grade Shielded Cables

- Heavy duty 6 ft parallel printer cable. 45 angleDB25, ground wire on centronics connector. \$5 each (RA00033)
- 25 ft DB25F to DB25M with 25 pins connected straight through. \$10 each (RA00031).
- 100 in. DB25F to DB25M with all 25 pins connected straight through. \$19 ea (RA00029)

## Hard Drive Bible \$29 each (RA00047)

NEW, Still in the box. This is the definitive reference source

for hard drives. It includes CD-ROM and video tape. It will look great on your bookshelf.

## 1.2 MB FLOPPY DISK DRIVES (RA00051)

MIXED BRANDS

Panasonic - HP - Teak

Tested good and come with a 30 day exchange warranty.

Sorry no choice of brand at these prices.  
**\$19 each or 10 for \$12.50 each**

## Laser Labels

210 4" x 3-1/3" Shipping Labels

- \$3 ea. or 12 pkgs \$25 (RA00055)

510 2-3/4" x 1" Clear Matte Labels

- \$3 ea. or 12 pkgs \$25 (RA00054)

50 sheets of 8-1/2" x 11" Transparency Film

- \$5 ea. or 12 pkgs \$40 (RA00056)

We Accept Discover Card, VISA, Mastercard, Check, Money Order and COD Orders.

This Advertisement is our catalog. All items subject to prior sale. Minimum order \$10.00 plus shipping and handling charges. All orders shipped FOB Santa Clara, CA via UPS ONLY. Ground shipping unless otherwise requested. There is a \$5.00 UPS charge added to COD orders. All items are sold as-is, and no warranty is expressed or implied unless otherwise noted.

## Part 4

by  
Daniel B. Levels

**E=I/R**  
**Even I remember.**

**D**o you recall learning this phrase to help memorize Ohms Law? Does it surprise you to learn that modern communication engineers still use this simple formula to verify design efforts? In the age of palm-top computers, it never hurts to grab a pencil and double-check your numbers!

In previous articles, we have explored methods for troubleshooting transmission impairments such as noise, static, Radio Frequency Interference (RFI), Electromagnetic Interference (EMI), and Power Line interference (PLI). If you missed these segments, contact *Nuts & Volts* for reprints. This month, we will review procedures for testing and correcting telephone line signalling problems.

Our investigation of noise troubles includes an overview on measurements for both metallic (transverse mode), and grounded (common mode) signals, and readings will be expressed in terms of power (dBm, dBmC). As we consider signalling issues, we will be measuring DC values in terms of volts and milli-amps. For ringing signals, we will express readings of AC volts peak-to-peak (VPP) and RMS, as well as frequency in Hertz (Hz).

In review, the local telephone company (telco) installs switching equipment at strategic locations throughout their areas. Large switching centers called "Central Offices" (COs) provide service to customers located within a reach of 10-15 thousand feet. Smaller switching units are extended to subdivisions and rural areas. These "Remote Units" are usually connected to the closest CO via fiber optic cables.

Installing remote units allows the telco to provide a higher grade of service,

while reducing costs associated with maintaining long runs of copper cable.

Telephone cables, service wires, and your Customer Provided Equipment (CPE) comprise the make-up of an electrical circuit called the Local Loop (see Figure 1A).

The telco delivers service to a "point of demarcation" (demarc), located on the side or rear of your home. Modern demarc devices are equipped with RJ11-type jack/plug combination that provides a quick way to determine if a problem is in the telco network or your CPE. Why provide a test point for network/CPE isolation? To avoid trip charges incurred when telco employees discover trouble in your CPE! Locating your own trouble before calling the telco can save \$45-\$65 per occurrence!

### WARNING!

Use caution when testing telephone lines and equipment. Normal 50 VDC @ 60 mA will jump to 90-130 VAC during ringing cycles. Additionally, longitudinal currents due to power-line induction can lead to dangerous voltage levels. Use insulated equipment and avoid contact with wiring and test points.

The local loop is engineered to meet a set of parameters associated with the type of service ordered. We have already reviewed some of these parameters for (POTS) lines. As we discovered last month, the noise parameters for POTS lines require circuit noise (metallic) to be less than 20 dBmC, while the PLI (Power Influence/Interference) should be less than 80 dBmC.

The telco Outside Plant (OSP) engineer bears the responsibility for designing a local loop that will meet the electrical parameters for the type of service for which you are paying. A key component of the process involves selection of cable size (pair count) and conductor wire gauge (see Table 1.)

Table 1 identifies the loop resistance in "ohms per kilofeet" for several common cable wire sizes, from 26 gauge to 19 gauge. These figures are used to determine the appropriate wire gauge for a given cable route to the customer(s).

The gauge is selected to achieve a minimum of 20 mA in the loop. Loop current can be verified by placing a 430-ohm resistor in series with an analog or digital VOM, as shown in Figure 1B. Be aware that you are actually "pulling dialtone" through the meter, so choose a scale which will read up to 100 mA DC. Cables that are bridge spliced along the route do NOT affect the amount of loop current delivered to the customer, unless electrical faults exist on the bridged legs.

Conductor size (AWG #26, #24, #22, etc.) has a direct effect on several parameters, such as operating current and signal loss, and the installed facilities must be tested to insure that the expected results have been achieved. The projected "Expected Measured Loss" (EML) is compared with the "Actual Measured Loss" (AML) and deviations from standard must be resolved. This article examines how these measures affect the operation of your customer provided equipment, which includes phones, fax and answering machines,

alarms, and modems.

When your service is installed, the technician completes a series of acceptance tests on the loop. The order is not completed until quality results are achieved. How many of you pay the phone bill each month and really know what you are paying for? The telco has gone to great lengths in providing a bill that is easy to understand. After all the taxes from city, state, and federal government, what are you really paying for?

You are paying for parameters! The standard POTS line is intended for voice grade usage and has a pre-

dictable set of electrical parameters which are measurable. Here they are:

Loop Current: >20 mA @ 430 ohm DC term.  
Loop Loss: @ 1KHz < 8.5 dBm @ 600 ohm Z<sub>0</sub> term.  
Circuit Noise (metallic): < 20 dBrnc, term.  
Power Influence (noise to ground): < 80 dBrnc hi Z.  
Balance: 60 or greater.

In previous articles, we reviewed circuit noise, power influence, and balance. This month, let's take a closer look at loop current. However, notice there was no minimum voltage limit! You are used to working with dif-

ferent DC voltage levels when you put batteries into your tape player or portable TV, etc. The tape player may require 9 volts DC, while the TV may require 12-13 volts. Some CPE technicians incorrectly believe the telco has to supply -50 volts DC battery supply. This is not true! You are paying for a level of *current*, not voltage.

The following analogy will give a clearer understanding of this principle. When you get into your car, you don't care if the battery is charged to 12 volts DC or to 13.5 volts DC. What you really care about is that when you turn the key, the engine starts. The starter will require a certain amount of *current* to operate. The electrical system could be designed to operate at a number of different voltages to achieve the needed operating current. If the car's battery were 100 feet away from the car, we may need 70 to 80 volts DC to operate the starter. You see, the closer you get to the *current source*, you can use a lower voltage and still operate efficiently.

The power company steps up its voltage to thousands of volts for transmission lines running long distances, yet converts back to 220/110 volts close to your home. To restate, the closer you get to the *current source*, the less voltage required to achieve a given operating condition. The closer to the source, the lower the loop resistance (because of less cabling). This is why there is no requirement

for a certain voltage on the telephone line. For many years, the telco supply was -50 volts DC, but today it could be any value from -28 to -52 volts DC. The important parameter is "loop current." The minimum acceptable loop current is 20 mA, or .020 amps.

Manufacturers of the telco's central office switching equipment, design and engineer their products to operate under a uniform set of electrical standards. CPE manufacturers also design products to function properly within these same "electronic rules." The OSP engineer must be aware of the limits of each piece of equipment installed into the network,

and design the local loop accordingly.

For instance, the lower limit for loop current for a POTS line is 20 mA, or .020 amps. The CO limit will be listed as "xx ohm loop" and the engineer will select the appropriate OSP cable wire size (gauge) to achieve a maximum length. The "xx Ohm loop" designation means that the switch will provide a minimum of 20 mA to a loop with a maximum resistance of xx ohms.

The engineer must also allow for the standard telephone (SET) DC resistance of 400 ohms, and an additional 30 ohms for the Inside Wiring (IW). Let's add these up for a 2000 ohm office and see where that leaves us.

Starting with the CO limit of 2000 ohms, we must subtract the resistance for the SET and IW (400 ohms + 30 ohms = 430 ohms), arriving at the maximum allowable resistance for cable and service drop. In this example, the loop resistance allotment for cable is 1570 ohms, (2000 ohms - 430 ohms = 1570 ohms). (See Figure 2.)

Let's double-check our figures by calculating the loop current and make sure this loop will achieve a minimum of 20 mA. The CO equipment provides 50 VDC to achieve the operating current. Therefore, 50 VDC/2000 ohms = .025 amps, or 25 mA. Looks like we have an additional 5 MA of current to play with, right? Wrong!

The CO has an internal resistance of 450 ohms and will add to the 2000 ohm OSP limit for a total of 2450 ohms. Let's re-figure our loop: 50 VDC/2450 ohms = .020 amps, or 20 mA. Don't take my word for it, get your calculator and perform this exercise!

For many years, 50 VDC was the nominal operating voltage used to achieve an operating current of (at least) 20 mA. However, there is no requirement to provide a certain operating voltage. In urban areas, CO switches serve tens of thousands of customers within a short physical distance. A typical office will have an external (OSP) resistive limit of 900 ohms. However, the same CO internal resistance and SET/IW values still apply.

Remember that the 900 ohms includes the set/IW resistance. (See Figure 3.)

Using our previous example, let's perform some loop calculations: 50 VDC/(900 ohms + 450 ohms) = .037, or 37 mA. This would be an overkill at 50 VDC, so let's see what operating voltage would be better.

To calculate, multiply the required current by the total loop resistance: .020 amps x (900 ohms + 450 ohms) = 27 VDC. Therefore, with a CO voltage of 27 VDC, we will achieve 20 mA with a total OSP resistance of 900 ohms. If we subtract the SET/IW resistance, (400 ohms and 30 ohms), we can allow a total of 470 ohms for the OSP cable and service drop.

Our main concern is to achieve at least 20 mA to the customer. Lower

WFM 1-1A  
CO Disconnect Wink

WFM 1-1B  
CO Disconnect Wink

voltage designs offer smaller packages at more attractive prices and higher efficiencies. The floor model calculator of the 50s has been reduced to the size of a credit card and operates off of room lighting.

When loop current falls below 20 mA, some CPE fails to function properly. Answering machines are especially prone to erratic behavior. Verify loop current as outlined above, insuring the telco is delivering a minimum of 20 mA to the demarc point. This reading should be obtained with all CPE disconnected. If voltage drops when CPE is reconnected, suspect faulty IWs or CPE instruments. The Jan. '95 edition of *Nuts & Volts* contains an article that describes proper methods for correcting faulty CPE wiring.

Answering machines are also prone to failure if the CO line voltage is something less than -50 VDC. Older CPE designs expected normal on-hook (idle) voltage to be -50 VDC. When normal on-hook voltage levels are lower, such as 28 VDC, the answering machine is programmed to interpret any value less than 45 VDC as an off-hook condition and, since it believes the line to be already in use, refuses to answer an incoming call. When normal on-hook voltage levels approach the decision threshold limit for the machine, these units fail to release from seized calls.

Two waveforms illustrate a lab experiment for this trouble. In WFM 1-

1a, the normal voltage is nearly 50 VDC, and the answering machine responds to the disconnect wink sent from the CO. However, WFM 1-1b shows the result from a slightly lower (40 VDC) line supply. The unit in the second test ignores the CO disconnect wink, permanently seizing the line. In this mode, the unit will record several "If you would like to make a call . . ." announcements and eventually releases the line.

If you are experiencing this type of behavior from some of your CPE, verify the loop voltage and loop current for your line. If loop current is below 20 mA, consult your local telco. If current is greater than 20 mA, contact your CPE vendor (store, etc.). Regardless of voltage levels, any modern CPE unit should operate properly with a minimum of 20 mA DC.

Rapid advances in telephone/CATV service demand shorter loops, and the chosen method is to relocate portions of the CO switching equipment closer to the customer. Some day the CO equipment link will be digital down to the handset (unless we can learn to speak very quickly in binary). Equipment size will continue to shrink, and local loop parameters will change, with emphasis on digital testing, rather than analog measurements.

We will discuss digital loop testing methods in future installments of this series. NV

## Southern California!

Tired of renting a second-rate cable box?  
**NOW YOU HAVE A CHOICE!**  
**CABLE CHOICE—DON'T GET BOXED IN!**

Freedom from cable company tyranny is as easy as:

1  
2  
3

Call or stop by our store for the details or a demonstration on our exclusive service for your area. Our trained representatives are waiting.

Bring in your current cable bill and receive your custom-programmed replacement converter. We program each unit individually on-site.

Return your old converter to your cable provider and begin saving money and enjoying a new level of cable technology.

From Santa Barbara to San Diego, begin saving today. Call 800-644-6682 for details on starting your own Cable Choice franchise.

K-17	<b>Telephone Hold Button</b> \$6.50 Put all incoming and outgoing calls on hold at the press of a button. K-18	<b>Digital Bird</b> \$8.95 You probably have never heard a bird sing like this before. K-19 Speaker Incl.
<b>Nerve Tester</b> \$8.95 Test your ability to remain calm. Indicates failure by lit LED or mild shock. K-20	<b>Signal Injector/Tracer</b> \$19.95 Both signal generator & receiver. K-21A	<b>Yap Box</b> \$8.95 Makes six exciting sounds: Laser gun, Siren, Puppy, Diesel horn, Wolf whistle, Machine Gun. Case Incl. Available assembled YAP-10. K-22A	<b>Burglar Alarm</b> \$6.95 Alarm for your car, house, room or closet. K-23 Buzzer Incl.	<b>Whooper Alarm</b> \$7.95 Can be used as a sander or siren. K-24 Speaker Incl.
<b>Digital Roulette</b> \$19.98 Sure winner with your friends. 32 LEDs are arranged in a 5" circle. K-25	<b>Metal Detector</b> \$7.95 Find new money and old treasure. Get started in this fascinating hobby. K-26	<b>Logic Probe</b> \$14.95 A must to check out logic circuits. K-27	<b>Pocket Dice</b> \$13.95 To be used with any game of chance. K-28	<b>TV/FM Oscillator</b> \$5.95 Learn about oscillators and FM transmitters. Use as FM transmitter. K-29
<b>FM Mic</b> \$8.95 Transmit your voice on any FM radio. Range up to 1000ft. Case Incl. K-30	<b>Digital Lock</b> \$19.95 Program your combination from thousands of different choices. K-31	<b>Decision Maker</b> \$9.50 Let this kit make decisions for you. 6 LEDs & speaker create mystic mood. K-32	<b>Solder Practice</b> \$7.25 Learn soldering techniques and build a flashing European type siren. K-33 Speaker Incl.	<b>One Button Bandit</b> \$15.95 Press the button and away she goes. If 3 LEDs light, you win. Our version of Vegas one arm bandit. K-34
<b>Telephone Bug</b> \$8.95 Size of a dime, yet transmits both sides of a phone conversation to any FM radio. No battery needed. K-35	<b>Sound Activated Switch</b> \$8.95 Clap and the light comes on, clap again and off it goes. K-36	<b>Resistor Substitution Box</b> \$12.95 Contains 24 different value resistors from 10 ohms to 1 meg. K-37	<b>Capacitor Substitution Box</b> \$12.95 Contains 12 different value capacitors from 100pfd to 1MFD. K-38	<b>Love Tester</b> \$10.95 Test your sex appeal with this exciting kit. K-39

**IMAGE PROCESSOR.** Mfg by Image Technology Co of Deer Park NY. Stand alone unit powered by 115VAC. Inputs for two video cameras, output to AT type computer. No further information at this time, but if someone can get us info we will pay a reward. 100 units available. ....\$80.00 Postpaid

**RGBPHOTOMETER.** This is called a supermatch display calibrator pro. Made by Supremac Technologies. Contains three detectors, each with a filter in front (red,green,blue). Was used to calibrate monitors. Useful for many other purposes. At press time no schematic or manual was available, but we are trying.  
**RGB PHOTOMETER.....\$25.00 Postpaid**

Thanks to everybody for the enthusiastic response to our ads. Just a reminder that our merchandise are state of the art systems and components at savings of 75% and more. Our smaller items are postpaid, to make it easier for you to order, no shipping and handling fees! Most orders are shipped within 24 hours. Personal or business checks are OK. Sorry we are not taking credit cards, WE WOULD RATHER SAVE YOU THE 2.5 TO 5 %. CODs are OK, but it costs an additional \$4.75 that goes to UPS. Very truly yours, Franklin G. Fink

## VISION AND MOTION SURPLUS

241 East Main Street, Unit A  
Westboro MA 01581-1745  
Telephone 508-366-8370

**Aircraft type Nickel Cadmium batteries.** These are the ideal batteries for robotics and vehicle applications. Compared to lead-acid or gel cells, they perform much better at low temperatures, last longer, have higher short period discharge rates, charge much faster, have slightly better power/weight ratio, and are much more maintenance free. They can be stored charged or discharged, which lead-acid types cannot. All cells are military surplus, used, but fully tested and guaranteed. All cells are 1.35 volts, prices are per cell.

40 ampere-hour SAFT VP400KH.....\$7.00 4 LBS  
23 ampere hour SAFT VP230KH.....\$5.00 2 LBS

## Designers Programmers Engineers Technicians and/or Hackers

Are you an expert in any of these areas?

- IR Control • PCB Design • C++ • Machine Code • Windows Development Code • Lasers • Spread Spectrum • ISO 9000 • FCC Certification Part B • Networks • X-10 • PIC16C55 • Fiber Optics • Plastic Molding • Tool & Die • CAD/CAM • Electronics.

We are a multi-million dollar electronics corporation looking for a few good independent subcontractors who can work at home or in an office to help us design new products on a fast track.

If you have special skills in any of these areas, we would like to hear from you. Please send your complete technical qualifications, and/or a list of your abilities and achievements to:

**CORBY** Access Control Systems

Department 111  
1501 East Pennsylvania St.  
Allentown, PA 18103

**NEW PROJECT CASES** and other surplus electronic equipment and parts sold for pennies on the dollar. Complete List. AIS, Rt. 4, Box 664, Spiro, OK 74959.

**CATALOG, LOW** cost parts for RF, analog, digital, and audio projects. Two stamps please. Johnson Shop Products, Box 2843, Cupertino, CA 95015.

### MICROCONTROLLERS 125

### NEW CLASSIFICATION

### ANTIQUE ELECTRONICS 130

**WANTED: APPLE 1**, Mark 8 and early microcomputers. Also journals for museum. PO Box 341, Floyd, VA 24091. 703-231-6478, 703-763-2321.

**WANTED: TUBE** hi-fi and commercial sound gear by Western Electric, Altec, Marantz, McIntosh, Dyna, Eico, Heath, others. Vintage speakers by Altec, JBL, Tannoy, Jensen, EV, etc. Also guitars & amps, effects pedals, drums, audio tubes, old books about tube electronics, old radios, audio transformers, mics, related display & advertising items. MORE! Have top cash, will travel. 1-800-666-TUBE.

**WANTED: GENERAL RADIO** model 816 precision fork, model 1103A or 693B synchrometer, model 1101A oscillator. Call Bill Scolnik, 1-800-634-7036 or fax 1-800-788-5006.

**WANTED: WWII** German electronics. Any Western Electric audio equipment and other power amplifiers. Also wanted: Vintage speakers and microphones. Call Steve after 11 am Central, 608-251-6121.

**CRYSTAL SETS.** Parts, plans, books, kits. Largest source in the world. Catalog \$2. MIDCO, PO Box 2288, Hollywood, FL 33022.

**RADIO, TV**, transmitting, receiving and CRT tubes. Sam's Photofacts and more. PEM Tubes, 7392 French Rd., Sacramento, CA 95828. 916-383-9107.

**VINTAGE MANUALS** for all your radio-related equipment. Catalog available. We buy, swap, and sell. Pete Markavage, 27 Walling St., Sayreville, NJ 08872-1818. 908-238-8964.

**WANTED, ELECTRON** Tubes for auto radios. Fred Cranshaw, 1624 Bitter Ck, Garland, TX 75040. 214-494-4917.

**ANTIQUE RADIO CLASSIFIED.** Free sample copy! Antique radio's largest-circulation monthly magazine. Old radios, TVs, ham equip., 40s & 50s radios, telegraph, books & more. Ads & articles. Free 20-word ad monthly. Subscribe today. Six-month trial: \$17.95. Yearly rates: \$34.95 (\$51.95 by 1st class). Foreign write: ARC, PO Box 802-G15, Carlisle, MA 01741. 508-371-0512.

**TUBES, NEW**, most types 20,000 in stock, \$3 up. Sams Photofacts, \$2 up. Send for quotes & availability. \$2 for name on mailing list, deduct 1st order, cash OK, SASE. Kemner Enterprises, 17 Lightcap Rd., Pottstown, PA 19464. 610-495-5367 lv. message.

**WESTERN ELECTRIC WANTED:** 1927-1960S. Amplifiers, speakers, tubes, etc. Free offer. 1-800-251-5454.

**AIRCRAFT TRANCEIVERS** tube type \$40 ea. OS-32 Mil, scope \$30 Marine transceiver 2-4MHz, \$35 dual power supply, O-500V, O-500MA reg. \$75. (Heavy). Need manuals fairchild, scope 765 and modules. 520-886-3087.

**COLLECTOR'S GUIDE** for personal computers and hand calculators. Also includes printers, storage media, modems, software, acronyms & terminology. Covers history, specifications and values. 366 pages, hundreds of illustrations. \$14.95 + \$3 S&H. Tom Haddock, PO Box 2626, Ann Arbor, MI 48106.

**EICO HF-81**, dual 14 watt amplifier. Manual included. Best offer including shipping. 818-968-5319.

**MICROPHONES: WANTED** older broadcast quality microphones from Altec, RCA, Western Electric, Shure, American Microphone, and others. Also literature and catalogs on the same. Call or FAX with a description and asking price. Mike 408-749-0130 days or 408-749-1323 FAX.

**RADIO, TV**, industrial tubes for sale. Thousands in stock. DH Distributors, PO Box 48623, Wichita, KS 67201. 316-684-0050 voice/fax.

**TUBES, NEW**, up to 90% off. SASE. Kirby, 298 W. Carmel Dr., Carmel, IN 46032.

**RADIO, TV**, transmitting, receiving and CRT tubes. Sams Photofacts and more. PEM tubes, 1816A Kirby, Roseville, CA 95661-5522. 916-858-0376.

**REMEMBER WHEN** they cost \$400? When the HP 35 was the smallest "computer?" Collect pocket electronic calculators. Join the only organization of its kind. \$12/yr. with quarterly newsletter. Sample \$2. International Association of Calculator Collectors, PO Box 345, Tustin, CA 92681.

## Don't Count Inventory.. Count Cash!

Turn your surplus inventory into surplus cash. Phone or fax us about your excess inventory and we'll make you an offer on the spot.

Our purchasing power, personal service and integrity in the marketplace is unmatched. For over 30 years we've earned our reputation on it.

If cash is important to you, then to us, it is. **SYMPHONY** Electronics Corporation

**SPECIAL PROJECTS**

We design/build/obtain/repair/modify/maintain/consult on any device/system/project/process - electrical/electronic/phone/computer/mechanical/appl/appl/automotive for business/personal/invention prototyping need. Confidentiality guaranteed. Describe and include \$30 pre-engineering fee (does not obligate you). Time and cost estimates in 7-10 days.

**HI-TECH RESEARCH SERVICES**

Unique 61-K electronic and computer design article database accessed by title and subject: Digital, µP, µC, analog, hybrid, no-graph, software. Many hacker, in-house, non-published articles. Provide us up to 25 keys (OK to combine topics), we return list, you select articles. \$25 search fee + \$15/selection + \$25/page + \$5 S/H.

**AUTOMATIC TELLER MACHINES**

ATM crimes, abuses, vulnerabilities and defeats exposed! 100+ chapters detailed, include: Physical, Reg. E, cipher, PIN compromise, card counterfeiting, magnetic stripe, false front, TEMPEST, Van Eck, tapping, spoofing, inside job, super-cool, vibration, pulse, high voltage - others. Case histories, law, countermeasures, detailed security checklist, labeled internal photos, figures. ATMs contain up to \$250,000 in cash! Recent \$350,000 ATM crime spree still unsolved! \$39.

