

# PSILOCYBIN / EXTRACT / MAKE

PSILOCYBIN IS OK. DO NOT MAKE THIS STUFF, INFO-LABS IS NOT LIABLE.

TO EXTRACT IT FROM THE STEMS OR WHOLE MUSHROOMS, IT DOESN'T MATTER.

TAKE ALL STEMS, FRUITS, ETC...PLACE IN OVEN AND DRY AT TEMP NO HIGHER THAN 200 DEGREES F. MAKE SURE IT IS ALL DRY BEFORE CONTINUING.

GRIND UP THE SHROOMS INTO POWDER USING A COFFEE BEAN GRINDER. ONCE A POWDER IT BECOMES ASCORBIC. MAKE SURE YOU KEEP WATER AWAY FROM THE POWDER. IMMEDIATELY PLACE THE POWDER IN A GLASS BEAKER WITH 8-10 TIMES METHANOL IN VOLUME...SO IF YOU HAVE 1 CUP POWDER USE 10 CUPS METHANOL. LET THE POWDER SOAK IN THE METHANOL FOR OVER 24 HOURS. STIR EVERY COUPLE HOURS. MAKE SURE IT STAYS WARM BUT NOT BOILING. JUST LUKE WARM.

USE VACUUM FILTRATION TO REMOVE THE POWDER FROM THE EXTRACT LIQUID. EVAPORATE THE LIQUID IN A HOT WATER BATH SO YOU END UP WITH A THICK BROWNISH RESIDUE. THIS IS ABOUT 75% PURE PSILOCYBIN. BE CAREFUL WITH IT.

-----THAT WAS EASY NOW TRY THIS-----

BELOW IS THE DEPICTION FOR MAKING PSILOCYBIN IN A LAB. IT IS VERY COMPLICATED AND REQUIRES A CHEMISTRY BACKGROUND AND A LABORATORY. DO NOT ATTEMPT TO MAKE THIS SUBSTANCE UNDER ANY CIRCUMSTANCE.
