

PARTICLE BEAM WEAPON

You will need two straight, highly polished strips of metal and a sunny day. Particle Beam Weapons are easy to make using light particles. The strips can be any length but to begin, try strips about 10 inches long and about one inch wide. The two metal strips must be highly polished - or better - chrome plated, to make excellent front surface mirrors. The two metal strips are placed slightly apart and parallel to each other, held slightly off & perpendicular to the earth with top opening aimed at the sun. Extreme care must be taken as to where the bottom beam exit is aimed. Addition of inexpensive optics on the light input end of this device greatly increases the power of your Particle Beam Weapon. A high intensity artificial light source (strobe light or photo flash is excellent) may also be used to input the device in place of the sun, making a portable, practical Particle Beam Weapon. The variations in design and utility are endless. The use of large photoflash tubes from old xerox machines with comparable power supplies will work most effectively for a portable system. Use of an 11 inch xenon strobe tube at ¼" diameter fully powered up will allow for a beam capable of burning through aluminum foil with one shot. But I must tell you, it had better be parallel to .001 degree. Use laser cut edges or milled parts which are electronically chrome plated on one surface. UUE sells lenses and xenon tubes.

Do not underestimate this device. It will cause eye damage if you do not wear protection especially if used in sunlight.

Do not build this device. Uue is not liable for use or misuse of this or any other information.

ELECTRON PARTICLE PHAZOR WEAPON...

An ultraviolet laser will ionize the air which it is passing through. By placing two high power ultraviolet lasers side by side and connecting the positive output of a tesla coil to one laser's rear and the other grounded to the coil's ground or negative. Distances of 300 meters can be reached with a portable setup. Using a laser pointer to line up your target you can really do some damage.