**CREDIT CARD SCAMS**

Cardholders, merchants, banks suffer \$ billions in losses annually because of credit card fraud. Describes every known means of credit card fraud and scams. Protect yourself! \$29.

**CONS, SCAMS & RELATED SWINDLES**

Cons, scams and related swindles fleece Americans of \$100+ Billion per year! The most comprehensive survival manual on cons & scams of all kinds - from the classic to hi-tech. Details 100s, their many variations, and countermeasures. Protect yourself! \$39.

**Beyond VAN ECK PHREAKING**

Eavesdropping on TV and computer video signals using an ordinary TV described in detail. Includes security industry reports. Range up to 1 KM. Plans include both the Consumertronics and the original Top Secret Van Eck designs! \$29.

**VORTEX GENERATOR**

Heat and cool with amazing, simple 3-port device. Uses no moving parts, electricity, fossil fuel, liquid or freon. Guaranteed scientifically sound! Plans. \$9.

**CELLULAR/CORDLESS PHREAKING**

How cellphones operate and are modified. Vulnerabilities to hack attack and countermeasures. Comprehensive info on reprogramming NAMs, ESNS, etc (cloning), control data formats, computing encoded MINs, ESNS, SIDHS, operating systems, PROMs and their programming, forcing ACK, test mode and resets, scanning, tracking, scanner restorations, freq and channel allocations, roaming, ESN and SIDH tables, parts/equipment sources, attendant stations, non-USA bands, health concerns, and the ECPA and critique. Step-by-step descriptions to keypad-reprogram 100+ popular cellphones. Plus complete section on phreaking cordless phones! Much more. Comprehensive, invaluable - 10 times more info than our competitor's \$79 manual! \$69. (Do Special Projects (above) for up-to-date hardware/software).

**PBX HACKING**

1000s of PBXs are hacked to the tune of about \$8 Billion/yr! While our "VOICE MAIL HACKING" (below) details how VMSs are hacked for "phun" and profit - including VMS methods for hacking PBXs themselves - "PBX HACKING" addresses all other issues relating to PBX hacking, including countermeasures. Can your business or agency afford a \$90,000 phone fraud loss (average loss due to hacked PBXs)? As described in *Forbes Magazine* article. \$29.

**VOICE MAIL HACKING**

How Voice Mail Box systems are used and the specific ways they are hacked. Includes ASPEN, MESSAGE CENTER, BIX, GENESIS, RSVP, SYDNEY, PHONE MAIL, AUDIX, CINDY, CENTAGRAM, SPERRY LINK, EZ, etc. Absolutely required for all users, sysops and security personnel! \$29.

**PHREAKING CALLER ID & ANI**

Details on how they work and dozens of effective ways of defeating Caller ID, ANI, \*69, \*57, Call Blocking and \*67. Also describes Caller ID, Orange, Beige, Cheese and CF Boxes, ESS, SS7, E-911, various CLASS services, CNA, NON PUB DA, CAMA, DNR, 800-ECR, Diverters, LD Extenders. Centrex - more. \$29.

**Beyond PHONE COLOR BOXES**

Dozen phone color boxes described - many circuits. Plus Call Forwarding, Conferencing, Phreak History, Glossary, Diverters, Extenders, Loops, REMOBS, Bridging Heads & Cans, Optocom, 3rd Party and many other non-box methods - more. \$39.

**ROBOFONE AUTODIALER**

Powerful, versatile, menu-driven "War-games" autodialer lets you dial any quantity (up to 10K) or mix of local/long distance phone #s in any order, over any length of time, whether busy or answered (your choice) and log the times/costs/answers/results to monitor/disk/print. Quick-dial directory of up to 600 numbers. BUSY redial options. Direct modem command and control. All Result Codes, including VOICE and RINGING. Optional shell to terminal program upon CONNECT. Exit to menu or DOS (for batching). Manual + Disk\* \$29.

**COMPUTER PHREAKING**

Describes in detail how computers penetrate each other, and how VIRUSES, TROJAN HORSES, WORMS, etc are implemented. Dozens of computer crime and abuse methods and countermeasures. Includes disk filled with hacker text files and utilities, and the legendary FLUSHOT + protection system (Ed. Choice, PC Magazine). BBS advice, password defeats, glossary - much more! Manual + Disk\* \$39.

**THE HACKER FILES**

Compilation of 100s of the best articles written (in ASCII) by top hackers & phreakers. Covers every major topic in hackerdom! 3 HD Disks\* \$59.

**CRYPTANALYSIS TECHNIQUES**

Five powerful menu-driven crypto programs (in .COM and .BAS source codes) to analyze, decrypt "secure" ciphertexts. Worked-out examples. Recommended by prestigious "Computers & Security". Manual + Disk\* \$29.

**By an ORDER of the MAGNITUDE**

The most comprehensive, hard-hitting, hi-tech survival book ever written! Topics include electronic, computer, computer, chemistry, energy, weaponry, cryptography, concealment, revenge, alarm, disguise & ID change, etc designs, tactics and strategies to survive an increasingly dangerous world. We all face increasingly physically and financially brutal times! Field-expedient use of technology in various threat and conflict environments and scenarios. Comprehensive. \$49.

**ROCKET'S RED GLARE**

Design and construction of solid-propellant amateur and survival rockets. Emphasis on formulation, manufacture, installation of propellants, motors, igniters, etc. Includes list of commonly available materials, and the design of launch pads and test beds (with schematics). \$29. **FIREWORKS** How firecrackers, small rockets, blockbusters, cherry bombs, smokes, volcanos, fountains, sparklers and safety fuses are made and colored. Simple, cheap, common ingredients. \$9. Both \$36.

**STOPPING POWER METERS**

As reported on "60 MINUTES": How certain devices can slow down (even stop) wathour meters - while loads draw full power! Device plugs into one outlet and normal loads into other outlets. Also describes meter creep, overload droop, etc. Plans \$29. **THE I.Q. MANUAL:** External magnetic ways (applied to meter itself) to slow down and stop wathour meters while drawing full loads. Plans. \$19. **KW-HR METERS:** How wathour meters work, calibration, error modes (many), ANSI Standards, etc. Demand and Polyphase Meters. Other experimental results to slow and stop meters by others. \$18. Any 2, \$38. All 3, \$59.

**HIGH VOLTAGE DEVICES**

HV device plans: Sun Gun, Taser, Prod, Cane, Flasher, Blaster, Zapper, Audio/RF/Radar Jammer, Jacob's Ladder, Plasma & Van de Graaff Gens., Fence Charger, Geiger Counter, Ozon Gun, Fish Stun, Plan, Stilm, Kirlian, more! All plans for only \$29.

**UNDER ATTACK!**

Electromagnetic Interference and Electronic Weapon Attacks cause: Cancer, birth defects, and profound psychological, neurological, cardiovascular and immune system disorders! Destructive to people, animals, plants, equipment! Includes ACTUAL CASES OF EM ATTACKS (we investigated!) Includes how to verify and pinpoint EM and electronic attack sources, and specific countermeasures. \$29. **EM BRAINBLASTER:** Tutorial and plans for powerful ELECTROMAGNETIC WEAPONS & LAB DEVICES. Optimum circuits, reags, waveforms, duty cycles, intensities. Through, \$29. Both \$49.

**RADIONICS MANUAL**

Exciting electrical, electronic and electromagnetic therapeutic, diagnostic and preventive devices (mostly experimental). History, descriptions, plans (dozens), availability of Radionics Devices from early to modern. While drugs cost \$ Hundreds, electricity costs pennies! \$29. **HEAL THYSELF:** Plans for 3 major electronic therapeutic devices of types approved by FDA. \$24. **EMF & LIGHT THERAPIES:** Systematic study of the germicidal properties of EMFs and lights *in vitro* and *in vivo*. Bands include jwaves, 4 IR, 6 visible and 3 UV, using continuous, single-pulse, strobe, random pulse rate and width exposures. \$29. Any 2, \$48. All 3, \$69.

**STEALTH TECHNOLOGY**

Police radar is fascinating! It also has error rates of 10-20%! Every known error mode - stealth method and material used to minimize radar reflections - tactic and strategy to fight unjust radar tickets (that cost you \$100s in insurance and risk cancellation) - methods to detect and jam signals - fully described! \$29.

**SECRET & SURVIVAL RADIO**

Optimum survival and security radio equipment, methods, freq allocations and voice/data scrambling/encoding. Includes small receivers/transmitters, telemetry, antenna optimizations, remote monitoring and control, security, surveillance, and ultrasonic, fiber-optic and infrared commo. 70+ circuit plans, tables. \$29.

**SAVVY DRIVING**

Detailed, comprehensive manual describes 100+ tactical and strategic driving tips. Includes how to avoid and evade criminals, avoid and evade head-on collisions and other accidents, properly react to accidents, emergencies and police pullovers, avoid tickets, minimize insurance premiums and loss risk, prepare for trips and optimize routes and long-distance driving, optimize parking, more. For all drivers - beginners to pros. \$29.

**ULTIMATE SUCCESS MANUAL**

Underpaid, overworked, harassed or abused? Victim of office politics? Stuck in a dead-end job? Can't find a good job? Expect to be laid off, fired or transferred soon? The ultimate no-holds-barred, looking-after-#1 Machiavellian techniques to find, obtain, maximize and keep top jobs, pay and benefits. THE RULES OF THE GAME FOR A GAME WITHOUT RULES! From resume to CEO. \$29.

**HARD DRIVE MANUAL**

Covers all hard drive and controller implementations (emphasis on PCs). How to set-up, initialize, format, set up, use, maintain, troubleshoot and repair them. How to protect them from mistakes, sabotage, prying eyes and sticky fingers. How to recover damaged and lost files. How to prevent crashes. Includes software reviews. Loaded with info, advice, tips. \$39. **DISK SERVICE MANUAL:** Maintain, adjust, align, troubleshoot, repair floppies without special equipment or software. 3.5/5.25/8", PCx86, MAC, Apple, Atari, Commodore, etc systems. All floppies need some upkeep. \$29. **DISK DRIVE TUTORIAL:** Theory, practical facts on floppy drives, disks, including many tips, recommendations, formatting, interfacing, FDC, etc. \$25. Any 2, \$54. All 3, \$74.

**Please Order Today!**

Sold for Educational Purposes Only

**CONDOR D.C. POWER SUPPLY**  
PN# YCA426 115VAC INPUT  
+5V, 4.0A / +12V, 3.0A  
-12V, 0.8A / -5V, 0.2A  
\$9.95

### AC/DC UNIVERSAL ADAPTOR

Input: 110/220V, 60/50hz, 12W  
Output: 1 to 12V, 1000mA  
only \$9.95

### LED SPECIAL !

Assortment of shapes, colors, and sizes.  
**GREAT DEAL!**  
100 pcs. - \$19.99

### MUFFIN FANS

3 1/8 x 3 1/8 x 1"   
New 12V Fan \$8.95  
2"x1" 12V Fan \$8.95

**FAN CORDS - \$1.25**

**FAN GUARD - \$1.00**

### Joystick Assembly

5 microswitches, cord,  
handle assembly \$3.99ea.  
**GREAT PARTS BUY !**

### PRINTER STANDS

DUAL LEG \$2.95

DUAL LEG  
W/PAPER TRAY  
\$4.95

80 COL. CLEAR  
PLEXIGLASS  
\$4.95

132 COL. CLEAR  
PLEXIGLASS  
\$6.95

### 386DX-25 COMPUTER\*

4MB RAM, 135 HD, 1.2 FD  
101 KB, VGA CARD, 30 DAY WAR.  
\$395.00\* (ADD \$95 FOR 1 YR WAR.)  
\$550.00 with VGA MONITOR

### POCKET PC REFERENCE

370 PAGES OF HARD TO FIND  
INFORMATION FOR IBM PC'S  
AND COMPATIBLES.  
EXCELLENT BOOK  
\$14.95

### HELPING HANDS

DUAL CLAMP  
WITH LENS  
\$9.95

**MINDSCAPE POWER PLAYER JOYSTICK**  
FOR COMMODORE 64, AMIGA, ATARI  
\$4.99

**EPSON LX-810 PRINTER** (Draft & NLQ)  
EXCELLENT 9 PIN, NEW 1 YR WARRANTY  
\$149.95

### COMPUTER "STUFF"

#### 2X SCSI MULTIMEDIA KIT

2X CD ROM, SOUND CARD  
SPEAKERS, 90 DAY WARR.  
\$179.95

**1X SCSI CD ROM DRIVE** \$69.95

**LASER PRINTER REPAIR MANUAL.**  
Don Thompson's Laser Service Seminars offers the only book available on general laser printer repair. Over 380 pages of vital information on all Canon based engines, HPs and Apple Laserwriters. \$350 + S/H. 1-800-457-5776. 714-855-3838.

**AUSTRALIAN ELECTRONICS** hobbyist catalogue available. 196 pages, 4,000 products. Mail order service. Catalogue free. Airmail charge US \$5. Send cash \$5 or money order in Australian dollars for A\$7. Jaycar Electronics, 8 Leeds St., Rhodes, NSW. 2137, Australia. FAX 612-743-2066.

**EARTHQUAKE ELECTRIC SIGNALS,** experiments newsletter. Sample issue, \$1. Geo-Monitor, 65 Washington Street, #400-V, Santa Clara, CA 95050.

**PINBALL MACHINES.** Books, magazines, manuals, diagrams, supplies. Send \$2 for catalog now to: Marco Specialties, Inc., 5290 Platt Springs Rd., Lexington, SC 29073-9252. 803-957-5500. FAX: 803-957-6974.

**FREE: "HOW RADAR WORKS"** 32-page booklet explains police and sports Doppler radar. Send \$1 postage. AIS, Rt. 4, Box 664, Spiro, OK 74959.

### PLANS — KITS — SCHEMATICS

150

**VOICE CHANGER** board! Fully assembled and tested! Not a kit! 16 levels of change, many applications! \$39.95 + \$4 (S&H) US funds! **PARSEC Electronics**, PO Box 34594, Phoenix, AZ 85067.

**FM STEREO TRANSMITTER** kit. Transmitter broadcasts any audio signal from a CD player, VCR, or cassette player to FM stereo radios throughout your home and yard. Uses the unique BA1404 IC. Tunable across the FM band, runs on 1.5 to 12 volts DC. PC board/components \$24. Visa/MC. **TENTRONIX**, Dept. NV795, 3605 Broken Arrow, Coeur d'Alene, ID 83814. 208-664-2312.

**RESELL 200+ ELECTRONIC PLANS & KITS.** Earn 100% profits. SASE for list & dealer info. Matco Electronic Publications, POB 509-A2, Roseville, MI 48066-0509.

**LASER LIGHT** show plans. New, inexpensive, non-computerized. Exotic patterns from music! \$8.95. TJ Tek, 9318 S. Steele St., Suite 222, Tacoma, WA 98444.

**IRQ/DMA conflict eliminator:** Easy to build board does what software can't. A must for troubleshooting pcs. Laser printed schematics, drawings and parts list, \$15. Mark Lopez, 306 Roosevelt, Irvine, CA 92720.

**BUILD THE Handy Finder**, direction finding phase detector. Similar to unit featured in QST, this unit covers 50-500 Mhz, all modes. Kit comes with: PC board, components, pre-formed stainless antennas, coax & BNC connector. You supply: PVC pipe handle and 9V battery. \$18 + \$1.95 S&H. Richard Rockwell, AB6CP, PO Box 2140, Carmichael, CA 95609.

**HOBBY CATALOG:** Broadcasting, Ham, CB, Cable TV, Hobby and Computer stuff. Transmitters, amplifiers, bugging devices, science projects, TV add-ons, descramblers, books (start your own radio station!), software and more. **PAN-COM International**, Box 130-V7, Paradise, CA 95967.

**OAK SIGMA I** converter descrambler schematic \$15; Oak Sigma STV I/II schematic \$15; Jerrold Starcom-5 compatible XT5-211 baseband schematic \$10; Starcom-7 compatible DPV7212 schematic \$10; Starcom-7 compatible DPBB/M1 baseband schematic \$20; Money order please. Surplus Electronics, POB 10009, Colorado Springs, CO 80932-1009.

**VCR BELT KITS!** Save big bucks by changing broken or worn belts. Send make, model & \$15 to Minute Man Electronics, 37111 Post St. #1, Fremont, CA 94536. Visa or MC. 510-791-5036.

**HEATH COMPANY** is selling photocopies of most Heathkit manuals. Only authorized source for copyright manuals. Phone: 616-925-5899, 8-4 ET.

**CRYSTAL RADIO Kits;** comes complete for an old style radio. \$22.50. Carl & Grace Ent., 5636 Romeyn, Detroit, MI 48209.

**MILITARY COMPONENTS** wanted. Capacitors, resistors, diodes, transistors, semiconductors, ICs. Electronic Material Industries, 818-842-5953, FAX: 818-845-3613.

**OPIE THE MOBILE ROBOT** provides a complete course in robotics. OPIE comes with a 13 chapter manual covering transducers, digital and analog circuits, microcontrollers and more. Used in University, College and High School. Buy as little or as much as needed. MasterCard accepted. Precision MicroDynamics. Tel. 604-472-7249, FAX 604-472-1830.

**FREE PHONE** calls through your CB radio. Project plans \$5. DB International, PO Box 1933, Lynnwood, WA 98046.

**OAK SIGMA I/II/3D/PH2** schematic for building Prom Programmer, instructions, Prom Codes, to turn units into full service mode for Testing purposes, \$20. Postpaid, money order please. Surplus Electronics, POB 10009, Colorado Springs, CO 80932.

**ELECTRONIC KITS:** Caller ID w/battery backup, 150 call memory and an RS232 interface, Multistation Thermometer w/4 separate temperature stations and an RS232 Interface, Telephone Dialer, 240 number storage and an LCD display. Call Genoa Group, 1-800-772-3945.

**RADAR JAMMER PLANS:** Send \$10 for full set of plans to Allmedia, 611 Jodi Dr., Hammond, LA 70403.

**CNC LOW COST 3 AXIS CONTROLLER KIT.** CIRCLE COMPUTER NUMERICAL CONTROL (CCNC) IS HERE! THIS 3 axis motion controller receives step and direction pulses from parallel port. Will drive 3 unipolar stepper motors at 1.25A per phase with 2 phase on. XYZ home switch and overtravel protection inputs. Expandable to drive solid state relays. Works with CNC shareware. Kit includes PC board and all parts for controller board and demo software. Uses a computer power supply or 12V battery. Use to CNC control PC board drill machines, band-saws, drill presses, wire measuring and cutting machines. Kit is \$95 plus \$5 S/H. Assembled and tested \$145. Send US check/MO to CAMTRONICS INC., 18230 130th PL NE, Bothell, WA 98011-3118. Tel: 206-487-0013.

**GET YOUR** sequential blinky light kit. You get a pre-etched circuit board, resistors, capacitors, integrated circuits, LEDs, and more. You get all parts and details to build this kit. More info from T. Heyward, Box 93-5169, Margate, FL 33093-5169.

**PLANS FOR** electronic fired potatoe launcher. You can build your own potatoe launcher for under \$20. Amaze your friends launch a potatoe 500 feet. Send \$10 cash only for plans to Creative Electronics, 465 Oak Drive, New Windsor, NY 12553.

**MINIATURE TRANSMITTERS!** All types! Send \$2 for information, refundable on first order. **Parsec Electronics**, PO Box 34594, Phoenix, AZ 85067-4594.

**IF YOU** can make these connections you'll have the best Turn Signal Reminder in the business. **PATENTED.** \$22 + \$2.50 S&H. 30 day money back guarantee. Free Flyer. Call toll free, 1-800-398-5605. Visa/MC. Sam TSR Co., 1627 Basil Dr., Columbus, OH 43227.

**REMOTE CONTROL** miniature encoded transmitters and receivers infrared and RF kits and assembled boards. Free catalog. Inventive Solutions, Inc., PO Box 8, Stratford, NY 13470.

**CAN A** hidden computer beat a casino? You've seen them on network TV. Now get the **ACTUAL SCHEMATICS** to easily build your own! Beautiful 40 PAGE manual will give you every detail! For informational purposes only. \$12. WCN, 3283 Belvedere, Riverside, CA 92507.

**JVC SERVICE** manuals. Complete set of 1993 audio and visual components. Never used. \$50 plus S&H. Approximately 400 manuals in 3 boxes (95 lbs). Sold as set only. Tom, 206-927-8846, leave message.

## PIC C COMPILER

- Integrated software development environment including an editor with interactive error detection/correction.
- Access to all PIC H/W features from C.
- Libraries for RS232 serial I/O and precision delays.
- Efficient function implementation allows call trees deeper than the hardware stack.
- Special built-in features such as bit variables optimized to take advantage of unique hardware capabilities.
- Assembly code may be inserted anywhere in the source and may reference C variables.
- Automatic linking handles multiple code pages.
- Constants (including strings and arrays) are saved in program memory.
- Standard one bit type (Short Int) that permits the compiler to generate very efficient Bit oriented code.
- PCM has interrupt. A/D and EEPROM built-in functions.

```
#include <PIC16C56.h>
#define Delay(Clock*20000000)
#define RS232 (Baud=9600,Xmit=pin_1,RCV=pin_2)

main () {
    printf("Press any key to begin\n");
    getch();
    printf("1 kHz signal activated\n");
    while (TRUE) {
        output_high(pin_8);
        delay_us(500);
        output_low(pin_8);
        delay_us(500);
    }
}
```

## Experimenting With The TMP01 Electronic Sensor IC

Temperature sensing is very important when it comes to automotive and industrial applications. The automobiles that we drive provide comfort when it's hot or cold by adjusting the temperature control unit. The temperature that is displayed on the overhead console gives us an indication of the weather conditions surrounding the vehicle.

In an industrial environment, the control panels responsible for moving the conveyors in the assembly plant can be affected by heat. These units have fans to keep the electronics from approaching thermal melt down. The paint booths used for painting automobiles have controllers that monitor and control the temperature within the stations.

What do all of these examples have in common? The answer is temperature! Temperature sensing is a unique engineering concept and is derived from the physical sciences realm. Temperature is one of those physical items that we can definitely get our hands around.

To measure it, we can use a thermometer and to control it, we use a switch. The switch allows us to

turn on or off the temperature, depending on what the thermometer reads. In both industrial and automotive applications, temperature is pretty much maintained by this concept of sensing and controlling.

There are various means in which to measure temperature. Thermometers, semiconductors, and thermistors are examples of detecting temperature. Relays, motors, and switches are components used to control temperature. When detection is combined with control, a temperature controller system is created.

Recently, developments in electronic temperature sensing have been made. Detection circuits are now packaged onto a small IC. In this month's column, electronic temperature sensing will be investigated using the TMP01 IC developed by Analog Devices. The IC's electronic construction will be explored, as well as the usual discussions on experimental circuits.

So, before we begin our discussion of the TMP01 IC, let's take a look at temperature sensing basics.

### What is Temperature?

Simply put, temperature is the hotness or coldness of an object. The easiest way to measure tem-

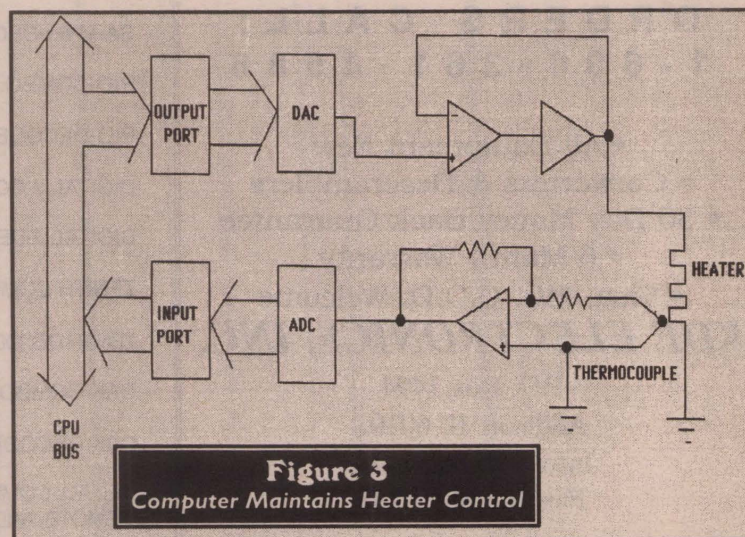

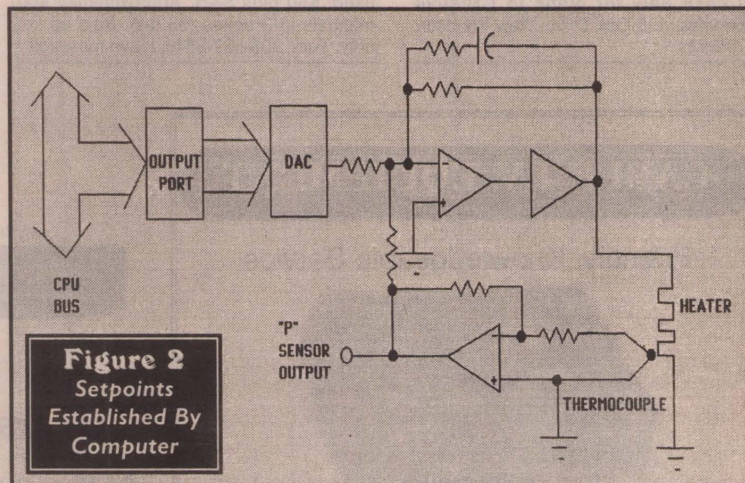

perature is to use a thermometer. Temperature is usually measured in degrees of Celsius (or Centigrade) or Fahrenheit. The temperature conversion scale shows that water boils at 212 degrees Fahrenheit or 100 degrees Celsius. To convert from Celsius to Fahrenheit, one can use a conversion chart listed in the back of science books or two simple equations can be used. To equate the equivalent Fahrenheit degrees for Celsius, use the formula:

$$F = (C \times 9/5) + 32$$

If you want to know what Celsius temperature is equal to a known Fahrenheit reading, use the formula:

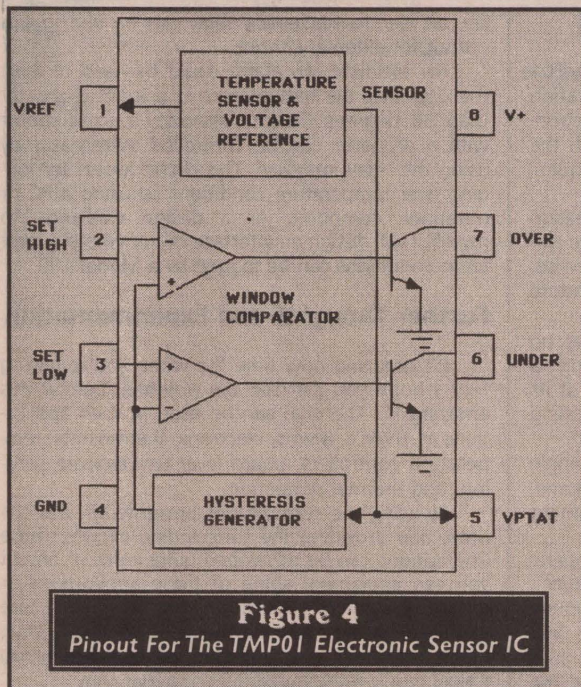

$$C = 5/9 \times (F - 32)$$

For those who are not familiar with these two formulas, try converting 100 degrees Celsius to Fahrenheit. This answer should be 212. The Celsius scale is part of the SI (System International) or metric units for indicating temperature. Another temperature scale used to calculate extremely hot or cold temperatures is the Kelvin. Water freezes at 273 K (Kelvins), and boils at 373 K. To convert a temperature given in

# THE SOLDERLESS BREADBOX

Celsius to Kelvin, add 273 to the number.

Temperatures can be generated by various means such as convection, radiation, and conduction. Convection is basically ambient (room) temperature surrounding an object. A fan blowing cold air on a soldering iron is an example of convection. The air circulating the soldering iron is the convection temperature surrounding the tool.

Radiation is the method of producing hot or cold air by a transmitting source. Transmitting in this context means being able to emit the solar or polar temperatures from the object. The sun is a good example of a radiation source because heat is emitted from the brilliant ball of light.

Last, conduction relates to how an object can absorb hot or cold air from a source. An example of conduction would be the heating elements in a toaster. The heaters absorb heat because of the metal grids they are made from. Metal is a conductor for both hot and cold temperatures.

The mercury that is inside of a thermometer is a good conductor for hot and cold temperatures because it transmits the hotness or coldness to the red dye. The dye reacts to the temperature by moving up the scale when it's hot, and down the scale when it's cold.

Figure 1 shows examples of convection, radiation, and conduction. To make temperature measurements using electronic sensors, one or all methods of temperature dissipation discussed are used.

The heart of a temperature control or measurement system is based on the sensitivity of the sensor used in the application. Temperature detection is only as good as the design of the system.

So, what's involved in a temperature measuring system?

## Designing a Temperature Controller

A temperature controller is a device that can measure hot or cold temperatures. Two approaches on design are illustrated in Figures 2 and 3. Figure 2 shows the computer (which is not part of the control loop) providing the set point value(s). This controller assumes that the set point (SP) command is correctly executed by the analog controller. The SP establishes the trip points of the temperature controller for actuating an alarm. The sensor output marked "P" could

be interfaced to an ADC (Analog-Digital-Converter) so the computer can check for reliable operation.

A comparator can also be used to check the difference between the DAC (Digital Analog-Converter) and the sensor outputs and raise a flag in the I/O port if the differential value is excessive. In any case, the computer's attention is only needed to vary SP to respond to a control failure.

The temperature controller in Figure 3 depends on the computer to maintain the correct value for the heater voltage. This is done by reading the value sensor output value through the ADC and calculating the appropriate response.

There are three devices that are used for temperature sensing: thermistors, thermopiles, or photodiodes. The thermistor will vary the amount of input current into the op-amp by the heat it detects. As temperature increases, the thermistor's resistance will decrease.

The thermopile, on the other hand, produces a voltage proportional to the amount of heat sensed. At high temperatures, more voltage will be applied to the input circuit of the op-amp.

Last, the photodiode provides current to the op-amp circuit by the amount of temperature it detects. Temperature is indirectly applied to the photodiode by the amount of light intensity. With more light intensity, the current flow is excessive into the circuit. Temperature will increase with this light level change, as well.

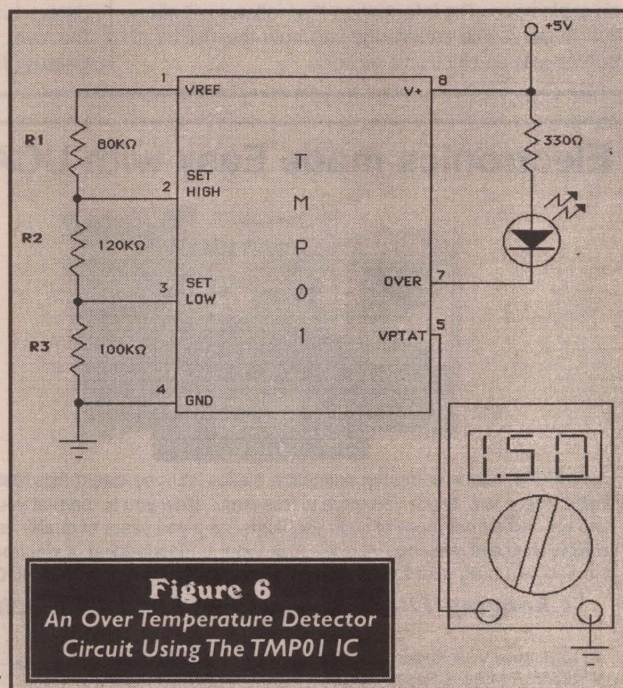

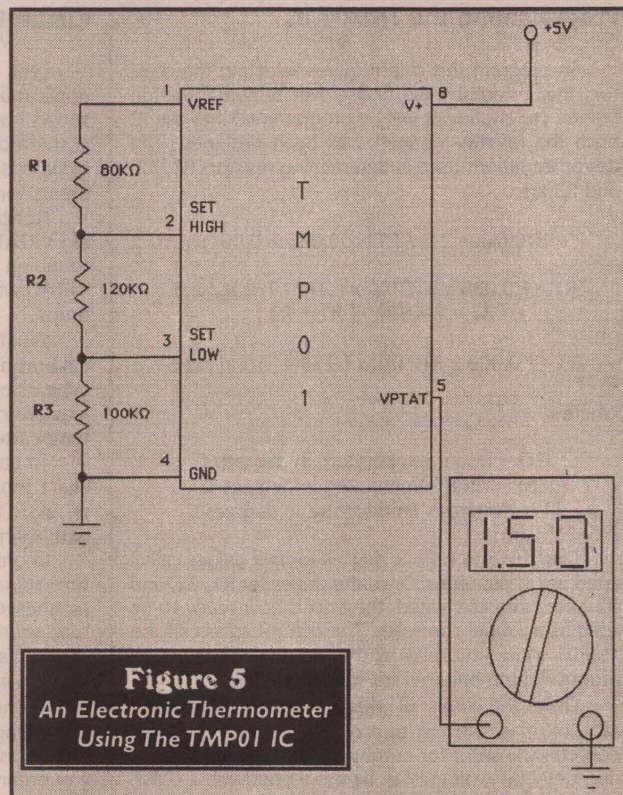

The trip points of both systems can be changed quite easily by modifying the software. The most unique feature about these controllers is that any computer can be used to monitor the temperature levels by the sensor. To control an alarm requires that an electronic switch be connected to the output of the system. Now, let's see how the TMP01 can be used as a temperature controller.

## The TMP01 Electronic Temperature Sensor

The TMP01 is an electronic temperature IC sensor which generates an output voltage proportional to absolute temperature. This nifty eight pin DIP (Dual-In-Line package) marvel, manufactured by Analog Devices, has two outputs that are triggered when the sensor detects an over temperature or under temperature condition. Figure 4 shows the pinout for the TMP01 IC.

Both the under and over temperature points are determined by user selected external resistors. This feature provides "programmability" to the IC. The temperature thresholds (hysteresis) is also determined by the resistive network, as well.

Inside of the TMP01 chip is a pair of matched comparators that monitor the input voltage established by the network with a 2.5V internal reference voltage. The comparators will generate a voltage proportional to absolute temperature (VPTAT), which has a nominal value of 1.49V at +25 degrees Celsius.

The TMP01 has a set of open collectors that output signals related to over/under temperature detection. These output ports are set upon the chip exceeding the temperature setpoints. The open collector outputs are capable of sinking 20mA, thereby enabling the TMP01 to drive electro-mechanical relays directly. The operating voltage range for the chip is 4.5V to 13.2V (single supply) and has a temperature detection limit of -55 degrees Celsius to +125 degrees Celsius ( -67 degrees Fahrenheit to + 257 degrees Fahrenheit).

In order to program the chip for the desired temperature detection points, the correct resistors must be selected. How does one program the TMP01 IC for temperature monitoring?

# THE SOLDERLESS BREADBOX

## Programming the TMP01 IC

To program this chip requires selecting the resistors that establish the under/over temperature trip points. The hysteresis will be programmed into the IC once the resistive network has been designed. The design equations used in determining resistors R1, R2, and R3 are:

$$RTOTAL = 2.5 / (T1 \times 0.005 + 0.001)$$

$$R1 = [0.005 \times RTOTAL \times (277 - THI)] / 2.5$$

$$R2 = RTOTAL - (R1 + R3)$$

$$R3 = [0.005 \times RTOTAL \times (273 + TLO)] / 2.5$$

where:

TLO = Under temperature in degrees C

THI = Over temperature in degrees C

T1 = Hysteresis temperature in degrees C

One thing to note is that all resistor values calculated are in kilo-ohms. Once the values for R1, R2, and R3 have been calculated, the chip is now ready to be used as a simple controller. The control aspect of the TMP01 comes into play by the fact that the temperature will be monitored for hi/low readings.

Once the limits of these readings have been reached, the chip will turn on the appropriate open collector transistor for output control. The continuous output (VPAT) voltage can be monitored with a DVM.

To see this chip in operation requires some hands on exploration. The information that follows will allow you to gain some knowledge into how the TMP01 IC operates as an electronic sensor.

## Circuit Examples Using the TMP01 IC

Let's jump right into the discussion of TMP01 applications by looking at Figure 5. This illustration shows how simple it is to use the IC as an electronic thermometer. The values for R1-R3 establish the hysteresis and the under/over temperature requirements for the chip.

Notice where the DVM is attached for measuring VPTAT. The output voltage will go up as the surrounding temperature of the IC increases. Likewise, VPTAT will decrease as TMP01 chip's temperature drops.

What makes this chip so appealing is that no calibration is required. The days of using a Wheatstone Bridge with a thermistor as one of its legs are no more. The TMP01 is capable of reading temperatures instantly upon being powered up.

To correlate voltage with temperature, a simple chart should be constructed. By using a thermometer, note the temperature reading of the instrument with the output voltage shown on the DVM.

In order to create this chart, a variable temperature source is required. I used an old hair dryer I purchased at a garage sale as my variable temperature source. This unit has cool, medium, hot, and very hot settings. By setting the switch to each position, I was able to read the temperature from the thermometer and record the corresponding IC output voltage. The table created using this procedure will be useful with other TMP01 circuit applications you dream up.

In Figure 6, we see the TMP01 being used to detect high temperatures. The circuit will turn on the over temp LED when it exceeds 38 degrees Celsius (100 degrees Fahrenheit). As mentioned ear-

lier, an electro-mechanical relay can be tied to this output for external control.

For example, an alarm could be used to alert the user that the temperature in a room is greater than 38 degrees Celsius. Likewise, a small motor with a propeller can be controlled quite easily by using this relay interface. This circuit allows for logging over temperature conditions by using a PC or notebook computer. As a design challenge to myself, I will design an interface circuit whereby over temp conditions can be logged by a Model 100.

## Further Thoughts and Experimentation

It's amazing how time flies when you're having fun! I hope you can see the potential behind this amazing IC. The chip can be used in such applications as HVAC systems, electronic thermostats, temperature controllers, board level temperature sensing, and thermal protection.

By using the core designs presented in this column, and providing the surrounding circuits, these applications can be developed quite easily. If any of you can implement some of these applications or dream up some of your own, drop me a line in care of this magazine's editorial department or by E-Mail. I'll be interested in seeing some of your results. My E-Mail box is t6790dw@infoctr.chrysler.com

Enuf said, see ya next month in the breadbox!!

## #150 PLANS - KITS - SCHEMATICS cont.

**NI-CAD ZAPPER** can rejuvenate those unchargeable NI-CAD batteries. Instructions, schematic and parts list to construct NI-CAD ZAPPER: \$5. **TEN-TRONIX**, 3605 Broken Arrow, Coeur d'Alene, ID 83814.

**TOCOM COMPATIBLE** schematics, 5507 \$15; 5503VIP \$10; 5504A \$10; 5504A full service testing modifications \$20; 5503VIP two different full service testing modifications \$20; program codes 5507, 5503VIP, or 5504A \$50 for each code; money orders or cash COD, 719-661-1659.

**WALKING ROBOT.** HexWalker six legged robot kit. Basic stamp controlled, servo driven. \$125 +\$5 S&H North America, \$15 all others. Manual only, \$10 +\$1 S&H (applicable to kit purchase). CA folks add 7.75%. M&T Systems, PO Box 7816, Huntington Beach, CA 92615. Tel. 714-969-3166, Fax 714-969-3167, E-Mail Mandtsys@ix.net-com.com.

**NIGHT VISION KITS**, and brand name US and Foreign units. Complete kits include all necessary components to build your own night vision scope. **SAVE \$.** US **Military Intensifiers**, IR, Foreign and more. Call or write: **NENVIS, INC.**, 320 Main St., Box 1088 Sturbridge, MA 01566 or 508-347-7238, 10-4pm EST.

**HYDROGEN FUEL** cell kit: PEM fuel cell, solar panel, electrolyzer, and more \$149. Greenlux, 415-753-0251.

**MAKE EXPERIMENTING** easier and save money! Build your own electronic breadboarding system complete with regulated voltage supply, logic indicators and signal sources all in a portable package that folds away for compact storage with your circuits still on the board. Plans and parts list only \$5 cash, check or money order. We pay postage. ZBL, 2299 Buckingham Blvd., Lake Havasu City, AZ 86404.

**MAX ROBOT KIT.** Mobile base platform 1ft. x 1 ft. with dual 12 volt drive motors \$89.95 plus \$15 shipping. HC11 CPU board package with manual set, "C" compiler and robotics software libraries \$269.95 plus \$10 shipping. Encoder optics to measure speed and distance \$14.95 including shipping. Sonar package, assembled and tested \$CALL. Many more AI and robotics items! MO residence add 6% sales tax. Zagros Software, PO Box 460342, St. Louis, MO 63146-7342, 314-768-1328.

**FAVORITE ELECTRONICS** circuits book, TV to computer, VGA to TV, computer 25MHz O'scope, and other adapters. 65KC and 25KC to 31KC monitor conversion plans. Send \$20 to Bob Davis, 222 West Fifth St., Emporium, PA 15834.

**VIDEO GAME** cartridge design plans and memory maps for the 8 and 16 bit systems. Explore game design using a C64 or IBM computer. For more information send a SASE. Andrew S. Pakerski, PO Box 86, Thorndale, PA 19372.

**MAKE EXPERIMENTING** easier and save money! Build your own electronic breadboarding system complete with regulated voltage supply, logic indicators and signal sources all in a portable package that folds away for compact storage with your circuits still on the board. Plans and parts list only \$5 cash, check or money order. We pay postage. ZBL, 2299 Buckingham Blvd., Lake Havasu City, AZ 86404.

**UNIVERSAL REMOTE CONTROL SYSTEMS** infrared, RF miniature transmitters, receivers. Items for novice technician or educator. Combine your home and vehicle control automate anything. **FREE CATALOG.** Inventive Solutions, PO Box 8, Stratford, NY 13470.

**BROADCAST FARTHER!** 75-110 MHz amplifier connects to stereo transmitters. Produces 15-20 watt signal. Requires 50-150MW drive. Complete plans with part source information and antenna designs, only \$16. Visa, MC accepted. **PROGRESSIVE CONCEPTS**, 1434 North Mills Ave. Claremont, CA 91711, 909-626-4969.

**BRAAAAAATTTTT WHHEEEEEEE!** No, not an air raid. We just want to alert our **Nuts and Volts** customers to our new telephone **307-234-3488**. 2700+ electronic devices have we ripped asunder, only to draw schematic diagrams of their little innards. These prints are sorted into 22 catalogs, a list of which you can have by sending us **4 stamps**. **BOMARC Services**, Box 1113, Casper, WY 82602.

**LASER PEN** pointer \$42.99 gun laser pointer with mount \$119.99 information. FAX 407-434-3882. Mail order plus \$4 S/H. TSAI, 98 Meadow Park Lane, Boynton Beach, FL 33462.

**MUSCLE RELAXANT**, stimulator schematic or kit. Adjustable pulsating generator has therapeutic value. Schematic and parts list \$25. Kit with hardware assembled and circuit board not assembled \$175. J.S., 600 Lindbergh Drive NW, Little Falls, MN 56345.

**TV TRANSMITTER** plans, 34 pages including schematics, parts list, tuning, kit information. Capable of transmitting 2 watt of audio and video exceeding several miles range. \$10 cash or money order to: Borderline Electronics, PO Box 1831, Riverhead, NY 11901.

## MANUALS — SCHEMATICS WANTED 155

**WANTED: SCHEMATICS** for all types of Hi-pot testing equipment, service manuals also wanted. Youngson's Inc., 6701 Melrose Ave., Louisville, KY 40216.

**WANTED: COLLINS** Radio Company literature. Jim Stitzinger, 805-259-2011, FAX 805-259-3830.

**MILITARY COMPONENTS** wanted. Capacitors, resistors, diodes, transistors, semiconductors, ICs. Electronic Material Industries, 818-842-5953, FAX: 818-845-3613.

**WANTED INFORMATION** and schematics on **ELECTRONIC SPEEDOMETERS** for American and Foreign automobiles. Top dollar paid for information about Lincoln Town-car 1990-1995. Please call 718-463-8746 or beep 917-249-3338.

**NEED HICKOK** manual and schematic for Model 155. Indicating traceometer. Copy OK. Paul Passey, 10521 Espira Ct., Albuquerque, NM 87114. 505-898-6818, evenings.

**NEED SERVICE** manual/schematic for Model 752 Hickock Tube tester. Copy OK. Virgil Darnel, 101 Stroud Drive, Mableton, GA 30059.

**WANTED: ANY** information on Commercial Trade Institute Model TC-20 tube tester or military control radio C-845/U by Conn. Tele. and Elec. Corp. Willing to pay reasonable prices for manuals, prints, operations, etc. Brett Hoff, 114 Griffin Road, Ochlocknee, GA 31773.

**WANTED: MANUALS** and/or schematics for Pioneer model PD-M502 multi CD player and I also need manuals/schematics for Fisher CR-W50 stereo cassette deck to: Larry N. Browning, PO Box 1044, Kearney, AZ 85237.

**MOTOROLA CELLULAR** service bulletins, complete set to #215. (or what have you). Motorola, OKI, Cellular & ICOM R-100, 7000, 7100, 9000 & R-I service-repair manuals, etc. Call Les, 702-642-0325.

**NEED A** schematic for a Lafayette HE-45 6 meter with HE-61 VFO. Rebuilding the power supply. Contact, Ken Lawrence, KD6HNN, 10254 Kenilworth Way., San Jose, CA 95127. 408-251-9976.

**TYPE SCR-68** Airplane Radio transmitting and receiving set (WECO). Any technical information/manual. Panasonic KX-FT120 Auto-Logic Facsimile Machine. Installation manual. All responses answered. Thank you. L.R. Coykendall, 6916 Hyland Oaks Dr., Orlando, FL 32818-8383.

**WANTED: TO** borrow service manual/schematics for Singer/Gertsch FM10CS Station Monitor. Marvin Moss, Box 28601, Atlanta, GA 30358.

**WANTED: TEST EQUIPMENT SERVICE MANUALS!** For late model Hewlett-Packard, Tektronix, Fluke, Wavetek, ESI test equipment. Pepper Systems: 214-353-0257; 214-902-9511 FAX.

## kits! kits! kits!

### 20 + 20 STEREO AMPLIFIER KIT \$19.95

Two separate high power amps on one PC board. Each amp has its own level control and puts out 20 watts RMS. Features include a red LED 'on' indicator and low distortion circuitry. Great stereo booster amp for your car sound system. Use with any speakers capable of handling at least 20 watts. Operates on 12 VDC. Compact size board measures 6" x 2.25"

### STEPPER MOTOR KIT \$16.95

A long-standing favorite, the stepper motor kit is your chance to learn about stepper motor operation without spending a fortune. Experiment with stepper motor control, speed, and direction. Features include variable speed, step, range, direction, and on/off controls as well as LED indicators. Kit includes 4-phase stepper motor (7-1/2 degree steps), circuit board, and components. Requires 12 VDC power source.

### TV TRANSMITTER KIT \$27.95

Tired of lugging the VCR to another room to see a movie while Aunt Martha watches reruns of the Julia Child special on PBS? Sick of stringing wires through the house so Junior can watch the latest Power Ranger movie in the comfort of his room? Never fear, we've got the solution! This kit allows you to send any audio and video source, like a VCR or TV camera, to any TV set for up to 300 feet. With this little kit, you're the producer and the programming director of your own TV station. Tunable to any TV channel 2-6, runs on 12 VDC, and accepts standard audio and video signals. Optional matching case set, \$14.95

### PHOTON MICROLIGHT \$10.00

8 Candellas of bright red or yellow light, visible over a mile away! This super-bright LED is secured in a tough ABS case and runs on a 3V lithium battery (included!) It won't burn out because it is an LED! Specify red or yellow when ordering. Battery has a 5 year shelf life and lasts up to 11 hours. (replacement battery \$0.98). Great for home or office use, popular with fire and rescue professionals, pyrotechnicians, stage performers, and more.

call to order  
1-800-669-5810

### 127 THERMOCOUPLES PELTIER JUNCTIONS

The peltier junction is a solid-state thermovoltage device. Current applied to the device will produce heat on one side of the device and a cold surface on the other side. Water placed on the surface will freeze or boil depending on polarity of applied voltage. Ideal for applications from 3-12 VDC -- grab a battery and let your imagination run wild! **DOCUMENTATION INCLUDED!!!**  
Small Peltier Junction \$20.00 (approximately 1.17"x1.17"x.12")  
Large Peltier Junction \$29.50 (approximately 1.56"x1.56"x.15")

### NEW!!!

### super bright halogen lamp assembly

Perfect for camcorders, decorative lighting, science projects, and any application requiring high intensity light. 12 volts 28 watts with mirrored reflector. Approx. diameter 1-5/16" new in box... \$4.95 each \$3 for \$12.00

### copy-iron-etch PC BOARDS 1-2-3 EASY with TEC 200 FILM

- 1) copy circuit pattern on TEC-200 film using any plain paper copier
- 2) iron film on to copper clad board
- 3) peel off film and etch

5 sheets, 8-1/2" x 11" \$4.95 Instructions Included

### stubby screwdriver assortment \$9.95

Eight of the most popular flat and phillips head screwdrivers in stubby style! **That's right, stubby!** each handle is about 3/4 of an inch long, and the hearty screwdriver blade is about another 1/2 inch long. (handle diameter is about 3/4" too!) Great for jobs in tight places!

### Passive Infra-red Talking Motion Detector III \$27.50

"Stay out of that refrigerator!", "Watch your step!" ... The possibilities are mind-boggling with this talking motion detector. You speak into it to record your message (up to 12 seconds long), turn the unit on, and instantly your voice (or your mother-in-law's) reminds anyone in the vicinity that you were expecting them. Message can be changed with the flip of a switch. Uses 4 AA batteries (not included), or an external power source (built-in jack). May be used independently (80 db output) or with an amplified speaker to blast your message throughout the house. Approx 4"x 3-1/2"x 1-1/2".

### SCANNER MODIFICATIONS #3 -- THE ULTIMATE SCANNER! \$29.95

Scanner guru Bill Cheek has at long last completed the third scanner book, and it was well worth the wait! From resource listings to computer interfaces, from history to helpful hints, memory mods, cellular mods, and more. Circuit diagrams, illustrations, photographs, and tables make this a good book, Bill Cheek's writing style (easy to read and fun!) make this a great book! So grab your scanner, fire up your computer, and embark upon a journey to create your own Ultimate Scanner!

### NOT-SO-BIG SOLAR PANEL II \$14.95

A smaller version of the popular Big Solar Panel, this 12" X 6" X 3/16" thin film glass solar panel is ideal for experimenters, small applications, and conservative budgets! 21 V no load, 12V 125mA with load.

### BIG SOLAR PANEL\* \$36.50

A whopping 1' X 3' X 3/16", this thin film glass solar panel puts out a hefty 12-14 volts @ 700-750 mA (3/4A). Imagine this as a power supply for your handheld or other project requiring 12 VDC.

\*big solar panel mailorder customers please include \$15.00 to cover shipping/handling on this item.

THE FINE PRINT: PRICES SUBJECT TO CHANGE WITHOUT NOTICE \* GATEWAY IS NOT RESPONSIBLE FOR PRINTING ERRORS \* MASTERCARD, VISA AND DISCOVER ACCEPTED \* YES, I'LL TAKE YOUR CHECK - SORRY, NO C.O.D.s \* \$10 MERCHANDISE MINIMUM ON MAIL ORDERS \* SUPPLY OF SOME ITEMS IS LIMITED \* PRICES DO NOT INCLUDE SHIPPING \* UPS GROUND SHIPPING/HANDLING WITHIN THE CONTINENTAL U.S. (ITEMS REQUIRING ADDITIONAL AMOUNTS ARE NOTED)...\$4.95 FOR THE FIRST ITEM, \$0.50 FOR EACH ADDITIONAL ITEM. RESTOCKING CHARGE MAY BE ASSESSED ON RETURNED ITEMS. YOU CAN COUNT ON YOUR FRIENDS, BUT IT IS EASIER TO COUNT ON YOUR FINGERS AND TOES!

### CST - Computer Service Technician \$59.95

The definitive guide to software and hardware troubleshooting, this hefty, info-packed book is a must for computer technicians, students, swap meeters, and computer professionals. The CST covers the latest on processors, motherboards, CD-ROM, disk drives, tape drives, printers, memory chips, diagnostic programs, BIOS, chipsets, video, I/O ports, and much more. Completely illustrated with hundreds of diagrams and charts. Includes on-the-job experience from hundreds of technicians. This book is the latest endeavor by Ronald J. Dugrenier, the author of Compufacts and Modemfacts. A BBS is available (with special access for CST owners,) with additional technical information. Completely up to date (copyright June, 1995!) with the latest information regarding new technology, the CST will show you how to install and test all parts of a computer system!

### 5 MW LASER MODULE \$55.00

Mini 5 mW visible LASER module WAVELENGTH 630 - 680 nm. 3/4" x 1/2" complete unit has a built-in power supply and an adjustable culminating lens. OPERATES ON 3 volts DC (A pair of AA or AAA BATTERIES WORK GREAT) **WARNING: AVOID DIRECT EYE CONTACT**

by  
**Harry Helms**

**O**ne of the lingering problems with software development under Windows 3.1 is that we're still stuck with MS-DOS file name conventions. That means all file names must have no more than eight characters. Each file name can

problem is that you can stick any three letter extension you like on a Windows (or MS-DOS) file. However, there have been attempts to standardize file extensions for different

# SOFTWARE WIZARDRY

have an extension of one to three letters, separated by a dot (period), following the name itself.

For example, the file name I used for this month's column was "filename.doc." The name itself is "filename," and the ".doc" extension indicates that the file was a word processing document. If you do much word processing, you know that ".doc" is used by many popular word processing packages to indicate the file is a document produced by the program.

Another common extension is ".exe," which is used to indicate the file is a compiled, executable program that can be run on a PC. Popular software development tools, like Microsoft's Visual Basic and Borland's Turbo C, all produce .exe files when programs developed under them are compiled. All software applications on your PC will have one or more .exe files somewhere in their directories. The programming language source code files used to produce the .exe files will have their own distinctive extensions, such as .c (for C), .bas (for BASIC), and .pas (Pascal).

Keeping track of various file extensions is a real headache for Windows software developers. One big

types of files. Not only does this help identify files for programmers and users, it also makes it possible to develop programs that can sort or locate file types by using the extension as an identifier. Since the file name extension is the key to understanding what the file is used for (and often which software produced the file), it's essential to be able to "decode" file name extensions. This month, we'll look at common, *de facto* standard file name extensions and what they all mean.

## Main Windows Files

Certain files are used with a variety of Windows applications and you'll frequently run across them in

Windows applications as needed during program execution. Most Windows applications, especially in multimedia, will make extensive use of DLLs.

Windows "remembers" your settings and preferences for the desktop through initialization (.ini) and group (.grp) files. When you use the control panel in Windows to change things like the color of the title bar of a window, you are changing the .ini file responsible for setting the color. Groups are collections of program items. For example, the file manager, control panel, print manager, and clipboard viewer are all part of the same group. You can create new groups of program items and save them as a new .grp file.

Individual Windows system resources have their own files and matching file extensions. These include the Calendar (.cal), Clipboard (.clp), Card file (.crd), Terminal (.trm), Write (.wri), and Recorder (.rec) resources.

Different type fonts used to display text in an application are contained in files ending with the .fon extension. A file named "courier.fon" would probably contain the information necessary to display and/or print courier type. Fonts using Microsoft's TrueType technology are often contained in files with the .ttf extension.

Some file extensions used in Windows are carried over from MS-DOS. Systems files containing information about hardware use the .sys extension. Files containing MS-DOS commands executed as a single set (a batch) have the .bat extension. Command files are similar to executable files and use the .com extension. And assembly language files still have the .asm extension. If you run the MS-DOS chkdsk command, lost clusters

found on a hard drive will be placed into files ending with the .chk extension. Older MS-DOS applications can more easily interact with Windows applications if program information files (PIFs) are used. PIFs tell Windows how much memory to set aside for the application, what input and output system resources are needed, etc. PIF files have the .pif extension.

## Text File Types

As mentioned, ".doc" is a common file name extension used by word processing packages to indicate the file is in the format of that word processor (some word processor packages use their own extensions, however). Such .doc files are loaded with formatting and style commands in addition to the actual text. As a result, .doc files produced by a package like

# Understanding File Formats

original software development work. One of the most common file extensions is .drv, which identifies a device driver file. For example, a file named "svga.drv" would likely be the device driver for a VGA monitor. Another common extension is .dll, which identifies files that are part of a *dynamic link library* (DLL). DLLs are, in effect, collections of subroutines that are linked to

**Table 1**

## Common File Extensions and Their Meanings

Extension	Meaning
.aif	Macintosh-developed sound file
.asm	assembly language file
.ats	OpenScript file
.avi	Video for Windows video file
.bas	BASIC language source code file
.bat	batch files
.bmp	bitmap graphics file
.c	C language source code file
.cal	Calendar system resource file
.cgm	vector graphics metafile
.chk	lost cluster file produced by the chkdsk command
.clp	Clipboard system resource file
.com	command file
.cpf	clip library file
.crd	Cardfile system resource file
.cur	Cursor system resource file
.dbf	dBase and FoxPro database files
.dib	device independent bitmap graphics file
.dic	dictionary file
.dif	data interchange format file
.dll	dynamic link library file

.doc	word processor file
.dot	Microsoft Word template file
.drv	device driver file
.drw	Micrografx Designer or Draw file
.dxf	AutoCAD two-dimensional graphics file
.eps	encapsulated PostScript file
.exe	executable file
.flc	Autodesk Animator file
.fli	Autodesk 3-D Studio file
.flm	FilmStrip video file
.flx	Tempura Animation Editor video file
.frm	Visual Basic form
.gif	CompuServe image format files
.grp	group files
.h	header files in a C program
.hgl	Hewlett-Packard graphics file
.icb	Truevision Targa graphics file
.ico	icon graphic used with controls
.iff	Macintosh-developed sound file
.igs	interplatform CAD graphics file
.img	GEM Paint graphics file
.ini	initialization file
.jif	JPEG image file
.jpg	JPEG image file
.lbm	Deluxe Paint graphics file

# SOFTWARE WIZARDRY

Microsoft Word are not compatible with those produced by a package like WordPerfect. Fortunately, many word processing packages include a routine to recognize "non-standard" .doc files, and many include conversion routines to change the .doc file into one the word processor can use.

A .txt file is nothing but the ASCII characters making up the text. None of the formatting or style commands of a word processor document are included in a .txt file. However, some word processors don't produce perfectly "clean" .txt files; there may be some random characters (especially at the beginning and end) that are not part of the text itself in the file and words that are in bold face or italics in the text may be bracketed by formatting characters.

A rich text format (.rtf) file can be thought of as an interim step between .doc and .txt files. An .rtf file includes basic paragraph and character (size, font, etc.) formatting, but does not include all the formatting features of a .doc file (for example, .rtf does not generally support subscripts or superscripts). The main use of .rtf files was originally as an easy means of exchanging files between different word processors, but now many multimedia development tools (like Microsoft Viewer) can best handle text files if they're in .rtf form.

Some word processors support *templates*, which can be thought of as models for documents. Template files are identified by the .dot extension.

## Sound Files

Sound is a big part of multimedia and is showing up in other applications. For example, it's now possible to embed sound files in some word processing documents. The most popular sound file format is the wave format, identified by the .wav extension. Wave files are created by sampling an analog audio signal to create a digital representation of the audio waveform. The size of wave files depends upon the sampling rate, the number of bits used to represent the sound, and whether the file is for mono or stereo sound. The higher the sampling frequency and the greater the number of bits, the larger the resulting .wav file. Stereo files will be larger than mono ones. A few seconds of music in stereo sampled at a high frequency and with a large number of bits can produce a .wav file of several megabytes! Any sound — music, human speech, random noises, etc. — can be digitized as a .wav file.

Sound files developed on a Macintosh can be con-

verted to Windows by using such tools as WaveEdit (WaveEdit is part of Microsoft's Multimedia Extensions for Windows). Files developed on a Macintosh may have file names with .aif, .iff, or .snd extensions prior to conversion to Windows. When the conversion process is completed, the converted file is usually given a .wav extension.

A standard for driving music synthesizers through PCs is musical instrument digital interface (MIDI). A file for driving a MIDI device is identified with the .mid extension. A .mid file can also be used with many PC sound cards that have a small synthesizer chip included on the board. .mid files can only be used to place music, and the quality of music reproduction will depend on the quality of the music synthesizer being driven (the sound quality of .mid files played on most sound cards will be poor). One big advantage of .mid files for music is that they will require only a fraction of the memory of a comparable .wav file. This is because .mid files consist of instructions to the music synthesizer to play music (something analogous to digitized sheet music) rather than the music waveform itself, and the instructions take about the same amount of memory as any other computer code.

## Graphics Files

This is where things start to get really complex. There is a bewildering variety of different file formats for images, and many are incompatible with each other. If you do any sort of software development involving the display or manipulation of images, the different file formats for graphics will probably be your biggest problem.

The basic graphics file format is the bitmap, which uses the .bmp extension. A bitmap image is just what the name implies, namely a "map" of bits that defines the image and such attributes as color and intensity. The PC Paintbrush program included on every Windows PC can produce images stored as .bmp files, and most other drawing and painting programs can generate bitmap files if desired. The run-length encoding method allows compression of bitmap images under Windows. Such files are indicated by the .rle extension.

PC Paintbrush can also produce files containing custom colors. These are stored in files with the .pal extension. Another Microsoft product, Paint, produces files with the .msp extension.

A graphics format unique to Windows is the Windows metafile (.wmf). A metafile represents a figure through directions on how the figure should be drawn. Metafile graphics use less memory space than bitmaps and the image size can be changed without distorting the image.

Sometimes you might want to use graphics developed in a non-Windows environment in a Windows application. Usually the best way to do this is with a *device-independent bitmap* file, identified by the extension .dib. These files include information that allows Windows to properly interpret the graphic image and set colors properly. Other bitmap formats are identified by the .pcx and .xbm extensions; the latter is often used for Unix system graphics.

The *tagged interchange file format* (TIFF) was developed as a universal standard for bitmap images regardless of hardware and software. It hasn't worked out quite that way, although most drawing and paint packages for Windows or the Macintosh can handle TIFF files. In Windows, these files are identified by the .tif extension. A variation of TIFF expressly for Windows is the resource interchange file format (RIFF), and this is used in RIFF device-independent bitmaps, denoted by the extension .rdi.

What has emerged as something of a *de facto* universal standard for exchanging images in desktop publishing is *encapsulated PostScript* (EPS). EPS files are in the PostScript language, and can contain text, as well as graphics. EPS files are identified by the .eps extension. Unfortunately, most multimedia authoring tools do not support the use of EPS files since they are too slow for most multimedia purposes.

Another attempt at a standard file format for graphics is the CompuServe graphics interchange format (GIF). These files are identified by the .gif extension. GIF files have been widely used for on-line graphics (such as those on the World-Wide Web) and are compressed to save space and on-line transmission time. But CompuServe recently announced its intention to collect royalties on each image using the GIF format. For this reason, many developers are shying away from the GIF format until this situation is resolved.

Finally, icon images use the .ico extension. Icon images include arrows, traffic signs (like stop signs), and similar things used on controls in multimedia and visual programming environments to indicate the purpose of the control. For example, an icon of an arrow

.lzh	LHarc compressed file	.rec	Recorder system resource file
.mac	MacPaint-developed graphics file	.rle	run-length encoded bitmap graphics file
.mak	Programming language project file	.sam	AmiPro word processor file
.mid	MIDI synthesizer file	.sbf	Superbase 4 database file
.mmm	Macromedia video file	.sbk	ToolBook system book
.mnu	Menu system resource file	.snd	Macintosh-developed sound file
.mov	QuickTime video files	.sst	index settings file
.msp	Microsoft Paint graphics files	.sst	Super Show & Tell presentation file
.out	index log file	.sys	system files
.ovd	Borland ObjectVision file	.tbc	cache file on a hard disk
.pal	Palette system resource file	.tbk	ToolBook file
.pas	Pascal language source code file	.tga	Truevision Targa graphics file
.pcd	Kodak Photo CD image file	.tif	tagged interface file format graphics file
.pcx	Windows graphics file	.trm	Terminal system resource file
.pic	Apple Macintosh PICT graphics file	.ttf	TrueType font file
.pif	program information file	.txt	ASCII text file
.pld	Adobe Premiere Library image file	.vbx	custom control file for use with Visual Basic, Delphi, etc.
.plt	AutoCAD graphics file	.vda	Truevision Targa graphics file
.ppj	Adobe Premiere Project image file	.vst	Truevision Targa graphics file
.ppt	PowerPoint presentation file	.wks	Lotus 1-2-3 spreadsheet file
.psd	Adobe Photoshop image file	.wmf	Windows metafile
.psq	Adobe Premiere Sequence image file	.wpg	DrawPerfect graphics file
.qtw	QuickTime for Windows video file	.wri	Write system resource file
.rdi	resource interchange file format device-independent bitmap file	.xbm	Unix bitmap graphics file
.ras	Sun raster graphics file	.xlc	Excel spreadsheet file

# SOFTWARE WIZARDRY

pointing to the right would typically be used to indicate the control is used to move to the next screen in an application. Icons are normally "loaded" onto controls by setting the control's properties.

There are numerous other graphics image formats. Table 1 lists those I'm aware of that are available in Windows; I'm sure there must be several others I've missed!

## Video Files

Microsoft has pushed developers to use its Video for Windows as the standard for video presentation in Windows applications. The technology used in Video

for Windows is called *audio/video interleaving*, and the files produced by Video for Windows have the .avi extension. Almost any Windows application or development tool that will let you use video will be able to work with .avi files.

Apple implements video on the Macintosh with its QuickTime technology. Files developed using QuickTime can be converted for use under Windows, and the resulting files have the .qt extension. Macintosh-format QuickTime video files may have the .mov extension before conversion to .qt extension.

Video for Windows and QuickTime for Windows are the two main "open" file formats for Windows. A wide variety of video and animation software packages

can produce files in those two formats. Beyond these two, however, are several proprietary video file formats. Autodesk's Animator software produces files with the .flc extension while their 3-D Studio software creates .fli files. Another common proprietary format is the one used by Macromedia's products (such as Director for Windows, etc.). These files have the extension .mmm. Another format is Tempra's Animation Editor, and those files share the extension .flx.

Table 1 is one I've compiled to keep track of common file name extensions I've run across in my Windows development work. This list is far from complete, but hopefully it will be a good start in developing your own list! NV

### NEW 170 MEG 2.5" IDE HARD DISK DRIVE

Laptop replacement or up-grade 2.5" hard drive. Logical Translation 989 Cyl/10 heads/34 Sec. Check your BIOS. 15ms +5Vdc 0.5 Amp. (P/N 84G1745). IBM-H2172-A2/(84G1745) \$124.95 Ea.

### NEW MITSUMI 1.2 MEG 5-1/4" FLOPPY DRIVE

5-1/4" half height Mitsumi Model #D509V2. White face plate only. Mitsumi 1.2M FD Drive .....PRICE REDUCED \$28.95 Ea.

### NEW 14" SUPER VGA DISPLAY

New 14" super VGA paper white monochrome display. M14SAE 14 Mono.....\$59.95 Ea.

### NEW VICTOR/HONEYWELL ENHANCED 101 KEYBOARD

4 ft. coil cord with PS/2 type 6 PIN MINI DIN connector. AT and XT DIP switch selectable. Model #101WN.....\$24.95 Ea.

### NEW MICROSOFT TWO-BUTTON PS/2 MOUSE

The old-style type, but old reliable. Note: No software included with mouse.

MS PS/2 Mouse.....\$19.95 Ea.

### WALL PLUG WALL ADAPTERS

Input: 117 Vac 50/60 Hz. Outputs Available.

### NEW 80486SX-25 BABY MOTHERBOARDS

Supports up to 32MB of RAM on-board. 256KX9/1MegX9/4MegX9/(80NS) 30 Pin type SIMM Five 16 Bit Slots and One 8 Bit Slot. AMI BIOS/Supports loadable hard drive parameters 720K/1.2Meg/1.44Meg/2.88Meg (with proper controller) 8K internal cache only. 486SX-25 Baby Motherboard (CPU included) (O-K RAM) .....PRICE REDUCED \$89.95 Ea.

### NEW NISCAN/GS PLUS OCR/ 256 GRAY SCALE SCANNER

Brand New True 256 Gray Scale Hand Scanner. Resolution: 25-400 DPI. Scan Width: 4.2 In. Scan Length: 11 In. Interface: 16 Bit high speed (ISA) card. 64K SRAM. System Requirements: 286/386/486 PC Compatible (16MHz). Available 16-Bit Interface slot. Windows 3.1, 4 Meg RAM, 10 Meg of Available HD space (Min.). Mouse or Other pointing device. Software Included: Picture Publisher LE 3.1, (Imaging Software), Perceive Personal 2.1, (OCR Software)

Niscan/GS Plus .....\$69.95 Ea.

### USED 150MEG SCSI TAPE BACK-UP DRIVE

Pulled from working equipment 150Meg SCSI Cipher P/N ST150-II. 30-Day Guarantee. 5-1/4" Half Height, off-white color faceplate. Interface: SCSI/1. 50 Pin. Cipher ST150S-2.....\$49.95 Ea.

### USED SVGA 16 BIT VIDEO CARD (ISA) TSENG LAB (ET4000AX) WITH 1 MEG DRAM

New Arrival: Pulled and tested SVGA 16 bit SVGA cards with 1 Meg (DRAM). Call for full specs.

SVGA (Tseng ET4000 1Meg).....\$39.95 Ea.

### USED 1.44 MEG FLOPPY DISK DRIVE

Pulled from working equipment 1.44 Meg 3.5" in 5-1/4" mounting bracket. 30-day guarantee. 5-1/4" Half Height, off-white color face plate. Interface: 34 pin & 4 pin power. Sony MP-F17W-70D.....\$19.95 Ea.

### USED 80 MEG 3.5" SCSI HARD DISK DRIVE

Pulled from working equipment. 80 Meg SCSI Quantum P/N ProDrive 80S. 30-day guarantee. 3-1/2", 1/3 Height (1-5/8"). Interface: SCSI/2. 50 pin. Quantum 80S SCSI.....\$49.95 Ea.

### NEW SQUARE EQUIPMENT FANS

115 Vac 3.1" or 4.7" .....\$7.95 Ea.  
12 Vdc 3.1" or 4.7" .....\$6.00 Ea.  
12 Vdc 2-3/8" .....\$4.95 Ea.  
12 Vdc 2-5/8" .....\$6.00 Ea.

### NEW PANASONIC 360K 5-1/4" FLOPPY DRIVE

5-1/4" half height Panasonic M# JU-455 Black face plates only. P/N: JU-455.....\$9.95 Ea.

### NEW 112W BABY SWITCHING POWER SUPPLY

Input: 120-220V, 50Hz/60Hz, UL & CSA. Output: +12Vdc @ 4 Amp., -12Vdc @ 0.3 Amp. +5Vdc @ 12.5 Amp., -5Vdc @ 0.3 Amp. Model #PS2682L Nichimen.....\$14.95 Ea.

### NEW 200W BABY SWITCHING POWER SUPPLY

Input: 120V-220V, 50Hz/60Hz, UL & CSA. Output: +12 Vdc @ 8 Amp. +5 Vdc @ 22 Amp. -5 Vdc @ 0.5 Amp. -12 Vdc @ 0.5 Amp. Model #SA201-3440 Astec.....\$24.95 Ea.

### NEW AA HIGH CAPACITY NI-CAD BATTERY

1.2Vdc 800Ma/Hr. Charge Rate 15 Hours @ 80Ma. Manufacturer Kenwood/Batteries have nipped and. Kenwood NB-88 (KR-AA) .....\$1.75 Ea. Kenwood NB-88 (KR-AA) 4 or more.....\$1.50 Ea.

### NEW PS/2 NOTE (N51) LAPTOP NI-CAD BATTERY

10.8VDC 1.2A/Hr. IBM P/N 07G1753 N51 Battery .....\$34.95 Ea.

### USED ADAPTEC 1540A ISA SCSI-2 CARDS

Pulled from working equipment. The Adaptec's first generation 1540A SCSI-2 ISA BUS card. Includes 2 Device 50 Pin SCSI cable. (NO Software) (No Floppy support) 30-Day Guarantee.

ADPTEK 1540A.....\$34.95 Ea.

### NEW MICROSOFT TWO BUTTON SERIAL MOUSE

New style type (Melted bar of Soap). DB9 Connector Female Connector only. Note: No software included with mouse.

MS Serial Mouse .....\$29.95 Ea.

### NI-CAD BATTERY

Varta Cordless phone Ni-Cad battery 3.6V 280Ma/H Charge Rate: 14 Hours @ 28Ma Model #3/V280R.....\$2.75 Ea.

### PADDED LAPTOP NYLON CARRYING CASE

Features two zippered sections. First for laptop and second for charger and/or accessories. Includes detachable shoulder strap. Holds most laptop computers. Exterior (Fully packed) 12"H x 12.5"W x 5"D.

Laptop Case.....PRICE REDUCED \$19.95 Ea.

### NEW EXTERNAL 3-1/2" 720K FLOPPY DISK DRIVE

Made by Tandy for Tandy 1000EX Computer. Unit enclosed with cable for hook-up. Drive inside is a Teac Corp. Model #FD-35 FN-10-U. Color: White

Tandy Model #25-1061 .....\$24.95 Ea.

### WIRE TIES

4" Black Plastic, Packs of 100 .....\$1.00

### NEW SYTOS PLUS (TAPE BACK-UP SOFTWARE)

Works with WangDAT DAT/130/320 or Wangtek 150/525/1GB in a MS-DOS environment supporting Adaptec Host Adapters. 5.25 & 3.5 disks supplied. (Will work with other tape back-up if you get configuration file from Sytron.) (Sytron BBS 508-898-2608 Conf. Files.)

Sytos Plus Ver: 1.32 .....\$17.95 Ea.

We buy all defective Memory Boards/Modules from IBM, as well as computer scrap. Please contact Mr. Wiley Burke.

#155 MANUALS - SCHEMATICS WANTED *cont.*

**WANTED: SAMs** photofact CB Radio Series books. 405-447-5689. 405-360-6817.

**WANTED: SERVICE** manual, parts list, for Tektronics 455 oscilloscope, serial #B010836. John Rusinko, 38A Union Avenue, Little Falls, NJ 07424. 201-256-6379.

**WANTED: MANUALS** for, Yaesu FRG-7, Knight tube tester, Knight G-30 grid dip, Heath Scope 10-102, Hickok scope cro 5002, and mfj-1290 software Multicom for Amiga disk only. Allen Short, 205 Boardman Dr., La Porte, IN 46350.

**MISCELLANEOUS  
ELECTRONICS FOR SALE**  
160

**TUBES, NEW, unused.** Send self-addressed, stamped envelope for list. Fala Electronics, Box 1376-3, Milwaukee, WI 53201.

**ELECTRON TUBES** wanted. Cash for all types. Daily Electronics, Suite B-6, 10914 NE 39th St., Vancouver, WA 98682. 206-896-8856, 800-346-6667.

**ELECTRONIC ASSEMBLY MACHINERY.** We buy and sell assembly machinery including solder machines and board cleaners, insertion machines and lead formers. Petlock Inc., Rialto, CA. 909-877-8900, FAX 909-877-8902.

**FOR SALE, \$1,300** takes all my antique radios, tubes and radio related parts. LSASE for needs and wants. Bill Gerk, 8061 US Hwy 49, Hattiesburg, MS 39402. 601-268-6059, leave message.

**VISIT THE** surplus store by the Jersey Shore. Tech Systems, 1309 Hwy 71, Belmar, NJ 07719. 908-280-0007.

**WATER-DETECTING Alarm.** If you have a basement, you need at least one water detector to warn you of sewer backup, sump pump malfunction, burst washing machine hose, etc. CED offers the WD-60, an assembled water detecting alarm, which will produce a loud beeping sound whenever it detects the smallest amount of water. A 9-volt battery (not included) will last two years or longer. If you want to make your own alarm, CED also offers the WD-100 module and the WD-77 beeper to which you only need to add a 9-volt battery and a piece of speaker wire. A pictorial assembly is provided with the module. The price of the WD-60 (assembled unit) is \$21.95 plus \$3 S/H and in Virginia 4.5% tax. The price of the WD-100 (module) is \$12.95 and the WD-77 (beeper) \$6.95 plus \$2 S/H and in Virginia 4.5% tax. Satisfaction guaranteed or your money back. Send check or money order to CED, 4209 Evergreen Lane, Annandale, VA 22003. Phone 703-354-2545.

**CUSTOM MADE** bags for your electronic gadgets! Ready made products, custom products, equipment bags/covers, large or small quantities, waist/fanny packs, cell phone holsters, soft sided attache cases, key rings, etc. Durable nylon and webbing products made to your specifications. LE Products. Call us at 1-800-484-1000, ext. 1992.

**DRILL MACHINE.** Computer controlled X-Y-Z table for printed circuit board drilling. Affordable and not a kit. Also electronic project kits. Call 203-653-4278 or write for catalog. CBBI, PO Box 222, North Granby, CT 06060.

**TUBES \$2.49, 1,000 types.** Also surplus components. SASE brings list. DNF, 6690 7 Mile Rd., South Lyon, MI 48178.

**CNC BUILDERS:** Stepper motors, machines, linear rails, several sizes of stepper motors, some servo motors and misc. drivers. Industrial equipment removals. Price list. Jim DuBois, 330 State Road 101, Amherst, NH 03031. 603-673-3645.

**SOLAR-POWERED FAN HAT.** Baseball type hat with solar powered fan. Great for sports fans, golfers, etc. Available in red or blue. \$19 plus \$2.00 shipping. CA residents add 7.75% sales tax. Visa/MC/Disc/Amex OK. H.T. Orr Computer Supplies, 249 Juanita Way, Placentia, CA 92670. 714-528-9822, 1-800-377-2023, FAX 714-993-6216.

**VINTAGE MOVIE** projector, 16 mm. Bell & Howell, Filmo-sound. Good condition. Highest offer. 704-497-7534.

There is a new and up-coming electronics assembly company that you have got to know. It is called Tamsco, Inc.

It is in a town just 50 miles west of Chicago, Illinois called Sugar Grove, just off of I-88, a nice little community.

They do all types of electronics design and assembly from printed circuit board layout to total turn-key operations and in any quantity you may need. They have years of experience in solid-state talking integrated circuits used for talking pop signs, kiddie rides, alarms, and almost anything you would like to make talk.

They are friendly folks that would like to help you and your business grow. Your success is our success; we will work with you to help you and your ideas succeed.

Just contact Owner Scott Gascoyne, Sales Manager John Middleton, or Sales Engineer Jim Payne to discuss your requirements.

Phone (708) 466-1260 Fax (708) 466-1263.

**MODEL 5000 Fully Assembled \$199.95**  
Our fully assembled product is factory tested and  
**GUARANTEED** to work on your system. We will  
also include an AC power adaptor and complete  
hookup instructions. This unique product will be  
available for a limited time only!

#### 4000 And 5000 Features

- The latest in Video Amplification Technology.
- New clocking circuits to stabilize color and the picture performance.
- The most advanced picture locking circuitry.
- Inverted Video Option is available.

- Connects easily to the VCR.

- NO CONVERTER BOX is necessary.

CALL THE HALCYON GROUP 1-800-664-6999

NO Florida Sales! Anyone implying theft of cable service will be denied assistance.

**MODEL 4000 KIT \$79.95**  
The 4000 KIT comes with all the  
electronic components and our Cad  
designed PC board. We provide a  
schematic, parts list, wiring diagram,  
tutorial and FREE in-house support.

**MODEL 4000A Enc. \$44.95**  
The 4000A Enclosure Package will  
provide the hobbyist, who has our  
4000 Kit, a custom enclosure, AC  
adaptor and finish accessories to  
professionally enclose their kit.

# RESOURCE BIN

number forty-two

## Alternate desktop publishing opportunities

**O**ur usual reminder here that the *Resource Bin* is now a two-way column. You can get tech help, consultant referrals, and off-the-wall networking on nearly any electronic, *tinaja* questing, personal publishing, money machine, or computer topic by calling me at (520) 428-4073 weekdays 8-5 Mountain Standard Time.

A portion of my PSRT RoundTable on *GENie* has also been set aside for you *Nuts & Volts* readers. This is the place you go for instant tech answers. Among the many files in our library, you will find complete reprints for all the *Resource Bin* columns.

I did manage to wrangle one super special sign-up deal for you *Resource Bin* readers. Ten free hours.

*GENie* now offers far lower daytime rates, a direct Internet access, plus a Windows graphics interface, so it's an even better deal than ever. See the trailer blurb for details.

### The Alternate Desktop

Several months ago, we looked into *book-on-demand* opportunities making use of PostScript and laser printers. This month, I thought we might take a quick look at papers.

And then focus on desktop's "other stuff" category. Obscure goodies. You can use PostScript and a printer to make a buck, or fill some community need. Stuff that requires only a few nickels' worth of supplies and takes a few minutes of your time to create a unique personal product.

### Paper Sources

Just in case you hadn't noticed, the price of paper just doubled in the last twenty minutes. On the other hand, there are lots of new papers that are more laser friendly, more permanent, and in far more colors, weights, and styles than ever before.

Start with a local store in the *Paper Plus* chain. Or check into the dozens of laser-specific direct mail outfits that stock mind-boggling selections. But at somewhat higher

prices. A random sampling includes *Paper Access*, *On Paper*, *Impact*, *Paper Direct*, *Queblo*, *Premier*, *Great Papers*, *Beaver Prints*, *Paper Design*, *Quill*, *Viking*, and *Paper Adventures*.

### Badges

Custom badges can be simple and cheap to do. Parts cost can be as little as twelve cents each. The most obvious source here is *Badge-a-Minit*, who offer all sorts of free catalogs and clip art. Plus a \$29.00 start-up kit. One cheaper parts source is *Super Badge and Button*.

## NEXT MONTH: Don looks at old and new resources for electronic music.

One major warning on using those *Badge-a-Minit* presses: Get some help from a five-year-old child! They will instantly *glom-snip-glomp-snap* any badge for you.

Any adult puzzling over the same process will take several hours.

An alternate circle cutter that works better is the *NT Cutter C-1500P* sold by *Clotilde*. Either circle cutter works best over a plastic cutting mat.

Circular justification routines are found in *KCIRCTEXT.GPS*.

A variant on badges are cups and mugs that accept "drop in" graphics. *Neil Enterprises* and *Inkadinkado* are two leaders here.

### Business Cards

Cutting custom business cards used to be real bad news. Besides being a tedious hassle, if you were off even a little bit, the cards looked awful.

Today, there are all sorts of pre-cut business card blanks. Two examples include *Cards Now* and *Blanks USA*. Do note that their layouts are slightly different. Different programming is required for either system. Also note that you can print a dozen cards per page with your

own routines, but only 10 with commercial blanks.

Card durability could be improved with *Laser Buddy* spray, laminating, or *Bakerizing*. With *Bakerizing*, you place your cards (or other toner product) in contact with a gloss mylar sheet and apply heat and pressure. Which will calender the finish. Making all the toner unbelievably glossy, durable, and black.

A sneaky trick I've used to pick up spot color: Print bold characters white on any solid black background. Then, use ordinary page highlighters to color the characters. On the latest printers, most of the blacks are dense enough to *completely* erase the overprint. You end up with pastel over black.

Obvious other approaches to color include color papers, color toners, or those hot stamp foils.

Yeah, plain old business cards are available cheap, in quantity. And it is hard to beat those \$9.90 per thousand thermography versions that advertise in the business mags. But what you could do is offer instant availability of just a few cards. Better yet, you could offer personal graphics the big guys won't dream of touching.

For instance, *maps* are easily added to any custom business card. And the potential for personal "here's how to get to our house" cards is still largely untapped. And wide open.

See GURU41.PDF for further details. Additional card layout utilities are in *BLANKSUSA.GPS*, *CARDSNOW.GPS*, *PCARDADD.GPS*, and *NUTS12.PDF*.

### Stepping & Repeating

The key secret to any smaller sized specialty desktop product is a strong *step and repeat* routine. Which lets you, for instance, do 10 to 12 business cards, half a dozen badges, or three bumper stickers on each sheet.

But simply any old repeating utility won't do. What you really want is a *step-and-almost repeat*. This one lets you make up sequentially numbered tickets, or automatically customized awards with your recipient's names. Sequential entries in a special array get used to customize each result.

I have posted the *step-and-repeat* routine I use as *STEPN-RPT.PS*. There are dozens of templates here.

### Padding Compound

*Magic Padding Compound* glop lets you do a removable binding for such things as note pads or calendars. In our PostScript class, pre-

new from  
**DON LANCASTER**

### ACTIVE FILTER COOKBOOK

The sixteenth (!) printing of Don's bible on analog op-amp lowpass, bandpass, and highpass active filters. De-mystified instant designs. \$28.50

### CMOS AND TTL COOKBOOKS

Millions of copies in print worldwide. THE two books for digital integrated circuit fundamentals. About as hands-on as you can get. \$28.50 each.

### INCREDIBLE SECRET MONEY MACHINE II

Updated 2nd edition of Don's classic on setting up your own technical or craft venture. \$18.50

### LANCASTER CLASSICS LIBRARY

Don's best early stuff at a bargain price. Includes the CMOS Cookbook, The TTL Cookbook, Active Filter Cookbook, PostScript video, Case Against Patents, Incredible Secret Money Machine II, and Hardware Hacker II reprints. \$119.50

scription pads seemed real popular.

All of your sheets *must* get jogged before padding. Preferably by using a real printer's jogger.

After jogging, you can clamp your sheets in a homemade squasher and paint the edge with the glop. Two or three thin coats are better.

Then dry overnight. A giant stack can be padded at once and then torn apart into individual projects.

One welcome and cheap gift is to take any stack of Astrobright papers, and add a child's custom name to the top sheet. Perhaps as "Melissa's very own paper" and some crayon art.

Or the ultimate padding compound play: Go to the bank and get yourself 100 new and sequentially numbered one dollar bills. Then long edge bind them using padding compound. Add a "time to reorder" form between bills number 20 and 21. And add the usual cardboard sheet on the bottom.

A tip on smaller prescription pads: Do the step and repeat in such a way that your to-be-bound edges all end up *portrait left* and *portrait right*.

Certain jobs will end up rotated or flipped on the page.

Then pad up the full stack of

whole sheets at once. Finally, cut the pads to size. This shares your clamping and padding labor efforts.

Padding compound is available for around \$6.00 a quart from *Paper Plus* or just about any printing supply house. While white and pink are the stock colors, you can add ink or easter egg dye to the white for full color.

### Custom Post-It Notes

Those "Post-it" notes are related to padding compound. You can buy the removable adhesive glop in roller or liquid form at a large office supply. While *3-M Post-It* does make nine-up notes for laser printing, these can be costly and hard to find.

Another alternative is to print the outlines of several post-it notes onto a carrier, stick the notes exactly to the outlines, and then send it through a laser printer. This gets handy for full custom on oddball colors.

### Hot Stamp Foils

This stuff used to be known as *Kroy Color*. Toner is a thermoplastic glue as well as a coloring agent. Should you put hot toner in pressure contact with a hot stamp foil, the

toner will remelt, grabbing to the foil. The result can convert toner into brilliant colors.

Brights, pastels, or metallics.

Most direct mail paper sources do offer the small quantity foil kits. The simplest method is to tape a pre-cut piece of foil on a select toner area, and run the sheet back through any laser printer having a straight path.

Sadly, there was this chicken-egg problem that kept all this stuff from really taking off. The special machines (which require very careful control of temperature and pressure) remained outrageously expensive and hard to get. And the sheets themselves tend to be way overpriced.

All of which still leads us to a great untapped opportunity. Sources of hot foils include *Crown Roll Leaf*, *Hoechst*, and *Transfer Print Foils*. The latter has a great *Foiled Again* newsletter.

There's also a hot stamp foil trade journal called *Inside Finishing*.

A superb source for intermediate quantities of foil rolls is *FoilMax*. You can find more on building your own foil fusion machines in HACK11.PDF or in GURU43.PDF.

### Rubber Stamps

"Rubber" stamps are not made from rubber. Chemical *photopolymer*s get used instead.

Because of the photo process, you can image *any* combination of text, clip art, and custom graphics you like.

Even photos.

To make a stamp, you first create a 1:1 negative of your desired artwork. Direct PostScript laser printing onto polyester works just fine.

A fairly thick photopolymer layer gets spread out and carefully spaced between two glass panels. The first side is then flash exposed *without the negative* with UV light. The exposure time is selected to precisely harden *one half* of the polymer thickness.

You'll then flip your photopolymer over. This time, you expose *through* your negative. This creates a "mesa" effect, where the entire bottom of the stamp is hardened, sloping on up to a precise artwork match.

The remaining liquid polymer is then washed out, followed by another exposure to complete the hardening. You then add the usual soft backing and a suitable handle.

To make the process economic and worthwhile, you normally will make a larger sheet with bunches of stamp projects on it. These can then be cut up into individual stamps.

The usual starting point on all this is *Grantham Polly-Stamp*. In medium quantities, the glop is available from *R. A. Stewart*. For railroad tank car lots, use *Hercules-Merigraph*.

Do-it-yourself stamp projects are in our *PostScript Beginning Projects*.

The big boys use *flexographic* plates instead. Which are just giant rubber stamps, optimized for press uses. And often used for such things as printing shipping cartons and such. A review of photopolymers in general appeared back in HACK66.PDF.

### Silk Screening

The silk-screening process gets used for everything from T-shirts to posters, to advertising signs to greeting cards, to playbills to circuit boards.

Traditionally, original artwork got photographed and processed. Ending up with a silk or metal screen having holes where ink is to go and block out where ink is to be stopped.

The screen is then tightly stretched into a hinged frame, and gets held a fraction of an inch above what you are printing. A squeegee forces special ink on through the screen. Contacting only where pressure is applied.

# RESOURCE BIN

Some inks air dry. Others cure with heat or ultraviolet light.

Two major suppliers of silk screen products are *Southern Sign Supply* and *Advance Process*. The leading mag is *Screen Printing*. One direct mail source for smaller quantities is *Dick Blick*. Two trade journals specific to T-shirts are *Impressions* and *PrintWear*.

One ultra low end artsy-craftsy silk screen creating machine is *Gocco*. And available from *Think Ink*. An ordinary flashbulb is used to expose the film.

If you really want to go whole hog, *Gerber* makes an incredible PostScript to silk screen mastering machine. It functions sort of like an inkjet printer. Except that your blocking resist goes directly onto the screen itself.

Precise multi color, too.

All the photo chemistry and all the slopping in the slush is eliminated in one swell foop. This one is expensive.

About the same as a new car.

"Fuzzy" lettering and such can be done using a sneaky process called a *hot split plastisol*. Any letter, such as a football jersey number, becomes heat bonded to the fabric. While it is still hot, the letter is literally rent asunder. Leaving half of the chemistry on the backing sheet and half of it on your fabric. The violent tearing gives you the final fuzzy surface. The leading supplier of this sort of stuff is *Stahl's*. They've also got several free videos available on their offerings. *Gerber* also stocks large quantities of hot split plastisols. And related inks.

Direct thermal transfer materials are also available. Try out *Wyndstone*. Or check into the *Transfer Magic*.

When you are instead interested in "instant felt" flocking, one supplier is *Don Jer*. The old way was to apply liquid glop and then spray on all the flock itself with a cabbage duster type of beastie. A second route is offered by *Hop Industries*. They offer precut and prepatterned

transfers.

More on flock in GURU74.PDF.

## Pad Printing

One really obscure alternate to silk screening is known as *Pad Printing*. Pad printing gets used for advertising specialties and such. It is particularly useful for printing on 3-D surfaces. Even eggshells can be pad printed.

To pad print, ink gets placed on an etched plate called a *caliche*. And then wiped using a *doctor blade*. A silicon rubber pad picks up the ink and then rolls it onto your pen or golf ball or whatever. A carefully chosen *involute* pad shape prevents distortion.

Suppliers do include *Barton-Nelson*, *Print Central*, *Service Tectonics*, and *Basco*. One source for etched plates in general is *Owosso Graphics*.

More on pad printing is found in PADPRINT.TXT and GURU59.PDF.

## Other Opportunities

For *thin* self-stick full color photos in various sizes, *PhotoLabels*.

For glass etching *Armour Products*, *Professional Glass Consultants*, *National Sandblast*, or *Victory Glass*.

For quality embroidery machines, one leader is *Meistergram*. For metal signs or dials, *Fotofoil*, *Metalphoto*, or *3-M Dynamark*. For vinyl signcutters, *Roland* or *Gerber*.

For glow-in-the-darks, prismatics, holographics, and whatever, *Coburn*. For heavier material stock in general, *FomeBords*. For applications help, the *POP & Sign Design* mag.

Your cheapest and best source for lamination machines and materials is *USI*. Also check pricey *GBC*.

For tickets, *Quick Tickets* or *Ticket Express*. For stock die cuts, *Die-O-Perf* or *Blanks USA*. Free samples.

Low-cost scoring systems by

*Martin Carbone*. Also *H.S. Boyd*.

Special scissors for fancier paper edging from *Black Street Designs*. A big warning here: Seamstresses will react violently when you even glance sideways at their pinking shears!

For heavier, high gloss and brightly colored laserpapers: *LaserCraft* from *Darcy Paper*. Great stuff.

For laser printer parts and training, *Don Thompson*. For effective binding systems *Unibind*. Especially their new *Pentabind* product.

For certificate stock, use *Paper Plus* in small lots. Or *Goes Lithography* or *Action Communications* in bulk.

For custom consulting and design on products that successfully sell in a small town, *Special Editions*.

## This Month's Contest

Let's have two contests this month. Either (A) Tell me about an alternate desktop opportunity or resource I do not yet know about, or (B) Dream up the most fiendish possible routine to go with the "dollar ripoff" play.

There will be a largish pile of my new *Incredible Secret Money Machine II* books going to the dozen or so better entries, plus an all-expense-paid (FOB Thatcher, AZ) *tinaja quest* for two that will go to the very best of all.

## For More Information

The dozens of free printshop trade journals are superb starting points for exploring alternate desktop concepts. *Quick Printing* is pretty near the best. Especially its *Helene's Helpline* product locator service. *Instant Printing* can be a second good choice.

My favorite two regional printer's classifieds are *California Printer* and *Horse Trader*. The *Printer's Hot Line* is a useful nationwide pub.

There are several more.

Plus, of course, *Recharger Magazine*. Printer's shareware is available from an outfit that goes by the catchy name of *Printer's Shareware*.

But note that *Printer's Shopper* is *not* a shopper at all. It is instead a useful wide range and a full line catalog of print supplies. Most at list price.

Of my own products, my *PostScript Beginning Projects* and *Book-on-demand Publishing Kit* can give you lots more insider info. You can check my nearby *Synergetics* ad for details.

Or call me for details. There's lots I had to cut to get this column down to size. Bumperstickers, announcements, custom papermaking, and more.

Besides the mentioned files, there's bunches more up on my *GENIE* PSRT. Plus preprints and reprints of all my columns and stories.

Let's hear from you. **NV**

*Microcomputer pioneer and guru Don Lancaster is the author of 32 books and countless tech articles. Don maintains his no-charge tech helpline found at (520) 428-4073, besides offering all of his own books, reprints, and all of his consulting services. He also has a free catalog full of his resource secrets waiting for you. Your best calling times are 8-5 on weekdays, Mountain Standard Time.*

*Don is now the sysop of GENIE PSRT, where a special Resource Bin topic has been reserved for Nuts & Volts readers. For modem access: (800) 638-8369. When prompted, enter JOININGENIE. When asked for an offer code, enter DMD524.*

*You can also reach Don at Synergetics, Box 809, Thatcher, AZ 85552. Or send any messages to his Internet address of SYNERGETICS@GENIE.GEIS.COM*

# LOOKING for SOMETHING?

NO "TRUTH IMPAIRMENT"  
LAB TESTED SPECIFICATIONS!

## LASER POINTERS,

We have always stressed the quality of our laser products with our "you get what you pay for" attitude. Well how about these for quality and price?  
(A.) Machined from a super tough aluminum extrusion. Brass inserts for battery cap and grippers on the side. You could stand on it! Looks very HI-TECH. A real pushbutton switch at the beam end makes for steady operation.  
(B.) Black anodized body has a substantial feel. Looks very dressy. Both weigh only 2 ounces. Two AAA cells that don't rattle, provide power. Batteries, and 1 year Mfr.'s Warranty. You will be amazed! Don't buy a pointer you can crumble in your hand like a soda can!

MODEL (A.) boxed.....\$49ea. MODEL (B.) w/presentation case.....\$59ea.

## Don't get "BURNED"

### Super Bright, 635nm LASERS

COMMERCIAL QUALITY at "HOME MADE" PRICES.

The Choice is Yours?

We offer 24K GOLD for less than their PC board!

Our lab models are priced even lower.

24K Gold plated, laser pen, operates from 2 AAA cells. Lab style has internal X/Y adjustment screws. The wide input vol; tage laser module has internal SMT pwr supply! All provide 800 Yard range and 1.5mrad divergence. Performance you can afford.

PEN...\$159, LAB STYLE...\$149, LDM....\$129

## Easy to use, WIDE Input 5mW, LASER with 3V to 6VDC power!

670nm, \$49ea

650nm, \$69ea

SPECIFICATIONS:  
DC Power, 3 - 6Vdc, @65mA  
Power out, 5mw max.  
Range, 100-300 Meters  
Glass Collimator (fixed @ inf.)  
Size, 0.41" diam. x 0.7"L

Through a large volume purchase we can now offer absolutely the best value and best quality available on our commercially made, 670nm and 650nm, subminiature, laser diode modules. A glass collimating lens provides adjustment free <1.5mrad performance. (comparable to HeNe lasers.) NEW wide input range, internal surface mount power supply operates from 3 to 6 Volts DC. The package is machined brass for excellent thermal characteristics. These are THE quality laser modules.

## LASERSIGHTS, Rugged & Dependable.

Windage and Elevation are easily adjustable using internal adjustment screws. Custom mount, alkaline battery and remote switch included.

Simply specify your make and model for the appropriate mount.

LASER SIGHT, 670nm.....\$99

650nm, 5X brighter, \$129, 635nm, 10X brighter \$159

## LAB STYLE DIODE LASERS

635nm, 650nm, 670nm

5mW, diode laser. Fully self-contained with

Internal alkaline cell (included) and, po./po. switch. Black anodized alum. housing. Internal X-Y adjustment screws. Superior quality. Can also be used as a super laser pointer. VERY rugged. SIZE: .75" diam.x2.85"L

670nm, \$89, 650nm, 5X BRIGHTER, \$119, 635nm, 10X BRIGHTER, \$149

## PRESSURE SENSOR IC,

### VLSI and micro-machining technology.

The NovaSensor NPH, Absolute Series. Piezoresistive strain gage in a Wheatston bridge configuration. Fully integrated on c micromachined silicon diaphragm. <0.1%, linearity. Metal, TO-8 pc mnt. package output of 100mV. 0-15 psi. Laser trimmed thick film compensation resistors. 3/16" OD pressure port. Reg. \$50ea, NOW \$9.95, 3/\$24.95

## NEW C-MOUNT, COLOR CCD SENSITIVE CAMERA,

Chinon 062, remote head, only 0.3 lux. 330 lines, 1/3" CCD, 3mm, f1.8, 110° FOV lens, 12VDC @150mA, auto shutter and AGC, Size: Head, 1.37" x 1.57", Proc., 2.5" x 3.9", 2.3 oz.  
Standard 4mm lens .....\$289ea.  
C-Mnt w/o lens .....\$289ea.  
4mm f1.4, C-mnt lens.....\$49ea.  
16mm f1.6, C-mnt lens.....\$29ea..

## C-MOUNT IMAGE INTENSIFIER NOW DOUBLES AS A MINI SIZED HAND HELD VIEWER.

Our EXCLUSIVE GM-15K, U.S. made 2nd Gen. I<sup>2</sup> system provides 15,000X gain. Providing true night vision and super IR capability to any quality CCD camera. Simply install between camera and your C-mount lens! Now use your GM-15K as a hand held viewer with our new eyepiece option and clip on battery. Your intensifier is twice as usefull. Provides you with one of the finest viewers available! GM-15K INTENSIFIER for CCD CAMERA, \$599  
EYEPIECE assembly and Battery holder.....\$149

## SUPER SENSITIVE,

### C - MOUNT MINI CCD CAMERA.

Perfect for scientific applications. GM-410, B&W camera,

38mm SQ. x40mmD, 1/3" CCD, over 270,000 Pixels, 410 Lines Res., Sens. 0.05 LUX., AGC and Electronic Shutter. 12VDC @100mA power. Three lens options fully exploit its superior performance. Composite out. IR SENSITIVE, RCA video connector and Jack for DC power. When you need performance not hype, there is no substitute for a good lens! This camera will out-perform any camera in this magazine guaranteed! BRAND NEW!, without lens...\$189ea.  
with 16mm, f1.6, (15deg. FOV) .....\$219ea.  
with 8mm, f1.3, (30deg. FOV).....\$239ea.  
with 4mm, f1.4, (56deg. FOV).....\$239ea.

## STILL AVAILABLE!

12V@8AH NEW! 1X6 pack 2"Wx4"Hx11"L  
\$15.00ea. Metal box of 4/\$39

## SPECTROPHOTOMETER, MILTON ROY

Spectronic 1001, Split-Beam. 190nm to 950nm, ± 2nm, with 6 cell auto

handler, fluorescent display, menu driven, very easy to use. RS-232, internal printer, chart recorder output and manual. Excellent condition. \$1895

## NEW! UHF VIDEO TRANSMITTER MICRO SIZED SMT DESIGN, with AUDIO!

SUPER COVERT, RECEIVE ON ANY TV CRYSTAL CONTROLLED.

- ▼Surface mount technology.
- ▼Lightweight and very small.
- ▼Transmits up to 1/4 mile!
- ▼Clear high resolution picture.
- ▼Quality audio as well.
- ▼9-12VDC @ 125mA Operation.
- ▼Shown actual size: 1.25" x 2.25" x .75"
- ▼Completely assembled, brand new.
- ▼No expensive receiver/downconverter can be used with any standard video camera

SPECIAL \$249ea.

## ACTUAL SIZE

1.25" Sq. x .99"D

## CCD MICRO CAMERA, Chinon model

060. Black and White, 1/3" CCD, with a full 250,000 PIXELS!, 380 Lines Resolution. Sens. 0.3 LUX. AGC and Electronic Shutter. Low Power 9VDC @90mA ALL lenses incl. pinhole, can be focused! FOV, 4mm, 78°, 3mm 100°, Pinhole 110°, 10mm to infinity! A real glass lens! You get what you pay for. A little more, for a lot more quality. Standard video out. 1/2 oncel IR SENSITIVE! A brand name camera. Mating Connector w/ cable included. One price!  
with 3 or 4mm.Lens.....\$149ea.  
with PINHOLE lens.....\$149ea.

## Mini Camera Housing,

Black, textured ABS. 1"x1.5"x2".....\$15.95

## GIANT WEATHER BALLOONS real military surplus,

black latex meteorological instrument balloons. 3 ft., 3/4 pound lift, or the monster >20ft. model with >200 lbs! .0035" thick latex. Manufacturers Individual packages. A rare find. Limited Quantity  
3 ft. Size, weighs 30m grams..... 2 / \$15  
20 ft. Size, weighs 5 pounds..\$69ea. 2 / \$119

## UNIQUE and UNUSUAL

A. Five Axis plus gripper, Eshed Robotec type ER-VII industrial robot. Easy to use, DC Servo motor/encoder operated. 30 inch reach. All cast aluminum. Very rugged. Weighs about 80 lbs. You supply the controller.

Like New Condition.....\$3500

B. TYPE PPS-15V, Portable, surveillance radar. 3000M range. Provides audible indication of objects w/alarm. Control panel with LED display of battery, signal strength, range and azimuth. Can be operated remotely. 12 or 28VDC powered. With transit case, Headphones, battery and tripod. Only 14 lbs.w/battery. Latest flat antenna. Motorized sweep. one avail.....\$4995

MILITARY HELMUT RADIO type PR-4 450mW Transmitter & compact receiver operates on 51MHz. Tone or voice. Xmitter operates from 12VDC, w/ 8AAA cell holder provided. Receiver with tone squelch is modified for standard 9V battery! Needs only 20mA Like new only better! NO military batteries required! Complete with all accessories, earphone, antenna, lanyard and manual. Government reconditioned and guaranteed. Perfect for paint ball! \$99/SET

We supply components and equipment for your College, University or R&D Organization. We guarantee high quality at reasonable costs. For current inventory, contact OE Technologies, Box 703, La Madera, NM 87539, 505-583-2482.

## Learn MICROCONTROLLERS EMBEDDED SYSTEMS and PROGRAMMING with the New AES-10

The AES-10... a complete learning system. a complete embedded control system. Extensive manuals guide you through your 8051 development project. Assembly, BASIC, and C programmable. All hardware details, complete schematics. Learn to program the LCD, keypad, digital and analog I/Os. The entire board is software reconfigurable for your applications. Everything you need, nothing extra required.

### 80C32 Computer/Microcontroller board with:

- 32K Byte ROM • 32K Byte RAM • 2 by 16 Liquid Crystal Display • 4 by 5 Keypad • Two serial ports • 5 interrupt sources • 3 timers
- A/D, D/A, PWM and digital I/O • Built in Logic Probe • Power supply (can also be battery operated) • Extended Intel BASIC and AES Monitor in ROM • RS-232 cable to connect to PC for programming • 8051/52 DOS Cross Assembler • Program disks with well documented examples • User's Manual, Language Manual, and Text (over 400 pages).

### AES-10 \$285

Mid and hi have protective RC networks. Lid with casters. Vert/horz. or 45 deg. Black, each \$299. Many up to 350' Cables (XLR3M 16 pair shielded) and distribution boxes are also available. Lot purchase preferred. **ERAC Co.**, 619-679-8360, FAX 619-679-6670.

**RADAR/JAMMER.** This new jammer works at any distance 100% of the time. We guarantee it! Dealers welcome. Call 1-800-671-8117 for a brochure. To order, write: **BLUE MOON GADGETS**, 6059 Allentown Blvd. #608, Harrisburg, PA 17112-0992. Visa/MC.

**BELOW WHOLESALE Prices.** Hundreds of pieces of test equipment: Oscilloscopes, plugs, and carts. Generators: pulse, waveform, function, ultra sonic and signal. Monitors: color and storage. Analyzers: spectrum, logic, diskette, and trim balance. Recorders, counters, CRT cameras, 6" wafer prober, Talystep 1 surface scan w/manuals, Ernst Leitz laser failure analysis w/camera, MGI Systems 1282 automatic mass wafer transfer system, power conditioners, thousands of power supplies, millions of resistors (many 1%). Call for complete listing, 1-800-328-7845. Or for specific information on items, 507-754-5611. Or FAX 507-378-2102. AES, Inc., Grand Meadow, MN 55936.

**HIGH QUALITY TOOLS AND STAINLESS STEEL HARDWARE.** European and American, electronic soldering stations, screwdrivers, nutdrivers, pliers, hex keys, balldrivers, and more! Free catalog. Robert Mink Import-Export, Box 6437V, Fair Haven, NJ 07704. Telephone or FAX 908-758-8388.

# GORDON WEST Ham/Commercial Code Course

## 10 wpm through 30 wpm, 6 long-play stereo code cassettes

- ✓ Prepare for amateur radio Extra 20 wpm code test.
- ✓ Pass commercial 16 wpm, 20 wpm, and 25 wpm code tests.
- ✓ Earn both licenses with one code course from "Gordo."

This Gordon West Commercial/Extra code course actually **OVER-QUALIFIES** you for passing the amateur Extra class code test. Amateur Extra class operators automatically receive code credit for second class and third class radiotelegraph operator telegraph Elements 1 and 2.

Go on to pass telegraph Element 3, 20 wpm code groups, and telegraph Element 4, 25 plain language words for commercial first class radiotelegraph operator certificate.

All instructions spoken on tape on how to prepare for both commercial and amateur radio "top gun" exams. Many ham radio QSO-type tests and many commercial code groups (CG) and plain language (PL) examinations, ALL with narrated answers.

# #160 MISC. ELECTRONICS FOR SALE cont.

**RADIO REPAIR:** Commercial and amateur two-way. Portables a specialty. Reasonable rates. Call Mike N9VWW at REYNOLDS RADIO, 219-482-5630.

**AUTOMOTIVE MICRO-COMPUTER** close out sale on Digital Micro Analyzer 50 feature gauge with audio-visual alarms. Scans and displays oil pressure, fuel level, system voltage, temperature, vehicle speed and engine RPM. Can be set to alarm at user specified levels on all scan functions as well as elapsed time and clock. Blue display w/variable brightness. Originally \$99.95, now \$34.95 (limited quantity, free shipping). Phone 206-885-0193.

**CHILLER-RECIRCULATING LOOP**, made by Filtrine. New! 3,500 BTU/hr, ambient temp 90°F, discharge temp 68°F. \$400. Truck shipment. Call Roger @ General Science & Engineering 716-338-7001. Visa or MC.

**AT&T MICROHMMETER NDT TEST SYSTEM**, model M-100, 12ft spring cord, Bi-position handle, Battery Charger, Calibration plate, 0.100 & 0.250 in Probe cartridges, complete documentation; Carrying case w/molded insert; Working as new condition. \$250 or offer. Psitech Plus, 707-745-4804. FAX 707-747-5277.

**87CS1H \$9** IRFD9120 Hex DIP -100VC1A P-FET \$1.50. MJE 8501 NPN 800V/2.5A \$2. Trimpots \$0.25. Dual digital delay line \$2.50. Solar panel with hot water collection \$100. Greenlux, 415-753-0251.

**FISH ZAPPER.** Complete theory and plans on this device that temporarily stuns fish and lets them float to the surface. Cost under \$30 to build from common components. Sold for educational purposes only. Only \$20 postpaid. Credit Cards OK. Software City, PO Box 23016, Little Rock, AR 72221.

**3 AXIS DNC Machine Center.** Industrial quality, cost effective, precision engineered work centers. Can automate many of your complex and tedious metal cutting applications. Run direct from your PC via parallel port. Systems starting at \$7,999. Computerized Automation Technologies, 508-685-9584.

**GETTING OUT** of collecting sale. Used and vintage audio (Heath and Dyna), video, ham and test equipment. Tube and transistor. SASE for multiple page list with accurate description. Bruce Brown, RR 1 Box 50, Valley Springs, SD 57068.

**DENSITOMETERS, MACBETH** Mod. RD 919 \$200, TD-904 \$275. Offers accepted, Psitech Plus, 707-745-4804. FAX 707-747-5277.

**ROBOT, INDUSTRIAL**, human size, uni-mation, puma, five axis, revolute electric arm, pneumatic gripper, rackmount power supply, PWM servo motor controller, inter-connect cable. 1342 hours. Each axis has potentiometer and encoder. No computer. Best offer, 615-877-9406. 10:00 to 5:00 Eastern weekdays.

**MA/COM X Band Isolators**, WR 90 flanges, \$50. X Band three port circulators, WR 90 flanges, \$35. **TELTONE TLS2** Telephone office simulator, impairment option, \$75. Circa 85 Centrex Radio Control Module, new \$150, 2 available. Psitech Plus, 707-745-4804. FAX 707-747-5277.

**TRANSISTOR TEXT** books are too complicated! Our 22 page basic theory text is simple and easy to understand. We avoid "holes," "majority carriers," and other confusing theory, only explaining what happens in circuits (with voltage applied). Practical projects. \$5.75. Thermadyne, Inc., Box 6167, Arlington, VA 22206.

**REVOLUTIONARY NEW PRODUCT!** Don't waste your money on outdated technology! This unit puts your converter(s) into **FULL SERVICE MODE!** Works on most systems! All units come with a 30-day **MONEY BACK GUARANTEE** and 1 year warranty. All units are shipped within 24 hours. Thousands of Satisfied customers! Quantity pricing available. **ABSOLUTELY NO COLORADO SALES!** Warning: Theft of service is a crime. It is not the intent of ALPHA ELECTRONICS to defraud any Cable TV company and will not assist anyone in doing so. Anyone implying theft of service will be denied assistance. Call 303-940-0201.

**FOR SALE:** KLM 10-30MHz 7el log period-ic, cost \$1,000, sell \$500 or trade? John, 2175 Wagner Dr., Caro, MI 48723. 517-673-4312. WA8CKT.

## MISCELLANEOUS ELECTRONICS WANTED 170

**WANTED: APPLE 1**, Mark 8 and early microcomputers. Also journals for museum. PO Box 341, Floyd, VA 24091. 703-231-6478, 703-763-2321.

**KINGSLEY WIRE** stamp machines, digital pressure gauges, Setra 370 IFR 401L, 402AP, 600A, RD300, 120043, etc. Auto pilot test equip. Jet, JT-1, FC110. Buy, sell, trade. 813-575-0138 P/F.

**WANTED: BUY & SELL** all types of electron tubes. Harold Bramstedt, C&N Electronics, 6104 Egg Lake Rd., Hugo, MN 55038. 1-800-421-9397 or 612-429-9397. FAX: 612-429-0292.

**UNITEK WELDERS** wanted for cash. Parallel heads and power supplies. Call 608-643-5434, FAX: 608-643-4439.

**EXCESS INVENTORY WANTED:** Transistors, semiconductors, capacitors, PC boards, & diodes. We buy it all!! Contact: **SEMITECH, INC.**, 334 Cooper Road Bldg. A. Berlin, NJ 08009. Phone 609-768-0030, FAX 609-768-5690.

**AVIONICS MAINT.** manuals. Collins, King, Narco, Cessna, RCA etc. Collins Proline Red Band, any condition, any type, control heads, King, Collins, Gables, Sperry, Radar, any. 813-575-0138 P/F.

**DO YOU** have aluminum anodizing knowledge, experience, or equipment? Will trade your small set-up or info for my cash or toolmakers services. Call Philip, 408-244-0728.

**WANTED: ELECTRON TUBES, ICS, SEMICONDUCTORS.** ASTRAL, PO BOX 707NV, LINDEN, NJ 07036. CALL 800-666-8467.

**WANT USED** or surplus DC motor controls or adjustable frequency AC drives, 1/2 HP and up. DC motors fractional to 3 HP. C. Woodruff, 5507 55th Ave. So., Seattle, WA 98118. Voice/Fax 206-723-8487.

**LCD COLOR PANELS/PROJECTORS** WANTED working or not. Fax description and price to 610-935-7666 or call 610-983-0100 ask for Neil.

**TUBES WANTED** Cash for new. 6L6GC, 5881, 6V6, 7027, 6550, 6CA7, EL-34, 7591. Alex, 610-767-9097.

## NATIONAL ELECTRONIC WHOLESALERS ★★★★★

YOUR WHOLESALE HEADQUARTERS FOR ELECTRONIC COMPONENTS

### MODULES COMPATIBLE WITH Xxxxxxxx

One-Wire Quick Board for X2, Z5, and BXZ  
(1-5)\$29 (6-10)\$25 (11-20)\$23 (21-50)\$20 (51+)\$18

NO BATTERY-CUT VERSION  
WORKS ON ALL ONE TOO!

ALSO AVAILABLE IN 3-WIRE VERSION

### MULTI-MODE -- 3-WIRE BOARD

(1-5)\$29  
(6-10)\$24  
(11-20)\$20  
(21-50)\$18  
(50+)\$16

WORKS ON ALL X2, Z5, AND BXZ MODELS THAT USE MULTI-MODE. WORKS ON UNITS THAT DON'T USE MULTI-MODE TOO!

### SPACECOM SEVEN THREE-WIRE MODULES

(1-5)\$13 (6-10)\$10 (11-20)\$9 (21-50)\$8 (51+)\$7

FOR MODELS THAT DON'T HAVE X2, OR Z5 AS PART OF THE MODEL NUMBER. NOT FOR BXZ MODELS.

ALSO: 28-PIN MOD FOR BPB 5 -- (1-10)\$10 (11-20)\$7

### MODULES COMPATIBLE W/SCIENTIFIC ATLANTA:

QUICK-BOARDS for MODELS 8550,8570,8580,8590,8600

# CELLULAR EXTENSION PHONES...*The Easy Way*

Expand your profit margin in a highly competitive market with decreased incentives coming from your cellular carrier.

Stand-alone programmer (only 10 oz.)

No computer required to program

Complete with programming cables

Easy-to-use instructions

24-hour telephone tech support

Easy to read digital display

Simple alpha/numeric keypad

Self-contained, battery operated

Completely Mobile---can be field operated by any employee

From \$1995.

## PROGRAM ESN AND NAM

EASILY PROGRAMS RENTALS OR LOANERS

# ATMOSPHERIC RADIO REFRACTION

by Gordon West

Every June, July, and August, VHF and UHF radio and television waves take some strange twists out in the atmosphere. Summertime means tropo time, and to two-way radio dispatchers, tropospheric ducting can be a real headache when trying to communicate with a mobile unit that is being drowned out by another base station dispatcher 800 miles away.

For the amateur radio operator, summertime tropo means big possibilities on shattering world records on how far the ham stations can intercommunicate on normally line-of-sight frequencies above 144 MHz.

"Summertime tropospheric ducting affects everyone on the VHF and UHF radio bands," comments Bill Alber WA6CAX, a sheriff dispatcher, licensed ham, and private pilot. "Last summer, the aeronautical bands (110 MHz-136 MHz AM) were affected by a tropospheric duct that veteran pilots couldn't believe," adds Alber. He refers to several incoming commercial aircraft on approach to San Francisco airport

took several minutes before both agencies got a grasp on what was occurring on their normally "private channel."

This summertime VHF and UHF "super range" has absolutely nothing to do with ionospheric skip. Although there are sporadic-E summertime conditions that will cause VHF aeronautical and VHF FM land mobile, marine, and ham signals to bounce off the ionosphere and come back down 1,000 miles away, sporadic-E skip is limited to only 30 or 40 minutes at a time, and is easily recognized by rapidly changing signal strengths that will literally pin a signal strength meter and then

**New Kenwood 2-meter SSB Mobile, popular with tropo operators.**

overhearing a Tokyo air traffic controller clearing a jumbo jet for a Pacific crossing.

To the surprise of a police dispatcher in Nova Scotia, Canada, public safety officers in the Miami Keys were responding back with similar-numbered mobile units. It

10 seconds later drop out into the noise, and then 10 seconds later reappear as strong as local signals for another few seconds.

But the enhanced super-range found during the summer months associated with the atmosphere does not rely on the 100-mile-up

ionosphere for any of its excitement. Rather, tropospheric ducting of VHF and UHF signals occurs only in our lower atmosphere (hence the name, tropospheric ducting), and most of the signal is trapped below 10,000 feet in altitude. Many times an enhanced VHF or UHF signal traveling hundreds and sometimes thousands of miles carries only a few hundred feet above earth or the water.

Tropospheric ducting of VHF and UHF signals is the result of atmospheric super-refraction. Normal atmospheric refraction of VHF and UHF radio waves will give them an additional 15 percent boost over the geometric horizon. The geometric horizon can be calculated by multiplying your VHF antenna elevation over ground by 2, and then taking the square root of that to end up with miles to the geometric horizon. Add 15 percent, and that is your radio communications horizon during normal atmospheric conditions.

A VHF or UHF base station antenna mounted 50 feet up on a small building will have a typical VHF range to the horizon of about 11-1/2 miles. Two times 50 equals 100, and the square root of 100 is

10, and add about 15 percent of that for the normal refraction of a radio signal under normal conditions.

It's a refraction that causes an optical illusion. When you put a rod in a container of water, the glass container will make the rod look bent. That's refraction. When you see a mirage by looking down at hot asphalt ahead or over sand, super-refraction from the super-heated air causes lightwaves from above to refract off of this hot air boundary layer and give you the optical illusion of shimmering blue water over the roadway which is nothing more than the refraction of the blue sky above.

VHF and UHF radio and television signal tropospheric ducting is an inverted mirage where distant signals well over the horizon are refracted back to our station hundreds and sometimes thousands of miles away by a hot air boundary above us, instead of below us like we see as a common mirage. This would be an inverted mirage, and there have even been reports of images of upside down distant cities and upside down boats magically appearing on the horizon when the elevated duct has a temperature inversion so intense that light and

## FROM HEADACHES TO WORLD RECORDS

**2,700 mile TV reception from Hawaii to California on 434 MHz. Tropospheric ducting made it all possible!**

optical images begin shimmering well over the horizon.

It is a widespread high pressure system that will usually trigger a distinct layering effect of air temperature, water vapor, and air pressure. This stratification can be easily seen as smog hanging on the horizon where you can see relatively clean air below it, and nice clear blue air above it. This is the same stratification where you see smoke rising, and then abruptly turning horizontal, trapped within a distinct hazy boundary. Your night-time weather forecasters will simply call it smog trapped in an inversion layer, but for the radio enthusiast this warm air inversion layer will trigger some real interesting radio reception on frequencies above 50 MHz.

The normal decrease of temperature, pressure, and water vapor creates a normal refractive index for air, represented by the symbol "n" for normal. Specifically, normal radiowave refraction in typical windy air is 1.000345. Pressure decreases with height in a logarithmic manner at 1 millibar for every 10 meters of altitude. Temperature decreases 20 degrees Fahrenheit for every mile of increasing altitude, and water vapor also drops in a likewise manner.

During summertime periods of static high pressure systems, all that air within the high pressure system begins to sink. This is called subsidence, and as the air sinks it becomes more compressed against the surface of the earth or sea water below — and as air is squeezed within this sinking high pressure system, it gets warmer. Gentle

and on a windless day rest 1,000 feet above the surface of the earth or water. As long as there are no major weather patterns near the high pressure cell, the high pressure system just sits there, giving sailors below it doldrums of no wind, and a visual spectacle of smoke hanging over the horizon.

Some of the best known North American summertime highs occur between California and Hawaii, the Bermuda high, an occasional high pressure system slowly drifting across the United States mid-continent, and a late summer high that many times develops off the Atlantic northeast coast with an extension all the way down to Florida.

The world's record over water VHF/UHF tropospheric duct occurs between California and Hawaii where the Pacific high forms up every June, and guarantees an almost always July and August VHF/UHF band opening between Hawaii and the United States. Paul Lieb KH6HME, takes a two hour drive up the slopes of the Mauna Loa volcano, and provides ham radio operators the opportunity to talk VHF, UHF, and microwave from the West Coast to Hawaii on frequencies that would normally only travel a couple hundred miles line-of-sight.

"I have spent days on the volcano giving out hundreds of contacts, and the ham operators cannot believe their ears when they discover

**Tropo expert Jim Ford N6JF, puts finishing touches to a microwave beacon system.**

the 5,000 foot level, I can feel and see a definite increase in air temperature," adds Lieb.

Reviewing his files illustrates a 10-degree increase in air temperature at 5,000 feet above sea level usually leads to successful 2,700 mile contacts on VHF and UHF on 144.2 MHz, 432 MHz, 1296 MHz, and his record-breaking contacts at 3456 MHz. Paul is presently working on the 10 GHz (10,000 MHz) record that is presently held by the boys down under. Old recently unclassified records by the U.S. Navy "Tradewinds" VHF/UHF propagation studies between Hawaii and San Diego revealed that even

microwaves near 10 GHz have been detected over the 2,700 mile path during a widespread tropospheric ducting episode during the summer months.

Similar long-range VHF/UHF propagation has been observed by amateur operators between hams in Maine speaking for hours on end with stations down in Florida on two meters and 440 MHz. Unlike sporadic-E ionospheric skip

that only lasts for about a half hour, tropospheric ducting from a stationary high-pressure system can last for days and sometimes weeks. The signals also remain steady, usually building around sunrise and sunset

as the trapped warm air re-stratifies from the sun coming up and the sun going down over the horizon.

For land mobile radio operators, VHF/UHF tropospheric ducting is a nuisance. "I'm trying to dispatch police cars on 460.075 MHz in the Bay Area, and local Southern California police cars over 400 miles away are overriding our portable units down on Van Ness Avenue," comments one police dispatcher from the Bay Area. "And I'm not talking about problems that last a few minutes — during hot summer months, this problem may last for several days," adds the dispatcher.

There are times that UHF 440 MHz-460 MHz circuits are more affected from a tropospheric duct than traditional VHF high-band signals at 140 MHz-160 MHz. The characteristics within the tropospheric duct create a radio wave guide with varying dimensions. The more pronounced and thin the duct, the greater refraction it will have on shorter and microwave lengths.

It takes temperature, vapor, and pressure balloon soundings by the military and National Weather Service to accurately illustrate the refractive index within the tropospheric duct, and hopefully through the information highway this valuable weather information will be more readily available to the radio enthusiast looking to predict when the path to a distant part of the country might be open.

Amateur radio beacons on two meters, 222 MHz, 432 MHz, and 1296 MHz are one way to tune into a band opening alert to a distant transmitting station. Local ham radio clubs who take part in VHF and UHF experiments may have a list of propagational beacon stations that may be easily tuned in during the summer months.

"When I hear FM stations coming in from California, I know it's

**Perfect microwave tropo weather for author West and his mobile 10 MHz station. (Dotted lines show tropo duct.)**

ocean breezes above the ocean or coming off a nearby water mass may keep this hot air from eventually touching down to earth or the ocean. This high pressure "cap" may only be 100 feet in thickness,

or their small 50-watt VHF FM transceiver is working direct from their antenna to my antennas here on the slopes of the Mauna Loa volcano," comments Lieb. "As I drive up the hill to my operating beacon facility at

time to get ready for some state-side tropo," comments Russ KH6FOO, in Maui. Russ also reports that he can hear a dramatic increase in random noise in the direction of the tropospheric duct.

Long-range communications via tropospheric ducting do not rely on any one communications mode. While upper sideband and CW work best when conditions are weak, FM and even television can travel hundreds and thousands of miles via tropo ducting without getting scrambled. This author was the first to see Hawaiian amateur television signals here in the United States during a big tropo opening last summer. The 2,700 mile TV pictures were so clear that they even came out in color!

A simple scanner receiver hooked up to an outside ground plane antenna is more than capable of tuning in a wide-spread tropo opening. Try a distant weather channel that may not be normally received in your local area:

- 162.550 MHz
- 162.400 MHz
- 162.475 MHz

Or try tuning in 155.160 MHz, a regional search and rescue frequency that could give you radio calls from a ski patrol 500 miles away. Or try 156.800 marine VHF Channel 16, and see whether or not you hear the Coast Guard coming in 1,000 miles away. It could happen this summer.

On television, unscrew the cable connection, reconnect that old TV antenna on the roof, and start flipping channels until you see something in the snow that appears to be getting stronger and stronger as the high-pressure system builds between you and that distant TV station. Who knows — on VHF or UHF channels, you could pull in a TV station more than 500 miles away. Stations in Texas regularly watch television out of St. Petersburg, FL!

Keep track of your local weather system, and watch for the stalled high-pressure system between you and a potential distant station that can be tuned in on VHF or UHF. Keep in mind that sunspots, solar flares, sporadic-E, D-layer, and F-layer ionospheric skip have zero effect on tropospheric ducting. It's the local weather that's going to spell some long-range reception on VHF and UHF; and when the temperature exceeds 10 degrees within the tropo duct, get set for some radio fireworks this summer! **NV**

#### #170 MISC. ELECTRONICS WANTED *cont.*

**WANTED: TUBE** Hi-Fi & Commercial equipment & speakers & horns, tubes. Altec, RCA, Fisher, Scott, Tannoy Dyna Co., Marantz, Heath, Eico, Craftsman, Brook, McIntosh, Jensen, Western Electric, JBL, EV, etc. Sonny Goldson, 1413 Magnolia Ln., Midwest City, OK 73110. 405-737-3312, FAX 405-737-3355.

**WANTED: REGENCY** VHF radios, UC102 and UC202 walkie talkies, TR200 crystal mobile radios, RH250 and RH256 programmable mobile radios, write Randy, POB 546, Randle, WA 98377 or phone 360-497-7075. Also need manual for Wilson VHF portable #HH-154-D6.

**LOOKING FOR** parabolic dish listening device cell-phone antennas with CB style 3/8 x 24 thread base and still looking for super-star 7000 DX European CB. Grant Maxwell, 5 Albion St., Nanaimo BC V9R-1R4 Canada.

**WANTED: BMI (BONNEVILLE)** stock and commodity quote FM receiver set. Set has 2 boxes, data receiver and data converter. Will consider either piece separately. Satellite set may be the same. I need a back-up set. Call, describe your box or set. I will call back. Tom, 312-271-8066.

**DEC EQUIPMENT WANTED!** We are buying DEC systems, boards, terminals, drives and peripherals. Also Scientific Micro Systems (SMS), DSD, Datability, Dialog, other DEC compatibles, and Computer Output Microfilm (COM) units. Please call for a quote or fax us your equipment list. We buy, sell, and trade. **COMPUTER KEYWAYS**, 513-847-2300 or FAX: 513-847-2350.

## BBS & ONLINE SERVICES 175

### NEW CLASSIFICATION

## EDUCATION 180

**LASER PRINTER REPAIR TRAINING.** From the laser printer training specialists. Our detailed hands-on seminars show you how to repair the most popular laser printers out today, HPs and Apple Laserwriters, etc. We also provide a 400 page up to the minute manual and free tech. support for 1 year! Don Thompson's Laser Service Seminars, 1-800-457-5776, 714-855-3838.

**START YOUR OWN TECHNICAL VENTURE!** Don Lancaster's newly updated **INCREDIBLE SECRET MONEY MACHINE II** tells how. We now have autographed copies of the Guru's underground classic for \$18.50. Synergetics Press, Box 809-K, Thatcher, AZ 85552. 520-428-4073. VISA/MC.

**ESP, BIOELECTRICITY**, microwave hearing introduction comprehensive booklet \$1. Research Associates, PO Box 3583, Boynton Beach, FL 33424-3583.

**HUBBLE TELESCOPE** Photographs (GLIFS) with accompanying NASA Texts. GALAXIES in the YOUNG UNIVERSE Series, \$9.99 + \$2 shipping. Entire public Hubble Series available. SPACEPICS, POB 75711, Oklahoma City, OK 73147.

**125 WAYS** to multiply and divide numbers. Make electronic calculations readily. Solving electrical problems becomes quicker and more interesting a must. "Practamatics & Arithmagics" \$12.50 PP. Mazal Electronics, 81 Market Sq., Newington, CT 06111.

**COLLEGE LECTURES** on VCR tapes. Topics include electronics, computers and communications. Send for course list. OCS, PO Box 292, Fort Mill, SC 29715-1832.

**ELECTRONIC ENGINEERING.** 8 volumes complete. \$109.95. No prior knowledge required. Free brochure. **Banner Technical Books**, D-2 1203 Grant Ave., Rockford, IL 61103.

**LEARN PC ASSEMBLY LANGUAGE.** Disk \$5. Book \$15. ZIPFAST, Box 12238, Lexington, KY 40581-2238.

**BE AN FCC LICENSED** Electronic Technician. Fast, inexpensive home study. "Free" details. **COMMAND**, D-227, Box 2824, San Francisco, CA 94126-2824.

**NEW VIDEO. A Technician's Guide to: Printer Maintenance Cleaning and Troubleshooting Tips** for Canon based machines: Covers SX, LX, EX and NX engines. Videos sold separately at \$39 each or in a set with all 4 tapes at \$145. To order call Diversified TechniGraphics, Inc., 1-800-457-5776 or 714-855-3838, FAX: 714-855-3959.

**MOBILE TRAINING** Institute correspondence course cost \$375, Sell \$200, OBO. John Wagner, 2175 Wagner Dr, Caro, MI 48723. 517-673-4312.

## BUSINESS OPPORTUNITIES 190

**START YOUR OWN TECHNICAL VENTURE!** Don Lancaster's newly updated **INCREDIBLE SECRET MONEY MACHINE II** tells how. We now have autographed copies of the Guru's underground classic for \$18.50. Synergetics Press, Box 809-K, Thatcher, AZ 85552. 520-428-4073. VISA/MC.

**\$100 GOLD!** There is a circuit chip made by IBM that contains more than \$100 each in scrap gold, and another worth \$20. Almost nobody knows this. They are just starting to show up in resale outlets and junk yards. You can score big with this knowledge. Complete info with photo \$35 to: Jim Sciuto, Box 128, Methuen, MA 01844.

**I AM** making over \$600 per week selling a simple one-page information report on gold value in circuit chips for \$35 each. Cost only 5¢ to print. Want to do the same? Call 24 hr. message, 603-645-4767.

**MILITARY COMPONENTS** wanted. Capacitors, resistors, diodes, transistors, semiconductors, ICs. Electronic Material Industries, 818-842-5953, FAX: 818-845-3613.

**WANT TO** do business south of the border? Buy, sell or manufacture in Mexico. We have the experience and connections. "Call a Pro." ISE. PH: 210-350-5555, FAX: 210-350-5574.

**PROTOTYPING, REVERSE ENGINEERING, PRINTED CIRCUIT DESIGN.** We will provide engineering services, manufacturing and assembly services, and finished products for businesses and individuals. We specialize in RF but will also do digital and linear work. Surface mount or through hole boards. Mechanical products are welcome, too. Contact: **MARTRONICS**, 4820 Deer Creek Way, Paso Robles, CA 93446. Tel. 805-239-1932.

**THE CASE AGAINST PATENTS.** Thoroughly tested and proven alternatives that work in the real world \$28.50. **SYNERGETICS PRESS**, Box 809-N, Thatcher, AZ 85552. 520-428-4073. Visa/MC.

**HOW TO** make money placing ads on the Internet. 30,000,000 or more prospects. 100 words for 1 year for \$95. Send \$10 for 3-1/2" computer program disk to: InfoVideos, Box 26031, Columbus, OH 43226-0031.

**NATIVE UKRAINIAN** wants to be your Tech Rep in Ukraine or Eastern Europe. Fluent in four languages, BSE degree, highly skilled in IBM/DOS hardware, software, networking, LF to UHF communications, antenna and transceiver design. Training or temporary work in USA to learn your products ok. KC1VF/US5WE, 03-231-6478, PO Box 2490, Christiansburg, VA 24068.

**SELL CD-ROMS.** 100s of titles. Home-based Okay. Write: Cash-Rom, 1860 Dorsetshire Rd., Columbus, OH 43229-2139.

**FREE 1995** 600,000 items wholesale directory. TNT, Box 2614NV, Big River, CA 92242. (LSASE).

**NEW BIG MONEY MAKING Opportunity.** National Computer Help Desk Corporation seeks key joint venture partners in marketing expansion. \$50,000+/year revenue possible. For qualifying interview call, 907-227-4637.

**MAKE \$100** per hour with your computer and our books and software. Call 602-782-2316 for details or write to: **TELECODE**, Box 6426-NV, Yuma, AZ 85366-6426.

**1 GIG-HDS \$100**, 72 pin SIMMS mem \$15, 486-90MHz. Pentium motherboards \$135. Pentium CPUs \$75 to \$200. 14". 28 SVGA monitors \$65 lots more. Deal directly and save. No import tax. This is no joke. Over 290 addresses \$20. We can also send COD if you like. FAX/Phone no's too. GR Stringer, PO Box 30563, Houston, TX 77249-0563 USA.

**DID YOU** know Chaffin Electronics offers: Programming service, circuit board manufacturing, thousands of obsolete and hard to find ICs, same day shipping, computerized parts search? Call for more information. Phone: 614-574-4456 or 6906, FAX: 614-574-2124.

**MAKE \$100** an hour using your computer from home! 25 different ideas! Report tells all! Easy to do! Only \$5! Bates, 426 Belmont, Chicago, IL 60657.

**DISCOVER SECRETS OF HIGH-PROFIT MICROWAVE AND VCR REPAIR!** Powerful new 2-cassette video shows you how to, when to and what to do. **GUARANTEED** logical, practical, realistic, specific. **MONEY BACK** if not completely satisfied. **Plus FREE** technical support. Call **MICROTECH** toll-free, 1-800-700-UFIX (8349).

## REPAIRS — SERVICES 200

**MAGICIAN IS** available to solve your RF problem. Have Laboratory & Instrumentation up to 10GHz. Prototyping, Consultation, Tutoring. **MINARET RADIO**, John Horvath, 2023 Gates Ave., Redondo Beach, CA 90278. Ph: 310-318-3156.

**PROTOTYPE DESIGN** and development, embedded micro-controllers including PIC, multi-layer PCBs, assembly language programming, device replication, packaging, from concept to completion, high quality, great rates. Your "one-stop-shopping" prototype solution. Micro-Cosm, 2855 Masters Court, Pinckney, MI 313-878-3355.

**SHARE REPAIR**, E-Mail tech support for TV-VCR technicians. For information, E-Mail: rhett@dump.com.

**REPAIR SOLUTIONS** — more than 17,200 VALUABLE, TIME SAVING, MONEY MAKING REPAIRS for servicing TVs, VCRs, CAMCORDERS & other electronics, organized in an easy to use computer program — **THE TIP REPAIR PROGRAM**. **PROFESSIONAL BOARD/COMPONENT LEVEL REPAIRS** with Part numbers, Component locations/values & test voltages (when available). **ADD** your own tips. **PRINT** tips. Owners of our **COMPUTERIZED TIP PROGRAM** say this is the **BEST** technical tip program on the market today. Works on **ANY** IBM compatible computer with a hard drive & 16 Megabytes free space. **NEW VERSION** — works in **DOS** and **WINDOWS**. Only \$200. **FREE Shipping** for prepaid orders (USA). **FREE Demo!** Have your own tips? Ask about our **TIP EXCHANGE** policy with **FREE Updates!** **CALL 1-800-215-5081/516-643-7740**. **HIGHER INTELLIGENCE SOFTWARE**, 60 Farmington Lane, Melville, NY 11747.

**PCB FABRICATION, PROTOTYPE and PRODUCTION**, 1 or 2 sided, Multilayer, SMT. **CAD LAYOUT** from Schematic or Sample PCB. **CAD Generated Schematics**, pen plotting to D Size. **LASER PHOTOPLOTTING CAT**, 501-967-4070.

**ENGINEERING CONSULTANT**. Will provide digital circuit design, PCB design, prototype development and EPROM programming, all at economical prices. Whatever it takes, I will do it. Write for more info. to: WSED, 16313 Bluebonnet St., La Puente, CA 91744.

**AFFORDABLE HP** power sensor repair! For example most HP 8481As repaired for \$195. Call or write for information and pricing. Willamette RF, Inc, PO Box 1599, Corvallis, OR 97339. Phone 503-754-7226, FAX 503-753-4629.

**SERVICE MANAGEMENT Software** at an affordable price! **ServWare Service Management Software** — **Stage 1** for the service business that wants to keep track of their customers and their repairs on computer **AND** print invoices. Look up customers by **NAME** and **PHONE NUMBER**. **Print INVOICES** with **YOUR** business name, address & phone number at the top of **EVERY** invoice. Print invoices with your printer on inexpensive, plain paper. If the repair is taxable, **ServWare** — **Stage 1** will also calculate the tax on the repair & **Total** the sale. Finally, software to help run your service business that is both simple to use and affordable to every business. No lengthy manuals to read. Even if you are new to computers, you can start using **ServWare** — **Stage 1** right away. This is it! **ServWare** is here. **The Service Management Software** you've been waiting for. Only \$200. **CALL 1-800-215-5081/516-643-7740**. **HIGHER INTELLIGENCE SOFTWARE**, 60 Farmington Lane, Melville, NY 11747.

**CUSTOM COMPUTER** & microprocessor software & hardware. Program in C, Basic, Fort, Fortran, etc. Design interfaces to telephones, lights, alarms, relays, motors, etc. 212-479-7805.

**PRODUCTS DEVELOPED** from your concept or design. We provide: electro/mechanical/opto/pneumatic designs. PCB design, fabrication, packaging, tooling, assembly & test. Microcontrollers, custom controls, sensors, smart devices, process automation, scientific research. Call: **A SQUARED TECHNOLOGIES**, 619-432-8285.

**PRODUCT/CIRCUIT** development available. Specializing in RF and analog design of satellite communications equipment. Have complete microwave and digital development lab for RF, analog, digital and PCB design, Tom Hajjar, 543 W. Amherst, Satellite Beach, FL 32937. 407-773-5633.

**GOLD-N-PEN 24K** gold plating with new compact pen plater. Gold plate any small metal object in seconds. Repair worn or damaged PC boards and electrical connectors. Touch-up jewelry, watches, customize models, make your own awards and gifts, and 100s of other uses. Includes 1.0 oz. of 24K gold plating gel. Simple to use. \$79.95 plus \$5 shipping and handling. **MASTERCARD** and **VISA** accepted. 1-800-373-3321.

**HAM & Two-way** radio repair, prompt service, competitive prices, Centurion communications, 892 N. Delsea Dr., Vineland, NJ 08360. 609-794-8000, FAX 609-794-8989.

**PINBALL MACHINES**. Books, magazines, manuals, diagrams, supplies. Send \$2 for catalog now to: Marco Specialties, Inc., 5290 Platt Springs Rd., Lexington, SC 29073-9252. 803-957-5500. FAX: 803-957-6974.

**I CAN** help you get your product to market inexpensively. I have gobbs of experience with electronics, microcontrollers, and PCs. Let's talk about your design and ideas. Bill Eubank, 612-574-8075 (Minneapolis and world wide).

**HAVE YOU** lost your master file for a PAL, GAL, or microcontroller, we can help. We work with Motorola, Intel, Microchip, and most other microcontrollers. If you have a secured chip, we can read out your program and provide you with an unsecured master chip or file on disk. Pricing is quoted per project. We can also update any old design or lower total chip count on your circuit board. We also make and sell custom readers. GAL 16V8, 20V8, 22V10, and 6001, turn around in 48 hours. Call 703-764-5361 and leave a message with your needs, or write to: ACD, Inc. 5765-F, Burke Centre Parkway, Suite 317, Burke, VA 22015.

**KITS BUILT 1 to 1000**. Wirewrap, breadboard, thru-hole, SMT PCB assembly. Wiring, cables, harness, chassis, racks, panels. Custom test fixtures. Quick turnaround. Low rates, top quality, free quotes. Call: **A SQUARED TECHNOLOGIES**, 619-432-8285.

**CREATIVITY FOR** rent WMP design, primary creative concepts, let me help you get your next project started. No charge for initial consultation. Send details to: Mike Ward, 3 Via Caridad, Rancho Santa Margarita, CA 92688.

**PROTOTYPING SPECIALISTS** providing quick turnaround on analog and digital designs. Wirewrap and printed circuit boards thru hole and surface mount available. Competitive pricing from concept to completion with on time delivery. **Contact:** NU-AGE Products, 2271-F Palmdale Blvd., Ste. B-38, Palmdale, CA 93550. 805-285-6000. FAX 805-285-6904.

**QUALITY ELECTRONICS** Engineering firm specializing in home automation & large run circuit board design seeks contracts. Able to engineer your ideas for electronic devices from conception thru manufacture. Call or fax to 615-436-5189.

## When Was The Last Time You Bebopped To The Boolean Boogie???

A long time, we bet. But HighText has the remedy!

### Bebop to the Boolean Boogie

An Unconventional Guide to Electronics Fundamentals, Components, and Processes  
by Clive (Max) Maxfield

This is the damndest book on electronics you've ever seen! It's a thorough A to Z guide to contemporary electronics laced with the author's sometimes bizarre sense of humor. You'll find useful, real-world information about finite state machines, multichip modules, circuit board design, integrated circuit fabrication, and logic family interfacing techniques along with a recipe for terrific seafood gumbo and tips on the best times of day to eat smoked fish. Pete Waddell of *Printed Circuit Design* magazine says, "This is a dangerous book. . . not only do you stand a chance of learning something from it, but ten years from now you will still remember it." Replace those boring old handbooks on your shelf with this hip, heavily-illustrated, 500+ page wonder! A steal at \$35.00.

### The Integrated Circuit Hobbyist's Handbook

by Thomas R. Powers

Like to build stuff using ICs or design your own circuits on a breadboard? If so, you need this book! It discusses the major types of ICs—op amps, linear, TTL, and CMOS—and how to breadboard circuits using them. There are also details on interfacing different device families, power supplies, and "degitching" techniques. There's in-depth treatment of the most popular ICs, complete with pin numbering diagrams, internal circuit diagrams, logic tables, specifications, and a ton of applications information. Includes hundreds of applications circuits on its 8.5x11" pages. Don't buy another IC without buying this book first! Only \$19.95.

### AND DON'T FORGET THESE OTHER GREAT BOOKS. . .

**CONTROLLING THE WORLD WITH YOUR PC** by Paul Bergsman shows how to control stepper and servo motors, monitor fluid levels, switch appliances on and off, and do other neat things using circuits connected to the parallel port of IBM-compatible PCs. Includes schematics, operational theory, construction hints, and control software source code in BASIC, Pascal, and C for each circuit. Accompanying HD disk includes all source code plus compiled .EXE files. A lot of cool stuff for just \$29.95!

**THE FORREST MIMS ENGINEER'S NOTEBOOK** by Forrest Mims (who else?) is the latest edition of his classic guide to IC applications. Includes pin-outs, logic tables, specs, and plenty of applications circuits. What?!!? You don't have a copy yet??? Grossly underpriced at \$14.95.

**VIDEO DEMYSTIFIED** by Keith Jack. Interested in multimedia, video games, or other applications using video on a PC? If so, you need this book! Covers everything from the basics of NTSC to color space conversion and MPEG compression. "This 435 page book more than lives up to the promise of its title," said *EDN* magazine. Essential information for only \$29.95.

**HighText titles are available at larger bookstores, technical bookstores, and leading electronic parts and equipment dealers. Or you can order direct by including \$3 shipping per book (\$4 Canada, \$10 elsewhere). California residents must add sales tax. U.S. funds only, please. Or call our order number and charge it!**

Call 1-800-247-6553 to order!

**HighText**  
publications inc.

P.O. Box 1489, Solana Beach, CA 92075

**RADIO REPAIR:** Commercial and amateur two-way. Portables a specialty. Reasonable rates. Call Mike N9VWW at REYNOLDS RADIO, 219-482-5630.

**MASTER BEEPERS** repair. Motorola, Train technician fastest turn around. For more information, please call Mr. Felix at Procom-Plus, 718-329-3424, FAX 718-329-3423. Unbeatable prices, call for your price list or write to Procom Plus, 2936 Jerome Ave., Bronx, NY 10468. Attn: Mr. Felix.

**ENGINEERING CONSULTING.** Experienced engineering for your ideas. Product development from conceptual to manufacturing stages. Digital, analog, sensor, and RF expertise. Precision audio designs. Microcontroller designs for HC05xx, HC11xx, PIC16C5x. Software design for IBM PC. ASIC design using XIL-1NX. Enclosure and packaging design. In house schematic capture and PWB layout. Reasonable Rates. Contact Steve Hicks, Diasystems Electronics, 7508 E. Granada Rd, Scottsdale, AZ 85257. 602-970-3162.

**ICs DUPLICATED.** We can duplicate your memory devices for \$2 each (a fraction others charge). 11 years experience. We also do 16CXX and other micro's. Call for others! Credit cards OK. **Software City**, Box 23016, Little Rock, AR 72221. FAX 501-223-9406.

## reader Feedback

Continued from page 6

Being able to poll the status of just two models of module isn't that helpful, though it is a start. The user still needs an intelligent X-10 controller capable of transmitting the status request and monitoring the powerline for the response. CompCo's RID (Remote Interface Device) was designed to do this, among its many other features.

Using this method, verification of on/off is a three-step process. 1) Send the X-10 command, 2) Request the module's status, 3) Receive the response. If the module isn't in the desired mode, the command can be re-sent. A better method being developed by CompCo will automatically send the status when a command is executed and will be able to detect whether the actual device is on or off, not just the module itself.

**Collision Detection and limited number of commands.** Detecting collisions is possible with the TW-523 and CompCo's RID takes advantage of this, reporting X-10 collisions and allowing the host computer to resend commands. There is also an extended data transmit capability of the TW-523 that will effectively eliminate the 256 command limit of X-10, allowing new CompCo modules to send data for a wide range of home automation uses.

I'm sorry I can't address the problems of slow communication, but six out of seven isn't too bad. To review the features of our current product line (the RID/REB/RIB) system, the RIB (Remote Interface Board) wires to touch-panel controls like those on a remote control or faceplate of a VCR, switcher, etc., and simulates key closures. This allows the RIB to be a universal/learning infrared remote transmitter and control options not on a remote control through direct hardware. The RIB uses a parallel interface to the computer and two RIBs can be connect-

ed to one parallel port.

The REB (RIB Expansion Board) allows up to eight RIBs per REB and two REBs can be used together for a whopping 16 RIBs per parallel port.

The heart of the system, RID (Remote Interface Device) has a parallel output port so that REBs and RIBs plug directly into it; a serial port connects the RID to a host computer or other serial device, reporting activity and receiving commands. The RID receives infrared, reports it to the host and transmits infrared through a RIB. The RID monitors the powerline for X-10 activity, reports it to the host computer and transmits X-10 commands, as well. There is a stand-alone mode so that the RID can transmit X-10 and/or IR based on IR input — without a host computer connected. A long series of X-10 and/or IR can be sent based on a single input (macros) and "bank select" allows the same inputs to perform different macros depending on which mode is selected. Stand-alone mode doesn't disable the host reporting or control, so a host computer can still monitor and augment activity. The RID includes an expansion port for dedicated I/O (TTL) and the HouseBus (CompCo's data/low voltage conduit). This is ideal for applications including relay boards, sensors, caller ID, user interfaces, other controllers, and future expansion.

Thank you again for the note in the column. We would like to stay in contact with you and discuss your input on the above and related topics. CompCo feels that the more people know about home automation, the more they can accomplish and we'll be glad to help them with affordable powerful products and intelligent support.

**Patrick G. Lane**  
**CompCo Engineering, Inc.**

Dear Nuts & Volts

Re: your May '95 issue, page 130, third paragraph.

The writer, Shari Prange mentions that 25 amps @12 volts requires a different wire gauge than 25 amps @ 6 volts. . . .WRONG!

The only requirement of the National Electrical Code with regard to the voltage carried by a conductor is the amount of insulation.

Sorry Shari, but 25 amps is 25 amps is 25 amps!

The remainder of the article was very well presented and contained a lot of common sense hints. I would score the article a B-plus.

**Robert Tiffany**  
**Seabrook, NH**

**Shari responds**

Sorry, Robert, but I stand by my original statement. People don't usually pay attention to voltage because it's either standard household 115V or standard automotive 12V. However, comparing wire gauge charts will tell the story. For example, my reference chart conveniently lists wire gauges for automotive 6V, 12V, and household 115V side by side. If I hold the current constant at 20 amps and the wire run constant at 30 ft., I find that a 6V system requires 8 ga wire, a 12V system calls for 10 gauge wire, and a 115V system specifies 12 ga. wire.

**Shari Prange**

## TECH FORUM

Continued from page 90

else. Knowing the number and types of inputs and outputs is not sufficient to design an embedded controller. Data rates, response time, also need to be specified. When a PC is used, it is easy to change configuration by plugging in different cards, also if desired, graphical software design tools eliminate writing of any code. For limited budget designs, C code is an alternative. When everything works, a small format PC system can be substituted.

Non-PC controllers make sense only for small size, simple, or volume applications. A flash disk can be used as nonvolatile mass storage.

A PC 104 size final system is an economical choice since cards are available from many sources. These include Ampro, Z-World, Ziatech, M-Systems, and dozens more. Contacts can be found in computer magazines.

**Jan Zaluda**  
**Mountain View, CA**

**ANSWER TO #68513 - JUNE 1995**

Maxim makes several video multiplexer ICs that can be used to make a video switcher. Digi-Key sells the MAX454CPD for about \$10. This is a four-channel video Mux that takes a two-line binary input to select which video signal you want to look at. The circuit requires a bunch of 75 ohm resistors and a few capacitors, but not much else. Maxim also makes an eight-input Mux. They have very good data sheets and application notes; these will show how to build the switcher. I used this chip to make a computer-controlled audio/video/serial Mux.

**ANSWER TO #69510 - JUNE 1995**

The connector on the Compaq monitor you have is a standard 180 degree, three-pin male DIN. Information on the monitor says 12 VDC at 2 amps, though the Zenith chassis hiding inside says 13 VDC at 1.4 amps. Connect your choice as follows:

pin 1 positive 12 to 13 VDC  
pin 2 chassis ground  
pin 3 minus power connection

**Richard M. Nelson**  
**Newport News, VA**

**ANSWER TO #6957 - JUNE 1995**

Electrochemical rust control indeed works. Rust inhibitors can be either active or passive. The operating principle of passive control uses difference in oxidation potential of different metals. A metal which has higher oxidation potential than the metal to be protected, is buried nearby, and electrically connected to the object to be

protected. For example, magnesium can be used to protect iron. Magnesium then preferentially donates electrons, and corrodes away, while the iron is relatively untouched.

In an active system, electrons can be donated by a power supply. The anode then has to be connected to the earth, or the sea to complete the circuit. This would work with parked cars also.

**Jan Zaluda**  
**Mountain View, CA**

**ANSWER TO #6956 - JUNE 1995**

No cross compatibility exists between cable descrambling systems. The descramblers are designed specifically to descramble the exact codes coming over the cable wire. If you tried to use your Hamlin, for instance, in an area that uses Jerrolds it wouldn't be able to recognize and descramble the codes and vice versa, if you tried a Jerrold in an area that uses Hamlin. The electronic components are built for that specific signal.

**Travis White**  
**Laguna Niguel, CA**

**ANSWER TO #69515 - JUNE 1995**

An easy way to maintain charge of a lead acid battery is to use a small solar panel of appropriate size and voltage. Such a charger is self-contained, requires no maintenance, is current limited, if reasonably sized, and is easy to use. Just connect it up, and forget it. Nothing could be more simple.

**Jan Zaluda**  
**Mountain View, CA**

**ANSWER TO #6955 - JUNE 1995**

My company, EFJ Devices, offers two power combiners — the PC1500 and PC4000 — for 25 to 30 MHz use. Each consists of a signal splitter and power combiner in one package. The inputs are rated at 100 watts and 600 watts, respectively. AMPs 1 & 2 outputs should be within 10% of each other. These power combiners were designed with data from the Motorola RF Data Manual, Second Edition, Third Printing, Copyrighted Motorola 1982. This data is not in the new edition. The reference specifically is AN-749 on page 2-62, prepared by Helge O. Granberg.

It should be noted that doubling the signal to the antenna will only increase its strength by 3 dB. This is 1/2 of an "S" unit and barely discernible by the human ear.

Combiners allow the amps to share the load permitting twice the "key down" time.

**Carl Motsinger**  
**Old Hickory, TN**

**ANSWER TO #6953 - JUNE 1995**

UHF antenna information, with some design software can be found in the ARRL antenna book and compendium series, available from ARRL, 203-666-1541. Another, more powerful and rather expensive software tool is the Microwave Explorer from Compact Software, 201-881-1200. The Explorer can be used to model any radiating structure in three dimensions.

# Put the remote back into your remote control!

*Amazing new device attaches to your existing remote control giving it the power to transmit anywhere, even through walls!*

By Charles Anton

It's Thursday evening and you have dinner guests. The kids are watching TV but it's too loud. Without embarrassing yourself or the kids by yelling to turn it down, you pick up your remote with Leapfrog long range power and turn it down without a hassle.

Until now remote control has never been very "remote." Even with the best equipment you had to be right in front of your stereo, TV, VCR, etc. to make it work. Now you can operate your entire entertainment system from anywhere in your home with Leapfrog, the next generation in remote systems.

**How "remote" is it?** Imagine yourself at home enjoying a relaxing evening of movies on your VCR. You decide to stop the movie so you can get yourself a snack. You aim the remote and click, but nothing happens! You grow more and more irritated, and finally have to stand right in front of the VCR before you can get it to stop the movie. You find yourself wondering why they call it a "remote" in the first place.

**Why all the hassle?** Typical remotes use infrared technology. In order for the process to work, the remote must be in direct line-of-sight with the audio-visual equipment. The equipment must "see" the signal.

**Radio revolution.** The Leapfrog transmitter never needs to be perfectly "lined-up" with the TV, etc. Why? Because the transmitter doesn't rely on an infrared signal. You can even point it in the wrong direction and it still works. Leapfrog overcomes all the headaches of obsolete remote controls through the use of radio waves.

Radio waves work anywhere within a 150 foot range. The signals pass through walls, doors, ceilings and floors, letting you control your equipment from any room of your home. You cannot aim and miss.

**Infrared to radio.** The Leapfrog transmitter, which attaches to your existing remote control, sends radio signals to the Leapfrog receiver. This receiver then transmits the signal to your audio-visual equipment with infrared technology.

**Versatile uses.** This amazing new remote control modifier works with any infrared remote. Just imagine the convenience of controlling your VCR, TV, stereo, cable converter box, speakers in multiple rooms, or any other audio-visual system throughout your home.

Leapfrog is also ideal for use with universal remotes. Control it all with just one remote.

## How does Leapfrog work?

Leapfrog converts your infrared remote signal to radio frequency. Radio frequencies enable the signals to pass through walls and other obstacles. It also allows signals to transmit up to 150 feet without staying in line-of-sight with your equipment. Leapfrog then re-transmits the signal to the receiver, which forwards it to your audio-visual equipment.

Leapfrog installs in minutes. The transmitter attaches to your current remote. Plug the receiver into any outlet and place it in line with your audio-visual equipment.

## Talented remote.

The Leapfrog is not another hand-held remote control. This powerful innovation actually modifies your current remote, thus enhancing its value. You can control your stereo, your VCR, your TV, etc. from anywhere. From across the room or from across the house.

You can even use Leapfrog from outside. This is a fantastic feature to have when you're out by the pool, on your patio, or in your garage.

**Factory direct.** You would expect an innovative device like this to cost several hundred dollars. That might be the case if we sold only through exclusive high-end audio-visual dealers. But we bring the good news straight to you. You save money with factory direct prices.

**Try it risk free.** We are so confident that you will love Leapfrog that we've backed it up with our "No Questions Asked" 30 day money-back guarantee. If you are not completely satisfied for any reason, just return it for a full refund.

**Leapfrog transmits signals in a range of up to 150 feet. Signals actually pass through walls, ceilings and floors. They even work from outside.**

Plus, it comes with a full one year manufacturer's limited warranty.

Leapfrog Remote Range Extender \$79 \$6 S&H

Please mention promotional code 192-NV-5815

For fastest service call toll-free 24 hours a day

**800-992-2966**

To order by mail, send check or money order for the total amount including S&H (VA residents add 4.5% sales tax.) Or charge it to your credit card, enclose your account number and expiration date.

**CONTRAD INDUSTRIES**

2820 Waterford Lake Drive Suite 106  
Midlothian, Virginia 23113

## Why Leapfrog beats infrared

■ **Range.** You can control electronics from up to 150 feet away.

■ **Aim.** You can't miss. Point your remote in the wrong direction and it'll still work.

■ **Value.** It lets you get the most out of your audio-visual equipment by making use of it throughout your home.

■ **Flexibility.** Because it sends signals through barriers, it lets you store your equipment behind cabinet doors.

# AMAZING

## Electronic and Scientific Products

### Long Range 3 Mile

#### Voice Transmitter

- Super Sensitive Mike
  - Crystal Clear
  - Tunable 80 to 120 MHz • Miniature Design
- XFM1KN .....\$39.50

### Blitzer Stun Guns

Life is Precious! Protect It!

- Hard Hitting • Reliable
  - READY TO USE**
  - STUN1X - 80,000 Volts.....\$29.95
  - STUN2X, 100,000 Volts.....\$39.95
  - STUN4X, 200,000 Volts.....\$69.95
- Check Local & State Laws Before Ordering

### Electric Charge Gun

- Stuns Attacker Up to 15' Range
  - Legal In Most States
  - More Knock Down Power Than Most Handguns
  - No Permanent Injury - Ready to Use with Identifying Code
- Special Introductory Offer Includes our 80KV Stun Gun**  
ECG10N .....\$249.50 Data Pack, creditable toward purchase ...\$10.00

### TV Joker

Shirt pocket device allows you to totally control and remotely disrupt TV or radio reception. Great gag to play on family or friends. Discretion required.  
EUK1KM Easy to Assemble Kit ..\$24.50

### Powerful Home Security

#### Telecom - Infinity Transmitter

Access on premises, ongoing phone calls, phone break-in capability, control of electrical functions such as lights, alarms etc. **Caution - Check Legality in Your State!**  
TELECOM2KN Kit, w/PC board ....\$149.50 TELECOM20N Ready to Use .....\$199.50

### FM Telephone 3 Mi Transmitter

- Listen to calls over any FM radio
  - Tunable 70 - 130 Mhz
  - Undetectable
  - Only transmits during phone use
- XFT300KN.....\$29.50

### Wireless Wizard Transmitter

- Rebroadcast VCR, Tape Recorders, Stereo to any TV or FM Radio
  - Eliminates Wires & Cables
  - Wide Band Operation • 70-130 Mhz
- RWM3KN.....\$24.50

### Tracking / Beeper Transmitter

For Homing & Tracking up to 3 Mi  
• Works with any FM radio • 70 - 130 Mhz  
• Use for Hunt Games, Vehicles, Animals, etc. HOD1KN.....\$24.50

### High Voltage 50,000 VDC Lab Supply

- Sub Mini Design
  - Universal Battery/12VDC/115VAC oper.
  - Many HV applications and experiments
- HV50N Ready to Use .....\$149.50

### Build a Handheld Ultrasonic Blaster for Self Defense

Phasor Pain Field for Property Protection or High Powered Animal Control System. Many uses. Includes high efficiency transducer. ULDR1KN.....\$39.95

### Laser Window Bounce Listener

Aim at room window and listen to sounds from within using reflected light. **Caution - Not for Illegal Use!** Includes ready-to-use 5mw laser gun sight and long range laser receiver kit. # LWB3KN.....\$149.50

### Ion Ray Gun

Projects charged ions that induce shocks in people and objects without any connection! Great science project as well as a high tech party prank!  
IOG30N Ready to Use .....\$99.50  
**Higher Powered Lab Version:**  
IOG7KN Kit .....\$99.50  
IOG70N Ready to Use .....\$149.50

### Universal High Voltage Power Supply Module

Self adjusting, current limited, switching, high output, efficient battery or line powered, intended for capacitor charging when used with pulsed lasers, magnetic guns, plasma pyrotechnics, etc. Includes triggered spark gap switch for high energy pulse applications. Many lab and R&D uses. Easy to assemble kit. HVPS1KN .....\$99.50

### Super Sensitive Amplifier

- Hear an insect walk! • Hear through walls!
  - Build a Long Range Parabolic Mike or Super Directional Shotgun Mike!
- AG7KM Kit .....\$29.95

### World's Smallest Tesla Coil

Neat little device will light a 40W fluorescent lamp without contact, yet is smaller than a pack of cigarettes. Many interesting applications. 12VDC or 115VAC.  
BTC2N Kit .....\$29.95

### Jacob's Ladder

Visual display of plasma pyrotechnics. 3" arc travels 30" from top to bottom. Unique solid state 12KV transformer, safety shutdown. Req's wood enclosure and readily available hardware.  
JKC1KN 12KV Transformer .....\$74.50

### Build a Stun Gun, Flame Thrower...

....Pulsed Shocker, Ignitor, etc. Electronic Module Kit. PSH1KN Kit .....\$29.50

### Body Heat Telescope

Detects the presence of living bodies, warm and hot spots, insulation leaks, etc. Use for security, law enforcement, R&D, etc. Dual mode operation.  
BHT1KN Kit .....\$99.50

### NEON License Frames

Easy to install, high brightness units. Available in purple, green, or pink. Specify color when ordering. **While They Last!**  
LICN (specify color) .....\$19.50

### Extended Play Tel. Taping System

Automatically records both sides of a call. **CAUTION:** check local laws for alerting beeper requirements. Ready to use with X4 recorder. TAP40XN .....\$84.50

### Plasma Neon Fire Saber

Active energy field produces the Star Wars effect, visible length of plasma field controlled by grip contact. Choose your color: Photon Blue, Neon Red, Phasor Green or StarFire Purple. FS2KN .....\$49.50

### Shocker Force Field/ Vehicle Electrifier

Neat device - Make hand and shock balls, shock wands, electrify objects, charge capacitors. Great payoff for those wise guys! SHK1KN EZ Assembly Kit \$24.50

### Ultrasonic Cleaner Kit

Cleans PC boards, jewelry, coins, small parts. Large capacity hopper, operates at 30KHz from 115VAC. ULCL1KN.....\$79.50

**See in Total Darkness**  
• Includes laser illuminator kit  
• Light amplification • With camera adapter  
• Hi quality optics • Viewer Ready to Use!  
NVW10N with Laser Kit.....\$395.00

### Mind Machine

Create Spectacular Hallucinations!  
• New Technology Utilizes **Electro-Brainwave Coherence!**  
• Uses No Drugs! • Must be over 18  
MIND1N Plans .....\$10.00

### Plasma Pen

Etch and write with the burning fire of electronic plasma! For FUN and PROFIT!  
• Pen Sized - Easy to Use  
• Baggage and Identification  
• Create Spectacular Designs  
PLPEN10N .....\$29.50

### Tesla Coil

- 10 to 14" Streamers!
  - Wireless Energy
  - Plasma Pyrotechnics
  - Corona / St Elmo's Fire
  - Lightning
- Toroid Terminal Optional  
BTC3KN Kit .....\$299.50

### 1000 Ft++ Spud Cannon

**NOT A TOY.** Uses electronic or piezo ignition. **CAUTION REQUIRED!**  
POT1 Plans.(Dangerous Product) \$10.00

### FireBall Gun

Shoots flaming ball - two shot capacity. Great for special effects and remote fire starting. **CAUTION REQUIRED!**  
FIREBALL Plans (Dangerous Product) \$10.00

### Mystery Levitating Device!

Remember War of the World? Objects float in air and move to the touch. Defies gravity, amazing gift, conversation piece, magic trick or great science project.  
ANT1KN Easy to Assemble Kit ....\$19.50

### SUPER VALUE! 3 for 1 HIGH PERFORMANCE Home Surveillance Kits -

**You Get ALL 3 for only \$29.95!!!**  
• Telephone Tape Recorder Switch  
• Long Range 2 mi+ Telephone Transmitter  
• Long Range 2 mi+ Voice Transmitter  
**= A GREAT DEAL! Order # COMBON ALL 3 UNITS .....\$29.95**

# INFORMATION UNLIMITED

# YOU CAN'T HIDE

## FROM THE INTERCEPTORS

### The New and Improved Model R10 FM Communications Interceptor®

If RF security is a concern then the R10 Interceptor® may be the answer. FM signals just can't hide from the R10. It provides a shield of protection that no FM signal can penetrate without being detected.

The proprietary circuitry was developed exclusively by Optoelectronics. Thousands of customers including security professionals, radio technicians, and monitoring enthusiasts appreciate the near field capabilities of the R10.

For the first time since its introduction two years ago the R10 has been upgraded with a new high intensity bargraph LED display, a

low battery indicator and a delayed squelch. The new squelch circuit provides continuous reception of a signal during most multi-path drop outs. Now when used with our DC440 Decoder, Digital Coded Squelch codes can be checked as well as CTCSS Tones and DTMF Characters.

- Check deviation with 10KHZ (1KHZ step) or 100KHZ (10KHZ step) range.
- Check relative signal strength.
- Skip button lets R10 scan to next signal.
- Continuous 30MHz to 2GHz coverage in less than one second.
- Completely automatic with no tuning required.
- 400 foot pick up range from hand held radios. (Distance will vary with RF background.)
- Use built in speaker or earphone/headphones.

### Model R20 Interceptor/Bug Detector AM Communications Interceptor®

The R20 is a compact RF signal strength detector with a 10 segment bargraph display. There is also an audio output from the detector that is processed for constant volume for use with ear phone.

The audio output is useful for room sweeps where in close proximity to a transmitter a quieting effect can be heard due to detector saturation.

Transmitters can be easily checked for output and AM modulation.

- The 10 segment LED bargraph responds to all RF signals with nominal 3dB increments
- Pocket sized with built in telescoping antenna.
- 9 Volt battery operation.
- Monitor Aircraft, CB, AM broadcast transmissions when close.
- Check Microwave oven leakage.
- Wide .5MHz - 3GHz+ frequency range.

## OPTOELECTRONICS

# BASIC STAMP MODULES!®

## Stamp-Sized Modules Run BASIC Programs

### BASIC Stamp I Module (BS1-IC)

8 general-purpose I/O lines  
256-byte program space (100 instructions)  
4-MHz clock (2400 baud serial, etc.)  
\$34, \$54 with carrier board\*

BS1-IC

These new BASIC Stamp modules are the latest in BASIC Stamp computers. They're perfect for numerous applications, from controlling model trains to monitoring factory sensors. They have 8 or 16 I/O lines, which can be used for a variety of digital and analog purposes. And like the original BASIC Stamp, these modules are programmed in BASIC. Our special "PBASIC" language includes familiar instructions, such as GOTO, FOR...NEXT, and IF...THEN, as well as SBC instructions for serial I/O, pulse measurement, and button debounce.

The BASIC Stamp Programming Package contains everything you need to program Stamps using your PC. The package includes our editor software, programming cables, manuals, application notes, and free technical support. The package is available for \$99; Stamps must be purchased separately.

The BASIC Stamp I will always be the smallest and least expensive Stamp. For many applications, it's the most prudent solution. However, a growing number of customers need the additional features of the Stamp II. We hope you'll find both Stamps useful and fun.

## PIC16/17Cxx DEVELOPMENT TOOLS®

New prices make PIC development more affordable

You've probably seen the articles about PIC microcontrollers. They're popular because they're cheap and efficient. Which is why we chose PICs for our BASIC Stamps. A typical PIC has 18 or 28 pins, 1K of program space, and 32 bytes of RAM, all for around \$5. If you'd like to program PICs in assembly language or C, we offer the hardware and software tools to get you going.

### PIC16Cxx Programmer

Programmer for PIC16C5x/64/71/74/84/...  
Printed manuals; cables; power supply • \$199  
Docs on disk; user-supplied cables\* • \$99

BS2-IC

### BASIC Stamp II Module (BS2-IC)

16 general-purpose I/O lines  
2048-byte program space (600 instructions)  
20-MHz clock (9600 baud serial, etc.)  
\$49, \$69 with carrier board\*
